Instruments. (Cf. Articles of words in italics.) Musical instruments can be divided into stringed I., wind I., and I. of percussion. (1) *Stringed I.* may be subdivided into *bowed I.* and *harp I.* (From lack of a proper word the latter one is coined. It is surely better than to speak of I. which are plucked, or pinched, or pulled, and which do not, besides, include I. of the clavier kind.) *Bowed I.* can be subdivided into such as have frets (*Viols, Lyres*: obsolete), and into those without frets (*Rebek, Vielle, Gigue, Violin, Viola, Violoncello, Double Bass, Trumb-scheit*); the stringed I. with keyboard (*Hurdy-gurdy, Schlüssel-fidel, and Bogenflügel*) form a special class. (2) *Wind I.* are divided into *wood-wind* and *brass*, or, better still, from the mode of producing the sound into *lip-* (labial-) *pipes* and *reed-* (tongue-) *pipes*; the *organ*, together with instruments related to it (*Harmonium, bayrel-organ, regal, orchestron*, etc.), consists of a combination of many wind instruments. (3) *I. of percussion* are of two kinds. Those which are properly tuned have, relatively speaking, a higher artistic value (*kettle-drums, bells* [carillon, Stahlspiel], *straw-fiddle*, and those of indefinite pitch (*drums, cymbals, triangle, tam-tam, castanets, tambourine*, etc.). The *Adiaphanon* (Gabelklavier) is an instrument which cannot well be included in any of the above-mentioned classes. The *Aolian Harp* can scarcely be reckoned among musical instruments, but it is otherwise with the *Anemochord*, formed after it. From among the numerous ephemeral inventions may be named the *Harmonica*, the *Clavi-cylinder*, the *Euphonium*, and the *Pyrophone*. I. for the purpose of investigations connected with acoustics are the *monochord*, the *tuning-fork*, and the *siren*. (Cf. AUTOMATIC MUSICAL MACHINES.)

Intavolare (Ital.), to write in tablature notation, i.e. to transcribe the usual (measured) notation into the special kind of notation specially used for the organ, likewise for the lute, etc. (Cf. TABLATURE.)

Integer valor (*notarum*), the average time value in measured music, the ordinary note value (mean time value) in contradistinction to that changed by diminution, augmentation, or proportion (see the respective articles); *Prolation major* also changed the tempo. The determinations usual at the present day (*Allegro, Adagio*, etc.) only came into vogue about 1600; before

that there were no exact time determinations. The I. V. changed considerably from the period of the invention of the measured note (q.v.) up to 1600, i.e. the *Brevis* of the 13th century had a value somewhat similar to the *Minima* of the 16th century, and to the *Seminima* (the crotchet) of the 17th century. Michael Pretorius (1618) fixed the I.V. (mean time value) of the *Brevis* at about $\frac{1}{10}$ of a minute, i.e. the crotchet at eighty of the Mälzel Metronome, which agrees fairly well with the usage of the present day.

Interludium (Lat.), interlude, especially in connection with the transition on the organ from one verse of a chorale to another.

Intermedio, Intermezzo (Ital.). This was the name given to the musical entertainments, introduced between the acts of a play, which sprang up in Italy towards the end of the 16th century. They were used, first in tragedies, but; later on, also in serious opera. At first the *Intermezzi* between the various acts were not connected, but each treated of a different mythological subject; gradually, however, an *Intermedio* was evolved from the *Intermezzi*, i.e. a second action, of a kind more or less humorous, as a contrast to the action of the principal piece, which was played in sections with the latter. Pergolesi's *La serva padrona* was an *Intermedio* of this kind. The next step was the loosening of this humorous small opera, which had gradually increased in dimension, from its unnatural entanglement with one of a serious kind, and the *Opera buffa* sprang into existence. The oldest *Intermezzi* were by no means written in the *stilo rappresentativo* of the Florentine music-drama, but were composed of madrigals; also, they were at times relieved by instrumental performances (likewise madrigals). Later on the *ballet divertissement* took the place of the I. At the present day we are strict with regard to the purity of style of the I., and of the principal piece; and the only form in which they still exist (in the drama) is that of the intercalated ballet, and that of *entr'acte* music.

Intermezzo, same as *Episode* (Cf. INTERMEDIO), probably used for the first time by Schumann as the name for a connected series of pianoforte pieces (Op. 4) without any reference to the word-meaning. S. perhaps regarded them as *hors d'œuvre*, intermediate numbers for a concert programme? Heller and Brahms have also made use of the title I.

Interrogativus (Lat.), one of the *accentus ecclesiastici*.

Interrotto (Ital.), interrupted.

Interval is the ratio of two tones with regard to their pitch, vibration numbers, or length of sound-waves (length of strings). Intervals are distinguished as consonant and dissonant. (1) *Consonant Intervals* are those which together form tones of one clang (of a major or a minor

chord), viz.: (a) the *Unison* (duplication of the same tone), with vibration and string-length ratio 1 : 1; the *Octave* (the repetition of the same tone in the nearest higher, and in the nearest lower position: the ratio of the fundamental to the second over-tone (*cf.* OVER-TONE), with the vibration numbers 1 : 2, and the ratio of the string-lengths 2 : 1 (in vibration ratios the smaller figure always belongs to the lower tone, and in string-lengths ratios, on the other hand, to the upper; both ratios are reciprocal to one another); the *Double Octave* 1 : 4 (4 : 1), triple octave 1 : 8 (8 : 1), and thus all octave extensions of the unison. (b) The *Fifth*, with the ratio of the first tone to the fifth 2 : 3 (3 : 2); the *Twelfth* (the octave extension of the fifth ratio of the fundamental tone to the third over-tone) 1 : 3 (3 : 1); the *Fourth* (inversion of the fifth by placing the fifth degree below, or the fundamental tone in the octave above) is the ratio of the first degree of the scale to the fourth, 3 : 4 (4 : 3); the *Eleventh* (octave extension of the fourth, 3 : 8, also 8 : 3), likewise all further octave extensions of the eleventh and the twelfth. (c) The (major) *Third*, the ratio of the first tone to the third in the major scale, 4 : 5 (5 : 4); the (major) *Tenth* (the octave extension of the major third), 2 : 5 (5 : 2); the (major) *Seventeenth* (second octave extension of the major third, ratio of the fundamental tone to the fifth over-tone), 1 : 5 (5 : 1); the *Minor Sixth* (inversion of the major third; *cf.* FOURTH), 5 : 8 (8 : 5); the *Minor Thirteenth* (octave extension of the minor sixth), 5 : 16 (16 : 5), likewise all further extensions of the major seventeenth and minor thirteenth. (d) The *Minor Third*, the ratio of the first tone to the third of the minor scale, 5 : 6 (6 : 5); the (major) *Sixth* (inversion of the minor third, ratio of the third to the fifth over-tone), 3 : 5 (5 : 3); the (major) *Thirteenth* (octave extension of the major sixth), 3 : 10 (10 : 3); the *Minor Tenth* (octave extension of the minor third), 5 : 12 (12 : 5); the *Minor Seventeenth* (second octave extension of the minor third), 5 : 24 (24 : 5), and all other octave extensions of the major sixth and minor third. Expressed in notes, the consonant intervals are as follows:—

—(2) *Dissonant Intervals* are those which are composed of tones which do not belong to the same clang; the vibration figures (likewise ratios of string-length) are easily found, if fifth and third steps are taken from one of the two tones of the interval until the other tone is reached. The superfluous octave extensions are got rid of by shortenings with the help of the number 2. For practical purposes, the best plan is to take

the figure 3 as factor for every fifth-step, and the figure 5 for every third-step; the vibration number of the second tone is then found, and that of the other is the nearest smaller, or nearest larger power of 2 (according as it lies below, or above the second tone). The 1, thus determined, is always less than the octave. If it be required to extend it by an octave, one has only to multiply the greater vibration figure by 2. For instance, take $c : d$ the major second; from c , d is reached by two fifth-steps ($c-g-d$), and the factors are therefore $3 \cdot 3 = 9$; the 9 is the vibration figure for d , and if the nearest smaller power of 2 ($= 8$) be taken, the second $c : d = 8 : 9$; but if the nearest greater power of 2 ($= 16$), then the minor seventh, $d : c = 9 : 16$. In a similar manner the augmented second $c : d\sharp$ will be found from $c-g-b-d\sharp$ (one fifth-step, two third-steps $= 3 \cdot 5 \cdot 5$), to be $64 : 75$, and its inversion, the diminished seventh $75 : 128$. The number of dissonant intervals is very great, as many of them can be determined in various ways, for instance: $c : d\sharp$ as $c-g-b-d\sharp$, or $c-g-d-a-b-d\sharp$ (one fifth and two thirds, or five fifths and one third). The most important are:—(1) the *chromatic second*, $24 : 25$ or $128 : 135$ (the string-length ratios are always the inversions of the vibration ratios); (2) its inversion, the *diminished octave*, $25 : 48$ or $135 : 256$; (3) the (diatonic) *minor second*, $15 : 16$; (4) its inversion, the *major seventh*, $8 : 15$; (5) the *major second*, $8 : 9$ or $9 : 10$; (6) its inversion, the *minor seventh*, $9 : 16$ or $5 : 9$; (7) the *augmented second*, $64 : 75$; (8) its inversion, the *diminished seventh*, $75 : 128$; (9) the *diminished fourth*, $25 : 32$; (10) the *augmented fifth*, $16 : 25$; (11) the *augmented third*, $512 : 675$; (12) its inversion, the *diminished sixth*, $675 : 1024$; (13) the *augmented fourth*, $18 : 25$ or $32 : 45$; (14) its inversion, the *diminished fifth*, $25 : 36$ or $45 : 64$. In notes, the dissonant Is. mentioned (counting from c taken as 1) are as follows:

The *augmented octave* is an octave extension of the chromatic second, the *minor ninth* an octave extension of the diatonic minor second, etc. Consonant intervals are either *perfect* (unison, octave, fifth, fourth, and their extensions), or *major* or *minor* (thirds, sixths, tenths, thirteenths, seventeenthths); dissonant Is. are either *major* or *minor* (seconds, sevenths, and ninths), or *augmented* or *diminished*. The inversions of perfect Is. are perfect, those of major, minor and *vice versa*, those of augmented, diminished, and *vice versa*.

Intimo (Ital.), inward, heartfelt.—*Con intimo sentimento*, with deep, genuine feeling.

Intonation (Ger. *Anstimmung*) is (1), in Catholic Church music, the introductory chant of the priest in antiphons, psalms, etc. The I. fixes the mode in which the melody is set, and this differs on high and ordinary festivals, and on ordinary week-days. One speaks of a psalm being *intoned*, of a priest *intoning* the Gloria, etc. —(2) In connection with instruments the term I. is used to express the equalisation of the various tones, i.e. by perfecting all the parts and placing them together, or the last touches given to remove any small inequality of clang-colour; also, in the organ, small changes in the wind-way of lip-pipes, or in the tongues of reed-pipes; in the pianoforte, the exact position of the hammers, inspection of the leather coverings, etc.—(3) The term I. is also used in connection with the human voice, and refers to tone-formation, especially in reference to pitch (pure or faulty I.; for the latter the Germans have the expression "Detonieren").

Intoniereisen (Ger.; "tuning-knife"), an instrument used by organ-builders in the first tuning of pipes; it must not be confused with the Tuning-horn (q.v.). The instrument is knife-shaped at one end, so as to widen or narrow at pleasure the wind-way; or, eventually, to be able to cut away a piece from the upper-lip or from the mouth of the pipe.

Intrade. (See ENTRÉE.)

Intreccio (Ital.), intrigue; a short stage-piece.

Intrepidamente (Ital.), fearlessly, boldly.

Introduction (Lat.), a term used specially for the short *Largo*, *Adagio*, *Andante*, or similar movement which precedes the *Allagro* of symphonies, sonatas, etc.

Introitus (Lat. "entry"), in the Ambrosian Ritual named *Ingressa*. It was originally a whole psalm sung by the choir, while the celebrant, holding the mass, moved from the sacristy to the altar; but it was afterwards shortened. Next was added to the psalm the "Gloria patri et filio," the "Gloria" by the celebrant, and the "Patri et filio, etc." by the choir, and then followed the antiphon. At the present day the I. is again coming somewhat more into vogue.

Inventions (Lat.), a term used in a sense similar to *Impromptus*. (Cf. Bach's two-part I.; the three-part I., on the other hand, he called "Symphonies.")

Inventionehorn. According to the statement of the Dresden "Hofmusiker," A. J. Hampel, this was the Waldhorn as improved by the instrument-maker J. Werner, at Dresden, about 1760. This was accomplished by applying crooks of various lengths to the tube of the horn, thus altering its natural scale. The system of crooks was also transferred to the

trumpet (*Inventionstrumpete*). Since the introduction of valves, crooks are rarely used.

Inversion (Ger. *Umkehrung*) is an exchange of the relationship of above and below, so that what was above becomes below, and what was below, above. Varied is the rôle which I. plays in the theory of composition. There is—

(1) an I. of *intervals*, which is simply an octave transposition of the upper note below the lower, or of the lower above the higher. The I. of an interval is always that other interval which completes the octave. There are the following Is.:

- (1) Second—Seventh;
- (2) Third—Sixth;
- (3) Fourth—Fifth;

and further, after I., a perfect interval remains perfect, a major becomes minor, and a diminished augmented, and *vice versa*.

(2) I. of *chords*.—By this is understood the change of bass note, i.e. all chords are named I. which do not have the natural bass note. Now the natural bass note, according to the usual definition, is the one which is lowest when the notes of the chord are placed one above another at the distance of a third, each from the other. There are therefore three positions of the Triad (q.v.), for instance, *c-e-g*, and its two Is.:

- (a) Fundamental position (bass note *c*).
- (b) 1st Inversion (bass note *e*) = chord of 6-3, *e, c, g*.
- (c) 2nd Inversion (bass note *g*) = chord of 6-4, *g, c, e*.

The chord of the Seventh (q.v.) has three Is.; for example: *g, b, d, f*.

- (a) Fundamental position (bass note *g*).
- (b) 1st Inversion (bass note *b*) = chord of 6-5, *b, d, f, g*.
- (c) 2nd Inversion (bass note *d*) = chord of 6-4-3, *d, f, g, b*.
- (d) 3rd Inversion (bass note *f*) = chord of 2, *f, g, b, d*.

(3) I. of a *Motive* (theme in *contrary motion*), one of the most interesting devices of imitation. It consists in this, that all the melodic progressions of the theme are made in reverse direction (rising instead of falling, falling instead of rising), in Italian *per moto contrario* or *al rovescio*. The I. of the theme occurs occasionally in

Fugue, also in the Gigue which has fugal working.

Invitatorium (Lat.; "invitation") is the name given in the Roman Catholic service to the antiphon sung at the Nocturnes, *i.e.* the one beginning the service for the following day.

Ionian (Iastian) Mode. (See CHURCH MODES and GREEK MUSIC.)

Ira (Ital.), anger, wrath, passion.—*Con ira*, angrily, passionately.

Irato (Ital.), angry, passionate.

Irgang, Friedrich Wilhelm, b. Feb. 23, 1836, Hirschberg (Schleswig), pupil at the school of composition of the Royal Academy, Berlin (Grell and Bach), received further training from Proksch at Prague, opened a music school at Görlitz (1863), became organist of the Dreifaltigkeitskirche there in 1878, and in 1881 organist and teacher of music at the Paedagogium at Züllichau. Besides various pianoforte pieces, I. brought out an "Allgemeine Musiklehre" (several times republished), and a "Harmonielehre."

Ironicamente (Ital.), ironically.

Isaak, Heinrich (Isaac, Izac, Ysack, Yzac; in Italy also Arrigo Tedesco [Heinrich der Deutsche], or in barbaric Latin Arrhigus), one of the most distinguished contrapuntists of the last quarter of the 15th, and first of the 16th century, probably a contemporary of Josquin, *i.e.* born about 1450. Though Glarean speaks of him as Tedesco or Germanus, I. appears to have been no German, but a Netherlander, for in his will he is named "Ugonis de Flandria." Documents testify to the fact that I. resided for a time in Ferrara, and that he was afterwards organist to Lorenzo di Medici, surnamed the "Magnificent." From there he went to Rome, and, finally, received an appointment at the court of the Emperor Maximilian I. as "Musicus" ("Symphonista regis" is the title given to him in the documents, probably the overseer of the instrumentalists), which he held until his death (about 1517); and then his pupil, L. Senfl, received the appointment, and held it until 1519, the year of the death of the Emperor Maximilian I. The following masses of I. have been preserved: *Charge de deuil*, *Misericordia domini*, *Quant jay au cor*, *La Spagna*, *Comme femme* (these five were printed by Petrucci as "Misse Henrici Izac," 1506); *Salva nos*, *Frölich Wesen* (in Graphäus' "Missæ XIII.," 1539); *O præclara* (in Petrejus' "Liber XV. missarum," 1539); *Missa solennis*; *De Apostolis* [*Magne Deus*, *Kyrie*] (in Isaak's "Chorale Constantinum," 1550); *Carminum* and *Une musique de Biscay* (in Rhaw's "Opus decem missarum," 1541); besides masses in manuscript at the Munich, Vienna, and Brussels libraries, ten of which have not been printed. Motets are to be found in Petrucci's "Odhecaton," "Canti B," and "Canti C" (1501-5),

in his first book of the motets à 5 (1505), in Kriesstein's "Selectissimæ . . . cantiones" (1540), and in many other collections, especially German ones of the 16th century. The part-songs of I. are models of their kind, many of which, in the form in which he wrote them, produce an excellent effect even at the present day; they are to be found in Ott's "115 guter newer Liedlein" (1544) and Forster's "Auszug guter teutscher Liedlein" (1539). The Munich court and state library is especially rich in manuscripts of I.'s compositions, and these became part of the music treasures of the court chapel, probably through Senfl.

Isidorus (Hispalensis), St., Bishop of Seville, b. about 570, Cartagena, d. April 4, 636. He wrote in his "Originum sive etymologiarum libri XX." much valuable information concerning music; Gerbert collected the special passages and printed them as "Sententiæ de musica" in his "Scriptores" (I.).

Isnardi, Paolo, b. Ferrara, monk, afterwards superior, of the cloister Monte Cassino, and maestro at Ferrara. He composed numerous masses, psalms, faux-bourbons, motets, and madrigals, which appeared in a special edition between 1561-94.

Isouard, Niccolò (also simply Niccolò de Malta), b. 1775, Malta, d. March 23, 1818, Paris; he was intended for a banker, but, contrary to his father's wish, gave his attention to music, and studied at Palermo under Amendola, and at Naples under Sala and Guglielmi, while employed in a banking firm. In 1795 he entirely gave up the career of a merchant and made his *débüt*, under the name of "Niccolò," at Florence with his opera *L'Avviso ai Maritati*, which, however, met with scanty success. After he had written for Livorno an *Ariasette* which pleased better, he became organist of St. John's of Jerusalem at La Valette, and afterwards maître de chapelle to the Order of Malta. After the suppression of the order, he wrote a series of operas for a theatre at La Valette, and went to Paris in 1799, where he found a devoted friend in R. Kreutzer. Already in the same year he produced a comic opera, *Le Tonnelier*, which was quickly followed by some others. He first made his mark with *Michel Ange* (1802), and reached the zenith of his fame with *Cendrillon* (1810). The return of Boieldieu (q.v.) from Russia resulted in a lively competition between the two composers, who enjoyed almost equal popularity; this had a most beneficial influence on I., and was instrumental in producing his best works, *Jeannot et Colin* and *Foconde*. A disorderly course of life, and sorrow caused by the preference shown to Boieldieu, who was elected by the Institut as successor to Méhul, soon brought about his death. Altogether I. wrote fifty operas, a

number of masses, motets, psalms, cantatas, canzonettes, and songs.

Israel, Karl, famous writer on music, b. Jan. 9, 1841, Heiligenrode (Electoral Hesse), d. April 2, 1881, Frankfurt; he first studied theology at Marburg, became a pupil of the Leipzig Conservatorium and settled in Frankfurt, where he became highly esteemed as musical critic. He published: "Musikalische Schätze in Frankfurt-a.-M." (1872), and "Musikalien der ständischen Landesbibliothek zu Kassel" (1881), two comprehensive catalogues of importance to musical bibliography; besides "Frankfurter Konzertchronik von 1713-80" (1876), and, from 1873-74, also contributions on bibliography to the *Allgemeine Musikalische Zeitung*.

Istesso (Ital.), the same; *L'istesso tempo*, the same tempo.

Istromento (Ital.), instrument.

Italian Sixth. The chord of the Italian sixth consists of a bass note, its major third, and augmented sixth—for instance, *a*^b, *c'*, *f*[#].

Itē missa est (Lat.), the concluding words of the mass.

Ivry, Marquis Richard d', b. Feb. 4, 1829, Beaune (Côte d'Or), a gifted amateur, since 1854, at Paris; wrote the operas: *Fatima*, *Quentin Metrys*, *La Maison du Docteur*, *Omphale et Pénélope*, and *Les Amants de Véronne* (*Romeo and Juliet*, 1864, under pseudonym Richard Yrvid, lately thoroughly revised); also songs, hymns, etc.

Izac. (See ISAAC.)

J.

Jachet (Jaquet). (See BERCHEM.)

Jachmann-Wagner. (See WAGNER [9].)

Jack, (1) in the harpsichord the upright slip of wood on the back end of the key-lever, to which is attached a crow-quill or piece of hard leather projecting at right angles. The quill or piece of leather served as a plectrum with which the corresponding string was plucked.—(2) A part of the action of the pianoforte, the escape-ment lever, which is also called "hopper."

Jackson, (1) William, b. May, 1730, Exeter, d. there July 12, 1803; for a time pupil of John Travers at London, and, for a long time, teacher of music at Exeter; in 1777 organist and master of the choristers at the cathedral there. He composed several operas (*Lycidas*, *The Lord of the Manor*, and *The Metamorphosis*), a large number of pf. sonatas and sacred works (of no importance); he also wrote "Thirty Letters on Various Subjects" (1782, some on music); "Observations on the Present State of Music (1791); and "Four Ages, together with Essays on Various Subjects" (1798).

(2) William, b. Jan. 9, 1816, Masham, son of a miller, and completely self-taught, d. April 15, 1866, organist of St. John's Church and afterwards of the Horton Lane Chapel (Bradford); conductor there of the Choral (male voices), and of the Festival Choral Society. He composed many sacred and secular works, and also published a "Manual of Singing" which passed through several editions.

Jacob, (1) Benjamin, b. 1778, London, became organist of Surrey Chapel 1794, d. Aug. 24, 1829, London; one of the most famous organists of his time. He composed psalm tunes ("National Psalmody") and glees.

(2) Fr. Aug. Leb. (See JAKOB.)

Jacobs, Eduard, 'cello virtuoso, b. 1851, Hal (Belgium), studied under Servais at the

Brussels Conservatoire; he was first engaged in the court band at Weimar, and, in 1885, succeeded his teacher at Brussels.

Jacobsohn, Simon E., excellent violinist, b. Dec. 24, 1839, Mittau (Courland), pupil of the Leipzig Conservatorium, 1860 leader of the band at Bremen, and 1872 of Thomas's orchestra, New York, afterwards teacher at Cincinnati Conservatorium; he resides now in Chicago.

Jacobsthal, Gustav, b. March 14, 1845, Pyritz (Pomerania), studied from 1863-70, and qualified himself in 1872 at the Strassburg University as lecturer on music, and became, in 1875, unattached professor. His treatise, "Die Mensuralnotenschrift des 12. und 13. Jahrhunderts" (1871), is a meritorious work.

Jacotin (real name Jacob Godebrye), Dutch contrapuntist, chaplain at Notre Dame, Antwerp, about 1479, d. March 24, 1529. Some of his compositions are to be found in Petrucci's "Motetti della Corona" (1519); in Salbinger's "Concentus octo, sex," etc. (1545); in Ott's "Novum opus musicum" (1537); chansons in Rhaw's "Bicinia" (1545); in the collections of Attaignant (1530-35, in fifth, sixth, and ninth books); in Le Roy and Ballard (in sixth book of the "Chansons nouvellement composées," 1556); and in "Recueil des recueils," 1563-64. Masses in manuscript at Rome.

Jacquard, Léon Jean, b. Nov. 3, 1826, Paris, d. there March 27, 1886, distinguished 'cellist, pupil of Norblin at the Conservatoire, where from 1877 he was professor of his instrument.

Jadassohn, Salomon, b. Aug. 13, 1831, Breslau, studied at the college there, then became pupil of the Leipzig Conservatorium (1848), went from there to Liszt at Weimar (1849), and at last became special pupil for

composition of Hauptmann's at Leipzig. At the conclusion of his studies he settled as teacher in Leipzig, became in 1866 conductor of the choral society "Psalterion," from 1867-69 was capellmeister of the "Euterpe," and, finally, in 1871 was appointed teacher of theory, composition, and specially of instrumentation, at the Conservatorium. Next to Reinecke, J. exercises at the present moment the strongest influence as teacher. In 1887 he received from the University of Leipzig the title of Dr. Phil. h. c. Especially well known are his works written in canon form—the serenade for orchestra (Op. 35), the pf. serenade (Op. 8), the four-hand ballet music (Op. 58), and the vocal duets in canonic form (Op. 9, 36, 38, 43). In all, J. has written over a hundred works, among which are:—four symphonies, two overtures, four serenades, pf. concerto in F minor (Op. 89), three pf. trios, two pf. quintets, pf. quartet (Op. 77), two quartets for strings, preludes and fugues for pf., etc. For chorus and orchestra: Psalm 100 (à 8, with alto solo, Op. 60), "Vergebung" (with soprano solo, Op. 54), "Verheissung" (Op. 55), "Trostlied" (with organ *ad lib.*, Op. 65); for male chorus and orchestra: "An den Sturmwind" (Op. 61); further, Psalm 13 (for soprano, alto, and organ, Op. 43), motets, part-songs, pf. pieces, etc. His thoroughly conservative method of teaching as theorist is expounded in his practical instruction books: "Harmonielehre" (1883, 2nd ed. 1887), with key (1886); "Kontrapunkt" (1884), with key (1887); "Kanon und Fuge" (1884); "Die Formen in den Werken der Tonkunst" (1889); and "Lehrbuch der Instrumentation" (1889), all of which have also appeared in English. His wife Helene (d. Dec. 31, 1891) was an esteemed teacher of singing.

Jadin, (1) Louis Emmanuel, b. Sept. 21, 1768, Versailles, d. July, 1833, Paris, son of the court violinist Jean J., "page de la musique" to Louis XVI., pianoforte pupil of his brother Hyacinthe, 1789 accompanist at the Théâtre de Monsieur (until 1792), member of the band of the Garde Nationale at the time of the Revolution, for which he wrote marches, hymns, etc. In 1802 he succeeded his brother as professor at the Conservatoire, then, in 1806, became conductor at the Théâtre Molière, and "Gouverneur des pages," 1814-30. After this he retired, composed about forty operas and operettas for various Paris theatres, several patriotic choruses ("Ennemis des tyrans," "Citoyens levez-vous," etc.), symphonies, overtures, concertantes, sextets for wind instruments, quintets, quartets, trios in great number for ensembles of various kinds, pf. concertos, a concertante for two pianofortes, sonatas, pf. pieces, songs.

(2) Hyacinthe, b. 1769, Versailles, brother of the former, 1795 professor of the pianoforte at the Conservatoire, d. 1802. He wrote fifteen quartets and six trios for strings, four

pf. concertos, five violin and five pf. sonatas, among which one for four hands.

Jaëll, Alfred, b. March 5, 1832, Trieste, d. Feb. 27, 1882, Paris, son of the violinist Edvard J., esteemed in his time at Vienna, and by whom he was trained, first in violin, and afterwards in pianoforte-playing. J. made his *début* as pianist in 1843 at Venice in the San Benedetto theatre, after which he led a very active life, making concert tours, and often changing his place of residence (Paris, Leipzig, Brussels, etc.). His playing—smooth and brilliant rather than imposing, insinuating rather than energetic—received due recognition. In 1866 he married the pianist Marie Trautmann. As a composer, J. has only written *paraphrases de concert* (transcriptions), and brilliant pieces for pf. with titles of various kinds. His wife also composes, and appears, indeed, to devote herself to works of large calibre (concerto in D, pf. quartet, waltzes for four hands, etc.).

Jagdhorn (Ger.; Ital. *corno di caccia*), hunting-horn. (See HORN.)

Jahn, (1) Otto, distinguished archæologist, philologist, and art critic, b. June 16, 1813, Kiel, d. Sept. 9, 1869, Göttingen; he went to the convent school Pforta, studied at Kiel, Leipzig, and Berlin, travelled for the purpose of study to France and Italy (1836-39), qualified himself in Kiel as lecturer on philology, in 1842 became unattached professor of archæology at Greifswald, 1845 professor in ordinary, and in 1847 occupied a similar post at Leipzig, was dismissed, however, in 1851, on account of his political opinions; he became professor of archæology and director of the academical art museum at Bonn in 1855, and, later on, director of the philological college; he was called to Berlin 1867, and d. at Göttingen after a prolonged illness. Besides many works on philology and archæology of high value, we are indebted to J. for the classical biography of Mozart (1856-59, four vols.; 2nd ed., 1867, two vols.; 3rd ed., revised by H. Deiters, one vol., 1889; translated into English by P. D. Townsend, three vols., Novello), not only an excellent and exhaustive work, but one of immense importance for musical literature in that it deals closely with musical history by philological and critical methods, and, in this sense, is epoch-making. It became a model to later biographers and historians of music (Chrysander, Spitta). J. wrote besides: "Ueber Mendelssohns Paulus" (1842), for the "Grenzboten," polemical articles on Berlioz and Wagner, reports of the Lower Rhine musical festivals of 1855 and 1856, a notice of Breitkopf u. Härtel's complete edition of Beethoven's works, etc., afterwards published in the "Gesammelte Aufsätze über Musik" (1866). He gives proof of solid musicianship in his thirty-two songs, full of feeling (in four vols.; the third and fourth contain Low German songs from Klaus Groth's "Quick-

born"), and a volume of four-part songs for mixed choir. He also brought out a critical edition in vocal score of Beethoven's *Fidelio*. His biography of Mozart arose, almost against his will, as the result of ever-increasing preparatory studies and collections of material for a Beethoven biography: materials were also accumulated for a biography of Haydn. Death prevented the carrying out of these schemes; his preparatory work was, however, made use of and developed by illustrious men:—Thayer (Beethoven) and Pohl (Haydn).

(2) Wilhelm, distinguished conductor, b. Nov. 24, 1835, Hof (Moravia), 1852 chorister at Temeswar, capellmeister at Pesth (1854), then at Agram, Amsterdam, Prague (1857-64), from 1864-81 at the royal theatre, Wiesbaden, and since then director at the Opera, Vienna; hitherto he has only published songs.

Jähns, Friedrich Wilhelm, b. Jan. 2, 1809, Berlin, d. there Aug. 8, 1888, highly-esteemed teacher of singing, conducted a choral society of his own at Berlin which enjoyed a good reputation (1845-70). By his special enthusiasm for K. M. v. Weber—which has led to important results for musical literature and history—J. has made for himself a lasting name. He diligently collected everything which had any relation to Weber or proceeded from him. J.'s collection, unique of its kind, of Weber's works (prints, manuscripts, sketches, letters, etc.) became, by sale in 1883, the property of the Royal Library at Berlin, where it is set in a place apart. With his treasures and experience as basis, J. wrote "K. M. von Weber in seinen Werken" (1871), the best book on Weber, and containing, besides, one of the best thematic catalogues (in chronological order, with excellent critical remarks, etc.); in addition, "K. M. v. Weber" (1873, sketch of his life); also articles for musical newspapers. In 1849 J. became "Königlicher Musikdirektor," and in 1870 "Königlicher Professor"; from 1881 he was teacher of rhetoric at Scharwenka's Conservatorium. The following of his compositions deserve mention: a pf. trio (Op. 10), and "Schottische Lieder."

Jakob, Friedrich August Leberecht, b. June 25, 1803, Kroitzzsch, near Liegnitz, d. Liegnitz, May 20, 1884, cantor at Konradsdorf, near Hainau (Silesia), 1824-78, published books of school songs, quartets for male voices, songs, a "Fassliche Anweisung zum Gesangsunterricht in Volksschulen" (1828), and his most important work—a "Reformiertes Choralbuch" (with Ernst Richter, Berlin, 1873; 2nd ed. 1877). He was for a long period co-editor of the *Euterpe*, and wrote various articles for educational papers. J. received a pension in 1878, and from that time lived at Hohenwiese, near Greiffenberg (Silesia).

Jalso, a Spanish national dance in $\frac{3}{4}$ time of

moderate movement (solo dance), with castanet rhythm:

Jalousieschweller: a chest, enclosing delicate stops, with a movable lid acted on by a knee-lever; by means of it dynamic shading is possible on the organ. A similar apparatus was long used in England for the pianoforte, and was transferred by Green (in 1750) to the organ. (Cf. CRESCENDO.)

Jan, Maistre. (See GALLUS, 2.)

Jan, Karl von, philologist, b. 1836, Schweinfurt, graduated in 1859 at Berlin with the essay "De fidibus Græcorum" ("The Stringed Instruments of the Greeks"), worked at the Graues Kloster as teacher under Fr. Beller-mann, further at Landsberg-a.-W., where, in 1862, the instruction in singing was handed over to him. He left this town in 1875 on account of differences with the municipal authorities respecting an organ which he had procured for the college hall from the proceeds of concert performances arranged by him. He laboured then at Saargemünd in the same way as formerly, cultivating music at the same time, until, in 1883, he was called to the Lyceum at Strassburg. J. has published several valuable articles on the history of music, some of which appeared in the *Allgemeine Musikalische Zeitung* (1878, on Old Grecian Modes; 1881, on the Diaulos), others in philological papers. Again, he wrote on Greek stringed instruments in the "Programm" of the Saargemünd College; also in the Halle Encyclopædia, under signature "Citharodik," giving new explanations concerning the cithara and lyre. In 1891 J. wrote a searching analysis of Bacchius's "Eisagoge" ("Programm" of the Strassburg Lyceum), on the metrics of Bacchius in the Rhenish "Museum f. Philologie" (vol. 46), on the "Hymnen des Dionysios und Mesomedes," in 1890, in Fleckelsen's "Jahrb. d. Philologie," on the "Harmonie der Sphären" ("Philologus," vol. 52), on "Rousseau als Musiker" in the "Preuss. Jahrb." (vol. 56).—Hermann Ludwig (von Jan), the biographer of Kastner (q.v.), is related to Jan.

Janissary Music, an orchestra composed of wind and percussion instruments (big drum, cymbals, and even triangle and crescent); special military music.

Jankó, Paul von, b. June 2, 1856, Totis (Hungary), son of Michael von J., manager of the estates of Count Esterhazy; he attended the Polytechnic at Vienna and the Conservatorium (pupil of Hans Schmitt, J. Krenn, and Ant. Bruckner), besides (1881-82) the University at Berlin, as mathematical student, and at the same time received instruction in the piano-forte from H. Ehrlich. In 1882 J. invented a new

keyboard, which must be regarded as a development of Vincent's idea of a chromatic keyboard, but which seems to promise better results, inasmuch as it leaves the fundamental scale (c major) capable of being recognised by the eye. J.'s keyboard consists of six rows of keys, which lie in terrace-form one above the other, but only represent one single chromatic scale, since the four upper rows are only repetitions of the two under ones (each lever is represented by a key in three of the boards). The J. clavier has decidedly attractive qualities (only five-sevenths of the usual stretch for the octave), and is capable of many new effects. (Cf. GLISSANDO.) Its principal defect is the weight, in playing, of the highest rows of keys. J. described his keyboard in a pamphlet of considerable size, and, since 1886 has produced it with success on concert tours. Hans Schmitt has written études, etc., for the new keyboard, and a number of pianists (Gisela Gulyas, Wendling, and others) have adopted the new speciality.

Jannaconi (Janacconi), Giuseppe, b. 1741, Rome, d. March, 1816; one of the last representatives of the traditions of the Romish School (see PALESTRINA-STYLE), was a friend of Pisari, teacher of Bainsi and Basili (1811), Papal maestro of St. Peter's Church as successor to Zingarelli when the latter undertook the direction of the Conservatorio at Naples. J. ranks high among church composers. His works remain in manuscript, and are preserved at Rome. They are as follows: a mass, *Te Deum*, *Magnificat*, "*Dixit Dominus*" and "*Tu es Petrus*" in sixteen parts, thirty more masses up to eight parts, with or without organ and instruments; forty-eight psalms with or without instruments, many motets, offertories, antiphons; canons: one in sixty-four, another in twenty-four parts; two in sixteen, one in twelve; and several in eight and in four parts with several subjects.

Jannequin (Janequin, Jennekin), Clément, important Belgian or French contrapuntist, but of whose life nothing at all is known. He was a pupil of Josquin de Près. The following of his works have been preserved: masses in manuscript (Rome); "*Sacræ cantiones seu motectæ 4 voc.*" (1533); chansons (mostly the same, some in greater, some in smaller number) in special editions by Attaignant (1533, 1537), Jacques Moderne (1544), Tylman Susato (1545), Le Roy et Ballard (1559); "*Proverbes de Salomon mis en cantiques et ryme français*" (1555); "*Octante psaumes de David*" (1559). Detached pieces are to be found in Gardane's "*Di Clément Jannequin et d'altri eccelentissimi authori vinticinque canzoni francesi*" (four-part, 1538), "*Selectissimæ nec non familiarissimæ cantiones ultra centum*" (four-part, 1540), "*Trium vocum cantiones centum*" (1541), also in books 11-17 of the great collection of chansons by Attaignant (1542-45), in books 7 and 8

of the "*Chansons nouvellement composées*" (1557 to 1558), and in the tenth book of the "*Recueil des recueils*" (1564). The most famous chansons (Inventions) of J., which show him to be the programme-musician of the 16th century, bear the titles "*La bataille*" (the battle near Malegnano [1515], originally in four parts, to which a fifth has been added by Verdelot), "*La guerre*," "*Le caquet des femmes*," "*La jalousie*," "*Le chant des oiseaux*" (twice), "*La chasse de lièvre*" "*La chasse au cerf*," "*L'alouette*," "*Le rossignol*," "*La prise de Boulogne*."

Janowka, Thomas Balthasar, b. about 1660, Kutenberg (Bohemia), licentiate in philosophy, and organist at Prague, the compiler of the oldest musical lexicon (with exception of Tinctor's ("*Diffinitorium*"), entitled "*Clavis ad thesaurum magnæ artis musicæ*" (1701).

Jansa, Leopold, b. 1794, Wildenschwert (Bohemia), d. Jan., 1875, Vienna; he studied law at Vienna, but soon changed to music, and trained himself for a violinist; he became member of the Imperial band 1824, also, in 1834, conductor of music at the University, and arranged regular quartet evenings. He was particularly noted as the best leader in Haydn's Quartets; it was also J. who, together with Czerny, played Beethoven's Kreutzer Sonata to the composer immediately after it was written. In 1849 he took part in a concert at London for the benefit of the banished Hungarian insurgents, and was, in consequence, dismissed from Vienna. He remained in London until 1868, highly esteemed as a violin teacher, and then, having obtained an amnesty, returned to Vienna and received a pension. J. composed many works for the violin (fantasias, variations, rondos), also several concertos, sonatas, quartets and trios for strings, violin duets, a *Rondeau concertant* for two violins with orchestra, and a few sacred works (offertorium for tenor solo and solo violin, chorus and orchestra). His most distinguished pupil was Mme. Norman Neruda.

Jansen, Gustav F., b. Dec. 15, 1831, Jever, royal musical director and cathedral organist at Verden. He wrote "*Die Davidshändler aus R. Schumanns Sturm und Drangperiode*" (1883), a somewhat fantastic description of the most interesting period of Schumann's artistic life, the statements of which were contradicted, perhaps in too sober a manner, by J. von Wasielewski ("*Schumanniana*"). J. also edited "*Robert Schumann's Briefe; neue Folge*" (1886).

Janssen, (1) N. A., organist at Louvain, for a time, Carthusian monk; he wrote "*Les vrais principes du chant grégorien*" (1845), translated into German by Smeddinck as "*Wahre Grundregeln des Gregorianischen oder Choralgesangs*" (1847).

(2) Julius, b. June 4, 1852, Venlo (Holland),

pupil of the Cologne Conservatorium; from 1872-76 music teacher and pianist in South Russia; and, from 1876, conductor of the Musical Society at Minden. Since then he has been conductor of the Musical Society and Male Choral Society at Dortmund, and in 1890 he became town musical director there (conductor of the first and second Westphalian music festivals); in some songs he has shown himself a talented composer.

Janssens, Jean François Joseph, famous composer, b. Jan. 29, 1801, Antwerp, d. there Feb. 3, 1835; he was trained by his father, who was director of the church music, and for two years by Lesueur in Paris; he then studied law, according to the wish of his family, and in 1826 became notary at Hoboken, near Antwerp, attracting attention at the same time by the performance of great works, and was appointed conductor of a musical society. In 1829 he became notary at Berchem, in 1831 at Antwerp. The siege of Antwerp (1832) frightened him away to Germany; and in Cologne, through the burning of the hotel at which he was staying, his manuscripts and other things of value were destroyed. Fear and vexation disturbed his reason, and, after a long illness, brought about his death. J. was one of the most important of Belgian composers. His principal works are: five orchestral masses à 4, a *Te Deum*, *motets*, psalms, hymns, etc., with orchestra, several cantatas (*Missolonghi*, *Le Roi*), a symphony which obtained a prize at a competition at Ghent; another, *Le lever du soleil*, two comic operas (*Le père rival*, *La jolie fiancée*), fantasias for wind band, and songs.

Japha, (1) Georg Joseph, b. Aug. 12, 1835, Königsberg, d. Feb. 25, 1892, Cologne; 1850-53 pupil of the Leipzig Conservatorium, especially of Ferd. David, and Raimund Dreyshock (violin); he studied in 1853 under Edmund Singer, who remained for a time at Königsberg, and then again under Alard in Paris; from 1855-57 he was member of the Leipzig Gewandhaus orchestra, appeared repeatedly at concerts as a violinist, made a concert tour to Russia during the winter of 1857-58, lived from 1858-63 as a private teacher at Königsberg, where he established (1863, jointly with Adolf Jensen) regular chamber-music evenings; he appeared with success in London as violinist, both as a solo and quartet player, became leader of the "Gürzenich" concerts, and was appointed teacher at the Conservatorium, Cologne.

(2) Louise (Langhans-J.), b. Feb. 2, 1826, Hamburg, where she received her first musical training from Fritz Warendorf (pianoforte), G. A. Gross and Wilh. Grund (theory and composition). She married W. Langhans (q.v.) in 1858, is an excellent pianist, has also written pf. pieces, stringed quartets, songs, etc. In 1853, under Robert and Clara Schumann at Düsseldorf, she went through a higher course of development in

pianoforte-playing and composition. She was looked upon in Paris (1863-69) as one of the most remarkable of German pianists, especially in Schumann's music. She has given many concert tours in Germany, and since 1874 has been living at Wiesbaden.

Jaquet. (See **BUUS**.)

Jarnovic (Giornovichi), Giovanni Mane, violinist and composer, b. 1745, Palermo (nevertheless of Polish origin), d. Nov. 21, 1804, Petersburg. He was a pupil of Lolli's, also a member of the *Concert Spirituel* at Paris in 1770, and both as player and composer soon became the hero of the day. On account of an affair of honour he was, however, forced to quit Paris, and went in 1779 to Warsaw, Petersburg, Stockholm, meeting everywhere with success, and in 1792 to London, where he soon put Viotti to the rout. From 1796 to 1802 he lived, without appointment, in Hamburg, and then went again through Berlin to Petersburg. His light and attractively written works are: sixteen violin concertos (with strings, two oboes, and two horns), some of which, however, are said to have been composed by Saint-George; six quartets for strings, many violin duets, and a book of violin sonatas with bass.

Jean le Coq. (See **GALLUS**, 2.)

Jehan. (See **GALLUS**, 2.)

Jehin, (1) Léon, b. July 17, 1853, Spa, pupil of the Brussels Conservatoire (Léonard), was orchestral conductor at Antwerp and Brussels (Théâtre de la Monnaie and Vauxhall), also in 1879 assistant teacher of theory at the Brussels Conservatoire. Since 1889 he has been conductor at Monaco (compositions for orchestra and for violin).

(2) François J.-Prume, b. April 18, 1839, Spa, likewise trained at Brussels, an able violinist who lived 1875-83 at Montreal, Canada, and since then at Brussels.

Jelensperger, Daniel, b. 1797, near Mülhausen (Alsace), d. there May 31, 1831. He came to Paris as a copyist for a lithographic printing firm, then studied theory under Reicha and became his "Répétiteur," and finally assistant professor. In 1820 he undertook the management of a publishing-house established by several professors of the Conservatoire for the purpose of bringing out their own works (Reicha, Dauprat, and others). About that time he wrote the Method (published after his death) entitled "L'harmonie au commencement du 19ième siècle et méthode pour l'étudier" (1830); in German by Häser (1833). He also translated into French J. Hummel's "Klavierschule" and Häser's "Chorgesangschule."

Jelinek, Franz Xaver, b. Dec. 3, 1818, Kaurins (Bohemia), d. Feb. 7, 1880, Salzburg, pupil of the Conservatorium at Prague, 1841 teacher of the oboe and archivist of the Mozarteum at Salzburg, afterwards director,

of the cathedral choir. He wrote church choral works, part-songs for men's voices, etc.

Jenkins, John, b. 1592, Maidstone, d. Oct. 27, 1678, Kimberley (Norfolk), lute-player and violist, chamber-musician to Charles I. and Charles II.; he composed numerous *Fancies* (Fantasias) and *Rants* (Caprices) for organ, viols, etc., which, for the most part, are preserved in manuscript at Oxford, and of which some were printed in Playford's "Courtly Masquing Ayres" (1662), "Musick's Handmaid" (1678), and "Apollo's Banquet" (1690). He himself published: "Twelve Sonatas for two violins and a Base, with a Thorough-base for the Organ or Theorbo" (1660-64). He also wrote "Theophilus" (airs to several parts of a poem by Benlowe, 1652); an elegy on the death of W. Lawes, printed at the end of Lawes' "Choice Psalms" (1648); two rounds in Hilton's "Catch that catch can" (1652); and songs in "Select Ayres and Dialogues" (1659); and "The Musical Companion" (1672), etc.

Jennekin. (See JANNEQUIN.)

Jensen, (I) Adolf, b. Jan. 12, 1837, Königsberg-i.-Pr., d. Jan. 23, 1879, Baden-Baden. This thoughtful song-composer, who unfortunately died at so early an age, was, for the most part, self-taught, and when he had studied only two years with Ehlert and Marburg his talent had already begun to put forth beautiful blossoms. In 1856 he was teacher of music in Russia, became capellmeister at Posen theatre in 1857, and in 1858 went to Copenhagen to Gade, whose artistic spirit was akin to his. He returned to Königsberg in 1860, where he soon made a name both as composer and as teacher. From 1866 to 1868 he was teacher for advanced pupils at Tausig's school at Berlin, but on account of his uncertain health, withdrew, first to Dresden, and in 1870 to Graz, and spent his last years in Baden-Baden, where he suffered long from an affection of the chest. J. has a better right than Robert Franz to the title of Schumann's heir in the composition of songs, and yet the reproach cannot be brought against him of being an imitator: depth of feeling, new birth of the poem in the melody—these are things which cannot be imitated. His numerous sets of songs, from the first (Op. 1) to the last (Op. 61), are a treasure-house of poetical and musical feeling. The greater number have plain titles, as "6 Lieder" (Op. 1), "7 Lieder" (Op. 11), etc., while some form cycles with a general title, as "Dolorosa" (Chamisso's "Thränen," Op. 30), "Gaudeamus" (twelve poems by Scheffel, Op. 40), two books, each of seven songs, from the "Spanisches Liederbuch" of Geibel and Heyse (Op. 4 and 21), "Romanzen und Balladen" (Hamerling, Op. 41), etc. J. also composed some books of part-songs (Op. 28 and 29), two songs for chorus with two horns and harp (or pianoforte, Op. 10); two selections of his songs appeared as

"Jensen Albums." J. takes high rank among lyric composers for the pianoforte, the cultivators of small *genre* pieces. The following deserve mention: "Innere Stimmen" (Op. 2); "Wanderbilder" (Op. 17); "Idyllen" (Op. 43); "Eroticon" (Op. 44); "Hochzeitsmusik" (four hands, Op. 45); Sonata (Op. 25); a "Deutsche Suite" (Op. 36); "Romantische Studien" (Op. 8); Studies (Op. 32); "Phantasiestücke," dances, romances, nocturnes, etc.; finally, "Jephthas Tochter," for soli, chorus, and orchestra, and "Der Gang der Jünger nach Emmaus," for orchestra. J. also left an opera (*Turandot*) with score complete. (Vide Niggli's essays on J. in the *Schweiz. M.-Zg.*, 1879.)

(2) **Gustav**, b. Dec. 25, 1843, Königsberg-i.-Pr. He studied with S. Dehn, F. Laub, and J. Joachim; violinist and composer; from 1872 professor of counterpoint at Cologne Conservatorium. He has written chamber-music (suite, Op. 3, for pf. and violin; trio, Op. 4; violin sonata, Op. 7; quartet for strings, Op. 11; cello sonata, Op. 26), orchestral works (3 Charakterstücke, Op. 33; symphony in B^b), pf. pieces, songs, choruses, etc.; he has likewise arranged a number of works by old masters for violin and pf. (Classische Violin Musik, Vortragsstudien, Corelli's Op. 5, etc. [Augener & Co.]).

Jeu (Fr.), an organ stop; *f. à bouche*, flue-stop; *f. à anches*, reed-stop; *Grand f.*, *Plein f.*, full organ.

Jew's Harp (Lat., *Cymbalum*; Ger. *Brunnmeisen Maultrommel*), an old primitive instrument consisting of an elastic steel tongue, which is riveted to a small piece of iron of horseshoe shape, held by the teeth. The buzzing tones produced with almost closed mouth have a peculiar, melancholy colour. The J. H. is to be met with here and there among bear-leaders, etc.

Jimmerthal, organist, b. 1809, Lübeck, d. there Dec. 17, 1886. He wrote a monograph on Dietrich Buxtehude (1877).

Joachim, Joseph, the classical violinist without a rival, b. June 28, 1831, Kittsee, near Pressburg; he was a musical prodigy, and made a public appearance at the age of seven with his first teacher, Szervaczinski, leader at the Pesth theatre. In 1838 he became a pupil of Böhm's at the Vienna Conservatorium, and made such rapid progress under him that he appeared, first at a concert given by Viardot-Garcia at Leipzig (1843), and soon after, (November, 1843) at the Gewandhaus, before a very critical public, and with brilliant success. During the following six years J. remained in Leipzig, at a time when Mendelssohn and Schumann were at the zenith of their fame, and his talent was further developed, especially under the influence of the former. In 1844 he appeared at the Gewandhaus with Bazzini (who was making a prolonged stay at Leipzig), Ernst, and David, in Maurer's concerto for four violins.

It may well be imagined that Leipzig, where art was encouraged in so distinguished a manner, was of decisive influence in his development, and that he found there the richest nourishment and the safest guidance in his high aim after that which was noblest. He added to his artistic fame by occasional concert tours from Leipzig, and already, in 1844, on Mendelssohn's recommendation, he appeared in London, which he visited again in 1847 and 1849, and often afterwards, until, in fulfilment of a brilliant engagement, he became a yearly guest. In 1849 he was leader of the band at Weimar, but was too little in sympathy with the new German tendencies centred in the person of Liszt to feel that he could settle there, and therefore in 1854 he exchanged his post for that of leader and "Kammervirtuos" at the court of Hanover. In 1863 he married there Amalie Weiss (really Schneeweiss; b. May 10, 1839, Marburg, in Styria), a distinguished contralto singer who, after short engagements at Hermannstadt and at the Kärntnertheater, Vienna, became (1862) a member of the opera company at Hanover. Frau J. withdrew from the stage, and devoted herself entirely to concert singing. Her fame as a *Lied* singer is scarcely inferior to that of her husband as a performer on the violin. As an interpreter of Schumann's songs, especially, she is without a rival. Soon after the events of 1866, the two artists went to Berlin, as J. was appointed director of the newly established High School of Music (1868), which, developing year by year, grew to large dimensions. (There has lately been a change in the organisation of this institution, and J. is now only artistic director of the branch for stringed instruments.) A goodly number of violin-players, especially, gathered around the master. Since David's death the school for violin-playing has changed from Leipzig to Berlin. J. has a splendid technique; and if indeed virtuosi like Sarasate, by brilliancy and fascinating colouring, attract musicians for a time, J., by his transcendent greatness and classic repose, remains conqueror. J. is one of those masters to whom the intentions of the composer are the highest ideal, to whom effect is a despicable thing; one of those masters who do not excite and bewitch, but who instruct and inspire reverence. It is indeed profitable to compare J.'s interpretation of the Beethoven or the Mendelssohn concerto with that of other distinguished violinists. J. is as celebrated a quartet- as he is a solo-player. It would indeed be difficult to hear finer renderings of Beethoven's last quartets than those given in Berlin by J.'s quartet party (de Ahna [+], Wirth, Hausmann, etc.). For many years J. has been the chief attraction of the London season (New Year to Easter), playing at the Popular Concerts, Philharmonic Concerts, also at the Crystal Palace. As a composer J. has produced hitherto only a few works for violin:

three concertos (G minor, Op. 3; "Hungarian," Op. 11; and G [1890], variations for violin and orchestra); "Andantino and Allegro" (with orchestra), Op. 1; six pieces with pf. (Op. 2 and 5); nocturno for violin and orchestra; variations on an original theme (viola and piano); Hebrew melodies (viola and pf.). Besides these, several overtures (*Hamlet*, *Demetrius*, and *Dem Andenken Kleists*, etc.); marches, and the "Szene der Marfa" (from *Demetrius*), for alto solo and orchestra. His music is akin to that of Schumann.

João (John) IV., King of Portugal, b. March 19, 1604, Villa Viçosa; 1640 King; d. Nov. 6, 1656, Lisbon. He wrote "Defensa da musica moderna contra la errada opinion del obispo Cyrillo Franco" (anon. 1649), and "Respuestas a las dudas que se puzieron a la missa, 'Panis quem ego dabo' de Palestrina" (1654); both works are translated into Italian. He composed, besides, twelve motets (1657), *Magnificat* à 4, "Dixit Dominus à 8," "Laudate Dominum à 8," "Crux fidelis à 4," etc.

Jobst Brant. (See BRANT.)

Jöcher, Christian Gottlieb, b. July 25, 1694, Leipzig, professor of philosophy and librarian there, d. May 10, 1758. He published "Allgemeines Gelehrtenlexikon" (1750, four vols., enlarged by Dunkel 1755-60, continued by Adelung 1784-87, republished and continued by Rotermund 1810-22, six vols.), which also contains biographies of musicians; his essay for the Doctor's degree appeared under the title "Effectus musicæ in hominem" (1714).

Johannes Cotto. (See COTTO.)

Johannes Damascenus, really Johannes Chrysorrohos, of Damascus, b. about 700 A.D., d. about 760 as monk in the Saba monastery, near Jerusalem. He is a saint both of the Greek and the Roman Church, the oldest theologian of the Greek Church, and also the arranger of the liturgical song, and reformer of the Byzantine notation. Up to the present the system of Byzantine notation has not been thoroughly investigated; and, indeed, the whole Byzantine liturgy requires to be expounded in a thoroughly exhaustive manner. As aids to work of this kind may be named Cyriakos Philoxenos' *Δεξικον της ελληνικης εκκλησιαστικης μουσικης* (1868); W. Christ's "Beiträge zur kirchlichen Litteratur der Byzantiner" (1870, reprint from the session reports of the Royal Bavarian Academy of Sciences); M. C. Paranikas' "Beiträge zur byzantinischen Litteratur" (1870, ditto); Riemann's, "Die *Ματρύρια* der byzantinischen liturgischen Notation" (1882, ditto); Tzetzis' "Die altgriechische Musik in der griechischen Kirche" (1874, Dissertation), and Gardthausen's "Beiträge zur griechischen Päläographie" (1880, from the session reports of the philologico-historical class of the Royal Saxon Society of Arts); and H. Reimann, "Zur Geschichte und Theorie der

byzantinischen Musik" (1889). (Cf. BYZANTINE MUSIC.)

Johannes de Garlandia. (See GARLANDIA.)

Johannes de Muris. (See MURIS.)

Johannes Gallus. (See GALLUS, 2.)

Jommelli (Jomelli), Nicola, one of the most distinguished opera composers of the Neapolitan school, b. Sept. 10, 1714, Aversa (Naples), d. there Aug. 25, 1774. He received his first musical instruction from Canon Mozzillo at Aversa; at the age of sixteen he became a pupil of Durante's at the Conservatorio di Sant' Onofrio, Naples, but went afterwards to the Conservatorio della Pietà, where Leo and Feo developed his talent for composition. With the exception of some small vocal pieces, his first works were ballets, with which he obtained little success. In 1737 he made his first attempt as an opera composer with *L'errore amoroso*, which was given out as the work of an indifferent musician named Valentino; it was a brilliant success, and, already in 1738, J. produced his first grand opera, *Odoardo*, under his own name. His reputation spread rapidly, and in 1740 we find him in Rome (*Ricimero*, *Astianasse*), and in 1741 in Bologna (*Ezio*). He remained for some time in the latter city, and still studied counterpoint under Padre Martini. The success of his opera *Mérope* (1747) at Venice gained for him the post of director of the Conservatorio degli Incurabili, in which capacity he wrote several sacred works for double choir. In 1749 he was appointed coadjutor of Bencini as maestro of St. Peter's, Rome, and remained there until he was called to Stuttgart as "Hofcapellmeister" at the end of 1753. During his fifteen years of activity in this post he gained an intimate knowledge of German music, and his part-writing and treatment of the orchestra in his operas were greatly influenced thereby. Much as this transformation raised him in the eyes of the Germans, it alienated from him the favour of his countrymen; and when the Stuttgart Opera was disbanded (March 29, 1769) and he returned to Naples, he was looked upon as a foreigner by the Italians, and could not regain his old reputation. His last, and perhaps best works, *Armida* (1770), *Demofonte* (1770), and *Ifigenia in Aulide* (1773), made no impression on the public of the San Carlo Theatre. J. had retired, with his family, to his native place, Aversa, and lived alternately there or in the neighbourhood of Naples. The failure of his last works hastened his end; he died shortly after he had written his famous *Miserere* for two sopranos and orchestra. In all, fifty-five operas and divertissements of J.'s are known by name; but those which were preserved at Stuttgart were, with few exceptions, destroyed at the burning of the theatre in 1802. He wrote, besides, a Passion, the oratorios *Isacco*, *Betulia liberata*, and *Santa Elena al calvario*, *La Natività di Maria Vergine*, several cantatas, masses,

psalms, graduals, responses, and other sacred works, besides those for double choir: *Dixit* à 8, *Miserere* à 8, *Laudate* with four solo sopranos and double choir, "In convertendo" (with six solo voices and double choir), *Magnificat* (with echo), and a Hymn to St. Peter for double choir.

Jonas, Émile, b. March 5, 1827, Paris, entered the Conservatoire there in 1841, where Lecoupey and Carafa were his teachers; he received several prizes, and, finally, in 1849, the second state prize (medal) for composition. J. turned his attention to the composition of operettas (*genre Offenbach*), and made his *début* in 1855 at the Bouffes Parisiens with *Le duel de Benjamin*, followed by a number of other works of a similar kind (so aptly described by the French as "Petite musique," or "Musiquette"): *Le duel de Benjamin*, *La parade*, *Le roi boit*, *Les petits prodiges*. From 1847-66, J. was professor of an elementary class (*Solfège*) at the Conservatoire, and from 1859-70 professor of harmony in a class established for pupils studying military music. At the Exhibition of 1867 he was entrusted with the arrangement of the performance of military music. In his capacity of musical director of the Portuguese Synagogue (J. is of Jewish descent) he published, in 1854, a "Recueil de chants hébraïques" for synagogue use.

Joncières, Félix Ludger (named Rossignol), Victorin de J., b. April 12, 1839, at Paris, studied at the Conservatoire under Elwart and Leborne, but left the institution in consequence of a dispute with Leborne about Richard Wagner, whom J. honours (in 1868 he travelled to Munich for the first performance of the *Meistersinger*). In addition to his great activity as composer, J. became musical critic to the *Liberté*. The following of his compositions rank amongst the best: music to *Hamlet*, the operas *Sardanapal* (1867), *Le dernier jour de Pompéi* (1869), *Dimitri* (1876, all three performed at the Théâtre Lyrique), *La Reine Berthe* (Grand Opéra, 1878), *Chevalier Jean* (1885, Opéra Comique), also a "Symphonie romantique," a choral symphony ("La mer"), a Hungarian serenade, an orchestral suite ("Les Nubiennes"), a "Slave" march, a violin concerto, a concert overture, etc. J. is extremely modern in his tendency, but his works lack purity of style.

Jones, (1) Robert, celebrated English performer on the lute at the beginning of the 17th century. He published: "The First Booke of Ayres" (1601); "The Second Booke of Ayres" (1601); "Ultimou vale; or, the Third Booke of Ayres" (1609); "A Muscicall Dreame; or, the Fourth Booke of Ayres" (1609), and "The Muse's Garden for Delight; or, the Fifth Booke of Ayres" (1611, "for the lute, the basse viol, and the voice"); besides a book of madrigals à 3-8 (for voices or voices). Some of his compositions are to be found in the "Triumphes

of Oriana" (1601); Leighton's "Teares and Lamentacions" (1614), and Smith's "Musica Antiqua" (1812).

(2) John, d. Feb. 17, 1796, as organist of Middle Temple, Charterhouse, and St. Paul's. He published: "Sixty Chants, Single and Double" (1785), one of which greatly impressed Haydn by its naïve and expressive style of melody.

(3) William (J. of Nayland), b. July 30, 1726, Lowick (Northamptonshire), d. Jan. 6, 1800, Nayland (Suffolk). He wrote a "Treatise on the Art of Music" (1784), and published in 1789 ten pieces for organ and four anthems. He also wrote a large number of famous works not relating to music.

(4) William, celebrated Orientalist, b. Sept. 28, 1746, London, d. April 27, 1794; he was judge at Calcutta for a long period, where he had leisure to study Indian manners and customs. In the sixth volume of his collected works (1799) there is a treatise: "On the Musical Modes of the Hindus," which Dalberg made the foundation of his work on the same subject.

(5) Edward, b. 1752, Henblas, near Llan-derfel (Wales), d. April, 1824, London, sprung from a Welsh family of bards; he went to London in 1775, and in 1783 became bard to the Prince of Wales (afterwards George IV.). He published: "Musical and Poetical Relicks of the Welsh Bards, with a General History of the Bards and Druids and a Dissertation on the Musical Instruments of the Aboriginal Britons" (1786 [1794]; 2nd volume: "The Bardic Museum," 1802; the 3rd volume came out about the time of his death, and the rest was published soon afterwards; the work contains altogether 225 Gaelic melodies). His other publications are: "Lyric Airs" (1804, Grecian, Albanian, Wallachian, Turkish, Arabian, Persian, etc., popular melodies), "The Minstrel's Serenades," "Terpsichore's Banquet" (a pendant to the "Lyric Airs"), "The Musical Miscellany," "Musical Remains of Handel, Bach, Abel," etc., "Choice Collection of Italian Songs," "The Musical Portfolio" (English, Scotch, and Irish melodies), "Popular Cheshire Melodies," "Musical Trifles calculated for Beginners on the Harp," "The Musical Bouquet" (popular melodies).

(6) Griffith, English writer at the beginning of this century; he wrote for the "Encyclopædia Londinensis" a sketch of the history of music, printed separately as "Music," which in 1819 appeared in a new edition as "A History of the Origin and Progress of Theoretical and Practical Music" (1819, German by Mosel: "Geschichte der Tonkunst," 1821).

Jongleurs (Lat. *Foculatores*; Ger. *Gaukler*; Old Fr. *Joglaars*, *Fonglaors*), itinerant players; the word is identical with Minstrels (*Ménétriers*). (See TROUBADOURS and GUILDS.)

Joseffy, Rafael, b. 1852, Presburg, a pianist of excellent technique, pupil of Tausig. He

has published pf. pieces, and lives at New York.

Josquin de Prés. (See DEPRÉS.)

Jota Aragonesa, a lively Spanish national dance with castanet rhythm

with a melody played by the mandoline—

which is given alternately while the dancers rest and a stanza is sung; it is always repeated in varied form.

Jouret, (1), Théodore, b. Sept. 11, 1821, Ath, Belgium, d. July 16, 1887, at the Kissingen baths. He was professor of chemistry at the military school at Brussels, composer of songs and quartets for male voices, also of a one-act comic opera (*Le Médecin Turc* [1845], jointly with Meyne). From 1846 he was musical critic of various Belgian and foreign political and musical newspapers (*Guide musical*, *L'Art*).

(2) Léon, brother of the former, b. Oct. 17, 1828, Ath, studied at the Brussels Conservatoire, since 1874 professor of a vocal ensemble class at the Brussels Conservatoire, made a name, since 1850 as composer of many songs, part-songs, cantatas; also sacred works. Two of his operas were performed at the "Cercle artistique et littéraire" with great success: they are entitled *Quentin Metsys* and *Le tricorné enchanté*.

Jubilus, a term used in the Middle Ages, answering to neume; a long melodic phrase on a vowel (coloratura).

Judenkunicg, Hans, a native of Schwäbisch-Gmünd, was a performer on the lute at Vienna, and published "Ain schone kunstliche underweisung . . . auf der Lautten und Geygen," etc. (1523), a small work of great interest in connection with the history of instruments (Vienna Library).

Jue, Édouard, b. 1794, Paris, trained at the Conservatoire, afterwards a pupil of Galin (q.v.), and, finally, a teacher according to the method (Melo-plast) of the latter. He published "La musique apprise sans maître" (1824, etc.); "Solfège méloplaste" (1826); and "Tableau synoptique des principes de la musique" (1836).

Jula, obsolete name of a Quint stop $5\frac{1}{2}$ ft.

Julien (Jullien), Louis Antoine, b. April 23, 1812, Sisteron (Basses-Alpes), d. March 14, 1860, Paris; he studied under Halévy at the Paris Conservatoire, but was not a steady worker, and, on account of his inclination towards dance

music, was dismissed from that institution. His dances, marches, potpourris, etc., were extremely popular, and he made a name as conductor of the ball concerts of the Jardin Turc; but he fell into debt, was compelled to leave Paris, and went in 1838 to London, where he gathered together an excellent orchestra and established promenade concerts, and travelled through England, Scotland, and Ireland, and even America, with his whole orchestra. In order to derive greater benefit from his compositions, he set up a music business in London. He was completely ruined by an operatic undertaking which he set on foot for the purpose of producing his opera *Pietro il grande*. Escaping once again from his creditors, he was arrested for debt in Paris and imprisoned. Shortly after his liberation he lost his reason.

Julien, (1) Marcel Bernard, b. Feb. 2, 1798, d. Oct. 15, 1881, Paris. He was general secretary of the "Société des Méthodes d'Enseignement" at Paris. He wrote: "De quelques points des sciences dans l'antiquité; physique, métrique, musique" (1854); "Thèses supplémentaires de métrique et de musique anciennes," etc. (1861); and "De l'étude de la musique instrumentale dans les pensions des demoiselles" (1848).

(2) Jean Lucien Adolphe, son of the former, b. June 1, 1845, Paris, writer on music, contributor to the *Revue et Gazette Musicale*, *Le Ménestrel*, the *Chronique Musicale*, and musical critic of several political papers. He wrote: "L'Opéra en 1788" (1873); "La musique et les philosophes au XVIII. siècle" (1873); "Histoire du théâtre de Mme. Pompadour, dit théâtre des petits cabinets" (1874); "La comédie à la cour de Louis XVI., le théâtre de la reine à Trianon" (1873); "Les spectateurs sur le théâtre" (1875); "Le théâtre des demoiselles Verrières" (1875); "Les grandes nuits de Sceaux, le théâtre de la Duchesse du Maine" (1876); "Un potentat musical" (1876); "L'église et l'opéra en 1735"; "Mademoiselle Lemaure et l'évêque de Saint-Papoul" (1877); "Weber à Paris" (1877); "Airs variés; histoire, critique, biographie musicales et dramatiques" (1877); "La cour et l'opéra sous Louis XVI.; Marie Antoinette et Sacchini, Salieri, Favart et Gluck" (1878); "La comédie et la galanterie au XVIII. siècle" (1879); "Histoire des costumes au théâtre" (1880); "Goethe et la musique" (1880); "L'opéra secret au XVIII. siècle" (1880); "La ville et la cour au XVIII. siècle" (1881, contains some of the aforementioned); "La comédie de la cour . . . pendant le siècle dernier" (1883); "Paris dilettante au commencement du siècle" (1884); finally "Richard Wagner, sa vie et ses œuvres" (1886); and "Hector Berlioz" (1888)—the last two are works of great merit, and splendidly got up in large 4to, with many illustrations.

Jumilhac, Dom Pierre Benoit de, b. 1611,

at the castle of St. Jean de Ligour, near Limoges, d. April 21, 1682, as adjunct to the general of the order of the Benedictines (congregation of St. Maur). He wrote "La science et la pratique du plain chant" (1673), a learned and exhaustive work with many musical examples, republished by Nisard and Leclerc (1847).

Junk, Benedetto, gifted Italian composer, b. Aug. 24, 1852, Turin (his father was a native of Alsace). Though he showed early signs of talent, he was sent to a business house at Paris. When, in 1872, his father died, he followed his inclination and became a pupil of Mazzucato and Bazzini at Milan, where he lived from that time. His works up to now are: Op. 1, "La Simona," twelve songs (libretto by Fontana), for soprano and tenor (1878); Op. 2, eight romances; Op. 3, two songs (Heine and Panzacchi wrote the words to Ops. 2 and 3); Op. 4-5, violin sonatas in G and D; Op. 6, a quartet for strings in E (1886).

Jungmann, (1) Albert, b. Nov. 14, 1824, Langensalza, d. Nov. 7, 1892, at Pandorf, near Krems, business manager of the house of Spina, Vienna, composer of many drawing-room pieces, songs, etc.

(2) Louis, b. Jan. 1, 1832, Weimar, d. there Sept. 20, 1892, pupil of Töpfer and Liszt, teacher of music at the "Sophieninstitut." He published pf. pieces, songs, etc.

Jungst, Hugo, b. Feb. 26, 1853, Dresden, where, from 1871-76, he was pupil of the Conservatorium, in 1876 founder and conductor of the Dresden Male Choral Society, also conductor of the Julius-Otto Association. He has composed many choruses for male voices.

Junker, Karl Ludwig, b. about 1740, Oehringen, d. May 30, 1797, as pastor in Ruperts-hofen, near Kirchberg. He composed three piano concertos, a cantata (*Die Nacht*, with violin and cello), a melodrama (*Genoveva im Thurm*), etc. He wrote: "Zwanzig Komponisten; eine Skizze" (1776; 2nd ed. under the title of "Portefeuille für Musikliebhaber," 1790); "Tonkunst" (1777); "Betrachtungen über Maler-, Ton- und Bildhauerkunst" (1778); "Einige der vornehmsten Pflichten eines Kapellmeisters oder Musikdirectors" (1782); "Ueber den Wert der Tonkunst" (1786); "Musikalischer Almanach" (1782, 1783, 1784); and "Die musikalische Geschichte eines Autodakts in der Musik" (1783). He also contributed articles to Meusel's "Miscellaneen" and "Museum für Künstler."

Jupin, Charles François, b. Nov. 30, 1805, Chambéry, d. already June 12, 1839, Paris, a distinguished, early-developed violin-player, pupil of the Paris Conservatoire; for several years he was maître de chapelle at Strassburg. He composed a violin concerto, a trio for strings, a trio for pf., fantasia for pf. and violin, and several sets of variations.

Jürgenson, Peter, b. 1836, Revel; he founded in 1861 the important music-publishing business at Moscow bearing his name (specially works of Russian composers: Tschaikowsky, etc.), and added a printing establishment to it in 1867.

Just Intonation is the intonation of intervals exactly according to the requirements of the mathematical determination of tone—for

example, of the fifth as 2:3. The J. I. of an interval is possible with the help of combination tones, but, if logically carried out, this leads to results of an extremely complicated nature; and the question as to which of the two (J. I. or equal temperament) (*see* TEMPERAMENT) is the more advantageous must probably be decided in favour of the latter. (*Cf.* HARMONIUM.)

K.

Kaan, Heinrich von (Albést-K.), b. May 29, 1852, Tarnopol (Galicia), pupil of Blodek and Skubersky at Prague, pianist and composer (chamber-music, pf. concertos, symphonic poem "Sakuntala," ballet "Bojaja," "Frühlingscklogner" for orchestra); he lives at Prague, where he was appointed professor at the Conservatorium, 1890.

Kade, Otto, b. 1825, Dresden, pupil of J. Otto and J. G. Schneider; after residing for a year and a half in Italy for the purpose of study, he founded (1848) the Cecilia Society (for old church music) at Dresden, where he was musical director of the Neustadt Church, and in 1860 became Schäffer's successor with the title of "Grossherzoglicher Musikdirektor," and undertook the direction of the palace music at Schwerin, in which post, both as director and composer, he displayed extraordinary activity. In 1884 he received the title of *Dr. Phil. hon.c.* from the Leipzig University. K. wrote many compositions in old Gregorian style for the liturgy of the Evangelical Church ("Kantionale," in three parts; 3rd part 1880), a "Choralbuch" for Mecklenburg-Schwerin (1869), etc. K. has also been an active investigator in the department of musical history, and to him we are not only indebted for valuable articles in the *Monatshefte für Musikgeschichte*, in the *Allg. Mus. Zeitung*, but also for a pamphlet, "Der neu aufgefundene Luther-Kodex vom Jahr 1530" (1872); monographs on Le Maistre and Heinrich Isaak, and a translation of Scudo's "Le Chevalier Sarti." He also edited the musical supplements to the 3rd vol. of Ambros' "Geschichte der Musik" (1881, forming a 5th vol.). In 1893 K. commenced a remarkable publication, consisting of old "Passions" (thirty-four numbers, extending from Obrecht to H. Schütz), and it is to be hoped that the undertaking will be brought to a successful close.

Kafka, Johann Christian, b. 1759, Ratisbon, pupil of Riepel, actor, singer, and composer; he appeared on the boards at Breslau, Petersburg, Dessau, in 1803, and established a publishing-house at Riga. K. wrote a series of operettas, ballets, also two oratorios, besides symphonies, masses, vespers, a requiem, etc.

Kafka, Johann Nepomuk, *salon* composer, b. May 17, 1819, Neustadt-a.-d.-Mettau

(Bohemia), d. Oct. 23, 1886, Vienna; he first studied law, but turned to music, and wrote a large number of brilliant but easy pf. pieces. K. was an enthusiastic collector of autographs.

Kahl, Heinrich, b. Jan. 31, 1840, Munich, d. Aug. 6, 1892, Berlin, attended school and the Conservatorium at Munich, and entered the court chapel; from 1857-66 leader of the royal band, Wiesbaden; then became theatre capellmeister at Riga, Stettin, Aachen; in 1872 chorus director at the Berlin Court Opera, and in 1880, royal capellmeister.

Kahlert, August Carl Thimotheus, worthy writer on music, b. March 5, 1807, Breslau, d. there March 29, 1864. He first studied jurisprudence, and was already referendary when he decided to study philosophy, and in this new vocation became professor of philosophy at Breslau. From youth upwards he was thoroughly grounded in music, and became a diligent contributor to Dehn's *Cäcilia*, and to the *Allg. Mus. Zig*. He also published on his own account: "Blätter aus der Brieftasche eines Musikers" (1832), and "Tönenleben" (1838); some of his songs also became popular.

Kahn, Robert, b. July 21, 1865, Mannheim, studied under Vincenz Lachner, Kiel, and Rheinberger. Since 1891 he has been conductor of a ladies' choral society at Leipzig, and has shown himself a talented composer of tertzes and quartets for female voices, songs, pf. pieces, and some chamber music (quartet for strings, pf. quartet, trio, violin sonata).

Kahnt, Christian Friedrich, b. May 10, 1823, founder, and up to 1886 proprietor, of the Leipzig music publishing firm bearing his name. From 1857 he was publisher, and after Brendel's death (1868) nominal editor, of the *Neue Zeitschrift für Musik*; he is also treasurer of the "Allg. deutscher Musikverein," "Grossherzoglich sächsischer Kommissionsrat," etc. Among other important works the house has published a series of compositions by Liszt. On the 1st of July, 1886, the firm, together with the editorship of the *N. Zeitschr. f. M.*, was acquired by Oskar Schwalm, who carried on the business under the title of "C. F. Kahnt Nachfolger." In 1888 the property passed into the hands of Dr. Paul Simon (b. Jan. 22, 1857, Königsberg),

who also undertook the editorship of the *N. Zeitschr. f. Musik*.

Kaiser, (1) Karl, b. March 12, 1837, Leipa (Bohemia), d. Dec. 1, 1890, Vienna; he studied philosophy at Prague, was then an officer in the army 1857-63, but at length turned to music, and in 1874 established a school of music at Vienna, which soon became popular; it is now under the direction of his son Rudolph.

(2) Emil, b. Feb. 7, 1850, Coburg, military bandmaster at Prague. He composed the operas: *Die Kavaliers des Königs* (Salzburg, 1879), *Der Trompeter von Säckingen* (Olmütz, 1882), *Andreas Hofer* (Reichenberg, 1886), *Der Kornet* (Leipzig, 1886), and *Rodenstein* (Brünn, 1891).

Kalamajka, a lively Hungarian national dance in quick $\frac{3}{4}$ time.

Kalbeck, Max, b. Jan. 4, 1850, Breslau, showed at an early age a taste for poetry, music, and painting, devoted himself especially to the first, and, already in 1870-72, through the good offices of Holtei, published poems ("Aus Natur und Leben"), soon exchanged the study of jurisprudence for that of philosophy, and in Munich, whither he had betaken himself for the purpose of study, devoted himself entirely to poetry; in this matter, however, he quarrelled with his father, and now chose music as a vocation (pupil of the Munich School of Music). In 1875 he undertook the post of musical critic and feuilletonist to the *Schlesische Zeitung* at Breslau, and assistant in the management of the Silesian Museum, but soon fell out with the director of the Museum, resigned the last-named post, and exchanged the first for one of a similar character on the *Breslauer Ztg.* In 1880, on the recommendation of Hanslick, he became a writer on the *Wiener Allg. Ztg.* At present he is musical critic of the *Wiener Montags Revue* and "Burgtheater" critic for the *Neue Wiener Tageblatt*. Apart from his activity as a critic, K. first became known in musical circles by his studies on Wagner's music-dramas (*Nibelungen*, 1876; *Parzifal*, 1880). In 1881 there appeared a collection of his articles ("Wiener Opernabende"). He won great merit by new poems and translations of opera libretti (da Ponte's *Don Giovanni* [1886, for the Mozart-Don-Juan secular festival at Vienna], also Mozart's *Bastien und Bastienne* and *Gärtnerin aus Liebe*, *Die Maieuhönigin*, with arias by Gluck; Massenet's *Cid* and Werther, Verdi's *Otello* and *Falstaff*, Mascagni's *Freund Fritz* and *Rantzau*, Smetana's *Verkaufte Braut* and *Dalibor*, Smareglia's *Vasall zu Szigeth*, Hubay's *Geigenmacher von Cremona*, Giordano's *Mala Vita*, and Cilea's *Tilda*). A selection of his poems appeared under the title "Aus alter und neuer Zeit."

Kalischer, Alfred, b. March 4, 1842, Thorn, studied philology and took his degree at Leipzig, then studied music at Berlin under Const.

Bürgel and C. Böhmer. He has since lived in that city as teacher and writer; he edited (1873) the *Neue Berliner Musikzeitung*, has contributed much to the *Klavierlehrer* and the *N. Z. f. Musik*, and published important works: "Beethoven's Beziehungen zu Berlin," "Luther's Bedeutung für die Tonkunst," "Lessing als Musikästhetiker," "Musik u. Moral," etc.

Kalkbrenner, (1) Christian, b. Sept. 22, 1755, Minden, d. Aug. 10, 1806, Paris; when young he went to Cassel, where his father was town musician. K. lived there for many years in a subordinate post as chorus-singer at the Opera, although he had already published numerous compositions, and had been named honorary member of the Liceo Filarmonico at Bologna. In 1788 he was at last appointed capellmeister to the queen at Berlin, and in 1790 to the prince Heinrich at Rheinsberg, but resigned this post in 1796 for unknown reasons; he lived for a time in Naples, then in Paris, where in 1799 he was appointed *répétiteur* at the Grand Opéra. K. achieved nothing remarkable either as composer or writer. His operas written, some for Rheinsberg, some for Paris, met with no success; of instrumental music he published some trios, violin sonatas, pf. variations, etc. His writings are: "Kurzer Abriss der Geschichte der Tonkunst" (1792; afterwards in revised form as "Histoire de la musique," 1802, two small vols.); "Theorie der Tonsetzkunst" (1789); "Traité d'harmonie et de composition par Fr. X. Richter" (compiled from the manuscript by K., 1804).

(2) Friedrich Wilhelm Michael, son of the former, b. 1788, on a journey between Cassel and Berlin, d. June 10, 1849, Enghien-Bains, near Paris. In 1799 he became a pupil of Adam's for the pianoforte at the Paris Conservatoire, afterwards studied harmony with Catel; in 1803 his father sent him to Vienna, in order to withdraw him from the dangers of Parisian life. He studied there for a time under Clementi. Owing to the death of his father, he returned to Paris, 1806, appeared with great success as a pianist, and was very much sought after as a teacher. From 1814 to 1823 he lived in London, and in 1818 joined Logier in making known the Chiroplast (q.v.), invented by the latter. In 1823 he travelled through Germany with Dizi the harp virtuoso, and in 1824 settled in Paris as a partner in the Pleyel pianoforte manufactory. Madame Pleyel was one of his pianoforte pupils. K.'s system was to render the fingers as skilful as possible without using arm power; he also originated modern octave technique (from the wrist). He devoted especial attention to the left hand, for which he wrote special pieces (sonata, Op. 42, "pour la main gauche principale"), Fugue à 4 for the left hand only, in his Méthode. To pedal technique he likewise devoted much attention. Many of his pianoforte compositions are of a light, drawing-

room *genre* (fantasias, caprices, variations, etc.), but he wrote also many larger and solidly-planned works: four concertos (one for two pianos), rondos, fantasias, and variations for orchestra, one pf. septet, one pf. sextet, two pf. quintets, one pf. quartet, pf. trios, violin sonatas, ten piano sonatas for two, and three for four hands, which still well deserve attention; studies (Op. 20, 88, and 143 are still of value at the present day), etc.; finally a pf. Method, "Méthode pour apprendre le piano-forte à l'aide du guide-mains" (1830; cf. Chiroplast), and a "Traité d'harmonie du pianiste" (1849).—His son Arthur, d. Jan. 24, 1869, well known in Paris through his eccentric and dissipated life, published *salon-music*.

Kalliwoða, (1) Johannes Wenzeslaus, an able violinist and estimable composer, b. Feb. 21, 1801, Prague, d. Dec. 3, 1866, Carlsruhe. He was a pupil of Dionys Weber and Pixis at the Prague Conservatorium, from 1823–53 capellmeister to the Prince of Fürstenberg at Donaueschingen, and then lived at Carlsruhe. He wrote seven symphonies, several overtures, violin concertos, and other solo pieces for violin, three string quartets, a concertante for two violins (Op. 20), and the much-sung Austrian "Deutsches Lied," etc. Cf. the articles by Tottmann (Ersch and Gruber's Encyclopædia, II., vol. 32), Hiller ("Erinnerungsblätter," p. 110, etc.), and Gathy (*N. Z. f. Musik*, 1849).

(2) Wilhelm, son of the former, b. July 19, 1827, Donaueschingen, d. Sept. 8, 1893, Carlsruhe; at first a pupil of his father, studied afterwards at the Leipzig Conservatorium. He was an able pianist and composer of pf. pieces and songs, and was for a long time, as his father's successor (1853), court capellmeister at Carlsruhe; in 1875 he retired into private life.

Kallwitz (Kalwitz). (See CALVISIUS.)

Kamienski, Matthias, b. Oct. 13, 1734, Oedenburg (Hungary), d. Jan. 25, 1821, Warsaw, was the first Polish opera composer; his *Nadżda Usześliwiona* was produced in 1775 at the National Theatre at Warsaw. He also wrote five other Polish operas for Warsaw, two German operas (not produced), several sacred works, and a cantata for the unveiling of the Sobieski memorial.

Kammercantate (Ger.), chamber cantata.

Kammerconcert (Ger.), a chamber concerto, or a chamber concert.

Kammerlander, Karl, b. April 30, 1828, Weissenhorn, d. Aug. 24, 1892, as cathedral capellmeister at Augsburg; song writer and composer.

Kammermusik (Ger.), chamber music.

Kammersänger (Ger.), a singer in the service of a prince.

Kammerton (Ger.), "Chamber pitch," concert pitch. (*Vide* Chor-Ton.)

Kammervirtuose (Ger.), a virtuoso in the service of a prince.

Kandler, Franz Sales, b. Aug. 23, 1792, Klosterneuburg (Lower Austria), d. Sept. 26, 1831, Baden, near Vienna, as royal military draughtsman. He obtained a thorough musical training (soprano singer in the Vienna court choir, afterwards a pupil of Albrechtsberger, Salleri, and Gyrowetz), and during his eleven years' official service at Venice and Naples (1815–26) he found time to study Italian music and its history. We are indebted to him for numerous articles in the Vienna *Musikantische Zeitung* (1816–17), in the *Allgemeine Musikalische Zeitung* (1821), in the *Cäcilie* (1827), *Revue Musicale* (1829), etc., and for the pamphlets "Cenni storico-critici intorno alla vita ed alle opere del celebre compositore Giov. Adolfo Hasse, detto il Sassone" (1820); "Ueber das Leben und die Werke des G. Pierluigi da Palestrina, genannt der Fürst der Musik" (1834; extract from Baini's work, published by Kiesewetter), and "Cenni storico-critici sulle vicende e lo stato attuale della musica in Italia" (1836, from posthumous papers and articles in the *Cäcilie*).

Kanoon (Quānōn), an Oriental stringed instrument not unlike our Zither. The name points to the ancient Canon, i.e. the Monochord, on which, already in ancient times, several strings were stretched, in order to be able to show at the same time the ratios of different sounds.

Kapelle (Ger.), a chapel. A musical establishment—consisting of a choir of singers, of a band of instrumentalists, or of both—connected with a church or a court, or in the pay of a nobleman. Now the expression is generally applied to a band of instrumentalists. (Cf. CAPPELLA.)

Kaps, Ernst, b. Dec. 6, 1826, Döbeln, d. Feb. 11, 1887, Dresden, as pianoforte-maker to the Saxon court; his speciality was the semi-grand piano.

Kapsberger, Johann Hieronymus von, German by birth, lived first at Venice (1604), and then at Rome, where he attracted notice as an excellent performer on the theorbo, lute, chitarrone, etc., also as a composer in the modern (Florentine) style, who by fulsome flattery understood how to win favour at the Papal Court (Urban VIII.). He appears to have died about 1650. K. was a very vain man, but by no means a bad musician. His tablature for lute instruments differs from that of his contemporaries, and is very much simpler. His principal works are: "Intavolatura di chitarrone" (three books; 1604, 1616, 1626); "Villanelle a 1, 2, e 3 voci" (in tablature for chitarrone and guitar; six books: 1610, 1619 [à 2 and 3], 1623, 1630, 1632); "Arie passeggiante" (in tablature, three books: 1612, 1623,

1630); "Intavolature di lauto" (two books: 1611, 1623); madrigals with continuo à 5 (1609); "Motetti passeggiati" (1612); "Balli, gagliarde e correnti" (1615); "Sinfonie a 4 con il basso continuo" (1615); "Capricci a due stromenti, tiorba e tiorbino" (1617); two books of Latin poems of Cardinal Barberini (Pope Urban VIII.) for one voice with figured bass (1624, 1633); "Die Hirten von Bethlehem bei der Geburt des Herrn" (dialogue in recitative form, 1630); "Missæ Urbanæ" (à 4-8, 1631); "Apotheose des heil. Ignatius von Loyola" (K. was especially friendly with the Jesuits; A. Kirchner was his admirer); besides several wedding cantatas and a musical drama, *Fetonte* (1630). He left in manuscript many other works of a similar character to those already mentioned.

Karajan, Theodor Georg von, b. Jan. 22, 1810, Vienna, d. April 28, 1873, a sub-director of the Vienna Court Library and president of the Academy of Sciences; he was an authority on German literature and music, and writer on literature. He published: "J. Haydn in London 1791 and 1792" (1861), a valuable monograph, which contains the correspondence of Haydn with Marianne v. Genzinger.

Karasowski, Moritz, b. Sept. 22, 1823, Warsaw, d. April 20, 1892, Dresden; he received lessons on the pianoforte and 'cello from Valentin Kratzer; became 'cellist in the orchestra of the Grand Opera, Warsaw, in 1851, and, from 1858-60, made tours for the purpose of study to Berlin, Vienna, Dresden, Munich, Cologne, Paris; from 1864 he was royal chamber-musician ('cellist) at Dresden. Besides some pieces for 'cello with pf., he published several treatises on the history of music, namely, in Polish: "History of the Polish Opera" (1859), "Mozart's Life" (1868), "Chopin's Early Days" (1862, 2nd ed. 1869), and in German: "Friedrich Chopin, sein Leben, seine Werke und Briefe" (1877; 2nd revised ed. 1878; 3rd ed. 1881).

Karow, Karl, b. Nov. 15, 1790, Alt-Stettin, d. Dec. 20, 1863, as teacher of music at a training school at Bunzlan (Silesia), was an esteemed teacher, and wrote motets, organ and pf. pieces, a "Choralbuch" and a "Leitfaden für den Schulgesangunterricht."

Käsmeyer, Moritz, violinist and composer, b. 1831, Vienna, d. there Nov. 9, 1884, pupil of the Vienna Conservatorium (S. Sechter and Preyer), was violinist in the Opera orchestra, wrote masses and other sacred works, songs and part-songs, five stringed quartets (printed). He was an excellent musical humorist.

Kastner, (1) Johann Georg, composer, theorist, and musical investigator, b. March 9, 1810, Strassburg, d. Jan. 19, 1867, Paris. Although from an early age he showed talent for music, he was trained for the church, and attended the Protestant theological college of

his native town, but at the same time studied music seriously. In 1830 he became band-master of a militia regiment of his native city, definitely abandoned theology in 1832, and in 1835, owing to the successful production of one of his German operas, the town council of Strassburg gave him the means of going to Paris, where he completed his musical studies under Berton and Reicha. With his "Traité général d'instrumentation," which appeared in 1837 (the first of the works of a similar kind in France), he commenced the long series of excellent educational treatises approved of by the Académie, and adopted by the Conservatoire:—"Cours d'instrumentation considéré sous les rapports poétiques et philosophiques de l'art;" "Grammaire musicale;" "Théorie abrégée du contrepoint et de la fugue;" "Méthode élémentaire d'harmonie appliquée au piano;" "Méthodes élémentaires de chant, piano, violon, flageolet, flûte, cornet à piston, clarinette, cor, violoncelle, ophicléide, trombone, hautbois;" "Méthode complète et raisonnée de Saxophone;" "Bibliothèque chorale;" "Méthode complète et raisonnée de timbales;" "Mannet général de musique militaire." The two last-named works deal with their subject also from an historical point of view. Kastner's treatise on instrumentation was soon forgotten when Berlioz published his work on orchestration based on Kastner. A comprehensive work, "De la composition vocale et instrumentale," a "Cours d'harmonie moderne," and a "Traité de l'orthographe musicale" remained unpublished. K. was also a prolific and successful composer. Besides five German operas written at Strassburg, he composed another of the same kind, *Beatrice* (1839; libretto after Schiller by G. Schilling), also the comic opera *La Maschera* (1841), which was produced in Paris; the grand Biblical opera, *Le dernier roi de Juda* (1844, words by M. Bourges; K.'s most important work); the comic opera, *Les Nonnes de Robert le Diable* (libretto by Scribe, 1845), and a number of vocal and instrumental compositions, large and small, especially choruses for male voices. K.'s most characteristic creations are his "Livres-Partitions," great symphonic tone-poems, including also treatises on the various subjects from a musicohistorical and philosophical point of view; "Les danses des morts" (Paris, 1852); "Les chants de la vie" (collection of male choruses, Paris, 1854); "Les chants de l'armée française" (Paris, 1855); "La harpe d'Éole et la musique cosmique" (Paris, 1856); "Les voix de Paris" (Paris, 1857); "Les Sirènes" (Paris, 1858); "Parémiologie musicale de la langue française" (Paris, 1866). K. was also an active contributor to French and German musical papers, to Schilling's "Lexikon der Tonkunst," etc. K.'s enterprise was fully acknowledged, and, among other distinctions, he was named *Dr. hon. causa* of the University of Tübingen, member of the

Institut de France, and of various foreign societies, member of the "Comité des Études" of the Paris Conservatoire, "Officier de la légion d'honneur," etc. His activity was displayed in every branch of musical art, especially in France for the "Orphéons" and military music; in connection with the latter K. was the originator of the "Concours européen de musiques militaires" at the Paris Exhibition of 1867. K. was one of the founders, and afterwards vice-president, of the "Association des artistes-musiciens." A happy blending together of German and French natures, together with his own artistic individuality, explains, for the most part, that fascinating originality which distinguishes the compositions of K., and the valuable services which he rendered to the history of music. His biography, "J. G. Kastner ein elsässischer Tondichter, Theoretiker und Musikforscher," was written by Hermann Ludwig (von Jan), and published at Leipzig by Breitkopf and Härtel (two parts in three vols.). A German version of K.'s chief works has been commenced. K.'s library was sold and dispersed.

(2) Georg Friedrich Eugen, son of the former, b. Aug. 10, 1852, Strassburg, d. April 6, 1882, Bonn, physicist, inventor of the "Pyrophon" ("Flammenorgel"). His investigations with regard to the laws of vibration are worthy of note; these are explained in his "Théorie des vibrations et considérations sur l'électricité" (3rd ed., Paris, 1876; German, "Theorie der Schwingungen und Betrachtungen über die Elektricität," Strassburg, 1881), and in "Le pyrophone, flammes chantantes" (4th ed., Paris, 1876). (Cf. the Biography of Joh. Georg K., last section of the third volume.)

(3) Emmerich, b. March 29, 1847, Vienna, pupil of Bibl, Pirkert, etc. He lives at Vienna as a writer on music, edited for some time the *Wiener Musikalische Zeitung* (afterwards *Paysfal*) and published a "Richard Wagner Katalog." His "Neuestes und vollständigstes Tonkünstler und Opern-Lexikon" (1889, A—Azzoni) appears not to have been continued.

Kate, André ten, 'cellist and composer, b. 1796, Amsterdam, d. July 27, 1858, Haarlem, pupil of Bertelmann; he wrote several operas, of which *Seid e Palmira* (1831) and *Constantia* (1835) were successfully produced at Amsterdam, also chamber-music, part-songs, etc. He did much to improve the state of music in Holland.

Kauer, Ferdinand, b. Jan. 8, 1751, Klein-Thaya (Moravia), d. April 13, 1831, Vienna. He was formerly a famous composer of Viennese *Singspiele*, and alternately capellmeister at the Josephstadt, Graz, and Leopoldstadt Theatres; and, in his old days, when no longer *à la mode*, tenor-player at the Leopoldstadt theatre. He composed about two hundred operas and operettas, of which *Das Donauweibchen* and *Die Sternenkönigin* were published,

and the first of these is to this day in the *répertoire* of minor theatres. He wrote besides, symphonies, chamber-music, concertos, over twenty masses, several requiems and other sacred works, oratorios, cantatas, songs, etc., which were nearly all destroyed at the overflowing of the Danube, March 1, 1830.

Kauffmann, (1) E. F., professor at the Heilbronn Gymnasium about 1850-65, noteworthy song composer in a simple, but noble and expressive style (a selection of thirty-six songs [six books, each of six], published by E. Ebner, Stuttgart). His son Emil has been for some years musical director at the Tübingen University.

(2) Fritz, b. June 17, 1855, Berlin, where he studied with Mohr, became druggist at Hamburg, then attended the Royal High School of Music at Berlin (Kiel), won the Mendelssohn scholarship, and went to Vienna in 1881 for further training. In 1889 he succeeded Rebling as musical director at Magdeburg. K. has composed pf. sonatas, a trio, a quartet in G minor, variations for stringed quartet, a symphony in A minor, a comic opera (*Die Herzkrantheit*), etc.

Kaufmann, (1) Georg Friedrich, b. Feb. 14, 1679, Osramondra, near Kölleda (Thuringia), d. beginning of March, 1735, as "Hofkapell-direktor" and organist at Merseburg. He wrote many works for harpsichord and organ, sacred compositions, also a treatise—"Introduzione alla musica antica e moderna," *i.e.* "Eine ausführliche Einleitung zur alten und neuen Wissenschaft der edeln Musik." All his works remained in manuscript except "Harmonische Seelenlust" (sets of chorale preludes à 2-4, 1735-36).

(2) Johann Gottfried, b. April 14, 1751, Siegmarsdorf, near Chemnitz (Saxony), mechanician at Dresden, d. 1818, at Frankfurt, while on a journey to display his inventions. He constructed musical clocks, and, among other things, a harp and a flute clock.

(3) Friedrich, son of the former, b. 1785, Dresden, d. there Dec. 1, 1866. His trumpet-automaton (1808) attracted considerable notice. His "Belloneon," constructed jointly with his father, also his "Klavaturharmonichord" and "Chordaulodion," must be classed among fugitive experiments in the construction of instruments. On the other hand, his "Symphonion" (1839) was the predecessor of the "Orchestrion," completed in 1851 by his son, Friedrich Theodor (b. April 9, 1823, Dresden, d. there Feb., 1872), an instrument which came into great demand as substitute (?) for a small orchestra in coffee-gardens, etc.

Kayser (Kaiser), (1) Philipp Christoph, composer and pianoforte virtuoso, b. March 10, 1755, Frankfurt, d. Dec. 23, 1823, Zürich, son of the organist Matthäus Kayser (d. Feb. 18, 1810, Frankfurt, at the age of eighty). He was

on friendly terms with Goethe. (Cf. "Goethe und der Komponist Ph. Chr. Kayser," Leipzig, 1879.)

(2) Heinrich Ernst, able teacher of music, b. April 16, 1815, Altona, d. Jan. 17, 1888, Hamburg, where from 1840-57 he was a member of the orchestra. His études for violin, Op. 20, "position" studies, Op. 28, daily studies, and the études, Op. 30, also his method for violin, are well known and highly esteemed.

Kazynski, Viktor, b. Dec. 18, 1812, Wilna, studied under Elsner at Warsaw. He produced his opera *Fenella* at Wilna in 1840, and two years later another (*Der ewige Jude*), at Warsaw and also Wilna, and in 1843 settled in Petersburg, whence he made a journey with General Lwow through Germany for the purpose of improving his musical knowledge; the results of this tour he described in an attractive travelling-journal (1845). Soon afterwards he was appointed capellmeister at the Imperial Opera. Besides another opera (*Mann und Frau*), which met with little success (1848), he wrote many instrumental works, also cantatas and *salon* pieces for pianoforte.

Keck von Gengen, Johann, about 1450 Benedictine monk at Tegernsee, author of "Introductorium musicæ," printed in Gerbert ("Script." III.).

Keinspeck (Keinsbeck, Künspeck, incorrectly, Reinspeck), Michael, Nuremberg. He was the author of the oldest printed theoretical work on music, and especially Gregorian Song: "Lilium musicæ planæ" (Basle, 1496; Ulm, 1497; Augsburg, 1498 and 1500; Strassburg, 1506). K. describes himself on the title-page of the book—"Musicus Alexandrinus" (?).

Keiser, Reinhard, b. Jan. 9, 1674, Teuchern, near Weissenfels, d. Sept. 12, 1739, Hamburg, was trained at Leipzig (St. Thomas's School and the University). Already in 1692 he wrote a pastoral ("Ismene"), and in 1693 a grand opera (*Basilius*), for the court at Brunswick, and went in 1694 to Hamburg, which henceforth became his home. Both as regards quantity and (exception being made of Handel's few operas written for Hamburg) also quality, K. was the most important composer of the Hamburg theatre, as is well known the earliest public stage for opera in Germany (from 1678). He was possessed of extraordinary gifts, especially in the matter of melody: unfortunately, he lacked patience, and the strength necessary for serious work. For Hamburg (which on several occasions he was forced to leave on account of debt) he wrote not less than 116 operas, the last of which, however, shows no improvement on the first. Their merit consists in not being merely modelled on the Italian style. The subjects of his operas are, for the most part, taken from ancient mythology and history, and such as had been repeatedly used in Italy; the popular

subjects of the day (in part very coarse) stand alone of their kind (*Störtebecker und Goadje Michel, Die Leipziger Messe, Der Hamburger Jahrmarkt, Die Hamburger Schlachtzeit*). In 1700 he established a series of winter concerts, with an excellent orchestra and the most famous soloists; and at these concerts provision was made, not only for the soul, but also for the body, in the shape of a choice supper. In 1703, jointly with Drüsicke, he took a lease of the Opera House, but they were not successful, and Drüsicke disappeared. K. continued on his own account still up to 1706. After several years' absence (in Weissenfels), he reappeared with his portfolio full of new operas, married a wealthy lady (his wife, and, afterwards, his daughter, were excellent singers), resumed his concerts in 1716, remained at the Stuttgart court from 1719-21 in the hope of being appointed capellmeister; he went, after useless waiting, to Copenhagen in 1722 as Royal Danish capellmeister, and in 1728 returned to Hamburg as cantor and canon of Saint Catherine's Church. He was opera conductor at Moscow and Petersburg 1729-30, also, for some time, at Copenhagen, where his daughter had an engagement, and finally again at Hamburg. Besides his operas, K. wrote many sacred works (passions, motets, psalms), oratorios, cantatas, of which the following appeared in print: *Gemüths Ergötzungen* (1689), *Divertimenti serenissimi* (1713), *Musikalische Landlust* (1714), *Kaiserliche Friedenspost* (1715), etc.

Kéler Béla (really Albert von Kéler), b. Feb. 13, 1820, Bartfeld, Hungary, d. Nov. 20, 1882, Wiesbaden. He first studied law, then took to farming, and in 1845 turned his attention to music, and studied at Vienna under Schlesinger and Sechter; after that he worked for some time as violinist at the Theater-ander-Wien, and became known by his dances and marches. In 1854, for a short time, he was conductor of the orchestra (formerly known as the Gungl Band) at Berlin, and then returned to Vienna as the head of the orchestra of Lanner, lately deceased (1855), and was then bandmaster at Vienna (1856-63), and from 1873 at Wiesbaden. After that he lived in retirement in the latter town.

Keller, (1) Gottfried, pianoforte teacher of German origin who lived in London. He published "A Complete Method of Attaining to Playing a Thorough-bass upon either Organ, Harpsichord, or Theorbo-lute" (Method of general bass, 1707; several times republished); also six sonatas for two flutes and bass; and six others for two violins, trumpet, or oboe, viola and bass.

(2) Max, b. 1770, Trossberg (Bavaria), d. Dec. 16, 1855, as organist at Altötting. He published many sacred concertos (masses, litanies, Advent songs, etc.), also several books of organ pieces (preludes, cadenzas, etc.).

(3) Karl, b. Oct. 16, 1784, Dessau, d. July 19, 1855, Schaffhausen; an excellent flautist, court musician at Berlin (up to 1806), Cassel (from 1814), Stuttgart (up to 1816); he then travelled as a virtuoso, and in 1817 became court musician, afterwards theatre capellmeister at Donaueschingen, where his wife (Wilhelmine Meierhofer) was engaged as opera singer. On receiving his pension (1849), he returned to Schaffhausen. His compositions were written mostly for flute (concertos, solos, duets, variations, polonaises with orchestra, divertissements, etc.). His songs became extremely popular ("Kennst du der Liebe Sehnen?" "Helft, Leutchen, mir vom Wagen doch," etc.).

(4) F.... A.... E.... one of those who have sought, by means of self-acting machinery, to solve the problem of recording free improvisations on the pianoforte (Melo-graph, etc.); he named his apparatus "Pupitre Improvisateur," and published "Méthode d'improvisation... fondée sur les propriétés du pupitre improvisateur" (1839).

Kellermann, Christian, b. Jan. 27, 1815, Randers (Jutland), d. Dec. '3, 1866, Copenhagen. He was a distinguished performer on the 'cello, and studied under Merk at Vienna. After travelling and giving concerts for many years, he was appointed solo 'cellist in the royal band at Copenhagen (1847). On a concert tour in 1864 he had a stroke of apoplexy at Mayence, and from that time was disabled. K. only published a few solo pieces for his instrument.

Kelley, Edgar S., b. April 14, 1857, Sparta (Wisconsin), pupil of Clarence Eddy, afterwards of Krüger and Speidel at Stuttgart; he was successful in America with orchestral and choral compositions.

Kellner, (1) David, musical director of the German church at Stockholm, published "Treulicher Unterricht im Generalbass" (1732, and up to 1792 was republished nine times; in Swedish by Miklius, 1782).

(2) Johann Peter, b. Sept. 24, 1705, Gräfenroda (Thuringia), d. there, as organist, over eighty years of age. He published "Certamen musicum" (preludes, fugues, and dance pieces for piano, 1748-49), "Manipulus musices" (organ pieces), also sets of figured chorales. He left in manuscript a Good Friday oratorio, cantatas (a complete set for the year), organ trios, etc.

(3) Johann Christoph, son of the former, organist, b. Aug. 15, 1736, Gräfenroda; studied with his father and Georg Benda at Gotha; after a long residence in Holland, he became court organist at Cassel, where he died in 1803. He published seven pf. concertos, trios, pf. sonatas, organ pieces, fugues, etc., also a "Grundriss des Generalbasses" (1783, several

times republished). An opera (*Die Schadenfreude*) was produced at Cassel.

(4) Georg Christoph, writer and teacher at Mannheim, d. Sept. 1808. Besides some historical novels, he wrote: "Ueber die Charakteristik der Tonarten" (1790); "Ideen zu einer neuen Theorie der schönen Künste überhaupt und der Tonkunst insbesondere" (in Egger's *Deutsches Magazin*, 1800); also an elementary Method for pf., organ pieces, songs, etc.

(5) Ernst August, a descendant of Johann Peter K., b. Jan. 26, 1792, Windsor, d. July 18, 1839, London. He was one of the youngest of musical prodigies. At the age of five he played at court a Handel harpsichord concerto (his father was violinist to the queen). He afterwards became an excellent singer, went to Italy in 1815, studied still under Crescentini at Naples, achieved double triumphs as pianist and singer in Vienna, London, Petersburg, and Paris, and finally settled down as organist of the Bavarian chapel in London. A biographical notice of K. appeared at London in 1839 ("Case of Precocious Musical Talent," etc.).

Kellogg, Clara Louise, b. July, 1842, Sumterville, South Carolina, celebrated stage-singer (lyric and *soubrette* parts). She made her *début* in 1861 at New York as Gilda in *Rigoletto*, and in 1867 as Margherita in Gounod's *Faust*, London, where, since that time, she has sung repeatedly. In 1874 she successfully organised an English troupe at New York, and sang in it during the winter (1874-75) 125 times.

Kelly, Michael, b. about 1764, Dublin, d. Oct. 9, 1826, Margate (his full name was Michael O'Kelly, and he was called by the Italians Occhelli); he was a famous singer and a prolific composer. He studied under the best Italian teachers in London, and also under Aprile at Naples. He appeared in that city in 1781 with great success, was then engaged from 1784-87 at the "Hoftheater," Vienna, and enjoyed the friendship of Mozart. In 1787 he returned to London, won triumphs on the stage and in the concert-room. He made his *début* as an operetta composer with *False Appearances* and *Fashionable Friends*. In the course of the next thirty odd years he wrote music for more than sixty stage pieces, as well as English, French, and Italian songs. In 1802 he opened a music shop, but failed in 1811; about the same time he retired from the stage. After that he was engaged in the wine trade. His wines, however, appear to have been bad, and his compositions not always original. "Grove's Dictionary" relates that the wit Sheridan described him as a "composer of wines and importer of music." In 1826 he published his *Memoirs* ("Reminiscences of the King's Theatre;" see an epitome in the *Allg. Mus. Ztg.*, 1880).

Kemangeh (or Kemantsche), an old Arabian instrument with a small sound-board (cocoon shell covered with serpent's skin), long neck and foot, and only one string. (Cf. M. Fürstenau, "Geschichte der Bogeninstrumente," 1882, pp. 16 and 17.)

Kemp, Joseph, b. 1778, Exeter, d. May 22, 1824, London. He was a pupil of William Jackson; in 1802 organist at Bristol, and in 1809 at London. In 1808 he took his Mus.Bac., and in 1809 the Mus. Doc. degree at Cambridge, and was one of the first who introduced into London the system of teaching music to numbers simultaneously. He gave lectures to prove the suitability of this method, and published a pamphlet, "New System of Musical Education." He composed anthems, psalms, songs, duets, some melodramas, also "Musical Illustrations of the Beauties of Shakespeare," "Musical Illustrations of *The Lady of the Lake*," and published the *Vocal Magazine*.

Kempis, Nicolaus, a, organist of Ste. Gudule, Brussels, in the middle of the 17th century, probably of Italian descent, for he is quoted as Florentino. He published at Antwerp "Symphonie 1, 2, 3 violinorum" (1644), "Symphonie 1-5 instrumentorum, adjunctae 4 instr. et 2 voc." (two books, 1647 and 1649), for stringed instruments and voices (1644-49), likewise a book of masses and motets à 8 with continuo (1650). His chamber-music ranks among the best of his time. (See the sonata in Riemann's "Early Chamber Music.")

Kempter, Karl, b. Jan. 17, 1819, Limbach, near Burgau (Bavaria), d. March 11, 1871, as capellmeister of Augsburg Cathedral. He composed many sacred works (masses, graduals, etc.); likewise several oratorios, *Johannes der Täufer, Maria, Die Hirten von Bethlehem, Die Offenbarung*, and published a collection ("Der Landchorregent") for the use of small churches.

Kenn, J., famous horn-player, German by birth. He went to Paris in 1782, became second horn at the Grand Opéra in 1783; entered the band of the National Guards in 1791, and in 1795 became teacher of the horn at the newly established Conservatoire (with Donnich and Duvernoy); but in 1802, when the staff of teachers was reduced, he was dismissed. Dauprat became his successor at the Opéra in 1808. Fétis praises K. as a horn-player remarkable for his low notes. K. published duets and trios for horn, also duets for horn and clarinet.

Kent, James, b. March 13, 1700, Winchester, d. there May 6, 1776, chorister of the Chapel Royal under Croft, organist at Cambridge up to 1737, and then at Winchester. He retired from active life in 1774. It was only in the decline of life that K. published twelve anthems; a Morning and Evening Service, and eight more anthems appeared after his death. K. assisted Boyce in his edition of "Cathedral Music."

Kent Bugle, an improvement of the Key Bugle; so named because a performance on it, shortly after its invention, took place in presence of the Duke of Kent.

Kepler, Johannes, the celebrated astronomer, b. Dec. 27, 1571, Weil (Württemberg), d. Nov. 15, 1630, Ratisbon. In the third and fifth books of his "Harmonices mundi libri V." (1619), he treats in detail of music from a philosophical point of view.

Keras (Gk.), horn, a wind instrument of the ancient Greeks.

Keraulophon (Gk., "horn-flute"), an 8-feet English organ stop, of wide measure, and of full, sombre tone; half stop (discant). A small hole is bored in the body of the pipe, near the mouth. (Cf. HORNPIPE.)

Keren (Heb.), a Hebrew trumpet.

Kerle, Jacob van, Netherland contrapuntist, early contemporary of Orlandus Lassus, b. Ypern; he was choirmaster and canon at Cambrai. He afterwards entered the service of the Cardinal Prince-Bishop of Augsburg, Otto von Truchsess, followed his master, lived with him in Rome, and returned with him to Augsburg (1562-75). It is extremely doubtful whether, as generally supposed, he was ever in the service of the Emperor Rudolph II. He must have died about 1583. His works which have been preserved are: "Sex missæ" (à 4-5, 1562); "Sex missæ, 4 et 5 voc. et Te Deum" (1576); "Quatuor missæ" (with a Te Deum, 1583); a book of motets à 5-6 (1571; also as "Selectæ quædam cantiones"); "Moduli sacri" (à 5-6, with a "Cantio contra Turcas," 1572); "Motetti a 2, 4, e 5 voci et Te Deum laudamus a 6 voci" (1573); "Mutetæ 5 et 6 voc." (with some hymns, 1575); "Sacre cantiones" (motets à 5-6 with some hymns, 1575); a book of madrigals à 4 (1570); the first chapter of Petrarch's "Trionfo d'amore" (à 5, 1570); "Gebete für den guten Ausgang des Tridentiner Konzils" (1569), and a Song of Praise in honour of Herr Melchior Lincken (à 6, 1574). The Munich Library contains two masses by K. in manuscript.

Kerll (Kerl, Kherl, Cherle), Johann Kaspar, b. 1621, Gaimersheim, near Ingolstadt, d. Feb. 13, 1693, Munich. He was one of the oldest organ masters of importance, received his musical training, first at Vienna from maestro Valentini, was then sent to Italy by the Emperor Ferdinand III., and studied at Rome under Carissimi and Frescobaldi (probably at the same time as Froberger), was court capellmeister at Munich, 1656-73; and, finally, "Kurfürstlicher Rath" there. About 1673 he resigned his post on account of the intrigues of the chapel singers (Italians). He is then said to have been organist of St. Stephen's, Vienna (?), but he died at Munich, March, 1684. Of his organ works only the following have

been preserved: "Modulatio organica super Magnificat octo tonis" (preludes, interludes, postludes, 1686), besides clavier suites and toccatas; also a trio for violins and bass viol in manuscript. His vocal works, which have been preserved, are more numerous: "Sacrae Cantiones" (à 4 with organ bass, 1669); two books of masses (1669, à 2-5, and 1669, à 4-6, among which is a Requiem for the Emperor Leopold I.); also in manuscript, several masses and portions of masses, among which a "Missa Nigra" only in black notes (small note values from the Semiminima and Hemiolia), with which he took his revenge on the chapel singers in Munich, for they could not sing it. Finally, there exists at the Munich Library a Requiem à 5 composed in 1669, and written out by copyists in the same year; but it is not printed.

Kes, Willem, b. Feb. 16, 1856, Dordrecht, studied there under Notdurft, Tyssens, and Ferd. Böhm, went, 1871, to David at the Leipzig Conservatorium, and, with a stipend from the King of Holland, to Wieniawski at the Brussels Conservatorium, finally to Joachim at Berlin. He is a gifted violinist and composer, became leader of the "Park" Orchestra in 1876, and of the "Felix meritis" Society at Amsterdam. He was, for some years, conductor of the "Gesellschaftskonzerte" at Dordrecht, in 1883 became conductor of the "Parkschouwburg" concerts, Amsterdam; after then he lived at Dordrecht, and is now conductor of the "Concertgebouw" concerts at Amsterdam.

Kesselpauke (Ger.), a kettle-drum.

Kessler, (1) Ferdinand, b. Jan., 1793, Frankfurt, d. there Oct. 28, 1856. He was an able violinist and teacher of music, studied with his father, who was a double-bass player, and learnt theory from Vollweiler. He was an excellent teacher of theory (Fr. Wüllner was his pupil), and published pf. sonatas, rondos, etc.; some works, on a large scale, remained in manuscript.

(2) Friedrich, in 1819 appointed pastor at Werdohle (Sauerland), published, jointly with Natorp, Rinck's "Choralbuch" in figure notation (1829, 1836); he wrote, besides, "Der musikalische Gottesdienst" (1832); "Kurze und fassliche Andeutungen einiger Mängel des Kirchengesangs" (1832), and "Das Gesangbuch von seiner musikalischen Seite aus betrachtet" (1838).

(3) Joseph Christoph (really Kötztler), b. Aug. 26, 1800, Augsburg, d. Jan. 14, 1872, Vienna. He lived at Prague (1803-7), Feldsberg (up to 1811), Nikolsburg (up to 1816), and Vienna (up to 1820). Only from his seventh to his tenth year did he receive regular instruction in pianoforte-playing (from the organist Bilek at Feldsberg); for the rest, he was self-taught, and became an excellent pianist and teacher of that instrument. He taught, from 1820-26, in

the house of Count Potocki at Lemberg and Landshut, lived after that at Vienna until 1829, then until 1830, at Warsaw, 1830-35 Breslau, 1835-55 (a part from a temporary residence at Castle Graz and a journey to Carlsruhe) again at Lemberg, and, finally, from 1855, at Vienna. K.'s *Études* (Op. 20 [1825], 51, 100) are of lasting value, and have, in part, been incorporated in the *Methods* of Kalkbrenner, Moscheles, etc. As material for study they represent a somewhat high standard of technical development (more difficult than Czerny's "School of Virtuosity," and, musically, occupying a place between Hummel and Chopin). The nocturnes, variations, preludes, bagatelles, etc., were merely fugitive pieces; yet among them there are some which do not deserve to be consigned to oblivion (Op. 29, 30, 38, also Op. 104 ["Blüthen und Knospen"]). (Cf. Fr. Pyllemann's personal reminiscences of K. in the *Allg. M.-Ztg.*, 1872.)

Ketten, Henri, well-known pianist and drawing-room composer, b. March 25, 1828, Baja (Hungary), d. April 1, 1883, Paris.

Kettenus, Aloys, b. Feb. 22, 1823, Verviers, pupil of the Conservatorium at Liège, in 1845 leader at Mannheim, has lived since 1855 in England. K. composed an opera (*Stella*), pieces for violin, etc.

Ketterer, Eugen, pianist and favourite drawing-room composer, b. 1831, Rouen, d. Dec. 17, 1870, Paris.

Kettle-drum (Ital. *Timpani*; Ger. *Pauken*; Fr. *Timbales*), musically considered, the most valuable of instruments of percussion. It consists of a hemispherical kettle with stretched polished skins, which, by means of screws at the edge, can be tightened or loosened, so that the pitch of the sound of the membrane can be exactly regulated. The name of "machine-drum" is given to a K. in which the moving of the separate screws, a process which takes up a certain time, is replaced by a so-called machine which acts equally over the whole periphery. There is a small hole (sound-hole) underneath the kettle, from which extends a wide bell in the direction of the membrane; it is about six inches high, and from eight to ten inches wide at the mouth. In the modern K. the sound-hole and the bell are frequently omitted. As a K. without fresh tuning can only produce one sound, at least two drums, standing near to each other, are always used, so as, on the one hand, to avoid frequent retunings, and, on the other hand, not to limit the composer too much in his use of the K. Within recent times the number of K.s in the orchestra has been increased to three (Berlioz, Liszt, Wagner, etc.)—a great advantage, of course, both to the composer and to the drummer. It were greatly to be desired that there should be really three K.s in all orchestras of any importance. K. are constructed in two sizes: the so-called large

drum has a compass from *F*—*c*, and the small one from *B*♭—*f*. Originally they were tuned in

the tonic and dominant of the key

of the trumpets before the time of Bach and Handel. For the principal theme of the scherzo of his Ninth Symphony, Beethoven made use of the lowest note of the large drum, and of

the highest of the small one :

Formerly, when very scanty use was made of the *K.*, and when it was regularly tuned in tonic-dominant, it was treated in notation as a transposing instrument, *i.e.* the key was indicated at the beginning of the piece : Timpani in *E*♭, *B*♭, or in *D* *A*, *B*♭ *F*, etc., but the notation was always *C* *G*, or rather, *c* *G* :—

or
This custom was done away with when composers (Beethoven) ventured to use other degrees than those of tonic and dominant; the actual notes are now written.

The kettle-drum-sticks have either heads of wood, leather, or sponge; the first produce a hard, the other two an extremely soft sound. For special effects it is advisable to prescribe which kind of stick should be employed.

Keurvels, Edward H. J., b. 1853, Antwerp, studied under Benoit, was, at first, for some years, chorus-master at the Royal Theatre, Antwerp, and, since 1882, has been conductor at the "National Vlaamschen Schouwburg" (the Flemish national theatre), into which, in 1890, he introduced lyric drama (opera with dialogue : Benoit's *Pacificatie van Gent* and *Charlotte Corday*, Waelpuut's *Stella*, Beethoven's *Fidelio*, etc.). He himself wrote much for the stage (operas, *Parisina*, *Rolla*, *Hamlet*, several small operettas); also cantatas, a mass with organ, ballads, songs, etc.

Kewitsch, Theodor, b. Feb. 3, 1834, Posilge (West Prussia), was musician in the band of the 21st Regiment, then teacher and organist at Wabcz, Schwetz, and Graudenz; in 1866 teacher at the Berentseminary for music-teachers, in 1873 upper-teacher, from 1884–85 "Direktoriatsverwalter." In 1887 he was pensioned, and since then has lived at Berlin, where, from 1891–92, he edited the *Musikhörps*. At present he is editor of the *Hannoversche Musikerzeitung*, and contributor to other musical papers. For many years K. was "Diöcesanpräses" (diocesan president) of the "Caecilienverein" for Kulm. He has composed sacred vocal pieces, etc.

Key is a word of manifold signification; the front part of the levers by which the pianoforte, organ, etc. are played, the levers of wood wind

instruments, also the scale in which a piece of music is written. (See below.)

Key is the term for the mode (whether major or minor), and for the degree of the scale on which a composition is based. Instead of the two modes in use at the present day, the ancients (Greeks, Romans, Arabians, Indians, and the West during the middle ages) made use of a larger number. (Cf. GREEK MUSIC, ARABIANS, CHURCH MODES.) For the meaning of these various octave species and of scales generally, cf. SCALES. Each octave species can, at pleasure, be transposed—*i.e.* the same succession of intervals can be established starting from any note. The Greeks already had fifteen transposition scales; the Church Modes were, indeed, for a long time, only transposed in the fourth, and only at a later period in the fifth and major second below. The introduction of other transpositions in the 16th and 17th centuries was already a sign of the decay of the old system. At the present day the transpositions of the two fundamental scales (*c* major and *A* minor) may, from the following table, be easily recognised and remembered (cf. FIFTH):

Major Keys.											
Flats.						Sharps.					
2	6	5	4	3	2	x	0	x	2	3	4
C♯	G♯	F♯	E♯	D♯	C♯	F	C	G	D	A	E
7	6	5	4	3	2	x	0	x	2	3	4
Flats.						Sharps.					
Minor Keys.											

The various sharps and flats are needed to rectify the succession of intervals of the fundamental scale. For instance, if the succession from the note *c*

is to be imitated, it will at once be seen that the fundamental scale between *c*¹ and *c*², instead of having the half-tone steps between the third and fourth and seventh and eighth degrees, has them between the first and second and fifth and sixth degrees :—

The second degree must therefore be moved further away from the first, *i.e.* raised (♯ before *f*); but by this there results a half-tone between the second and third degrees, so that the latter must be raised so as to have the half-tone in the right place. In the same manner the second half-tone must be moved from its false to its true place (5–6) by raising the sixth and seventh degrees :—

Keys with flats are formed in a similar manner by moving the half-tone steps downwards, for example, F:

And this, as an aid to memory, may be added: the keys of the (upper and under) fifth of the fundamental scale have one chromatic sign; those of the (upper and under) whole tone, two; those of the minor third, three; of the major third, four; of the minor second, five; of the tritone, six; and of the chromatic half-tone, seven.

Key Relationship. (Cf. TONE RELATIONSHIP.)

Keys, Auxiliary (Ger. *Nebentonarten*), the keys nearest related to the principal key of a piece of music, especially the parallel key, and the dominant keys.

Kiel, Friedrich, one of the most important of modern composers, b. Oct. 7, 1821, Puderbach, near Siegen, d. Sept. 14, 1885, Berlin; he was first trained by his father, the village schoolmaster. K. taught himself the pianoforte and composition, and several sets of dances and variations were written already 1832-34. Prince Karl of Wittgenstein-Berleberg perceived the boy's talent, and he himself taught him the violin (1835). Already at the end of a year K. played a concerto by Viotti, and became a member of the Prince's orchestra. His first works of importance were two sets of variations for violin with orchestra. After further training in theory, under Kaspar Kummer at Coburg (1838-39), he became, in 1840, leader of the court band and music-teacher to the ducal children. His next works (1837-42) were two overtures (B minor, C), solo pieces (variations, fantasias) for piano, violin, oboe, with orchestra; a cantata, four pianoforte sonatas, pf. pieces, songs, and part-songs. On the recommendation of the Prince, and as the result of the compositions which he exhibited, he received a stipend from Friedrich Wilhelm IV., and for two and a half years (1842-44) went through a severe course of counterpoint with S. W. Dehn. From that time K. resided in Berlin. In 1850 he published his first works: Op. 1, fifteen canons, and Op. 2, six fugues; the number of his published works barely exceeds eighty. He soon acquired fame, especially after (Feb. 8, 1862) the production of his first Requiem (Op. 20) by the Stern choral society; this work was composed 1859-60, revised and published 1878; a second Requiem (Op. 80 A^b) was produced a few years before his death. The Stern choral society first brought to a hearing K.'s "Missa solennis" (March 21, 1867; composed 1865) and the oratorio *Christus* (April 4, 1874; composed 1871-72; up to 1878 performed six times at Berlin). Although these, his four chief works, are not remarkable for

thorough artistic individuality—rather, indeed, for their affinity to Bach and Beethoven, still they display such mastery, power of self-criticism, and fine esthetic instinct, that they, undoubtedly, lay claim to be ranked among the best contributions to modern musical literature. Already in 1865 K. was appointed member in ordinary of the Academy of Arts, and in the following year became teacher of composition at the Stern Conservatorium, and contributed greatly towards the reputation of that institution. After the title of professor had been bestowed on him, in 1868, he was appointed (1870) teacher of composition at the newly established "Hochschule für Musik," and elected, at the same time, member of the Senate of the Akademie. K., from the time when he had outgrown Dehn's theory, himself trained many distinguished pupils. He taught pf. playing only until his appointment at Stern's Conservatorium. To the works of K. already named may be added: The Stabat Mater (Op. 25, 1862), the 130th Psalm (Op. 29, 1863; both for female chorus, soli, and orchestra), a Te Deum (Op. 46, 1866), and two songs (Op. 83) for mixed choir with orchestra. He distinguished himself in the department of instrumental music; besides many pf. works for two hands (especially the variations Op. 17 and 62, three gignes Op. 36, and the smaller pieces, Op. 55, 59, 71, 79), and some for four hands, a pianoforte concerto (Op. 30), and four marches for orchestra (Op. 61), he wrote four violin sonatas, a cello sonata (Op. 52), sonata for tenor (Op. 67), seven trios (Op. 3, 22, 24, 33, 34, 65, the last containing two trios), three pf. quartets (Op. 43, 44, 50), two quintets (Op. 75, 76), two stringed quartets (Op. 53), and two series of "Walzer für Streichquartett" (Op. 73 and 78). Cf. the articles on K. by Bungert (*N. Z. f. Musik*, 1875), Saran (*Allg. M. Ztg.*, 1862), and Gumprecht (*Westermann's Monatshefte*, 1886).

Kiene. (See BIGOT.)

Kienle, Ambrosius, b. May 8, 1852, Siegmaringen, entered the Benedictine monastery, Beuron (Hohenzollern), 1873. He made a deep study of Gregorian melody, and wrote, besides many valuable essays in journals, a "Choralschule" (1890), a "Kleines kirchenmusikalisches Handbuch" (1892), and translated Potier's "Les mélodies Grégoriennes" ("Der gregorianische Choral," 1881).

Kienzl, Wilhelm, b. Jan. 17, 1857, Waitzenkirchen, in Upper Austria. He attended the Gymnasium at Graz (pianoforte pupil of Ignaz Uhl and Mortier de Fontaine), studied composition with Dr. W. Mayer (W. A. Remy), studied 1874 at Graz, 1875 at Prague, 1876 at Leipzig, 1877 at Vienna, where he took his degree of Dr. Phil. ("Die Musikalische Deklamation," published 1880). In 1879 he went to Bayreuth to Wagner, gave lectures at Munich (1880) on music, then became capellmeister of the Opera

at Amsterdam and Crefeld, in 1886 conductor of the Styrian "Musikverein" at Graz, and in 1889 capellmeister of the theatre at Hamburg. As a writer, K. not only contributed articles to newspapers (collected as "Miscellen," 1886), but wrote miscellaneous essays and a compressed version of Brendel's History of Music. K. is also a composer of a light *genre* (chamber-music, pf. pieces, songs, opera *Urvasi* [Dresden, 1886], *Heilmayr der Narr* [Munich, 1892]; he also completed Ad. Jensen's posthumous opera *Turandot*).

Kiesewetter, Raphael Georg (Edler von Wiesenbrunn), a famous writer on music, b. Aug. 29, 1773, Hollerschau (Moravia), d. Jan. 1, 1850, Baden, near Vienna. He was trained for government service; and was imperial councillor of war; in the fulfilment of his duties he frequently changed his residence, and in 1845 received his pension as Imperial Councillor. From early youth K. was a zealous friend of music, made extensive collections of old musical works, which gradually led him to historical investigations; he studied, besides, theory and counterpoint (1803) under Albrechtsberger and Hartmann, and became, finally, an authority on matters connected with the history of music. Outward recognition of his services, which, indeed, could not be denied, was not lacking; he became successively member, likewise honorary member of several institutions (Berlin, Vienna) and musical societies. K. was the uncle of A. W. Ambros. His principal works are: "Die Verdienste der Niederländer um die Tonkunst" (which gained the prize offered by the Netherlands Academy, 1826; Dutch, 1829); "Geschichte der europäisch-abendländischen oder unserer heutigen Musik" (1834; 2nd ed. 1846); "Ueber die Musik der neuern Griechen, nebst freien Gedanken über altägyptische und altgriechische Musik" (1838); "Guido von Arezzo, sein Leben und Wirken" (1840); "Schicksale und Beschaffenheit des weltlichen Gesangs vom frühen Mittelalter bis zur Erfindung des dramatischen Stils und den Anfängen der Oper" (1841); "Die Musik der Araber" (1842; see Riemann, "Studies on the History of Notation, pp. 77-86); "Der neuen Aristoxener zerstreute Aufsätze" (1846); "Ueber die Oktave des Pythagoras" (1848); "Galerie alter Kontrapunktisten" (1847; catalogue of his collection of old scores, which he bequeathed to the court library). He wrote, besides, a series of valuable articles for the Leipzig *Allgemeine Musikalische Zeitung*, 1826-45 (on the notation of Gregory the Great, on Franko of Cologne, on old tablatures, on Compère, Josquin, on Schmid's "Petrucci," etc. K. supervised the publishing of Kandler's "Palestrina"; several theoretical works remained in manuscript.

Kin, obsolete Chinese instrument of the zither kind, the strings of which (5-25) were made of silk threads.

Kindermann, (1) Johann Erasmus, b. March 29, 1616, Nuremberg, organist of St. Aegidien there; he published up to 1652 a large number of sacred songs. (See *Monatsh. f. Mus. Gesch.* XV., 37 and 138.)

(2) August, b. Feb. 6, 1817, Potsdam, d. March 6, 1891, Munich, an excellent stage singer (baritone); he commenced his career at the age of sixteen as chorus-singer at the Berlin Opera, and Spontini chose him to take small solo parts. He was engaged at Leipzig 1839-46, and worked himself up from second bass to principal baritone, and was afterwards one of the greatest favourites of the public at the Munich Opera.

(3) Hedwig (Reicher-) K. (See REICHER-KINDERMANN.)

King, Chinese instrument of percussion consisting of stone bars tuned to different notes.

King, (1) Robert, chamber-musician to William III. of England, Bachelor of Music (Cambridge, 1696); he published "Songs for One, Two, and Three Voices, Composed to a Thorough-bass for the Organ or Harpsichord." Some of his compositions are to be found in collections of his time ("Choice Ayres," 1684; "Comes Amoris," 1687-93; "The Banquet of Music," 1688-92; *The Gentleman's Journal*, 1692-94; "Thesaurus musicus," 1695-96).

(2) Charles, b. 1687, chorister at St. Paul's under Blow and Clark, Mus.Bac. (Oxford, 1707), d. March 17, 1748; in 1707, almoner and master of the choristers of St. Paul's, organist of St. Benet Fink (1708), finally vicar choral of St. Paul's. He composed much sacred music (services, anthems, etc.), some of which were published separately, some in Arnold's "Cathedral Music" and in Page's "Harmonica Sacra," and some remained in manuscript.

(3) Matthew Peter, b. 1773, d. Jan., 1823, London. He wrote a number of English operas for the Lyceum Theatre, published pf. sonatas, songs, a cantata, produced an oratorio (*The Intervention*), and wrote a "General Treatise on Music" (1800; 2nd ed. 1809), and "Thorough Bass made Easy to Every Capacity" (1796).

Kinkel, Johanna, the wife of the well-known poet (*née* Mockel, divorced Matthieux), b. July 8, 1810, Bonn, d. Nov. 15, 1858, London. In 1832 she married the bookseller Matthieux, but left him after a few days. She was then trained at Berlin, and in 1843 became the wife of Gottfried K., whom she had followed, after his escape from the Spandau prison, to England. Her best-known works are the "Vogel-Kantate" and the operetta *Otto der Schütz*; she also wrote "Acht Briefe an eine Freundin über Klavierunterricht" (1852).

Kinnor, old Hebrew zither, or a stringed instrument of the harp kind.

Kipke, Karl, b. Nov. 20, 1850, Breslau, studied music at Leipzig, where, not counting his labours as conductor for a time at Pilsen,

he has always resided. He is highly esteemed as proof-reader, also as editor of the *Sängerhalle*, etc.

Kipper, Hermann, b. Aug. 27, 1826, Coblenz; pupil of Auschütz and H. Dorn. He lives as a teacher of music and musical critic at Cologne, and has made himself known by some humorous operettas: *Der Quacksalber (Doktor Sägebein und sein Famulus)*, *Inkognito (Der Fürst wider Willen)*, and *Kellner und Lord*.

Kirchenmusik (Ger.). (See CHURCH MUSIC.)

Kirchenstyl (Ger.), the ecclesiastical style, the style of church music.

Kircher, Athanasius, b. May 2, 1602, Geisa, in the former bishopric of Fulda, d. Nov. 28, 1680, Rome; a learned Jesuit, professor of physics at Würzburg University; in 1635 he fled from the terrors of the Thirty Years' War to Avignon, and settled in Rome in 1637. Of his numerous works the following treat especially upon music, also acoustics: "Musurgia universalis sive ars magna consoni et dissoni," etc. (1650, two vols. [1654? 1662? 1690]; an epitome in German by Hirsch, 1662), and "Phonurgia nova, sive conjugium mechanico-physicum artis et naturæ," etc. (1673, German from "Neue Hall- und Tonkunst," by Agathos Cario). Both works are examples of the most extraordinary mixture of scientific proofs and of credulity beyond belief; but they also contain much of the highest interest for the history of music, and also for acoustics. Some musical peculiarities are to be found in his "Ars magnetica" (1641, and frequently), and in "Œdipus Ægyptiacus" (1652-54, three vols.).

Kirchl, Adolf, composer of songs for male voices, b. June 16, 1858, Vienna, lives there as choir-master of the Schubertbund.

Kirchner, (1) Theodor, b. Dec. 10, 1823, Neukirchen, near Chemnitz, a gifted pianoforte composer, especially of miniature pieces treated in a manner quite peculiar to himself. He went to Leipzig in 1838, and, on the advice of Mendelssohn, studied with C. F. Becker (organ and theory), J. Knorr (pianoforte); and in the summer of 1842 with Joh. Schneider at Dresden (organ). In 1843 he became a pupil of the Leipzig Conservatorium (but only for six months), from 1843-62 was organist at Winterthur, and for the following ten years acted as conductor and teacher of music at Zürich. After a year's residence at Meiningen as teacher of music to the Princess Maria (1872-73), he worked as director of the royal "Musikschule," Würzburg, lived for eight years at Leipzig, went in 1883 to Dresden, where he became teacher at the royal Conservatorium, and in 1890 to Hamburg. Besides pf. pieces, some songs ("Sie sagen, es wäre die Liebe") have especially made K.'s name known in wider circles. Here is a complete list of his original compositions: Op. 1, ten songs; Op. 2,

ten pf. pieces; Op. 3, "6 Mädchenlieder;" Op. 4, four songs; Op. 5, "Gruss an meine Freunde;" Op. 6, four songs; Op. 7, "Albumblätter;" Op. 8, Scherzo; Op. 9, preludes (two books); Op. 10, "Zwei Könige" (ballad for baritone); Op. 11, "Skizzen" (three books); Op. 12, "Adagio quasi fantasia;" Op. 13, "Lieder ohne Worte;" Op. 14, "Phantasiestücke" (three books); Op. 15, "Ein Gedenkblatt" (serenade in B major for pf., violin, and 'cello); Op. 16, "Kleine Lust- und Trauerspiele;" Op. 17, "Neue Davidsbündlertänze;" Op. 18, "Legenden;" Op. 19, ten pf. pieces (transcriptions of his own songs; five books); Op. 20, stringed quartet; Op. 21, "Aquarellen" (two books); Op. 22, romances (two books); Op. 23, waltzes (two books); Op. 24, "Still und bewegt" (two books); Op. 25, "Nachtbilder" (two books); Op. 26, Album; Op. 27, caprices (two books); Op. 28, nocturnes; Op. 29, "Aus meinem Skizzenbuch" (two books); Op. 30, "Studien und Stücke" (four books); Op. 31, "Im Zwielicht;" Op. 32, "Aus trüben Tagen;" Op. 33, "Ideale;" Op. 34, waltzes (two books); Op. 35, "Spielsachen;" Op. 36, "Phantasien am Klavier" (two books); Op. 37, four elegies; Op. 38, twelve études; Op. 39, "Dorfgeschichten;" Op. 40, three songs (words by F. v. Holstein); Op. 41, "Verwehte Blätter;" Op. 42, mazurkas (two books); Op. 43, four polonaises; Op. 44, "Blumen zum Strauss;" Op. 45, six pf. pieces; Op. 46, "30 Kinder- und Künstlerlänze;" Op. 47, "Federzeichnungen;" Op. 48, Humoresken; Op. 49, "Neue Albumblätter" (two books); Op. 50, six songs; Op. 51, "An Stephen Heller;" Op. 52, "Ein neues Klavierbuch" (three parts); Op. 53, "Florestan und Eusebius;" Op. 54, Scherzo; Op. 55, "Neue Kinderszenen;" Op. 56, "In stillen Stunden;" Op. 57, twelve pieces for four hands; Op. 58, children's trios (for pf., violin, and 'cello); Op. 59, "Trio-Novelletten;" Op. 60, "Plaudereien am Klavier;" Op. 61, six characteristic pieces (three books); Op. 62, Miniatures; Op. 63, "Romanze und Schlummerlied," for pf. and violin; Op. 64, gavottes, minuets, and lyric pieces; Op. 65, sixty preludes (Op. 66 is wanting); Op. 67, "Liebeserwachen" (song); Op. 68, "Nähe des Geliebten" (song); Op. 69, four poems by Goethe (for male chorus); Op. 70, five sonatinas; Op. 71, one hundred small studies; Op. 72, "Stille Lieder u. Tänze" (two books); Op. 73, "Romantische Geschichten" (four books); Op. 74, "Alte Erinnerungen;" Op. 75, nine pf. pieces; Op. 76, "Reflexe" (six waltzes); Op. 77, polonaises, waltzes, and Ländler; Op. 78, "Les mois de l'année" (illustrated); Op. 79, eight pieces for pf. and 'cello; Op. 80, 9 Albumblätter Op. 81, six songs; Op. 82, "Gedenkblätter" (for the inauguration of the new Leipzig Conservatorium); Op. 83, "Bunte Blätter" (twelve trios); Op. 84, pf. quartets; Op. 85, variations for two pianofortes. Without opus number have appeared a

second "Triosonate" (cf. Op. 15) in E, Polonaise for two pfs., two études in C and D minor (the latter in the Pianoforte School of Lebert-Stark); "Lieblinge der Jugend" (thirty small études), and "Alte Bekannte im neuen Gewande" (piano duets), and some songs. K. has lately transcribed a great number of songs by Jensen, Brahms, etc., for pf. solo. Cf. A. Niggli's "Th. K." (1880).

(2) Fritz, b. Nov. 3, 1840, Potsdam, pupil at Kullak's Akademie (Kullak, Wüerst, Seyffert), where he became teacher (1864) until the staff was disbanded (autumn, 1889). He is a diligent composer, especially of instructive pieces for pf.; also vocal pieces.

(3) Hermann, b. Jan. 23, 1861, Wölfls (Thuringia); concert-singer (tenor) and composer, lives at Berlin.

Kirkman, (1) Jacob (really Kirchmann), founder of the London pianoforte manufactory, K. and Sons; he came before 1740 to London and worked for Tabel, where also Shudi (Tschudi), founder of the Broadwood factory, was engaged. K. married Tabel's widow, and died a wealthy man in 1778. His harpsichords enjoyed a high reputation. As he had no children, he was succeeded by his nephew, Abraham K., of whom the present manager, Joseph K., is a descendant. A subtle solution of the problem how to prolong sound on the pianoforte was shown in the "Melopiano" (reiterated blows by special small hammers) which Caldera invented, and which was successfully employed by K.

(2) Johann, Dutch by birth, 1782 organist of the Lutheran Church, London; d. 1799. Trios, violin sonatas, pf. sonatas, organ pieces, etc.

Kirnherger, Johann Philipp, b. April 24, 1721, Saalfeld, Thuringia, d. July 27, 1783, Berlin, one of the most esteemed theorists of the last century. His name must be mentioned side by side with those of Rameau and Tartini, yet the services which he rendered have often been exaggerated. K. studied with Kellner (sen.) at Gräfenroda, with Gerber (sen.) at Sondershausen, and for some time with J. S. Bach at Leipzig. From 1741-50 he occupied various posts as private teacher of music and musical director in the houses of Polish noblemen, and finally at the convent, Lemberg. He returned to Germany in 1751, studied the violin at Dresden, and became a member of the royal band at Berlin, and in 1754 teacher of composition and capellmeister to Princess Amalie (q.v.), in which post he found abundant leisure for composition. The works of K. are now forgotten (lessons, pieces, suites, fugues, etc., for clavier and for organ; twelve minuets for two violins, oboes, flutes, horns, and continuo; soli for flute; trios for two violins and bass; songs, odes, motets, etc.). The best-known and most important work of K. is "Die Kunst des reinen Satzes" (1774-79, two

vols.). His first work was "Konstruktion der gleichschwebenden Temperatur" (1760, cf. TEMPERAMENT). There appeared besides, under his name (cf., however, J. A. P. Schulz), "Die wahren Grundsätze zum Gebrauch der Harmonie" (1773). Fundamental chords, according to K., are: major chord, minor chord, diminished triad, major chord with major and with minor seventh, likewise the minor chord and diminished triad with minor seventh. The assertion of K. that there are only two fundamental chords (triad, and chord of the seventh) must therefore be taken *cum grano salis*. He wrote besides: "Grundsätze des Generalbasses als erste Linien der Komposition" (1781, often republished); "Gedanken über die verschiedenen Lehrarten der Komposition als Vorbereitung zur Fugenkenntnis" (1782); "Anleitung zur Singkomposition" (1782); "Der allzeit fertige Menuetten- und Polonaisen-Komponist" (1757), somewhat of the nature of a musical joke, a precursor of the well-known musical game of dice. K. was a contributor to Sulzer's "Theorie der schönen Künste"; he also published numerous vocal works by Hasler and Graun. (Concerning K.'s i, cf. the article "i.")

Kist, Florent Corneille, b. Jan. 28, 1796, Arnheim, d. March 23, 1863, Utrecht, worthy Dutch musician; he was originally only an amateur, studied medicine and practised as doctor at the Hague until 1825; but at an early period became an excellent performer on the flute and horn, and diligently studied singing and composition. Already in 1821 he was one of the founders of the musical union "Diligentia" at the Hague, and displayed (after he had given up medicine) an extraordinary activity as organiser. He founded at Delft a choral society, and a branch of the union for the advancement of music at the Hague, the "Cäcilia" society, and presided over, besides the above-named, the "Collegium musicum" at Delft, and the "Harmonie" at the Hague. In 1841 he went to Utrecht, edited for three years the *Nederlandsch muzikaal Tijdschrift*, and afterwards founded the *Cæcilia*, which, to the present day, is the most important musical paper of Holland. For several years he was also member of the Utrecht concert society ("Collegium musicum Ultra-jectinum"), and founded amateur concerts ("Symphonie") as well as a choral society ("Duce Apolline"). Besides many articles in both his above-named musical papers, as well as in the German *Signale*, *Teutonia*, and Gassner's *Zeitschrift für Dilettanten*, he wrote "De toestand van het protestantsche kerk gezang in Nederland" (1840); "Levensgeschiedenis van Orlando de Lassus" (1841); and also translated into Dutch Brendel's "Grundzüge der Geschichte der Musik" (1851). His printed compositions are vocal pieces for one and several voices, and a volume of variations for flute; important cantatas, etc., remained in manuscript.

Kistler, Cyrill, b. March 12, 1848, Gross-Aitingen, near Augsburg, was from 1867-76 school-teacher, and then received his musical training from Rheinberger at Munich. He became, in 1873, teacher at the Conservatorium at Sondershausen, and lives, since 1885, as teacher of music at Kissingen. His romantic opera (*Kunihild*) was given at Sondershausen in 1884, and at Würzburg in 1892; two others have not been performed. He is the author of "Harmonielehre" and a "Musikalische Elementarlehre," and publishes the *Musikalische Tagesfragen* (critical notices, personal news, etc.).

Kistner, Friedrich, b. March 3, 1797, Leipzig, d. there Dec. 21, 1844; he undertook in 1831 the Probst musical business, and from 1836 traded under his own name. The publishing-house of K. developed into one of the most important in Leipzig under him and his son Julius (d. May 13, 1868), but especially under K. F. L. Gurckhaus (b. April 17, 1821, d. May 22, 1884, Leipzig), who in 1866 became the proprietor.

Kit is the name for the old pocket violin. (Cf. POCHETTE.)

Kitchener, William, rich London physician and famous gourmand, also a trained amateur, d. Feb. 26, 1827 (fifty years old). He wrote "Observations on Vocal Music" (1821), and edited the collections "The Loyal and National Songs of England" (1823), "The Sea Songs of England" (1823), and "A Collection of the Vocal Music in Shakespeare's Plays." He also wrote an operetta, *Love among the Roses*; or, *The Master Key*.

Kittel, Johann Christian, b. Feb. 18, 1732, Erfurt, d. there May 9, 1809, the last pupil of J. S. Bach; he was, at first, organist at Langensalza, from 1756 up till his death at the "Predigerkirche," Erfurt, with a very small salary (but he was protected from want by means of a small pension from Prince Primas of Dalberg, also by the proceeds of some concert tours), and went finally in 1800 to Hamburg and Altona, where he remained a year. K. enjoyed a distinguished name as organist, composer, theorist, and teacher. K. H. Rinck was his most celebrated pupil. Only a few of his works appeared in print, and of these the following deserve special mention: "Der angehende practische Organist oder Anweisung zum zweckmässigen Gebrauch der Orgel beim Gottesdienst" (1801-8, three parts; new edition 1831); "Neues Choralbuch" (for Schleswig-Holstein, 1803); "Grosse Präludien," for organ; two chorales with variations, for organ; six pf. sonatas (Op. 1); twenty-four chorales (with eight figured basses for each); "Hymne an das Jahrhundert," à 4 (1801), and a book of pf. variations.

Kittl, Johann Friedrich, b. May 8, 1809, Castle Worlik (Bohemia), d. July 20, 1868, Polnisch-Lissa, son of an officer of justice; he studied jurisprudence, but, with special prefer-

ence, music (principally under Tomaschek at Prague); from 1840 he devoted himself entirely to music, and, after the death of Dionys Weber, was elected director of the Prague Conservatorium. After more than twenty years' active and salutary service, he withdrew in 1865 to Polnisch-Lissa. K. wrote several operas—*Daphnis' Grab*, *Die Franzosen vor Nizza* (= *Bianca und Giuseppe*, libretto by Richard Wagner!), *Waldblume*, *Die Bilderstürmer*—which gained for him high repute. He also wrote a trio (Op. 28), septet (pf., wind instruments, and double-bass), songs, and several symphonies, etc.

Kitzler, Otto, b. March 16, 1834, Dresden, pupil of J. Otto, Joh. Schneider, and F. A. Kummer (cello); and after a short engagement as musical director at Eutin he studied with Servais at the Brussels Conservatoire; he was also 'cellist in the opera orchestra at Strassburg and Lyons, then opera capellmeister at Troyes, Linz, Königsberg, Temeswar, Hermannstadt, and Brünn; from 1868 director of the Brünn Musical Society and of the music school connected with it, likewise conductor of the male choral society. K. published works for piano-forte and for orchestra, also songs, which show him to be a well-schooled musician.

Kjerulf, Halfdan, Norwegian composer, b. 1818, d. Aug. 11, 1868, Christiania, where a monument was erected to him. By his songs and part-songs he became extremely popular in his native country; but he also wrote excellent pianoforte works (published by Heinrich Hofmann and Arno Kieffel), which made his name known in Germany.

Klafsky, Katharina, dramatic stage-singer (dramatic soprano), b. Sept. 19, 1855, St. Johann, in Hungary (county Wieselburg). She was the daughter of a shoemaker, who, like her mother, was musical, and sang in church choirs. Her mother died when she was young, and, as her father married again, she left home, and went first to Ödenburg, and, later on, to Vienna. There her voice attracted notice, and Hellmesberger persuaded Mme. Marchesi to give the young lady lessons gratis. In 1875 she appeared on the stage at Salzburg in small parts; but in 1876 she married a merchant, retired from public life, and went to Leipzig. Unfortunate circumstances compelled her to return to the stage (Leipzig), and, with ever-increasing success, she soon became an artist of the first rank, and succeeded Hedwig Reicher-Kindermann in Angelo Neumann's travelling Wagner company. Neumann first took her to Bremen, but since 1885 she belongs to the Hamburg stage. In the rôle of Fidelio, Frau K. has, at the present time, few rivals.

Klangboden (Ger.), sound-board.

Klanggeschlecht (Ger.), genus of sounds; the diatonic, the chromatic, and the enharmonic genus.

Klangschlüssel ("Clang Key") is the term applied by the compiler of this Dictionary to the new method of designating chords which he has developed and exclusively employed in his theoretical works, and which he would use in place of general-bass figuring, since the latter does not indicate in a satisfactory manner the clang meaning of chords. (Cf. GENERAL-BASS.) In K., as in general-bass, the figures 1-10 are employed, but the intervals are determined not from the bass note, but from the principal note of the clang in the sense of which the chord must be conceived. The usual (Arabian) figures are used for major, the Roman, for minor chords; the former indicate the intervals from the principal tone upwards, the latter, downwards. The figures have the following meaning: 1 (I), principal tone; 2 (II), major second; 3 (III), major third; 4 (IV), perfect fourth; 5 (V) perfect fifth; 6 (VI) major sixth; 7 (VII) minor seventh; 8 (VIII) octave (used exceptionally, for instance, after 9 (IX), in place of 1 [I]); 9 (IX), major ninth; 10 (X), major tenth (in exceptional cases for the third). All the figures, with exception of 1, 3, 5 (8, 10), likewise I, III, V (VIII, X), indicate dissonant tones; for only principal tone, third-tone, and fifth-tone are constituent parts of the (major or minor) clang. (See CLANG.) When the seven or ten fundamental intervals mentioned above undergo change, < indicates raising by a semitone, and > lowering by a semitone; *tones doubly raised or doubly lowered are inconceivable from a musical point of view.* The abbreviated sign 4 stands for the major chord (upper clang) in

place of $\overset{5}{3}$, and the sign 0 for the minor chord (under-clang) in place of $\overset{I}{III}$. The sign $+$ is,

however, only used in opposition to, or alternately with, °; the absence of any sign indicates the major clang of the given tone. K. differs from general-bass figuring in that it is not confined to a bass part, but can be employed at pleasure for any part. A pupil under the old method had no opportunity of learning good progressions for a bass part, but in K. such opportunity is granted to him in fullest measure. Instead of indicating clangs concretely according to their principal tone (♯, °, etc.), the compiler of this dictionary has recently used the more general letters which, at the same time, indicate the *tonal function* :—T (tonic), D (dominant), and S (subdominant), with + and ° for major and minor. The harmonic meaning is rendered quite independent of pitch, and thus important means is offered for training scholars to think harmonically. See Riemann's "Verein-fachte Harmonielehre" (London, 1893). (Cf. TONAL FUNCTIONS OF HARMONY.)

Klangvertretung (Substitution of Clangs), a conception of modern harmony theory, relating to the special meaning which a note or interval

obtains according as it is conceived in (the sense of this or that clang. For example, c has quite a different meaning in the logic of composition, if it is thought of as the third of the chord of A flat, from that which it has as third of the chord of A minor (^{see, cf. KLANGSCHÜTTEL}); in the former case it is closely related to D flat, and to the D flat chord; in the latter, to B and to E major and the E minor chord. Each note can form an essential part of six various clangs (*cf. CLANG*); for instance, the note c can be the major principal note of the c upper-clang, the major (upper) fifth of the F upper-clang, the major (upper) third of the A flat upper-clang, the minor principal note of the c under-clang (F minor chord), the minor (under) fifth of the G under-clang (C minor chord, and, finally, the minor (under) third of the E under-clang (A minor chord):—

If the note *c* appears as dissonant note to any other clang, or in the place of one of its chord notes as suspension, or as altered note (*see* DIS-SONANCE), its meaning must always be determined in the sense of one of these six clangs, and, indeed, of the nearest related.

Klappe (Ger.), a key of wind-instruments like the flute, clarinet, bassoon, Kent bugle, etc.

Klauser, (1) Karl, b. Aug. 24, 1823, Petersburg, went in 1850 to New York, and lived, from 1855, as a highly esteemed teacher of music at Farmington (United States). K. has made a name by his numerous pf. arrangements of classical and romantic orchestral works, also by editing celebrated pianoforte works for the firm of Schubert & Co. His son and pupil

(2) Julius, b. July 5, 1854, New York, from 1871-74 at the Leipzig Conservatorium (Wenzel), lives, an esteemed teacher of music, at Milwaukee. He has published: "The Septonate and the Centralisation of the Tonal System" (1890), a harmony book of modern tendency.

Klauwell, (r) Adolf, b. Dec. 31, 1818, Langensalza (Thuringia), for many years teacher of the third, afterwards of the fourth, "Bürgerschule" in Leipzig, where he d. Nov. 21, 1879. He was a well-known teacher, and published elementary school-books and instructive pianoforte pieces, of which "Goldnes Melodien-Album" is specially popular. His daughter Marie (Lang-K.), b. Jan. 27, 1853, is a much-admired concert-singer (soprano).

(2) Otto, composer and writer on music, b. April 7, 1851, Langensalza, nephew of the former, was trained at the Schulpforta Gymnasium; from 1870-71 he took part in the war against France, and afterwards studied mathematics at the Leipzig University, but then followed his own wishes, and, in 1872, turned

entirely to music, studying under Reinecke and Richter (theory and composition) at the Leipzig Conservatorium, and in 1874 took his degree of Doctor of Philosophy at the Leipzig University. In 1875 he became teacher of the pianoforte, theory, and history at the Cologne Conservatorium, and in 1884 undertook the direction of the pianoforte training-classes established by Fr. Wüllner. K. is a talented composer; he has written overtures, chamber-music, pf. pieces, also an opera (*Das Mädchen vom See*), and songs, most of which were published. The following of his pamphlets also deserve mention: "Die historische Entwicklung des musikalischen Kanons" (1874, dissertation), an interesting collection of aphorisms; "Musikalische Gesichtspunkte" (1881); also "Der Vortrag in der Musik" (1883); and "Der Fingersatz des Klavierspiels" (1885).

Klee, Ludwig, b. April 13, 1846, Schwerin, pupil (1864-68), and afterwards (up to 1875) teacher, at Kullak's Academy, Berlin, and since then president of a school of music of his own. He published a number of educational works, of which the "Die Ornamentik der Klassischen Klaviermusik" especially deserves mention.

Kleeberg, Clotilde, b. June 27, 1866, Paris, pupil of the Conservatoire (Mme. Retz and Mme. Massart). She made her first public appearance at the Pasedoul concerts in 1878, when she performed Beethoven's c minor concerto; since then, as a refined pianist, she has acquired European fame.

Kleeman, Karl, b. Sept. 9, 1842, Rudolstadt (Thuringia), was intended for the book trade, but, under the court capellmeister Müller at Rudolstadt, studied music and began his practical career as a conductor of a vocal society in Westphalia. In 1878 he went for several years to Italy, devoting himself diligently to composition, and on his return was appointed second opera conductor and ducal musical director at Dessau. Of his compositions the following have appeared: music to Grillparzer's *Der Traum ein Leben*, symphonic fantasia, *Des Meeres und der Liebe Wellen*, two symphonies, songs, choral works, and pf. pieces, etc.

Kleffel, Arno, b. Sept. 4, 1840, Pössneck (Thuringia), attended the Leipzig Conservatorium for a short time, but was chiefly a private pupil of Moritz Hauptmann's. From 1863-67 he was conductor of the musical society at Riga, then theatre capellmeister successively at Cologne, Amsterdam, Görlitz, Breslau, Stettin, etc.; from 1873-80 at the Friedrich Wilhelm-theatre, Berlin, at Augsburg and Magdeburg; 1886-92 Cologne, now teacher of theory at Stern's Conservatorium, Berlin. K. has composed an opera (*Des Meermanns Harfe*), which was produced at Riga in 1865, music to the Christmas legend "Die Wichtelmännchen," besides music to Goethe's *Faust*, overtures,

choral works, songs, pf. pieces, part-songs, a stringed quartet, etc.

Klein, (1) Johann Joseph, b. Aug. 24, 1740, Arnstadt, d. June 25, 1823, Kahla, near Jena, lawyer at Eisenberg (Altenburg). He wrote: "Lehrbuch der praktischen Musik" (1783); "Lehrbuch der theoretischen Musik" (1801); "Neues vollständiges Choralbuch" (1785, with an introduction on chorale music); also various articles for the *Allgemeine Musikalische Zeitung* (1799 to 1800).

(2) Bernhard, b. March 6, 1793, Cologne, d. Sept. 9, 1832, Berlin, an excellent composer of sacred works, received his early musical training at Cologne, where his father was double-bass player. He went to Paris in 1812, where he worked for some time under Cherubini, and studied diligently at the library of the Conservatoire. On his return he was appointed musical director at Cologne Cathedral. In 1818 he went as government inspector to the musical schools at Berlin, but settled there, where, in 1820 he was appointed teacher of composition at the newly established Royal Institution for Church Music, and, simultaneously, musical director and teacher of singing at the University. K.'s chief works are his oratorios *Jephtha*, *David*, and *Job*, a mass, a Paternoster à 8, a Magnificat à 6 (with triple fugue), responses à 6, besides eight books of psalms, hymns and motets for male voices (well known and held in high esteem), pf. sonatas, variations, etc., songs and ballads ("Erlkönig"), cantata, *Worte des Glaubens* (Schiller), two operas, *Dido* (1823), and *Ariadne* (Jan. 22, 1825), two acts of a third (*Irene*), music to Raupach's *Erdennacht*, etc.

(3) Joseph, younger brother of the former, b. 1802, Cologne, d. there 1862, likewise composer; he lived at Berlin and Cologne.

(4) Bruno, Oskar, b. June 6, 1856, Osnabrück, pupil of his father, of the musical director Karl K., and of the Royal School of Music at Munich. K. was appointed organist of St. Francis Xavier, New York, in 1879. He has made himself known as a composer by orchestral pieces, a violin sonata, a suite for pf. and violin, etc.

Kleinmichel, Richard, composer and pianist, b. Dec. 31, 1846, Posen, received his first instruction from his father, who was bandmaster there, and afterwards at Potsdam, and finally went to Hamburg, where he enjoyed further, and sound training. From 1863-66 he was a pupil of the Leipzig Conservatorium, then lived as teacher of music at Hamburg, and in 1876 settled in Leipzig, where in 1882 he became musical director of the "Stadttheater." His wife is the singer Clara Monnhaupt. He has appeared frequently as a pianist, and with success, but of late is mentioned mostly as a composer. He has published, up to now, various pf. works (excellent études), songs,

chamber-music, two symphonies and two operas (*Manon*—*Schloss de Lorme* [Hamburg, 1883], and *Der Pfeifer von Dusenbach* [Hamburg, 1891]).

Klengel, (1) August Alexander, b. Jan. 27, 1783, Dresden, d. there Nov. 22, 1852, son of the landscape-painter K., pupil of Milchmayer, and of Clementi (1803), with whom he went to Petersburg, where he remained up to 1811. After a residence of two years in Paris, he returned to Dresden in 1814, which he only left for a passing visit to London in the following year. In 1816 he was appointed court organist at Dresden. K. is known under the name "Kanon K." on account of his complete mastery of this severest of imitative art-forms. He himself, towards the close of his life, published twenty-four canons under the title, "Les avant-coureurs;" his chief work ("Kanon und Fugen," 1854; an attempt to outdo the "Well-tempered Clavier," but unsuccessful, in that it is pedantic and lacking in imagination), to which the above-named forms the introductory steps, was published by Moritz Hauptmann after K.'s death. In his early years he wrote: two pf. concertos, one concert polonaise for pf., flute, clarinet, viola, cello, and bass; one trio, one pf. fantasia for four hands, several pf. sonatas, and many pieces; a concerto and a quintet remain in manuscript. Younger relatives of K., though not by direct descent, are:

(2) Paul K., b. May 13, 1854, Leipzig, able violinist and pianist, composer of pleasing songs; Dr. Phil., with dissertation "Zur Aesthetik der Tonkunst" (Leipzig); from 1881-86 conductor of the "Euterpe" concerts at Leipzig, then, for some years, second Hofkapellmeister at Stuttgart, and 1893 conductor of the academical choral society "Arion" at Leipzig. His brother

(3) Julius, b. Sept. 24, 1859, Leipzig, a cellist of the very first rank, principal cello in the Gewandhaus orchestra, and teacher at the Leipzig Conservatorium ('cello concerto, Op. 10, concertino, Op. 7, stringed quartet in G, suite for two violoncelli, and other compositions for violoncello).

Kliebert, Karl, b. Dec. 13, 1849, Prague, studied jurisprudence at Vienna, took his degree of Dr. Jur. at Prague, but then devoted himself entirely to music, and was trained by Rheinberger and Wüllner at Munich. After acting for some time as theatre capellmeister at Augsburg, he was called to Würzburg (1875) to reorganise the Royal School of Music, and in 1876 succeeded Kirchner as director of this institution, which, under his guidance, has greatly prospered.

Klindworth, Karl, b. Sept. 25, 1830, Hanover, distinguished pianist, pupil of Liszt's at Weimar, lived from 1854-68 in London, highly esteemed both as teacher and player. From 1861-62 he established orchestral and chamber-music concerts, which, however, owing to the

heavy expenses, he was obliged to give up. From 1868-84 he was professor of the pianoforte at the Moscow Conservatoire, then settled in Berlin in order to conduct the Philharmonic Concerts jointly with Joachim and Wüllner, and established in Berlin a "Klavierschule" which, with the co-operation of Bülow (one month per year), was successfully inaugurated (1893, incorporated with the Scharwenka Conservatorium). As a composer, K. is only known by a few interesting pianoforte pieces, but his remarkable editorial work is of very great importance, especially his pf. scores of Wagner's complete "Nibelungen-Trilogie," an edition of Chopin's works, new edition of Beethoven's sonatas, etc.

Kling, Henri, b. Feb. 17, 1842, Paris, teacher of music at the schools at Geneva, and bandmaster. He has written several operas, as well as instrumental and vocal music, all of little intrinsic value; he is also the author of a Method and studies for horn, a Method for drum, a treatise on instrumentation (German), frequently republished.

Klingenberg, Friedrich Wilhelm, b. June 6, 1809, Sulau (Silesia); he studied theology at Breslau, but gave it up and turned to music, undertook the direction of the Breslau "Akademischer Musikverein," afterwards of the "Künstlerverein." In 1840 he was called to Görlitz as cantor of the Peterskirche, and in 1844 was named "Königlicher Musikdirector." In 1885, owing to a severe injury to one of his feet, he was compelled to resign his appointments. As conductor of the church choir, as well as of a large vocal society of his own (the "Görlitzer Musikverein"), he did much for musical life at Görlitz. As composer, he became known by a number of sacred and secular vocal works.

Klitzsch, Karl Emanuel, b. Oct. 30, 1812, Schönhaide (Saxon Erzgebirge), studied philology at Leipzig, took his degree, and was appointed teacher at Zwickau College (pensioned in 1886). He studied music at the same time, and, although for the most part self-taught, he undertook later on the direction of the concerts of the musical society and of the a-cappella "Musikverein," and was also musical director of the two principal churches at Zwickau. For many years K. was a zealous contributor to the *Neue Zeitschrift für Musik*. He published songs, the ninety-sixth psalm, etc., under the name "Emanuel Kronach."

Klosé, Hyacinthe Éléonore, famous clarinet-player, b. Oct. 11, 1808, on the island of Corfu, d. Aug. 29, 1880, Paris. When young he went to France; was, at first, bandmaster, and in 1839 succeeded his teacher, Berr, as professor of the clarinet at the Paris Conservatoire, and received his pension in 1868. He applied the Boehm system of ring keys to the clarinet (1843); he also published solo, and instructive

works for clarinet (soli, duets, fantasias, studies, a "Grande méthode pour la clarinette à anneaux mobiles"), also marches, parade pieces for military band, and three Methods for the various kinds of saxophones.

Klotz (Clotz), the name of an old family of violin-makers at Mittenwald (Bavarian Alps); Aegidius K. is named as the oldest representative, and his son Matthias, about 1660-96, established the reputation of the family. Sons of the latter are Sebastian and Joseph; later descendants (in the 18th century) Georg, Karl, Michael, and Aegidius K. A great many of the violins made by K. pass for those of Steiner.

Klughardt, August Friedrich Martin, b. Nov. 30, 1847, Cöthen. After attending the Dessau Gymnasium, he became a pupil of Blassmann and A. Reichel at Dresden, and commenced his public career, at the age of twenty, as theatre capellmeister at Posen, Lübeck (each a season), and Weimar (four years), where he was appointed musical director to the Grand Duke. In 1873 he became court capellmeister at Neustrelitz, and now occupies a similar post at Dessau. His stay at Weimar, especially the intercourse with Liszt, had a beneficial effect on K.'s talent for composition: he was drawn in the direction of the new German school, proof of which, among other things, is given by his "Leonore" symphony. Besides this, the following works were published, likewise produced: the overtures "Im Frühling," "Sophonisbe," and "Siegessouvertüre;" the symphonies, "Im Walde," and Op. 37 in D; festival overture; orchestral suite, Op. 40, A minor (in six movements); pf. quintet, Op. 43; trio, Op. 47; sextet and quartet (Op. 42) for strings; operas: *Mirjam* (Weimar, 1871), *Iwein* and *Gudrun* (Neustrelitz, 1879 and 1882); *Die Hochzeit des Mönchs* (Dessau, 1886; as *Astorre*, at Prague, in 1888); "Schildlieder" ("Phantasiestücke," after Lenau, for pf., oboe, and viola), and eight books of songs.

Knecht, Justin Heinrich, b. Sept. 30, 1752, Biberach (Württemberg), d. there Dec. 1, 1817. In 1792 he became organist and concert director in his native town, in 1807 court capellmeister at Stuttgart, but, owing to intrigues, the post became distasteful to him, and, already in 1809, he returned to Biberach. As organist K. enjoyed extraordinary fame, and only Vogler was considered his superior. His compositions have ceased to live; the following may be mentioned: a symphony ("A Tone-picture of Nature," having a programme identical with that of Beethoven's Pastoral Symphony; he treated the same subject in an organ sonata, "Die unterbrochene Hirtenwonne"); concert duet, "Mirjam und Deborah" (from Klopstock's *Messias*); psalms, a Te Deum for double choir, masses, several operas and vaudevilles, melodrama, *Das Lied von der Glocke*

(Schiller); organ pieces, pf. variations, sonatas, flute duets, arias, hymns, two chorale books (for Württemberg and Protestant Bavaria), etc. As a theorist K. represents the extreme school of third-building up to the chords of the eleventh, on all degrees of the scale (!). He wrote "Erklärung einiger . . . nicht verstandener Grundsätze aus der Voglerschen Theorie" (1785); "Gemeinnützlichtes Elementarwerk der Harmonie und des Generalbasses" (1792-98; four parts); "Kleines alphabetisches Wörterbuch der vornehmsten und interessantesten Artikel aus der musikalischen Theorie" (1795); "Vollständige Orgelschule für Anfänger und Geübtere" (1795-98, three parts; a French plagiarised version of it was published by J. P. E. Martini at Paris); "Theoretisch-praktische Generalbassschule" (without year of publication); "Kleine Klavierschule für die ersten Anfänger" (1800 and 1802; two parts; 2nd ed. as "Bewährtes Methodenbuch," etc.); "Allgemeiner musikalischer Katechismus" (1803, several times republished); "Luther's Verdienst um Musik und Posie" (1817). Many theoretical articles by K. are to be found in the first year of the Leipzig *Allg. Musik. Zeitung*, some also in Speier's *Musikalische Realzeitung*.

Kniegeige (Ger.), a Viola da Gamba, or Violoncello.

Kniess, Julius, b. Dec. 21, 1848, Roda (Altenburg), received his school training in Altenburg, where W. Stade was his music-teacher; and he received further musical training (1868-70) from Brendel and Riedel in Leipzig. After he had become known as an able pianist and organist, he undertook (1871-76) the direction of the "Singakademie" at Glogau, became in 1876 conductor of the Rühl Choral Society and of the "Wagner-Verein" at Frankfurt, and in 1884 succeeded Breunung as musical director at Aix. Since 1889 K. lives at Baireuth, where he has been, since 1882, chorus-master at the festival plays. Four of his books of songs have been printed, and a symphonic poem, "Frithjof," and the prelude of an opera, *König Wittichis*, both in manuscript, have been produced at the "Tonkünstlerversammlung," Wiesbaden (1879).

Knight, Joseph Philip, b. July 26, 1812, Bradford-on-Avon, d. June 1, 1887, Great Yarmouth, studied under Corfe at Bristol. He was a popular English song composer, lived 1839-41 in the United States, was afterwards ordained to the charge of St. Agnes in the Scilly Isles, where he resided for two years. He published over two hundred songs, duets, terzets, etc., which enjoy great popularity (among which "She wore a wreath of roses"). He also wrote an oratorio, *Jephtha's Daughter*.

Knorr, (1) Julius, distinguished pianoforte teacher, b. Sept. 22, 1807, Leipzig, d. there June 17, 1861. He at first studied philology at Leipzig, but soon turned entirely to music, and

made a successful appearance as pianist at a Gewandhaus concert in 1831. He lived as teacher of the pianoforte at Leipzig, was on intimate terms with Schumann, and for the first year editor of the *Neue Zeitschrift für Musik*. The educational works of K. are: "Neue Pianoforteschool in 184 Uebungen" (1835; 2nd ed. as "Die Pianoforteschool der neuesten Zeit; ein Supplement zu den Werken von Cramer, Czerny, Herz, Hummel, Hüntten, Kalkbrenner, Moscheles," etc., 1841); "Das Klavierspiel in 280 Uebungen" ("Materialien zur Entwicklung der Fingertechnik"); further, "Materialien für das mechanische Klavierspiel" (1844); "Methodischer Leitfaden für Klavierlehrer" (1849, frequently republished); "Wegweiser für den Klavierspieler im ersten Stadium (elementary; c. 1853); "Ausführliche Klaviermethode" (first part "Methode," 1859; second part "Schule der Mechanik," 1860, Leipzig, Kahnt); "Führer auf dem Felde der Klavierunterrichts Litteratur" (without date); "Erklärendes Verzeichnis der hauptsächlichsten Musikkunstwörter" (1854). He also revised an edition of the Pianoforte Method of J. G. Werner (1830) and A. C. Müller (1848). K. was the first who established "technical preparatory exercises" as an essential element of study (since his time, the tripartite division: technique, studies, pieces).

(2) Iwan, b. 1853, Mewe (West Prussia), pupil of the Leipzig Conservatorium (Reinecke, Richter), in 1874 became teacher of music at an institution at Charkow (South Russia), and from 1878 director of theoretical instruction at the "Kaiserl. Musikgesellschaft" section there. At the reorganisation of Dr. Hoch's Conservatorium in Frankfurt, he was appointed, on the recommendation of Brahms and Wüllner (1883), teacher of theory and composition. As a composer K. was active in the departments of orchestral and chamber-music (also "Ukrainische Liebeslieder," for mixed chorus and pf.).

Knyvett, Charles, d. 1822 as organist of the Chapel Royal, London. He was in his younger years (from 1780-90) a distinguished concert singer (tenor), and established, jointly with S. Harrison, the Vocal Concerts (1791-94). His elder son, Charles (b. 1773; d. Nov. 2, 1852, London), pupil of Webbe, re-established them, jointly with Greatorex, Bartleman, and his brother William (1801). He has also become known by publishing a Selection of Psalm Tunes (1823); he was for a long time organist of St. George's, Hanover Square, and was a gifted teacher of the pianoforte and of theory. More important is his brother William (b. April 21, 1779, d. Nov. 17, 1856, London); was already appointed from 1797 gentleman (paid) singer of the Chapel Royal, where he succeeded Arnold as composer. For a long time he was the best London concert singer (tenor), conducted from 1832-40 the Concerts of Ancient Music, from 1834-43 the Birmingham Festivals, also the York Festival of 1835. As a composer he only wrote

some glees and anthems for the coronation of George IV. and of Queen Victoria.

Kobelius, Johann Augustin, b. Feb. 21, 1674, Wähltitz, near Halle, d. Aug. 17, 1731, Weissenfels, studied under Schiefferdecker and J. Phil. Krieger; "Kammernusikus" at Weissenfels, organist and capellmeister at Sangerhausen and Querfurt, finally capellmeister to the Duke of Weissenfels. Between 1716-29 he wrote for the court there twenty operas, for the most part on ancient and mythological subjects.

Kobsa, primitive instrument of the lute kind used in Russia Minor to accompany the Dumka.

Koch, (1) Heinrich Christoph, b. Oct. 10, 1749, Rudolstadt, where his father was member of the Prince's band, d. there March 12, 1816; under the patronage of this prince K. received musical training, first at Rudolstadt, and then from Göpfert at Weimar. In 1768 he became violinist in the band at Rudolstadt, and rose to be "Kammernusiker" (1777). K. was not a composer of importance (cantatas for court festivals, a "Choralbuch" for wind-band, etc.), but rendered valuable service as theorist. He published a "Musikalisches Lexikon" (1802, in two parts, a meritorious work. An epitome appeared in 1807 under the title "Kurzgefasstes Handwörterbuch der Musik," another one, anonymously, in 1828, and an excellent new revised version by Arrey v. Dommer in 1865); also "Versuch einer Anleitung zur Komposition" (1782-93; in three parts, likewise a work of high excellence, which, in its day, appears to have been entirely overlooked); "Handbuch bei dem Studium der Harmonie" (1811); "Versuch aus der harten und weichen Tonart jeder Stufe der diatonisch-chromatischen Leiter vermittelst des enharmonischen Tonwechsels in die Dur und Molltonart der übrigen auszuweichen" (1812). In 1795 he attempted the publication of a *Journal der Tonkunst*, but soon had to give it up. Theoretical articles and reviews of his are to be found in Speier's *Musikalische Realzeitung* (1788-91), in the Leipzig *Allg. Mus. Zeitung*, and in the *Jenauer Literaturzeitung*.

(2) Eduard Emil, hymnologist, b. Jan. 20, 1809, at Castle Solitude, near Stuttgart, d. April 27, 1871, Stuttgart, 1837 pastor at Gross-Aspach, in 1847 at Heilbronn, in 1853 superintendent, which post he resigned in 1864 in order to devote himself entirely to historical studies. The work of his life is "Geschichte des Kirchenliedes und Kirchengesanges, insbesondere der deutschen evangelischen Kirche" (1847, third edition [eight volumes] 1866-76; the eighth volume edited by R. Lauxmann).

Köchel, Ludwig (afterwards Ritter von), b. Jan. 14, 1800, Stein-a.-d.-Donau (Lower Austria), d. June 3, 1877, Vienna; he studied law, was from 1827-42 teacher to the royal princes, was named imperial councillor in 1832, raised to the rank of a nobleman in 1842, was

member of the Board of Public Instruction from 1850-52 at Salzburg, and lived from that time up to his death at Vienna. K. was an enthusiastic botanist and mineralogist, but had a solid musical training, and enriched musical literature with some valuable works: "Ueber den Umfang der musikalischen Produktion W. A. Mozarts" (1862), a forerunner of his famous catalogue, "Chronologisch-systematisches Verzeichnis sämtlicher Tonwerke W. A. Mozarts" (1862; supplements by K. himself in *Allg. M.-Ztg.*, 1864); also "Die Kaiserliche Hofmusik-kapelle zu Wien von 1543-1867" (1868), and "Johann Joseph Fux" (1872).

Kocher, Konrad, b. Dec. 16, 1876, Ditzingen, near Stuttgart, d. there March 12, 1872, studied the pianoforte at Petersburg under Klengel and Berger, and composition under J. H. Müller. In 1819 he travelled to Italy for the purpose of studying *a-cappella* music, and, on his return, founded a church choral society at Stuttgart; became, in 1827, musical director of the "Stiftskirche" there, and, in 1852, *Dv. Phil. hon. c.* of Tübingen University. K. wrote: "Die Tonkunst in der Kirche" (1823), published "Zionsharfe" (treasury of chorales of all centuries), and also composed two operas, an oratorio, etc.

Kogel, Gustav Friedrich, b. Jan. 16, 1849, Leipzig, where his father was trombone player in the Gewandhaus orchestra. He studied at the Leipzig Conservatorium (1863-67), lived for some years in Alsace as teacher of music until driven home by the war. He then began to work for the Peters house, and from 1874 led a busy life as theatre capellmeister at Nuremberg, Dortmund, Ghent, Aix-la-Chapelle, Cologne, Leipzig (1883-86), became in 1887 conductor of the Philharmonic orchestra at Berlin, and in 1891 conductor of the "Museum" concerts at Frankfurt. As composer K. is only known by a few pianoforte pieces for two and four hands. On the other hand, he has been an industrious editor of pianoforte and full scores of operas (among which, for the first time, Spohr's *Fessonda*, Nicolai's *Merry Wives of Windsor*, and Marschner's *Hans Heiling*).

Köhler, (1) Ernst, b. May 28, 1799, Langenbielau (Silesia), d. May 26, 1847, Breslau, where from 1827 he was principal organist of the "Elisabethkirche." K. was an important organ and pianoforte player; his published organ and pf. works are not so well known as they deserve to be. He also wrote twelve church cantatas, twelve important vocal works with orchestra, nine overtures, two symphonies, etc.

(2) Chr. Louis Heinrich, b. Sept. 5, 1820, Brunswick, d. Feb. 16, 1886, Königsberg-i.-Pr., was first a pupil of A. Sonnemann (pianoforte), Chr. Zinkeisen, sen., J. A. Leibrock (theory), and Chr. Zinkeisen, jun. (violin), at Brunswick; then from 1839-43, at Vienna, he

received further training from Simon Sechter, J. von Seyfried (theory, composition), and also, in pianoforte-playing, from K. M. v. Bocklet, on the advice of Czerny. After being theatre capellmeister for a brief period at Marienburg, Elbing, and Königsberg, K. settled in Königsberg in 1847 as teacher, conductor of the vocal society, critic, and director of a school for pianoforte-playing and theory. In 1880 he was named professor. K. was noteworthy as a composer (music to *Helena* of Euripides, three operas, *Prinz und Maler*, *Maria Dolores* [Brunswick, 1844], and *Gil Blas*; a ballet, *Der Zauberhomonist* [Brunswick, 1846]; Paternoster for four female and four male voices [Op. 100]) and was esteemed as a teacher. K. was, without doubt, one of the most zealous pianoforte teachers of our time, the heir of Czerny; his "Systematische Lehrmethode für Klavierspiel und Musik" (1st part; "Die Mechanik als Grundlage der Technik," 1856; 2nd ed. 1872; 3rd ed. 1888 [revised by Riemann]; pt. 2, "Tonschriftwesen, Harmonik, Metrik," 1858) enjoys a very wide circulation; also his numerous études, of which a number exist for each stage of musical training; but their extreme dryness prevents most teachers from using them. His "Führer durch den Klavierunterricht" (6th ed. 1879) is a valuable handbook, though at times the author is somewhat too much in the foreground. The following writings of K. have still to be mentioned: "Der Klavierfingersatz" (1862), "Der Klavierunterricht, Studien, Erfahrungen und Ratschläge" (4th ed. 1877); "Die neue Richtung in der Musik" (1864); "Leichtfassliche Harmonie- und Generalbasslehre" (3rd ed. 1880); "Brahms und seine Stellung in der neuern Klavierliteratur" (1880); "Der Klavierpedalzug" (1882); "Allgemeine Musiklehre" (1883). K. was also a zealous contributor to various musical papers (of his articles, likewise the History of Pianoforte Music in the *N. Z. f. Musik*, 1867-69, 1872, 1875, 1878; and in the *N. Berliner M. Ztg.*, 1871, 1875, and 1876).

Kohnt, Adolf, b. Nov. 10, 1847, Mindszent (Hungary), writer on music, lives at Berlin ("Weber-Gedenkbuch," "Fr. Wieck," "Leuchtende Fackeln," etc.).

Kolbe, Oskar, b. Aug. 10, 1836, Berlin, d. there Jan. 2, 1878; pupil of the Royal Institute for Church Music and of the school for composition of the "Akademie." From 1859-75 he was teacher of theory at the Stern Conservatorium, and was appointed royal "Musikdirektor" in 1872. He published several books of songs, and in 1872 produced an oratorio, *Johannes der Täufer*. He also wrote a "Kurzgefasstes Handbuch der Generalbasslehre" (1862; 2nd ed. 1872), and a "Handbuch der Harmonielehre" (1873).

Kollektivzug (Ger.), composition pedal. (See PEDALS, COMPOSITION.)

Kollmann, August Friedrich Karl, b. 1756, Engelbostel (Hanover), d. Easter Sunday, 1824, London: he studied music at Hanover, and in 1778 was private tutor to a Hanoverian family in London, where he became choir-master at the German Chapel, St. James's, also organist of the small organ presented to the chapel by George III. K. was by nature disposed to theory, as can be seen from the greater number of his compositions (programme symphony, "The Shipwreck": twelve analysed fugues; rondo on the motive of the diminished seventh; and a hundred psalms harmonised in a hundred ways, pf. concertos, etc.). His didactic works are: "First Beginning on the Piano-forte" (1796); "Introduction to Modulation"; "Essay on Practical Harmony" (1796); "Essay on Practical Musical Composition" (1799); "Practical Guide to Thorough-Bass" (1801); vindication of a part of the latter (1802); "New Theory of Musical Harmony" (1806); "A Second Practical Guide to Thorough-Bass" (1807); Remarks on Logier in the *Quarterly Musical Magazine and Review* (1818); a German epitome in the *Allg. Mus. Zeitung* (1822); a paper of his own, the *Quarterly Musical Register* (1812), of which, however, only two numbers appeared, but it contained several valuable articles.

Kömpel, August, excellent violinist, b. Aug. 15, 1831, Brückenau, d. 1891, pupil of the School of Music at Würzburg, afterwards of Spohr, David, and Joachim. In 1844 he was member of the court band at Cassel, from 1852-61 of the court band at Hanover, and, after long concert tours, leader from 1863 at Weimar. He received a pension in 1884.

Königslöw, (1) Joh. Wilh. Cornelius von, b. March 16, 1745, Hamburg, d. May 14, 1833, Lübeck, where, from 1773, he was organist of the "Marienkirche." He was a diligent composer of "Abendmusiken." (*Vide* BUXTEHUDE.)

(2) Otto Friedrich von, b. Nov. 13, 1824, Hamburg, an excellent performer on the violin, received his first musical training from his father (who, however, was not a musician by profession), also for a brief period from Fr. Pacius and Karl Hafner. From 1844-46 he attended the Leipzig Conservatorium as a pupil of David (violin) and of Hauptmann (theory). From 1846 to 1858 he made artistic tours, and from 1858 to 1881 was leader of the orchestra at the Gürzenich concerts, teacher of the violin and vice-director of the Cologne Conservatorium, and received the title of "Königlicher Professor." He now lives in retirement near Bonn.

Koning, David, b. March 19, 1820, Rotterdam, d. Nov. 6, 1876, Amsterdam. A composer and pianist of note, who studied under Aloys Schmitt in Frankfurt (1834-38), and received a prize from the Netherland Musical Society in 1839 for an overture (Op. 7). In 1840 he settled in Amsterdam, and undertook the direction of

the choral society "Musæ." He also visited London, Paris, and Vienna, but always returned to Amsterdam, where, for the space of ten years, he was secretary, and afterwards president, of the Cecilia Society, and was highly esteemed as a teacher of music. Of his compositions the following deserve mention: "Domine, salvum fac regem," with orchestra (Op. 1), several stringed quartets and pf. sonatas, études, songs, ("Zuleika"), part-songs for male voices, female voices, and for mixed chorus, concert scenes, a comic opera, *Das Fischer mädchen* (which gained a prize); the "Elegie auf den Tod eines Künstlers" (Op. 22), chorales, (& 4), etc. He also translated a theoretical work, "Beknopte handleiding tot de kennis van de leerstellingen der toonkunst," from the English of C. C. Spandler.

Konradin, Karl Ferdinand, b. Sept. 1, 1833, St. Helenenthal, near Baden (Lower Austria), d. Aug. 31, 1884, Vienna; a favourite operetta composer (1860-67; eleven operettas for Vienna).

Kontski, (1) Antoine de, b. Oct. 27, 1817, Cracow, distinguished pianist, who, in numerous concert tours, won applause by the smoothness and delicacy of his playing. He lived for some years in Paris, then in Berlin, where he was appointed court pianist, and from 1854-67 in Petersburg. After that he settled in London. Of his numerous *salon* compositions, "Le reveil du lion" is universally known. His opera, *Les deux distraits*, was given in London in 1872.

(2) Apollinaire de, brother of the former, b. Oct. 23, 1825, Warsaw, d. there, June 29, 1879. In his day he was a very famous violin virtuoso, studied with his eldest brother, Charles de K., and became a player at an astonishingly early age; later on he enjoyed instruction from Paganini at Paris. From 1853-61 he was imperial chamber virtuoso at Petersburg, and then founded the Conservatorium at Warsaw, of which he was director up to his death. His violin compositions are of no importance. Also

(3) Charles de K., b. Sept. 6, 1815, Cracow, afterwards piano-forte teacher in Paris, d. Aug. 27, 1867, and

(4) Stanislaus de K., b. Oct. 8, 1820, Cracow, violin teacher in Paris; these were both brothers of the above-named, and published pieces of a light *genre* for piano-forte and violin.

Kopecký, Ottokar, able violinist, b. April 29, 1850, Chotěboř, Bohemia, attended the Gymnasium at Pilsen, from 1864-70 the Prague Conservatorium, and then played in orchestras at Brünn, Vienna, Sondershausen, etc. At present he is leader of the Philharmonic society at Hamburg, also teacher at the Conservatorium and conductor of the "Schäffer" orchestral society.

Kopfstimme (Ger.), head-voice, *false alto*.

Koppel (Ger.), a coupler.

Korgánoff, Jennadi Osipowitsch, b. April 30, 1858, Kaschetin (Caucasus), d. Feb. 23, 1890, Rostroff on the Don (in a railway carriage), pianist and composer (fantasia "Bajati" on Caucasian themes). He studied under Reinecke at Leipzig, and under L. Brassin at Petersburg.

Körner, (1) Christian Gottfried, b. July 2, 1756, Leipzig, d. May 13, 1831, Berlin, chief privy councillor (father of the poet Theodor K.). Meetings of a choral society were held in his house at Dresden, in which city, for many years, he held office. He composed music and wrote, among other things, for the "Horen" of 1775, "Ueber den Charakter der Töne oder über Charakterdarstellung in der Musik."

(2) Gotthilf Wilhelm, b. June 3, 1809, Teicha, near Halle-a.-S., d. Jan. 13, 1865, Erfurt. He attended the Training School in the latter town, laboured for several years as school teacher, and in 1838 founded there the music publishing-house which still bears his name, and which is especially rich in works for the organ (1886 incorporated with C. F. Peters). In 1844 he founded the still existing musical paper *Urania* (for lovers of the organ; editor Gottschalg).

Kornmüller, Utto, "novice-master," prior, and regens chori of the Benedictine monastery, Metten, b. Jan. 5, 1824, Straubing, ordained priest July 16, 1847, declared his vows Nov. 30, 1858. K. wrote various masses, motets, several pamphlets on questions of liturgy and theory of music, also many articles for the "Kirchen-musikalische Jahrbücher" and the *Monatshefte für Musikgeschichte*. He is, at present, diocesan president of the Cecilia Society of the diocese of Ratibon.

Koschat, Thomas, composer, b. Aug. 8, 1845, Viktring, near Klagenfurt. He attended the national Gymnasium at Klagenfurt, and commenced the study of physics at Vienna, but then joined the chorus of the court opera, and devoted himself entirely to music. In 1874 he became a member of the cathedral choir, and in 1878 of the Hofcapelle. In 1871 appeared his first Carinthian quartets for male voices. They made a furore, and there were many imitations of them. K. was both poet (in the Carinthian dialect) and composer of these songs, which gave a typical picture of the intellectual life and the character of the Carinthian people, but they are altogether of simple structure. He also published two small volumes of similar poems without music ("Hadrich" and "Dorfbilder aus Kärnten"), also a vaudeville (*Am Wörther See*), which was repeatedly performed at Vienna and elsewhere.

Köselitz, Heinrich, b. 1854, Annaberg (Saxony), pupil of the Leipzig Conservatorium (Richter), in 1875 under Nietzsche at Basle. Since then he has lived for the most part in Italy. He is a gifted composer of operas (up

to now has only been produced—"Die heimliche Ehe, Danzig, 1891, under pseudonym Peter Gast. Cf. Dr. Karl Fuchs, "Thematik" of this opera.).

Kosleck, Julius, b. Dec. 3, 1835, Neugrad Pomerania, performer on the trumpet and the *cornet-à-pistons*; in 1852 he joined the band of the 2nd regiment of the Guards in Berlin, and, after some years, was appointed member of the royal band, and, in 1873, teacher of the trumpet and trombone at the royal "Hochschule." K. is known as the founder and head of the famous "Kaiser-Kornett-quartett." Besides numerous arrangements for this quartet society, K. published a Method for trumpet and *cornet-à-pistons*.

Kossak, Ernst, b. Aug. 4, 1814, Marienwerder, d. Jan. 3, 1880, Berlin; he studied philology at Königsberg and Berlin, and took his degree of Dr. Phil., but devoted himself entirely to the career of a journalist, and excelled especially as a writer of musical *feuilletons*. He was also a frequent contributor to the *Neue Berliner Musik Zeitung*, to the musical paper *Echo* (which he founded, and of which he was for a long time editor), and to the *Zeitungshalle* (afterwards called *Berliner Feuerspritze*, *Berliner Montagspost*), which was also started by him.

Kossmaly, Karl, b. July 27, 1812, Breslau, d. Nov., 1893, Stettin, pupil of L. Berger, Zeiter, and Klein at Berlin (1828-30), then opera capellmeister at Wiesbaden, Mayence, Amsterdam (1838), Bremen (1841), Detmold and Stettin (1846-49), where he became teacher of music and concert-conductor. He has made a name as composer of songs and some instrumental works. As a writer he was of still greater importance: "Schlesisches Ton-künstlerlexikon" (in parts, 1846-47); "Mozarts Opern" (1848, after Ullibischew); "Ueber die Anwendung des Programms zur Erklärung musikalischer Kompositionen" (1858); "Ueber Richard Wagner" (1874, anti-Wagnerian). He contributed much also to the *Neue Zeitschrift für Musik*, *Neue Berliner Musik Zeitung*, and the *Stettiner Zeitung*.

Köstlin, (1) Karl Reinhold, professor of esthetics and history of art at Tübingen, b. Sept. 28, 1819, Urach (Württemberg), d. April 12, 1894, Tübingen, a man of high musical culture, of which his "Aesthetik" (1863-69, two vols.), also the "Aesthetik" treating specially of music, written by him for the third volume of F. Th. Vischer's comprehensive "Aesthetik," and his pamphlet on R. Wagner, give signal proof.

(2) Heinrich Adolf, writer on music, b. Oct. 4, 1846, son of the celebrated Tübingen professor Christian Reinhold K., a lawyer versed in criminal law, and also a poet, and of Josephine Lang-K. (q.v.), the excellent song-composer. He received from a tender age a sound musical education, but, after his father's premature death (1856), studied theology at

Tübingen, went in 1869 as private tutor to the Würtemberg ambassador at Paris, was chaplain in the army during the war of 1870, was tutor at the theological training-school at Tübingen (where he gave lectures on the history of music), from 1873-75 deacon at Sulz.-a.-N., organised in 1875 the union of the choirs (the three towns Sulz, Kalw, Nagold) for the practice of church music, which in 1877 was extended into the "Evangelischer Kirchengesangverein" for Würtemberg, the festival performances of which he conducted for many years. He was called to Maulbronn in 1875, and to Friedrichshafen in 1878, where he became preacher, and likewise conductor of the Oratorio Society. In 1881 he went to Stuttgart, and in 1883 was appointed professor at the Friedberg (Hesse) training-school, but in 1891 was removed to Darmstadt as member of the supreme consistorial court, and superintendent. His critical notices of musical books (in *Deutsches Literaturblatt* and the Augsburg *Allgemeine Zeitung*) are worthy of mention; also his "Geschichte der Musik im Umriss" (1875; third, and considerably enlarged edition, 1883), and "Die Tonkunst. Einführung in der Aesthetik der Musik" (1878); and "Josephine Lang-K." (biography of his mother).

Kotek, Joseph; b. Oct. 25, 1855, Kamenez-Podolsk (Government Moscow), d. Jan. 4, 1885, Davos, pupil of the Moscow Conservatoire. After further study under Joachim, he became, in 1882, teacher of the violin at the Royal High School of Music, Berlin. He composed studies, solo pieces, and duets for violin.

Kothe, (1) Bernhard, b. May 12, 1821, Gröbnig (Silesia); he attended the Royal Institution for Church Music, Berlin, enjoyed also, for a time, instruction from A. B. Marx, and in 1851 was appointed church musical director and teacher of singing at the school at Oppeln, from which town in 1869 he went to Breslau as teacher of music at the seminary. K. founded there the Cecilia Society for Catholic sacred music; he published collections of sacred songs for male chorus ("Musica sacra"), besides organ pieces, a "Praeludienbuch" for organ, motets, a Method of singing ("Singtäfelchen" for training in schools), also the pamphlets "Die Musik in der katholischen Kirche" (1862) and "Abriss der Musikgeschichte für Lehrerseminare und Dilettanten" (1874), revised the 3rd edition of Seidel's "Die Orgel und ihr Bau" (1887), and collaborated with Forschhammer in a "Führer durch die Orgellitteratur" (1890).—His two brothers—(2) Aloys (b. Oct. 3, 1828, d. 1868 as teacher of music at the seminary, Breslau); and (3) Wilhelm (b. Jan. 8, 1831, teacher of music at Habelschwerdt seminary)—made a name by their sacred compositions and vocal works for school use.

Köttlitz, Adolf, b. Sept. 27, 1820, Trèves, an

excellent violinist; he lived for several years in Cologne, and, under Liszt's patronage, for three years in Paris. From 1848-56 he was leader at Königsberg, and, while on a concert tour through Siberia, settled at Uralsk as musical director, where an accident in the hunting-field put an end to his life on Oct. 26, 1860. Of his compositions, two quartets for strings deserve mention.—His wife (Klotilde, *née* Ellendt, d. 1867) lived at Königsberg esteemed as a teacher of singing.

Kotzeluch (Koželuch), (1) Johann Anton, b. Dec. 13, 1738, Wellwarn (Bohemia), d. Feb. 3, 1814, as capellmeister of St. Veit's Church, Prague. He was trained at the Jesuits' College at Brzeznitz, afterwards at Prague (pupil of Seegert and chorister of St. Veit's) and Vienna (pupil of Gluck and Gassmann). He was musical director of a church at Vienna, then at Prague at the Kreuzherrenkirche; finally, capellmeister of the Metropolitankirche. He wrote several operas, oratorios, masses, etc., which, during his lifetime, were held in high esteem, but were not published.

(2) Leopold Anton, cousin of the former, prolific composer, b. Dec. 9, 1752, Wellwarn, d. May 7, 1818, Vienna; he went through his school and university studies at Prague, but, after a successful production of a ballet of his at the Prague National theatre (1771), devoted himself entirely to composition, and wrote, during the following six years, twenty-four more ballets, three pantomimes, and other incidental music for the theatre. He went in 1778 to Vienna, and was soon appointed teacher of music to the Archduchess Elizabeth. The post of leader, as Mozart's successor, of the band belonging to the Archbishop of Salzburg was offered to him (1781), but this he refused; on the other hand, after Mozart's death, he replaced him as imperial court composer (1792). K. wrote with extraordinary ease, but without much self-criticism. His works, especially those for pianoforte, were very popular in Germany, and most of them were published by a brother of his at Vienna. Besides the ballets already mentioned, he wrote several operas (*Didone abbandonata*, *Fiduth*, *Deborah und Sisera*), an oratorio (*Moses in Aegypten*), numerous arias, cantatas, choruses, etc., about thirty symphonies (only a few of which were published), thirteen pianoforte concertos (all of them published; one for four hands and one for two pianofortes), fifty-seven pf. trios, three *Symphonies concertantes* for strings, many pf. sonatas (for two and four hands), pf. pieces, six cello concertos (two published), two clarinet concertos, two concertos for basset-horn, etc.

Kotzolt, Heinrich, the founder (1849), and, up to his death, conductor, of the Kotzolt *capella* vocal society at Berlin, b. Aug. 26, 1814, Schnellwalde, near Neustadt (Upper Silesia), d. July 3, 1881, Berlin. From 1834-36 he

studied philology at Breslau, but then turned to music, and, from 1836-38, worked at theory in Berlin under Dehn and Rungenhagen. In the latter year he became principal bass at the Danzig opera, settled in that city (1839-42) as teacher of singing, and, after some long concert tours, became principal solo bass of the cathedral choir, Berlin, and in 1862 sub-conductor of the same. From 1865 he was also teacher of singing at the Königstadt high school, and from 1872 at the Joachimsthal Gymnasium; he was appointed royal musical director in 1866, and named professor in 1876. K. was an excellent teacher of singing and conductor; he published an *a cappella* method.

Kraft, (1) Anton, b. Dec. 30, 1752, Rokitzan, Bohemia, d. Aug. 28, 1820, Vienna. He was a distinguished 'cellist, and was a member of the bands of the Princes Esterházy (1778-90), Grassalkowitsch (up to 1795), and Lobkowitz (up to 1820) at Vienna. He studied composition for a time with Haydn. K. wrote a 'cello concerto, six 'cello sonatas, three *duos concertants* for 'cello and violin, two duos for two 'celli, a *divertissement* for 'cello and bass, and several trios for two barytons (the favourite instrument of Prince Esterházy, on which K. also was a performer) and 'cello.

(2) Nikolaus, son and pupil of the above, was also a distinguished performer on the 'cello, b. Dec. 14, 1778, Esterházy, d. May 18, 1853, Stuttgart. He was a member of the celebrated Schuppanzigh Quartet. When young he travelled with his father, in 1796 became chamber-musician to Prince Lobkowitz, at whose expense he studied under Dupont at Berlin, joined the court opera orchestra in 1809, and went, in the same capacity, to Stuttgart in 1814. In 1834 he received a pension. He added valuable works to the literature of the 'cello, among others, five concertos, one fantasia with stringed quartet (Op. 1), three *divertissements* for two 'celli, six duos for 'celli, characteristic pieces, one polonaise, bolero, etc.—His son, Friedrich, b. Feb. 12, 1807, was for many years 'cellist in the court band at Stuttgart.

Krakowiak (Fr. *Cracovienne*), a Polish dance in $\frac{3}{4}$ time. Like the Mazurka and other Polish, Hungarian, and Bohemian dances, its characteristic feature consists in the frequent accentuation of unaccented beats, and in the employment of syncopation—

but it is lively and graceful rather than passionate.

Krantz, Eugen, the present director of the Dresden Royal Conservatorium, b. Sept. 13, 1844, Dresden. He was the son of a painter, studied the pianoforte, first under G. Funke and R. Reichardt, received further training,

from 1858-65, at the Dresden Conservatorium (H. Döring, E. Leonhard, Ad. Reichel, I. Rietz, M. Fürstenau, etc.). He then became private teacher of the pianoforte and theory at Dresden, in 1869 chorus-master of the Hofoper (up to 1884), and at the same time at the Conservatorium, at first only for the pianoforte, in 1877 also for ensemble singing and operatic music, likewise, inspector of the seminary. In 1884 he undertook the highest choral class, and, in 1890, acquired the institution by purchase. At the same time K. was active as critic (1874-76 of the Dresden *Presse*, from 1886-87 of the *Dresdener Nachrichten*). K. is an able pianist, since 1862 highly esteemed as accompanist at concerts, also a good Bach player (at the "Tonkünstlerverein"). As a composer he has produced only a few songs, but has many works of large compass in manuscript. His "*Lehrgang im Klavierunterricht*" (1882) is a work of merit. In 1882 he received the title of "Kgl. Sächs. Professor."

Krause, (1) Christian Gottfried, b., according to Ledebur, 1719, Winzig, where his father was "Stadtmusicus," attended the University at Frankfurt, went in 1747 to Berlin, where, in 1753, he became a lawyer, and died July 21, 1770. He was composer, writer, editor, and collector of the "*Lieder der Deutschen*," likewise contributor to the *Allgem. deutschen Bibliothek*. He wrote: "*Von der musikalischen Poesie*" (1753, 484 octavo pages, a sharp-sighted, worthy work, which compares well with similar works in the older literature); "*Vermischte Gedanken über Musik*" (in Marburg's "*Kritische Beiträge*, vols. 2 and 3, 523 pages).

(2) Karl Christian Friedrich, philosopher, b. May 6, 1781, Eisenberg (Altenburg), d. Sept. 27, 1832, Munich, whither he had just come (for the purpose of qualifying himself as private lecturer at the University) from Göttingen, where he had long waited in vain for a professorship. He published philosophical works of the highest interest ("*Urbild der Menschheit*," "*Logik als philosophische Wissenschaft*," "*Philosophie des Rechts*," etc.), and historical works on freemasonry, "*Darstellungen aus der Geschichte der Musik*" (1827), "*Anfangsgründe der allgemeinen Theorie der Musik*" (1838, posthumous), and a technical educational work for the pianoforte ("*Vollständige Anweisung*," etc., 1808).

(3) Theodor, b. May 1, 1833, Halle, pupil of Fr. Naue, E. Hentschel, M. Hauptmann, and E. Grell (theory), and Eduard Mantius and Martin Blumner (singing). He was founder of the church choir of St. Nikolai and of St. Marien at Berlin, conductor of the Seiffert vocal society (*a cappella*), musical critic of the *Deutsche Rundschau*, of the *Reichsboten*, and of the *Berliner Zeitung*, etc.; he lives at Berlin as rector. K. attempted to simplify the teaching of singing in schools by means of the so-called "Wander-

note." As a composer he has produced songs, part-songs, also sacred works. In 1887 the title of "Königl. Musikdirektor" was bestowed on him.

(4) Anton, a highly esteemed teacher of the pianoforte, conductor and composer, b. Nov. 9, 1834, Geithain (Saxony), pupil of Fr. Wieck, Spindler, and Reissiger, and, from 1850-53, at the Leipzig Conservatorium. Since 1859 he has been conductor of the "Konkordienkonzerte," of the town vocal society, and of the Liedertafel at Barmen, where he also established regular performances of chamber-music. K.'s compositions are principally confined to instructive pieces for the pianoforte (sonatinas and sonatas for two and four hands, also some for two pianofortes, études, etc.), which, owing to their simple structure, are held in high esteem. K. has also published expressive songs, a Kyrie, Sanctus, and Benedictus, for soli, chorus, and orchestra, likewise two operas.

(5) Emil, also an esteemed teacher of the pianoforte, b. 1840, Hamburg, pupil of the Leipzig Conservatorium under Hauptmann, Rietz, Moscheles, Plaidy, and Richter; he has been living as teacher of the pianoforte and theory at Hamburg since 1860, has been active as a musical critic since 1864, and, since 1885, as teacher at the Conservatorium. Of his publications, the "Beiträge zur Technik des Klavierspiels" (Op. 38 and 57, the latter as foundation to the higher development of pianoforte-playing), and his "Aufgabenbuch für die Harmonielehre," deserve special mention. He also wrote chamber-music, three cantatas, Ave Maria à 6, double chorus for female voices, songs, etc.

(6) Prof. Dr. Eduard, b. March 15, 1837, Swinemünde, d. March 28, 1892, Berlin, studied science, but at the same time pianoforte and theory under Kroll and Hauptmann at Leipzig. In 1862 he settled at Stettin, where, as pianist, composer, and teacher of music, he worked most successfully. He has become favourably known as the author of several philosophico-musical treatises.

(7) Martin, b. June 17, 1853, Lobstädt-i.-S. After attending the teachers' seminary, he joined the Leipzig Conservatorium (1874-76), was then active in Switzerland and at Bremen as pianist and teacher of his instrument. In 1882 he settled permanently at Leipzig, founded in 1885, jointly with Friedheim, Siloti, Nikisch, Dayas, F. Stade, Fritsch, etc., the "Liszt-Verein," a society which, under his energetic presidentship, has become an essential element of Leipzig musical life. As a pianist (of Liszt tendency; for by many years intercourse he had become imbued with the master's principles), and as a critic of advanced views, he has won for himself a distinguished position. The Duke of Anhalt, in recognition of his merits in connection with music, and especially the cause of Liszt, bestowed on him the title of

professor, and the Knight's Cross, first class, of the "Albrecht" order.

Kraushaar, Otto, b. May 31, 1812, Cassel, d. there Nov. 23, 1866. He studied with Moritz Hauptmann, whose idea with regard to the oppositeness of the major and the minor consonance he adopted; and, before the appearance of Hauptmann's "Natur der Harmonik und der Metrik," he developed the same in a small pamphlet ("Der akkordliche Gegensatz und die Begründung der Skala" 1852), and in a more logical manner even than Hauptmann; for in contradistinction to the major scale he placed the minor scale as its opposite. The charge of plagiarism brought against him by Hauptmann in the preface to the above-named work is therefore altogether unjustifiable. Besides numerous articles in musical papers, K. wrote "Die Konstruktion der gleichschwebenden Temperatur ohne Scheiblersche Stimmgabeln" (1838). He also published several books of songs and "Lieder ohne Worte."

Krauss, Gabriele, opera-singer (soprano), b. March 24, 1842, Vienna, pupil of the Conservatorium there. She was engaged at the Vienna court opera from 1860-68, and since then has been one of the chief attractions of the Paris Grand Opéra. Among other distinctions, she was made honorary member of the society of the concerts of the Conservatoire, and in 1880 officer of the Académie. She plays great dramatic rôles, such as Aida, Norma, etc.

Krebs, (1) Johann Ludwig, b. Oct. 10, 1713, Buttelstädt, near Weimar, where his father, Joh. Tobias Krebs (b. 1690, pupil of Bach's at Weimar), was cantor and organist, d. beginning of January, 1780, Altenburg. He attended the Thomasschule at Leipzig (1726-35), became a private pupil of Bach's, and occupied various posts as organist at Zwickau, Zeitz, and Altenburg. Bach considered him his best pupil for the organ. His published compositions are: "Klavierübungen" (1743-49), sonatas for clavier and flute, flute trios, a clavier concerto and preludes for clavier. A complete edition of his compositions, remarkable for the purity of their style, was issued by Heinrichshofen at Magdeburg.

(2) Karl August, b. Jan. 16, 1804, Nuremberg, d. May 16, 1880, Dresden; an excellent conductor, composer, and pianist. His real name was Miedcke, but he afterwards took the name of his adoptive father (the opera-singer J. B. Krebs), to whom he was indebted for a good part of his artistic training. After one year of further study under Seyfried at Vienna, he commenced his career as conductor in 1826 as third capellmeister at the Vienna court opera, but went, already in 1827, as capellmeister to Hamburg, and became an important factor in the musical life of that city. He was called to Dresden in 1850 as court capellmeister, and for many years displayed great and beneficial

activity, until he retired in 1872. For a time his compositions, especially songs, were known and admired far and wide; several operas (*Silva*, 1830; *Agnes Bernauer*, 1835, revised 1858) were produced; and he also wrote a *Te Deum*, masses, pf. pieces, etc.

His wife (3) Aloysia K. Michalesi, b. Aug. 29, 1820, Prague, married 1850, was a famous opera-singer (Hamburg, Dresden).

Of two daughters, (4) Mary (married Brenning), b. Dec. 5, 1851, Dresden, distinguished pianist (pupil of her father's), appeared already in 1865 at a Gewandhaus concert at Leipzig, and, after long journeys, settled in Dresden.

(5) Karl, writer on music, b. Feb. 5, 1857, Hanseberg, near Königsberg-i.-W., attended the Gymnasium in the latter city. He first studied natural philosophy, then music at the Royal High School of Music, Berlin; he attended lectures on the theory and philosophy of music at the University (Spitta), and for his treatise "*Girolamo Dirutas Transilvano*" was created Dr.Phil. by the University of Rostock. K. gradually undertook the musical notices for the *Vossische Zeitung*, the *Moderne Kunst* and the *Deutsche Rundschau* (Rodenberg). Up to the present he has contributed a number of treatises of the highest value on the history of music to the *Vierteljahrsschrift für Musikwissenschaft*, the *Preussische Jahrbücher*, and to the science supplements of the *Vossische Zeitung*, etc.

Krebsgänger (Ger.), retrograde, backward, in reference to motion.

Krehl, Stephan, b. July 5, 1864, Leipzig, studied at the Leipzig Conservatorium, and also at Dresden; since 1889 he has been teacher of the pianoforte and theory at the Carlsruhe Conservatorium. He is a highly talented composer (pf. pieces, songs, etc.).

Kreipl, Joseph, composer of "Mailüfterl" (words by Kleesheim), which has become a Volkslied, etc.; he was b. 1805, and d. May, 1866, Vienna.

Kreischend (Ger.), shrieking, screeching.

Kreisler, Johannes. (See **HOFFMANN** [2].)

Kreisler von Hellborn, Heinrich, the worthy biographer of Schubert, b. 1812, Vienna, d. there, as Imperial Finance Secretary, April 6, 1869. He was member of the board of directors of the Gesellschaft der Musikfreunde. His two works are: "F. Schubert, eine biographische Skizze" (1861), and some years later, an exhaustive biography—"Franz Schubert" (1865; English by Arthur Duke Coleridge, 1869; an epitome by Wilberforce, 1866).

Krejčí, Joseph, b. Feb. 6, 1822, Milostin (Bohemia), d. Oct. 19, 1881, Prague, a distinguished organist, pupil of Witassek and Proksch at Prague; in 1844 organist of the "Kreuzherrenkirche" of that city, in 1848 chorus director of the "Minoritenkirche;" in 1853 he occupied a similar post at the "Kreuzherrenkirche," in

1858 became director of the organ school, and in 1865 director of the Conservatorium. K. composed organ pieces, masses, and other instrumental and vocal works.

Krempelsetzer, Georg, b. April 20, 1827, Vilsbiburg (Lower Bavaria), d. there June 9, 1871; he was for many years a cloth-weaver, but resolved to devote himself entirely to music, for which he showed disposition and talent. F. Lachner, of Munich, became his teacher. He soon successfully produced some operettas (*Der Onkel aus der Lombardei*; *Der Vetter auf Besuch*; *Die Kreuzfahrer*; *Das Orakel in Delphi*; *Die Geister des Weins*; *Der Rotmantel*). For a time he occupied the post of capellmeister at the "Aktientheater," Munich (1865), and was afterwards similarly engaged at Görlitz (1868) and Königsberg (1870).

Kremser, Eduard, b. April 10, 1838, Vienna, from 1869 choir-master of the Vienna Male Choral Society. He has composed pf. pieces, songs, part-songs, and operettas: *Eine Operette* (1874), *Der Botschafter*, *Der Schlosserhönig*, *Der kritische Tag* (1891; all at Vienna).

Krenn, Franz, b. Feb. 26, 1816, Dross (Lower Austria), organist and composer, pupil of Seyfried, occupied several posts as organist at Vienna, and became in 1862 capellmeister of the "Michaels (Hof-) Kirche," and in 1869 professor of harmony at the Conservatorium of the "Gesellschaft der Musikfreunde." His compositions consist for the most part of sacred and secular vocal works: fifteen masses, *Te Deum*, *Salve regina*, several requiems, cantata, oratorios (*Bonifacius*; *Die vier letzten Dinge*), part-songs; yet he also wrote pieces for the organ and pianoforte, quartets, a symphony, an organ Method, and one of singing, etc.

Kretschmann (Krečman), Theobald, b. 1850, Vinos, near Prague, solo violoncellist at the Vienna court opera, and conductor of the chamber concerts.

Kretschmer, Edmund, b. Aug. 31, 1830, Ostritz (Saxon Oberlausitz), where his father was director of the Realschule, pupil of Jul. Otto and Joh. Schneider at Dresden, where he continued to study zealously by himself, became organist in 1854 of the Catholic "Hofkirche," Dresden, court organist in 1863, conductor, from 1850-70, of various societies there, and founded a Cecilia Society, since dissolved, of which he was conductor. K. is of importance as a composer, and his merit fully recognised. In 1865 Rietz, Abt, and J. Otto awarded him a prize for his "*Geisterschlacht*," and in 1868 he gained the prize at the national competition at Brussels with a Mass. He wrote, besides, three other masses, also "*Pilgerfahrt*" for chorus, soli, and orchestra; "*Festgesang*," for chorus and orchestra; "*Musikalische Dorfgeschichten*," for orchestra; but, above all, the grand operas *Die Folkunger* (Dresden, 1874), *Heinrich der Löwe* (Leipzig, 1877; of which he also wrote the

libretto), and the operetta *Der Flüchtling* (Ulm, 1881), the first two of which were successfully produced at the most important theatres. His most recent works are: *Schön Rohtraut* (romantic opera, Dresden, 1891) and "Sieg im Gesang" (for soli, chorus, and orchestra). K. was specially stimulated and assisted by J. Rietz, who at once rightly estimated the value of *Die Folkunger*, and by Franz Lachner, with whom he opened up correspondence; the latter happened to be one of the judges, together with Fétis, at the Brussels competition.

Kretschmar, Aug. Ferd. Hermann, b. Jan. 19, 1848, Olbernhau (in the Saxon Erzgebirge), received his musical instruction from his father, who was cantor and organist. He attended the Kreuzschule at Dresden (received instruction in music from J. Otto), studied philology at Leipzig, obtained his degree of Dr. Phil. in 1871 with a dissertation on the notation signs anterior to Guido d'Arezzo, and became teacher in the same year at the Leipzig Conservatorium, where he had formerly been pupil (under Paul, Richter, Papperitz, and Reinecke). As at the same time he displayed great activity as a conductor (Ossian, Singakademie, Bach-Verein, Euterpe), his strength gave way, and, in 1876, he was compelled to resign all his Leipzig appointments. After resting for a short time, he undertook, still in the same year, the post of theatre capellmeister at Metz, and, in 1877, became musical director of the Rostock University, and in 1880, town musical director, and soon caused musical matters at Rostock to stand in high repute. In 1887 he succeeded Hermann Langers as musical director of the Leipzig University, and became conductor of the "Paulus." Also as member of the commission to examine students in theology, of the municipal professional Verein, and of the directorate of the Bachgesellschaft, also as conductor of the "Riedel" Society, he received in 1890 the title of Professor. In the same year he started the "Akademische Orchesterkonzerte" (with historical programmes). The few compositions for the organ which he has published, and some secular and sacred choruses, show him to be a sound musician. In addition, K. is an excellent performer on the organ, and has acquired fame as a musical critic (*Musikalisches Wochenblatt*, *Grenzboten*, etc.). His great literary works are reports on "Chorgesang, Sängerschöre," etc., on "Peter Cornelius" (1880, in: Waldersee's Collection), the "Führer durch den Konzertsaal," which soon became popular (three vols., 1887 [2nd edition, 1890], 1888, 1890), and valuable articles in the *Grenzboten* ("Das deutsche Lied seit Schumann," 1881; "Die deutsche Klaviermusik seit Schumann," 1882; "Brahms," 1884). At present K. is at work on a vast monograph of the Opera, which was preceded in 1892 by an article in the *Vierteljahrsschrift für Musik-Wissenschaft* on "Venetian Opera," especially on Cavalli and Cesti.

Kreubé, Charles Frédéric, b. Nov. 5, 1777, Lunéville, d. 1846, at his villa, near St. Denis. He studied under Rod. Kreutzer, and was principal conductor at the Opéra Comique from 1816-28. Between the years 1813-28 he wrote sixteen comic operas for Paris.

Kreutzer, (1) Rodolphe, b. Nov. 16, 1766, Versailles, d. Jan. 6, 1831, Geneva, son of a violinist of the Chapelle du Roi. Under the guidance of his father and of Anton Stamitz, he became an excellent violinist at an early age, and, already at thirteen, wrote his first violin concerto, before he had received any instruction in theory. His father died when he was sixteen years old, and he then took his place in the court band, and in 1790 was appointed solo violinist at the Théâtre Italien, and, holding this post, was able to bring out an opera. His *Jeanne d'Arc à Orléans*, produced in 1790, opened the goodly series of nearly forty operas, which, up to 1823, he wrote, partly for the Grand Opéra, partly for the Opéra Comique; most of them were favourably received, but all have fallen into oblivion. On the other hand, his fame as a virtuoso and teacher of the violin still lives. In 1795 he was appointed professor of the violin at the newly established Conservatoire, and in 1796 his reputation was established abroad by a grand concert tour through Italy, Germany, and Holland. When Rode went to Russia in 1801, K. took his place as solo violinist at the Grand Opéra, became second conductor there in 1816, and principal one in 1817; at the same time, from 1802, he became chamber-musician to Napoleon, and, from 1815, to Louis XVIII. He retired from public life in 1826. The last years of his life were embittered by the disdainful refusal to produce his last opera, *Mathilde*, on the part of the directors of the Grand Opéra. The work which will secure the most lasting fame to K. as composer is his "40 Études ou Caprices," for violin alone. He wrote, besides, for his instrument:—nineteen concertos, two double concertos, a similar one for violin and cello, fifteen stringed quartets, fifteen stringed trios, several violin sonatas with bass, violin duets, variations for solo violin with orchestra, also for two, three, and four violins. K. published, jointly with Rode and Baillet, the great Violin Method of the Paris Conservatoire. Beethoven dedicated his violin sonata (Op. 47, K.-Sonata) to Rodolphe K.

(2) Auguste, b. 1781, d. Aug. 31, 1832, brother of the former, and his pupil at the Conservatoire; he was also a distinguished performer on and teacher of the violin. From 1798 he was a member of the orchestra of the Opéra Comique, and belonged to the Grand Opéra from 1802-23, also to the court band of Napoleon, Louis XVIII., and Charles X. up to 1830; he succeeded his brother as professor of the violin at the Conservatoire in 1826. He

published for the violin: two concertos, two duets, three sonatas with bass, also some solo pieces and variations.

(3) Charles Léon François, son of the latter, b. Sept. 23, 1817, Paris, d. Oct. 6, 1868, Vichy; he was an intelligent, but severe, musical critic, and wrote especially for the papers *La Quotidienne*, *L'Union*, *Revue et Gazette Musicale* (1841, a series of valuable articles, "L'Opéra en Europe"), and *Revue Contemporaine* (Studies on Meyerbeer). An edition of the article which he wrote, jointly with Fournier, for the "Encyclopédie du XIX. siècle" appeared separately in 1845 under the title "Essai sur l'art lyrique au théâtre" (up to Meyerbeer). K. was also highly gifted as a composer, and published pf. sonatas, stringed quartets, a trio, songs, a prelude to Shakespeare's *Tempest*, etc.; also a treatise on modulation. Two symphonies, two operas, etc., remained in manuscript. A. Pougin wrote a biographical notice of him (1868).

(4) Konradin (Kreuzer, according to certificate of baptism), b. Nov. 22, 1780, Mösskirch (Baden), d. Dec. 14, 1849, Riga, was the son of a miller, but, already from an early age, received regular instruction in music. After the death of his father (1800) he devoted himself entirely to music (already in 1800 his first Vaudeville, *Die lächerliche Werbung*, was produced at Freiburg-i.-Br.). He started for Vienna, but remained for some years in Constance; only in 1804 did he arrive in Vienna, where he became the pupil of Albrechtsberger. His talent for composition soon showed buds of promise, and by a performance of a piano concerto of his own K. soon became favourably known. The production of his grand operas *Konradin von Schwaben* and *Der Taucher* was prevented, but he had a pleasing success with his *Æsop in Phrygien* (1808) and *Jery und Bätely* (1810). A performance of the opera *Konradin* at Stuttgart (1812) procured for him the post of capellmeister at the Würtemberg court. He now wrote several new operas for Stuttgart, but went in 1817 to Donaueschingen as capellmeister to Prince von Fürstenberg. In 1822 he returned to Vienna, produced there his *Libussa*, and was for many years (1825, 1829-32, and 1837-40) capellmeister at the "Karntnerthor" Theatre, and from 1833-37 at the Josephstadt Theatre. From 1840-46 he was capellmeister at Cologne, from 1846-49, again at Vienna, in place of O. Nicolai. For the sake of his daughter Cecilia, whom he trained as an opera-singer, he went to Riga, where she was engaged, and he died there. In all K. wrote thirty operas, some incidental music, and an oratorio, *Die Sendung Moses*, but only *Nachtlager von Granada* (Vienna, 1834) and *Der Verschwander* are still played. His instrumental compositions (septets, quintets, pf. quartets, three pf. concertos, trios for pf., flute and cello, one for pf., clarinet and bassoon, fantasias, variations, etc.), and his songs are

forgotten. Only some male quartets are popular in the best sense of the word ("Der Tag des Herrn," "Die Kapelle," etc.). (Cf. Riehl, "Mus. Charakterköpfe.")

Kreuzer. (See KREUTZER, [4].)

Krieger, (1) Adam, b. Jan. 7, 1634, Driesen (Neumark), pupil of S. Scheidt at Halle, d. June 30, 1666, as court organist at Dresden. He wrote arias à 1-5, with instrumental *ritornelli*, of which he published one in 1656; sixteen others appeared after his death in 1667.

(2) Johann Philipp, b. Feb. 26, 1649, Nuremberg, d. Feb. 6, 1725, Weissenfels, organist at Copenhagen, then, from 1672, for some years chamber composer and capellmeister at Baireuth; but, owing to the French war, for a long time he had no duties to perform, and received permission to travel in Italy. He held office in Cassel, Halle-a.-S., for periods of various lengths, and, from 1685, was court capellmeister at Weissenfels. The Emperor Leopold raised him to the rank of a nobleman on the occasion of a court concert at Vienna. K. wrote several operas for Dresden, Brunswick, and Hamburg. Of his works are preserved: twenty-four sonatas for two violins with bass (Op. 1, 1687; Op. 2, 1693); "Lustige Feldmusik" (pieces for four wind instruments); and "Musikalischer Seelenfriede" (twenty sacred arias with violin and bass, 1697; 2nd ed. 1717).

(3) Johann, b. Jan. 1, 1652, Nuremberg, d. July 18, 1736, Zittau, pupil and brother of the former, and his successor at Baireuth; in 1678 court capellmeister at Greiz, also for a time at Eisenberg; and in 1681, musical director and organist at Zittau. His works are: "Musikalische Ergötzlichkeit" (1684, arias à 5-9); "Musikalische Partien" (1697, dance pieces for clavier); and "Anmutige Klavierübungen" (1699, preludes, fugues, ricercari, etc.). Motets and portions of masses of his are preserved in manuscript in the Berlin library. K. had the reputation of being one of the most celebrated contrapuntists of his day.

(4) Ferdinand, b. Jan. 8, 1843, Waldershof (Upper Franconia), pupil of the teachers' seminary at Eichstätt and of the Munich Conservatorium; from 1867 music-teacher at the teachers' preparatory institution at Ratisbon. He published: "Die Elemente des Musikunterrichts" (1869); "Die Lehre der Harmonie nach einer bewährten praktischen Methode" (1870); "Studien für das Violinspiel;" "Technische Studien im Umfang einer Quinte für das Pianofortespiel;" "Der rationelle Musikunterricht, Versuch einer musikalischen Pädagogik und Methodik" (1870).

Kriesstein, Melchior, music-printer at Augsburg in the 16th century; he published two collections of Siegmund Salbinger's—"Selectissimæ nec non familiarissimæ cantiones ultra centum" (1540), and "Cantiones 7, 6 et 5 vocum" (1545).

Krigar, Julius Hermann, b. April 3, 1819, Berlin, where he d. Sept. 5, 1880. He first studied for the career of a painter, but turned entirely to music in 1843, attended the Leipzig Conservatorium, and lived as a teacher of music in Berlin, where he established a vocal society. For some years he conducted the "Neue Berliner Liedertafel," and in 1857 was named royal musical director, and in 1874, professor. He only produced a few small pieces. From 1873-74 K. published a "Musikerkalender."

Krisper, Anton, Dr. Phil. at Graz. He wrote "Die Kunstmusik in ihrem Principe, ihrer Entwicklung und ihrer Konsequenz" (1882), a highly interesting historico-theoretical study on a harmonic-dualistic basis.

Krzkowsky, Paul, famous Czechish national and church composer, b. Jan. 9, 1820, d. May 8, 1885, Brünn; he was an Augustine monk, and councillor of the archbishop's consistory.

Kroll, Franz, b. June 22, 1820, Bromberg, d. May 28, 1877, Berlin, pupil of Liszt at Weimar and Paris, lived from 1849 in Berlin, where he also appeared with success as a pianist. From 1863-64 he taught at the Stern Conservatorium. A disorder of the nerves prevented him from work of any kind during the last years of his life. His name stands high through his excellent critical edition of Bach's "Well-tempered Clavier" (published by Peters, and in the fourteenth year of the Bach Society edition), the "Bibliothek älterer u. neuerer Klaviermusik" (Dresden, Fürstner, c. 1891), and, also, some pianoforte compositions of his own.

Krolow, Franz, excellent stage-singer (bass), b. Sept., 1839, Troja (Bohemia). He studied law at Prague, commenced his career as army auditor, but gave this up in 1861, and studied for the stage under Richard Levy at Vienna. In 1863 he made his *début* at Troppau in the rôle of Ernani, and from that time rose to a position of high eminence. He was engaged at Troppau, Linz, Bremen, Leipzig, and since 1872 has been one of the attractions of the Berlin court opera. He has an extensive *répertoire*; he sings, for instance, the Commandant and Leporello, and also Masetto, in *Don Juan*. In 1868 K. married the singer Vilma v. Voggenhuber (q.v.).

Krommer, Franz, b. May 17, 1760, Kamenitz (Moravia), d. Jan. 8, 1831, Vienna, an excellent violinist and composer; he was trained in organ-playing by an uncle who was *Regens chori* at Turin. After occupying a post as organist for some time, he entered the private band of Count Styrum at Simonthurm (Hungary) as violinist, became *Regens chori* at Fünfkirchen, then bandmaster of the Karoly regiment, went as capellmeister to Prince Grassekowsky at Vienna, and, after the death of the latter, gave lessons and composed until he

received the post of Imperial "Kammerthürhüter," from which, after the death of Kotze-luch (1814), he was advanced to that of court capellmeister. His chamber compositions, especially the sixty-nine stringed quartets, are flowing and pleasing, and to some extent original; but, at a time when Haydn, Mozart, and Beethoven were writing, their merits were not fully recognised. He wrote besides: eighteen string quintets, one stringed trio, violin duets, five violin concertos, five symphonies, music for wind band, marches, etc., flute and clarinet concertos, quartets and quintets for wind instruments, and concertante pieces of various kinds. (Cf. Riehl's "Mus. Charakterköpfe," I.)

Kronach, Emanuel. (See KLITZCH.)

Krotalon, a species of clapper, used by the ancient Greeks to mark the time in dancing.

Krückl, Franz (Krükl), Dr. Jur., an excellent stage-singer (baritone), b. Nov. 10, 1841, Edlsitz (Moravia); he was already officially employed by the government as a jurist when he resolved to study for the stage under Dessoff. He made his *début* in 1868 at Brünn, and after that appeared at Cassel, Angsburg (1871), Hamburg (1874), Cologne (1875), from 1876 to 1885 again at Hamburg, and then became teacher at Dr. Hoch's Conservatorium, Frankfurt. Since 1892 he has been director of the Stadttheater, Strassburg. K. has written:—"Der Vertrag zwischen Direktor und Mitglied der deutschen Bühne" (1889).

Krug, (1) Friedrich, b. July 5, 1812, Cassel, d. Nov. 3, 1892, Carlsruhe, was opera-singer (baritone), afterwards court musical director at Carlsruhe (operas: *Die Marquise*, Cassel, 1843; *Meister Martin der Küfer und seine Gesellen*, Carlsruhe, 1845; also *Der Nachtwächter*, in 1846).

(2) **Dietrich**, b. May 25, 1821, Hamburg, teacher of music there, d. April 7, 1880. He wrote a number of easy, melodious pianoforte works, also studies and a Pianoforte Method.

(3) **Arnold**, son and pupil of the former, b. Oct. 16, 1849, Hamburg, received further training afterwards from Gurliitt. In 1868 he became pupil of the Leipzig Conservatorium, and in 1869 obtained the Mozart foundation scholarship, and thus became the pupil of Reinecke and Kiel (1871), and for pianoforte-playing, of E. Frank. From 1872-77 he was teacher of the pianoforte at the Stern Conservatorium, Berlin, and went (from 1877-78, as holder of the Meyerbeer scholarship) to Italy and France. Since then he has been living at Hamburg as conductor of his own Gesangverein, and, from 1885, as teacher at the Conservatorium and conductor of the Altona "Singakademie." K. possesses a sound talent for composition, and in his music there is no straining after effect. Among his published compositions are a symphony, the symphonic prologue to *Othello*, a suite, Romanesque dances for orchestra, "Liebesnovelle" and "Italien-

ische Reiseskizzen" for orchestra of strings, a violin concerto, a choral work ("Sigurd") for chorus, with soli and orchestra, "An die Hoffnung" for mixed choir and orchestra, "Italienisches Liederspiel," a pf. quartet, trio, waltzes for four hands, pf. pieces, songs, part-songs, a psalm, etc.

(4) Wenzel Josef (Krug-Waldsee), b. Nov. 8, 1858, Waldsee (Upper Suabia), pupil of the Stuttgart Conservatorium, from 1882-89 conductor of the Stuttgart "Neuer Singverein," from 1889-92 chorus director at the Hamburg Stadttheater; at present he is capellmeister at the Brün Stadttheater. Besides solo and part-songs, his choral works, "Harald," "Geiger zu Gmünd," and especially "König Rother," have been repeatedly performed. A one-act comic opera, *Der Prokurator von San Juan*, still awaits production.

Krüger, (1) Eduard, musical theorist, b. Dec. 9, 1807, Lüneburg, d. Nov. 9, 1885, Göttingen. He attended the Gymnasia at Lüneburg, Hamburg, and Gotha, studied philology at Berlin and Göttingen, but at the same time made a thorough study of music. He was, for a long time, teacher at the Gymnasium, and, after that, director of the seminaries at Emden and Aurich. For some time he was editor of the *Neue Hannoverische Zeitung*, and in 1861 was appointed professor of music at the University of Göttingen. K. was one of our most learned and thoughtful musicians; his critical articles in the *Göttinger Gelehrten Anzeiger* are dignified, and show great knowledge of his subject; and the same can be said of his notices of novelties in the *Neue Berliner Musikzeitung* and the *Allgemeine Musikalische Zeitung*. His works—"Grundriss der Metrik" (1838), *Beiträge für Leben und Wissenschaft der Tonkunst* (1847), and especially the "System der Tonkunst" (1866)—are a rich treasure-house of thoughtful investigation. He also wrote numerous pamphlets, among which his dissertation for the degree of doctor, "De musicis Græcorum organis circa Pindari tempora" (1830). Of his compositions only a few small pieces have been printed.

(2) Wilhelm, b. 1820, Stuttgart, d. there June 17, 1883, son of the former flute virtuoso, royal Württemberg chamber-musician, Gottlieb, b. 1790, Berlin. He was an excellent pianist and composer of elegant (sometimes bordering on the "Charakterstück") drawing-room music. He lived (from 1845-70) in Paris, after that again in Stuttgart as royal court pianist and teacher at the Conservatorium.

His brother, (3) Gottlieb, b. 1824, is a distinguished performer on the harp, and member of the court band at Stuttgart.

Kruis, M. H. van, b. March 8, 1861, Oude-water, received his first musical training from his father, became, in 1877, a pupil of Nikolai's at the Hague, and, in 1881, organist and musical director at Winterswyk. In 1884 he went to

Rotterdam as organist and teacher at the School of Music, and, in 1866, established the monthly paper, *Het Orgel*. K. has composed pieces for pianoforte and organ, choruses, eight overtures and three symphonies for orchestra, and the Dutch opera, *De bloem van Island*. He has also made himself known as a writer:—"Beknopt Overzicht der Muziekgeschiedenis" (1892).

Krummbogen (Ger.), a crook for changing the key (pitch) of a horn or trumpet.

Krummhorn (Kromphorn, Krumhorn, from which the French *Cromorne* and Ital. *Cormone*; Ital. also *Cornamuto*, or, briefly, *Storto*)—(1) an obsolete wood-wind instrument allied to the Bomhart, which was blown by means of a double reed fixed in a kettle-shaped mouth-piece; it differs from the Bomhart through the semicircular bend of the lower portion of the sounding tube, and through the marked narrower compass (a ninth). In the 16th century the K. was constructed in from three to four different sizes (as discant-, alto- [tenor], and bass instrument), and in the straight portion of the tube it had six key-holes. The tone of the instrument was melancholy; an imitation of its clang colour is given by the (2) K. (Cormorne, Cremona, also Photinx), an organ stop frequently to be found in former days in small organs, and in the echo-work of larger ones (8 ft., 4 ft.; in the pedals also as 16 ft. as *Krummhornbass*), a half-covered reed stop, of conical shape below, and of cylindrical above.

Krumpholtz, (1) Johann Baptist, famous performer on the harp, b. about 1745, Zlonitz, near Prague, d. Feb. 19, 1790, Paris; he was brought up in Paris, where his father was bandmaster of a French regiment. In 1772 he gave concerts in Vienna, and settled there as teacher; was, from 1773-76, member of the band of Prince Esterhazy, and enjoyed instruction in composition from Haydn. Meanwhile his reputation had spread, and he undertook a great concert tour through Germany, and then went to France. In Metz he trained Fräulein Meyer, who became an accomplished performer on the harp. He married her and went to Paris, where he celebrated great triumphs, especially after that Nadermann, according to his suggestion, constructed harps with a loud and soft pedal. K. also suggested the idea of double-pedal harps to Erard. From sorrow caused by the unfaithfulness of his wife, who ran away with a young man, he drowned himself in the Seine. His compositions for the harp (six concertos, fifty-two sonatas, variations, quartets with violin, viola, and 'cello, harp duets, symphony for harp, two violins, flutes, two horns and 'cello, etc.) are still of value.

(2) Wenzel, b. about 1750, brother of the former, was in 1796 member of the opera orchestra in Vienna; he was on friendly terms with Beethoven, and died May 2, 1817.

dedicated to his memory the "Gesang der Mönche." K. published "Abendunterhaltung" for violin solo, and "Eine Viertelstunde für eine Violine."

Kruse, Johann S., excellent violinist, b. March 23, 1859, Melbourne, Australia (his father had migrated from Hanover); in 1876 he studied under Joachim at Berlin, became leader of the Philharmonic orchestra, and went, in 1892, as leader, to Bremen.

Krustische instrumente (Ger.; from Gk. *χρῶναι*, to "strike"), instruments of percussion.

Kucharcz, Joh. Baptist, b. March 5, 1751, Chotecz, Bohemia, d. after 1815, distinguished organist, studied under Seeger at Prague, became organist of the Heinrichskirche in that city, in 1790 at the Strahower Stiftskirche, in 1791 capellmeister of the Italian Opera. He was also an esteemed composer of organ concertos, operas, ballets, etc., arranger of the first piano-forte scores of Mozart's operas, and wrote recitatives to the *Magic Flute*.

Kücken, Friedrich Wilhelm, b. Nov., 1810, Bleckede, near Hanover, d. April 3, 1882, Schwerin, son of a peasant, received his first musical training from his father's brother-in-law, the court organist Lürss at Schwerin. K. played various instruments in the court orchestra at Schwerin, but even at that time attracted notice by his simple songs, which quickly became popular (the Thuringian Volkslied "Ach wie war's möglich dann"), and he was appointed teacher of music to the princes. In 1832 he went for further study to Birnbach at Berlin, and obtained a lasting success there with an opera (*Die Flucht nach der Schweiz*). He still studied afterwards with Sechter at Vienna (1841), and with Halévy at Paris (1843); but, in spite of all this zeal for knowledge, K. never got beyond the standpoint which suits the general public. In 1851 he was called as court capellmeister to Stuttgart, at first jointly with Lindpainter, after whose death he became sole conductor; but he resigned in 1861 and retired to Schwerin. The number of K.'s compositions, especially of songs and duets, is exceedingly large (among them are "Gretelein," "Ach wenn du wärst mein eigen," "Du schönes blitzendes Sternlein," etc.); in addition may be mentioned "Der Präbendent" (Stuttgart, 1847), violin sonatas, cello sonatas, quartets for male chorus, etc.

Kudelski, Karl Matthias, b. Nov. 17, 1805, Berlin, d. Oct. 3, 1877, Baden-Baden; 1830 at Dorpat as quartet-player, in 1839 there as capellmeister to a Russian prince, from 1841-51 conductor at the Imperial Theatre, Petersburg; and then lived for a long time at Baden-Baden. He wrote a Method of composition, a cello sonata, violin concerto, trios, and string quartets.

Kufferath, (1) Johann Hermann, b. May 12, 1797, Mülheim-a.-d.-Ruhr, d. July 28, 1864,

Wiesbaden; an excellent violinist, pupil of Spohr and Hauptmann at Cassel, in 1823 musical director at Bielefeld, in 1830 town musical director at Utrecht, teacher of singing at the School of Music, and conductor of several musical societies; and he was held in high consideration for the musical services which he rendered to that city. In 1862 he withdrew to Wiesbaden. K. composed several festival cantatas, overtures, motets, etc., and published in 1836 a Vocal Method for schools (which gained the prize at the Netherland Musical Society).

(2) Louis, b. Nov. 10, 1811, Mülheim, d. March 2, 1882, near Brussels, brother of the former, pianist, pupil of Fr. Schneider at Dessau; from 1836-50 director of the school of music at Leeuwarden, also conductor of the societies "Euphonia-Crescendo" and "Tot nut van t'algemeen," and founder of the "Groote Zang Vereeniging." After 1850 he settled in Ghent, devoting himself entirely to composition and private lessons. He published a mass à 4, with organ and orchestra, 250 canons, one cantata (*Artevelde*), many pf. compositions, songs, part-songs, etc.

(3) Hubert Ferdinand, b. June 11, 1818, Mülheim, brother and pupil of the two former; he studied from 1833-36 under Fr. Schneider at Dessau, and under Mendelssohn and David at Leipzig; from 1841-44 he was conductor of the male choral society at Cologne, settled in 1844 at Brussels, and in 1871 became professor of composition at the Conservatorium. He published a symphony, several pf. concertos, songs, etc.

(4) Maurice, son and pupil of the former, b. Jan. 8, 1852, Brussels; he studied also the cello under the two Servais, then attended the University and studied jurisprudence and philology. In 1873 he was named editor of the *Indépendance Belge* (for foreign politics), and, likewise, editor, later on, proprietor, of the *Guide Musical*. K. is zealously in favour of musical progress, and has published a great number of works of small compass: "R. Wagner und die 9. Symphonie," "Berlioz u. Schumann," "Le théâtre de Wagner de Tannhäuser à Parsifal," "L'art de diriger l'orchestre" (2nd edition), a biography of H. Vieuxtemps, a report on the musical instruments at the Brussels Exhibition of 1880. He has also translated the texts of works by Wagner, Brahms, and other composers (pseudonym: Maurice Reymont). His younger sister, Antonia, pupil of Stockhausen, is favourably known for her rendering of Lieder by Brahms; she married the well-known song composer Ed. Speyer at Frankfurt.

(5) Friedrich Wilhelm, pianist, composer, and esteemed teacher, died April, 1885, Cologne, Küffner, Joseph, b. March 31, 1776, Würzburg, d. there Sept. 9, 1856; he composed seven symphonies, ten overtures, many works for wind- and military-band, stringed quartets, a viola concerto, quintet for flute and stringed

quartet, duets and trios for flutes, duets for clarinets, etc. His works for military band met with special favour.

Kugelmann, Hans, principal trumpeter to Duke Albrecht of Prussia, published a book of sacred songs à 3 for church use in Prussia; to this work was added, by way of supplement, a series of art-songs à 2-8. K. died at Königsberg, 1542. (Concerning his importance in connection with sacred song, see Winterfeld, "Evang. Kirchenges." I., 265; cf. *Monatsh. f. Mus.-Gesch.*, VIII., 65 f.)

Kuhe, Wilhelm, b. Dec. 10, 1823, Prague, pupil of Tomaczek there, pianist and composer of pleasing pianoforte pieces; he has lived for a long time as a teacher of music in London, and since 1886 has been professor at the Royal Academy.

Kuhhorn (Ger.), a cow-horn; Alpine horn.

Kuhlau, Friedrich, b. Sept. 11, 1786, Uelzen (Hanover), d. March 18, 1832, Copenhagen; he sang for alms in the streets at Brunswick, and studied harmony there under Schwencke. He fled to Copenhagen in 1810 to escape the French conscription, and there, at the commencement of 1813, became (without salary) royal chamber-musician. He gave instruction in pianoforte-playing and theory, received, in 1818, a salary and the title of court composer, and in 1828 was named Professor. K. wrote for Copenhagen the operas *Die Ränberburg* (1814), *Elisa*, *Lulu*, *Die Zauberharfe*, *Hugo und Adelheid*, dramatic scena *Euclidice*, and music to Heiberg's *Erlenhügel* (1828); all of these were favourably received, but are now forgotten. His instrumental compositions (three quartets for flute, *trios concertants*, duets, soli, etc., for flute, two piano concertos, eight violin sonatas, pf. sonatas and sonatinas for two and four hands—the last still popular and of great educational value for beginners [Op. 55, 20, 59], rondos, variations, divertissements, dances, etc.) have been in part preserved; but of his once popular songs and quartets for male voices nothing more is heard. (Cf. K. Thrane's "Fr. Kuhlau," on the occasion of the hundredth anniversary of his birthday, 1886.) A relative of K.'s, Friedrich K., an esteemed cellist, d. Aug., 1878, at Copenhagen.

Kühmstedt, Friedrich, b. Dec. 20, 1809, Oldisleben (Thuringia), d. Jan. 10, 1858, Eisenach. It was intended to train him for the church, but at the age of nineteen he ran away from the Gymnasium at Weimar, and studied composition for three years under K. H. Rinck at Darmstadt. His desire was to become a pianoforte virtuoso, but paralysis in the left hand frustrated this plan. After living for some time at Weimar as teacher of music, he was appointed in 1836 teacher at the Eisenach College, was then named musical director, and, finally, professor. K. composed several oratorios (*Auferstehung*, *Triumph des Göttlichen*),

a mass à 4 with orchestra, motets, and also secular choral pieces, songs, piano concertos, rondos, etc., which are all forgotten. On the other hand, the following are held in esteem: "Gradus ad Parnassum" (preludes and fugues as preparatory training for Bach's organ and clavier works), also his numerous organ works (preludes, postludes, fugues, concert double-fugue, "Fantasia eroica," etc.), his "Kunst des Vorspiels für Orgel" (Op. 6), and his "Theoretisch praktische Harmonie u. Ausweichungslehre" (1838, for self-instruction).

Kuhnau, Johann, b. April, 1660, Neugeising (Saxony), d. June 5, 1722, Leipzig; he was a pupil at the "Kreuzschule" and chorister ("Ratsdiskantist") at Dresden, but fled from the plague in 1680, and returned to his home. He was, for some time, cantor at Zittau, in 1684 successor of Kühnel as organist of St. Thomas's Church, Leipzig, and in 1700 musical director of the University and cantor of St. Thomas's. J. S. Bach was his successor. K. was not only an excellent musician, but had also studied languages and jurisprudence, and made translations from Greek and Hebrew, etc. His compositions which have been preserved are: "Neue Klavierübung" (1689 and 1695, two parts); "Frische Klavierfrüchte oder sieben Sonaten von guter Invention," etc. (1699), and "Musikalische Vorstellungen einiger biblischen Historien in sechs Sonaten auf dem Klavier zu spielen" (1700). In pianoforte literature K. occupies an important place as the first who transferred the form of the chamber sonata in various movements to the clavier; K., however, does not write in the "galant" style of Ph. E. Bach. The works of K. on music are: "Jura circa musicos ecclesiasticos" (1688); "Der musikalische Quacksalber" (1700, a satire on Italian music). His "Tractatus de tetrachordo" and "Introductio ad compositionem musicalem" remained in manuscript.

Kühner, Konrad, b. March 2, 1851, Marktstreuendorf, Meiningen, pupil of the Stuttgart Conservatorium, lives at Brunswick as teacher of the pianoforte. He has written a "Technik des Klavierspiels," romances, nocturnes, and a symphonic poem, "Maria Stuart."

Kuhreihen, or **Kuhreigen** (Ger.), the name of the simple melodies sung, or played on the horn, by the Swiss herdsmen when driving the cattle out or homeward.

Kujawiak, Polish dance of Kujawien similar to the Mazurka.

Kullak, (1) Theodor, b. Sept. 12, 1818, Krotoschin (Posen), where his father was "Landgerichtssekretär," d. March 1, 1882, Berlin; at an early age he showed talent for music, and attracted the attention of Prince A. Radziwill (q.v.), who superintended his training under Agthe at Posen, so that at the age of eleven K. made his *début* at a court concert at Berlin. The death of the Prince disturbed

the musical plans made for the future. K. attended the Gymnasium at Züllichau, and went in 1837 to Berlin in order to study medicine. Here he found his old teacher Agthe proprietor of a music institution, and he was soon once more on a musical path, gave pianoforte lessons and studied harmony under Dehn. In 1842 he continued his studies under Czerny, Sechter, and Nicolai at Vienna, and in 1843, after a successful concert tour through Austria, was appointed music-teacher to Princess Anna, daughter of Prince Friedrich Karl, and was afterwards teacher to all the princes and princesses of the royal house. In 1846 he was appointed court pianist. In 1850, jointly with J. Stern and A. B. Marx, he founded the Berlin (Stern) Conservatorium, but withdrew from the direction in 1855, and founded the "Neue Akademie der Tonkunst," which celebrated the twenty-fifth anniversary of its foundation with a hundred teachers and over a thousand pupils. Theodor K. was not only an excellent pianist, but also a teacher of the first rank (pupils: Hans Bischoff, M. Moszkowski, X. and Ph. Scharwenka, and many others); his "School of Octave-playing" (Op. 48) is a work which every pianist ought to possess. Also his "Materialien für den Elementarunterricht" (three books), and the practical part to the Method of pianoforte-playing of Moscheles and Fétis (two books) are excellent educational works. His compositions amount altogether to about 130, consisting mostly of *salon* music and brilliant paraphrases, fantasias for pianoforte. But he also wrote a pianoforte sonata (Op. 7), a "Symphonie de piano" (Op. 27), pf. concerto (Op. 55), three duos with violin (Op. 57, jointly with R. Wüerst), one Andante with violin or clarinet (Op. 70), one trio (Op. 77), and some songs (Op. 1 to 10), and the universal favourite, "Kinderleben" (two parts, Op. 62 and Op. 81).

(2) Adolf, b. Feb. 23, 1823, Meseritz, d. Dec. 25, 1862, Berlin; brother of the former, attended the Gymnasium of the Graues Kloster, Berlin, studied philosophy there, and took his degree of Dr.Phil., but then devoted himself entirely to music (Agthe and Marx were his teachers), was contributor to the *Berliner Musikzeitung*, and gave lessons at his brother's Akademie. Besides various pf. pieces and songs, he wrote: "Das Musikalisch-Schöne" (1858), and "Aesthetik des Klavierspiels" (1861; 2nd ed., by H. Bischoff, 1876; an excellent book).

(3) Franz, Dr. Phil., son of Theodor K., b. April 12, 1844, trained at his father's Akademie, after whose death he became director; the institution was, however, suddenly dissolved in 1890. He has published careful editions of classical pianoforte concertos, and by an opera, *Ines de Castro* (Berlin, 1877), has proved himself a worthy heir of his father.

Kummer, (1) Kaspar, b. Dec. 10, 1795, Erlau, near Schleusingen, performer on the

flute, was appointed member of the court band (Coburg) in 1813, d. May 21, 1870; he published numerous works for the flute (concertos, quartets, and quintets with stringed instruments, duos, fantasias, variations, etc., and a Method for flute).

(2) Friedrich August, b. Aug. 5, 1797, Meiningen, d. May 22, 1879, Dresden, son of an oboe-player in the Meiningen court band, and soon called in a similar capacity to Dresden. Young K. studied the 'cello under Dotzauer, but, as there was no post vacant for that instrument, he was first appointed oboist in 1814, and 'cellist, only in 1817. K. soon became known as one of the best performers on his instrument, whether as solo, quartet, or orchestral player; he was an especially good teacher (Cossmann, J. Goltermann, and others were his pupils). In 1864 he celebrated his fiftieth anniversary as member of the Dresden band, and retired therefrom, but still remained teacher at the Conservatorium. His published compositions are: concertos, variations, divertissements, and other pieces for 'cello, a Method for that instrument, and much incidental music to plays. Like his father and his brother, his sons and grandsons were also able musicians. His grandson, (3) Alexander K., is especially worthy of mention. He was b. July 10, 1850, and is an excellent violinist, pupil of the Leipzig Conservatorium; he lives in England.

Kümmerle, Salomon, b. Feb. 8, 1838, Malmshelm, near Stuttgart; from 1853 he was trained as teacher at the Tempelhof Seminary; from 1860-66 tutor at Nice, and, at the same time, organist of the German church there; from 1867-68 teacher of music at the seminary for female teachers at Ludwigsberg, Württemberg; from 1869-74 teacher at the High School for girls at Schorndorf, Württemberg; from 1875-90 teacher (Professor) at the lower school at Samaden, Switzerland. Up to the present the following works of his have appeared: "Musica sacra," master-works of old, especially old-Italian, church composers (for male chorus, two parts, 1869-70); "Grabgesänge," for male voices (1869); "Zionsharfe," a collection of sacred songs, motets, etc., for mixed voices (two parts, 1870-71); "Choralbuch für evangelischen Kirchenchöre" (three hundred compositions 4 and 5 for mixed choir, by the masters of the 16th and 17th centuries, and by modern composers—first part, 1887; second part, 1889); "Encyklopädie der evangelischen Kirchenmusik" (first vol., 1888; second vol., 1890; third vol., in the press).

Kündinger, (1) Georg Wilhelm, b. Nov. 28, 1800, Königshofen (Bavaria), was "Stadtkantor" and musical director at Nördlingen in 1831, occupied similar posts at Nuremberg in 1838; but in consequence of bodily infirmities he withdrew from all his public appointments,

and lived at Fürth. K. wrote many sacred pieces. His sons are:—

(2) August, b. Feb. 13, 1827, Kitzingen, violinist and composer for that instrument, member of the Imperial court orchestra at Petersburg.

(3) Kanut, b. Nov. 11, 1830, 'cellist, since 1849 member of the Munich court orchestra.

(4) Rudolf, distinguished pianist and teacher, b. May 2, 1832, Nördlingen, pupil of his father (*see above*, 1) and of Blumröder for theory, went in 1850 to Petersburg as private music tutor to Baron Bietinghoff, made yearly appearances at the concerts of the Imperial Musical Society, and in 1860 became teacher of music to the children of the Grand Duke Constantin Nikolajewitsch. Since that time K. has confined himself to teaching at the Imperial court and to giving lessons to the present Empress, and he has received high honours. A professorship of the pianoforte at the Conservatoire was offered to him in 1879, but he resigned after the expiration of a year. Of his compositions only a trio and some piano pieces have been published.

Kunkel, Franz Joseph, b. Aug. 10, 1808, Dieburg (Hesse), d. Dec. 31, 1880, Frankfurt, rector of the town-school and teacher of music at the Bensheim College for teachers; he was pensioned in 1854. He composed sacred vocal works, organ pieces, a "Choralbuch," and wrote "Kleine Musiklehre;" "Die Verurteilung der Conservatorien zu Pflanzschulen des musikalischen Proletariats" (1855); "Kritische Beleuchtung des K. F. Weitzmannschen Harmonie Systems," and the pamphlet "Die neue Harmonielehre im Streit mit der alten" (1863).

Kunstfuge (Ger.), a fugue in which the composer introduces all imaginable scholastic contrivances. *Meisterfuge* and *Ricercata* are synonymous expressions.

Kuntze, Karl, b. March 17, 1817, Trèves, d. Sept. 7, 1883, Delitzsch, pupil of the Royal Institution for Church Music at Berlin (A. W. Bach, Marx, Rungenhagen), organist at Pritzwalk, was appointed royal musical director in 1852, in 1858 organist at Aschersleben, in 1873 teacher of music at the Delitzsch College for teachers. He is well known as the composer of humorous and comic quartets for men's voices, songs, duets, terzets, etc. He also supervised the third edition of J. J. Seidel's "Die Orgel und ihr Bau" (1875).

Kunz, Konrad Max, b. Dec. 30, 1812, Schwandorf (Bavarian Upper Palatinate), d. Aug. 3, 1875, Munich; he began the study of medicine in the latter city, but maintained himself by giving music lessons, and finally devoted himself entirely to music. He was conductor of the Munich Liedertafel, and in 1845 chorus-master of the court opera at Munich. K. wrote a very large number of quartets for male voices, which gained extraordinary popularity

("Elstein," "Odin, der Schlachtengott," etc.). He also wrote the satirical pamphlet, "Die Gründung der Moosgau-Brüderschaft Moosgrillia."

Kunzen, (1) Johann Paul, b. Aug. 30, 1696, Leisnig (Saxony), d. 1770 as organist at Lübeck. In 1718 he was capellmeister at Zerbst, in 1719 concert director at Wittenberg, and lived later on in Hamburg. K. is praised by Mattheson as one of the best composers of his time (several operas for Hamburg, a Passion, cantatas, overtures, oratorio *Belsazar*, etc.).

(2) Karl Adolf, son of the former, b. Sept. 22, 1720, Wittenberg, d. July, 1781, Lübeck; he was a youthful musical prodigy, who, at the age of eight, attracted notice in Holland and England as a pianist. In 1750 he was capellmeister at Schwerin, and in 1757 succeeded his father at Lübeck. K. published twelve pf. sonatas; his other numerous works remained in manuscript (symphonies, concertos for violin, flute, oboe; oratorios, cantatas, etc.).

(3) Friedrich Ludwig Aemilius, son of Karl Adolf K., b. Sept. 24, 1761, Lübeck, d. Jan. 28, 1817, Copenhagen; he attended the school at Hamburg and the University at Kiel; went in 1787 to Copenhagen, where he made a success with his maiden opera *Holger Danske* (*Oberon*); and from there to Berlin, where, jointly with Reichardt, he published the *Musikalisches Wochenblatt* (1791), and the *Musikalische Monatschrift* (1792). For a brief period he was theatre capellmeister at Frankfurt and Prague, until at last he was called as court capellmeister to Copenhagen. K. wrote, in addition to *Holger Danske*, twelve other Danish and German operas (*Holger Danske* and *Das Wintzerfest* appeared in pf. score), further, several oratorios, cantatas, overtures, sonatas, etc.

Kupfer-Berger, Ludmilla, opera-singer (soprano), b. 1850, Vienna, daughter of a manufacturer named Berger, pupil of the Vienna Conservatorium. She made her *début* in 1868 at Linz as Marguerite in Gounod's *Faust*, and in the same year took the place, at Berlin, of Harriers-Wippen, who was retiring. At Berlin she married a rich merchant (Kupfer by name), and soon exchanged the Berlin court opera for the one at Vienna, where she shares with Frau Materna the great dramatic soprano rôles.

Kurpinski, Karl Kasimir, Polish composer of operas, b. March 5, 1785, Luschwitz, near Fraustadt (Posen), d. Sept. 18, 1857, Warsaw, son of an organist. He was, first of all, second, and, from 1825-41, first, capellmeister, as successor to Elsner at the National Theatre, Warsaw; finally, from 1819, imperial Russian court conductor. Between 1811-26 he wrote not less than twenty-six Polish operas for Warsaw.

Kurrende (Ger.; from Lat. *currere*, "to run"). This was the name given to the needy pupils belonging to the lower-class municipal schools, who, under the direction of one of the older

pupils (the "Präfekt") sang sacred songs for scanty alms in the streets, at funerals, etc. This custom was kept up, especially in Thuringia and Saxony, until the present century, and in Hamburg even beyond the year 1860. The boys wore small black round capes and flat cylinder hats. *Cf.* Schaarschmidt's "Geschichte der K." (1807).

Kurschmann, v. CURSCHMANN.

Kusser (Cousser), Johann Siegmund, b. about 1657, Pressburg, d. 1727, Dublin, an extraordinarily gifted conductor and esteemed opera composer, to whom the Hamburg opera is really indebted for its fame. According to the testimony of Walthers (in his "Musikalisches Lexicon"), he was a restless spirit who never could remain anywhere long, so that "probably a place could not easily be found where he was not known." K. lived for six years in Paris in intimate friendship with Lully. In 1693 he took a lease of the Hamburg opera-house, together with Jakob Kremberg von Schott, and so distinguished himself as director up to 1695, and as wielder of the *bâton*, that Matthesen (in his "Vollkommener Kapellmeister") named him as a model to conductors. After being capellmeister of the Stuttgart opera from 1698 to 1704, he went to England and became conductor of the band belonging to the Viceroy of Ireland. The works of K. that have been preserved are his operas: *Erindo* (1693); *Porus* (1694); *Pyramus und Thisbe* (not produced); *Scipio Africanus* (1694); and *Fason*. He published: "Apollon enjoué" (1700, six overtures and some arias); "Helikonische Musenlust" (1700, pieces from the opera *Arion*); a birthday serenade for King George I. (1724); a funeral ode for Miss Arabella Hunt; a "Serenata teatrale" in honour of Queen Anne is mentioned by Chrysander (*Allgemeine Musikalische Zeitung*, 1879, 26) as a recently discovered manuscript.

Küster, Hermann, b. July 14, 1817, Tempelin (Uckermark), d. March 17, 1878, Herford (Westphalia); he studied under A. W. Bach, L. Berger, Rungenhagen, and Marx, at the

Royal Institute for Church Music and the School for Composition of the Berlin "Akademie;" from 1845-52 he was musical director at Saarbrücken, lived afterwards in Berlin as teacher of music, where he founded the "Berliner Tonkünstlerverein," became musical director and court and cathedral organist in 1857, and Professor in 1874. K. composed several oratorios, and other vocal and instrumental works, but his writings are of higher importance: "Populäre Vorträge über Bildung und Begründung eines musikalischen Urteils" (1870-77, four books); "Ueber Händels *Israel in Aegypten*" (1854); and many detached articles in Berlin musical papers. In 1872 he published a "Methode für den Unterricht im Gesang auf höhern Schulanstalten."

Kwast, James, distinguished pianist, b. Nov. 23, 1852, Nijkerk (Holland), pupil of his father and of Ferd. Böhme (a pupil of M. Hauptmann). He held the scholarship of the "Maatschappij tot Bevordering van Toonkunst" from 1869-74, and afterwards benefited by a royal stipend and studied under Reinecke and Richter at the Leipzig Conservatorium, under Th. Kullak and Wüerst at Berlin, and under L. Brassin and Gevaert at Brussels. In 1874 he succeeded Gernsheim as teacher at the Cologne Conservatorium, and, since Oct., 1883, he has been professor of the pianoforte at the Frankfurt Conservatorium. In 1877 K. married the daughter of Ferd. Hiller. As a composer, K. has successfully produced a trio (a work belonging to his Leipzig student-days), an overture (which gained a prize at the competition instituted by the King of Holland), a pf. concerto in F (which he has repeatedly played with approval at concerts), and some other pianoforte works.

Kyrie is the name given to the first portion of the Mass (q.v.) which immediately follows the Introit. The words consist of a threefold appeal for mercy—"K. eleison! Christe eleison! K. eleison!" One speaks, therefore, of a first and a second K.; the first precedes, the second follows the "Christe eleison."

L.

L', the Italian article (in place of *lo, la*) before vowels.

La, (i) in Italy, France, Belgium, Spain, etc., the name which the Germans, Dutch, and English give to the note called A (q.v.). (Concerning *la, mi, re, la, fa*, etc., *cf.* SOLMISATION, also MUTATION.)—(2) In Italian the feminine article (the), before vowels, *l'*.

Labarre, Théodore, famous harp-player, b. March 5, 1805, Paris, d. March 9, 1870, pupil of Bochs and Nadermann, also at the Con-

servatoire under Dourlen, Fétis, and Boieldieu, became well known by concert tours; he lived alternately in Paris and London. He produced several operas at Paris, was, from 1847-49, *chef d'orchestre* of the Opéra-Comique, then went again to London, but in 1851 returned to Paris as *chef* of the private band of Napoleon III., and in 1867 succeeded Prumier as professor of the harp at the Conservatoire. With the exception of four operas and five ballets, L. wrote chiefly for the harp (*sol*), fantasias, nocturnes; duets with piano, violin, horn, oboe; trios with

horn and bassoon, etc.), a "Méthode complète pour la harpe," and a number of romances which became popular.

Labatt, Leonard, celebrated stage-singer (dramatic tenor), b. 1838, Stockholm, pupil of the Academy of Music there, and of Masset at Paris. He made his *début* at Stockholm in 1866 in the rôle of Tamino, and from 1868 to 1882 was one of the most esteemed members of the Court Opera, Vienna.

' **Labialpfeife** (Ger.), a flue-pipe in the organ.

Labialstimme (Ger.), a flue-stop in the organ.

Labisation, a somewhat rare term for Hitzler's *Bebisation*. (See *BOBISATION*.)

Labitzky, Joseph, b. July 4, 1802, Schönefeld (near Eger), d. Aug. 19, 1881, Carlsbad; a favourite dance composer of the Strauss and Lanner *genre*. He was at first member (violinist) of the "Kurorchester" at Marienbad, and afterwards at Carlsbad, where in 1834 he founded an orchestra of his own, with which he made successful concert tours as far as Petersburg and London, by which his waltzes, quadrilles, etc., became widely known. His son, August, b. Oct. 22, 1832, Petschau, pupil of the Prague Conservatorium, and of David and Hauptmann at Leipzig, undertook the direction of the orchestra in 1853.

Labium (Lat.), the lip of an organ-pipe.

Lablache, Luigi, b. Dec. 4, 1794, Naples, d. Jan. 23, 1858, was, on his father's side, of French descent; a celebrated singer (bass), pupil of the Conservatorio della Pietà, he first became basso-buffo at the theatre San Carlino at Naples and at Messina, but afterwards took serious parts, was engaged, with ever-increasing reputation, at Palermo, Milan, Venice, Vienna, and reached the zenith of his fame when he went to Paris in 1830. He sang up to 1852 in Paris, London, and Petersburg, then retired to his country-house, Maisons-Lafitte, and died at his villa near Naples, whither he had betaken himself on account of the mild climate. In his "Méthode de chant" L. wrote down his experiences as a vocalist.

Labor, Josef, b. June 29, 1842, Horowitz (Bohemia), became blind at an early age, and, as he showed musical gifts, was trained at the Vienna Conservatorium (Sechter, Pirkhert) at a heavy sacrifice on the part of his young widowed mother. In 1863 he appeared in Vienna as pianist, and his expressive playing met with such favourable recognition that he ventured to make a great concert tour through Germany. King Georg kept him for almost two years in Hanover as chamber pianist and teacher to the Princess. L. appeared at Brussels and London in 1865, at Leipzig 1866, then also at Paris, Petersburg, Moscow. Since then he has been living in Vienna. After 1870 he also studied the organ, and has also enjoyed great fame as a performer on

that instrument. He has published a pf. quintet, pf. quartet, pf. pieces and songs; a Paternoster for chorus and orchestra, and an Ave Maria in canonic form for female voices (à 2), were sung in the court chapel.

Laborde, Jean Benjamin, b. Sept. 5, 1734, pupil of Dauvergne and Rameau, chamberlain to Louis XV., afterwards farmer-general, guillotined at Paris July 22, 1794. He wrote several comic operas, also chansons; "Essai sur la musique ancienne et moderne" (1780, four vols.); "Mémoire sur les proportions musicales," etc. (1781, supplement to the former); and "Mémoires historiques sur Raoul de Coucy" (1781).

Lachner, (1) Franz, b. April 2, 1803, Rain (Upper Bavaria), d. Jan. 20, 1890, Munich, one of the most important of modern composers, and, especially, a distinguished master of counterpoint. He first studied with his father (1810-15), who was organist, and then, until 1819, at the Gymnasium, Neuburg-on-the-Danube, of which Eisenhofer was rector. The original plan of pursuing scientific studies was abandoned by L., who meanwhile had made various attempts as composer, and who played the pianoforte, organ, and cello. He lived at Munich from 1820-21, giving instruction in music, and still studying on his own account under capellmeister K. Ett. In 1822 he hastened to Vienna, which had long been the goal of his desires, and obtained a post as organist at the Protestant Church. He was an intimate friend of Franz Schubert, profited by instructive intercourse with S. Sechter and the Abbé Stadler, and was acknowledged even by Beethoven. In 1826 he became vice-capellmeister, and in 1828 principal capellmeister of the Kärntnerthor Theater, and remained in that post until, in 1834, a similar one was offered to him at Mannheim. On the way thither he produced at Munich his D-minor symphony; the result was an engagement as court-capellmeister, but he could not act as such until 1836, when his engagement at Mannheim expired. From that time he displayed wonderful and profitable activity as conductor of the Court Opera, of the sacred performances of the Court Band, and of the concerts of the Musical Academy at Munich; but he also found time to enrich musical literature every year with new and excellent works. He also conducted the Musical Festivals at Munich (1854 and 1863), at Aix-la-Chapelle (1861 and 1870), etc. Already in 1852 he was named general musical director, so as to connect him with Munich by lasting ties. The Wagner-worship gradually springing up in Munich, towards which L. was by no means sympathetic, caused his post to be an unpleasant one, so that in 1865 he proffered a request for his pension, which at first was given to him in the form of leave of absence, but in 1868 made absolute. In 1872 the University of Munich bestowed on

him the degree of *Dr. Phil. honoris causâ*. Of the works published by L., and amounting to about 190, the principal are: his suites for full orchestra, Op. 113, 115, 122, 129, 135, 150, and 170 ("Ballsuite"), real show-pieces of contrapuntal art, and an eighth, completed in 1881; further, his eight symphonies (*Symphonia appassionata*, Op. 52, gained a prize from the "Gesellschaft der Musikfreunde" at Vienna in 1835); the operas: *Die Bürgschaft* (Pesth, 1828); *Alidia* (Munich, 1839); *Catharina Cornaro* (ditto, 1841); and *Benvenuto Cellini* (ditto, 1849); the oratorios: *Moses* and *Die vier Menschenalter*; the Requiem, Op. 146; the solemn mass, Op. 52; two *Stabat Maters*, Op. 154 and 168; a series of other masses, psalms, motets, etc.; five stringed quartets, several pf. quartets, quintets, sextets, a nonet for wind instruments, a serenade for four 'celli, elegy for five 'celli, trios, violin sonatas, and sonatas, fugues, and pieces for organ, a large number of songs (to the composition of which he was most strongly prompted by his intercourse with Schubert), part-songs, songs with orchestra, etc. L. is at his best in his orchestral suites, which, as a kind of modern continuation of Bach-Handel orchestral movements, occupy a distinctive place in musical literature. Sovereign command of contrapuntal devices combined with nobility of invention will secure for them in the future greater appreciation than is accorded to them at the present day.

(2) Ignaz, brother of the former, b. Sept. 11, 1807, Rain, attended the Gymnasium at Augsburg, was violinist in the orchestra of the Isarthor Theater at Munich, was drawn by his brother as violinist to Vienna, became, later on, conductor, and in 1825 vice-cappellmeister at the Kärntnerthor Theater, and succeeded his brother as organist of the Evangelical Church, in 1831 court director at Stuttgart, in 1842 second capellmeister, under his brother, at Munich, in 1853 principal capellmeister at the Hamburg Theatre, in 1858 court capellmeister at Stockholm, and in 1861 principal capellmeister at Frankfurt; on his retirement in 1875 he lived there for a time; since then, in Hanover. Ignaz L. is an excellent musician, and has published many works of all kinds. He also wrote several operas (*Der Geisterturm*, Stuttgart, 1837; *Die Regenbrüder*, Stuttgart, 1839; *Loreley*, Munich, 1846).

(3) Vincenz, b. July 19, 1811, Rain, d. Jan. 22, 1893, Karlsruhe, the third or fourth of the brothers (the eldest, Theodor, b. 1798, d. May 22, 1877, step-brother, was organist at Munich, and, finally, conductor at the Opera). V. attended the Gymnasium at Augsburg at the same time as his brother Ignaz, was for some time tutor in a private family at Posen, went then to Vienna to his brothers, and in 1834 succeeded Ignaz as organist of the Evangelical Church, and, in 1836, Franz as court capellmeister at Mannheim, where, with the exception of two short

breaks (London, 1842, and Frankfort in 1848), he displayed wonderful and beneficial activity as conductor and teacher, until he received a pension in 1873. After that he lived at Carlsruhe, where from 1884 he taught at the Conservatorium. Various of his compositions gained prizes (overture, pf. quartet, song); his overtures to *Twandot*, *Demetrius*, etc., were often performed at concerts, and his quartets for male voices were popular favourites. Two sisters (Thekla and Christiane) occupied for several years posts as organists—the former at Augsburg, the latter in her native place, Rain.

Lackowitz, Wilhelm, b. Jan. 13, 1837, Trebbin (near Berlin), attended the Berlin school-teachers' college, studied music with his father (Stadt Musikus), L. Erk, Th. Kullak (at his academy), and Dehn. He acted for some years as municipal teacher, but soon turned his attention to music; from 1877 he edited the *Deutsche Musikerzeitung*, and published "Musikalische Skizzenblätter" (2nd ed. 1876). L. is also a botanist ("Flora Berlins," fourth ed. 1880).

Lacombe, (1) Louis Trouillon, composer, b. Nov. 26, 1818, Bourges, d. Sept. 30, 1884, St. Vaast-la-Hougue. As early as 1829 he studied the pianoforte under Zimmermann at the Paris Conservatoire, and in 1831 received the first prize for pianoforte-playing. In 1832 he left that institution, and made an artistic tour through France, Belgium, and Germany with his sister Félicie, and accompanied by his parents. They went, finally, to Vienna, where he stayed for eight months (1834), when he studied the higher development of pianoforte-playing under Czerny, and theory with Sechter and Seyfried. In 1839, on his return to Paris, L. devoted himself more and more to composition. He published a pianoforte quintet (Op. 26, with violin, oboe, cello, and bassoon), a trio (p minor), and pf. pieces; then followed the dramatic symphonies (with soli and chorus), "Manfred" (1847), and "Arva, oder die Ungarn" (1850), a second trio (A minor), a grand and widely-known octave étude for pianoforte, pf. pieces, many songs, choruses a cappella and with organ (*Agnus* and *Kyrie* for three equal voices), a "Lyrisches Epos" of gigantic proportions, a one-act comic opera, *La Madone* (Théâtre Lyrique, 1860), a grand four-act opera, *Winkelried* (Geneva, 1892), a two-act comic opera, *Le Tonnelier* (*Meister Martin u. seine Gesellen*, not produced), incidental music to Riboyet's *L'Amour*, etc. The best-known work of L. is *Sappho*, prize cantata at the Exhibition of 1878, which was repeatedly performed at the Châtelet and at the Conservatoire. Lyrical, graceful music was the strong point of L.'s muse; at times, as in *Winkelried*, he rises to heroic greatness, or to boldness of characterisation and tone-painting (*Manfred*).—The second wife of L. (1869), Andréa, née Favel, is an able singer who has published a meritorious Method of singing.

(2) Paul, composer, b. July 11, 1837, Carcassonne, where he was trained by a former pupil of the Paris Conservatoire (Teyssyre), made a name specially as writer of chamber-music (two violin sonatas, one trio, pf. pieces, one symphonic overture, three symphonies (the first in \sharp and the third in \flat each gained a prize), a *divertissement* for pf. and orchestra (won a prize), a serenade for orchestra, "Scène au camp," "Suite pastorale" (ditto), serenade for flute, oboe, and strings; suite for pf. and orchestra, etc.; a Mass, a Requiem, also songs (in all sixty-two published works, many in manuscript). In 1889 he received the *Prix Chavrier* (for the good services which he rendered to chamber-music).

Lacombe (d'Estalens), Paul Jean Jacques, composer, b. March 4, 1838, Houg (Gers), was trained in his native town, went to Paris when an operetta of his gained a prize offered by the Bouffes-Parisiens (but which was not produced owing to a change of management); and since then he has lived there as composer and musical critic. Besides a number of operettas and farces (*Saynètes*), he has made himself known by compositions for wind instruments, a pf. trio, waltzes, etc., for piano, songs, psalms for one and several voices, with organ or pianoforte.

Lacrimosa, the initial word of the eighth strophe of the sequence of the mass for the dead (*see* REQUIEM); hence, in a Requiem on a large scale, the name of a special (and, as a rule, soft and mournful) section of the work.

Lacrimoso (Ital.), tearful, woeful.

Ladegast, Friedrich, b. Aug. 30, 1818, Hochhermsdorf (near Geringswalde), important organ-builder, was the son of a cabinet-maker; he worked under his brother Christlieb (b. Dec. 3, 1813), who had at that time an organ manufactory at Geringswalde, afterwards in several other places, and started on his own account at Weissenfels in 1846. One of his earliest and greatest works was the renovation of the grand organ of Merseburg Cathedral (1855), which soon made his name famous. He also built the organ of the "Nikolaikirche" at Leipzig (1859-62; four manuals and eighty-five stops).

Ladurner, Ignaz Anton Franz Xaver, b. Aug. 1, 1766, Aldein (Tyrol), d. March 4, 1839, Massy, son of an organist; he was brought up in a Benedictine monastery, and occupied the post of organist for some time after his father's death until a younger brother took his place. He then went for further training to Munich, and made the acquaintance of a Countess Hainhausen, whom he accompanied to her estate at Bar-le-Duc. In 1788 he went to Paris, where he was highly esteemed as pianist and teacher (Auber was his pupil). In 1836 he retired to a villa near Massy. L. pub-

lished: twelve pf. sonatas, one sonata for four hands, nine violin sonatas, *divertissements*, variations, etc.; he also produced two operas at the Opéra Comique.

Lafage, Juste Adrien Lenoir de, eminent writer on music, b. March 28, 1801, Paris, d. March 8, 1862, at Charenton Lunatic Asylum, near Paris. He studied under Perne and Choron, was at first teacher of singing, then, with the help of a government stipend, went to Italy (1828-29), studied under Baini's direction the fugal style of the old masters, and on his return was appointed maître de chapelle of the church St. Étienne du Mont at Paris. He went again in 1833 to Italy, and commenced as a writer on music by completing the "Manuel complet de musique vocale et instrumentale," sketched by his old teacher Choron, who died in 1834 (1836 to 1838; six vols., in three parts). For the purpose of further investigation, L. made journeys to Italy, Germany, Spain, and England, and so overworked himself that his intellect became disordered. His principal works, in addition to the "Manuel," are "Séméiologie musicale" (1837, an elementary treatise based on the principles of Choron: in the edition of 1837 it bears the title "Principes élémentaires de musique"); "De la chanson considérée sous le rapport musical" (1840); "Histoire générale de la musique et de la danse (1844, two vols.); "Miscellanées musicales" (1844; biographical notices of Haydn, Tritto, Bellini, etc.); biographical notices of Stanislas Mattei (1839), Zingarelli (without year), Choron (1844), Bocquillon-Wilhem (1844), Baini (1844), Donizetti, etc.; reports of the organs built by Cavallé-Coll for St. Denis (1845) and St. Eustache (1845); "Quinze visites musicales à l'exposition universelle de 1855;" "Extraits du catalogue critique et raisonné d'une petite bibliothèque musicale;" "Essais de diptérographie musicale;" "De l'unité tonique et de la fixation d'un diapason universel (1859); "Nicolai Capuani presbyteri compendium musicale." In his later years he busied himself, from inclination, with the reform of Gregorian singing: "De la reproduction des livres de plain-chant romain" (1853); "Lettre écrite à l'occasion d'un mémoire pour servir à la restauration du chant romain en France par l'abbé Céleste Alix" (1853); "Cours complet de plain chant" (1855-56, two vols.); "Nouveau traité de plain chant" (1859); "Prise à partie de M. l'abbé Tesson dans la question des nouveaux livres de plain-chant romain;" "Routine pour accompagner le plain-chant." In 1859 L. founded a newspaper, *Le Plain-Chant*. The compositions of L., in addition to some sets of variations, fantasias, duets for flute, and some songs, consist of sacred works bearing, for the most part, Latin titles, after the manner of the 16th century: "Adriani de L. motetorum liber I." (1832-35; second book, 1837); "Psalmi vespertini quaternis

vocibus cum organo" (1837), etc.; also an "Ordinaire de l'office divin arrangé en harmonie sur le plain-chant" (1832-35).

Lafert, Oskar, b. Jan. 25, 1850, Breslau, d. May 17, 1889, Dresden. He was a pianoforte-maker and music-seller at Carlsruhe, and from 1884 director of the "Apollo" pianoforte manufactory at Dresden. L. was also active as a writer on music.

Lafont, Charles Philippe, celebrated violinist, b. Dec. 1, 1781, Paris, d. Aug. 14, 1839, nephew and pupil of Berthoume, studied afterwards under Kreutzer, Rode, and Berton (harmony); already as a child he made concert tours, and continued the restless life of a wandering virtuoso until he was called to Petersburg as chamber virtuoso in place of Rode, who was returning to France. In 1815 Louis XVIII. offered him a similar position, and thus attracted him to Paris. L. nevertheless undertook many concert tours, and finally met with his death by the upsetting of the diligence between Bagnères-de-Bigorre and Tarbes. L.'s compositions are: seven violin concertos, many fantasias, rondos, variations, etc. (partly for orchestra, partly for stringed quartet, pianoforte, harp, etc.), also about two hundred songs (romances). L. produced two small operas at Petersburg and Paris.

Lagrimoso (Ital.), tearful, mournful.

La Harpe, Jean François de, b. Nov. 20, 1739, Paris, d. there Feb. 11, 1803, poet and critic; he was one of the antagonists of Gluck, and repeatedly attacked his music in the *Journal de politique et de littérature* (1777).

Lahoe, Henry, b. April, 1826, Chelsea, from 1847-74 organist at Brompton, esteemed English composer of vocal music (glees, madrigals, cantatas [*The Sleeping Beauty*]).

Lahire, Philippe de, professor of mathematics at the Paris University, b. 1640, Paris, d. there April 21, 1719. He wrote, among other things, "Explication des différences de sons de la corde tendue sur la trompette marine," and "Expériences sur le son" (in the report of the Paris Académie).

Lais (Fr.; English "Lays"), popular songs of the Middle Ages, after the manner of sequences. (Cf. Ferd. Wolff, "Ueber die L. Sequenzen u. Leiche" [Heidelberg, 1841].)

Lajarte, Théodore Édouard Dufaure de, b. July 10, 1826, Bordeaux, d. June 20, 1890, Paris, pupil of Leborne at the Paris Conservatoire; he produced several small operas and operettas at the Théâtre Lyrique and elsewhere. He composed marches and dances for military band, also some choruses with military music, but made his mark specially as a writer on music. Apart from his contributions to various musical papers, and his musical feuilletons and criticisms in political journals, L. wrote "Bibliothèque musicale du théâtre de l'Opéra" (1876, etc., two vols.), a work of high

importance (enumeration of all pieces produced at the Paris Opéra, together with special notices of all kinds based on the archives of the Opéra, of which L. was librarian from 1873); further, "Instruments Sax et fanfares civiles" (1867); and "Traité de composition musicale" (jointly with Bisson, 1880). He also published a collection, "Airs à danser de Lulli à Méhul," and, lastly, undertook the publication of vocal scores of old French operas, "Chefs d'œuvre classiques de l'opéra français" (Lully's *Thésée*, *Psyché*, and *Armide*; also works by Rameau, Campra, Piccini, etc.).

Lajeunesse, Emma. (See ALBANI.)

Lalande, (1) Michel Richard (de), b. Dec. 15, 1657, Paris, son of a tailor, d. June 18, 1726, as *intendant de la musique de cour* to Louis XV. He composed sixty motets, with chorus and orchestra, which appeared at the cost of the king in a magnificent edition in twenty parts, and which gained for him great reputation in his own country. He also wrote music to Molière's *Mélicerte*, and several ballets (*Les éléments*, jointly with Destouches).

(2) Henriette Clémentine Méric-L., b. 1798, Dunkirk, d. Sept. 7, 1867, Paris, a celebrated vocalist, made her *début* at Nantes in 1814, and at Paris in 1822. After that she still studied under Garcia, and in Milan under Bonsichi and Banderali; she married the horn virtuoso Méric, and shone especially in Italy, Vienna, and Paris, but did not achieve success in London. She brought her dramatic career to a close in Spain in the thirties.

Lalo, Édouard, b. Jan. 27, 1823, Lille, d. April 22, 1892, Paris; he was a pupil of the branch of the Paris Conservatoire at Lille, an excellent violinist and composer of note. He first became known in Paris as viola-player in the Armingaud and Jacquard chamber-music *soirées*, and soon produced chamber-music works. An opera (*Fiesque*) was subject to rare ill-fortune, so that up to the present day it has not been performed, although accepted at the Opéra both at Paris and Brussels. A second opera (his best work), *Le Roi d'Ys*, the overture of which was already played in 1876, was first produced in 1888, and a third, *La Jacquerie*, remained incomplete; a ballet, *Namouna*, became popular as an orchestral suite, and a pantomimic ballet, *Néron*, was given in 1891. Of his other works the following deserve mention: two violin concertos (I., dedicated to Sarasate; II., "Symphonie espagnole"), "Rhapsodie Norvégienne" (for orchestra), a divertissement for orchestra, a quartet for strings, two pf. trios, a violin sonata, a Duo concertant for pf. and violin, a 'cello sonata, and various characteristic pieces for violin and pf., violin, 'cello and pf., and for 'cello and pf.; finally songs ("Mélodies vocales").

La Mara. (See LIPSIGUS.)

Lambert, (1) Michel, b. 1610, Vivonne (Poitou), famous teacher of singing at Paris, father-in-law of Lully; from 1650 he was chamber-music-master to Louis XIV., and d. 1696, Paris. He published a collection, "Airs et brunettes" (1666; second ed. 1689), and after his death there appeared another, "Airs et dialogues" (à 1-5, 1698). Some detached pieces of his, overlaid throughout with ornaments, are to be found in Paris collections, many also in manuscript.

(2) Johann Heinrich, b. Aug. 29, 1728, Mülhausen-i.-E., d. Sept. 25, 1777, Berlin, as "Oberbaurath" and member of the Akademie, for which he wrote several valuable works on acoustics: "Sur quelques instruments acoustiques" (1763; German by Huth, 1796); "Sur la vitesse du son" (1768); "Remarques sur le tempérament en musique" (1774; German by Marpurg in the "Historisch critische Beiträge," fifth vol.); "Observations sur les sons des flûtes" (1775), all printed in the reports of the Akademie.

Lambillotte, Louis, b. March 27, 1797, Charleroi (Hainault), d. Feb. 27, 1855, Vaugirard (near Paris), sacred composer and important writer on music. He was at first organist at Charleroi, then at Dinant, about 1822 maître de chapelle at the Jesuit Institution at St. Acheul, in 1825 joined the same order, after seriously studying the dead languages, and lived in various houses of that order, finally at Vaugirard. His compositions are: four grand masses, among which one in the fifth Church Mode (Lydian), besides motets, hymns to the Virgin Mary for great and small festivals, cantica à 2; he also published a good collection of organ pieces, fugues, etc., "Musée des organistes" (1842-44, two vols.). His writings are: "Antiphonaire de Saint Grégoire" (1851, a facsimile of the Antiphony of St. Gall in neume notation, with historico-critical treatises); "Quelques mots sur la restauration du chant liturgique" (1855, posthumous); "Esthétique, théorie, et pratique du chant grégorien restauré d'après la doctrine des anciens et les sources primitives" (1855, posthumous). Père Dufour, editor of the last two works, published also the "Graduale" and "Vesperale" according to L.'s reforms in chorale notes, and with transcription into modern notation (1856). (Cf. POTHIER.)

Lamentabile, **Lamentôso** (Ital.), mournful.

Lamento (Ital.), lamentation.

Lamoureux, Charles, violinist and conductor, b. Sept. 28, 1834, Bordeaux, studied under Girard at the Paris Conservatoire, played, at first, in the orchestra of the Gymnase and of the Grand Opéra, and, after further study under Tolbecque, Leborne, and Chauvet, established a society for chamber-music (jointly with Colonne, Adam, and Rignault), founded, in 1873, a *Société de Musique sacrée* (oratorio concert), and, *per saltum*, became one of the

most esteemed conductors of Paris. In 1875 he conducted the Boieldieu Jubilee Concert at Rouen, and in 1876 was associated for a time with Deldevez, but in 1878 succeeded him as chief conductor at the Grand Opéra. From 1872-78 L. was sub-conductor of the Conservatoire concerts. In 1881 he resigned his post, and established the Nouveaux Concerts (Concerts L.), which, at the present day, rank amongst the most important concert institutions of Paris.

Lampadari, (1) Johannes, Byzantine church composer and musical theorist of the 14th century, was chapel-singer at St. Sophia, Constantinople. His work on Grecian church music is entitled, "Τεχνολογία της μουσικης τεχνης" (at the Vienna library).

(2) Petrus, b. about 1730, Tripolitza (Morea, hence named "the Peloponnesian" to distinguish him from the former), was likewise a composer of the Greek Church. His brother, Gregorius L., together with Chrysanthus of Madytos (q.v.), reformed the new Greek liturgical notation, and arranged at Paris an edition of "Triodia" (songs for Lent), with music by Petrus L., in the new notation (1821).

Lampadius, Wilhelm Adolf, Protestant clergyman, b. 1812, d. April 7, 1892, Leipzig, author of the well-known biography of Mendelssohn (q.v.).

Lamperen, Michel van, b. Dec. 26, 1826, Brussels, from 1859 librarian of the Brussels Conservatoire; since 1870 he has been publishing a complete catalogue of the library under his charge. He has also published a number of sacred compositions.

Lampert, Ernst, b. July 3, 1818, Gotha, d. there June 17, 1879, as court capellmeister, pupil of Hummel at Weimar, and of Spohr and Hauptmann at Cassel. He published a great number of instrumental and vocal compositions, also produced several operas at Gotha and Coburg.

Lamperti, Francesco, b. March 11, 1813, Savona, d. May 1, 1892, Como, famous teacher of singing, pupil of the Milan Conservatorio, established his reputation as director of the "Teatro filodrammatico" at Lodi (jointly with Masini). He became (1850) professor of singing of the Milan Conservatorio, and worked with great success up to 1875. After that he withdrew from that institution, and only gave private lessons. From among his famous pupils may be mentioned the two Cruvellis (mother and daughter), Artôt, La Grange, Albani. L. published at Ricordi's, Milan, a vocal Method, also several books of études, shake-studies, etc. M. G. B. L., who has likewise published instructive vocal works, must not be confused with Francesco L.

Lampons (Fr.), a kind of drinking-song.

Lampugnani, Giovanni Battista, Italian opera composer, b. 1706, Milan, d. about 1772.

He wrote for Milan, London (1744-55), etc., a large number of operas, mostly serious and in the style of Hasse, in which the recitative is treated in a highly expressive manner.

Landgraf, J. Fr. Bernhard, celebrated clarinettist, b. June 25, 1816, Dielsdorf (Weimar), d. Jan. 25, 1885, Leipzig; from 1840 principal clarinettist in the Gewandhaus orchestra.

Landi, Stefano, Papal chapel singer (evirato) about 1630, previously church capellmeister at Padua, a sound church composer. He published: madrigals à 4 (1619); madrigals à 5 (1625); "Poesie diverse in musica" (1628); "Missa in benedictione nuptiarum" (1628); eight books of arias à 1-2 (1627-39); psalms à 4 (1629); a music drama, *San' Alessio* (1634); one pastoral, "La morte d'Orfeo" (1639); and one book of masses (*a cappella*) à 4-5.

Landino, Francesco, known under the name of Francesco Cieco (the blind), or Francesco degli Organi, a highly famous organ-player and composer, b. about 1325, Florence, where he d. 1390. Of his compositions there have only been preserved some canzone à 2 and 3, which Fétis found in the Paris Library, and one of which he published in his *Revue musicale* (1827). For an appreciation of L. see A. G. Ritter's "Geschichte des Orgelspiels" (1884), p. 3.

Ländler (Länderer, Dreher), old term for the so-called Landel' (Austria beyond the Enns), originally a native slow waltz, danced in quiet, equal steps (3-4 time):—

The L. has now become a characteristic dance, i.e. the name of one of the many types of instrumental music (cf. the Ländler of Beethoven, Schubert, Heller, Jensen, etc.) of characteristic rhythm, melody, and tempo. The melody of the L. generally moves along in quiet quavers. (Cf. the Waltz in the *Freischütz*.) The *Tyrolienne* (q.v.) is a French imitation of the L.

Landolfi (Landalphus), Carlo Ferdinando, a renowned violin-maker at Milan, from 1750-60, whose 'celli stand even in higher repute than his violins. L. imitated Giuseppe Guarneri with great success.

Lang, (1) (L. Köstlin), Josephine, b. March 14, 1815, Munich, d. Dec. 2, 1880, Tübingen, daughter of the court musician Theobald L., and of the famous singer Regina Hitzelberger L. (for whom Peter Winter wrote the rôle of Myrrha in his *Unterbrochene Opferfest*): she was an excellent composer of songs, pupil of her mother, afterwards of Frau Berlinghof-Wagner, and, for theory, of Mendelssohn (1831), who held her in high esteem. After teaching singing and pianoforte for some time privately in Munich, she became one of the singers at

the court. She married, in 1842, the Tübingen professor of law, Chr. Reinhold Köstlin (as poet, Karl Reinhold), who died already in 1856, and then she turned again to the teaching of music. A large number of songs and pf. pieces have appeared in print; many are still in manuscript. Her son, H. A. Köstlin, wrote her life (in the *Sammlung musikalischer Vorträge*, 1881).

(2) Benjamin J., b. Dec. 28, 1839, Salem (Massachusetts, North America), excellent pianist (trained in Germany), to whom Boston is musically indebted. He has been for twenty-one years organist of the Handel and Haydn Society, also conductor of the Cecilia Society (mixed choir) and of the Apollo Club (male choir).

Langbecker, Emanuel Christian Gottlieb, b. Aug. 31, 1792, Berlin, d. there Oct. 24, 1843, as secretary to Prince Waldemar of Prussia. He made a deep study of the history of the origin of the Protestant chorale, and wrote on that subject: "Das deutsch-evangelische Kirchenlied" (1830); "Johann Crügers . . . Choral Melodien" (1835); "Gesangblätter aus dem 16. Jahrhundert (1838); "Paul Gerhards Leben und Lieder" (1841).

Langdon, Richard, d. Sept., 1803, Armagh, Mus.Bac. (Oxford, 1761), organist at Exeter, Bristol, and finally at Armagh. He published: a collection, "Divine Harmony" (1774, two vols., Psalms and Anthems), also twelve glees, two books of songs, and some songs of his own composition.

Lange, (1) Otto, b. 1815, Graudenz, d. Feb. 13, 1879; he was a school-teacher, also musical reporter to the *Vossische Zeitung*, edited (from 1846-58) the *Neue Berliner Musikzeitung*; he was also active as a teacher of school-singing in Berlin, and died as professor *em.* at Cassel. L. published several educational pamphlets, among which, "Die Musik als Unterrichtsgegenstand in Schulen" (1841).

(2) Samuel de, organist and composer, b. Feb. 22, 1840, Rotterdam, where his father, of like name, was organist of St. Laurens Church and teacher at the school of music of the Society for the Advancement of Art (b. June 9, 1811, Rotterdam, d. there May 15, 1884). L. received his first education from the latter, and was further trained by A. Winterberger (Vienna), Damcke and Mikuli (Lemberg). L. is a distinguished organist, made concert tours from 1858-59 in Galicia, then settled in Lemberg for four years, and became organist and teacher at the Rotterdam Music School (*Maatschappij tot bevordering van Toonkunst*), whence he made concert tours in Switzerland, and appeared at Leipzig, Vienna, Paris, etc. From 1874-76 he was associated with the school of music at Basle, and, after a short stay in Paris, in 1877 became teacher at the Cologne Conservatorium, where he was conductor of the male choral society, and also of the "Gürzenichchor."

In 1885 he undertook the direction of the Oratorio Society at the Hague, also of some smaller societies. Of his compositions should be mentioned especially the five organ sonatas Op. 5, 8, 14, 28, 50, besides one pf. concerto, two stringed quartets, one trio, quintet, violin sonata, part-songs for male-chorus, etc. A symphony of his was produced in 1879 at Cologne, and an oratorio, *Moses*, at the Hague in 1889. In 1893 he received a call as teacher and deputy-director at the Stuttgart Conservatorium. His brother

(3) Daniel de, b. July 11, 1841, Rotterdam, studied under Ganz and Servais ('cello), also Verhulst and Damcke (composition), from 1860-63 teacher at the Lemberg School of Music, then studied the pianoforte at Paris under Madame Dubois, working all the time by himself until he became an able organist; he was appointed organist of the evangelical community of Montrouge, and of the "Freie Gemeinde," and conductor of the German "Liedertafel." In 1870 (during the war) he went to Amsterdam as teacher at the music school (which, afterwards, was raised to the rank of Conservatoire), then became secretary of the "Maatschappij tot bevordering van Toonkunst," was for a long time Coenen's deputy as conductor of "Amstels Mannenkoor," then conductor of several vocal societies at Leyden and Amsterdam, with which he repeatedly produced old Dutch *a-cappella* music with phenomenal success (in 1888 and 1894 at London, and in 1892 in Germany). For many years L. has been musical critic of the *Nieuws van den Tag*, and has composed two symphonies (in c and d), several cantatas, an opera (*De Val van Kuilenburg*), overture ("Willem van Holland"), incidental music to *Ernani*, a mass *a cappella*, a requiem, twenty-second Psalm, for soli, chorus, and pianoforte; a 'cello concerto, songs, etc. Daniel de L., next to Fuchs, is the first who ventured in orchestral-playing to make use of the principles of phrasing as established by H. Riemann (concerts at Amsterdam, 1886 and 1887).

(4) Gustav, b. Aug. 13, 1830, Berlin, composer of some popular drawing-room pieces.

Langer, (1) Hermann, b. July 6, 1819, Höckendorf (near Tharandt), d. Sept. 2, 1889, Dresden, studied philosophy and music at Leipzig, where, in 1843, he was appointed musical director of the University and organist; he was for some time conductor of the Euterpe Concerts, and conducted several vocal societies at Leipzig ("Männergesangverein," "Leipziger Gau-Sängerbund," "Zöllner-Bund"). In his official capacity at the University he conducted the "Pauliner-Gesangverein," lectured, as *Lector publicus*, on Protestant liturgy, the theory of harmony, etc., and was held in high consideration in the musical circles of Leipzig. In 1859 the University granted him the degree of

Dr. Phil. hon. causd. In 1882, at the sixtieth jubilee of the "Pauliner-Verein," he received the title of Professor. L. published "Repertorium für den Männergesang," edited the "Musikalisches Gartenlaube," and wrote "Der erste Unterricht im Gesang" (1876-77, three courses). He was called to Dresden in 1887 as "Kgl. sächs. Orgelbaurevisor."

(2) Viktor, b. Oct. 14, 1842, Pesth, pupil of R. Volkmann, attended the Leipzig Conservatorium, and became very active in his native town as conductor, teacher of music, and composer (partly under the pseudonym of Aladar Tisza), also as editor of an Hungarian musical paper.

(3) Ferdinand, opera composer, b. Jan. 21, 1839, Leimen (near Heidelberg), son of a schoolmaster; without the help of any teacher of fame, he obtained the post of 'cellist in the Court Theatre at Mannheim, of which he is now second capellmeister. With his operas—*Die gefährliche Nachbarschaft* (1868), *Dornröschen* (1873), and *Aschenbrödel* (1878), *Murillo* (1887)—L. obtained pleasing, though somewhat local, success.

Langert, Joh. August Ad., b. Nov. 26, 1836, Coburg; he was active as conductor of the theatres at Coburg, Mannheim (1865), Basle (1867), Trieste (1868), and then lived in retirement at Coburg, Paris, and Berlin. In 1872 he became teacher at the Geneva Conservatoire, and then received a call in 1873, as court capellmeister, to Gotha. He wrote the operas: *Die Jungfrau von Orleans* (1861), *Des Sängers Fluch* (1863), *Die Fabier* (1866, these three for Coburg), *Dornröschen* (Leipzig, 1871), and *Jean Cavalier* (Coburg, 1880, and again as *Die Kamisarden*, 1887).

Langhans, Fr. Wilhelm, violinist and writer on music, b. Sept. 21, 1832, Hamburg, d. June 9, 1902, Berlin, where he received his school education at the Johanneum; he became a pupil of the Leipzig Conservatorium in 1849, and studied under David (violin) and Richter (composition), was also private pupil (for violin-playing) of Alard in Paris. From 1852-56 he was a member of the Gewandhaus orchestra at Leipzig, from 1857-60 leader at Düsseldorf, then teacher and concert-player at Hamburg (1860), Paris (1863), Heidelberg (1869), where he received the doctor's degree. In 1874 he became teacher of the history of music at the "Neue Akademie der Tonkunst" (Kullak), but left that institution in 1881 and joined X. Scharwenka's newly established Conservatorium. L. published a concert Allegro for violin (with orchestra), violin studies, a violin sonata, There remained in manuscript a quartet for strings (which gained a prize at Florence, 1864), a symphony, overture ("Spartacus"), songs ("Parerga"), and violin solos. L.'s activity as a writer is of greater importance: "Das musikalische Urteil" (1872; second ed. 1886), "Die königliche Hochschule

für Musik in Berlin" (1873), "Musikgeschichte in zwölf Vorträgen" (1878; Dutch by Ed. de Hartog, 1885), and a cleverly compiled continuation of Ambros' "Geschichte der Musik" under the title, "Die Geschichte der Musik des 17. 18. 19. Jahrhunderts" (1882-86, two vols.), an addition to literature for which students ought to be grateful. L. was an honorary member of the "Liceo filarmonico," Florence, 1878, and of the St. Cecilia Academy at Rome, 1887. In 1858 he married Luise Japha (q.v.). Their son Julius, b. 1862, Hamburg, has been living at Sydney since 1886, where he is highly esteemed as a teacher of music.

Langlé, Honoré François Marie, b. 1741, Monaco, d. Sept. 20, 1807, Villiers le Bel (near Paris), studied under Cafaro at the Conservatorio della Pietà at Naples. He was for some time musical director at Genoa, and went in 1768 to Paris, where the production of an important vocal work gained for him a name. In 1784 he became teacher of singing to the "École royale de chant et de déclamation" (until its suppression in 1791). When the Conservatoire was established in 1794, he was appointed librarian and professor of harmony, but when, in 1802, the teaching staff was reduced, he lost the latter appointment, but retained the former. L.'s compositions are of no importance (several operas, cantatas, etc.), but his theoretical works are of value: "Traité d'harmonie et de modulation" (1797; building up of chords by thirds); "Traité de la basse sous le chant" (1798); "Nouvelle méthode pour chiffer les accords" (1801); "Traité de la fugue" (1805).

Langsam (Ger.), slow; *langsamer*, slower.

Languendo, Languente (Ital.), in a plaintive manner.

Languette (Fr.), (1) The tongue of a harpsichord jack.—(2) The tongue of a reed-pipe in the organ.—(3) The stem of the keys of wind instruments.

Laniere, Nicholas, b. about 1590, London, d. there between 1665 and 1670. He was the son of an Italian musician who had emigrated twenty years previously. L. was a man of many talents—composer, singer, painter, engraver. To him must be ascribed the merit of having introduced the *Stilo rappresentativo* into England, of which he made use in his "Masques" (i.e. small stage pieces with allegorical action). L. became, in 1626, court musical director to King Charles I., which post he lost during the Revolution, but, after the death of Cromwell, regained it from Charles II. Of his compositions, pieces written for special occasions (funeral hymn for Charles I., new year songs, etc.) have been preserved, also some songs in the collections: "Airs and Dialogues" (1653, 1659); "The Musical Companion" (1667); "The Treasury of Music" (1669); "Choice Airs and Songs" (fourth book, 1685).

Lanner, Joseph Franz Karl, famous dance composer, b. April 12, 1801, Oberdöbling (near Vienna), d. there April 14, 1843; he learnt violin-playing and composition by himself, began his career as leading violinist in an amateur quartet party (with Joh. Strauss as violaplayer), for which he arranged operatic potpourris and composed dances; and from that simple beginning was evolved a full orchestra. The L. orchestra soon gained extraordinary popularity, and his waltzes, galops, and Ländler, etc., were played everywhere. L. created the Viennese waltz (before his time [in Beethoven, Clementi, and Schubert] the waltz was a short dance piece with a few repeats and a trio), and gave to it a broader, more melodious character. Strauss followed in his footsteps, but introduced into it piquancy and instrumental refinement—new elements which J. Strauss, jun., amalgamated in the happiest manner with the former. Besides Vienna, L. gave concerts only in the provincial towns of Austria. (Cf. H. Sachs' "J. L." [1889], also Oettinger's "Meister Strauss u. seine Zeitgenossen" [comic novel, 1862].)—His talented son, August Joseph, b. Jan. 23, 1834, soon followed him to the grave, Sept. 27, 1855.

Lans, Michael J. A., b. July 18, 1845, Haarlem, Roman Catholic priest; in 1869 teacher at the priests' training college at Voorhout, near Leyden, since 1887 clergyman at Schiedam. In 1876 he founded the *Gregoriusblad* (newspaper for Catholic church music), and in 1878, the Gregorian Society. He has written a "Lehrbuch des (strengen) Kontrapunkts" (1889), and has himself composed cantatas, a mass, etc.

Lapicida, Erasmus, was a composer well known in his time (16th century), for it seems that he was often briefly named Rasmus, or merely designated by his initials, E. L. Of his life absolutely nothing is known; his name is evidently Latinised ("stone-cutter"). There are compositions of his to be found in Petrucci's "Motetti B." (1503), in his "Frottole" in Book VIII. (1507), in Book IV. of the motets à 4 (1507), and in Book II. of the Lamentations (1506), also in Petrejus' "Anszug guter alter und neuer deutscher Liedlein" (1539), in G. Rhaw's "Symphonie jucundæ" (1538), etc.

Laporte, Joseph, Jesuit father, afterwards Abbé, b. 1713, Béfort, d. Dec. 19, 1779, Paris. He wrote: "Anecdotes dramatiques" (1775, four vols.; an enumeration of all kinds of stage pieces); "Dictionnaire dramatique" (1776, three vols.); and "Almanach des spectacles de Paris, ou Calendrier historique de l'opéra, des comédies françaises et italiennes et des foires" (1750-94, 1799-1800, 1804, forty-eight vols.; continued by Duchesne and others).

Larga (Lat.) is a name used by writers on mensural music of the 14th and 15th centuries for a note-value which never attained to

practical importance; it was greater than that of the *Maxima*, from which it differed in sign in that several *cauda* (strokes) were added to the bodies of the notes: \neg or |||| , etc.

Largamente (Ital.), broadly, largely.

Largando (*slargando*, *allargando*), Ital. "broadening"; as a rule it is united with *crescendo*.

Larghetto (Ital.), somewhat broad (a diminutive of *Largo*, q.v.); a time-indication falling between *Largo* and *Andante*, somewhat the same as *Andantino*, perhaps rather slower. The term L. is frequently to be met with as the superscription of the slow movement in a symphony, sonata, etc.; in such cases the whole movement is called the L.

Largo (Ital., "broad"), an indication of the slowest movement, except perhaps *molto* L., which, after all, conveys pretty much the same meaning. Whole movements bearing the superscription L. are rare; on the other hand, the term L. is frequently applied to the introductions of symphonies. The reason for this is that excessive heaviness is the characteristic feature of the L., and this is not removed by figuration. For a whole movement it is, for the most part, too oppressive, whereas for a limited number of bars it is of excellent effect. *Poco* L. is a somewhat indefinite term; it occurs also in *Allegro*, and indicates a moderate modification of the principal tempo.

Larigot, an obsolete French name for the quint-stop ($1\frac{1}{2}$ ft.), also called *Petit nasard*. Originally, L. was the name of an instrument of the flageolet kind (small beak-flute).

Laroche, Hermann Augustowitsch, b. 1845, Petersburg; in 1862 was pupil there at the Conservatoire, in 1866 teacher of theory and musical history at Moscow. He is esteemed as a critic (articles on Glinka), and has composed vocal and instrumental works.

La Rue, Pierre de (*Larus*, $\text{b}^{\frac{5}{4}}$ rue [the note $d = \text{la}$], Petrus Platenus [in Glarean], Pierchon, Pierson, Pierazzon), one of the most distinguished Netherland contrapuntists from the 15th to the 16th century, contemporary of Josquin, and, like the latter, a pupil of Okeghem. The dates of his birth and death are unknown, but it has been shown that from 1492 to 1510 he was chapel-singer at the Court of Burgundy, and in 1501 became prebend of Courtrai. L. was *facile princeps* in the most complicated arts of imitative counterpoint, yet his works are not lacking in feeling and grandeur. The following of his printed works have been preserved: a book of masses, published by Petrucci 1513 ("Beate Virginis," "Puer nobis est," "Sexti Toni," "Ut Fa," "L'homme armé," "Nunquam fuit poena major"); besides the mass "De Sancto Antonio" in Petrucci's "Missæ diversorum" (1508); the masses "Ave Maria" and

"O Salutaris hostia" in "Liber XV. missarum" of Antiquis (1516); "Cum jocunditate," "O Gloriosa," and "De Sancto Antonio" in the "Missæ XIII." (1539); "Tous les regrets" in "Liber XV. missarum" (1538); and a mass in the fourth Church Mode in Petrucci's "Missæ Antonii de Fevin" (1515). Among the manuscripts of La Rue stand prominently forth the magnificent seven masses in the Brussels Library, which the Regent of Burgundy, Margaret of Austria (d. 1530), ordered to be made (à 5, "De conceptione Virginis Mariæ," "Ista est speciosa," "De doloribus," "Paschale," "De Sancta Cruce," à 6, "Ave Sanctissima Maria," à 4, "De feria"). Another magnificent manuscript, also prepared by order of Margaret, is to be found at Mechlin (masses à 4, "Fors seulement," "Resurrexit," "Sine nomine," "De Sancta Cruce," and à 5, "Super Alleluja"). Finally, there is still a manuscript of two masses at Brussels, "De septem doloribus" (the mass à 5 already mentioned, and one à 4); in the archives of the Papal Chapel at Rome, besides those à 4 already named, there are "L'amour de moy," "Pour quoy non," "De Virginibus," and "O gloriosa Margarita," and at Munich the masses à 4 "Cum jocunditate" (three copies), "Pro defunctis" (three copies), and one à 5, "Incessament." The following works of L. have also been preserved: a Credo in manuscript (Munich), a Stabat Mater à 5 on "Comme dame de reconfort" (Brussels), five "Salve regina" à 4 (Munich MSS. 34), and several chansons (Munich MSS., 1508). A "Salve regina" is printed in the fourth book of "Motetti della Corona" (Petrucci, 1505), a motet ("Lauda") in Vol. III. of the Nuremberg collection, 1564; and some chansons are to be found in Petrucci's "Odhecaton," "Motetti A" and "Motetti B" (1501-3), and G. Rhaw's "Bicinia" (1545), also some madrigals in Gardane's "Perisone" (1544).

Laruelle, Jean Louis, b. March 27, 1731, Toulouse, d. there Jan. 1792; he was one of the first French composers of vaudevilles (*La fausse aventurière*, Paris, 1756; *L'heureux déguisement*; *Le médecin de l'amour*, etc.).

Larynx. The human larynx belongs, as musical instrument, to the reed-pipe species. The vocal cords (of which there are two, as in the oboe) take the place of reeds, and lie opposite to, and slightly inclined to each other, between the two movable shield-like (thyroid) and the two ladle-like (arythenoid) cartilages forming the real L. The vocal cords, either throughout or partially, are tightly stretched or relaxed by means of numerous muscles; a condensation or, on the other hand, rarefaction of these cords is possible, especially at the edges, as the two sets of cartilages can easily move to and from each other, whereby the depth and breadth of the L. become changed.

It is not possible consciously to set in action these or those muscles, and the physiological experiments for investigating the conditions under which this or that modification of the sound of the human voice arises are therefore of no practical use in singing, and only of scientific interest. Unfortunately, even for the latter, unquestionable results cannot be recorded. (Cf. EMOUCHURE, REGISTER, etc.) To those who may desire further knowledge in this matter, Merkel's "Anthropophonik" may be recommended (1857). Necessary details will be found in that work also about the laryngoscope, etc.

La Salette, Joubert de, b. 1762, Grenoble, French officer, finally brigadier-general, d. 1832, Grenoble; he was an enthusiastic writer on the theory and history of music. His works are: "Sténographie musicale" (1805, an attempt to revive German tablature [q.v.] for France); "Considérations sur les divers systèmes de la musique ancienne et moderne" (1810); "De la notation musicale en général et en particulier de celle du système grec" (1817); "De la fixité et de l'invariabilité des sons musicaux" (1824), etc.

Lasner, Ignaz, b. Aug. 8, 1815, Drosau, Bohemia; d. Aug. 18, 1883, Vienna, studied under Goltermann at Prague, and under Merk and Sersais at Vienna. He was an able performer on the cello, and played in orchestras at Vienna and Arad, and wrote valuable pieces for cello. His son and pupil, Karl, b. Sept. 11, 1865, Vienna, attended the Conservatorium of that city, and is now 'cellist in the Philharmonic orchestra at Laibach.

Lassen, Eduard, b. April 13, 1830, Copenhagen, whence his father removed two years later to Brussels. At the age of twelve L. became a pupil of the Brussels Conservatoire, received the first prize for pianoforte in 1844, and for harmony in 1847, and in 1851 the *Prix de Rome*, awarded every two years. He travelled for the purpose of study, first to Germany, staying at Cassel, Leipzig, Dresden, Berlin, and Weimar, and then to Italy, remaining a long while in Rome. His opera, *Landgraf Ludwig's Brautfahrt*, owing to Liszt's patronage, was performed at Weimar in 1857, and procured for him, in 1858, the post of court musical director to the Grand Duke. In 1861, on the retirement of Liszt, he was appointed court capellmeister, and there soon followed the operas *Frauenlob* (1860, French) and *Le captif* (Brussels, 1868). The following compositions of L. also deserve mention:—the music to Hebbel's "Nibelungen" (eleven characteristic pieces for orchestra), to Sophocles' *Œdipus Colonus*, Goethe's *Faust*, and *Pandora* (1886), and Devrient's version of Calderon's *Circe* (*Ueber allen Zaubern Liebe*), two symphonies, several overtures, cantatas (Op. 56, *Die Künstler*), Bible pictures (vocal, with orchestra), *Der Schächer putzte sich zum Tanz*

(soprano, with orchestra), also a number of songs which have become popular. The University of Jena conferred on him the title of *Doc. h. c.*

Lasso, (1) Orlando di (Orlandus Lassus), b. 1532, Mons, d. June 14, 1594, Munich, next to Palestrina, the greatest composer of the 16th century. He was chorister in the church of St. Nicholas, and was several times carried off on account of his beautiful voice. With the consent of his parents, he was taken by Ferdinand Gonzaga, Viceroy of Sicily, to Sicily, and afterwards to Milan. When his voice broke, he went to the Marquis of Terza, and, in 1541, through the influence of the Cardinal Archbishop of Florence, he became director of the choir at the Lateran, Rome, as Rubino's successor. He held this post until 1548, when, after long journeys through France and England, he settled in Antwerp 1555, where he published Book I. of Madrigals à 4, and at the same time, at Gardano's, Venice, Book I. of Madrigals à 5. In 1557 Duke Albert V., of Bavaria, invited him to the court chapel at Munich, the direction of which L. undertook in 1562 and held the post until his death. The last years of his life, however, were spent in a pitiful state of melancholy caused by excessive mental exertion. L. was not only the most prolific composer of the 16th century, but probably of any period. The number of his works exceeds two thousand. His contemporaries placed him above all masters, and surnamed him "Prince of Music," the "Belgian Orpheus," etc. His works have defied time, and still excite astonishment at the present day. As complete a catalogue as possible has been given, by R. Eitner, of the printed works, as a supplement to the fifth and sixth yearly series of the *Monatshefte für Musikgeschichte*; the Munich Library has a large number of those still unprinted. (Cf. J. J. Maier's Catalogue, 1879.) Eitner gives the beginnings of no less than forty-six masses, and the Munich Library contains, besides, unprinted ones on "Je suis déshéritée" (à 4), "Triste départ" (à 5), "On me l'a dict" (à 4), "Jesus ist ein süsser Name" (à 6), "Domine Dominus noster" (à 6), "Si rore aënio" (à 5). From the great number of his works the following deserve special mention; the Penitential Psalms of David—a work which is as well known as Palestrina's *Impropria* ("Psalmi Davidis penitentiales," printed in 1584; in a new score edition by Dehn, 1838; in manuscript [1560–70], magnificently got up with miniatures, at Munich). The "Patrocinius musics" (1573–76, five vols., prepared at the expense of the Duke of Bavaria) is also splendidly got up; it contains:—(i.) twenty-one motets; (ii.) five Masses; (iii.) offices; (iv.) Passion, vigils, etc.; (v.) ten Magnificats. L. composed one hundred Magnificats (published and unpublished appeared together in 1619 under the title "Jubilus

Beatae Virginis"), about twelve hundred motets ("Cantiones sacrae, etc.," the "Magnum opus musicum" of 1604 contains 516 of them), not to mention the chansons, madrigals, and German *Lieder* which appeared in Italian, German, French, and Netherland publications, likewise pirated. The style of L., as compared with that of Josquin, Obrecht, etc., is far more developed in the matter of harmonic clearness. L. was one of the morning stars of modern times, although he held fast to the imitative style of composition, and repeatedly wrote over a *Cantus firmus*. The ease with which he moved, on the one hand, within the various forms of the Mass, motet, etc.; and, on the other hand, within those of the madrigal, villanella, chanson, etc., shows that he was gifted in many ways—nay, a universal genius. New score editions of L.'s works are to be found, in varying number, in the collections of Proske, Commer, Rochlitz, Dehn, and others. Biographical notices of L. have been written by Delmotte (1836; in German by Dehn, 1837), Matthieu (1838), Kist (1841), and Baümker (1878). E. van der Straeten published letters of L. in 1891. For the tercentenary (1894) of his birth, Breitung and Haertel announced a complete edition of L.'s works, under the editorship of Dr. Ad. Sandberger of Munich. (cf. Sandberger, "Beiträge zur Geschichte der bair. Hofkapelle unter O. d. L."—I., 1893.)

(2) Ferdinand, eldest son of the former, d. Aug. 27, 1609, as court capellmeister at Munich. He published a volume of motets ("Cantiones sacrae suavissimae" (1587), and edited, jointly with his brother Rudolf, the "Magnum opus musicum" of his father.

(3) Rudolf, the second son of Orlando di L., organist, teacher of singing and composition to the Munich Court Chapel (from 1587), d. 1625. He published: "Cantiones sacrae" (à 4, 1606); "Circus symphoniacus" (1609); "Moduli sacri ad sacrum convivium" (à 2-6, 1614); "Virginalia eucharistica," à 4, 1616; "Alphabetum Marianum" (fifty-seven antiphons, 1621). Three Masses and three Magnificats are to be found in manuscript in the Munich Library.

(4) Ferdinand, grandson of Orlando di L., son of Ferdinand L., was sent to Rome by the Duke of Bavaria in 1609, to complete his musical education; in 1616 he was appointed court capellmeister, but was dismissed in 1629 and entrusted with a post as administrative officer. He died in 1636. Of his compositions—written for the most part for double choir (à 8-16) in the style in vogue in Italy at the commencement of the 17th century—few have been preserved. He only published "Apparatus musicus" (motets à 8 for two choirs).

LASSU. (See CZARDAS.)

LATILLA, Gaetano, b. 1713, Bari (Naples), d. about 1789, pupil of Gizzi at Naples, had success with his operas at an early age, was

appointed, already at the end of 1738, second maestro at St. Maria Maggiore, Rome, but, owing to a severe illness, was unable to attend to his duties. In 1741 he was dismissed, and lived in Naples for the sake of his health. In 1756 he was appointed teacher of choral singing at the Conservatorio della Pietà, Venice, where in 1762 he also became second maestro of St. Mark's Church. A refusal to raise his salary gave him an opportunity of returning to Naples in 1772, where, highly esteemed as a teacher, he ended his life. L. was the uncle of N. Piccini. He wrote twenty-seven operas, mostly for Naples and Venice, only known by name; *Orazio* (Rome, 1738, etc.) had the most success. L. was one of the best Neapolitan composers of opera, and also wrote some excellent sacred works and an oratorio.

LAUB, Ferdinand, celebrated violinist, b. Jan. 19, 1832, Prague, d. March 17, 1875, Gries (near Bozen), pupil of Mildner at the Prague Conservatorium, succeeded Joachim as leader of the band at Weimar (1853), from 1855-57 teacher of the violin at the Stern Conservatorium, Berlin, afterwards leader of the court orchestra and "Königlicher Kammervirtuose" (until 1864). After long concert tours he was appointed professor of the violin at Moscow Conservatoire, and leader of the Russian Musical Society; he spent his last years, suffering from a painful illness, at Carlsbad (1874), and finally at Gries (near Bozen). L. only published a few solo pieces for violin.

LAUDES (Lat.; Ital. *Laudi*), songs of praise (hymns, simply constructed motets).

LAUREATE (Lat., "crowned with laurels"), the winner of the *Grand Prix de Rome* (q.v.) at the Paris or Brussels Conservatoire.

LAURENCIN (d'Armond), Ferdinand Peter Graf, b. Oct. 15, 1819, Kremsier (Moravia), d. Feb. 5, 1890, Vienna, took the degree of *Dr. Phil.* at Prague, studied music under Tomaschek and Pitsch, and lived as a writer on music at Vienna. He wrote the small pamphlets, paying homage to the new German tendency:—"Zur Geschichte der Kirchenmusik" (1856); "Das Paradies und die Peri von R. Schumann" (1859); "Dr. Hanslicks Lehre vom Musikalisch-Schönen" (1859); "Die Harmonie der Neuzeit" (1861; this gained a prize, but is only strong in negation); also many articles in the *N. Z. f. M.*; cf. Schuch's *Nekrolog* in *N. Z. f. M.*, 1890.

LAURENT DE RILLÉ, François Anatole, b. 1828, Orléans, pupil of Elwart in Paris, where he was inspector of school-singing. He wrote numerous choruses for male voices (*Chœurs orphéoniques*) which were popular in France; and, since 1858, sixteen operettas, mostly of one act, for Paris and Brussels, but also a number of small Masses and other sacred pieces, songs, a Vocal Method, exercises for male chorus, and a musical novel—"Olivier l'orphéoniste."

Laurenti, (1) Bartolomeo Girolamo, b. 1644, Bologna, d. Jan. 18, 1726, as principal violinist at St. Petronio. He published: Op. 1, "Sonate per camera a violino e violoncello" (1691), and Op. 2, "Sei concerti a 3, cioè violino, violoncello ed organo" (1720).

His son (2) Girolamo Nicolo, d. Dec. 26, 1752, Bologna, likewise principal violinist at St. Petronio, studied under Torelli and Vitali, published concertos for three violins, viola, cello, and organ.

Lauska, Franz Seraphinus, excellent pianist, b. Jan. 13, 1764, Brünn, d. April 18, 1825, Berlin. He was a pupil of Albrechtsberger at Vienna, was first engaged by an Italian duke, then became chamber musician at Munich, and in 1798 settled as pianoforte-teacher in Berlin, where he was held in high consideration in private circles and at the court. His published compositions, mostly in the style of Clementi, are: sixteen pf. sonatas, one ditto for four hands, a cello sonata, rondos, variations, etc., a Pianoforte Method, some male quartets and songs.

Laute (Ger.), a lute.

Lauterbach, Johann Christoph, eminent performer on the violin, b. July 24, 1832, Kulmbach, attended the Gymnasium and the School of Music at Würzburg, continued his musical studies under De Bériot and Fétis at Brussels, and so distinguished himself that, at the end of two years, he was able to act as deputy for Léonard. He was appointed in 1853 leader, and teacher of the violin at the Conservatorium, Munich, but in 1861 accepted a call to Dresden as leader of the orchestra (he was pensioned in 1889); at the same time he was teacher of the violin at the Royal Conservatorium, but resigned in 1877. Of L.'s compositions the following may be named: Concert polonaise, Reverie, Tarantelle, and concert-pieces.

Lavigna, Vincenzo, b. 1777, Naples, pupil of the Conservatorio della Pietà, d. 1837, Milan, where he had been for a long while teacher of singing and accompanist at La Scala. His first opera—which, on the recommendation of Pae-siello, he was commissioned to write for La Scala (1802)—*La muta per amore* (*Il medico per forza*)—proved his best work. He wrote, besides, eight other operas and two ballets.

Lavignac, Albert, professor of the Paris Conservatoire, published in 1882 "Cours complet théorique et pratique de dictée musicale," a work which was the means of musical dictation (q.v.) being introduced into all conservatoria of any note.

Lavigne, (1) Jacques Émile, famous French tenor, b. 1782, Pau, from 1809–25 was engaged at the Grand Opéra, Paris, afterwards lived in retirement at Pau, and d. in 1855. L. was second tenor (A. Nourrit was principal), but he won triumphs in all the rôles left to him

by Nourrit, and abroad in all principal rôles; and, on account of his powerful voice, he received the surname "L'Hercule du chant;" his post was embittered by intrigues.

(2) Antoine Joseph, famous oboe-player, b. March 23, 1816, Besançon, pupil of the Paris Conservatoire. He lived from 1841 in England, where he was, at first, in the orchestra of the Drury Lane Promenade Concerts, but afterwards joined Hallé's excellent orchestra at Manchester. L. partially applied the Boehm ring-key system to the oboe.

Lavoix, Henri Marie François, b. April 26, 1846, Paris, d. Oct., 1892, Paris, son of the "Conservateur" of the numismatic cabinet of the Paris National Library (from whom he is distinguished as "L. fils"). He attended the Paris University, graduated, and became pupil of Henri Cohen for harmony and counterpoint, and, from 1865, librarian at the National Library. L. has distinguished himself by clever monographs:—"Les traducteurs de Shakespeare en musique" (1869); "La musique dans la nature" (1873); "La musique dans l'imagerie du moyen-âge" (1875); "Histoire de l'instrumentation" (1878; honourably mentioned by the Académie, 1875); "Les principes et l'histoire du chant" (with Th. Lemaire); "La musique au siècle de Saint Louis." L. was also musical feuilletonist of the *Globe*, and one of the most active contributors to the *Revue et Gazette Musicale*, and other musical papers. (See LEMAIRE, 2.)

Lawes, (1) William, pupil of Coperario, chorister at Chichester Cathedral, 1603 member of the Chapel Royal, London, and afterwards chamber-musician to King Charles I. He fell in the Civil War as a soldier in the Royal army during the siege of Chester, 1645. Anthems and other sacred and secular works of his are to be found in Boyce's "Cathedral Music" and other English collections of the period ("Catch that Catch Can," 1652; "Select Musical Ayres and Dialogues," 1653, 1659; "The Treasury of Musick," 1669, etc.).

(2) Henry, brother of the former, b. end of December, 1595, d. Oct. 21, 1662, London, was likewise pupil of Coperario, entered the Chapel Royal in 1625, and also received an appointment at court. Like his brother, he was a sound Royalist. The fall of Charles I. cost him, not his life, but his post. In 1660 he was reappointed under Charles II. Henry L. was the more important of the two brothers. He wrote music for masques, and published: "A Paraphrase upon the Psalmes of David" (1637); "Choice Psalmes put into Musick for Three Voices" (1648, jointly with William L.); "Ayres and Dialogues for One, Two, and Three Voyces" (1653, 1655, and 1658; three books). Other works are to be found in the above-mentioned collections.

Lawrowskaja, Elisabeth Andrejewna,

Russian singer, b. Oct. 12, 1845, Kaschin (Government Twer), pupil of Fenzi at the "Elisabeth" Institution, afterwards at the Petersburg Conservatoire under Frau Nissen-Saloman, made her *début* in 1867 as Orpheus (Gluck), and, after continuing her studies abroad (London, Paris) at the expense of the Princess Hélène, she was engaged at the Imperial Opera-house, Petersburg. Pecuniary differences with the management led her, after four years of stage work, to travel, and she appeared at the theatres and in the concert-rooms of the most important cities of Europe. She only returned to the stage in 1878, and is one of the chief ornaments of the Petersburg Opera (as Vania in Glinka's *Life for the Czar*, as Rátmir in the same composer's *Ruslan und Ludmilla*, as Princess in Dargomizsky's *Rusalka*, as Grania in Serow's *Wraznia Sila*, etc.). L. married Prince Zeretelew.

Layolle (Layole, dell' Aiolle, Ajolla), François, composer of the 16th century at Florence, probably French by birth; he composed motets, madrigals, masses, psalms, etc., which are scattered in the collections of Jacobus Modernus (1532 up to 1543), Petrejus (1538-42), Rhaw (1545), and Antonio Gardano (1538-60).

Lays (Fr. *Lais*; Ger. *Leiche*), songs of a popular character during the Middle Ages, after the manner of sequences. (Cf. Ferd. Wolff, "Ueber die Lais, Sequenzen u. Leiche" [Heidelberg, 1841].)

Lazarus, Henry, b. 1815, studied the clarinet under Blizard and C. Godfrey. In 1838 he was appointed second to Willman at the Sacred Harmonic Society. From 1840 he was principal clarinet at the Opera, and at all provincial Festivals and London concerts. He retired after fifty years of public life.

Lazzari, Sylvio, b. 1858, Bozen, studied jurisprudence at Innsbruck and Munich, passed the government examinations, but then followed his own inclination, and in 1882 attended the Paris Conservatoire, making, at the same time, his *début* as a composer, with some songs. In Paris he studied especially under César Franck. L. is a composer of modern tendency (symphonic poems, pantomimic ballets, chamber-music, also a music-drama, etc.), and he has also contributed articles to various musical papers.

Le (Ital.), the feminine article in the plural (before vowels l').

Leader (Konzertmeister; Fr. *Violon solo*), the first violin, or solo violin, of an orchestra, who has occasionally to act as the conductor's deputy.

Leading-note is a note leading to another, causing the same to be expected, especially the semitone below the tonic (*Subsemitonium modi*; Fr., *Note sensible*), for example, *b* in *c* major, *f* in *a* major, etc. Such a L. is

always the third of the dominant chord. But there is another kind of L. which is of equal importance with the *subsemitonium*, viz., the L. from above—the *Suprasemitonium*. Every sharp or flat which raises or lowers a note of the tonic triad, or of the dominant chord, introduces a note which produces the effect of a L., i.e., which leads one to expect a half-tone progression upwards (\sharp) or downwards (\flat). Thus, in *c* major an *f* has the effect of a L. to *g*, a *b* of L. to *a*, a *d* of L. to *e*, a *e* of L. to *c*, and so on. The acoustic ratio of the L. to the following note is always 15:16 or 16:15, i.e. that of the fifteenth overtone (5:3, see CLANG, i.e. the third of the fifth), likewise of the fifteenth undertone (the under-third of the under-fifth) to the principal tone (likewise of its fourth octave, the sixteenth over- or undertone), for example, *c*, (*g*), *b*, or *c*, *f*, *d*.

Le Bé, Guillaume, was one of the first in France to make music-types, and indeed of two kinds. In the oldest kind (1540) notes and lines were printed simultaneously—i.e. each type contained a note and a portion of the five-line stave. The later one (of 1555) gave the notes and the lines separately, so there had to be two printings, as in Petrucci. L. also prepared types for tablature works: all his punches passed into the hands of Ballard (q.v.).

Le Beau, Louise Adolpha, b. April 25, 1850, Rastadt, pupil of Rheinberger and Fr. Lachner, lived at Munich, Wiesbaden, Karlsruhe, as an able pianist and esteemed teacher of music. She has published various pianoforte pieces, songs, and chamber-music, which display talent.

Lebègue, Nicolas Antoine, b. 1630, Laon, d. July 6, 1702, as court organist, Paris; he published several sets of organ pieces, pianoforte pieces, and "Airs" à 2-3, with continuo.

Lebendig (Ger.), lively, active, vivacious.

Lebert, Siegmund (Levy, named L.), b. Dec. 12, 1822, Ludwigsburg (Württemberg), d. Dec. 8, 1884, Stuttgart; he received musical training at Prague under Tomaschek, Dionys Weber, Tedesko, and Proksch, worked for several years as pianoforte-teacher at Munich, where he was highly esteemed, and founded (1856-57), jointly with Faisst, Brachmann, Laiblin, Stark, Speidel, etc., a Conservatorium at Stuttgart. L. was a renowned pianoforte-teacher, and, in addition to his activity as such, he became celebrated for the educational works for pianoforte which he published. At the head of these stands the "Grosse Klavierschule," which he published jointly with L. Stark, and which up to now has been issued in German, French, English, Italian and Russian editions: but it is far too pedantic, especially in the first and second sections, and hence is gradually losing in public estimation. Further, an instructive edition of the classics (jointly

with Faisst, Bülow, Ignaz Lachner, Liszt); a "Jugendalbum" (jointly with Stark); Clementi's "Gradus ad Parnassum," etc. He received the honorary degree of Dr.Phil. from the Tübingen University, and the King of Württemberg bestowed on him the title of professor. Jacob Levy, b. 1815, d. Oct. 19, 1883, Stuttgart, professor of the pianoforte at the Conservatorium, was his brother.

Lebeuf, Jean, b. March 6, 1687, Auxerre, d. there April 10, 1760, as Abbé, canon, and sub-cantor of the Cathedral, from 1740 member of the Paris Académie. He was a diligent writer on music: "Traité historique et pratique sur le chant ecclésiastique" (1741), and a series of articles on Gregorian song (plain-chant) in the *Mercur de France* (1825-37), and great historical works—"Recueil de divers écrits pour servir d'éclaircissements à l'histoire de France" (1738, two vols.), and "Dissertations sur l'histoire ecclésiastique et civile de Paris" (1739-45, three vols.), which also contain matters relating to music.

Lebhafft (Ger.), lively, animated.

Leborne, Aimé Ambroise Simon, b. Dec. 29, 1797, Brussels, d. April 1, 1866, Paris, pupil of Dourlen and Cherubini at the Paris Conservatoire, winner of the *Grand Prix de Rome* (1820), already in 1816 assistant teacher at the Conservatoire, in 1820 teacher in ordinary of an elementary class, in 1836 successor of Reicha as professor of composition, and in 1834 librarian of the Grand Opéra, afterwards music librarian to Napoleon III. He was especially famous as a teacher, but also attempted composition with success, and brought out several comic operas; a *Method of Harmony* remained in manuscript; he also republished Catel's celebrated "Traité de l'harmonie."

Lebrun, (1) Ludwig August, very famous oboe-player, b. 1746, Mannheim, d. Dec. 16, 1790, Berlin; he was appointed from 1767 in the court orchestra at Munich, whence, liberal leave of absence being granted, he gave concerts at home and abroad, and made a reputation. His published compositions are: seven oboe concertos, trios for oboe, violin and cello, and flute duets. His wife, Franziska (née Danzi, b. 1756, Mannheim, d. May 14, 1791, Berlin), sister of Franz Danzi, was one of the most distinguished singers of her time (high soprano), and obtained equal triumphs at Mannheim, Munich, Milan, Venice, Naples, London, and Berlin. She had scarcely entered upon an engagement in the last-named city when her husband died. Grief so overcame her that she soon followed him to the grave. Also their daughters, Sophie (afterwards Frau Dulken, b. June 20, 1781) and Rosine (b. April 13, 1785), both made a name—the former as a pianist, the latter as a vocalist.

(2) Jean, b. April 6, 1759, Lyons, excellent horn-player, and one who has scarcely ever

been surpassed in the production of the high notes; from 1786-92 he was principal horn-player at the Grand Opéra, Paris, then for a long time at the Berlin Court Opera. In 1806 he returned to Paris, but could obtain no engagement, and in 1809 committed suicide by suffocation.

(3) Louis Sébastien, b. Dec. 10, 1764, Paris, d. June 27, 1829; from 1787 to 1803 he was opera-singer (tenor) at the Grand Opéra, and for some time at the Opéra Comique, then *répétiteur* at the Grand Opéra, in 1807 tenor singer at the royal chapel, and, from 1810, director of the singing there. He successfully produced a large number of operas (especially *Le Rossignol*, 1815, which kept the boards during several decades), also a *Te Deum* (1809), a "Messe solennelle," etc.

(4) Paul Henri Joseph, b. April 21, 1861, Ghent, studied at the Conservatoire of that city, received in 1891 the *Prix de Rome* for composition, and, for a symphony, the first prize of the Belgian Académie.

Le Carpentier, Adolphe Clair, b. Feb. 17, 1809, Paris, d. there July 14, 1869, pianist and composer (Methods, exercises, fantasias, etc.).

Lechner, Leonhard, a gifted and diligent composer of the 16th century, b. in the Etschthal, and probably for a time chorister in the chapel of the Duke of Bavaria. About 1570 he occupied a position as teacher at Nuremberg, became capellmeister in 1584 to Count Eitel Frederick of Hohenzollern at Hechingen, but afterwards went to Stuttgart; in 1595 he became court capellmeister, and died Sept. 6, 1604. For a catalogue of his compositions (motets à 4-6, German songs of the Villanella kind, à 2-3, German songs and madrigals à 4-5, masses à 5-6, etc.) see the *Monats. f. Mus. Gesch.*, I. 179, and X. 137.

Leclair, Jean Marie, eminent violinist, b. Nov. 23, 1687, Paris, murdered there Oct. 22, 1764. He was originally a ballet-dancer, and became ballet-master at Turin, but at the same time cultivated violin-playing with such energy and success that Somis took notice of him and accepted him as a pupil. In 1729 he went to Paris, but only succeeded in obtaining a post as ripieno-violinist at the Grand Opéra; in 1731 he became a member of the royal band, but only for a short time, as he could not obtain the post of leader of the second violins. After that he lived as a private teacher and composer until, from motives unknown, he was murdered. His works are: forty-eight sonatas for violin with continuo (Op. 1, 2, 5, 9); duets for two violins (Op. 3, 12); six trios for two violins with continuo (Op. 4); easy trios for two violins with continuo (Op. 6, 8); *Concerti grossi* for three violins, viola, cello, and organ bass (Op. 7, 10); an opera, *Glaucus und Scylla* (Op. 11, produced 1747); overtures, and sonatas as trios for two violins and bass (Op. 13); and, finally, a posthumous sonata (Op. 14). Ferdinand David

revived two of his sonatas in his "Hohe Schule des Violinspiels." L.'s sonata No. 4 has been arranged for violin and pianoforte by G. Jensen. A younger brother of L., Antoine Remi, also a violin-player, published in 1739 (not 1760) twelve viola sonatas.

Ledercq, Louis. (See **CELLER**.)

Lecocq, Alexandre Charles, b. June 3, 1832, Paris, was a pupil of Bazin (harmony), Halévy (composition), and Benoist (organ) at the Conservatoire, and was active from 1854 as teacher of music. His *début* as composer was in 1857, when an opera—*Le docteur Miracle*, written jointly with G. Bizet—gained a prize in a competition instituted by Offenbach. It was only moderately successful. His operetta, *Huis clos*, in 1859, met with even a cooler reception, and also the following pieces: *Le baiser à la porte* (1864), *Liline et Valentin* (1864), *Les Ondines de Champagne* (1865), *Le Myosotis* (1866), *Le cabaret de Ramponneau* (1867), and the comic opera *L'amour et son carquois* (1868) only achieved moderate and ephemeral success. It was only with his *Fleur de thé* (April, 1868) that he completely won the ear of the public; within a short time it was performed a hundred times, and found its way abroad. From that time L. ranked amongst the most favourite composers of the general public. He differs from Offenbach and Hervé, and to his advantage, in the greater carefulness and correctness of his writing. In addition to above-named works there are the comic opera *Les jumeaux de Bergame* (1868); the vaudeville *Le carnaval d'un merle blanc* (1868), the operettas *Gandolfo* (1869); *Deux portières pour un cordon*, *Le Rajah de Mysore*, *Le beau Dunois* (1870); *Le Testament de M. de Crac* (1871); *Le barbier de Trouville*, *Sauvons la caisse* (1872); *Les cents vierges*, *La fille de Madame Angot*, *Giroflé-Girofla* (1874); *Les prés de St. Gervais*, *Le pompon* (1875); *La petite mariée* (1876); *Kosiki*, *La Marjolaine* (1877); *Le petit duc* (1878); *Carmargo*, *La petite Mademoiselle* (1879); *Le Grand Casimir*, *La jolie Persane* (1880); *Le Marquis de Windsor*, *Janot* (1881); *La roussotte*, *Le jour et la nuit*, *Le cœur et la main* (1882); *La princesse des Canaries* (1883); *L'oiseau bleu* (1884); and *Plutus* (1886); *Les grenadiers de Monte-Cornette* (1887); *Ali Baba* (1887); *La voitière* (1888), and *L'Égyptienne* (1890). Besides his stage works, L. published also: "Les Fantoccini" (ballet pantomime for pianoforte), a gavotte and twenty-four characteristic pieces ("Les miettes") for pf., a number of vocal pieces with pf. (*Méodies*, *Chansons*, *Aubade*, etc.), sacred songs for female voices ("La chapelle au couvent," 1885), and a pf. edition of Rameau's *Castor et Pollux* (1877).

Le Couppey, Félix, b. April 14, 1811, Paris, d. there July 5, 1887, pupil of Dourlen at the Conservatoire, was, from 1828, assistant teacher in an elementary harmony class, in 1837 teacher in ordinary; in 1843 he succeeded Dourlen as professor of harmony, in

1848 became deputy for Henri Herz, who had departed on his travels, and soon after that, professor of a new pianoforte class for young ladies. The published compositions of L. are principally educational works for the pianoforte: an "École du mécanisme du piano," "L'art du piano" (fifty Études with remarks), and a pamphlet, "De l'enseignement du piano; conseils aux jeunes professeurs" (1865).

Ledebur, Karl Freiherr von, b. April 20, 1806, Schildesche (near Bielefeld), was a cavalry officer in Berlin, but, in consequence of a fall from his horse, resigned in 1852, and from that time devoted himself especially to musical studies. L. published a "Tonkünstlerlexikon Berlins von den ältesten Zeiten bis auf die Gegenwart" (1860-61), a work compiled with great care.

Ledent, Félix Étienne, b. Nov. 20, 1816, Liège, studied at the Conservatoire of his native city under Daussoigne, Lambert, Conrardy, and Jalheau. In 1832 he won the first prize for pianoforte-playing, and in 1843 the *Prix de Rome* for composition. Since 1838 L. has been professor of the pianoforte at the Liège Conservatoire; he is also a composer.

Ledger lines or **Léger lines**, the short auxiliary lines above or below the stave.

Lee, the brothers Sebastian (b. Dec. 24, 1805, Hamburg, d. there Jan. 4, 1887) and Louis (b. there Oct. 19, 1819), celebrated 'cellists, pupils of J. N. Prell. Sebastian L. from 1837-68 was solo 'cellist at the Grand Opéra, Paris, lived afterwards in Hamburg, and published fantasias, variations, rondos, and duets for 'cello, also a much-used 'cello Method. Louis L., at the early age of twelve, gave concerts in Copenhagen and through Germany, then became 'cellist at the Hamburg Theatre, lived for several years in Paris, established in Hamburg chamber-music *soirées*, together with Hafner, afterwards with Böie; and was for many years principal 'cellist of the Philharmonic Society, and, until 1884, was also teacher at the Conservatorium. His printed compositions are: a pf. quartet (Op. 10) and pf. trio (Op. 5), a 'cello sonata (Op. 9), sonatina (Op. 15), violin sonata (Op. 4), sonatina (Op. 13), pieces for pf. and 'cello, and for pf. alone; the following are in manuscript, but have been performed: symphonies (one under Spohr at Cassel), two stringed quartets, and music to Schiller's *Jungfrau von Orleans* and *Wilhelm Tell*. Their brother, Maurice (b. Hamburg, Feb., 1821) is a composer of popular drawing-room pieces, and resides in London as pianoforte teacher.

Lefébure, Louis François Henri, b. Feb. 18, 1754, Paris, d. 1840 in the French Government service, finally sous-préfet at Verdun; from 1814 he lived in retirement at Paris. He wrote: "Nouveau Solfège" (1780), in which he expounded a new method of Solmisation

which Gossec introduced into the École Royale du Chant, and "Revue, erreurs, et méprises de différents auteurs célèbres en matière musicale" (1789); he also composed several cantatas and oratorios.

Lefebure-Wély, Louis James Alfred, b. Nov. 13, 1817, Paris, d. there Dec. 31, 1869, son of the organist of St. Roch, Antoine L., who published pf. and violin sonatas, a mass, *Te Deum*, etc. (d. 1831). L. studied with his father, and, at the early age of eight, was his deputy, at the age of fourteen becoming his successor. Shortly after this appointment he entered the Conservatoire, where Benoist (organ), Zimmermann (piano), and Berton and Halévy (composition) were his teachers, and he received several prizes. At the same time L. was a private pupil of Adam (composition), and of the organist of St. Sulpice, Séjan (organ). In 1847 he exchanged his post of organist of St. Roch for that of the Madeleine with its magnificent organ built by Cavallé-Coll. He resigned in 1858 in order to devote himself entirely to composition, yet succeeded Séjan at St. Sulpice in 1863. L., who is principally known as the composer of the pianoforte piece "Les cloches du monastère," was a distinguished musician, and especially skilled in organ improvisation. He attempted almost every branch of music:—opera, *Les recruteurs* [1861]; cantata, *Après la victoire* [1863]; two masses for organ, one mass for orchestra, three symphonies, etc., numerous *salon* pianoforte pieces (three great collections of études). L. was also a distinguished performer on the harmonium, and a composer for that instrument.

Lefebvre, (1) Jacques (Le Febvre, Jacobus Faber), b. about 1435 or 1455, Étampes, near Amiens (hence called "Stapulensis"), d. 1537 or 1547, Nérac, in the service of the kings of Navarre as tutor to the royal children. He wrote "Elementa musicalia" (1496; 2nd ed. 1510, under the title "Musicalibris IV. demonstrata," with a similar superscription in a great mathematical work of Lefebvre's of 1514, and in another of 1528, which also contains "Quæstioncula prævia in musicam speculativam Botii;" finally in 1552 as "De musica quatuor libris demonstrata").

(2) Charles Edouard, b. June 19, 1843, Paris, son of the painter of that name. He first studied jurisprudence, then entered the Conservatoire, gaining the *Prix de Rome*, 1870. After long tours he settled in Paris, and devotes himself solely to composition (choral works [concert opera], *Judith*, 1879; fantastic legend: *Melha*; choral work, *Eloa*; chamber-music, psalms, several operas: *Zaire*, 1887; *Le Trésor* [one act], *Djelma*).

Lefèvre, Jean Xavier, celebrated clarinet-player, b. March 6, 1763, Lausanne, d. Nov. 9, 1829, Paris; pupil of Michel Yost in Paris, for

many years member of the orchestra at the Grand Opéra, 1795–1825 professor of the clarinet at the Conservatoire, from 1807 member of the Imperial, and, since the restoration, Royal Chapelle; he wrote the official clarinet *Méthode* of the Conservatoire (1802; also in German), also: concertos, concertantes, duets, sonatas, etc., for his instrument, which he had improved by the addition of a sixth key. He refused to entertain the idea of any further addition of keys.

Legando (Ital.), slurring, binding; playing or singing smoothly.

Legatissimo (Ital.), the superlative of *legato*, very smoothly. (See below, **LEGATO**.)

Legato (*ligato*), tied, i.e. without a pause between each note. L. is obtained in singing when, without break, i.e. without interrupting the current of air, the degree of tension of the vocal cords is changed so that the first sound really passes into the second. A similar process takes place in wind instruments, where, likewise, the current of air is not interrupted, but only the fingering or position of the lips changed. On stringed instruments sounds are tied (1) when they are played on the same string, with only change of fingering, and without the bow leaving the string; (2) when they occur on different strings, while the bow glides quickly from the one to the other. The connecting of notes on keyed instruments is effected by only leaving the first key while the second is being pressed down. On the pianoforte then the strings of the first note are free from the damper, and therefore sound till the second note is struck. On instruments of the organ kind (Harmonium, Regal, "Positiv") the valve admitting wind to the channel remains open until touching a new note opens a new valve. (Cf. **SLUR**.)

Legatura di voce (Ital.), smooth execution of a succession of notes in one breath.

Legend, a term much used of late for musical works of an epico-lyrical character, of which the subject (text or programme) is the legend of some saint.

Leggiero (Ital.), light, nimble. A mode of touch in pianoforte-playing between *legato* and *staccato*; it differs from the former, in that it is the result of a blow, and not of pressure. It differs from *mezzo-legato*, in that it is not the nervous touch, but merely the springing-back to which the player has to pay attention.

Legno (Ital.), wood. *Col legno*, with the stick of the bow (not with the hair).

Legoux, Isidor Edouard, b. April 1, 1834, Paris, pupil of the Conservatoire of that city, composer of a number of comic operettas, mostly of one act, but of too distinguished a character to gain the ear of the million.

Legrenzi, Giovanni, eminent composer, b. about 1625, Clusone (near Bergamo), d. May 26,

1690, Venice. He was a pupil of Pallavicino, organist of Santa Maria Maggiore at Bergamo, afterwards director of the Conservatorio dei Mendicanti at Venice, and, from 1685, also maestro of San Marco. L. considerably increased the orchestra of that church, so that there were thirty-four players (eight violins, eleven small viols [violettes], two tenor viols, three gambas and contrabass viols, four theorbos, two cornets, one bassoon, three trombones). L. wrote seventeen operas (mostly for Venice), which, especially in the treatment of instrumental accompaniment, showed an advance on his predecessors. He published: "Concerto di messe e salmi a 3 e 4 voci con violini" (1654); two motets à 2-4 (1655); motets à 5 (1660); "Sacrie festivi concerti, messe e salmi a due cori" (1657); "Sentimenti devoti" (à 2-3; 1660, two books); "Complete con litanie ed antifone della Beata Virgine Maria" à 5 (1662); "Cantate a voce sola" (1674); "Idee armoniche" à 2-3 (1678); "Echi di reverenza," fourteen cantatas for solo voice (1679); "Motetti sacri a voce sola con 3 stromenti" (1692); "Sonate a 2 e 3" (1655); "Suonate da chiesa e da camera a tre" (1656); "Una muta di suonate" (1664); "Suonate a due violini e violone" (with continuo for organ, 1667); "La cetra" (sonatas for 2-4 instruments, 1673); "Suonate a 2 violini e violoncello" (1677); "Suonate da chiesa e da camera" à 2-7 (1793). Lotti was his pupil.

Lehmann, Lilly, distinguished dramatic vocalist (soprano), b. May 15, 1848, Würzburg, was, from 1870, for many years an ornament of the Berlin stage, but she broke her contract and went to America, where she married the tenor singer Kalisch. In 1890 she returned to Germany, appearing occasionally on the stage.

Leibrock, Joseph Adolf, b. Jan. 8, 1808, Brunswick, d. Aug. 8, 1886, Berlin; he studied philosophy, and took the degree of Dr. Phil., but turned to music, and became cellist and harpist in the court orchestra at Brunswick. Besides compositions of the most varied kind (music to Schiller's *Räuber*, songs, part-songs, very many arrangements for pf. and cello, etc.), he published a "Musikalische Akkordenlehre" (1875), which is interesting in that L. seeks to establish the relation of chords in the tonal system of harmony, and, in so doing, recognises the peculiar importance of the under-dominant in a logical system of writing. L. wrote also a history of the ducal "Hofkapelle" at Brunswick (in the *Braunschweig Magazin*, 1865-66). Latterly he resided at Leipzig.

Leidenschaft (Ger.), passion, emotion. *Mit Leidenschaft*, with passion, with strong emotion.

Leierkaeten (Ger.). (See HURDY-GURDY.)

Leighton, William Knight, English composer about 1614, in which year he published; "The Teares or Lamentacions of a Sorrowfull

Soule," containing fifty-four psalms and hymns, partly à 4 with accompaniments for lute, etc., partly à 4-5 a cappella; the first eight pieces are by L. himself, the others by J. Bull, Byrde, Coperario, J. Dowland, A. Ferrabosco, O. Gibbons, Th. Weelkes, J. Wilbye, etc.

Leisinger, Elisabeth, distinguished dramatic vocalist (soprano), b. May 17, 1864, Stuttgart, pupil of the Stuttgart Conservatorium, and of Mme. Viardot-Garcia at Paris; since 1884 she has been a highly esteemed member of the Berlin Court Opera.

Leite, Antonio da Silva, Portuguese composer and theorist, maestro at the Conservatório at Oporto about 1787-1826; he wrote "Resumo de todas as regras e preceitos de cantoria assim da musica metrica como da cantochão" (1787); also a guitar Method (1796), six sonatas for guitar with violin (Rebek) and two trumpets, a "Tantum ergo" à 4 with orchestra, a hymn for the coronation of King John VI. of Portugal, etc.

Leitert, Johann Georg, excellent pianist, b. Sept. 29, 1852, Dresden; he made his first appearance at the early age of thirteen, and afterwards studied seriously under Liszt, whom he followed to Rome. He made extensive concert tours (among others, with Wilhelmj, 1872), and became well known beyond Germany. From 1879-81 he was teacher at the Horak's Institution, Vienna. L. has published compositions for the pianoforte.

Leitmotiv (Ger.), is the name given in operas, oratorios, programme-symphonies (especially in Wagner, who first gave to the L. the important rôle which it now plays), to an oft-recurring motive, of rhythmic, melodic, or even harmonic, pregnance, which, by the situation in which it first occurred, or by the words with which it was first connected, receives a particular meaning, and thus, whenever used, recalls that situation. The idea of the L. was by no means unknown to the classic writers, but with them it appears mostly in the form of a general characteristic of the various personages. (Cf. the Leporello thirds in *Don Juan*, the "Caspar" bass figures in *Freischütz*, etc.). It first appeared with full meaning in the *Flying Dutchman* and *Lohengrin*. In his later operas Wagner has made greater, and indeed extraordinary, use of the L., and thus throughout developed real unity. Yet it is not easy to trace it everywhere, and, as a matter of fact, for less-gifted hearers, or for those not well prepared, the numerous "Führer durch Wagners Bühnenwerke" constitute help by no means to be despised.

Leitton (Ger.), leading note (q.v.).

Leittonwechselklänge, the term given by Dr. Riemann in his new theory of harmony ("Harmony Simplified," Augener & Co.) to chords of opposite genus (the one major, the other minor),

the primes of which are leading notes to each other, e.g. e, g, b, \longleftrightarrow c, e, g. L. may be substituted for one another in a similar manner to parallel chords (Parallelklänge).

Le Jeune, Claudin, French contrapuntist; his compositions appeared from 1585 up to 1610 (chansons, madrigals, psalms, airs, etc.); he is not to be confused with Claudin de Sermisy, who flourished fifty years earlier.

Lemaire, (1) according to Rousseau, "Dictionnaire de musique," and Mersenne, "Harmonie universelle," p. 342 (1636), the one who proposed to introduce seven, instead of six, Solmisation syllables, i.e. to do away with Mutation (seventh syllable, according to Rousseau *Si*; according to Mersenne, *Za*). According to Fétis ("Biographie universelle"), there was a Guillaume le Maire among the twenty-four violons of Louis XIV., who might have been the innovator in question; as, however, according to Calvisius, "Exercitatio musicæ III." (1611), the name *Si* for the seventh syllable appears to have been already well known about 1611, this statement can scarcely be correct; and the priority must be refused to L., or the period at which he flourished placed earlier.

(2) Théophile, b. March 22, 1820, Essigny le Grand (Aisne), pupil of Garcia (singing) and of Michelot (opera), and Moreau-Sainti (comic opera) at the Conservatoire. In consequence of a violent attack of pleurisy, he gave up his contemplated operatic career as vocalist, and devoted himself to the teaching of singing, for which he made deep studies of all Methods, ancient and modern, which came within his reach. These studies led him to translate Tosi's "Opinioni dei cantori antichi e moderni," 1823 ("L'art du chant, opinions," etc., 1874); he also worked in collaboration with H. Lavoix (q.v.) at a "Histoire complète de l'art du chant."

Le Maistre (Le Maître), Mattheus, Netherland contrapuntist, appointed court capellmeister at Dresden in 1554, pensioned in 1568, d. in 1577. He published: "Magnificat octo tonorum" (1557); "Catechesis numeris musicis inclusa et ad puerorum captum accomodata tribus vocibus composita" (1563, for the Dresden choir-boys), "Geistliche und weltliche teutsche Gesänge" (1566, à 4-5), a book of motets à 5 (1570); "Officia de nativitate et ascensione Christi" (1574, à 5); "Schöne und auserlesene teutsche und lateinische geistliche Lieder" (1577). The Munich Library possesses in manuscript three Masses, twenty-four offices, and four verses, which are not printed. Fétis has confused L. and Matthias Hermann. (See HERMANN; cf. also *Monatshefte für Musikgeschichte*, 1871 [12]; also the monograph of L. by O. Kade, 1862).

Lemière de Corvey, Jean Frédéric August, b. 1770, Rennes, d. April 19, 1832, Paris, French officer of the time of the

Revolution; also under Napoleon. He wrote a goodly series (twenty-three) of vaudevilles and comic operas, the former at Rennes when he was quite an amateur; but the latter, from 1792, as pupil of Berton, for Paris, and not without success. He also prepared in French several operas of Rossini, and published violin sonatas, pf. sonatas, potpourris, military music, a trio for harp, horn, and pianoforte, romances, etc.

Lemmens, Nicolas Jacques, celebrated performer on the organ, b. Jan. 3, 1823, Zoerle-Parwijs (Belgium), d. Jan. 30, 1881, Castle Linterport (near Malines); he was a pupil of the Brussels Conservatoire under Fétis; then (1846) sent at the government expense to Hesse at Breslau, and became professor of organ-playing at the Brussels Conservatoire, 1849. In 1857 he married the vocalist Miss Helen Sherrington (b. Oct. 4, 1834, Preston, pupil of the Brussels Conservatoire), highly esteemed in London as a concert, church, and opera singer; from that time he resided much in England. In 1879 he opened a training college for organists and choirmasters at Malines under the auspices of the Belgian clergy, and it was well attended. L. wrote many excellent compositions for the organ (improvisations, sonatas, studies, etc.), also a great "Ecole d'orgue," (adopted by the Conservatoires of Brussels, Paris, etc.), a method for the accompaniment of Gregorian chants, various sacred vocal works, symphonies, etc.

Lemoine, (1) Antoine Marcel, b. Nov. 3, 1763, Paris, d. there April, 1817; he was a performer on the guitar, played the viola in 1789 at the Théâtre de Monsieur, and was for some time conductor at small Paris theatres, but founded in 1793 a music-publishing house, which was carried on by his son. (See 2.) He published a Guitar Method.

(2) Henri, son of the former, b. Oct. 21, 1786, Paris, where he died, May 18, 1854, pupil of the Conservatoire there (1798-1809), and still of Reicha in 1821 for harmony, was much sought after as a pianoforte teacher, but in 1817 took over his father's publishing business, and brought it into high repute. L. himself compiled pianoforte, harmony, and solfège Methods, and, besides, "Tablettes du pianiste; memento du professeur de piano" (1844), also a number of good pf. pieces (sonatas, variations, etc.).

(3) Aimé, b. 1795 (date of death unknown), was a pupil of Galin (q.v.), taught according to his method, and also published two new editions of his "Méthode du mélodiste," but finally returned to the ordinary method of instruction.

Lemoyne, Jean Baptiste (Moyne, called L.), b. April 3, 1751, Eymet (Périgord), d. Dec. 30, 1796, Paris; he was at first conductor at small French provincial theatres, then studied under Graun and Kirnberger at Berlin, became second

capellmeister to Frederick the Great, returned, however, to Paris and professed to be a pupil of Gluck, but was disavowed by the latter, whereupon he began to copy Piccinni's style of writing. In spite of his lack of individuality, L. was successful with some of his operas (*Néphthé* was the cause of a call for the author, a thing unheard of before in Paris).

Lenaerts, Constant, b. March 9, 1852, Antwerp; he studied under Benoit, was already, at the age of eighteen, director of the (Flemish) national theatre, and is now teacher at the Antwerp Conservatoire.

Lenepveu, Charles Ferdinand, b. Oct. 4, 1840, Rouen; he was to have been a lawyer, and even studied jurisprudence at Paris, but at the same time music, under Servais, and, after he had gained a prize for a cantata, became a pupil of the Conservatoire (1865), and in 1866 obtained the *Prix de Rome*. His comic opera, *Le Florentin*, first produced in 1874, also gained a prize in a competition (1869). In 1882 followed a grand opera, *Valleda* (London). Meanwhile, L. had been appointed professor of harmony at the Conservatoire (as successor to Guiraud, who had become professor of composition).

Lentando (*Slentando*), Ital., becoming slower, slackening.

Lento (Ital.), has a meaning somewhat similar to that of *Largo*; *non L.*, not dragging.

Lenz, Wilhelm von, b. 1808, d. Jan. 31, 1883, at the infirmary, Petersburg, Imperial Russian Councillor. He wrote: "Beethoven et ses trois styles" (1852-55, two vols.); "Beethoven, eine Kunststudie" (1855-60, five vols., of which Vols. III.-V. appeared separately under the title "Kritischer Katalog der sämtlichen Werke nebst Analysen derselben" [1860], and the first as "Beethoven, eine Biographie" [2nd ed. 1879]); finally, "Die grossen Pianoforte Virtuosen unsrer Zeit" (1872, concerning Liszt, Chopin, Tausig, Henselt). The books of L. on Beethoven are not so much the result of serious and sober investigation as of a warm enthusiasm; they are therefore not of so much importance for the history of music, as for the understanding of the artistic character and individuality of Beethoven, and awakening enthusiasm for his genius.

Leo, Leonardo, b. 1694, San Vito degli Schiavi (Naples), d. 1746, Naples; he studied under A. Scarlatti and Fago at the Conservatorio della Pietà, Naples, and afterwards under Pitoni at Rome. On his return he was appointed teacher at the Conservatorio della Pietà, in 1716 organist of the royal chapel, and in 1717 maestro of Santa Maria della Solitaria. He afterwards exchanged the post of teacher at the above-named Conservatorio for a similar one at the Conservatorio Sant' Onofrio. He died quite unexpectedly while seated at the clavichord. L.

was one of the most distinguished representatives of the Neapolitan school, was one of its original founders and most famous teachers; Jomelli and Piccinni, among others, were his pupils. L. wrote nearly sixty dramatic works; in 1712 his oratorio, *S. Alessio*, was produced at the Conservatorio. He made his first attempt at a real opera in 1719 at the Teatro San Bartolomeo, Naples (*Sofonisbe*); his last opera was *Il nuovo Don Chisciotte* (completed in 1748 by Pietro Gomez). The titles of his other works are those common to all Italian composers of operas: *Tamerlano*, *La Clemenza di Tito*, *Siface*, *Demofonte*, etc. Before *Sofonisbe* he had only produced some "serenades" for birthdays, weddings, etc. To the operas must be added the oratorios: *La Morte d'Abele*, *Santa Elena al calvario*, *Dalla morte alla vita*; further, a mass à 4 in the Palestrina style, two masses à 5 with organ, a mass à 4 and one à 5 with orchestra, several Credos, Dixits (one à 10 for two choirs and two orchestras), Misereres (one noble one à 8, a *cappella*), Magnificats, responses, motets, hymns, etc. Finally are to be named six 'cello concertos with stringed quartet, a number of clavier toccatas, two books of organ fugues, solfeggi and figured basses for the purpose of practice. The greater number of his works are in manuscript at Naples, Rome, Paris, and Berlin. In modern publications some few pieces of L. are to be found: in Braune's "Cécilia" ("Credidi propter, Tu es sacerdos, Miserere 4 voc."); Rochlitz' "Collection," etc. ("Di quanta pena, Et incarnatus est"); the Miserere à 8, a real polyphonic pearl a *cappella*, is reprinted in Rochlitz, Commer ("Musica sacra," eighth vol.), Weber ("Kirchliche Chorgesänge," only a portion), and in a separate edition by Schlesinger (Berlin), also formerly by Choron (Paris); a "Dixit dominus" à 8 by Stanford (London), a "Dixit dominus" à 5 by Kümmel ("Collection," etc), a great number of solfeggi with bass in Lévêque and Bèche's "Solfèges d'Italie," etc., an aria from *Clemenza di Tito* and a duet from *Demofonte* in Gavaert's "Gloires de l'Italie," etc.

Léonard, Hubert, distinguished violinist and teacher, b. April 7, 1819, Bellaire (near Liège), d. May 6, 1890, Paris, was first trained by a teacher named Rouma, in 1836 attended the Paris Conservatoire as a pupil of Habeneck, and, at the same time, soon acquired a post as violinist, first at the Théâtre des Variétés, then at the Opéra Comique, and, finally, at the Grand Opéra. In 1839 he left the Conservatoire, but remained in Paris until 1844. He then travelled much, giving concerts and making a name, and in 1848 received an appointment at Brussels as principal violin professor at the Conservatoire (successor to Bériot, who had become blind). In 1851 he married Antonia Sticher de Mendi, an excellent vocalist, niece of Manuel García. In 1867, for the sake of his health, L.

resigned his appointment at Brussels, and went to live in Paris, where he still trained many pupils. His publications are for the most part educational: "Gymnastique du violoniste," "Petite gymnastique du jeune violoniste," "24 études classiques," "études harmoniques," "École Léonard" (Violin Method), "L'ancienne école italienne" (studies in double-stopping), six sonatas, and the "Trille du diable" of Tartini's, with accompaniment written out from the composer's figured bass; also five concertos with orchestra, six concert pieces with pianoforte, many fantasias, characteristic pieces, a serenade for three violins, a concert duo for two violins, valse-caprice, many duos with pianoforte on operatic motives, among which transcriptions on themes by Wagner, four duos with pianoforte (jointly with Litolf), and three with 'cello (jointly with Servais).

Leoncavallo, Ruggiero, b. March 8, 1858, Naples, the second of the sensational Italian composers of serious operettas (cf. MASCAGNI). His *Pagliacci* was produced at Milan May 31, 1892, and his *Medici* in 1893. The public will soon forget him; and the art criticism, with respect to L. and also Mascagni, pass to the order of the day. A small maiden opera, *Songes d'une nuit d'été*, was privately performed at Paris in 1889; also L.'s songs appeared first at Paris, where he lived for a time.

Leonhard, Julius Emil, b. June 13, 1810, Lauban, d. June 23, 1883, Dresden, became professor of the pianoforte at the Conservatorium at Munich in 1852, and received a similar appointment at Dresden in 1859. The following of his compositions may be mentioned: the oratorio *John the Baptist*, a symphony (♩ minor), overture to Oehlenschläger's *Axel und Walburg*, a pf. sonata (which gained a prize), two violin sonatas, three trios, one pf. quartet, three cantatas for chorus, soli, and orchestra, and other vocal works.

Leoni, Leone, maestro at Vicenza during the last decades of the 16th and the beginning of the 17th century. He was one of the masters who, in 1592, paid homage to Palestrina by dedicating to him a volume of psalms à 5. L. published: five books of madrigals, à 5 (1588, 1595 [2], 1598, 1602); one book of motets, à 6 and one à 8 (1603, 1608); two books of motets, with organ bass, à 2-4 (1606, 1608; 2nd ed. under title "Sacri fiori," 1609-10); two books of motets, with organ bass, à 1-3 (1609-11); "Omnis psalmodia solemnitatum 8 vocum" (1613); and "Prima parte dell' aurea corona, ingemmata d'armonici concerti a 10 con 4 voci e 6 instrumenti" (1615). Detached pieces by L. are also to be found in Gardano's "Trionfo di Dori" (1596), in Schade's "Promptuarium," in Bodenschatz' "Florilegium Portense," and other collections.

Leonowa, Daria, distinguished Russian vocalist (contralto), b. 1825, Government Twer,

entered the Imperial Opera School at Petersburg at the age of thirteen, and at the age of eighteen made her *début* as Vania in Glinka's *Life for the Czar* at the "Marientheater." Since then she has been one of the chief supports of Russian National Opera (*Russlan und Ludmilla*, *Rogneda*, *William Ratcliff*, *Boris Godunow*, *Das Mädchen von Pskow*, etc.). She has travelled and made a name; in 1874 she journeyed round the world.

Le Roy. (See BALLARD.)

Lesage de Richée, Philipp Franz, performer on the lute, and composer, studied under Mouton, published in 1685 (Breslau?) the "Kabinet der Lauten," ninety-eight pieces arranged in twelve suites, which rank among the best things of this branch of literature typical of the French clavier style. (Cf. *Monatshefte für M.-G.*, 1889, No. 1.)

Leschetitzki, Theodor, pianist and excellent pianoforte-teacher, b. of Polish parents in 1831, Lemberg. He was for many years professor at the Petersburg Conservatoire, but resigned this post in 1878, and has lived since then as private teacher in Vienna. In 1880 he married his pupil, A. Essipoff. L. has published many clever, elegant, and effective pianoforte pieces; an opera, *Die erste Falte*, was successfully given in 1867 at Prague, and in 1881 at Wiesbaden.

Leslie, Henry David, excellent conductor and composer of note, b. June 18, 1822, London, played at first the 'cello in the orchestra of the Sacred Harmonic Society, became secretary of the Amateur Musical Society in 1847, and in 1855 was appointed conductor of the same until its dissolution. In 1855 he founded a choral society of his own for *a-cappella* singing, which attained to high fame, and gained the first prize at the Paris international competition in 1878. In 1864 he was placed at the head of the National College of Music, but that institution broke up after a few years. The chief compositions of L. are: an opera, *Ida* (1864); operetta, *Romance*; or, *Bold Dick Turpin* (1857); two oratorios (*Immanuel*, 1853; *Judith*, 1858, for the Birmingham Musical Festival); several cantatas (*Holyrood*, 1860; *The Daughter of the Isles*, 1861); a festival anthem, "Let God Arise;" *Te Deum* and *Jubilate* (1846); symphony (1847); overture, "The Templar" (1852).

Lessel, Franz, composer, b. about 1790, Pulawy (Poland); his father was musical director to Prince Czartoryski; d. March, 1839, Petrikow. L. went to Vienna to study medicine, but became a pupil of Haydn and devoted himself entirely to music. Haydn held him in high esteem, and L. remained with the master until his death. In 1810 he returned to Poland to the Czartoryski, and, after they were driven away by the revolution of 1830, led a restless romantic life, and died as teacher at the college

at Petrikow—it is said, of a broken heart. Some of his pianoforte sonatas and fantasias appeared in print.

Lessmann, W. J. Otto, b. Jan. 30, 1844, Rüdersdorfer Kalkberge (near Berlin). He studied under A. G. Ritter at Magdeburg, afterwards at Berlin under H. v. Bülow (piano), Fr. Kiel (composition), and Teschner (singing). After having been private tutor, for two years, at Pforten in the house of Count Brühl (in which capacity he frequently came into contact with A. W. Ambros at Prague), he became teacher at the Stern Conservatorium, Berlin, then at Tausig's school for the higher development of pianoforte-playing until 1871 (when Tausig died). For a short period he was proprietor of a music school of his own at Berlin, and since 1872 he has been director of musical instruction at the "Kaiserin Augusta-Stiftung" at Charlottenburg; also for some time he conducted the singing at X. Scharwenka's Conservatorium. L. is principally known as musical critic, but has also been active as a composer, and has produced some successful songs, etc. Since 1882 L. has been proprietor of the *Allg. Musik-Zeitung*, and edits the same with remarkable tact.

Lesto (Ital.), nimble, quick.

Lesueur (Le Sueur), Jean François, b. Jan. 15, 1763, Drucat-Plessiel (near Abbeville), d. Oct. 6, 1837, Paris: the "predecessor of Berlioz" as programme musician. He was chorister at Abbeville, and afterwards at Amiens, where he attended the College. In 1779 he broke off his school studies, and took the post of *maître de musique* at Séz Cathedral, which, six months after, he exchanged for that of *sous-maître* at the Church of the Innocents, Paris, where Abbé Roze became his instructor in harmony. The restless, ambitious spirit of L. was not satisfied with a subordinate position, and thus, within a small space of time, we find him *maître de musique* at the cathedrals of Dijon, Le Mans, and Tours, in 1784 *maître de chapelle* of the Innocents at Paris, and further, in 1786, of Notre Dame. Gossec, Grétry, and Philidor were favourably disposed towards the young man. L. was allowed to have a full orchestra at Notre Dame, and he now wrote for the services, Masses, motets, etc., with orchestra; among other things, a grand instrumental overture, which created quite a sensation, and raised a storm of *pros* and *cons*. L. himself defended his principles in the pamphlet, "Essai de musique sacrée, ou musique motivée et méthodique" (1787), and, on receiving an anonymous reply, published a second, "Exposé d'une musique imitative et particulière à chaque solennité" (1787). Unfortunately the orchestra was reduced in the same year, and L. resigned. As, at the same period, his opera *Télémaque* was refused by the Grand Opéra, he withdrew dissatisfied to the country

at Champigny, where, from 1788–92, he devoted himself to composition, whilst the horrors of the Revolution were being enacted in Paris. In 1793 he reappeared in Paris, and produced the operas *La Caverne*, *Paul et Virginie* (1794), and *Télémaque*, all at the Théâtre Feydeau. When the Conservatoire was founded he was named one of the inspectors, and was elected member of the *comité des études*; he also drew up, jointly with Méhul, Langelé, Gossec, and Catel, "Principes élémentaires de Musique" and "Sol-fège du Conservatoire. A new conflict ended in a manner still more unpleasant for L. than the first. Two operas (*Ossian* [*Les Bardes*] and *La mort d'Adam*) sent in by L. to the Grand Opéra were discarded in favour of Catel's *Sémiramis*. L. opened up a stormy discussion with the "Lettre à Guillard sur l'opéra de *La mort d'Adam*" (1801), which finally degenerated into an attack on the Conservatoire ("Projet d'un plan général de l'instruction musicale en France," 1801), which brought about L.'s dismissal (1802). Thereupon he experienced bitter anxiety as to his means of living, until, in 1804, Napoleon named him his *maître de chapelle*, as successor to Paisiello, and thus 'at one stroke he received the highest musical post in Paris. His *Bardes* was now produced and met with Napoleon's special approval. After the Restoration (1814), L. became royal principal *maître de chapelle* and court composer, and, on the re-opening of the Conservatoire, professor of composition; finally he was loaded with honours of all kinds, and, already in 1813, elected member of the Institut, etc. To the dramatic works of L. must be added the *divertissements* "L'inauguration du temple de la Victoire" and "Le triomphe de Trajan" (both jointly with Persuis, 1807), also the operas *Tyrtée*, *Ariaxerxe*, and *Alexandre à Babylone*, which were not produced. Of his numerous masses (thirty-three), oratorios, motets, etc., only a Christmas oratorio, three *Messes solennelles*, the oratorios *Deborah*, *Rachel*, *Ruth et Naëmi*, *Ruth et Boaz*, three *Te Deums*, some motets, two *Passion* oratorios, a *Stabat Mater*, and a few *pièces d'occasion* (*Coronation March* for Napoleon) appeared in print. L. was also the author of "Notice sur la mélodie, la rythmopée et les grands caractères de la musique ancienne" (Paris, 1793). He wrote, likewise, a biographical notice of Paisiello (1816). The following wrote about L.: Raoul-Rochette (1837), Stéphen de la Madeleine (1841), and Fouqué ("L. comme prédecesseur de Berlioz").

Letter Notation, i.e. the indication of sounds by means of letters. It appears to be the oldest form of notation; anyhow, it was already in use among the Greeks. (Cf. GREEK MUSIC.) Their notation—at least in the treatises of the theorists—was preserved in Western Europe up to the 10th century A.D.; though from about the 6th century, and possibly earlier, notation by means of neumes (q.v.) was in practical use. In the

10th century, however, we meet with a new kind of notation, the one with Roman letters; the first seven letters, in fact, of the alphabet. *A B C D E F G* were used for the seven sounds of the diatonic scale, but their former differed from their present meaning; they corresponded rather to our *c d e f g a b*. Above *G* came *A*, and below *A*, *G*, as at the present day. According to the testimony of writers of the early Middle Ages, this notation was first used for stringed instruments (Psalterium, Rotta), and was generally adopted for the organ, then coming into vogue. But the Western monks soon changed the meaning of the letters by adapting them to the old Grecian system (a minor scale through two octaves). *A*, consequently, acquired its present meaning, *i.e.* in the old letter notation *C D* and *G A* were half-tone steps, but in the reformed one (called the "Odoistic," after the name of Odo of Clugny, who died in 942, and who probably made the change), *B C* and *E F*. Already in the 10th century differently formed letters began to be used for each octave. A note was added to the system of the Greeks, *viz.* our capital *G*; this was indicated by the Greek Gamma (*Γ*). Then followed the octave of the capital letters *A B C D E F G*, and after that the small ones, *a b c d e f g*; if higher notes were required, these were doubled, *aa bb cc dd ee*, or thus: $\begin{smallmatrix} a & b & c & d & e \\ a & b & c & d & e \end{smallmatrix}$. Instead of the small letters

for the second octave, the alphabet characters were sometimes continued thus; *H I K L M N O P*. This notation *A—P* (falsely called the "Notation Boétienne") occurs in the old system (*H* = our *c*), and in the "Odoistic," in which *H* stood for *a*; both were in use up to the 12th century. Once the knowledge of the origin of the double meaning of the letters had become lost, it was natural that they should be used with various meanings, and this actually was the case; the meaning of the letters changed according to the tuning of the instrument for which they were employed. In the theoretical treatises of the 12th and 13th centuries the employment of letters as pitch-signs was, therefore, quite arbitrary; for example, *A* is to be found in the sense of our *F*, and so on. For a long time letter notation for practical use passed out of sight. Through Guido d'Arezzo's invention or arrangement of our modern notation on lines (cir. 1025), which, however, as shown by the clefs placed at the beginning, was only a shortened and more distinct letter notation—letters, at least for the notation of vocal music, fell gradually into disuse, while, on the other hand, they were employed more than ever by instrumentalists. Unfortunately, we have no notation of instrumental compositions older than the end of the 15th century. About this time letter notation was revived, under the well-known name, in fact, of *Organ Tablature* (q.v. *Tablature*). The meaning of letter notation, *viz.*, the "Odoistic," now becomes

fixed, for it passed into the Guido note system with lines, and became the basis of *Musica Mensurata notation*. On the other hand, the order of letters, with regard to octave division, varies. Together with the old *Γ, A—G, a—g*, etc., we find $\underline{f—e}$, $\underline{f—e}$, $\underline{f—e}$, and occasionally $\underline{G—F}$, $\underline{g—f}$, etc.; also already at the beginning of the 16th century we catch glimpses of our present octave division, which always begins with *c* (as the oldest always began with *A*, answering to our *c*). We find the present system fully developed at the commencement of the 17th century in Michael Praetorius (1619); but the old octave division *A—G, a—g, a—g*, and extended downwards *A—G*, was maintained so long as the *Tablature* was in use (up to the last century). The following octave division with *B* and *H* (*B rotundum* and *quadratum*) is also to be found in the 16th century (see FUNDAMENTAL SCALE and CHROMATIC SIGNS), $\underline{A B H C D E F G A B h c d e f g a b h c d e}$, etc. With regard to rhythmical value and pause signs of the *Tablatures*, see *TABLATURE 2*. Although letter notation is no longer in practical use, it is used by theorists, both in the past and present, to express acoustical relationships, etc., but always with the division starting from *c*. A different use of capital and small letters has, however, recently come into vogue. Letters with chord meaning were first employed at the beginning of this century (Gottfried Weber); a capital letter indicated the major chord of the sound expressed by the letter (irrespective of the position in this or that octave), and in like manner a small letter, the minor chord; for example, *A* = *A* major, *a* = *A* minor. A small nought marked the diminished triad, *e.g.* $a^b = a : c : e^b$. (For another meaning attached to nought, see *KLANGSCHLÜSSEL*.) By *A* is also understood the key of *A major*, and by *a* that of *A minor*. Moritz Hauptmann and his pupils, again, use capital and small letters in another sense, *viz.* to distinguish fifth-sounds and third-sounds. If, for instance, four steps of a fifth are taken upwards from *C*, the sound *E* is reached (to be considered apart from the octave position); this sound does not exactly coincide with the third of *C*, but is somewhat higher. The vibration number for the 4th fifth is $81 (= 3^4)$; the nearest *c* below is the nearest smaller power of 2, *i.e.* 64. (Cf. *INTERVAL 2*.) This so-called Pythagorean third has, then, the ratio 64 : 81; but the ratio of the major-third is that of the fourth to the fifth partial tone (see *SOUND*) = 4 : 5, or, which is the same, 64 : 80, *i.e.* the third is lower than the true fifth by 80 : 81. This difference is called the *comma syntonium*. Hauptmann indicates all tones obtained by fifth steps by capital letters, and third-tones by small ones; for example, *C e G, a C e*, etc. This method would not be sufficiently accurate for scientific purposes: the second upper-third of *C*, as third of *e*, would be written again with a capital letter,

$G\sharp$, i.e. no distinction would be made between it and the 8th fifth, higher by two commas. Helmholtz, therefore, in the first edition of his "Lehre von den Tonempfindungen," contrived to indicate the lower pitch by means of a horizontal stroke under the capital letters for the second upper third, c, e, g $G\sharp$, and a similar mark, above the letter, to indicate higher pitch for the second under-third, $a\flat, c, f\flat, a\flat$. This method was simplified by A. v. Oettingen, for, while adopting the horizontal strokes, he did away with capital letters. A horizontal stroke above a letter signified an upper-third, and one below, the under-third; the second third was indicated by two strokes, the third by three, etc., so that the letter notation showed exactly the vibration number of the interval, thus;

$c : e, e : g\sharp, g\sharp : b\sharp, a\flat : c, f\flat : a\flat$, etc.

Every stroke indicates the lowering, likewise the raising, of the tone obtained by plain fifth-steps by 80 : 81. For theoretical purposes this is a great gain, as the harmonic meaning of the interval is directly perceived by the letter notation; for example, if $c\sharp$ be the third of the fourth fifth from c ($c-g-a-c\sharp$), $c\sharp$ on the other hand, is the second third of the under fifth of c ($c-f-a-c\sharp$), etc. Helmholtz, unfortunately, in accepting this improvement in the second edition of the above-named work, has given reverse meaning to the horizontal strokes above and below the letters. One must, therefore, carefully note in reading as to whether the Oettingen plan, or the more widely known one of Helmholtz (which alone is used in this Dictionary) is employed.

Leuckart, F. Ernst Christoph, established a music business at Breslau in 1782, which was taken over by Constantin Sander in 1856. The latter moved the business to Leipzig in 1870, and enlarged it by purchasing the publishing houses of Weinhold and Förster of Breslau, Damköhler of Berlin, and Witzendorf of Vienna. Of works brought out by this very enterprising firm may be mentioned compositions by Robert Franz, Ambros' Musical History, etc.

Levasseur, (1) Pierre François, performer on the 'cello, b. March 11, 1753, Abbeville, pupil of Duport junior, member of the orchestra of the Grand Opéra, Paris, 1785 to 1815, after which he soon died. He published twelve 'cello duets.

(2) Jean Henri, likewise performer on the 'cello, b. 1765, Paris, pupil of Cupis and Duport junior, member of the orchestra of the Grand Opéra from 1789 to 1823, and professor of 'cello-playing at the Conservatoire, from 1795 to 1823 member of the Imperial, named after 1814 the Royal, chapel. He published 'cello duets, sonatas, and études, and was one of the chief contributors to the 'cello Method of the Conservatoire.

(3) Rosalie, was a famous singer at the Paris Grand Opéra 1766-85, and especially remarkable in the chief rôles of Gluck's operas until the appearance of Madame Saint Huberty.

(4) Nicolas Prosper, celebrated bass singer, b. March 9, 1791, Bresles (Oise), d. Dec. 7, 1871, Paris, pupil of the Conservatoire, played serious rôles at the Grand Opéra 1813-45, teacher of singing at the Conservatoire 1841-70.

Lévé (Fr.), the upward movement of the foot or hand in beating time; it corresponds with the unaccented part of the bar.

Levens, church maître de chapelle at Bord-eaux. He published; "Abrégé des règles de l'harmonie" (1743), in which he places the under-tone series (*progression arithmétique*) over against the upper-tone series (*progression harmonique*); i.e. he accepts two principles for the consonance; he is, therefore, an harmonic dualist like Zarlino (1558), Tartini (1754), Hauptmann, and others.

Levey, William Charles, b. April 25, 1837, Dublin, d. Aug. 18, 1894, trained at Paris, opera conductor and composer of operettas, incidental music to plays, and cantatas; he lived in London.

Levi, (1) Hermann, excellent conductor, b. Nov. 7, 1839, Giessen, studied under Vincenz Lachner at Mannheim (1852-55), attended the Leipzig Conservatorium (1855-58), was musical director at Saarbrücken (1859-61), capellmeister of the German Opera, Rotterdam (1861-64); from 1864-72 he was court capellmeister at Carlsruhe, and in 1872 was called to his present post as court capellmeister, Munich.

(2) Jakob (Levy, Lewy). (See LEBERT.)

Lewandowski, Louis, b. April 3, 1823, Wreschen, Posen, d. Feb. 4, 1894, Berlin, pupil of the School of Composition of the Berlin "Akademie"; from 1840, musical director of the Synagogue at Berlin. He composed many orchestral, vocal, and chamber works. L. was one of the first founders of the Institution for Aged and Indigent Musicians, which, owing to his direction, already disposes of a colossal fortune.

Lewy, (1) Eduard Constantin, performer on the French horn, b. March 3, 1796, St. Avoird (Moselle), d. June 3, 1846, Vienna. He was a French military musician, and from 1822, after long concert tours, principal horn-player at the Vienna Court Opera, and teacher at the Conservatoire. Also his brother and pupil, Jos. Rudolph (L.-Hoffmann), b. 1804, Nancy, d. Feb. 9, 1881, Oberlössnitz, near Dresden, was a distinguished performer on the French horn.

(2) Charles, son of E. C. L. (1), pianist and drawing-room composer, b. 1823, Lausanne, d. April 30, 1883, Vienna.

(3) Richard (Levy), brother of the former, b. 1827, Vienna, d. there Dec. 31, 1883, was originally a performer on the French horn, and

already at the age of thirteen, member of the court orchestra. Later on, he was appointed chief inspector and *régisseur* of the Court Opera. As a teacher of singing he trained Mallinger, Lucca, and Sembrich. (See **LEBERT**.)

Leybach, Ignace, b. July 17, 1817, Gambsheim (Alsace), d. May 23, 1891, Toulouse, received his musical training, first at Strassburg, afterwards at Paris under Pixis, Kalkbrenner, and Chopin, and in 1844 became organist of the cathedral of Toulouse. L. was an excellent pianist, and published a great number of drawing-room pieces which became popular, also a harmony Method, concert pieces for the harmonium, a great organ Method ("L'organiste pratique," three vols., containing 130, 120, and 100 pieces), and some books of songs and motets with organ.

Liaison (Fr.), (1) a bind, a syncopation.—(2) The playing or singing of a series of notes with one stroke of the bow, in one breath.—(3) A ligure.

Libitum (Lat. *ad libitum*, abbr. *ad lib.*), at pleasure.

Libretto (Ital., "little book"), the name given to the text (the text-book) of important vocal works, especially operas; *Librettist*, poet who writes the words for an opera.

Licenza (Ital.), freedom, deviation from strict rules (for example, *Canone con alcune license*, canon with certain licence).

Lichanos. (See **GREEK MUSIC**.)

Lichner, Heinrich, b. March 6, 1829, Harpersdorf (Silesia), pupil of C. Karow (Bunzlau), Dehn (Berlin), Mosewius, Baumgart, and Ad. Hesse (Breslau), cantor and organist of the Church of the Eleven Thousand Virgins, Breslau; and conductor there of the "Sängerbund." He is a diligent composer (psalms, choral pieces, songs, many pf. pieces). His much-played sonatas are shallow and unoriginal.

Lichtenstein, Karl August Freiherr von, b. Sept. 8, 1767, Lahm, Franconia, d. Sept. 10, 1845, Berlin, successively intendant of the court theatres of Dessau, Vienna, and Berlin (1805), wrote words and music of operettas and operas: *Knall und Fall* (1795); *Bahmendi* (1798); *Die steinerne Brant* (1799); *Ende gut, alles gut* (1800); *vaudeville, Mißgefühl* (1800); all given at Dessau. *Kaiser und Zimmermann* (Strassburg, 1814); *Die Waldburg* (Dresden, 1822); *Der Edelknabe* (Berlin, 1823); *Singethee und Liedertafel* (Berlin, 1825); and *Die deutschen Herren von Nürnberg* (Berlin, 1833).

Lichtenthal, Peter, important writer on music, b. 1780, Pressburg, d. Aug. 18, 1853, Milan, studied medicine, but devoted himself entirely to music, and in 1810 settled in Milan. His published compositions are: a stringed quartet, a pf. trio with violin and 'cello, ditto with violin and viola, and some works for pf. alone. For the Teatro della Scala

he wrote three operas and four ballets. His writings are: "Harmonik für Damen" (1806); "Der musikalische Arzt" (1807, on the healing power of music; also in Italian, 1811); "Orpheik, oder Anweisung, die Regeln der Composition auf eine leichte und fassliche Art zu erlernen" (1807); "Cenni biografici intorno al celebre maestro W. A. Mozart" (1814); "Mozart e le sue creazioni" (1842, on the occasion of the unveiling of the Mozart memorial at Salzburg); "Estetica ossia dottrina del bello e delle belle arti" (1831); but his chief work is: "Dizionario e bibliografia della musica" (1826, four vols., the third and fourth vols. containing bibliography).

Lie, Erica (married Nissen), excellent pianist, b. Jan. 17, 1845, Kongsvinger (near Christiania), was trained by her father and Kjerulf, afterwards by Kullak at Berlin; she has made herself known by numerous concert-tours on the continent and in England.

Lié (Fr.), slurred, tied.

Liebe, Eduard Ludwig, b. Nov. 19, 1819, Magdeburg, where he received musical training, was afterwards a pupil of Spohr and Baldewein at Cassel, then musical director at Coblenz, Mayence, Worms, for several years teacher of music in Strassburg, and finally in London. L. has composed numerous vocal and instrumental works, of which only songs have appeared in print and enjoyed popularity, and pf. pieces. An opera (*Die Brant von Azola*) was given in 1868 at Carlsruhe.

Liebhich, Ernst, b. April 13, 1830, Breslau, d. there Sept. 23, 1884, was a distinguished maker of violins at Breslau, where his father and grandfather had already been similarly engaged. L. worked under Vuillaume (Paris), Hart (London), and Bausch (Leipzig), and received many first prizes for his instruments.

Liebig, Karl, the founder of the Berlin "Symphoniekapelle," b. July 25, 1808, Schwedt, d. Oct. 6, 1872, Berlin; he was at first clarinet-player in the Alexander regiment, and from 1843 established symphony concerts in various halls with a band playing on a co-operative system. These met with such great success that the band was engaged for concerts by the Berlin Vocal Societies ("Singakademie," the Stern "Gesangverein"). In 1860 he received the title of royal musical director. In 1867 the band became unfaithful to him, and placed itself under the direction of Stern, whilst L. founded a new orchestra, but with only moderate success. His son Julius, b. 1838, Berlin, d. there Dec. 26, 1885, was for many years capellmeister at Ems.

Lieblieh (Ger.), sweet, lovely, delicious. This word occurs often as an epithet in the names of organ stops, as *L.-Gedacht*, *L.-Bourdon*, etc.

Lied, the union of lyric poetry with music, in which the words are sung in place of being

spoken, so that the musical elements of rhythm and cadence belonging to speech are intensified so as to become real music, rhythmically planned melody. (Cf. SINGING.) The characteristic feature of the L. is plain periodic division. The so-called L.-form (also for instrumental compositions) has two themes in the following order: theme I. II. I.; and in further development also with like division of the three parts: I. *aba*; II. *cde*; III. *aba* (extended L.-form, cf. FORMS). *L. ohne Worte* (song without words), since Mendelssohn, has become a common expression for somewhat short melodious instrumental pieces of all kinds (formerly "Aria"). The L. proper (the poem composed for song) is either a strophe L. or through-composed (*durchkomponiert*); i.e. when the poet adheres to a definite strophe, the composer can follow him and write a melody which is repeated for each strophe, or he has a number of strophes sung to the same melody, but perhaps for the last, or for a middle one, introduces either a new melody, or the first one with certain modifications. The through-composed L., on the other hand, follows the poet's meaning more closely than the strophe L.; it not only gives the general mood, but enters into detail, characterises, paints. Thus each strophe is set to a new melody, and if, for the sake of roundness of form, one is repeated, it appears modified. (Cf. VOLKSLIED.)

Liederspiel (Ger.), a vaudeville; a dramatic piece interspersed with light, easily comprehensible music—songs, duets, choruses, etc.

Liedertafel, male choral union with social tendencies. The first real L., founded in 1809 by Zelter at Berlin, was composed of members of the Singakademie, and it was followed in 1815 by those at Leipzig and Frankfurt-a.-O., in 1819 by the "Jüngere L." at Berlin, etc. In England there existed already in the former century clubs (cf. CATCH, GLEE and MADRIGAL) of a similar character; but the German L. have a special meaning, inasmuch as they fostered German patriotism at the time of the ignominious oppression of German nationality. The members of a L. are called "Liederbrüder," the president is "Liedervater," the conductor "Liedermeister," and the vocal festivals of the "Sängerbunde," composed of a large number of Liedertafel, are named "Liederfeste." The united choral societies of the "Deutscher Sängerbund," numbering about fifty thousand singers, are usually named after some county or province (Suebian, of the Palatinate, Lower Saxon, Silesian, Franconian, Bavarian, Thuringian, Baden, North German, etc., Sängerbund), occasionally after the names of towns (the Berlin, Dresden, Bromberg Sängerbund), or of persons (the Zöllner-Bund, Julius Otto-Bund, Molck's Sängerbund, etc.). The "Deutscher Sängerbund" held imposing festivals at Dresden in 1865, at Munich in 1874, at Hamburg

in 1882. (Cf. H. Pfeil's "Liedertafel-Kalender." In France, male choral unions have of late grown in importance. (See ORPHÉON.)

Lienau, Robert, music publisher, b. Dec. 28, 1838, Neustadt (Holstein), bought in 1864 the publishing business of Schlesinger at Berlin, and in 1875 that of Haslinger at Vienna; so that he is now the proprietor of one of the largest music-publishing firms.

Ligato. (See LEGATO.)

Ligature (Lat., *Ligatura*), tie, (1) a term in modern counterpoint equivalent to syncopation. It occurs in writing when, of two notes against one, the first is tied to a note of the preceding beat of the bar; for example:

(2) In mensural music, groups of notes connected together in which the rhythmical value of the notes does not depend upon their form, but on their position. When mensural music was developed in the 12th century, it took from the Choralnote (q.v.) not only the simple note-signs but also the complicated neume-forms (see NEUMES) which now, as L.s, constitute one of the most difficult chapters in the theory of mensural music. The following scheme enables one to see at a glance the value of the initial and concluding notes of L.s:

Initial note: Concluding note:

Brevis		Longa
Longa		Longa
Brevis		Brevis
Longa		Brevis

{ Here, on the other hand, the first two notes are Semibreves.

Every note of a L. which is not first and last is a Breve, with exception of the second in the last cases given, where it is a Semibreve. (Cf. the articles PROPRIETAS, IMPROPRIETAS, PERFECTION, and IMPERFECTION.)

Liliencron, Rochus Freiherr von, b. Dec. 8, 1820, Plön, Holstein, youngest son of the Danish Land-, and afterwards Army-commissary-general, v. L. He attended the colleges at Plön and Lübeck, studied first theology, then jurisprudence, at Kiel and Berlin, finally Tentonic philology, and graduated in 1846 with the treatise "Ueber Neidhardts höfische Dorf Poesie" (1848), pursued old-Northern studies in Copenhagen up to 1847, and then went to Bonn and qualified himself as Privatdozent; but, as about this time (1848) the first Schleswig-Holstein war broke out, L. placed himself

at the disposal of the provisional government, and became secretary in the bureau of foreign affairs. At the end of the year, however, he was sent to Berlin as official deputy, with full authority, from the "Gemeinsame Regierung," which meanwhile had come into power. In the latter city he represented the government in office when the war broke out atresch. After the conclusion of peace between Prussia and Denmark, L. betook himself, in the autumn of 1850, to Kiel, where he entered on the professorship of Northern languages which had been offered to him. As, however, he was not recognised by the Danish Government, he accepted the invitation of Michaelis in 1852 to Jena as professor of the German language and literature. L. published, jointly with the then musical director of the University, Wilh. Stade, a collection of "Lieder und Sprüche aus der letzten Zeit des Minnesangs" (Weimar, 1854); L. wrote the Introduction and the translation of the text, Stade the (modern) harmonisation in four parts. In 1855, L. accepted a call to Saxe-Meiningen as chamberlain and cabinet councillor (afterwards privy cabinet councillor) to Duke Bernhard; he also undertook for a time the intendantship of the ducal chapel, but soon exchanged it for the post of director of the ducal library, and then undertook for the historical commission founded in Munich in 1858 the task of collecting and annotating the historical German folk-poems of the Middle Ages. These "Historische Volkslieder der Deutschen vom 13.-16. Jahrh." were published by Vogel at Leipzig (1865-69) in four volumes, and a supplement, which contains chiefly melodies and a treatise on the melodies of the 16th century. When he had completed this work, he was further commissioned by the same body to undertake the editing of the "Allgemeine deutsche Biographie," of which a plan had been already sketched. In order to prepare himself for this important—and, at the present day, far-advanced—publication, L., who had been appointed foreign member in ordinary of the Bavarian Academy of Sciences, 1869, made a short stay in Brunswick, and in the same year settled in Munich, where, after the death of Wilh. Wackernagel, he was elected member in ordinary of the historical commission. As soon as the work was sent to press, Professor von Wegele, of Würzburg, became chief editor of the politico-historical section of the biographies. Besides many historical studies, L. wrote:—"C. E. F. Weyse und die dänische Musik seit dem vorigen Jahrh." (eighth yearly series, 1878); "Ueber den Chorgesang in der evang. Kirche" (questions and discussions of the day, No. 144, 1881). Further must be mentioned his biography of J. B. Cramer in the "Allg. d. Biographie." He also assisted in the "Deutsche National Litteratur," edited by Kürschner, and published by Spemann: it

consisted of two volumes, one under the title "Deutsches Leben im Volkslied um 1530," containing the finest German popular songs of the 16th century, together with their melodies. At the same time he published the treatises "Ueber Kirchenmusik und Kirchenkonzert" (Second Yearly Report of the Society for Evangelical Church Music); "Ueber Entstehung der Chormusik innerhalb der Liturgie" (*Magdeburg. Evang. K.-Ztg.*); "Introitus," Graduale, Offertorium, Communio (Sionia X. 9 to XI. 4).

Limma. (See APOTOME.)

Limnander de Nieuwenhove, Armand Marie Ghislain, b. May 22, 1814, Ghent, d. Aug. 15, 1892, at his castle, Moignanville (Seine-et-Oise); he studied under Lambillotte at the Jesuit college, Freiburg, afterwards under Fétis in Brussels, lived first at Malines, where he married and founded a vocal society ("Réunion Lyrique"); he then lived in Paris, where he brought out several stage works. His best productions are comic operas: *Les Monténégrins* (1849, at the Opéra Comique); *Le Château de Barbe-Bleue* (1851, Opéra Comique); and *Yvonne* (1859, Opéra Comique); the grand opera *Le maître chanteur* (1853, at the Grand Opéra); *Scènes Druidiques*; a Te Deum, Requiem, Stabat Mater, a cello sonata, a stringed quartet, many songs, etc.

Lincke, Joseph, b. June 8, 1783, Trachenberg (Silesia), d. March 26, 1837, Vienna, was an excellent 'cellist, member of the famous Rasumowsky quartet party; he played at Schuppanzigh's quartet *soirées*, occupied afterwards some posts in the provinces, then became chamber virtuoso to Countess Erdödy, afterwards principal 'cellist at the Theater an der Wien, and finally at the Vienna Court Opera. L. published some variations for 'cello.

Lind, Jenny, b. Oct. 6, 1820, Stockholm, d. Nov. 2, 1887, at her villa, Wynds Point, Malvern Wells, probably the most wonderful singer of our age, surnamed "The Swedish Nightingale." Bewitching was the sympathetic, elegiac tone of her noble soprano voice; astonishing were her colorature, her perfect shakes, and her *staccato*; and her incredible leaps were as worthy of admiration as were her expressive and artistic performances. She received her first training at the opera school connected with the Stockholm Court Theatre (Lindblad), made her *début* at Stockholm, in 1838, in the rôle of Agathe, and for three years was the most brilliant star on the court stage. In 1841 she went to Paris and put herself under Garcia. She sang to Meyerbeer quite privately, and with pianoforte accompaniment, in the opera-house; but, from the recently published "Memoirs of Madame Jenny Lind-Goldschmidt, 1820-51," by H. S. Holland, M.A., and W. S. Rockstro (two vols., 1891), there seems to be no ground whatever for the general impression that in consequence of no engagement having been offered to her she had taken a profound

artistic dislike to Paris. In 1844 she studied German at Berlin, and appeared with brilliant success in Meyerbeer's *Camp of Silesia* (*Feldlager in Schlesien*), the principal rôle (Vielka) of which had been written for her by Meyerbeer. After repeated triumphs at Berlin, Stockholm, also at Hamburg, Coblenz, Leipzig, Vienna, she made a victorious *début* in London in 1847, where, by every possible means, her appearance was delayed in order to raise to the highest pitch the curiosity of the public. After that she sang principally in London and Stockholm; but already in 1849 she retired altogether from the stage, and devoted herself entirely to concert-singing. From 1850-52 she travelled through North America with J. Benedict and the impresario Barnum; she married Otto Goldschmidt (q.v.) at Boston in 1852 and returned to Europe with a balance of £30,000, two-thirds of which, however, she devoted to benevolent institutions in Sweden. After a long stay in Germany (Dresden), she returned with her husband to London. From 1883-86 she taught singing at the Royal College of Music. Goldschmidt was for a time, conductor of the "Bach Choir," and Madame Lind-Goldschmidt took part in the rehearsals and performances. Her last public appearance was at the Rhenish Musical Festival, Düsseldorf, in her husband's oratorio, *Ruth* (1870). The fame of the vocalist has been celebrated in various biographical sketches: "Jenny Lind die schwedische Nachtigall" (1845; in Swedish 1845); "Jenny L." by A. Becher (1846); "G. Meyerbeer and J. L." by J. B. Lyser (1847); "Memoirs of Jenny Lind" (1847); and the above-named "Memoirs" by Holland and Rockstro (1891).

Lindblad, Adolf Fredrick, b. Feb. 1, 1801, on the family estate at Löfvingsborg (near Stockholm), d. there Aug. 23, 1878; pupil of Zelter in Berlin; from 1835 he lived at Stockholm. He composed a great number of Swedish songs of thoroughly national colouring, and original both as regards melody and harmony; their merit was generally recognised, and they were frequently sung by, among others, L.'s pupil, Jenny Lind. His instrumental works, a symphony (produced at the Gewandhaus, Leipzig, 1839), a violin sonata, etc., were highly praised by the critics, but are little known.

Linden, Karl van der, composer, b. Aug. 24, 1839, Dordrecht, pupil of J. Kwast, senior (pianoforte), and of F. Böhme (theory); otherwise self-taught. After a long residence, for the purpose of study, in Paris, Belgium, and Germany, he became, in 1860, conductor of the "Harmonie" at Dordrecht, also, successively, conductor of the "Liedertafel" (1865), "Ido's Mannenkoor," bandmaster of the National Guard at Dordrecht (1872), and, in 1875, conductor of the grand concerts of the Netherlands "Tonkünstlerverein." L. is one of the

most esteemed musicians in Holland; he conducted the Musical Festival at Rotterdam (1875), also at Dordrecht (1877 and 1880), and was member of the jury at the great musical competitions of Ghent (1873), Paris (1877), and Brussels (1880). Among his compositions that have appeared are the cantatas *De starrenhemel* and *Kunstzin* (both for soli, chorus, and orchestra), and numerous songs. He also wrote seven overtures for grand orchestra, two operas, part-songs, for male, female, and mixed voices, with and without accompaniment, sonatas and pf. pieces, and many works for wind band.

Linder, Gottfried, b. July 22, 1842, Ehingen, pupil of the Stuttgart Conservatorium, from 1868 teacher at that institution, and in 1879 named Professor. He wrote the operas: *Dornröschen* (1872) and *Konradin von Schwaben* (1879), a "Waldlegende" for orchestra, an overture ("Aus nordischer Heldenzeit"), trios, songs, etc. L. belongs to the new German school.

Lindley, Robert, excellent 'cellist, b. March 4, 1776, Rotherham (Yorkshire), d. June 13, 1855, London. He was a pupil of Cervetto, and first received an engagement in the theatre orchestra at Brighton, and in 1794 succeeded Sperati at the Royal Opera, London. His 'cello compositions (tour concertos, duets for violin and 'cello, also for two 'celli, solos, variations, a trio for strings) are not of importance.

Lindner, (1) Friedrich, b. about 1540, Liegnitz, d. as cantor of the "Aegidien" Church, Nuremberg: he published two books of "Cantiones sacræ" (1585-88), a volume of Masses à 5 (1591), and the two collections, "Gemma musicalis" (4-6, and various madrigals, for the most part by Italian masters and by himself; 1588, 1589, 1590, three parts) and "Corollarium cantionum sacrarum" (motets of Italian masters à 5-8 and of L., 1590, in two parts).

(2) Adolf, distinguished French horn virtuoso, b. 1808, Lobenstein, d. April 20, 1867, Leipzig. He was at first court musician, then "Stadt-musikus" at Gera, from 1844-46 member of Gungl's travelling band, then of the orchestra of the Potsdam Theatre, and from 1854 was at the Gewandhaus, Leipzig.

(3) Ernst Otto Timotheus, for many years editor of the *Vossische Zeitung*, b. 1820, Breslau, d. Aug. 7, 1867, Berlin; he was an excellent musical connoisseur, and on friendly terms with Dehn, Stern, and Rust. He conducted for a time the Berlin "Bach Verein," wrote many musical articles in his newspaper, also in the *Echo*, gave lectures on music at various places, and published "Meyerbeer's 'Prophet' als Kunstwerk beurteilt" (1850), "Die erste stehende deutsche Oper" (1855, two vols.), "Zur Tonkunst. Abhandlungen" (1864), and "Geschichte des deutschen Liedes im 18. Jahrhundert" (1871, posthumous; edited by L. Erk).

(4) August, excellent 'cellist, b. Oct. 29, 1820, Dessau, d. June 15, 1878, Hanover, studied under K. Drechsler, since 1837 member of the court band at Hanover; he composed various works for his instrument.

Another of the same name, likewise 'cellist, formerly member of the theatre orchestra, Stuttgart, d. Aug. 9, 1887, Heidelberg.

Lindpaintner, Peter Joseph von, conductor and composer, b. Dec. 9, 1791, Coblenz, d. Aug. 21, 1856, Nonnenhorn (Lake Constance), while on a holiday trip; from 1812-19 he was musical director at the Isarthor Theater, Munich, then court capellmeister at Stuttgart. L. was a distinguished conductor, and brought the Stuttgart band into high repute. He was more prolific than original as a composer; he wrote twenty-one operas, several ballets and melodramas, six Masses, a Stabat Mater, two oratorios, cantatas, symphonies, overtures ("Faust"), concertos, chamber music, and many songs, of which "Fahnenwacht" achieved great popularity.

Linley, (1) Thomas (senior), composer, b. 1732, Wells (Somerset), d. Nov. 19, 1795, London, musical director and part proprietor of Drury Lane Theatre, for which he wrote several pieces (*The Duenna*, *Selima* and *Azor*, *The Camp*, *The Carnival of Venice*, *The Gentle Shepherd*, *Robinson Crusoe*, *Triumph of Mirth*, *The Spanish Rivals*, *The Strangers at Home*, *Richard Cœur de Lion*, *Love in the East*); he also published six elegies for three voices (probably his best work) and twelve ballads. After his death there appeared, together with some works of his son, of the same name, two volumes of songs, cantatas, and madrigals. His three daughters, Eliza Ann, Mary, and Maria, distinguished themselves as concert singers.

His eldest son, (2) Thomas, b. 1756, Bath, d. Aug. 7, 1778, Grimsthorpe (Lincolnshire), drowned through the upsetting of a boat; he was an excellent violinist, studied under Boyce, then went to Florence to Nardini, and on his return became solo violinist at Bath, and afterwards at Drury Lane Theatre, London. He wrote music to Shakespeare's *Tempest*, an anthem with orchestra, "Let God arise;" an "Ode on the Witches and Fairies of Shakespeare"; an oratorio, *The Song of Moses*, etc.

(3) George, b. 1798, wrote many songs, ballads, etc. He also composed music for *The Toy Maker*, produced at Covent Garden in 1861. L. died Sept. 10, 1865.

Linnarz, Robert, b. Sept. 29, 1851, Potsdam, studied under Haupt at Berlin, teacher, in 1877, at the Bederkesa Seminary, occupied in 1888 a similar position at Alfeld-a.-L. He wrote *All-deutschland* (Festival cantata), songs, choruses for male voices, Methods for violin, for organ, and one on the art of teaching singing.

Lipinski, Karl Joseph, famous performer on the violin, b. Oct. 30 (or Nov. 4), 1790, Radzyn

(Poland), d. Dec. 16, 1861, at his country house, Urlow (near Lemberg). He received his first instruction from his father, a gifted amateur, but otherwise was self-taught. Already in 1810 he became leader, afterwards, from 1812-14, capellmeister, of the theatre at Lemberg. In 1817 he went to Italy in order to hear Paganini, and became intimate with him; but the two met again in 1829 at Warsaw as rivals, and their friendship was disturbed. In 1839, after long triumphant concert-tours throughout Europe, L. became leader at Dresden until he received his pension in 1861. L. was a player of broad tone and was skilled in double-stopping. His compositions are; four violin concertos (second in D, Op. 21 [military concerto], still often played), a number of caprices for violin alone, rondos, polonaises, variations, fantasias, a stringed trio, etc.: he published a collection of Galician melodies, with pianoforte accompaniment (1834, two vols.).

Lip-pipes, those pipes in which sound is produced by a thin stream of air forced against an edge; this stream excites alternately condensation and rarefaction in the body of the pipe, and is thus drawn inwards and outwards. (Cf. WIND INSTRUMENTS.) Of orchestral instruments only flutes belong to the lip-pipe species; the oboe, clarinet, bassoon, and brass wind instruments, on the other hand, to that of reed pipes. According to the scale, or measure (q.v.), also according to the height and breadth of the mouth, a distinction is made between the various lip-pipe stops in the organ: *Diapason*, *Gamba*, *Flute*, and *Hohl-flute* stops, etc.; the *Gemshorn*, *Pyramidon*, also *Bifara* and *Double Flute* differ in the shape of their pipe bodies. (Cf. separate articles.) Stopped and half-stopped L. (Rohrflöte) form a special section. The following differ, not in the mode of construction, but in that of their use: *Quint* and *Third stops*, *Mixtures*, *Cornet*, *Progressio harmonica*, *Sesquialtera*, *Tertian*. (Cf. MUTATION STOPS.)

Lips (from Latin, *Labium*), the name given to the edges above and below the mouth of lip-pipes (q.v.). The under-lip forms with the core of the pipe the windway through which a narrow stream of air is directed against the sharp-edged upper-lip situated exactly above.

Lipsius, Marie, a lady writer, known under the pseudonym of "La Mara," b. Dec. 30, 1837, Leipzig. She belongs to a family of savants, and is the authoress of "Musikalische Studienköpfe" (1873-80, five vols.; several times re-published), "Gedanken berühmter Musiker über ihre Kunst" (1877), "Das Bühnenfestspiel in Baireuth" (1877), a translation of Liszt's "Chopin" (1880), "Musikerbriefe aus 5 Jahrhunderten" (1886, two vols.), "Klassisches u. Romantisches aus der Tonwelt" (1892), and other works, which, in regard to modern composers, prove trustworthy sources. L. writes in an intelligent and attractive style.

Lira, Lirone (see LYRA, 2); *L. tedesca*, same as Hurdy-gurdy.

Lirou, Jean François Espic de, b. 1740, Paris, d. there 1806, officer of the Mousquetaires du roi, zealous amateur of music, composer of a Mousquetaire March, and poet of some opera libretti; he wrote "Explication du système de l'harmonie" (1785), which is an original attempt to derive the laws of tonality from the nature of sounding bodies and clang combinations.

Lissmann, Heinrich Fritz, excellent stage singer (baritone), b. May 26, 1847, Berlin, d. Jan. 5, 1894, pupil of Hillmer and J. Stockhausen, sang with ever-increasing success at Zürich, Lübeck, Leipzig (with Gura), and Bremen, and in 1883 became successor of Gura as principal baritone at the Stadt Theater, Hamburg. His wife, Anna Marie (*née* Gutzschebauch, named Gutzschbach), is likewise a highly esteemed opera and oratorio singer (soprano), was engaged at Leipzig before her marriage, and afterwards accepted engagements (until 1892) with her husband at Leipzig, Bremen, and Hamburg.

Listemann, the brothers, two excellent performers on the violin, famous for their ensemble playing: (1) Bernhard Friedrich Wilhelm, b. March 25, 1839, Schlotheim (Thuringia), and (2) Ferdinand, b. there Aug. 28, 1841. They both studied at the Leipzig Conservatorium, settled in 1866 at New York, where Bernhard was leader of the Thomas Orchestra (1871-74), and afterwards established a concert society of his own. In 1878 they moved from New York to Boston, where in 1879 Bernhard founded the Philharmonic Orchestra. From 1881-85 he was leader of the Boston Symphony Orchestra, and in 1893 accepted the post of professor of the violin at the Chicago Conservatoire.

L'istesso tempo (Ital.), the same tempo (as before).

Liszt, Franz, the gifted pianist, without a rival during his lifetime, b. Oct. 22, 1811, Raiding, near Ödenburg (Hungary), d. July 31, 1886, Baireuth. His father, steward to the estates of Prince Esterhazy, was musical, played the pianoforte and several stringed instruments, and was able, therefore, to nurture the musical talent of the boy, which showed itself at a very early age. Already at six the boy began to learn to play on the pianoforte; at nine he took part, for the first time, in a concert given by the blind young Baron v. Braun at Ödenburg, and with such success that Prince Esterhazy sent for him to Eisenstadt to hear him play. The father determined, on his own account, to let the boy give concerts in Pressburg. The second concert resulted in a yearly stipend offered by several Hungarian magnates (Amadé, Apponyi, Szapary) of six hundred florins for six years, for his artistic training. L.'s father now

resigned his position at Raiding, and the parents devoted themselves entirely to the education of their son, and went to Vienna (1821), where Czerny became L.'s teacher, while Salieri undertook his theoretical instruction (Randhartinger was L.'s fellow-pupil). The progress made by L. was incredible. It is known how Beethoven, at L.'s farewell concert in Vienna, was so enchanted with the boy that, at the close, he hastened on to the platform and embraced him. From Vienna a journey was made to Paris (1823). The conscientious father wished L. to receive further training at the Conservatoire. Cherubini, however, who could not endure youthful prodigies, refused to receive the boy because he was a foreigner. So now publicity became L.'s real high school. As in Vienna, so also in Paris, he was introduced under the protection of Hungarian magnates into the highest circles; and thus the "petit Litz" soon became the spoilt darling of the most fashionable salons. He had no more pianoforte-lessons, but Paër, and, later on, Reicha, gave him instruction in composition. After a concert which electrified the Parisians, the father resolved also to visit London; the mother returned to Vienna. The first English journey (1824) was followed by a second, and also by two journeys through the French *départements*. During the last of these, L.'s father died at Boulogne-sur-Mer (1827), and the mother, weighed down with grief, hastened back from Vienna to Paris to her son. L. was now obliged to provide for himself and his mother by giving music-lessons; for the six years' stipend had come to an end. He found plenty of work. He was at once in great demand as a teacher in the best families. His reputation as a pianist was already fully assured, and he also began to be talked about as a composer. His operetta, *Don Sancho*, had been produced at the Grand Opéra in October, 1825. The July Revolution, which he greeted with enthusiasm, and St. Simonism, about which he raved for a time, both exerted great influence on the characteristic development of his individuality. Several times the wish arose in him to take holy orders, but this wish was always repressed by the ever-growing consciousness of his artistic calling. Paganini's appearance at Paris (1831) threw him into ecstasy, and excited him to develop new forms of technique (stretches, leaps). In quite another direction his development was completed by the individuality of Chopin, with whom L. became intimately acquainted. Berlioz, returning from Italy, and the performance of *Épisode de la vie d'un artiste*, took still deeper hold of his artistic life, and brought to light a long-held but silent conviction that music has to express, represent something, to reproduce poetical ideas. Thus L., and also Berlioz, became the champions of programme music. Also the new views on modern tonality and its future development (abolition of the old idea of keys),

expounded by Fétis in the musico-philosophical lectures which he gave in 1832, found in L.'s mind a fruitful soil, and gave to his system of harmony that universality and freedom from the fetters of tonality (scales) which is one of the characteristic features of the "New German School." As an artist, so as a man, L. passed through a new phase; the pet of the *salon* had become a man, and toying assumed a more serious character. L.'s relationship to the Countess d'Agoult (known as a writer under the name "Daniel Stern") proved of lasting importance. She left her husband and lived for several years (1835-39) with L., first at Geneva, then at Nohant, George Sand's country seat, also in Italy (Milan, Venice, Rome), and presented him with three children, one of whom (Cosima) is now the widow of Richard Wagner. At the end of 1839 L. sent the Countess, together with her three children, to his mother at Paris, while he continued his career as virtuoso, and, until 1849, made triumphal progress through Europe. Already in 1836 he travelled twice from Geneva to Paris, and obtained victories over his most important rival, Thalberg. There was no longer any pianist who could dispute his claim to the highest rank. An extraordinary deed of L.'s occurred in 1839. He wrote to the committee for the Beethoven monument at Bonn that he would be personally responsible for the (large) amount still wanting; and, but for L., years might have elapsed before the sum had been collected and the monument commenced. In 1847 L. accepted the post of court capellmeister at Weimar, and remained there until 1861. Weimar now became a rendezvous of distinguished talents (Raff, Bülow, Tausig, Cornelius, etc.), an advanced fortress of the "New German tendency." In Weimar L. wrote his "Symphonische Dichtungen," which really represent his creative individuality. The opposition to Liszt's ardent progressive tendencies (cf. CORNELIUS) caused him suddenly to resign his post. L. then lived at Rome until 1870, when he conducted the Beethoven festival at Weimar, and, at the court there, re-established relations which had been disturbed. From that time he spent every year a few of the summer months at Weimar. In 1865 he took minor orders with the title of Abbé, and in later years became a canon; thus the desire, nourished from youth upwards, to enter the priesthood was, at any rate, half-fulfilled. L. in his last period was a sacred composer, though not exclusively so. L. was loaded with orders and honours more perhaps than any musician had been before his time. The Königsberg University bestowed on him the title *Dr. Phil. honoris causâ*; the Emperor of Austria created him a noble by bestowing on him the Order of the Iron Crown; German and Austrian cities named him honorary citizen; and the Grand Duke of Weimar made him chamberlain, etc. From 1875 he was also president

of the newly established Hungarian Academy of Music at Pesth. A crowd of enthusiastic pupils and admirers followed the master from one place of residence to another.

The principal works of Liszt are: (1) works for orchestra: the symphonies:—"Dante" (symphony, after Dante's "Divina Commedia," for orchestra and female chorus); "A Faust Symphony" (in three character-pictures—Faust, Gretchen, Mephistopheles—for orchestra and male chorus); the symphonic poems:—"Ce qu'on entend sur la montagne" (V. Hugo); "Tasso, lamento e trionfo," "Les Préludes," "Orpheus," "Prometheus," "Mazeppa," "Festklänge," "Héroïde funèbre," "Hungaria," "Hamlet," "Hunnenschlacht," "Die Ideale," "Von der Wiege bis zum Grabe" (1883, after a drawing by Mich. von Zichy). In addition there are the orchestral works: "Episoden aus Lenau's Faust" ("Der nächtliche Zug" and two "Mephistowalzer"), "Künstlerfestzug" (for the Schiller Festival, 1859), "Gaudemus igitur" (with chorus and soli), "Festmarsch," "Festvorspiel," "Huldigungsmarsch," "Vom Fels zum Meer," and a series of masterly arrangements of Schubert's marches, of the "Divertissement à l'Hongroise," of the "Racoczy March," etc. (2) Pf. works:—two concertos (E♭, A), "Danse macabre," for pf. and orchestra, "Concerto pathétique" (concert-solo), fifteen Hungarian Rhapsodies, "Rhapsodie espagnole" (Jota aragonesa), Sonata in B minor, fantasia and fugue on BACH, six organ preludes and fugues of Bach arranged for pf., variations on a theme from Bach's B minor Mass, two ballads, berceuse, two legends, two elegies (one for pf., violin, and 'cello), "Capriccio alla turca" (on themes from Beethoven's "Ruins of Athens"), "L'idée fixe" (motive from Berlioz), *Impromptu* (F♯), "Consolations," "Apparitions," "Harmonies poétiques et religieuses," "Années de pèlerinage," twenty-six numbers; "Liebesträume" (three nocturnes), chromatic galop, three caprice-valses, besides a great number of paraphrases, especially on themes from operas by Wagner, Meyerbeer, Verdi, etc.; bravura fantasia on Paganini's "Clochette," Circassian march (from Glinka's *Russian and Luámilla*), "Hochzeitsmarsch und Elfenreigen" (from Mendelssohn's *Midsummer Night's Dream*), many transcriptions of songs for pf. solo (about sixty of Schubert's), transcriptions for pf. solo of Beethoven's nine symphonies, Berlioz's "Symphonie fantastique," also of the "Pilgrims' March" (from *Harold en Italie*), "Danse des Sylphes" (from *La damnation de Faust*); overtures: "Les francs jugs" and "Le roi Léar," Wagner's "Tannhäuser" overture, Saint-Saëns' "Danse macabre," and many others; "Études d'exécution transcendante," "3 grandes études de concert," "Adirato" (*Étude de perfection*), etc. In addition to these, variations on the march from *I Puritani* for two pfs., several arrangements for two pfs., a

"Andante religioso," and all kinds of transcriptions for organ or harmonium, melodramatic pf. works (on Bürger's "Lenore," Strachwitz's "Helges Treue," Lenau's "Trauriger Mönch," etc.), three duets for pf. and violin, etc. (3) Vocal works: "Gräner Festmesse," "Ungarische Krönungsmesse," two organ Masses (c minor and a minor), Psalms (Nos. 13, 18, 23, and 137), Requiem for male voices and organ, many smaller sacred works (Pater Noster, Ave Maria, Ave Maris Stella, Ave Verum, Tantum ergo, O Salutaris); the oratorios, *Christus, Stanislaus, the Legende von der heil. Elisabeth*; the cantatas, *Die Glocken des Strassburger Münsters, Die heil. Cäcilia, An die Künstler* (for male chorus), choruses to Herder's *Entfesselter Prometheus*, festival cantatas for the secular celebrations of Beethoven, Herder, Goethe, several books of quartets for four-part male chorus, about sixty songs for solo with pf. (among which many noble gems), "Jeanne d'Arc au bucher," "Die Macht der Musik," etc. One may doubt whether Liszt possessed real creative gifts, yet his high culture, his extensive knowledge of literature, and his warm enthusiasm for ideals which make for progress (refusal to be tied by rules, aim after characterisation) have, at any rate, given to his works the stamp of originality. (4) Literary works: "De la fondation Goethe (Goethestiftung) à Weimar" (1851); "Lohengrin et Tannhäuser de Richard Wagner" (1851, also in German); "Frédéric Chopin" (1852; 2nd ed. 1879; German by La Mara, 1880); "Die Zigeuner und ihre Musik in Ungarn" (1861, French; also in Hungarian; German by P. Cornelius); "Ueber Field's Notturmos" (1859, French and German); "Robert Franz" (1872); "Keine Zwischenaktsmusik mehr" (1879). L.'s "Collected Writings" were published by L. Ramann (1880-83, six vols.). Smaller biographical and esthetic sketches on L. have appeared in great number, as pamphlets or as parts of greater works. L. Ramann has undertaken to write a comprehensive biography ("Franz L., 1880; Vol. I. treating of the period 1811-40; Vol. II., first part, 1841-47).

Litanies (*Litanie, Letanie*) are songs of supplication, appeals to God and the saints for pity. L. were originally introduced in processions for averting public calamities (plague, earthquakes), and have kept their place in the religious service of definite ecclesiastical times.

Litolff, Henry Charles, pianist and composer, b. Feb. 6, 1818, London, where his father, Alsatian by birth, had settled as violinist, d. Aug. 6, 1891, Paris. L. was a pupil of Moscheles, and already at the age of twelve appeared as pianist at Covent Garden Theatre. A marriage contracted at the early age of seventeen, contrary to the wish of his parents, was the cause of his leaving England and going to France, where, at first, he found no means of existence; and he was compelled to

maintain his family in a small provincial town—a task of some difficulty. In 1840, however, he succeeded in attracting the notice of the Parisians at a benefit concert. His fame as pianist, and also as composer, quickly rose, and, especially, when after a mournful end to his love idyll (separation from his wife), he went on tours, commencing in Belgium. From 1841-44 he was capellmeister at Warsaw, then travelled again through Germany, Holland, etc., spent (1848) some stormy days of the March Revolution in Vienna as a champion of liberty, but withdrew at the right time, and found footing in Brunswick. Bodily ailments and hypochondria compelled him in 1850 to bid farewell to the career of virtuoso. He married, for the second time, the widow of the Brunswick music-publisher, Meyer, undertook himself the publishing business, and became the founder of the well-known "Collection L.," one of the first cheap editions of classical musical works. In 1860 he handed over the business to his step-son, Theodor L., and returned to Paris, where worldly life again drew him within its vortex. He gave concerts, and formed a *liaison* with Countess de Larochevoucauld, which led to a divorce from his second wife, and to a third marriage. As a composer, L. is of a certain importance; his concerto-symphonies ("Duos concertants" for pf. and orchestra), of which he wrote five, have met with much approval. His "Spinlief" is well known, also a series of other brilliant solo pieces. Besides these, L. has written pf. trios, a funeral march for Meyerbeer, a violin concerto, a small oratorio, *Ruth et Boaz* (1869), and songs with pf. accompaniment. For many years he devoted himself specially to the composition of operas; already in early days he brought out a grand opera (*Die Braut von Kynast*; Brunswick, 1847), a second one (*Rodrigue de Tolède*) remained unknown, whilst a third (*Les Templiers*) was given in Brussels, 1886. Small Paris theatres (Folies Dramatiques, Théâtre du Châtelet) and the Fantaisies Parisiennes of Brussels produced several of his operettas (*La boîte de Pandore, Héloïse et Abélard, La belle au bois dormant, La fiancée du roi de Garbe, La Mandragore, Le chevalier Nahel* [Baden-Baden], and *L'escadron volant de la reine* [1888]), but of these only one (*Héloïse*) had any success deserving of mention.

Litta, Giulio, Visconte Arese, Duca, b. 1822, Milan, d. May 29, 1891, Vedano (near Monza), received a solid musical training, and has written a Passion oratorio and ten Italian operas, mostly for Milan (*Bianca di Santafiera*, 1843; *Sardanaplo*, *Leoni*, *Maria Giovanna*, *Editta di Lormo*, *Don Giovanni di Portogallo*, *Il viandante*, *Il raggio d'amore*, *Il sogno dei fiori*, and *Il violino di Cremona*, 1882).

Liturgy (Λειτουργία, from Ἀμικτον ἔργον), public divine service according to Church rule, especially in so far as music is prescribed for the

beautifying thereof. (Cf. CHURCH MUSIC, CHORALE, MASS, etc.)

Lituus, same as **ZINK**.

Liverati, Giovanni, opera composer, b. 1772, Bologna, pupil of Abbate Mattei, produced, already in 1789, some psalms, and made his *début* in 1790 as a dramatic composer; he was engaged as principal tenor in 1792 at Barcelona, and afterwards at Madrid, directed for several years the Italian Opera at Potsdam (until 1800), and, besides, filled the post of capellmeister at Prague and Trieste. In 1805 he settled in Vienna as teacher of singing, and accepted a call to London in 1814 as composer for the Opera (last opera, *The Nymph of the Grotto*, 1829, jointly with Alex. Lee). The year of his death is not known. L. wrote fourteen operas, and, besides, several cantatas, two oratorios, many small vocal compositions, several stringed quartets, etc.

Lloyd, (1) Charles Harford, b. Oct. 16, 1849, Thornbury (Gloucestershire), became, in 1876, organist of Gloucester Cathedral, in 1882 organist of Christ Church, Oxford, and conductor of the Choral Society. He is held in high esteem as conductor (the Three Choirs), and has composed cantatas: *Hero and Leander* (Worcester, 1884), *Song of Balder* (Hereford, 1885), *Andromeda* (Gloucester, 1886), sacred compositions, part-songs, *Duo concertante* for clarinet and pianoforte, organ sonatas, etc.

(2) Edward, b. March 7, 1845, London, received his early education at Westminster Abbey under Turle. He has devoted himself entirely to oratorio and concert singing. He has a magnificent tenor voice, and is a well-trained, accomplished musician.

Lo (Ital.), the masculine article before words which begin with *sp*, *st*, etc. (*s* followed by a consonant), also the apostrophised *l* before vowels (*l'*.)

Lobe, Johann, Christian, theorist and composer, b. May 30, 1797, Weimar, d. July 27, 1881, Leipzig; he received his first training in flute- and violin-playing from the musical director A. Riemann, afterwards from capellmeister A. E. Müller, and already in 1811 performed a flute solo at a Gewandhaus concert, Leipzig. He was for a long time flautist, and afterwards viola-player in the Weimar court band, which he left in 1842. He received the title of professor, and directed a musical institute of his own until he settled in Leipzig (1846), when he applied himself to theoretical work, and gave private lessons. The compositions of L. are: concertos, variations, solo pieces, etc., for flute; pf. quartets, two symphonies, several overtures, five operas (*Wittekind*, *Die Flibustier*, *Die Fürstin von Granada*, *Der rote Domino*, *König und Pächter*, all produced at Weimar), and some smaller compositions. Of his writings are known:—"Die Lehre von der thematischen Arbeit" (1846); "Lehrbuch der musikalischen

Komposition" (Vol. I., Method of harmony, 1850; 5th ed., 1884, revised by H. Kretzschmar; Vol. II., Instrumentation, 3rd ed. 1879; Vol. III., Fugue, Canon, etc., 1860; Vol. IV., Opera, 1867, revised by H. Kretzschmar, 1884-87); "Katechismus der Musik" (1851; 21st ed. 1881); "Musikalische Briefe eines Wohlbekannten" (1852; 2nd ed. 1860); "Fliegende Blätter für Musik" (1853-57, three vols); "Aus dem Leben eines Musikers" (1859); "Vereinfachte Harmonielehre" (1861); "Katechismus der Kompositionslehre" (1872; 3rd ed. 1876); "Konsonanzen und Dissonanzen" (1869; miscellaneous articles). From 1846-48 L. edited the Leipzig *Allgemeine Musikalische Zeitung*.

Lobkowitz. (See CARAMUEL DE L.)

Lobo (Lopez, Lupus), Duarte, one of the most distinguished ancient Portuguese composers, pupil of Manoel Mendes, was (cir. 1600) choir-master of the Hospital church, and afterwards of the Cathedral, at Lisbon, and died there, at an advanced age, as rector of the Priests' College. L. had a predilection for composition in eight parts, and his music often recalls Benevoli. His works which have been preserved are: three books of Magnificats à 4 (1605, 1611), a book of Masses à 4 and 8, and one à 4 and 6 (1621, 1639), "Officium defunctorum (choraliter)" (1603); "Liber processionum et stationum ecclesiæ Olyssiponensis" (1607); besides in manuscript (at Lisbon) Masses, antiphons, psalms, etc., in eight and more parts. A theoretical work of L. bears the title "Opuscula musica" (1602).

Locatelli, Pietro, distinguished violinist, b. 1693, Bergamo, d. 1764, Amsterdam; he studied under Corelli at Rome. He appears to have travelled much, and, finally, to have settled at Amsterdam, where he established regular concerts. L. was one of the first who sought to extend the technique of the violin by playing in several parts (double-stopping), also by different modes of tuning; and was also instrumental in the development of the sonata form. His published works are: twelve "Concerti grossi" (Op. 1), flute sonatas with bass (Op. 2), "L'arte del violino" (Op. 3, twelve concertos and twenty-four caprices for two violins, viola, 'cello, and continuo), six concertos (Op. 4), six trios for two violins and bass (Op. 5), six sonatas for violin alone (Op. 6), six concerti a quattro (Op. 7), trio sonatas (Op. 8), "L'arte di nuova modulazione" (Op. 9; in French editions as "Caprices énigmatiques"), "Contrasto armonico" (Op. 10; four-part concertos). Alard and David have reprinted some compositions of L.'s in their great Violin Schools; the sonatas, Op. 6, appeared last in 1801 in a new edition for the Paris Conservatoire; Op. 6, III. (B major) is also edited by H. Riemann.

Lock, Matthew, court composer to Charles II., b. circa 1632, d. Aug., 1677, as organist to Queen Catharine; he was one of the most

distinguished of the old English musicians. He wrote music to several dramas (Shakespeare's *Macbeth* and *Tempest*, Shadwell's *Psyche*; the last two printed together, 1675, with other pieces), masques, anthems for the Chapel Royal, suites à 4 and à 3 for viols or violins ("Consorts of Four Parts," the manuscript formerly in the possession of the Sacred Harmonic Society; "Little Consort of Three Parts," published 1656). Many English collections of the 17th century contain pieces of his. L. is the author of the oldest English Method of figured bass ("Melothesia, or Certain General Rules for Playing upon a Continued Bass," 1673); he also published several short polemical pamphlets in which he opposed Salmon's attempt to get rid of the various clefs.

Loco (Ital., "in its place") annuls a previous 8va (octava) sign. (*Vide* ABBREVIATIONS.) In violin compositions, also, an indication after *sul G*, *sul D*, etc., that the usual position is to be taken again.

Locrian (Hyperæolian) **Mode**, (1) name given by the Greeks to one of the transposition scales, expressed in modern fashion by the key with four flats. (*See* GREEK MUSIC, III.)—(2) As a term for the series *B c d e f g a b*, a Church Mode, carefully to be distinguished from *B c d e f g a b* (Hyperphrygian). The L. M. never attained to any real importance.

Loder, Edward James, b. 1813, Bath, d. April 5, 1865, London; pupil of Ferd. Ries at Frankfort, lived first in London, where he wrote several operas for Drury Lane and Covent Garden, was, later on, conductor at Manchester, and finally, for a long time, disordered in intellect. L. wrote the operas: *The Night Dancers*, *Puck* (ballad opera), and *Raymond and Agnes*; also additions to several other operas, a cantata, *The Island of Calypso*, stringed quartets, and songs.

Loeillet, Jean Baptiste, famous harpsichord-player and performer on the cross-flute. He was Dutch by birth, but went to Paris, and afterwards London, where he established in his house weekly amateur concerts. He was born about the middle of the 17th century, and died in 1728. He published sonatas for flute, oboe, violin, flute duets, etc.

Logarithms. Euler, and with him Drobisch, were the first to employ logarithms to show *differences of pitch*. Base 2, giving for the octave 1,000,000, is the best to use, for any octave transposition leaves the decimal fraction (behind the comma) unchanged, and only requires an addition to or subtraction from 1,000,000. With the help of the usual Briggs's system, these logarithms are obtained with the formula $2^x = a$ or $x = \frac{\log a}{\log 2}$, where x is the log. sought for, but a the quotient of the given interval. (*Cf.* TONE, DETERMINATION OF.)

Logier, Johann Bernhard, b. Feb. 9, 1777, Cassel, d. July 27, 1846, Dublin; he sprang from a musical family (his immediate predecessors occupied posts as organists at Kaiserslautern), came when young to England and became flautist in the band of an Irish regiment, of which the band-master (likewise a German by birth), Willman, later on, became his father-in-law. When the regiment was disbanded, L. received a post as organist at Westport (Ireland). There he invented the *Chiroplast*, a machine which guides the position of the hand in pianoforte-playing; the chiroplast made him celebrated and rich. In 1821 the Prussian Government sent F. Stöpel to London to study L.'s system (L., when his system began to be recognised, removed to Dublin, whence he came to London), and soon after L. was invited to Berlin to superintend the introduction of his system there. More important than the chiroplast was another idea of L.'s, which for decades was most prosperous, and even now has not gone entirely out of use; this was the system of instruction in common (on several pianofortes). After three years' residence in Berlin, L. returned to Dublin. L.'s compositions (a pf. concerto, sonatas, and other pf. pieces for two and four hands, trios with flute and 'cello, etc.; also a Method for Buglehorn) are not of importance. His writings refer, for the most part, to the chiroplast. The first, "An Explanation and Description of the Royal Patent Chiroplast, or Hand-director for Pianoforte" (1816), was frequently attacked; but this only increased his fame, and led L. to write other small pamphlets on his system, which appeared in 1818: "The First Companion to the Royal Patent Chiroplast" (on unison-playing); "Logier's Practical Thoroughbass" (in German, 1819); "System der Musikwissenschaft und der musikalischen Komposition" (1827; also in French).

Logroscino, Nicolà, b. about 1700, Naples, d. there, 1763. He was one of the most distinguished opera composers of the 18th century, for he considerably developed opera-buffa, first cultivated by Leo, Pergolesi, and Hasse, and the important ensemble at the close of the act (finale) was an effective addition made by him. Later on Piccinni (q.v.) followed in his footsteps, and with his first operas proved a successful rival to L. L. settled at Naples in 1747, and became principal professor of counterpoint at the Conservatorio dei figliuoli dispersi at Palermo, but afterwards returned to his native town. Of more than twenty-five operas the most important were: *Il governatore*, *Il vecchio marito*, *Tanto bene tanto male*, and *Ginlio Bruto*.

Lohmann, Peter, poet, b. April 24, 1833, Schwelm (Westphalia). He was at first a bookseller, and from 1856 lived at Leipzig, and became known through his peculiar ideas of reform in the union of poetry and music in

music dramas. His poems ("Die Rose vom Libanon," "Die Brüder," "Durch Dunkel zum Licht," "Valmoda," "Frithjof," "Irene," etc., four vols.; 3rd edition, 1886) draw one away as far as possible from the objective world, for they are only concerned with conflicts and unravellments of soul-life. The following are his disciples: Joseph Huber, K. Götze, A. W. Dresser, W. Freudenberg, etc. L. wrote "Ueber R. Schumanns Faustmusik" (1860), and "Ueber die dramatische Dichtung mit Musik" (1861; 2nd ed. 1864); he was for a long time engaged in editing the *Illustrierte Zeitung*, contributed articles to the *Neue Zeitschrift für Musik*, also to Brendel's and Pohl's *Anregungen*, etc.

Lohr, Johann, b. May 8, 1828, Eger, trained at Prague, in 1856 organist at Szegeid; he now lives at Pesth, an esteemed organ virtuoso.

Lolli, Antonio, famous violinist, b. about 1730, Bergamo, d. 1802, in Sicily; after long tours with Nardini, he became leader at Stuttgart (1762-73), then at Petersburg, where he enjoyed the special patronage of Catherine II. (up to 1778). After that he went on tours (Paris, London, Spain, Italy). According to the unanimous report of his contemporaries, he was a virtuoso of immense technique, but decidedly unmusical: incapable of performing an adagio with taste, uncertain in the matter of time, etc. His compositions for violin—three sets (à 6) of sonatas with bass, six sonatas with accompaniment of second violin, eight concertos and a Violin Method—are not of great value; and it is said that L. himself only wrote the violin part.

Longa (◻), the second longest note of mensurable music = $\frac{1}{2}$ or $\frac{1}{3}$ *Maxima*. (See *MENSURABLE NOTE*.) *Duplex L.* is the older name of the *Maxima* (in the 12th century), a proof that the latter only came into use after the *L.* Concerning the *L.* in ligatures, *sine proprietate* and *cum perfectione*, see *LIGATURE*, *IMPROPRIETAS*, and *PERFECTIONE*.

Longhurst, (1) John Alexander, b. 1809, d. 1855. He gained popularity as a singer; he was allotted the part of Puck in *Oberon*, in 1826, but his voice suddenly broke, and he was compelled to give up singing.

(2) His younger brother, William Henry, Mus.Doc., b. Oct. 6, 1819, is at present organist of Canterbury Cathedral. He has composed an oratorio, anthems, songs, etc.

Longitudinal Vibrations are the vibrations of columns of air in wind instruments, also those of strings when they are struck in the direction of their length. The opposite of *L.V.* are *transverse vibrations* (cross-vibrations, the usual vibrations of strings).

Lopez. (See *LOBO*.)

Lorenz, (1) Franz, b. April 4, 1805, Stein (Lower Austria), d. April 8, 1883, Vienna, *Dr.Med.*; he made valuable contributions to the

Mozart and Beethoven literature ("In Sachen Mozarts," 1851; "Haydns, Mozarts, and Beethovens Kirchenmusik;" "W. A. Mozart als Klavierkomponist," 1866; besides articles in musical newspapers). It was owing to L. that Köchel drew up his Mozart catalogue.

(2) Karl Adolf, b. Aug. 13, 1837, Köslin, *Dr.Phil.*, teacher at the Gymnasium, musical director and organist at Stettin; he wrote an oratorio, *Winfried* (1888), *Otto der Grosse* (1890), also several operas.

(3) Julius, b. Oct. 1, 1862, Hanover, since 1884 conductor of the "Singakademie," Glogau; he has composed overtures, pf. pieces, choruses, songs, and an opera, *Die Rehruten*.

Loris, Loritus. (See *GLAREAN*.)

Lortzing, Gustav Albert, important opera composer, b. Oct. 23, 1803, Berlin, where his father was actor, d. there Jan. 21, 1851. He studied for a time in Berlin under Rungenhagen, but the lessons soon came to an end, as the father wandered from theatre to theatre (Breslau, Bamberg, Strassburg, Düsseldorf, Aix-la-Chapelle, etc.). L. learnt, nevertheless, to play on various orchestral instruments, and began at an early age to compose; at the same time he appeared on the stage in children's rôles, and was trained as a singer and actor. In 1823 he married the actress Regina Ahles. In 1824 he produced at Cologne his first small opera, *Ali Pascha von Janina*, accepted in 1826 an engagement at the Detmold Theatre, and soon made a name as an actor. In 1833 he was engaged by director Ringelhardt as tenor singer at Leipzig. Shortly before, two new vaudevilles of his, *Der Pole und sein Kind* and *Szene aus Mozarts Leben*, had made the round of the German theatres. Then followed, in 1837, *Die beiden Schützen*, which opera at once succeeded with the public, and shortly after *Zar und Zimmermann*, coolly received at Leipzig, but, on the other hand, enthusiastically applauded at Berlin. After several failures (*Die Schatzkammer des Inka*, not produced; *Das Fischerstechen*, 1839; *Hans Sachs*, 1840; *Casanova*, 1841), he produced, in 1842, the *Wildschütz*, without doubt his best and most original work, though at first it did not make much sensation. For a short time in 1844 L. acted as theatre capellmeister at Leipzig; he quarrelled with the management, and after that led a wandering life for several years, but one embittered by anxiety for the maintenance of his numerous family. He produced *Undine* at Hamburg (1845), which soon found its way to other stages, and he had great success at Vienna (Theater an der Wien, 1846) with *Waffenschmied*, and at Leipzig with *Zum Grossadmiral* (1847) and *Die Rolandsknappen* (1849). Once more he received an appointment at Leipzig, but quarrelled again as soon as on the first occasion, and finally spent the last years of his life, wearied-out both in body and mind, as capellmeister at the Friedrich-Wilhelm-

stadt Theatre, Berlin. His last works were *Die Berliner Grissette* (farce) and *Die Opernprobe* (operetta). An opera (*Regina*), a vaudeville (*Der Weihnachtsabend*), and the music to Benedix's *Drei Edelsteine* were left behind by him, together with small vocal and various orchestral works. The never-failing humour in L.'s comic operas will long ensure to them the favour of the public.

Löschhorn, Albert, pianist and composer, b. June 27, 1819, Berlin, studied under Ludwig Berger (1837-39), then at the Royal Institution for Church Music under Grell, A. W. Bach, and Killitschgy; in 1851 he succeeded the last-named as pianoforte-teacher at that institution, and in 1858 received the title of professor. He was an excellent pianist and teacher, and made a name by his numerous pianoforte pieces (études, sonatas, sonatinas, suites, pianoforte quartets, and many brilliant drawing-room pieces). He published, jointly with J. Weiss, a "Wegweiser i. d. Pianofortelitteratur" (1862; 2nd ed. as "Führer durch die Klavierlitteratur," by L. alone, 1885).

Lossius, Lukas, b. Oct. 18, 1508, Vacha (Hesse), d. July 8, 1582, as rector at Lüneburg. He published an excellent, but very rare, compendium in dialogue form, "Erotomata musicae practice" (1563, and several times republished); also a collection, "Psalmodia, hoc est cantica sacra veteris ecclesiae selecta" (1552, several times republished, with a preface by Melancthon).

Lotti, Antonio, famous composer, b. about 1667 (probably at Hanover; where his father, Matteo L., was court capellmeister, or at Venice before his father went to Hanover; he spoke of himself as "Veneto," which, as a matter of fact, does not prove very much, since he went at an early age to Venice), d. Jan. 5, 1740, Venice. He studied under Legrenzi, and brought out, at the age of sixteen, an opera, *Giustino*, at Venice. In 1687 he became chorister of St. Mark's, and rose gradually to the post of assistant organist, 1690; organist of the second organ, 1692; principal organist, 1704; and, finally, maestro of St. Mark's, 1736. From 1717-19, at the special invitation of the elector, he resided at Dresden, where he wrote some operas and composed some of his finest works. L. was one of the most striking artists of his time as regards individuality; and although he cannot be placed on the same level with his German contemporaries (Bach, Handel), he is, nevertheless, an honourable representative of the Italian, specially of the Venetian, School, and, indeed, more in the department of sacred than of dramatic composition. L. wrote seventeen operas for Venice, one for Vienna (*Constantino*, jointly with Fux [overture] and Caldara [comic intermezzi]), and for Dresden three operas (*Giove in Argo*, *Ascanio*, *Teofane*), besides for Vienna and Venice the oratorios *Il voto crudele*, *L'amilla*

coronata, *Gioia*, *Giuditta*. After his return from Dresden (1719) he still composed, but only sacred music (Masses, motets, Misereres, etc.); these works, however, did not appear in print; as manuscripts they are scattered in libraries or are in the hands of private owners. The "Duetti, terzetti, e madrigali" (dedicated to the Emperor Joseph I, 1705) is the only work which he published himself; in it occurs the madrigal, "In una siepe ombrosa," of which, later on in London, Bononcini, to his misfortune, declared himself the author. Four masses and some other pieces are to be found in Lück's "Collection," likewise a series of other works (among which especially Misereres à 6, à 8, and à 10) in Rochlitz's Collection, Proske's "Musica divina," Commer's "Musica sacra," Schlesinger's "Musica sacra," Trautwein's "Auswahl," etc.

Lotto, Isidor, violinist, b. Dec. 22, 1840, Warsaw, pupil of Massart (violin) and Reber (composition) at the Paris Conservatoire. He made extended concert tours, and in 1862 was appointed solo violinist of the court orchestra at Weimar, which post he exchanged in 1872 for that of violin-teacher at the Strassburg Conservatorium. L. is now teacher at the Warsaw Conservatoire.

Lotze, Rudolf Hermann, famous physiologist, philosopher, and writer on esthetics, b. May 21, 1817, Bautzen, d. July 1, 1881, Berlin; in 1842 professor of philosophy at Leipzig, 1844 professor in ordinary and court councillor at Göttingen; he was called to Berlin in 1881. Of L.'s numerous philosophical works, the one entitled "Geschichte der Aesthetik in Deutschland" (1868) is of the highest interest: it contains not only intelligent ideas respecting musical esthetics, but sharp-sighted criticism of the musical systems of Herbart, Hauptmann, Helmholtz, etc.

Louis Ferdinand, Prinz von Preussen (really Ludwig Friedrich Christian), son of Prince Ferdinand, brother of Frederick II., b. Nov. 18, 1772, Friedrichsfelde, near Berlin, fell at Saalfeld, Oct. 10, 1806. He was a capable, if not a thoroughly well-schooled, musician; also a great admirer of Beethoven, of whose influence his works bear many traces. He published: a quintet (Op. 1) for pf. and strings; an octet for pf., clarinet, two horns, two violins, and two cello; a nocturno for pf., flute, and strings; a Larghetto with variations for pf. and strings (with double-bass); two pf. quartets (Op. 5; F minor, Op. 6); an Andante for pf. quartet, two pf. trios, a four-part pf. fugue, variations for pf., a rondo with orchestra.

Loulîé, Étienne, music-master of Mlle. de Guise about 1700, really the first inventor of the metronome (q.v.); his "chronomètre" was constructed in similar fashion to the revived pocket-chronometer at the present day: lead suspended by a thread and a scale with seventy-two degrees of rapidity. L. constructed also a "sonomètre,"

a kind of monochord, an instrument to assist pianoforte-tuners. Both instruments were approved of by the Paris Académie. L.'s writings are "éléments de musique" (1766, with representation and description of the chronometer); "Abrégé des principes de musique" (1766); also as "Éléments, ou principes de musique" and "Nouveau système de musique," (1768, with explanation of the "sonomètre").

Loure, (1) name of an obsolete instrument of Normandy similar to the bagpipe, and giving rise to (2) the name of a dance of measured movement in triple time, with marked emphasis on the first beat of the bar. The rhythm is generally $\frac{3}{4}$, $\text{♩} \text{♩} \text{♩}$ without any shortening of the dotted note.

Lover, Samuel, b. Dublin, 1797, d. 1868. He wrote dramas, poems, and novels; also many songs and ballads (both words and music).

Löw, Joseph, b. Jan. 23, 1834, Prague, d. there Oct., 1886, composer of drawing-room pieces and pf. studies.

Lowe, Edward, organist of Christ Church Cathedral, Oxford, 1660, appointed in the same year one of the organists of the Chapel Royal. He published at Oxford in 1661 "A Short Direction for the performance of Cathedral Service," etc., and wrote anthems. He died July 11, 1682.

Löwe, Johann Karl Gottfried, b. Nov. 30, 1796, Loebejue (near Coethen), d. April 20, 1869, Kiel; he was the twelfth child of a schoolmaster, chorister at Coethen, and attended the Gymnasium of the Francke Institution at Halle-a-S., where he received instruction in music from Türk. He distinguished himself so highly as chorister, that King Jérôme of Westphalia, on the occasion of a visit to Halle, granted him a yearly stipend of three hundred thalers to devote himself entirely to music. The fall of Napoleon deprived him of this allowance, and L. devoted himself first to theology, but continued his musical studies, and in 1820 received a call as cantor to the St. Jacob's Church, and as music-teacher to the Gymnasium at Stettin, becoming town musical director in 1821. In this modest position he laboured for forty-six years, until, in 1866, after an attack of apoplexy, he was dismissed. He went to Kiel, where he ended his life. The University of Greifswald bestowed on him the title of Doctor of Philosophy. L. was a competent singer, and made many concert tours from Stettin (to England, Scandinavia, France, etc.), during which he produced his ballads. The total number of his published works is 145, among which are:—three quartets for strings, a pf. trio, pf. sonatas ("Mazeppa," Op. 27; in E, Op. 16; sonate élégiaque, F minor, Op. 32; Gipsy sonata, Op. 107). But the vocal works form the central point of importance, especially the "Ballads" for one voice with pf. accompaniment ("Edward" [Op. 1], 1824; "Erklärung," "Heinrich der Vogler," "Archibald

Douglas," "Der Nöck," "Tom der Reimer," "Oluf," "Die verfallene Mühle," etc.). (Cf. the Loewe-Albums of Peters [twenty ballads] and Schlesinger [sixteen ballads].) The musical form of the ballad was first established by L., in that he understood how to hold fast to a plastic principal motive, displaying epic breadth, yet without sacrificing in any degree details of characterisation. The following may also be named: "Die Walpurgisnacht" (ballad for soli, chorus, and orchestra), the cantata *Die Hochzeit der Thetis*; the oratorios *Die Festzeiten*, *Die Zerstörung Jerusalems*, *Die Siebenschläfer*, *Johann Huss*, *Die eiserne Schlange*, *Die Apostel von Philippi* (a capella), *Gutenberg*, *Palestrina*, *Hiob*, *Der Meister von Avis*, *Das Südnopfer des neuen Bundes*, *Das Hohe Lied Salomons*, *Polus Atella*, *Die Heilung des Blindgeborenen* (a capella), *Johannes der Täufer* (a capella), *Die Auferweckung des Lazarus* (with organ). Of his five operas only one, *Die drei Wünsche*, was produced (Berlin, 1834; pianoforte score published); also symphonies, overtures, etc., remain in manuscript. L. was also the author of a "Method of Singing" (1826; 3rd ed. 1834), and of a pamphlet, "Musikalischer Gottesdienst; methodische Anweisung zum Kirchengesang und Orgelspiel" (1851), and of "Klavier und Generalbassschule" (2nd ed. 1851). His autobiography was published in 1870 by K. H. Bitter; cf. Runge, "K. L." (1884), and "L. redivivus" (1888); Wellmer, "K. L." (1886); also Ambros, "Kulturhistor. Bilder" (1860), and Gumprecht, "Neue Charakterbilder" (1876). A book, entitled "Loewe und Schubert," by Albert B. Bach, was published in 1890.

Lübeck, (1), Vincentius, one of the most excellent masters of the North German School of organists, b. 1654, Paddingbüttel (near Bremen), d. Feb. 9, 1740, Hamburg, as organist of the Nicolai Church; before that, 1674-1702, organist of the St. Kosmas and Damian churches at Stade. His son and successor, Vincent (d. 1755), was an able organist.

(2) Johann Heinrich, b. Feb. 11, 1799, Alphen (Holland), d. Feb. 7, 1865, at the Hague, a musician highly esteemed in his native land. He took part in the war of liberation, 1813-15, as a Prussian military musician, and then made serious studies in theory at Potsdam, played in the theatre orchestra at Riga and at Stettin, also appeared as a violinist, and in 1823 returned to the Netherlands, where, by giving concerts, he became well known. In 1827 he was appointed head of the newly established Conservatoire at the Hague, and in 1829 was named court capellmeister, conducted also the concerts of the "Diligentia," and died there after forty years of successful activity. L. was equally distinguished as conductor and teacher; as a composer he was successful with his psalm, planned on a large scale, for soli, chorus and orchestra, and produced at the Hague Musical Festival of 1863.

His eldest son was (3) Ernst, b. Aug. 24, 1829, the Hague, d. Sept. 17, 1876, Paris, distinguished pianist, studied with his father, travelled from 1850-54 with Franz Coenen in America, settled in 1854 in Paris, and gave excellent chamber-music performances with Lalo, Armingaud, and Jacquard. He became disordered in intellect during the last years of his life.

(4) The younger son, Louis, b. 1838, the Hague, is an excellent 'cellist, studied in the latter city, and afterwards under Jacquard at Paris. He became, from 1863-70, teacher of the 'cello at the Leipzig Conservatorium, and then went to Frankfurt, where he settled.

Lubrich, Fritz, b. July 29, 1862, Bärtsdorf (Posen), studied at the seminary at Sagan (Silesia), and, since 1890, has been cantor at Peilau (Silesia). L. has published male choruses, songs, a "Chorgesangschule" for male choral societies (third edition); and he is editor of the newspaper *Die Orgel*.

Lucas, (1) Charles, b. July 28, 1808, Salisbury, d. March 30, 1869, London; he studied at the Royal Academy under Lindley, Lord, and Dr. Crotch. On the retirement of the first-named, L. became principal 'cello-player at the Opera, provincial festivals, etc.

(2) Stanley, son of the above, Secretary to the Royal Society of Musicians since 1861, and to the Philharmonic Society from 1866-1880.

Lucca, Pauline, celebrated opera-singer (soprano), b. April 25, 1841, Vienna, was trained there by Uffmann and Lewy, but, when means failed for the continuation of her studies, she joined the chorus of the court opera, and first attracted notice (1859) as chief bridesmaid in *Der Freischütz*. She received her first engagement at Olmütz in the same year, sang soon afterwards at Prague, and in 1861 was engaged for life by the court opera, Berlin. Her favourite rôles were Zerlina (*Don Juan* and *Fra Diavolo*) and similar ones; she created the parts of Selika (*L'Africaine*) and Carmen. She soon became the recognised favourite of the Berliners. In 1869 she married Baron v. Rhaden, but the nuptial ties were soon broken (1872); she left Berlin, and for years sang in England, America, and at Paris, Petersburg, etc., with great success. In America she married Herr v. Wallhofen. Frau Lucca now lives at Vienna (honorary member of the court opera).

Lück, Stephan, b. Jan. 9, 1806, Linz-a-Rh., d. Nov. 4, 1883, Trèves, studied at Linz, Bonn, Trèves, took holy orders Sept. 20, 1828; up to 1831 he was chaplain at Kreuznach, up to 1835 parish priest at Waldalgesheim, up to 1849 professor of moral philosophy at the clerical college, Trèves, and, finally, became member of the cathedral chapter in that city. L. distinguished himself in the restoration of Catholic Church-music. He published; "Gesang und Gebet-

buch für die Diocese Trier" (1846); "Theoretisch-praktische Anleitung zur Herstellung eines würdigen Kirchengesanges" (1856); "Sammlung ausgezeichnetester Kompositionen für die Kirche" (1859, 2nd ed. [four vols.] published by M. Hermesdorff [1884] and H. Oberhoffer [1885]).

Ludus (Lat.), play; *ludi moderator*, organist; *ludi spiritali*, sacred plays (mysteries).

Ludwig, (1) Otto, the well-known poet, b. Feb. 11, 1813, Eisfeld (Thuringia), d. Feb. 25, 1865, Dresden, was also composer (songs; an opera, *Die Köhlerin*).

(2) August, composer, attracted notice by his attempt to complete Schubert's B minor Symphony (third movement, "Philosophen-Scherzo"; fourth, "Schicksalsmarsch"); he produced also a series of orchestral works planned on a large scale.

Lugubre (Ital.), sad.

Lührsz, Karl, b. April 7, 1824, Schwerin, where his father was court organist, d. Nov. 11, 1882, Berlin, was trained at home, afterwards at the school of composition of the Berlin Akademie, and under Mendelssohn. L. won esteem by his orchestral works and chamber-music. In 1851 he married a wealthy lady, and after that wrote very little music.

Lully (Lulli), Jean Baptiste de, important French composer of operas, b. 1633, Florence, of poor parents (according to his document of naturalisation, of noble family), d. March 22, 1687, Paris. As a child he was taken to Paris by the Chevalier de Guise, and he entered the service of Mlle. de Montpensier, in which he rose from the kitchen to be one of the music pages; but he was dismissed, for he was foolish enough to write a satirical song on the princess. As he was already well known as an excellent performer on the violin, it was not difficult for him to find the means for serious study under the guidance of able organists. He was very soon received among the "24 violons du Roi" of Louis XIV., and, as he specially pleased the king, the latter appointed him leader (1652) of the "24 violons" (*Grande bande*), and created a second select orchestra, the "16 petits violons," which, under L., attained to great fame. In 1653 he was appointed court composer, and wrote for the court festivals ballets and masques, in which the king himself danced. L. also appeared as a dancer (as M. Baptiste), and he made a sensation as actor (Pourceaugnac, Muffi, etc.) in the Molière comedy-ballets for which he wrote music. He had great influence with the king, although on several occasions he took liberties which almost cost him his place. L. bore no good character. He was intriguing, jealous, and imperious, spared no means to displace his rivals, and managed to get a patent—granted in 1669 to

Perrin and Cambert (q.v.) for the erection of an "Académie de Musique"—transferred to him—i.e. cancelled and a new one drawn up in his favour. The lawsuit of those who had suffered loss (Grenouillet and Guichard, to whom Perrin had made over the patent) was stopped by order of the Cabinet, and their theatre closed. Thus L., after his competitors had been set aside, became "the founder of the French National Opera." In Quinault he met with a gifted poet, who at all times showed rare comprehension of the demands which music makes of poetry (above all, the giving up of continued lines of verse of equal measure). L. tyrannised over his poet, but paid him handsomely. The opera of L. differed from the Italian—as the latter, meanwhile, had been developed—in the strict conformity of the music to the natural declamation of speech—i.e. L. is one of those great reformers who, in favour of poetry, repressed the overgrowth of the purely musical—of flowery melody, of syllabic extension, ornaments, repetition of words, etc. He placed himself again on the footing of the first Florentine inventors of music-drama, and achieved results similar to those brought about afterwards by Gluck and more recently by Wagner. The difference of the results lies in the difference of the period, i.e. in the advanced development of musical means, and also in the difference of creative power. No wonder, therefore, if, at the present day, L.'s music appears dry—almost pedantic. As he set French texts to music, his mode of treatment of necessity developed a truly national style, and his music is pregnant with the natural rhythm and accent of French speech. As a conductor L. was exceedingly excitable, and he died finally from an injury caused by a cane which served as a conducting-stick. L.'s importance lies in his operas, which held the French stage for a century, and only yielded to the productions of Gluck, of higher, more genial merit: *Les fêtes de l'Amour et de Bacchus* (1672, Pasticcio of the old ballets and masques of L.); *Cadmus et Hermione* (1673, libretto by Quinault); *Alceste* (1674); *Thésée* (1675); *Atys* (1676); *Isis* (1677); *Psyché* (1678); *Bellérophon* (1679); *Proserpine* (1680); *Le triomphe de l'Amour* (1681); *Persée* (1682); *Phaëton* (1683); *Amadis de Gaule* (1684); *Roland* (1685); *Armide et Renaud* (1686, in new edition [full, and piano score] in the fourteenth volume of Eitner's publications of the "Gesellsch. für Musikforschung"); *Acis et Galatée* (1687)—all of which were published, and the greater number in "Chef d'œuvres classiques de l'opéra français" (Breitkopf & Härtel). To these must be added a series of *pièces d'occasion* and divertissements for the court, of which only the masque *Le carnaval* (1720), and the ballets *Le triomphe de l'Amour* (1681), *Le temple de la paix* (1685), *Idylle de la Paix* (1685), *Éloge de Versailles* (1685) appeared in print. L. also produced with great success a number

of sacred works (*Te Deum*, *Miserere*, etc.). L.'s eldest son, Louis de L., b. Aug. 4, 1664, Paris, d. after 1713, likewise wrote several operas, the first (*Zéphire et Flore*), 1688, jointly with his younger brothers, Jean Baptiste and Jean Louis.

Lumbye, Hans Christian, b. May 2, 1810, Copenhagen, d. there March 20, 1874, popular Danish composer of dance-pieces. He was named the "Northern Strauss"; he conducted, from 1865, an orchestra of his own in the Tivoli, Copenhagen, with which he also made concert tours. When he retired into private life he was named councillor of war, and handed the direction of his band over to his son Georg, the composer of the opera *Die Hexenflöte* (1869).

Lunga pausa (Ital.), a long pause or rest.

Lupi. (See **LUPUS**.)

Lupot, celebrated family of French violin-makers, among whom Nicolas specially distinguished himself. The latter was born 1758 at Stuttgart, where his father lived for twelve years as violin-maker to the court, and died at Paris in 1824. (He was named the "French Stradivari," because he imitated in an exceedingly clever manner the Stradivari violins.) His instruments are very valuable, and of high price.

Lupus, a composer's name (Christian name), frequently to be met with in collections of the 16th century. The most important bearers of it are:—(1) L. Hellinck, who is mentioned by his full name in Forster's "Selectissimæ motetæ" (1540), Ott's "115 guten neuen Liedlein" (1544), and other collections. (2) L. Lupi, mentioned by name in Gardano's motets "Del fiore" and "Del frutto." The family name Lupi ("Wolf") gives more room for hesitation, as, in addition to L. Lupi, there were composers in the 16th century named Didier, Johannes (Jean) and Manfred Lupi, of whom, except their works (for the most part only detached motets), nothing is known. Of Johannes L. the only works published are a book à 4-8, "Musicae Cantiones quæ vulgo motetti nuncupantur" (Attaignant, 1542), and a book à 4-5, "Mutetæ" (Gardano, 1545). (Cf. also **LOBO**.)

Luscinus, Ottomar (really Nachtgall or Nachtigall, Latinised L.), b. 1487, Strassburg, d. there about 1536. He was a learned theologian and musical theorist, studied at Paris, Louvain, Padua, and Vienna, and in the last city enjoyed instruction from Paul Hofhaimer. He was afterwards organist at Strassburg (1517), preacher at Augsburg (1523), Basle (1526), whence he escaped from the Reformation, which was making headway, to Freiburg. L. published, "Institutiones musicæ" (1515, as Luscinus), and "Musurgia seu praxis musicæ" (as Othmar Nachtgall, 1536; 2nd ed. 1542); the

latter work being a translation of Virdung's "Musica getuscht," in which, as it appears, the original wood-blocks were used.

• *Lusingando, Lusingante, Lusinghevole* (Ital.), in a sweet, coaxing manner, without accent.

Lussy, Mathis, b. April 8, 1828, Stans (Switzerland), received his first musical training from the Abbé Businger, who was organist there, also from Pater Nägeli at the college at St. Urban. In 1847 he went to Paris to study medicine, but turned entirely to music, and afterwards won high esteem as a pianoforte-teacher. L. gained a good reputation by his "Exercices de mécanisme" (1863, a guide to technical preparatory studies) and "Traité de l'expression musicale" (1873, an attempt at a theory of accentuation and rendering of music; in German by Felix Vogt, 1886; a reprint of a portion of this work appeared as "Le Rhythme musical"). L.'s merits have been strongly exaggerated; for a critical notice of his "Traité," see "Klavierlehrer," 1886, No. 15, etc. In 1880, jointly with E. David, L. received the prize offered by the Paris Académie (*Prix Bordin*) for the best history of notation (issued by the national printing-press in a splendid edition under the title, "Histoire de la Notation Musicale," 1882, an altogether non-original work).

Lüstner, (1) Ignaz Peter, excellent violinist, b. Dec. 22, 1793, Poischwitz (near Jauer), d. Jan. 30, 1873, Breslau. From 1819–26 he was leader of the band of Prince Karolath at Karolath, then leader at Breslau, where, in 1844, he established a violin school. His sons are:—(2) Karl, 'cellist and pianist, b. Nov. 10, 1834, Breslau, who has been living at Wiesbaden since 1872, much sought after as a pianoforte-teacher; a musician of wide culture to whom this Dictionary is indebted for many valuable notices; (3) Otto, violinist, b. April 9, 1839, d. Sept. 8, 1889, Barmen, as town musical director; he was a member of the orchestras at Schwerin and Breslau, was leader of a quartet party at Count Stolberg's, Wernigerode, from 1867–72; from 1875–77 leader of the court band at Sondershausen, and "herzogl. Sächs. Kammer-virtuosus;" (4) Louis, distinguished violinist and conductor, pupil of his father, b. June 30, 1840, Breslau, since 1874 town capellmeister (conductor of the Kurorchestra) at Wiesbaden. (5) Georg, 'cellist, b. Sept. 23, 1847, d. April 21, 1887, Berlin; capellmeister at Berlin; and (6) Richard, performer on the harp and violinist, b. Sept. 2, 1854, lives in Breslau.

Lute (Arabic *al Oud*; Sp. *Laut*; Ital. *Liuto*; Ger. *Laute*; Fr. *Luth*; Lat. [in the 16th and 17th centuries] *Testudo*), a very old instrument, the strings of which were plucked by the fingers, like its descendants in vogue at the present day, the guitar, mandoline, etc. Representations of the L. are to be found on very old Egyptian tombs; at a later period it was the favourite instrument of the Arabians (q.v.),

through whom it reached Spain and Lower Italy, whence, somewhere about the 14th century, it spread over the whole of Europe. From the 15th to the 17th century it played an important rôle: lute arrangements of vocal compositions for home use were much the same as the transcriptions of orchestral or vocal works of the present day as pianoforte solos or duets. And at that period the L. was in general use as an orchestral instrument, and it was only in the 17th and 18th centuries, when the violin began to flourish and clavier instruments arrived at a state of perfection, that it was gradually supplanted. (Cf. ORCHESTRA.) The L. differed from the guitar in the totally different form of the body: it had no edges, but was arched downwards (somewhat like a half pumpkin, similar to the mandoline of the present day). Further, the L. had a far greater number of strings, of which five pairs and a single one (the highest, for the melody) lay over the finger-board, but the others (the bass strings [finally five], which were only used as open strings), at the side. These bass strings were abolished at the end of the 16th century. The tuning of the L. varied at different periods: the most usual methods in the 16th century were *G c f a d' g'* or *A d g b e' a'*; in the 17th and 18th centuries *A d f a d' f'*, and for the bass strings (*G F E D C*). The *Quinterna* (Chiterna, i.e. guitar) was a smaller kind of L. of the 16th century, similar in construction to the L., but it had only four strings: in the 17th century the Quinterna was already, like the guitar of to-day, flat in structure. The endeavour to increase the compass of the L. first led to the introduction of bass strings, which ran from the neck, with the peg-case bent at an obtuse angle, directly down to the tail-piece, firmly fixed to the sound-board. But in order to obtain longer strings, the peg-case for the bass ones was pushed out a little above the one for the finger-board strings, so that the latter began somewhere about the middle of the former (Theorbo). Or the neck of the first peg-case was bent back, and in its prolongation formed a second one for the bass strings (*Archiliuto*, great bass lute); or, finally, both peg-cases were separated by a neck of several feet in length (*Chitarrone*). For the L. and its various forms the usual (mensural) notation was not used, but special letters or figures, which indicated, not the pitch, but the fret (Lute-tablature); the tablatures of France, Italy, and Germany, however, differed. The Italians, to whom we also are indebted for figured bass, used figures, but the French and Germans, letters. And then the Italians and French reckoned up on the same string by half-tones, but the Germans crossways over all the strings; i.e. the Italians and French, who used lines to represent the strings (the Italians took for the highest string the lowest of six lines; the French, the highest of five), marked each open string (*O, a*), and the next following twelve,

likewise ten sounds on the same at distances of a semitone, thus:—o 1 2 3 4 5 6 7 8 9 X X X (Ital.), and a b c d e f g h i k l (French). For example, with the tuning G c f a d' g':—

The Germans, on the other hand, numbered the open strings 1 1 2 3 4 5 (= A d g b e' a'), and then, in similar manner, running crossways over the five highest strings with a b c d e f g h i k l m n o p q r s t u v x y z g a b c d̄, etc., thus:—

5	e	k	p	v	9	e
4	d	i	o	t	z	d
3	c	h	n	s	g	c
2	b	g	m	r	y	b
1	a	f	l	q	x	a

so that the above chromatic succession of sounds would be expressed by

						4	d	i	o	t	z
						g	c	h	n	s	g
(2nd string)	g	m	r	y	b	g	m				

(The letters and figures standing over one another indicate the same note; cf. also the examples under *TABLETUE*.)

Different modes of notation were used for the lowest string. Gerle (1545), like the Italians, uses 1 2 3 4 5 6 7 8 9 (not, however, 0, but 1, for the open string) for the nine sounds, at intervals of a semitone; Judenkönig (1523), like the French, A B C D E F G H I; Viridung (1511), on the other hand, uses signs answering to those of the first (*i.e.* really of the second) string, viz. I A F L Q X A A F F, etc. The lute-tabletatures are of great importance in studying the music of the 16th and 17th centuries, because in them all the most doubtful points of mensural notation, the use of many a b or # with independent meaning, disappears, and the fret is always indicated with precision; and thus they often give safer and more trustworthy information respecting the use of semitones (with #, b) than is to be obtained from the indefinite and equivocal statements of theorists. With regard to the signs of rhythmical value of the lute-tabletatures, cf. *TABLETUE*. We are indebted to Baron for a valuable monograph on the L. ("Untersuchung des Instruments der Lauten," 1727); cf. in the *Vierteljahrsschrift für Mus.-Wiss.*, 1886, p. 1, etc., an exhaustive article by O. Fleischer on the lute master, Denis Gaultier. (Cf. also Prætorius' "Syntagma" [1619], and of recent works those of Kiesewetter [*Allgemeine Musikalische Zeitung*, 1831]; and

Wasielewski's "Geschichte der Instrumentalmusik im 16 Jahrhundert," 1878.)

Luther, Martin, the great reformer, b. Nov. 10, 1483, Eisleben, d. there Feb. 18, 1546; he not only endeavoured in a suitable manner to reorganise church song, but, apart from the church, was a zealous lover of music, and praised "Frau Musika" both in tones and words. It is well known that he wrote a great number of sacred poems, for some of which he invented melodies. Further, the two composers, Conrad Rupff and Johann Walther, assisted him in selecting old melodies and fitting words to them, or inventing new melodies. Within recent times all independent share in chorale composition has been refused to Luther, and matters have gone so far that a chance similarity of a few melodic progressions has been considered a proof of borrowing.

Lützel, Joh. Heinrich, b. Aug. 30, 1823, Iggelheim (near Speyer), attended the college at Kaiserslautern, then enjoyed instruction in music from Jacob Vierling, became teacher in 1845, and, soon afterwards, organist at Zweibrücken, but resigned his post as teacher in 1854, and founded the "Evangelischer Kirchenchor" at Zweibrücken (which in 1880 extended over the whole Palatinate), in 1860 the "Pfälzischer Sängerbund," and in 1868 became examiner of organs, and in 1883 was named Professor. L. himself published several school song-books, a collection of sacred songs from the 16th to the 19th centuries, and a "Choralbuch" (1858). He wrote "Der praktische Organist" (two vols.), and set the 24th Psalm to music for male chorus and orchestra, etc.

Lutzer, Jenny. (See DINGELSTEDT.)

Lux, Friedrich, excellent performer on the organ, conductor, and composer, b. Nov. 24, 1820, Ruhla (Thuringia); he was pupil of Fr. Schneider at Dessau, then (1841) musical director at the court theatre there, 1851-77 capellmeister at the town theatre, Mayence, and from 1864 conductor of the ladies' choral society and of the Liedertafel; he retired in 1891. He has written many orchestral and choral works, produced with success, and of which some obtained a prize; also three operas, *Der Schmied von Ruhla*, *Käthchen von Heilbronn*, and *Die Fürstin von Athen*; and a dramatic scena, *Coriolan*, songs, etc. L. was conductor of several Middle Rhenish Festivals.

Lwoff, Alexis von, b. May 25, 1799, Reval, d. Dec. 28, 1870, on his estate, Government Kowno, major-general, adjutant to the Emperor Nicholas, and conductor of the court choir. He was a distinguished violinist, and recognised as such in Leipzig, Berlin, Paris, etc.; later on he became completely deaf. He wrote several operas (*Undine*, *Der Dorfschulze*, *Bianca e Gualterio*), and published a violin concerto, violin duets, fantasias and variations with stringed

quartet, some Russian part-songs, psalms, and sacred songs. He arranged Pergolesi's *Stabat Mater* for chorus and grand orchestra, harmonised old Russian church melodies, and wrote: "Ueber den freien und nicht symmetrischen Rhythmus des altrussischen Kirchengesangs" (1859). L. is also the composer of the Russian national hymn, the poem of which was written by Shukowski (1833).

Lyceum was the name of the grove at Athens sacred to Apollo, in which Aristotle and his pupils (the Peripatetics) walked and discoursed; hence used in the present day in the sense of Academy (q.v.), a school of learning, an institution for high culture, similar to the term Gymnasium used in Germany. Also certain Conservatoria bear the name L. (Ital. *Liceo*), as, for instance, the Liceo Filarmonico (Liceo comunale di musica) at Bologna, celebrated for its library rich in old musical works.

Lydian Mode. (See CHURCH MODES and GREEK MUSIC.)

Lyra (Ger. *Leier*), (1) an old Greek stringed instrument, similar to the cithara, but smaller; it was played with a plectrum. The number of strings varied at different periods, but originally it was said to have had only three. As the L. and cithara had no finger-board, *i.e.* each string only gave one note, they can in no way be compared with our present zither, or even guitar, but only with the harp.—(2) A stringed instrument of many strings, in vogue from the 16th to the 18th century; the strings ran partly over the finger-board, partly by the side (as so-called "drones"). The L. was of the Viol (q.v.) family, and constructed in three different sizes; as *Lira da braccio* (with seven finger-board strings and two drones, a tenor instrument), as

Lira da gamba (twelve strings and two drones, bass instrument), and *Archiviola da lira* (*Livone*, up to twenty-four strings, double-bass instrument; also named *Accordo*). The *Baryton* (q.v.) also belonged to the lyre species. Even Haydn wrote pieces for L. and for Baryton, the former for the King of Naples, the latter for Prince Esterhazy.—(3) Also the instrument in military music called *Stahlspiel*, or improperly *Glockenspiel*, and which has been introduced into the opera orchestra. It consists of variously tuned steel bars loosely fastened to a lyre-shaped frame, and struck with a small hammer (a substitute for the old *Glockenspiel*).

Lyra, Justus Wilhelm, b. March 23, 1822, Osnabrück, d. Dec. 30, 1882, Gehrden (Hanover), as Pastor *primarius*, previously in ecclesiastical posts at Bevensen, Wittingen, and Lingen, and from 1841-46 as *stud. theolog.* at Berlin. He was a many-sided, gifted man, whose life, however, was troubled by disordered intellect. During his student days he composed some songs, which achieved extraordinary popularity ("Der Mai ist gekommen," "Die bange Nacht ist nun herum," "Meine Mus' ist gegangen," and "Zwischen Frankreich und dem Böhmerwald").

Lysberg, Charles Samuel (Bovy, known under the pseudonym L.), b. March 1, 1821, Lysberg (near Geneva), d. Feb. 25, 1873, Geneva; an esteemed pianist and brilliant drawing-room composer, pupil of Chopin at Paris, and teacher at the Geneva Conservatoire. Besides numerous drawing-room pieces (barcaroles, nocturnes, caprices, waltzes, "Le réveil des oiseaux," "Le chant du rouet," etc.), he wrote paraphrases on opera themes, a romantic sonata, "L'absence," and also produced an opera, *La fille du carillonneur*, at Geneva.

M.

M (m), (1) in organ compositions, stands for manual (*manualiter*).—(2) In pianoforte music, abbreviation of *main* or *mano* (hand); for example, *m.d.* = *main droite*, *mano destra* (right hand); *m.g.* = *main gauche*, *m.s.* = *mano sinistra* (left hand).—(3) *m* = *mezzo*, *mf.* = *mezzo forte*, *mp.* = *mezzo piano*, *mv.* = *mezza voce*.—(4) *M.M.* = Mälzel's Metronome (q.v.).

Ma (Ital.), but; for example: *allegro ma non troppo*, fast, but not too quick.

Mabellini, Teodulo, composer, b. April 2, 1817, Pistoja, studied for some time at the music school in Florence, obtained, through the good success of his opera, *Matilda de Toledo* (1836), a stipend from the Grand Duke of Tuscany, by which he was enabled to renew his studies under Mercadante at Novara. He quickly won for himself a distinguished reputation as a composer of operas, and then settled definitely in Florence,

where he became director of the Philharmonic Society, maestro, and afterwards leader, at the Pergola, and professor of composition at the Royal School of Music. M. wrote eight other operas (*Rolla*, 1840; *Genevra degli Almeri*, 1841; *Il conte di Savaena*, 1843; *I Veneziani a Costantinopoli*, 1844; *Maria di Francia*, 1846; *Il venturiero*, 1851; *Baldassarro*, 1852; *Fiametta*, 1857), some oratorios (*Eudossia e Paolo*, *The Last Day of Jerusalem*), cantatas (*La caccia*, *Raphaelle Sanzio*, *Il ritorno*, *Lo spirito di Dante*, etc.), hymns, and other vocal music, but especially, a large number of sacred works (masses, motets, Te Deums, psalms, etc.).

Mabillon, Jean, learned Benedictine, b. Nov. 23, 1632, St. Pierremont (near Rheims), d. Dec. 27, 1707, St. Germain des Prés. He wrote: "De liturgia gallicana libri tres" (1685; re-published 1729); also his "Annales Ordinis S.

Benedicti" (1713-39, six vols.) and "Acta Sanctorum Ordinis S. Benedicti" (1668-1702, nine vols.), contain many important notices in relation to the history of music.

MacDowell, Edward Alexander, noteworthy pianist, b. Dec. 18, 1861, New York. He was a pupil of Savard and Marmontel at Paris, 1876, and, later on, pupil for composition of Raff at Frankfurt, and pupil for piano-playing of Carl Heymann; in 1881 piano-teacher at the Darmstadt Conservatorium, 1882, at Wiesbaden. In 1888 M. returned to America, and lives at present at Boston. He has published: two modern suites (Op. 10 and 14), pf. concertos, two orchestral pieces (Op. 22), symphonies, songs, etc.

Macfarren, (1) Sir George Alexander, one of the most meritorious English musicians of modern times, b. March 2, 1813, London, d. there Oct. 31, 1887, was, in 1820, a pupil of the Royal Academy of Music, and, as early as 1834, became teacher at the same institution. For many years he laboured successfully there, in spite of a malady of the eyes, which ended in total blindness. After Bennett's death (1875), he was appointed Professor of Music at Cambridge University, and about the same time Principal of the Royal Academy of Music; also in 1875 he took the degrees of Mus.B. and Mus.D., and was knighted in 1883. M. composed several operas: *Devil's Opera* (1838), *Don Quixote* (1846), *Charles II.* (1849), *Robin Hood* (1860), *Frey's Gift* (pantomime), *Jessy Lea* (1863), *She Stoops to Conquer*, *The Soldier's Legacy*, *Helvellyn* (1864); also the oratorios: *John the Baptist*, *The Resurrection*, *Joseph*; *King David* (Leeds, 1883); several cantatas: *The Sleeper Awakened*, *Lenora*, *May Day* (for the Bradford Musical Festival, 1856), *Christmas*, *The Lady of the Lake* (Glasgow, 1877); many sacred vocal works (services, anthems, psalms), part-songs, duets, etc.; symphonies (No. 1, 1834); overtures (*Chevy Chase* [Battle of Otterburn, 1838], *Hamlet*, *Romeo and Juliet*, *The Merchant of Venice*, *Don Carlos*), stringed quartets, a stringed quintet, trios, violin sonatas, a violin concerto, pf. sonatas, etc. M. also edited some old works, among others Purcell's *Dido and Aeneas*, Handel's *Belshazzar*, *Judas Macabæus*, and *Jephtha*, and harmonised old melodies (Chappell's "Popular Music of the Olden Time," and Irish and Scotch airs). His experiences as teacher of harmony were recorded in the "Rudiments of Harmony" (1860), "Six Lectures on Harmony" (1867); he was, besides, contributor to the *Musical World*, and prepared the analytical programmes for the Sacred Harmonic and Philharmonic Societies. M.'s wife, Natalia, is an excellent singer (contralto), and became known through her translations into English of texts of German operas, vocal works, etc. (Schiller's "Glocke [Bruch]," Devrient's "Mendelssohn," etc).

(2) Walter Cecil, brother of the former, b. Aug. 28, 1826, a pupil of the Royal Academy under Holmes, C. Potter, and his brother (1842-46); in 1846 he was appointed teacher at the Academy; in 1868 he was made director of the Philharmonic Society, and in 1873 conductor of the Academy concerts. He has composed sacred vocal works (two services), overtures (*Beppo*, *A Winter's Tale*, *Hero and Leander*, and *Pastoral*), chamber music, pf. sonatas and pieces, songs, part-songs, etc. He has also rendered service by editing many classical pianoforte-works (Mozart, Beethoven, and a selection of "Popular Classics").

Machault (Machaut, Machaud, Machau), Guillaume de (Guillermus de Mascandio), troubadour, b. about 1284, probably at Machau, near Rethel (Champagne), d. not before 1369. He was in the court service of Joanna of Navarre (wife of Philip the Fair), afterwards of Johann of Luxembourg (King of Bohemia), and finally, of Charles V. of France. Besides a large number of his poems, compositions (rondos, chansons, ballads, motets, and a Mass à 4) have been handed down to us.

Machines. (See PISTONS.) Machine-drums. (See DRUM.)

Mächtigt, Karl, b. Jan. 10, 1836, Breslau, d. there May 2, 1881, pupil of M. Brosig and P. Lüstner, succeeded Ad. Hesse as principal organist at St. Bernhardin. Of his compositions songs and pf. pieces are worthy of mention.

Mackenzie, Alexander Campbell, composer, b. Aug. 22, 1847, Edinburgh, pupil of Ulrich and Stein at Sondershausen, then (1862) was elected King's Scholar at the Royal Academy of Music, and from 1865 was teacher of music in Scotland. M. received the honorary degree of Mus.D. from the University of St. Andrews in 1886, and in 1888 was elected Principal of the Royal Academy of Music. He has written orchestral, chamber-music, and choral works, and is highly esteemed as a composer: pf. quartet (Op. 11), violin concerto (Op. 32), orchestral ballad, "La Belle Dame sans Merci"; overtures, *Cervantes*, *Twelfth Night*, and *Britannia*; two Scotch rhapsodies; cantatas, *The Bride*, *The Story of Sayid*, and *The Dream of Jüdal*; oratorios, *The Rose of Sharon* (1884), *Bethlehem*, a mystery (1894); the two operas, *Colomba* (1883) and *The Troubadour* (1886), pf. pieces, songs, etc.

Madrigal was the name given, first in Italy, and afterwards in other countries, to the art-song of the 16th century (for at that time the accompanied song for one voice, such as we have, was unknown), a part-song (usually for three, four, five, or six voices; more especially five) which, in its more artistic structure, differed from the canzonetta, villanella, frottole, which were of more popular character, simpler in rhythm and counterpoint; but, like the

latter, madrigals were of secular, for the most part erotic, contents. The M. is therefore the real representative of the chamber-music of the 16th century. The origin of the M. as an art-form extends further back than the 16th century; it is connected with the Provençal troubadours, and the word itself is derived from *mandra* (home) and *gal* (song). Probably that pointed, almost epigrammatic poetical form, which to-day is known by the name of M., bore that name long before Arcadelt (1538) created such a stir with the first book of his madrigals that within thirty years it passed through twelve editions; and afterwards, both the form and the name of these songs were adopted by hundreds of composers. Indirectly the M. was the starting-point of accompanied monody and of instrumental music, since favourite madrigals were arranged for lute (also for key-board instruments), so that one part (tenor or soprano) was sung, while the others, so far as was possible, were played upon instruments. Also the opera was preceded by a series of madrigals, some of which were sung in the manner indicated, with accompaniment of viols, lutes, theorbos, etc., while others were executed entirely by voices. The M. was thrown into the shade by genuine monody; in England, thanks to the London Madrigal Society (founded in 1741), the M. has held its ground down to the present day. Dr. Emil Vogel, in his "Bibliothek der gedruckten weltlichen Vokalmusik Italiens" (1892, two vols.), has written a comprehensive monograph on the literature of the M. and of allied forms in Italy.

Maësta (Ital.), majesty; *maëstoso*, with majesty.

Magadis, (1) a stringed instrument of the ancient Greeks, which had up to forty strings, and was similar to the harp. A passage in Aristotle's "Probl." XIX. shows that passages in octaves were played on the M.—(2) M. (also Magas) was the term employed by the theorists of the 16th century for the monochord.

Maggiore (Ital.), major; *harmonia di terza m.*, major chord. When M. is written over a section (Trio) in marches, dances, scherzos, or rondos, also over a variation, it indicates that that section is in the parallel major key, or the major key of the same tonic, as the principal minor key of the piece. Also, in the opposite sense, M. after a Trio marked *Minore*, indicates a return to the principal key, when this is a major one.

Magini, Giovanni Paolo, celebrated violin-maker at Brescia, 1590–1640, whose instruments are distinguished for their soft tone, similar to that of the viola, and are highly prized.

Magnificat is one of the three *Cantica majora*, the Evangelistic hymn of praise, the *Canticum beate Mariae Virginis*, the song of praise of Mary in the house of Zacharias with which she answered the greeting of Elisabeth: "Magnificat

anima mea dominum." In the Catholic Church the M. is sung at Vespers, and it is set to melodies in all the eight Church Modes (hence *Magnificat octo tonorum*). Church composers have arranged the M. for several voices a countless number of times.

Magnus, Désiré (really Magnus Deutz), pianist, b. June 13, 1828, Brussels, d. the beginning of January, 1884, Paris, received his first musical instruction from Vollweiler at Heidelberg; he then attended the Brussels Conservatoire, where he received in 1843 the first prize. He made successful concert tours as a pianist through England, Russia, Spain, etc., and afterwards settled definitely in Paris, where he occupied an honourable position as pianoforte-player, teacher, composer, and musical critic. He played upon the Steinway concert-grand pianofortes at the Exhibition of 1867. He published chiefly pf. works, sonatas, études, fantasias, etc. His "Méthode élémentaire de piano," which appeared in 1879, became very well known.

Mahillon, Victor, a meritorious writer on acoustics, b. March 10, 1841, Brussels; since 1877 he has been curator of the museum of instruments at the Brussels Conservatoire. He has published: "Tableau synoptique des voix et de tous les instruments de musique," etc., "Tableau synoptique de la science de l'harmonie," "Éléments d'Acoustique musicale et instrumentale" (1874, prize), "Étude sur le doigté de la flûte Boehm" (1885). M. also started the musical journal *L'Écho Musical*, and is manager of a large wind-instrument factory founded by his father.

Mahmud Schirasi, Persian encyclopædist, d. 1315; his work, "Dürret et tadsch" ("Pearl of the Crown"), treats exhaustively of the old Arabic Messel theory (system of intervals). (Cf. MESSL.)

Mahu, Stephan, one of the most important of German contrapuntists during the first half of the 16th century; he was chapel-singer to the Emperor Ferdinand I. Some of his compositions are to be found in Joannelli's "Novus thesaurus musicæ" (1568, Lamentations), in J. Walther's "Gesangbuch" (1551, chorale melodies), Montan-Neuber's "Thesaurus musicus" (1564, a *Da pacem* à 8), in Petrejus' "Modulationes" (1538), and "Neben deutschen Liedlein" (1539), in Kriesstein's "Selectissimæ," etc. (1540), and in Rhaw's "Neben geistlichen Gesängen" (1544). Two Magnificats à 4 were found in the Munich Library and published by Commer ("Musica sacra," vol. 18).

Maier, (1), Joseph Friedrich Bernhard Kaspar, cantor at Schwäbisch-Hall. He published "Hodegus musicus" (1718) and "Museum musicum theoretico-practicum, darinnen gelehrt wird, wie man sowohl die Vokal- als Instrumentalmusik gründlich erlernen kann" (1732; 2nd ed. as "Neu eröffnete theoretisch-

praktischer Musiksaal," etc., 1741, a guide to the playing of a number of instruments now obsolete—Schnabelflöte, cornet, bass viol, etc.).

(2) Julius Joseph, b. Dec. 29, 1821, Freiburg, Baden, d. Nov. 21, 1889, Munich. He went to school at Carlsruhe, studied law at Freiburg and Heidelberg, became assessor in 1846, and secretary to the Ministry of the Interior in 1849. In the last-named year, however, he studied with Haussmann at Leipzig, and in 1850 became teacher of counterpoint at the Royal School of Music, Munich. From 1857–87 he was "Conservator" of the exceedingly wealthy musical section of the Munich Library. He published: "Klassische Kirchenwerke alter Meister" (arranged for male chorus, 1845), "Auswahl englischer Madrigale" (1863), and rendered great service to musical investigators by publishing the catalogue, "Die musikalischen Handschriften der Königlichen Hof- und Staatsbibliothek in München" (Pt. I., "Die Handschriften bis zum Ende des 17 Jahrhunderts," 1879).

Maillart, Louis (called Aimé), composer, b. March 24, 1817, Montpellier, d. May 26, 1871, Moulins (Département Allier), whither he fled from the Germans. In 1833 he studied under Halévy at the Paris Conservatoire, and won the *Prix de Rome* in 1841. He composed six operas, of which the first, *Gastibelza* (1847), was favourably received, and one of the last, *Les dragons de Villars* (1856), as *Das Glöckchen des Eremiten*, became very popular even in Germany. The other four, however (*Le moulin des tilleuls*, *La croix de Marie*, *Les pêcheurs de Cataine*, and *Lara* [1864]), only met with moderate success.

Mailly, Alphonse Jean Ernest, b. Nov. 27, 1833, Brussels, pupil of Chr. Girschner for organ; in 1861 appointed piano-, in 1868 organ-teacher at the Brussels Conservatoire. Berlioz praised him in the *Journal des Débats* (1858) as a distinguished organ virtuoso. M. has composed a sonata for organ, smaller organ-pieces for Best's "Cecilia," besides orchestral works, etc.

Main (Fr.), the hand; *m.d.* (*m. droite*), right hand; *m.g.* (*m. gauche*), left hand.

Mainzer, Joseph, teacher of music, b. May 7, 1807, Trèves, d. Nov. 10, 1851, Manchester; he received his musical training at Trèves, became priest, and later, abbé. His first post was that of teacher of singing at the Trèves training college. He became an exile, owing to political intrigues, during the Polish Revolution, went to Brussels, and soon afterwards to Paris, where he certainly found occupation as a writer of musical feuilletons, but no solid position. In 1841 he therefore crossed the Channel, went to London, and thence to Manchester, where he obtained great success by establishing classes of popular music on Wilhelm's method, and by founding and directing a number of vocal schools. His writings are: "Singschule" (1831), "Méthode

de chant pour les enfants" (1835 and 1838); "Méthode de chant pour voix d'hommes" (1836); "Bibliothèque élémentaire du chant" (1836); "Méthode pratique de piano pour les enfants" (1837); "Abécédaire de chant" (1837); "École chorale" (1838); "Cent mélodies enfantines" (1840); "Singing for the Million" (1842). He published besides: "Esquisses musicales; ou, souvenirs de voyage" (1838–39); "Musical Athenæum; or, Nature and Art, Music and Musicians in Germany, France, Italy," etc. (1842); a musical paper, *Chronique musicale de Paris* (1838), which, however, soon came to an end, while a fresh attempt in England (*Mainzer's Musical Times*, the predecessor of the still flourishing *Musical Times*) met with better fortune. M. wrote operas, which achieved no success (*Le triomphe de la Pologne*, *La Jacquerie*).

Maitland, J. A. Fuller, musical author and critic, b. 1856, London; in 1884 he wrote the biography of Schumann ("Great Musicians"), in 1894 "Masters of German Music," also collaborated with Clara Bell in the translation of Spitta's "Johann Sebastian Bach" into English. He has written articles for Grove's "Dictionary of Music," etc.; he is musical critic of the *Times*, *New Quarterly Musical Review*, etc.

Maitre Jehan. (See GALLUS, 2.)

Maitrise was the name given in France until the Revolution to the school of music connected with every important church. The pupils of a M. had *pension* in common, and besides a musical, received a good general education. The arrangements were similar to those at the present day at St. Thomas's, Leipzig, and at the Dresden "Kreuzkirche," etc. The Maitrises were, therefore, the real music-schools of France until their suppression in 1791 and the establishment of the Conservatoire (1794). At the head of the M. stood the *Maitre de chapelle*, whence the name M.

Majo, Francesco di (called Ciccio di M.), gifted opera and church composer, b. about 1745, Naples, d. 1770, Rome; he was organist of the Royal Chapel, Naples, and made his *début* in 1762 with the opera *Artaserse*, which was quickly followed by others. Besides fifteen operas, he wrote five Masses (one for double choir with two orchestras), several psalms, Graduals, Salve, etc.

Majorano. (See CAFFARELLI.)

Major Chord. (See TRIAD MAJOR.)

Major Consonance. (See CLANG.)

Major Key. Key, in its narrower meaning, is bound up with the *scale* (q.v.); and from this point of view only sounds and chords "proper to the scale" belong to the key, i.e. for c major, those contained in the scale of c. Modern theory of music since Rameau (q.v.) accepts sounds in the sense of clangs (compound sounds), and therefore regards the major scale as a resolution

or taking to pieces of the sounds of the tonic chord, and those nearest related to it, and presenting them in melodic succession. The harmonic system of the major key confined to the sounds proper to the key is therefore:—

d f a c e g b d

(three major, and three minor chords). By this, however, the *major scale* is explained, but not the major key. It seems arbitrary to limit the harmony to these few clangs, and it is opposed to the practice of music. The conception of key has, therefore, been widened to that of *tonality* (q.v.), and the scale appears to be merely a melodic progression through the notes of a chord with the insertion of the simplest passing notes.

Major Scale. (See KEY, SCALE.)

Malagueña. (See FANDANGO.)

Malder, Pierre van, noteworthy composer, b. May 13, 1724, Brussels, d. there Nov. 3, 1768; chamber-musician to Prince Charles of Lorraine, and for a long time violin soloist at the Brussels Court Opera. He wrote several operas for Brussels, also one for the Opéra Comique, Paris (*La bagarre*, 1762), but he had more success with his six stringed quartets (1757), eighteen symphonies (for strings, two oboes, and two horns; the first six appeared in 1759), and six sonatas for two violins and bass. M. was one of the first who cultivated the stringed quartet and the symphony.

Malibran, (1) Maria Felicita, b. March 24, 1808, Paris, d. Sept. 23, 1836, Manchester, daughter of Manuel Garcia (q.v. 2), sister of Madame Viardot Garcia, and one of the most distinguished singers of our century (contralto of enormous compass). She was trained by her father, appeared first in London 1825, was at once engaged, and soon became the most famous prima donna of the London Opera. At the end of the season Garcia, with wife and children, almost a complete family opera troupe, crossed the Atlantic. In New York Maria married the merchant M., but, as he soon became bankrupt, she separated from him. On her return to Europe Madame M. appeared at Paris, in 1827, with immense success, and was engaged at a salary of 50,000 francs; at the conclusion of the Paris season she sang regularly every year in London, and disputed the palm with Henriette Sontag. She sang with ever-increasing success in Naples, Milan, and other cities of Italy (she spoke Spanish, French, Italian, English, and German). When she had obtained a divorce from her first husband, she married the violin virtuoso De Bériot (March, 1836). She died, however, a few months afterwards at Manchester, in consequence of over-exertion at the musical festival there (Sept. 12-14). M. was very musical, and composed some pleasing

chansonnettes, nocturnes, and romances, some of which appeared in print ("Dernières pensées musicales de Marie Félicité Garcia de Bériot").

(2) Alexandre, performer on the violin, b. Nov. 10, 1823, Paris, d. there May 13, 1867, in impoverished circumstances; he studied under Spohr at Cassel, where he married and settled. He published: "Ludwig Spohr, sein Leben und Wirken" (1860), established a musical paper in Paris, *L'Union Instrumentale*, which soon came to an end; he then wrote for a long time the feuilleton for a French newspaper at Frankfort, and in 1864 started a musical paper at Brussels, *Le Monde Musical*. His attempt to establish popular concerts at the Gaîté Theatre, Paris, after the style of those of Padeloup, proved a failure. He composed orchestral and chamber-music works, also a Mass for the *Légion d'honneur* (for male voices).

Malinconico (Ital.), melancholy.

Mallinger, Mathilde, distinguished dramatic singer (soprano), b. Feb. 17, 1847, Agram, pupil of Gordiniani and Vogl at the Prague Conservatorium (1863-65), and of Lewy at Vienna. She was engaged at the Munich Court Theatre, 1866-69, and after that became one of the chief ornaments of the Berlin Court Opera. In 1869 she married Baron v. Schimmelpfennig. Since 1890 she has been teacher of singing at the Prague Conservatorium.

Malten, Therese, distinguished stage singer (dramatic soprano), b. June 21, 1855, Instenburg (East Prussia), pupil of Gustav Engel at Berlin. She made her first appearances in 1873 at Dresden as Pamina and Agathe, and was at once engaged for leading parts, singing in all the most important operas (Senta, Elisabeth, Eva, Elsa, Isolde, Fidelio, Armide, etc.). In 1882 she created the rôle of Kundry in *Parsifal* at Baireuth with extraordinary success.

Mälzel (Mälzl), Johann Nepomuk, skilled mechanician, b. Aug. 15, 1772, Ratisbon, d. July 21, 1838, in America, son of an organ-builder; he settled in 1792 at Vienna as a teacher of music, but soon made a name by the construction of various mechanical musical works (a kind of orchestration [Panharmonion], a "Trompeter-automaton," also a mechanical chess-player), and in 1808 was named Court Mechanician. He won lasting fame by the construction (1816) of the well-known time-measurer, or *Metronome* (q.v.), which now bears his name; but the mechanician Winkel, of Amsterdam, successfully disputed his right to priority of idea. Another metronome, an improvement on the one by Stöckel, had been constructed a few years previously (compare also Loulié). M. constructed also ear-trumpets, of which Beethoven made use; he was at first on friendly terms with the composer, but provoked his just anger by purloining the score of the "Battle of Vittoria." M. made extensive journeys with his automata;

finally he started for America, but died on board the American brig *Otis*.

Manager, impresario of a theatre.

Mancando (Ital.), dying away, like *calando*.

Mancinelli, Luigi, b. Feb. 5, 1848, Orvieto, at first 'cellist at the Pergola, Florence, in 1874 'cellist, but already in 1881 director of the Liceo Filarmónico, and conductor at the theatre St. Petronio, Bologna; 1886-88 conductor at Drury Lane; in 1888 royal conductor at Madrid. He is now conductor at Covent Garden. M. is a composer of note:—*Intermezzi* to Cossa's *Mesalina* and *Cleopatra*; opera, *Isora di Provenza* [Rolando] (Bologna 1884, Hamburg, 1892). His oratorio *Isaias* was produced at the Norwich Festival (1887).

Mancini, (1) Francesco, composer, b. 1674, Naples, d. there, 1739, pupil of the Conservatorio di San Loreto, afterwards teacher there, in 1709 sub-, in 1728 principal maestro. He wrote twenty operas, mostly for Naples (*Idaspe*, London, 1710), also the oratorios *L'amor divino trionfante nella morte di Cristo*, *L'arca del testamento in Gerico*, *Il laccio purpureo di Raab*, *Il genere umano in catena*, and a *Magnificat à 8*.

(2) Giambattista, distinguished teacher of singing, b. 1716, Ascoli, d. Jan. 4, 1800, Vienna; pupil of Bernacchi and Padre Martini. He became, about 1760, teacher of singing to the imperial princesses at Vienna. M. published a valuable work on coloratura singing, "*Pensieri e riflessioni pratiche sopra il canto figurato*" (1774, 2nd ed. 1777; in French, as "*L'art du chant figuré*," 1776; and also "*Réflexions pratiques sur le chant figuré*," 1796).

Mandoline (Ital. *Mandolino*, diminutive form of *Mandola* [Mandora, Pandura, see BANDOLA]), a stringed instrument belonging to the lute family, with arched sound-chest after the shape of a pumpkin, of deeper curve than the lute, but of considerably smaller dimensions. The M. is used in Italy, especially in Naples, as a melody instrument, and is accompanied by the guitar. On the Neapolitan M. there are eight strings, tuned in pairs in unison, like the violin, *g' a' a' e'*; the Milanese M. has five or six pairs of strings, tuned *g' e' a' d' e'* and *g' b' e' a' d' e'*. The M. is played with a tortoise-shell plectrum. Cf. Bartoluzzi, "*Anweisung zur Erlernung der Mandoline*" (Vienna, Haslinger, and Leipzig, Breitkopf und Härtel.) Cf. GUITAR.

Mangeot-Clavier (*à deux claviers renversés*). (See ZAREMSKI.)

Mangold, (1) Wilhelm, b. Nov. 19, 1796, Darmstadt, d. there May 23, 1875, studied with his father (Georg M., b. Feb. 7, 1767, Darmstadt, d. there Feb. 18, 1835, as court musical director), also with Rinck and Abt Vogler. He studied from 1815-18 at the Paris Conservatoire as pupil of Cherubini, was then appointed chamber-musician at Darmstadt, from 1825

court capellmeister, and received his pension in 1858. M. considerably improved musical life at Darmstadt, himself wrote an opera, *Merope* (1823), also two smaller ones, and some incidental music to plays, overtures, much chamber-music, likewise vocal pieces, and especially melodies for horn (clarinet) with pianoforte, which have become general favourites.

(2) Karl Ludwig Amand, brother of the former, b. Oct. 8, 1813, Darmstadt, d. Aug. 5, 1889, Oberstdorf (Allgäu), received his musical training from his father and his brother Wilhelm, and lived from 1836-39 in Paris. Previously (1831) he had been active as violinist in the Darmstadt court band, joined it again (1839) after his return, and became court musical director in 1848; already in 1839 he had undertaken the direction of the musical society, and was conductor of the "*Mozart-Verein*" (1869-75) after he received his pension as court musical director. M. is well known in Germany by his quartets for male voices, distinguished for their vigour and spontaneity ("*Waldlied*," "*Mein Lebenslauf*," etc.); he also published choruses for mixed voices, part-songs, and larger vocal works ("*Hermannsschlacht*," pæan for mixed choir, soli, and orchestra; oratorio, *Abraham*; *Die Weisheit des Mirza Schaffy* [cantata for male chorus, soli, and orchestra, which gained a prize]). The following works were not printed, but were produced with success: the oratorios *Wittekind* and *Israel in der Wüste*, the operas *Köhlermädchen*, *Tannhäuser*, *Gudrun*, and *Dornröschen*, the concert dramas *Frithjof*, *Hermanns Tod*, and *Barbarossas Erwachen*; the dramatic scena *Des Mädchens Klage*; symphony cantata, *Elysium*; also two symphonies (one in *e*♭, the other in *F* minor), and various chamber works.

(3) Karl Georg, pianist, pupil of Hummel, d. Nov. 1, 1887, London.

Manieren (Ger.). (See ORNAMENTS.)

Mann, (1) Arthur Henry, b. May 16, 1850, Norwich, was chorister of Norwich Cathedral; became organist successively at (1870) Wolverhampton, (1871) Tettenhall, (1876) Beverley, and finally of King's College, Cambridge; in 1874 M. took his Mus.B., and in 1880 Mus.D. degree at Oxford. Compositions: "*Ecce Homo*," for chorus, orchestra, and organ; anthems, etc.

(2) Johann Gottfr. Hendrik, b. July 15, 1858, Hague, where he attended the Royal School of Music. At the present time M. is military capellmeister at Leyden. He is composer of numerous orchestral and vocal works.

Männergesangverein (Ger.). (See LIEDER-TAFEL.)

Manns, August, conductor, b. March 12, 1825, Stolzenburg (near Stettin), of poor parents. He first learned from a village musician to play on various instruments, and then received instruction from the "*Stadt Musikus*" Urban of Elbiug, became clarinet-player in a military band at Danzig, afterwards at Posen; his

merits were gradually better appreciated, and he became solo violinist at Kroll's, Berlin. From there he went to Königsberg as bandmaster of a regiment, and in 1854 became sub-conductor of the orchestra at the Crystal Palace, London, then only a wind-band. After acting as opera conductor at Leamington and Edinburgh during the winter 1854-55, and conducting summer concerts at Amsterdam, he was appointed, in the autumn of 1855, conductor of the Crystal Palace Concerts; the orchestra was soon increased, and under his direction the concerts soon acquired great fame, which has been maintained up to the present day. M. has conducted the Handel Festivals since 1882.

Mannstädt, (1) Franz, excellent pianist and esteemed conductor, b. July 8, 1852, Hagen, Westphalia, pupil of the Stern Conservatorium. In 1874 he became capellmeister at Mayence, in 1876 conductor of the Berlin "Symphoniekapelle," and in 1879 teacher of the pianoforte at the Stern Conservatorium. He was for some time capellmeister at Meiningen (under Bülow), then up to 1887 conductor of the Philharmonic orchestra, 1887 to 1893 capellmeister of the Royal theatre at Wiesbaden, and teacher at the Conservatorium, and then returned to the conductorship of the Berlin Philharmonic.

(2) His elder brother, Wilhelm, b. May 20, 1837, Bielefeld, entered upon a mercantile career, then led an unsettled life as actor, conductor of small opera companies, etc., and settled in 1865 in Berlin, where he conducted various societies, and was active as *régisseur* at small theatres. His artistic tastes extended to poetry and painting. He wrote words and music to a great number of stage works of inferior rank (farces, operettas, etc.), and in 1874 published a newspaper, *Der Kunstfreund*.

Mano (Ital.), the hand; *d.m.* or *m.d.* (*m. destra*), right hand; *s.m.* or *m.s.* (*m. sinistra*), left hand.

Mansfeldt, Edgar. (See PIERSON.)

Mantius, Eduard, distinguished stage singer (tenor), b. Jan. 18, 1806, Schwerin, d. July 4, 1874, Bad Ilmenau; he studied jurisprudence at Rostock and Leipzig, and took lessons in singing in the latter city under Pohlenz, and quickly made a reputation as concert-singer. In 1830 he made his *début* at Berlin, at the court theatre, as Tamino, and was at once offered an engagement. He belonged to the same stage for twenty-seven years, but appeared frequently as "Gast" in other places, until, in 1857, he took his farewell of the stage as Florestan in *Fidello*. Still for many a year as teacher of singing he transmitted his art to the rising generation. M. published some pleasing songs.

Mantovano, Alberto. (See RIPA.)

Manual Coupler. (See COUPLER.)

Manualiter (abbr. *man., m.*), a term used in organ compositions, indicating for manuals only, *i.e.* without pedals.

Manualls are the key-boards in the organ to be played upon by the hands (*manus*), in contradistinction to the pedals worked by the feet (*pedes*). The number of M. varies from two to five, according to the size of the organ. By having several M. a quick transition from one to another quality of tone is made possible, also the simultaneous combination of various tone-colours for different voices or parts (*cf.* TRIO, 3); and they are also of great use in case anything happen suddenly to the action of one manual, rendering the use of it precarious or impossible. (See HOWLING.) Each M. has special stops of its own, and for stops of a similar kind, the intonation or voicing differs in intensity according to the manual. All the stops of the organ can be used together on one manual (the Great Organ) by means of couplers (q.v.). When there are two M. they are named: Great Organ (Ger. *Hauptmanual*; Fr. *Grand orgue*) and Choir Organ (Ger. *Nebenmanual*, or *Unterwerk*; Fr. *Positif*), placed above the Great Organ. When there are three: Great Organ (placed in the middle), Choir Organ, and Swell Organ (Ger. *Oberwerk*; Fr. *Clavier des bombardes*). When there are four or five, the fourth and fifth are placed above the Swell Organ, and are called: Solo Organ (Ger. *Soloklavier*; Fr. *Clavier de récit*) and Echo-work (Ger. *Echowerk*, *Fernwerk*). Five key-boards are extremely rare (in France); and often, where formerly there were five, they have been reduced to four. The compass of the M. usually extends from C of the great octave to thrice-accented f (*f'''*); in older organs only up to thrice-accented c; in old Italian organs, on the other hand, from contra-G or F, even contra-C to four-times accented c (sixoctaves). (*cf.* "Synopsis of Notes," p. 1.)

Manubrium (Lat.), the handle or knob of an organ stop.

Manzuoli, Giovanni, famous soprano singer (evirato), b. about 1725, Florence, at first made a name on Italian stages, was engaged by Farinelli in 1753 for Madrid, and by his powerful yet sweet voice excited enthusiasm in London (1764-65). M. was no coloratura singer, but a sound actor, and, according to the testimony of Burney, he was instrumental in obtaining a favourable reception for serious opera in London. He was still singing in 1771, as may be seen from letters of Leopold and Wolfgang Mozart; at that time he was living at Florence as singer to the Grand Duke. The year of his death is unknown.

Mapleson, James Henry, impresario, pupil of the Royal Academy, first appeared as a singer, also played the viola in the orchestra. He commenced his once prosperous and active career as operatic manager at the Lyceum Theatre in 1861, and understood the art of always attracting a powerful company to his theatre (1862-68, Her Majesty's Theatre; 1869, Drury Lane; 1871, in company with Gye; 1871-77, again at

Drury Lane: then again at Her Majesty's). Since 1879, at the close of the London season, M. has given operatic performances at New York.

Mara, Gertrud Elisabeth (*née* Schmeling), highly distinguished vocalist, b. Feb. 23, 1749, Cassel, d. Jan. 20, 1833, Reval, was the daughter of a poor musician, and, at an early age, lost her mother. From an unfortunate fall when a child, she remained, all through her life, deformed and of weak constitution. She showed signs of musical talent from early childhood; her father trained her at first as a wonder child-violinist, and took her to Vienna and London. In the latter city her talent for singing was discovered, and she was placed under Paradisi; the lessons, however, only lasted for a short time, and M. never had any other teacher, but was essentially self-taught. In 1765 she returned with her father to Cassel, in hopes of obtaining an engagement at the Court Opera, but those hopes were not fulfilled. On the other hand, she was engaged at Leipzig at a salary of 600 Thl., side by side with Corona Schröter, for the grand Concert given under the direction of J. A. Hiller. After she had appeared several times at the Court Opera, Dresden, and with great success, she received an engagement for life at the Court Opera at Berlin at a salary of 3,000 Thl. (1771). In 1773 she married the cellist, M.; her choice of husband was not a fortunate one, and certainly did not meet with the approval of Frederick the Great. In 1780 she escaped with her husband, breaking her Berlin contract, went to Vienna, and received letters of recommendation to Marie Antoinette of France at Paris. At that time Todt stood at the zenith of her fame, and there ensued a hot rivalry between the two prima donnas (Todists, Maradists); it appeared impossible, however, to bestow the palm of victory on either. From 1784 to 1802 she lived principally in London, sang at the great Handel Commemoration Festivals of 1784 and 1785, and first appeared on the London stage in a pasticcio (1786), *Didone abbandonata*, but devoted herself principally to singing at concerts. From 1788-89 and in 1791 she visited Italy, and won laurels at Turin and Venice. In 1799 she separated from her extravagant and dissipated husband; later on he became an utter wreck, and died at Schiedam (Holland) in 1808. M. left England in 1802, when her voice began to lose its strength and elasticity; she sang without success at Paris, and, after a long concert tour, settled in Moscow. There she had the misfortune to lose all her property at the great fire, when the French invaded Russia (1812), and, at the age of sixty-four, she was compelled to travel and sing, in order to support herself. She then settled as teacher of singing at Reval, made another expedition, but an unfortunate one, to London in 1819, and died, in impoverished circumstances, at Reval, in the eighty-fourth year of her age. G. G. Grosheim

(1823) wrote her biography (up to 1792), also Rochlitz ("Für Freunde der Tonkunst," Vol. I.), but much touched-up. O. v. Riese-mann published her autobiography in the *Allgemeine Musikalische Zeitung*, 1875; and on it A. Riggli based a graphic biographical sketch (1881).

(2) La Mara, pseudonym for Marie Lipsius (q.v.).

Maraie, Mar in, celebrated performer on the gamba, b. March 31, 1656, Paris, d. there Aug. 15, 1728; he studied under Hottemann and Sainte-Colombe. He worked at composition under Lully, entered the royal band in 1685 as solo violinist, and remained in that post until 1725, when he received his pension. Besides the operas *Alcide*, *Ariane et Bacchus*, *Alcione*, and *Sémélé*, which appeared in print, M. wrote, especially, pieces for the gamba (five books, with continuo), also a set of Trios for flute, violin, and discant-viol. M. used seven in place of six strings on the gamba, and first introduced (three) covered strings for the same. Of M.'s nineteen children, who were almost all musical, Roland was the most important. In 1725 he succeeded his father as solo performer on the gamba. He published, likewise, two books of pieces for the gamba with general bass, and also a "Nouvelle Méthode de musique pour servir d'introduction aux acteurs modernes" (1711).

Marbeck, John. (See MERBECKE.)

Marcato (Ital.), accentuated.

Marcello, Benedetto, distinguished composer and gifted poet, b. Aug. 1, 1686, Venice, of noble family, d. July 24, 1739, Brescia; he studied under Gasparini and Lotti. He devoted himself to jurisprudence, held several posts, was, at first, lawyer, then, for fourteen years, member of the Council of Forty, in 1730 *Provveditore* of Pola, where, through the bad climate, his health suffered, and not even the excellent one of Brescia, where he became *Camerlengo* in 1738, enabled him to recover. The finest work of M. is his setting of the Italian paraphrases of the first fifty psalms, by Girolamo Ascanio Giustiniani, "Estro poetico armonico" (1724-27, eight vols.; à 1-4 with continuo for organ or clavier, some of them with obbl. cello, likewise two violas; in English 1757; new Italian editions: Pompeati [without year] and Valle [1803]; a selection in German, 1865 [twelve psalms, scored by Grüneisen and Lindpaintner], another with French and Italian words about the same time [Paris, Flaxland]; the most recent complete edition [pf. score by Mirecki], was published by Carli, Paris [without year]. M. published also "Concerti grossi" à 5 (1701), clavier sonatas, "Sonate a cinque e flauto solo col basso continuo" (1712), "Canzoni madrigalesche ed arie per camera a 2, a 3, a 4 voci" (1717). Of his Pastoral, *Calisto in Orsa*, the opera *La fede riconosciuta* (*Dorinda*), and the "Intreccio" *Arianna*, only the libretti, written by M. himself, appeared in print. Finally,

there is the pamphlet "Il teatro alla moda, o sia metodo sicuro e facile per ben comporre ed eseguire le opere italiane in musica" (without year [1720?], several times republished; a severe satire on the journeymen opera-makers). A sharp criticism on a book of madrigals by Antonio Lotti ("Lettera familiare," etc.), which is ascribed to M., and a "Teoria musicale ordinata alla moderna pratica," remained in manuscript. Also the following: several cantatas, an oratorio, *Gioas*; several Masses, Lamentations, *Salve*, a *Tantum ergo* à 6 in canonic form, and an allegorical oratorio, *Il trionfo della poesia e della musica nel celebrarsi la morte, la esaltazione e la coronazione di Maria* (Personages: Poetry, Music, Soprano, Clavier, Tenor, Bass). On the other hand, M. published poems, sonnets, opera libretti, etc., which were in part set to music by other composers. According to Busi and Chilisotti, the day of his birth and death were the same (July 24). His life has been written by Sacchi (1789), by A. Boito (1881, in "Great Musicians"), and by L. Busi (1884).

March (Ital. *Marcia*; Fr. *Marche*) is music which has for its aim the regulation of the movements of a large body of men, and in this sense is allied to dance: it is, in fact, itself a kind of dance (as, for instance, in our Polonaises, or the old Entrada [*Entrée*], etc.). The M., without doubt, dates from a very early period. Already in ancient times festival processions were accompanied by music, and there is no reason to suppose that this music was not of march character. The M. was employed to more artistic purpose in Greek tragedy, when the chorus entered in measured movement, and withdrew in like manner, not indeed with instrumental accompaniment, but singing all the while. The military march is often referred back to the Thirty Years' War, but this is scarcely correct. Drums, kettle-drums, trumpets, and cross-fifes were already in use at the beginning of the 16th century, when a prince rode into a town or started on a campaign (Virdung). The army drums were especially used to mark time. The M. as a real piece of music was certainly evolved from martial songs strengthened by instruments. The form of the M. as we find it in artistic music, first in operas (Lully), and then as clavier piece (Couperin), is that of the old dance-forms (two phrases of from eight to sixteen bars with repeats). The modern M. is, as a rule, more developed, and has a trio of a melodious character. *Military marches* are either Parade marches (*Pas ordinaires*) or Quick marches (*Pas redoublés*), or, finally, Storm marches (*Pas de charge*). From the number of marches written with a fixed aim, or for a special occasion (Festival marches, "Huldigungsmärsche," Sacred marches, the latter almost always on the stage in processions, etc.), the Funeral March (*Marcia funebre*, *Marche funèbre*) stands out with special prominence.

Marchand, Louis, an esteemed performer on the organ in his day, b. Feb. 2, 1669, Lyons, d. Feb. 17, 1732, Paris. Already in 1684 he became organist of Nevers Cathedral, afterwards of the one at Auxerre, in 1697 organist of the Church of the Jesuits, Paris, and then of several churches in that city, finally court organist at Versailles. In 1717 he so compromised himself that he was exiled from France; it is well known that in the same year he entered into a musical contest with J. S. Bach at Dresden, and got the worst of it. Later on he returned to Paris, was much sought after as a teacher, and received high terms, but died in the most needy circumstances. He published three books of *pièces de clavier* and a book of organ-pieces. His clavier compositions are meritorious.

Marche (Fr.), March (q.v.).

Marchesi, (1), Luigi (also named Marchesini), famous soprano singer (evirato), b. 1755, Milan, d. there Dec. 15, 1829; he sang already in 1773 at Munich, then at Rome, Milan, Treviso, again at Munich, Padua, Florence, Naples, and as early as 1780 was looked upon as the greatest singer of Italy. He next appeared at Vienna, and in 1785 was engaged, together with Todt, under Sarti at Petersburg, whence, however, on account of the climate, he went in 1788 to London. There he sang for many years, appearing from time to time in Italy, especially at Milan. In 1806 he withdrew entirely from the stage, and lived in retirement in Milan until his death.

(2) Salvatore, Cavaliere de Castrone, Marchese della Rajata, b. Jan. 15, 1822, Palermo, of a noble family. He was an officer in the Neapolitan Guard, but, on account of his political convictions, withdrew in 1840. He studied law at Palermo and Milan, but at the same time paid diligent attention to music, especially singing, under Raimondi (Palermo), Lamperti, and Fontana (Milan), and, when exiled on account of his participation in the revolution (1848), went to America. He made his *début* in New York as Ernani (baritone), then studied in London under Garcia, made a name as concert-singer, and in 1852 married Mathilde Graumann (see below). After both had appeared for a short time on various stages (Berlin, Brussels, London, also in Italy), and with success, they were appointed teachers of singing at the Vienna Conservatorium, went from there to Paris, and still remained together when, in 1865, Mme. M. received an appointment at the Cologne Conservatorium, and also when she returned to the Vienna Conservatorium in 1869. In the autumn of 1881 they again took up their residence in Paris. M. is not only an able teacher of singing; but a composer of interesting songs (German Lieder, Italian canzonets, French romances, etc.); he has published vocal exercises and a Method of

singing, and translated several German and French operas into Italian (*Fliegender Holländer*, *Lohengrin*, *Tannhäuser*, etc.). Also as juror he drew up a report in Italian on the musical instruments at the Vienna Exhibition of 1873.

(3) Mathilde de Castrone-M. (*née* Graumann), wife of the former, b. March 26, 1826, Frankfort, studied under Nicolai at Vienna (1843) and Garcia at Paris (1845), and was already highly esteemed as a concert-singer in Paris and London when she married M. (see above). But it is as a teacher of singing that she has won lasting fame, and, without doubt, she ranks among the best living artists who have devoted themselves to that branch of art. Mme. M. has published a Method of singing, and twenty-four books of vocal exercises, universally recognised as of great excellence. She wrote "Reminiscences of my Life" (1877).

Marchesini. (See MARCHESI.)

Marchetti, Filippo, a highly esteemed opera composer in Italy, b. Feb. 26, 1835 (not 1831), Bolognola (Camerino), pupil of the Conservatorio San Pietro a Majella, Naples, made his *début* as dramatic composer in 1856 at Turin, at the National Theatre, with the opera *Gentile da Varano*, followed in 1857 at Turin and Rome by *La demente*. In spite of the success of these maiden works, he could not succeed in getting a new one, *Il Paria*, produced at Rome, and therefore soon left that city, in which he had settled as teacher of singing, and went to Milan. At first he met with similar difficulties there, but at last, in 1865, produced *Romeo e Giulietta* at the Carcano Theatre, obtaining a brilliant success, although Gounod's opera of like name was brought out at the same time at La Scala. At last the doors of that opera-house were opened to admit his *Ruy Blas* (1869), with which he made a sensation in Italy; but the work certainly only met with a cool reception at Dresden in 1879. His most recent works, *L'amore alla prova* (Turin, 1873), *Gustav Wasa* (Milan, 1875), and *Don Giovanni d'Austria* (Turin, 1880), met with small success; yet the last-named, when revived at Rome in 1885, was received with enthusiasm. Since 1881 M. has been president of the St. Cecilia Academy at Rome.

Marchettus of Padua (Marchetto is the diminutive form of Marco), learned musician about the turning-point from the 13th to the 14th century. He wrote two theoretical treatises of the highest interest: "Lucidarium in arte musicæ planæ" and "Pomerium artis musicæ mensurabilis," both of which are printed in Gerbert's "Scriptores," etc., III. They belong to a time in which an attempt was made after means to express the ideas of an art in full blossom, and they contain much that differs from the principles laid down by Johannes de Muris, who flourished a little later, and others

Marchisio, the name of two singers (sisters), Carlotta (soprano, b. Dec. 6, 1836, Turin) and Barbara (contralto, b. there Dec. 12, 1834); both made their *début* in 1851 at Venice, and sang afterwards, and with increasing success, at Florence, Milan, Naples, Rome, Parma, Paris (1859-60 at the Théâtre Italien), London, Berlin, St. Petersburg, etc. Carlotta married the Viennese singer E. Kuhn, and died June 28, 1872, at Turin. Barbara likewise married and retired from the stage.

Marcia (Ital.), march (q.v.); *marziale*, in a march-like manner: not to be confused with *marziale* (q.v.).

Marenco, Romualdo, Italian composer of operas and ballets, b. March 1, 1841, Novi Ligure. In 1873 he became director of the ballet at La Scala, Milan. M. produced his first ballets in 1869 at Genoa and Milan (up to now twenty ballets); he also brought out several operas, *Lorenzino de' Medici* (Lodi, 1874), *I Moncada* (Milan, 1880), and *Le diable au corps* (operetta, Paris, 1884).

Marenzio, Luca, famous composer, b. c. 1550-60, Coccaglio (near Brescia), was, about 1584, maestro to the Cardinal Este, then for several years, at a salary of 1,000 scudi, at the court of Sigismund III. of Poland, and from about 1595 organist of the Pope's chapel, Rome; he died there on Aug. 22, 1599, of a broken heart, it is said, because insuperable difficulties prevented his union with a relation of Cardinal Aldobrandini, whom he loved. M. is probably the most striking representative of the madrigal, but did not limit himself to that particular branch of composition. He was named by his contemporaries "Il più dolce cigno," "Divino compositore," etc. M.'s writing has in it something of the spirit of modern tonality, i.e. according to the terminology of his day, it is chromatic; he introduces, without scruple, a \sharp or \flat to obtain a smoother or more impressive modulation. The printed works of M. are as follows: nine books of madrigals à 5 (Venice, Gardano, 1580-89; many times republished; a complete edition in a quarto volume by Pierre Phalèse, 1593), six books of madrigals à 6, published by Gardano (1582-91; complete edition by Phalèse, 1610), a book of madrigals à 4-6 (1588), a book of madrigals à 4 (1592, republished 1608), a book of "Madrigali spirituali" à 5 (1584), two books of motets à 4 (1588, 1592), a book of motets à 12 (1614), a book of "Sacri concerti" à 5-7 (1616), a complete set of motets for all church festivals for a whole year (1588), complines and antiphons à 6 (1595), five books à 3 and one à 4 of "Villanelle ed arie alla Napolitana" (1584-1605). A considerable number of madrigals and motets are also to be found in the collections of Gardano, P. Phalèse, and others. Pieces in modern notation are to be found in Proske's "Musica divina," in Choron's "Principes de composition," in Padre Martini's "Contrappunto," etc.

Mares (Maresch), Johann Anton, performer on the horn, b. 1719, Choteboř (Bohemia), d. May 30, 1794, Petersburg; he studied under Hampel at Dresden, and the violin under Zika at Berlin. In 1748 he went to Russia, and lived there as Imperial chamber-musician, at first as horn-player, and in later years as cellist at St. Petersburg. M. was the inventor of the "Russian Hunting-horn Music," in which each player had only to give out one and the same note; this silly joke (a legato even of two notes is impossible in it) has long become antiquated.

Mareček, Max, b. June 28, 1821, Brünn. In 1848 he went to New York, and has contributed much to the musical development of that city by his energy in the undertaking of opera performances. M. is also a composer (operas, *Hamlet*, Brünn, 1840; *The Sleeping Hollow*, New York, 1879).

Mariani, Angelo, distinguished orchestral conductor, b. Oct. 11, 1822, Ravenna, d. June 13, 1873, Genoa, pupil of Rossini at the "Liceo Filarmónico," Bologna, was at first principal maestro at Messina (1844), Milan, and Vicenza, then, in 1847, court conductor at Copenhagen, whence, however, he hastened back to his native country in order to become a volunteer. When the war was ended, he resided for a time in Constantinople, and in 1852 held the post of maestro at the Fenice Theatre, Genoa, where he soon was accounted the best conductor in Italy. Some years later he held a similar post at the town theatre, Bologna, until he returned in 1873 to Genoa, where he died a few weeks after his arrival. M. composed some songs and cantatas, also a Requiem.

Marin, Marie Martin Marcel, famous performer on the harp and composer for his instrument, b. Sept. 8, 1769, Bayonne. He sprang from the noble Venetian family De' Marini, studied for a short time under Hochbrucker, but was, for the most part, self-taught. He travelled much, and finally settled at Toulouse (the year of his death is unknown). Fétis describes the compositions for harp of M. as "truly classical" (six sonatas, four sets of variations for harp alone, a duo with pf. and one with violin, a quintet for harp with strings, songs with harp accompaniment, etc.).

Marini, (1) Biagio, one of the earliest writers for stringed instruments in a virtuoso style, b. Brescia, lived at Venice, was from 1621-41 at the Palatine Court (received letters of nobility), and then returned to Italy; he died about 1660 at Padua. M. published a goodly series of chamber-music works (vocal and instrumental works, à 1 to 7, in accompanied style).

(2) Carlo Antonio, likewise one of the principal composers of chamber-music during the second half of the 17th century at Bergamo (chamber sonatas à 2-5 for strings with

continuo; eight works, each consisting of twelve sonatas). (Cf. MARIN.)

Mario, Giuseppe, Conte di Candia, famous opera-singer (tenor), b. 1810, Cagliari, d. Dec. 11, 1883, Rome, was at first an officer in the Piedmontese army, went in 1836 to Paris, where, in private circles, his voice attracted attention, so that finally he yielded to persuasion and went on the stage. In 1838 he made his *début* in *Robert le Diable* at the Grand Opéra, but in 1840 went over to the Italian Opera. For nearly thirty years he sang in Paris, London, and Petersburg, lived constantly and for many years with Grisi, whom he finally married, and in 1867 withdrew from the stage, residing first in Paris, afterwards in Rome.

Marius, . . . , clavécin-maker in Paris at the beginning of the 18th century. He was one of those who, independently of the first inventor (cf. CRISTOFORI), proposed, and likewise introduced, hammer mechanism for the pianoforte (Silbermann, Schröter; see PIANOFORTE). The hammer mechanism of M., according to the model drawings in the third volume of "Machines et inventions approuvées par l'Académie Royale des Sciences" (1713-19), was considerably less perfect than that of Cristofori, the prototype of the present English action. M. had also a patent for folding key-boards (*clavécin brisé*).

Marks of expression and indications of time (Ger. *Vortragsbezeichnungen*) relate: (1) to the degree of loudness or softness with which a note is produced; the most important and most usual marks relating to dynamics are:—

*For*te (f), strong, loud.

*Pia*no (p), soft.

*Mezzo*forte (mf), moderately loud.

Other gradations of tone-production are indicated by:—

Fortissimo (ff, fff), very loud.

Pianissimo (pp, ppp), very soft.

Poco forte (pf), moderately loud, from mf, intensified in the direction of forte; formerly in the sense of less loud, as mf.

Mezzopiano (mp), rather soft; not so strong as mf; stronger than p.

Sottovoce (in one word), "with soft voice," and *mezza voce*, "with half voice" (an indication, in vocal music, to sing with head voice), have about the same meaning as *piano*. *Tutta la forza*, or *fortissimo possibile*, indicates the strongest forte; the softest piano is expressed by *piano possibile*, or *pianissimo possibile*. (Cf. also MORENDO, PERDENDOSI, DILUENDO, SCEMANDO, ESTINTO.) A strong accent for a single note or chord is marked *sforzato* (sf, sfs), also *sforzando*, *forzando* (fx, still stronger, ffs); also *fp* indicates a strong accent within the piano, with immediate return to the piano. Milder accents are indicated by Λ or \succ , over or under the note. Concerning the plain dynamics of the bar, not prescribed by the composer, cf. METRE, ART OF. For

gradations of tone the following words and signs are used:—

<i>Crescendo</i> (<i>cresc.</i>)	} increasing in loudness.
<i>Accrescendo</i>	
<i>Rinforzando</i> (<i>rf.</i>)	} (—) diminishing in loudness.
<i>Diminuendo</i> (<i>dim.</i>)	
<i>Decrescendo</i> (<i>decresc.</i>)	

(2) Words for the determination of the *tempo* (the kind of movement which gives a more exact value to the relatively determined duration values of the notes) are as follows:—

Adagio (slow, quiet).
Andante (in moderate movement).
Allegro (quick, lively).
Presto (quick).

The following are almost synonymous with *adagio* (with the accessory idea of restraint):—

Largo (broad).
Lento (slow).
Grave (serious).

The following are gradations of the chief terms: *adagietto* and *larghetto* (not so slow as *adagio* and *largo*). *Andantino* (q.v.), *allegretto* (not so fast as *allegro*); *prestissimo* (faster than *presto*). The following have somewhat the same meaning as *allegro*:—

Moderato (moderately),
Con moto (with animation),
Vivace (lively),
Veloce (swift),
Agitato (agitated, almost like *presto*),
Con fuoco (with fire),
Appassionato (with passion),

and are also frequently added to the word *allegro*. The gradual transition to a slower or faster *tempo* is indicated thus:—

<i>Accelerando</i>	} quickening the time.
<i>Stringendo</i>	
<i>Affrettando</i>	
<i>Incalzando</i>	
<i>Ritardando</i>	} slackening the time
<i>Rallentando</i>	
<i>Tardando</i>	
<i>Slentando</i>	
<i>Strascinando</i>	

Slackening of the *tempo* and, at the same time, diminution of tone are indicated as follows:—

<i>Calando</i>	} slackening, failing.
<i>Mancando</i>	
<i>Deficiendo</i>	
<i>Morendo</i>	
<i>Smorzando</i>	

With regard to other general important modifications (*pian, meno, assai, non troppo*, etc.) relating to time, or to the character of a piece of music (*maestoso, scheraando, brillante*, etc.), likewise words referring to one special instrument (*glissando, martellato, vibrato, arco, pizzicato, sul ponticello, con sordino, una corda*, etc.), the separate articles must be consulted. With regard to various kinds of detached or slurred playing, cf. ARTICULATION, LEGATO, and STACCATO.

Markull, Friedrich Wilhelm, composer, b. Feb. 17, 1816, Reichenbach (near Elbing), d. April 30, 1887, Danzig, was brought up in Elbing, whither his father soon went as organist, was trained by him, and afterwards by the

organist Kloss. He studied under Fr. Schneider at Dessau (1833–35), and, in 1836, became principal organist of the Marienkirche, Danzig. He laboured there for many years as conductor of the choral society, was a teacher much sought after, and an able organist and pianoforte-player. In after years, however, he confined himself to private lessons and press work (musical critic of the *Danziger Zeitung*). M. was a diligent composer, and wrote some great, if not epoch-making, works. He met with much success, with his operas:—*Maja und Alpino* (Die bezauberte Rose, Danzig, 1843), *Der König von Zion* (1848), *Das Walpurgisfest* (Danzig, 1855, and Königsberg, 1856), and the oratorios *Johannes der Täufer*, *Das Gedächtnis der Entschlafenen* (produced at Cassel in 1856 under Spohr's direction; also printed), further with the 86th Psalm, several symphonies (one in c minor gained a prize at Mannheim), etc. Many works for pianoforte and organ, songs, a "Choralbuch" (1845), arrangements of classical works, etc., appeared in print.

Markwort, Johann Christian, writer on music, b. Dec. 13, 1778, Reisling (near Brunswick), d. Jan. 13, 1866, Bessungen, near Darmstadt; a thoughtful theorist on the art of singing. He at first studied theology, but afterwards went on the stage as tenor singer, and appeared successively at Feldsberg, Trieste, Munich, and finally Darmstadt, where in 1810 he became chorus-master until 1830, when he received his pension. His works are: "Umriss einer Gesamt-Tonwissenschaft überhaupt wie auch einer Sprach- und Tonsatzlehre und einer Gesang-, Ton- und Rede-Vortragslehre" (1826), "Ueber Klangveredelung der Stimme, über harmonisch begründete Gehörausbildung und singweis deutliche Aussprache" (1847). He also published an elementary piano Method, and wrote numerous articles on the art of singing, mimic art, etc., for the *Allg. Mus. Zeit.* (1820, etc.), Weber's "Cäcilie," the *Wiener Musikalische Zeitung*, etc.

Marmontel, Antoine François, b. July 18, 1816, Clermont-Ferrand (Puy de Dôme), pupil of Zimmermann at the Paris Conservatoire; already in 1832 he distinguished himself by winning the first pianoforte prize, and afterwards studied composition under Halévy and Le Sueur, succeeded Zimmermann in 1848 as professor of the pianoforte, in which capacity he was active for many years, and one of the most renowned teachers of the Conservatoire. He trained a great number of excellent pupils (Guiraud, Paladilhe, A. and E. Duvernoy, J. Wieniawski, Bizet, Dubois, etc.). His pf. compositions are for the most part of an instructive character:—"L'art de déchiffrer" (one hundred easy studies); "École élémentaire de mécanisme et de style" (twenty-four studies, Op. 6); studies, Op. 9, 45, 62, 80, 85; "École de mécanisme," Op. 105–107; fifty drawing-room studies, Op. 108; "L'art

de déchiffrer à 4 mains," Op. 111; sonatas, nocturnes, serenades, characteristic pieces, dances, drawing-room pieces; M. has also published some pamphlets, "Petite grammaire populaire," "L'art classique et moderne de piano" (1876, vol. i.; "Conseils d'un professeur sur l'enseignement technique et l'esthétique de piano"; vol. ii.: "Vademecum du professeur de piano" [catalogue gradué et raisonné des méthodes, etc., de piano]). He also wrote "Symphonistes et virtuoses" (1881), "Histoire du piano et de ses origines, influence de son futurac sur le style des compositeurs et virtuoses" (1885), "Virtuoses contemporains" (1882), and "Éléments d'esthétique musicale" (1885).

Marpurg, (1) Friedrich Wilhelm, celebrated musical theorist, b. Oct. 1, 1718, Seehausen in the Altmark, d. May 22, 1795, Berlin. He was at Paris in 1746, as secretary to General Rothenburg, and then made the acquaintance of Rameau and his system, lived after that for a short time at Berlin, then for several years at Hamburg, in 1763 became the director of the Royal Lotteries at Berlin, and also received the title of "Kriegsrat." M. is only represented as composer by six clavier sonatas, some books of organ and clavier pieces, sacred and secular songs, and an incomplete four-part mass (*Kyrie, Gloria, Sanctus, Agnus*), with violins, violas, and organ (score engraved). His theoretical and historical works are: "Der kritische Musikus an der Spree" (1749-50, in weekly numbers of one sheet); "Die Kunst das Klavier zu spielen" (1750-51, two vols.; several editions), "Anleitung zum Klavierspielen, der schönen Ausübung der heutigen Zeit gemäss entworfen" (1755; 2nd ed. 1765; also French [a French edition by M. himself and Dutch]: "Abhandlung von der Fuge," his most important work, and esteemed at the present day (1753-54, two parts; 2nd ed. 1806; French by M. himself, 1756; newly revised and rearranged by Simon Sechter, two vols.); "Handbuch beim Generalbass und der Komposition" (1755-58, three parts; Supplement, 1760; 2nd ed. 1762; French by Choron and Lafage, 1836-38; also in Swedish, 1782); "Historisch-kritische Beyträge zur Aufnahme der Musik" (1754-62 and 1778, five vols.; appeared in parts at irregular intervals); "Systematische Einleitung in die musikalische Setzkunst nach den Lehrsätzen des Herrn Rameau" (1757, translation of D'Alembert's "Éléments de musique," etc.); "Anfangsgründe der theoretischen Musik" (1757); "Anleitung zur Singkomposition" (1758); "Kritische Einleitung in die Geschichte und Lehrsätze der alten und neuen Musik" (1759; this only treats of ancient music); "Kritische Briefe über die Tonkunst" (1759 to 1763); "Herrn G. A. Sorgens Anleitung zum Generalbass, etc." (1760, polemical); "Anleitung zur Musik überhaupt und zur Singkunst insbesondere" (1763); "Versuch über die musikalische Temperatur" (1776); "Neue Methode, allerlei Arten von Temperaturen dem

Klaviere aufs bequemste mitzuteilen" (1779 [1790]); "Legenden einiger Musikheiligen" (1786, musical anecdotes). A "Geschichte der Orgel" remained unfinished in manuscript.

(2) Friedrich, great-grandson of the former, b. April 4, 1825, Paderborn, d. Dec. 2, 1884, Wiesbaden; in his youth a distinguished pianoforte- and violin-player, pupil of Mendelssohn and Hauptmann for composition, was capellmeister at the Königsberg Theatre, afterwards at Mayence, where in 1860 he conducted the Middle Rhenish Festival; in 1864 court capellmeister at Sondershausen, 1868 court musical director at Darmstadt, as Mangold's successor. In 1875 he went to Wiesbaden, where, in 1883, he became conductor of the Cecilian Society. He composed the operas *Musa der letzte Maurenkönig* (Königsberg, 1855), *Agnes von Hohenstaufen* (Freiburg-i.-Br., 1874), and *Lichtenstein* (unpublished).

Marqués, Miguel, modern Spanish composer in Madrid, has made a name by several Spanish operettas (Zarzuelas): *La monja al ferez*, 1875; *La cruz de fuego*, *San Francisco de Sena*, *El tocan de rancho*, 1892; also by some orchestral variations (Op. 30).

Marschner, (1) Heinrich August, celebrated opera composer, b. Aug. 16, 1795, Zittau (Saxony), d. Dec. 14, 1861, Hanover; he attended the college at Zittau, and went (1813) to the Leipzig University in order to study law; but he soon gave himself up entirely to music, and had the advantage of Schicht as teacher. In 1816 he accompanied Count Thaddäus von Amadée to Vienna, where he made Beethoven's acquaintance, and, in 1817, through the instrumentality of this same magnate, received the post of music-teacher at Pressburg. He wrote there the operas *Der Kyffhäuserberg*, *Saidor*, and *Heinrich IV. und Aubigné*, which last was produced at Dresden in 1820 by C. M. v. Weber. In 1822 M. therefore hastened to Dresden, where Weber received him in a friendly manner, and in 1824 procured him the post of musical director at the Opera. When Weber died in 1826, and M. saw no prospect of taking his place, he left Dresden and went to Leipzig as capellmeister of the theatre. There he wrote the operas *Der Vampir* (1828) and *Der Templer und die Jüdin* (1829), which speedily made his name known, and which were produced at all the great theatres of Germany. In 1831 he received the post of court capellmeister at Hanover, and laboured there for twenty-eight years, a favourite with the band, the actors and also the public. During the years of reaction, however, his favour at the court, unfortunately, grew less firm, as M. was a Liberal, and did not hide his opinions. In 1859 he received a pension with the title "Generalmusikdirector." M. married three times: Eugenie Jäggi (1819, at Pressburg), who died early; Marianne Wohlbrück (1826, at Dresden), who was engaged as vocalist at Hamburg; and, finally, Therese Janda (really Jander, 1854, at Hanover), who survived

him (she was also a vocalist, from 1838-44 pupil of the Vienna Conservatorium, from 1862-67 teacher at the same institution). M.'s most important work, at the present day the ornament of every German stage, *Hans Heiling* (libretto by Eduard Devrient), was written at Hanover, and produced there May 24, 1833, with extraordinary success. The relation of Wagner's *Fliegende Holländer* to *Hans Heiling* is at least as striking as that of *Lohengrin* to *Euryanthe*. In German opera M. is the connecting link between Weber and Wagner. With the exception of the operas named, *Vampir*, *Templer und Jüdin*, and *Hans Heiling*, no other of M.'s operas has kept the stage. The titles are:—*Der Holsdieb* (1825, Dresden), *Lucretia* (1826, Danzig), *Das Falkners Bräut* (1832, Leipzig), *Das Schloss am Aetna* (1838, Berlin), *Der Babu* (1837, Hanover), *Adolf von Nassau* (1843, Hanover), *Austin* (1851, Hanover). He wrote, besides, music to Kleist's *Prinz Friedrich von Homburg*, to Kind's *Schön Ella*, to Hall's *Ali Baba*, etc. His last work was the opera *Hjarne* (Frankfort, 1863). Apart from the stage, M. has won laurels especially in the department of song and choral song; some choruses for male voices (among which the splendidly coloured "Zigeunerleben") are still particular favourites. On the other hand, his chamber-music (trios, pf. quartet, pf. sonatas, marches for four hands, divertissements, etc.) is completely and undeservedly forgotten. An exhaustive biography of M. was prepared by Ph. Spitta (d. 1894).

(2) Franz, b. March 26, 1855; Leitmeritz (Bohemia), attended at the same time the University and the Conservatorium at Prague (Skuhersky, Lugert), was, 1883-85, under Brückner (with government stipend) at Vienna, and, since 1886, he has been professor of the lady-teachers' seminary at Vienna. M. wrote an "Entwurf einer Neugestaltung der Theorie u. Praxis des kunstgemässen Anschlags" (in pianoforte-playing), Vienna, 1888; also interesting articles on questions relating to harmony.

Marsick, Martin Pierre Joseph, distinguished violinist, b. March 9, 1848, Jupille (near Liège), pupil of the Liège Conservatoire (Desiré-Heynberg); from 1865 to 1867, at the expense of the Princess v. Chimay, at the Brussels Conservatoire under Léonard, received further training (1868-69) at the Paris Conservatoire under Massart, and finally, by means of a scholarship offered by the Belgian Government, became private pupil of Joachim at Berlin (1870-71). He made his *début* in 1873 with great success at the Paris "Concerts populaires," and since then has travelled over Europe with much success. In 1892 he became violin professor at the Paris Conservatoire as successor to Massart. M. has written a number of grateful concert pieces for violin (also three violin concertos).

Martellato (Ital., "hammered"), i.e. struck with great strength (arm staccato; pianoforte).

Martellement (Fr.), the repetition of the same note on the harp, produced on modern harps on two strings, the lower of which, by means of the pedal, is brought into unison with the upper one. In old clavier music M. stood for *Mordent* (q.v.).

Martianus Capella. (Cf. CAPELLA.)

Martin, (1) Jean Blaise, celebrated singer (baritone) of the Paris Opéra Comique, b. Feb. 24, 1768, Roncières (near Lyons), d. Oct. 18, 1837, Paris; he made his *début* at the Théâtre de Monsieur (1788), sang at the Théâtre Feydeau until 1794, then at the Théâtre Favart until it was amalgamated with the Théâtre Feydeau as Opéra Comique (1801), and at the latter until 1823. M. was a bad actor, but had a noble voice, and, in the course of time, acquired the necessary routine.

(2) Pierre Alexandre, Paris organ-builder, d. there Dec., 1879; one of the oldest harmonium-makers, and himself the inventor of several improvements, for example, of "percussion," i.e. the striking of the tongue by the hammer to obtain quicker speech.

Martin y Soler, Vicente (named by the Italians Martini "lo Spagnuolo"), b. 1754, Valencia, d. Feb. 19, 1806, Petersburg; he was at first organist at Alicante, then went to Italy, on the advice of an Italian singer for whom he had written some arias, and soon became celebrated there as a composer of operas. His first work was *Ifigenia in Aulide* (1781, for Florence); up to 1784 followed three more for Lucca, Turin, and Rome, and several ballets. In 1785 M. went to Vienna, where he achieved a triumph with his *La cosa rara*, and was received with distinction at the court of Joseph II. His works found favour there in the eyes of the public in opposition to those of Mozart, as in Italy in opposition to those of Paisiello, Cimarosa, and Guglielmi; now they are forgotten. In 1788 he accepted a call to the Italian Opera at Petersburg, was named councillor of state by Paul I. in 1798; but in 1801 the field of his activity vanished, when the French instead of the Italian Opera made its appearance at Petersburg, and he then gave lessons.

Martinez, Marianne di, b. May 4, 1744, Vienna, d. there Dec. 13, 1812, educated by Metastasio, piano pupil of Haydn, singer, pianist, and composer (oratorios, psalms, motets, symphonies, pf. concertos, etc., in manuscript, are in the possession of the Gesellschaft der Musikfreunde.)

Martini, (1) Giambattista (commonly named Padre M.), highly celebrated historian of music and master of counterpoint, b. April 24, 1706, Bologna, d. there Oct. 4, 1784. He was the son of a violinist, and received a careful musical training, first in violin-playing from his father, then in pianoforte and singing from Padre Angelo Predieri, and in counterpoint from the castrato Ricciari; the monks of the Oratorio

San Filippo Neri looked after his learning. In 1721 he passed his novitiate at the Franciscan convent at Lago, returned to Bologna, and already in 1725 became maestro di cappella at the church of San Francesco, in 1729 ordained priest. He satisfied his thirst for scientific knowledge by severe mathematical studies under Zanotti, and by intercourse with Giacomo Pertti, maestro di cappella of San Petronio, was stimulated to fruitful activity in composition. Later on M. became the highest authority in Italy in discussions concerning the history or theory of music, and pupils flocked to him from all parts; his goodness of heart as well as his learning was acknowledged by all. His life was poor in incident, but rich in deeds for art. After his death a part of his magnificent library went to the Vienna Hofbibliothek, but the greater part to the Liceo Filarmonico at Bologna. M. was a member of the academies "dei Filarmonici" at Bologna, and "dei Arcadij" at Rome; his assumed name in the latter was "Aristoxenus Amphion." The printed compositions of M. are: four-part Litanies and antiphons to the Virgin, with organ and instruments *ad lib.* (1734); two books of organ (clavier) sonatas (1742 and 1747), and a book of chamber duets (1763); several oratorios and *intermezzi* in MS. are preserved in the Liceo Filarmonico, and Masses are to be found at the San Francesco convent. Of M.'s writings the two great works deserving chief mention are: "Storia della musica" (1757, 1770, 1781, three vols.), and "Exemplaire ossia saggio fondamentale pratico di contrappunto" (1774-75, two vols.). The first only deals with ancient music; a fourth part, unfinished, treating of music in the early Middle Ages, remained in MS. The work on counterpoint is a collection of standard examples. M. wrote, besides: "Onomasticum seu synopsis musicarum græcarum atque obscuriorum vocum cum earum interpretatione ex operibus J. B. Doni" (printed in Doni's works, Vol. II.); "Dissertatio de usu progressionis geometricæ in musica" (1766); "Compendio della teoria de' numeri per uso del musico" (1769); "Regole per gli organisti per accompagnare il canto fermo" (about 1756); "Serie chronologica de' principj dell' Accademia dei Filarmonici," etc. (1777), and some occasional pamphlets (criticisms, results of discussions, etc.); Cf. Leonida Busi, "Il padre G. B. M.," one vol., Bologna, 1891, and Valle, "Memorie storiche del P. Giov. Battista M." (1785).

(2) Jean Paul Egede (M. il Tedesco), b. Sept. 1, 1741, Freistadt (Palatinate), d. Feb. 10, 1816, Paris; his real name was Schwarzenndorf, but he Italianised his name when he settled at Nancy in 1760 as teacher of music; in 1764 he went to Paris, and had the good fortune to win the prize in a competition, then taking place, for a military march; by this he gained high patronage, and was appointed officer *à la suite* of a hussar regiment. He first made use of the

leisure thus acquired by composing military marches, but in 1771 wrote an opera, *L'amoureux de quinze ans*, which made its mark at the Italian Opera. He became maître de chapelle to Prince Condé, and afterwards to the Count of Artois, and then purchased the reversionary interest in the post of royal "Intendant general de musique." The Revolution destroyed this prospect, but in 1794 M. became a member of the Committee of Tuition of the Conservatoire, and was selected for one of the posts of inspector. He lost his appointment in 1802, when the number of teachers was reduced. The Restoration (1814), finally, secured for him the post of Intendant. The compositions of M. are: twelve operas, of which nine (of these, *L'amoureux*, etc., *La bataille d'Ivry*, *Droit du seigneur*, *Sappho*, and *Ziméo*, appeared in print) were produced; two festival masses, two requiems, six two-part psalms with organ, and other sacred pieces, six quartets for flute and strings, twelve trios for two violins and 'cello, six quartets for strings, divertissements and nocturnes for pf., two violins, and 'cello, etc. His military music, also, was published.

(3) M. lo Spagnuolo. (See MARTIN Y SOLER.)

Martucci, Giuseppe, remarkable Italian composer, b. Jan. 6, 1856, Capua, pupil of the Conservatorio, Naples. He is at the present time director of the Bologna Conservatorio, and highly esteemed as conductor (in 1888 he conducted the *Tristan* performances at Bologna) and pianist. The following of his compositions deserve mention:—a pf. concerto (B flat minor, Op. 68), a pf. quintet, a trio (E flat, op. 62), a 'cello sonata (F sharp minor), a fantasia for two pianofortes, etc. M. is a strong partisan of the new German school.

Marx, Adolf Bernhard, celebrated writer on the theory and esthetics of music, b. May 15, 1799, Halle, d. May 17, 1866, Berlin; he was the son of a physician, studied law, was appointed referendary to the provincial court of Naumburg, but soon went to Berlin and devoted himself entirely to music, for which he had shown talent at an early age. Already in Halle he had made serious studies in theory under Türk (q.v.), and in Naumburg he had written the libretto and music of two operas. In Berlin he made further studies under Zelter, supported himself by private teaching, and in 1824 established the *Berliner Allgemeine Musikalische Zeitung* (Schlesinger), which he edited, until it became extinct (end of 1830), with prudence, and regard for the great German masters. In 1827 he took his degree of *Dr. Phil.* at the University of Marburg, then held lectures on music at the Berlin University, where he became professor in 1830, and in 1832 director of music. In 1850 he founded, jointly with Kullak and Stern, the (Stern) Conservatorium of Music, still existing at the present day, gave instruction in composition at this

institution, but withdrew in 1856 (Kullak had already resigned in 1855 and founded the "Neue Akademie der Tonkunst"), and from that time worked only at the University and as private teacher of composition. The compositions of M. have shown no vitality (opera, *Fery und Bätely*, 1827, at the Berlin Opera; melodrama, *Die Rache wartet*, libretto by W. Alexis, at the Königsstadt Theatre, 1829; oratorios, *Johannes der Täufer* and *Moses*; cycle of songs, "Nahid und Omar," a symphony, a pf. sonata, songs, etc.). Also his chorale- and organ-book, his "Kunst des Gesangs" (1826), and his "Method of part-singing" are already forgotten. His importance lies in his writings on the theory and esthetics of music; these show the influence of Logier, yet the ideas of the latter were treated by M. in independent fashion (M. translated Logier's Thorough-bass Method into German): "Die Lehre von der musikalischen Komposition" (1837-47, four vols.; the work was revised by H. Riemann: 1st vol., 9th ed., 1887; 4th vol., 5th ed., 1888; 2nd vol., 7th ed., 1890; the 3rd vol. is still in its 1st ed.); "Allgemeine Musiklehre" (1839; 9th ed. 1875); "Ueber Malerei in der Tonkunst" (1828); "Ueber die Geltung Händelscher Sologesänge für unsre Zeit" (1829); "Die alte Musiklehre im Streit mit unsrer Zeit" (1842); "Die Musik des 19. Jahrhunderts und ihre Pflege" (1855); "Ludwig van Beethovens Lehen und Schaffen" (1858; 3rd ed. 1875); "Gluck und die Oper" (1863, two vols.); "Anleitung zum Vortrag Beethovenscher Klavierwerke" (1863); "Erinnerungen aus meinem Leben" (1865, two vols.).

Marxsen, Eduard, b. July 23, 1806, Nienstädten (near Altona), d. Nov. 18, 1887, Altona, where his father was organist, studied at home and with Clasing at Hamburg, afterwards (1830) under Seyfried and Bocklet at Vienna, and then settled as music-teacher in Hamburg. In 1875 he received the title of "Königlicher Musik-director." M. was the teacher of Johannes Brahms.

Marziale (Ital.), martial, warlike.

Mascagni, Pietro, b. Dec. 7, 1863, Livorno, pupil of Ponchielli and Saladino at the Milan Conservatorio, conducted at various small Italian theatres, finally, was conductor of the musical society at Cernigola. M. became the hero of the day, when his one-act opera *Cavalleria rusticana* won the prize at the competition instituted by Sonzogno (first performance, Rome, May 17th, 1890). The Mascagni fever under which the world is suffering may be explained in part by the clever *réclame* of the publisher and partly by the skilfully worked libretto. The music stands on a lower level, and its merit is that it does not delay the action. The frenzy of enthusiasm, to which even critics of renown fell a prey, gradually gave way to great dismay at the deception practised, when in the works which followed—

L'Amico Fritz (Rome and Berlin, 1891) and *I Rantzau* (1892)—the weaknesses of the music were no longer concealed by the excellencies of the poem. The latest opera of M. bears the title *Ratcliff*. His first opera, *Il filanda*, was already produced at Livorno in 1881, but without success; M.'s songs are likewise unsatisfactory. The *Cavalleria* is merely a powerful step forwards in the path entered upon by Bizet in *Carmen* towards the amalgamation of the opera and the operette; a "tragic operetta" is, however, far below *Carmen*.

Maschek, Vincent, able pianist and virtuoso on the harmonica, b. April 5, 1755, Zvikovec (Bohemia), d. Nov. 15, 1831, Prague, pupil of Seegert and Dussek, made concert tours, was afterwards organist of St. Nikolaus, Prague, and finally music-seller. M. composed several Bohemian operas, besides masses, symphonies, pf. concertos, chamber music, songs, pf. sonatas, pieces for harmonica, an instrument on which his wife played, etc.—His brother Paul, b. 1761, was likewise an able pianist, and died Nov. 22, 1826, as private teacher of music at Vienna. He also tried his hand at composition in all branches.

Mason, (1) William, writer on music, b. 1724, Hull, d. April 7, 1794, Aston; accumulated the degrees of B.A. and M.A. (Cambridge), took holy orders 1755, and became canon and precentor of York Cathedral. M. published a collection of Bible texts that had been set as anthems ("A Copious Collection," etc., 1782), to which he wrote as preface, "Essay on Cathedral Music"; also essays "On Instrumental Church Music," "On Parochial Psalmody," "On the Causes of the Present Imperfect Alliance between Music and Poetry." He was also a poet (tragedies, lyric poetry), wrote a biography of Gray, and also composed some anthems.

(2) Lowell, worthy North American musician, b. Jan. 8, 1792, Medfield (Massachusetts), d. Aug. 11, 1872, Orange (New Jersey); he was for a long time president of the Handel and Haydn Society at Boston; in 1832 he founded the Academy of Music there, also started periodical conferences of music-teachers. He took the degree of Doctor of Music at New York University in 1835, made a journey through Germany (1837) for purposes of study, and published, as the result of his observations, "Musical Letters Abroad" (1853).—Two of his sons, Lowell and Henry, are founders of the firm "M. and Hamlin," an organ and harmonium manufactory at Boston. A third—

(3) William, b. Jan. 24, 1829, Boston, esteemed pianist, studied 1849-54 in Germany, under Moscheles, Dreyschock, and Liszt (pianoforte), and under M. Hauptmann and E. F. Richter (theory). After successful concert appearances at Leipzig, Prague, Weimar, London, he returned to America, first made a concert

tour through the United States, and then settled in New York, where, with Bergmann and Thomas, he arranged classical musical evenings. For some time he has ceased to play in public, but is active as teacher. He has published many pleasing pianoforte pieces, also a pianoforte Method.

Masques (Fr. *Masques*; Ital. *Ludi*) were the precursors of opera; they consisted of all kinds of allegorical and mythical scenes with singing, and luxuriant decorations, which, especially in the 16th and 17th centuries, were performed at the courts of princes and at marriage festivities. M. differ in a marked manner from the music-drama of the 17th century by the absence of monody. M. were much in fashion in England during the first half of the 17th century (W. Lawes, Lanieri, Campion, Lock, etc.; *Cf.* articles).

Mass (Lat. *Missa*; Ital. *Messa*; Fr. *Messe*; Ger. *Messe*), the portion of the Catholic service during which the consecration of the Host takes place. Before the commencement of this holy ceremony, the catechumens and penitents, who do not take part in it, are dismissed with the words "Ite, missa est (ecclesia)" ("Depart, the assembly is dismissed"). The portion (singing of psalms, sermon) of the service up to the "Ite" was therefore called "the Mass of the catechumens," that after the "Ite," on the other hand, "Missa fidelum" (Mass of the faithful). Masses, again, are distinguished as Low and High; choral singing, which, from a musical point of view, is included in the term M., only takes place in the latter. Those parts of the M. occurring between the separate portions of the service (Introit, Collects, Sermon, Epistle, Gospel, Offertory, Preface, Paternoster, Communion) are: (1) the *Kyrie*, (tripartite: *Kyrie eleison! Christe eleison! Kyrie eleison!*); (2) the *Gloria* (Doxology); (3) the *Credo* (Symbol, confession of faith); (4) the *Sanctus* with the *Benedictus*; (5) the *Agnus Dei*. (*Cf.* the respective articles.) Concerning the *Missa pro defunctis* (Mass for the dead), see *REQUIEM*. Originally these songs were sung in unison to old Gregorian melodies, such as the "Gradual Hallelujah," etc. With the blossoming of polyphonic music, and the ever-growing splendour of Catholic worship, the musical form of the M. became more artistic. In the period, therefore, of the imitative style (15th to the 16th century) it was in the M. that the masters of counterpoint showed their whole art. (See *COUNTERPOINT*.) When a reaction was brought about against extravagant refinement in composition (PALESTRINA), an attempt was made in another direction to replace scientific art, and that by increasing the number of vocal parts. Thus in the 17th and 18th centuries Masses were written in eight to twelve, sixteen to twenty-four, and even more, parts; on the other hand, the development of instrumental music gave opportunity for new combinations. The

Protestant Church has not adopted the M.; only the *Kyrie* and *Gloria* are used as so-called Short Masses (*Missa brevis*).

Massaini, Tiburcio, contrapuntist of the 16th century, b. Cremona, was at first maestro of Santa Maria del Popolo at Rome, received then his post at the court of the Emperor Rudolf II., Prague (1580), and lived afterwards again in Rome (still in 1605). His works which have been preserved are: two books of madrigals à 4 (1569, 1573), four books of madrigals à 5 (1571-94), "Sacri modulorum concentus" à 6-12 (motets, two to three choirs, 1567), Vesper psalms à 5, and Magnificats (one à 9, 1576), four books of motets à 5 (1576-94), a book of motets à 4 (1580, dedicated to Philipp de Monte), motets à 7 (1607), psalms à 6 (1578), Masses à 5 and 6 (1578), Masses à 8 (1600), Lamentations à 5 (1599), also detached pieces in collections and manuscripts in Rome.

Massart, Lambert Joseph, distinguished violinist, b. July 19, 1811, Liège, d. Feb. 13, 1892, Paris, sprang from a family of musicians, received his musical training from R. Kreutzer at Paris, was refused admission into the Conservatoire by Cherubini on account of being a foreigner. After making a name as violin-teacher in Paris, he was appointed professor of the violin at the Conservatoire from 1843-90. H. Wieniawski, Marsick, etc., were his pupils.—M.'s wife, Louise Aglaë (née Masson), b. June 10, 1827, Paris, d. there July 26, 1887, was an excellent pianist, and in 1875 succeeded Farrenc as teacher of the pianoforte at the Conservatoire. Another artist, probably a relation, Victor M., b. 1799, d. Aug. 6, 1883, Liège, was double-bass player and teacher at the Conservatoire at Liège.

Massé, Victor (really Felix Marie), French opera composer, b. March 7, 1822, Lorient (Morbihan), d. July 5, 1884, Paris. From 1834-44 he was a pupil of Zimmermann (piano) and Halévy (composition) at the Paris Conservatoire, received in 1844 the grand state prize (*Prix de Rome*) for composition for the cantata *Le renégat de Tanger*; he sent from Rome during the three years' prescribed residence there for the purpose of study, among other things, an Italian opera, *La Favorita e la schiava*; on his return he became known at first by his romances, and made his *début* as opera composer with great success in 1849 at the Opéra Comique with *La chambre gothique*; since then have appeared *La chanteuse voilée* (1850), *Galatée* (1852), *Les noces de Jeannette* (1853), *La fiancée du diable* (1854), *Miss Fauvette* (1855), *Les saisons* (1855), *La reine Topaze* (1856), *Le cousin de Marivaux* (1857), *Les chaises à porteurs* (1858), *La fée Carabosse* (1859), *Mariette la promise* (1862), *Le mule de Pedro* (1863), *Fior d'Aliza* (1866), *Le fils du brigadier* (1867), *Paul et Virginie* (1876), *Une loi somptuaire* (operetta, not performed, but printed 1879), and *La nuit de Cléopâtre* (posthumous, 1885). In 1860 M.

became chorus-director of the Grand Opéra, professor of composition at the Conservatoire in 1866, and in 1880 he retired from active life with the title of honorary professor. In 1871 he succeeded Auber as member of the Académie.

Massenet, Jules Émile Frédéric, one of the most important of modern French composers, b. May 12, 1842, Montaud, near St. Étienne (Loire); was trained at the Paris Conservatoire, where Laurent (pianoforte), Reber (harmony), and Ambroise Thomas (composition) were his special teachers. In 1863 he received the *Prix de Rome* for the cantata *David Rizzio*, and has since made his name advantageously known by a series of remarkable works. Especially may be mentioned: *Marie Madeleine* (Biblical drama in four acts, 1873, at the Odéon Theatre), *Eve* (a mystery, in three parts, 1875), *La Vierge* (Biblical legend in four scenes); the grand operas *Le Roi de Lahore* (1877), *Hérodiade* (1881), *Le Cid* (1885), and *Le Mage* (1891); the comic operas *Don César de Bazan* (1872), *Manon* (1884), the one-act *Ma grand'tante* (1867) and *Berangère et Anatole* (1876), music to De Lisle's *Les Erinnyes*, and music to Sardou's *Théodora* (1884); *Esclarmonde* (1889), *Werther* (1892), and *La Navarraise*; five orchestral suites (among which an Hungarian Suite and "Scènes pittoresques"), overtures, orchestral fantasias, pf. pieces, etc. M. is member of the Institut, and since 1878 professor of composition at the Conservatoire (successor of Bazin).

Masurisch, Masurek. (See MAZURKA.)

Masutto, (1) Giovanni, d. Jan. 1, 1894, Venice, Italian writer on music and critic of several newspapers at Venice, author of "I maestri di musica italiani del secolo XIX." (Venice, 3rd ed. 1884).

(2) Renzo, son of the former, b. April 25, 1858, Treviso, pupil of Cozzi, Del Maino, and Ferrarini (violin), Sartori and Ficarelli (piano), Giov. Rossi at Parma and Tonassi at Venice (composition). He is now bandmaster of the 27th Italian Infantry Regiment. He has appeared in public both as pianist and violinist, and gives promise as a composer (overtures, two operas, pianoforte pieces, songs).

Maszkowski, Raphael, b. 1838, Lemberg, pupil of the Vienna Conservatorium, also of that of Leipzig, in 1885 conductor of the "Im-thurneum" at Schaffhausen, in 1889 musical director at Coblenz, since 1890 conductor of the Breslau orchestral society. M. is highly esteemed as a conductor; he originally gave promise as a violinist, but in consequence of a nervous affection in his left hand had to give up violin-playing.

Matérna, Amalie, eminent dramatic singer, b. July 10, 1847, St. Georgen (Styria), daughter of a schoolmaster, after whose death she went with relations to Graz, where she sang at

first in churches and at concerts, and made her *début* as *soubrette* at the Opera. In Graz she married the actor Karl Friedrich, and both were engaged at the Vienna "Carl-Theater" (Frau M. as operetta singer), and only in 1869 did she become prima-donna at the Court Opera. One of Frau M.'s specially fine impersonations was that of Brünnhilde at Baireuth in 1876 (Wagner's *Bühnenfestspiel*). Her voice possesses wonderful dramatic tone, and is exceedingly pleasing in quality.

Mathews, William S. B., b. May 8, 1837, London, New Hampshire (North America), an esteemed teacher of music at Chicago, zealous champion of modern educational schemes (phrasing, musical dictation), author of an historico-esthetic work, "How to understand music" (two volumes, Philadelphia, 1888), of a "Popular History of Music," of a "Pronouncing Dictionary of Music," of "Outlines of Musical Form," also of "How to Teach the Pianoforte," "Twenty Lessons to a Beginner in the Pianoforte," and "First Lessons on Phrasing and Musical Interpretation." A great "Course of Piano Study" is in course of publication. M. is a diligent contributor to *The Étude*. He has also translated Riemann's "Comparative Pianoforte School" and "The Nature of Harmony" into English.

Mathias, Georges Amédée Saint Clair, excellent pianist and esteemed composer, b. Oct. 14, 1826, Paris (his father was German, a native of Dessau), studied under Kalkbrenner and Chopin, and under Halévy and Barbereau composition; from 1862 he was professor of the pianoforte at the Conservatoire, but has now given up this post and devotes himself wholly to composition. The following of his compositions deserve mention: six pf. trios; the overtures "Hamlet" and "Mazeppa"; symphonies; pf. concertos, sonatas, études (Op. 28, "Études de style et de mécanisme"; Op. 10, "Études de genre"), and other good pf. works for two and for four hands (a selection collected as "Œuvres choisies pour le piano," Brandus).

Mathieu, (1) Adolphe Charles Ghislain, *conservateur* of the Brussels Library manuscripts, b. June 22, 1804, Mons; he published a monograph on Orlando Lasso: "Roland de Latre" (1838; 2nd ed. 1840).

(2) Émile, Belgian composer, b. Oct. 16, 1844, Lille, d. Aug., 1883, Paris; pupil of the Brussels Conservatoire, where he gained several prizes. He was for some time musical director and teacher at the Academy at Louvain, but settled in Brussels in 1872, where he brought out the operas: *Georges Dandin* (1876), *La Bernoise* (1880), and the ballet *Les fumeurs de Kiff* (1876). Already as a pupil he produced a small opera, *L'échange* (1863). Also his cantata, *Torquato Tasso's doom* (Flemish) and a number of songs have made a favourable impression.

Mattei, Stanislao (Abbate M.), b. Feb. 10, 1750, Bologna, d. there May 12, 1825, pupil of Padre Martini, and succeeded him as maestro of San Francesco; afterwards maestro of San Petronio, professor of counterpoint at the Liceo Filarmónico from its establishment in 1804; Donizetti, Rossini, etc., were his pupils. He published "Pratica d'accompagnamento sopra bassi numerati" (Method of thoroughbass, 1829-30, three vols.).

(2) **Tito**, b. May 24, 1841, Campobasso; pupil of Thalberg and Raimondi. After travelling on the Continent, he settled finally in London, and became conductor at Her Majesty's Theatre. Popular pianist and composer; works, an opera, *Maria de Gand*, songs, and various pf. pieces of a light genre.

Matteis, Nicola, eminent violinist, who settled in London in 1672, and attracted notice. He published four books of solo pieces for violin ("Arie, preludj, alemande," etc. [1st and 2nd Books], and "Ayres for the Violin; to wit, Preludes, Fuges, Alemands," etc., 3rd and 4th Books); also a "Guide to playing a true Base upon the Guittare" ("The False Consonances of Musick").—His son Nicola (d. 1749) was likewise a good violinist, lived for a long time at Vienna, but settled finally in Shrewsbury as teacher of the violin and of languages; Burney was one of his pupils.

Matthäi, Heinrich August, b. Oct. 30, 1781, Dresden, d. Nov. 4, 1835, Leipzig. In 1803 he became sub-, and in 1817 principal leader (as successor to Campagnoli) of the Gewandhaus orchestra. He was esteemed as violin player and teacher.

Mattheson, Johann, highly meritorious writer on music, b. Sept. 28, 1681, Hamburg, of well-to-do parents, d. there April 17, 1764; he received an excellent education, which developed his many-sided talents, so that he could not only sing, but learnt to play on nearly all orchestral instruments. Then, after leaving school, he studied jurisprudence, and acquired English, Italian, and French. In 1697 he appeared as a singer (tenor) at the Hamburg Opera, in 1699 in the triple rôle of opera composer, singer, and conductor in his *Plejaden*. When Handel went to Hamburg (1703) M. took him under his wing, but afterwards quarrelled with him (see *HANDEL*); he sang for the last time in Handel's *Nero* (1705). In the same year he became tutor in the house of the English ambassador, with whom he made various tours, obtained in 1706 the post of secretary to the legation, and advanced afterwards to that of ambassador *ad interim*. In 1715 he became musical director and canon at Hamburg Cathedral, but, owing to deafness, was forced to give up the post of musical director in 1728, but was allowed to remain in possession of his office of canon. The amount of work accomplished by this busily occupied

man is astonishing. He composed eight operas, twenty-four oratorios and cantatas, a Passion (Brookes), a Mass, clavier suites, twelve flute sonatas (1720), etc.—altogether eighty-eight printed works (some of which are to be found in Pauer's "Old German Composers"). His writings, in which much old theoretical lumber was swept away, cleared the way for and hastened on our modern system. They are as follows:—"Das neu-eröffnete Orchester oder gründliche Anleitung, wie ein *galant homme* einen vollkommenen Begriff von der Hoheit und Würde der edlen Musik erlangen möge," etc. (1713); "Das beschützte Orchester oder desselben zweite Eröffnung" (1717, aimed at Buttstet's "Ut re mi fa sol la, tota musica"); "Das forschende Orchester oder desselben dritte Eröffnung" (1721); "*Veritophili* Beweisgründe von der Musik" (1717); "Exemplarische Organistenprobe im Artikel vom Generalbass" (1719; a second augmented edition, entitled "Grosse Generalbassschule," etc., 1731); "Kleine Generalbassschule" (1735); "Réflexions sur l'éclaircissement d'un problème de musique pratique" (1720, only the annotations are by M.); "Critica musica, das ist: gründrichtige Untersuch- u. Beurteilung vieler teils vorgefassten, teils einfältigen Meinungen," etc. (1722, two vols.); "Der neue göttlingische aber viel schlechter als die alten lacedämonischen urteilende Ephorus, wegen der Kirchenmusik eines andern belehret" (1727, against Professor Joachim Meyer of Göttingen); "Der musikalische Patriot" (1728); "De eruditione musica" (1732); "Kern melodischer Wissenschaft bestehend in den auserlesenen Haupt- und Grund-Lehren der musikalischen Setzkunst" (1737); "Gültige Zeugnisse ueber die jüngste matthesonisch-musikalische Kernschrift" (1738); "Der vollkommene Kapellmeister, das ist Gründliche Anzeige aller derjenigen Sachen, die einer wissen, können und vollkommen inne haben muss, der einer Kapelle mit Ehren und Nutzen vorstehen will" (1739); "Grundlagen einer Ehrenpforte, worin der tüchtigsten Kapellmeister, Komponisten, Musikgelehrten, Tonkünstler, etc., Leben, Werke, Verdienste, etc. erscheinen sollen" (1740); "Etwas neues unter der Sonnen! oder das unterirdische Klippen-Concert in Norwegen" (1740); "Die neueste Untersuchung der Singspiele" (1744); "Das erläuterte Selah" (1745); "Behauptung der himmlischen Musik aus den Gründen der Vernunft" (1747); "Aristoxeni junioris phtongologia systematica, Versuch einer systematischen Klanglehre" (1748); "Mithridat wider den Gift einer welschen Satire genannt, *La musica*" (1749); "Bewährte *Panacea*" (1750); "Wahrer Begriff des harmonischen Lebens; der *Panacea* zwote Dosis" (1750); "Sieben Gespräche der Weisheit und Musik samt zwei Beylagen; als die dritte Dosis der *Panacea*" (1751); "Die neu angelegte Freudenakademie" (1751);

"Philologisches Tresepiel" (1752); *Plus ultra*, ein Stückwerk von neuer und mancherlei Art" (1754); "Georg Friedrich Händels Lebensbeschreibung" (1761; translated from the English). M. wrote, besides, a large number of theological, historical, and political pamphlets, and republished Niedt's "Handleitung," with addition of sixty organ dispositions. Several fully worked-out musical treatises ("Der bescheidene musikalische Diktator," etc.) remained in manuscript. M.'s writings are of the greatest value for the study of the history of music of his time. Cf. L. Meinardus, "M. und seine Verdienste um die deutsche Tonkunst" (1878, No. 9 of the "Waldersee'schen Vorträge").

Matthias Hermann. (See HERMANN, I.)

Matthias (Matheus) Le Maître. (See LE MAISTRE.)

Matthieux, Johanna. (See KINKEL.)

Matthison-Hansen, (1), Hans, distinguished Danish organist and noteworthy composer, b. Feb. 6, 1807, Flensburg, d. Jan. 7, 1890, Roeskilde, son of a sailor, showed early talent for drawing and music, but occupied himself with the former at Copenhagen up to about his twentieth year, when C. F. E. Weyse (*q.v.*) advised him to make a serious study of music. Already in 1832 he became organist of Roeskilde Cathedral, *i.e.* one of the most sought after posts in Denmark, and one in which he greatly distinguished himself through a long series of years. In 1877 his son Gotfred (*q.v.*) became his assistant. M. wrote exclusively sacred and organ music:—an oratorio, *Johannes*, several psalms (with orchestra), church cantatas, organ preludes and postludes, chorales with variations, organ symphonies (sonatas), fantasias, etc.

(2) Gotfred, son of the former, b. Nov. 1, 1832, Roeskilde, also an excellent organist and gifted composer, first studied law at Copenhagen, but turned his attention entirely to music, and in 1859 became organist of the German Friedrichskirche in the latter city. He spent the winter of 1862–63, with the help of a stipend (Ancker Scholarship), in Leipzig, and founded at Copenhagen in 1865, together with E. Grieg, R. Nordraak, and E. Hornemann, a concert society, "Euterpe," which, however, only existed three years. In 1867 he became teacher of the organ at Copenhagen Conservatoire, exchanged his position as organist of the Friedrichskirche for that of St. John's Church, and from 1877 acted as deputy for his father. He is now organist of Trinity Church, Copenhagen. M. has made concert tours in Germany with great success ("Tonkünstlerversammlung," 1877, Hanover). Most of his compositions appeared in Germany, and of these may be named: pf. trio, Op. 5; violin sonata, Op. 11; cello sonata, Op. 16; pf. ballad, Op. 14 ("Frode Fredegod"); organ fantasia, Op. 15; "Konzert-Tonstücke" for organ, Op. 19.

Maurer, Ludwig Wilhelm, distinguished violinist, b. Feb. 8, 1789, Potsdam, d. Oct. 25, 1878, Petersburg, was a pupil of Haak, and appointed member, at the early age of thirteen, of the Berlin court orchestra; when it was disbanded, in 1806, he made a concert tour to Russia, and received, through the aid of Baillot, the post of capellmeister to the Chancellor Wsowologski. In 1817 he again made tours, and only returned to Petersburg in 1832. From 1845 he lived for a long time in Dresden. Of his compositions the quadruple concerto for four violins and orchestra spread his name and reputation, and from time to time his violin concertos and other violin compositions are still played. M. also wrote six operas (*Aloise*, 1828), now completely forgotten; also quartets, symphonies, etc.

Maurin, Jean Pierre, b. Feb. 14, 1822, Avignon, d. March 16, 1894, Paris, studied under Baillot and Habeneck at the Paris Conservatoire, from 1875 teacher of the violin at that institution, as successor to Alard. M. was an excellent quartet and solo player and teacher (one of the founders of the "Société des derniers quatuors de Beethoven").

Maxima (*Duplex longa*, ) , the longest note of mensurable music, equal to two or three Longas, according to the measure prescribed. (See MENSURAL NOTE.)

May, Edward Collet, highly esteemed teacher of popular singing, b. Oct. 29, 1806, Greenwich, d. Jan. 2, 1887, London, was a pupil of Thomas Adams, Cipriani Potter, and Crivelli, and from 1837–69 organist of Greenwich Hospital. Attracted by Hullah's lectures on popular teaching of music, he devoted himself, from 1841, to that style of teaching, and taught at many schools in London, as well as in private circles; and he trained thousands of teachers. (Cf. WILHELM.) He was afterwards appointed teacher of singing at Queen's College, London.

Mayer, (1) Charles, excellent pianist, b. March 21, 1799, Königsberg, d. July 2, 1862, Dresden, went when young with his father, a clarinet-player, to Petersburg, where he became a pupil of Field; as a finished virtuoso, he accompanied his father in 1814 on a grand concert tour to Paris, lived from 1819–50 as teacher at Petersburg, travelled in 1845 through Sweden, Germany, and Austria, and in 1850 settled in Dresden. Mayer's pf. compositions are brilliant and grateful to the player (concertos, concert pieces, fantasias, variations, études, etc., over two hundred works).

(2) Wilhelm, known under the *nom de plume* of W. A. Rémy, b. June 10, 1831, Prague, son of a lawyer, pupil of C. F. Pietsch, who, after an overture of his had been publicly performed, attended the university as *Stud. jur.*, became *Dr. jur.* in 1856, and government official, 1856–61. During this time he continued his musical studies, composed, and in 1862 gave himself

entirely up to music, and undertook the direction of the musical society at Graz. In 1870 he withdrew from this post and devoted himself to composition and teaching. Of his compositions are to be mentioned:—three symphonies; overture "Sardanapal"; symphonic poem "Helene"; orchestral fantasias, "Slavisches Liederspiel" (with two pianofortes), "Oestliche Rosen" (ditto); a concert-opera "Waldfräulein" (1876), songs, part-songs, etc. Among his pupils were: Busoni, Kienzl, Heuberger, and Weingartner.

Mayerhoff, Franz, b. Jan. 17, 1864, Chemnitz, studied at the Leipzig Conservatorium; in 1883 he became capellmeister of Lübeck Theatre, afterwards in a similar position at Memel, Tilsit; from 1884-5 again at the Leipzig Conservatorium; since then music-teacher at Chemnitz, in 1888 cantor of St. Peter's Church there, and conductor of the musical society. As a composer M. is best known by his songs and sacred choruses.

Mayerl (Maierl), Anton von, b. Bozen, and died as *Rentier*, Innsbruck, 1839, pupil of Ladurner and Ett; he was a church composer (a *Stabat Mater*, printed).

Mayr, Johann Simon, a once famous opera composer, b. June 14, 1763, Mendorf (Bavaria), d. Dec. 2, 1845, Bergamo. He was trained at the Jesuit Seminary at Ingolstadt, then went with a Swiss nobleman, De Bessus, as his tutor, to Bergamo, and placed himself under Lenzi, and to Venice, where he studied under Bertoni; he settled there, and wrote and produced numerous sacred compositions (Masses, requiem, psalms, a Passion, etc.) and the oratorios (*Jacob a Labano fugiens*, *Sisara*, *Tobia matrimonium*, *David*, *Il sacrificio di Jette*), and in 1794 his opera *Saffo* met with so favourable a reception at the Theatre della Fenice that he devoted all his energies to the stage, and wrote over seventy operas in twenty years. In 1802 he became maestro of Santa Maria Maggiore at Bergamo, and in 1805, teacher of composition at the newly established Musical Institution there. Donizetti was one of his pupils. M. was also active as a writer on music: "Brevi notizie storiche della vita e delle opere di Giuseppe Haydn" (1809). Several theoretical works remained in manuscript.

Mayrberger, Karl, theorist and composer, b. June 9, 1828, Vienna, d. Sept. 23, 1881, Pressburg, pupil of Preyer (who studied under Sechter), professor of music at the "Staatspräparandie," Pressburg. He published male choruses, songs, etc., wrote an opera, *Melusina* (1876); an opera burlesque, *Die Entführung der Prinzessin Europa* (1868); music to Oehlschlager's *Yrsa*, a "Lehrbuch der musikalischen Harmonik" (1st Part, "Die diatonische Harmonik in Dur," 1878), and "Die Harmonik R. Wagners" (Chemnitz, 1883).

Maysseder, Joseph, important violinist, teacher, and composer, b. Oct. 26, 1789, Vienna, d. there Nov. 21, 1863, received instruction from Suche and Wranitzky. Schuppanzigh took the boy at an early age into his quartet party, and exerted great influence over his further development. In 1816 M. entered the court orchestra, became solo violinist at the court opera in 1820, and chamber virtuoso in 1835. M. never made concert-tours, and but rarely gave concerts of his own (the first in 1800); nevertheless he was a distinguished master of his instrument, whom Paganini himself recognised without reserve. His violin works (concertos, variations with orchestra, ditto with stringed quartet, rondos, stringed quartets, pf. trios, violin sonatas, études, etc., in all sixty-three works) occupy a respectable position in violin literature.

Mazas, Jacques Féréol, violinist, b. Sept. 23, 1782, Béziers, d. 1849, pupil of Baillot at the Paris Conservatoire; in 1805 he received the first prize for violin-playing. In 1808 Auber wrote a violin concerto for him. M. travelled for a long time all through Europe, and, owing to his full, though sweet, tone, met with much success. He settled finally as teacher of music in Orleans, after having been for a short time solo violinist at the Théâtre du Palais Royal, Paris (1831), undertook, in 1837, the direction of the municipal school of music at Cambrai (until 1841); from that time he entirely disappeared from the eyes of the musical world. His numerous violin compositions are brilliant and effective (concertos, variations, fantasias, romances, stringed quartets, trios, violin duets [prized as teaching pieces], études, etc.). He also wrote a violin Method, with a treatise on flageolet-playing, and a viola Method.

Mazurka (*Masuwka*, *Masurisch*), a national Polish dance of chevalresque character, in triple time, frequently with limitation of the motive at the second beat, and with a first beat subdivided, or detached: $\frac{3}{4}$  and close  In old Mazurkas the basses are continuous. The movement of the M. is considerably slower than that of the waltz.

Mazzinghi, Joseph, b. Déc., 1765, London, of Italian parents, d. Bath, Jan. 15, 1844. He studied with Joh. Christian Bach, Bertolini, Sacchini and Anfossi, and (mostly in collaboration with Reeve) wrote ten operas, and some ballets and melodramas, also many pf. pieces (seventy sonatas), a Mass, hymns, and other vocal works.

Mazzochi, Domenico, native of Civita Castellana, Doctor of Civil and Criminal Law at Rome, composer of several books of madrigals and motets, etc. (1625-40). He was the

first who used the signs (<-->) for Crescendo and Diminuendo, and gives an explanation of them in the preface to his "Madrigali a 5 voci in partitura" (1640).

Mazzucato, Alberto, director of the Milan Conservatorio, composer, and critic, b. July 28, 1813, Udine (Friaul), d. Dec. 31, 1877, Milan; he originally studied mathematics at Padua, but soon turned to music, worked for some time under Bresciani, and made his *début* already in 1834 at Padua as opera composer with *La fidanzata di Lammermoor*, but, in spite of repeated attempts (*Don Chisciotte*, *Esmeralda*, *I corsari*, *I due sergenti*, *Luigi V. di Francia*, *Ernani*; an eighth, *Fede*, was not completed), did not achieve lasting success; his other compositions (songs, a Mass, Vespers, etc.) are not important. On the other hand, he was highly esteemed as a teacher; in 1839 he was teacher of singing of the girls' class at the Conservatorio, Milan; in 1851 he advanced to the post of teacher of composition, in 1852 gave lectures on esthetics and history, and, finally, in 1872 received the post of director, as successor to Lauro Rossi, who had undertaken the direction of the Royal Music School at Naples. At the same time M. was (1859-69) leader at La Scala (1854-55 actually director of the same), edited for several years the *Gazzetta musicale di Milano*, established in 1845, translated Garcia's singing Method, Fétis's treatise on harmony, Panofka's "Alcédair vocal" into Italian, published Asiol's "Principj elementari di musica," and drew up an "Atlas of Ancient Music." A treatise on musical esthetics remained in manuscript.

Measure, (1) the proportion of the width of an organ-pipe to its length, whereby a distinction is made between a *wide* (for example, Hohlflöte), *medium* (Diapason), and *narrow* (Gamba) M. The measure differs somewhat between 1 : 10 and 1 : 24. Wide measure gives a mellow tone; narrow, a sharp, grating. (Cf. REGISTER, LIP-PIPES, and REED-PIPES.)—(2) In other instruments the term applies to various proportions; for example, in the flute, to the determining of the position of the sound-holes; in stringed instruments, to the length of the strings, etc.—(3) A term now antiquated, but of great historical importance: the determination in so-called mensurable or measured music (q.v.) of the *note values* according to the time-signatures. In general, a distinction was made between *binary* and *ternary* M.: the latter was named perfect (*Mensura perfecta*, in relation to the Holy Trinity), the former, imperfect (*Mensura imperfecta*). In perfect M. a note was equal to three of the next lesser species; for example, a Long = three Breves; in imperfect only two. There were, however, many combinations of ternary and binary measure; for example, when the Long was equal to three Breves (*Modus perfectus*), but the Breve to only two Semibreves (*Tempus imperfectum*). The

ternary value of the breve was indicated by a circle (O), the binary by a semicircle (C), the latter of which has been preserved up to the present day as a sign of $\frac{1}{2}$ time.—(4) A stately dance.—(5) Time, the rhythmical division of the portion of music between two bar-lines.—(6) A bar, the portion of music lying between two bar-lines.

Mechanism, the technique of instrumental playing: training of the fingers for velocity and strength; fingering, etc. (Cf. TECHNICS.)

Mederitsch, Johann, named Gallus, b. about 1760, Bohemia, d. after 1830, from 1794-96 musical director at Ofen, lived before and afterwards in Vienna. He was a diligent composer (operettas: *Der Schlosser*, 1783; *Rose, Die Seefahrer, Die Rekruten, Der letzte Rausch, Die Pyramiden von Babylon* [jointly with P. v. Winter], music to *Macbeth*, chamber-music, pf. concertos, Masses, etc.).

Medesimo (Ital.), the same; *tempo m.*, the same tempo.

Médiant (middle tone) is the name given in the older systems of harmony to the third of the tonic, i.e. in c major: *e*; cf. DOMINANT.

Meerens, Charles, writer on musical acoustics, b. Dec. 26, 1831, Bruges; he was first trained for a cello virtuoso under Bessems (Antwerp), Dumon (Ghent), and Servais (Brussels), but then entered his father's pianoforte manufactory as tuner, and occupied himself more and more with problems relating to acoustics. In the speculative theory of music M. represents a standpoint totally opposed to that which, of late, has been generally recognised as the physiological foundation of the musical system. His writings are: "Le métronome, ou moyen simple de connaître le degré de vitesse d'un mouvement indiqué" (1859); "Instruction élémentaire de calcul musical" (1864); "Phénomènes musico-physiologiques" (1868); "Hommage à la mémoire de M. Delezenne" (1869); "Examen analytique des expériences d'acoustique musicale de M. A. Cornu et E. Mercadier" (1869); "Le diapason et la notation musicale simplifiés" (1873); "Mémoire sur le diapason" (1877); "Petite méthode pour apprendre la musique et le piano" (1878); "La gamme majeure et mineure" (1890; 2nd ed., 1892).

Meerts, Lambert Joseph, violin teacher at the Brussels Conservatoire, b. Jan. 6, 1800, Brussels, d. there May 12, 1863. He occupied himself with music at first only as an amateur, but, already at the age of sixteen, was obliged to take a post as violinist and *répétiteur* at the Antwerp Theatre. Later on, during a long residence in Paris, he derived benefit from lessons with Lafont, Habeneck, and Baillot. In 1828 he joined the town orchestra, Brussels, became, in 1832, solo violinist, and in 1835 professor of the violin, at the Brussels Conservatoire.

M.'s system of teaching was excellent; his educational works were highly esteemed ("Études pour violon avec accompagnement d'un second violon," "Mécanisme du violon," twelve studies in double-stopping; three sets of studies in the second, fourth, and sixth positions, twelve rhythmic studies on themes by Beethoven, three études in fugue-playing and staccato, six two-part fugues for violin alone, etc.).

Mees, Arthur, b. Feb. 13, 1850, Columbus (N.A.), studied under Weitzmann, Kullak, and Dorn at Berlin; he lives in New York, highly esteemed as teacher of singing and conductor.

Mehlig, Anna (married Falk), excellent pianist, b. July 11, 1846, Stuttgart, studied there under Lebert, and under Liszt at Weimar; she has gained reputation in Germany and other countries, especially in England and America (1869-70). Since her marriage she has resided in Antwerp.

Mehrrens, Fr. Adolf, pianist and director, b. April 22, 1840, Neuenkirchen, near Otterndorf-on-the-Elbe; he was for several years a school-teacher, then turned his attention to music, and from 1861-62 was pupil of the Leipzig Conservatorium. He has since lived at Hamburg as teacher of music and conductor of various societies, and since 1871, of the Bach-Gesellschaft. M. has written various vocal and instrumental works (symphony in E♭, Te Deum), and has published some small pieces.

Méhul, Étienne Nicolas, famous opera composer, b. June 22, 1763, Givet (Ardennes), d. Oct. 18, 1817, Paris. He developed at an extraordinarily early age, and already at ten was organist of the Franciscan church in his native town. He received his first instruction from a blind organist, and was then greatly assisted by the organist Wilhelm Hauser of the Lavaldieu Monastery, whom the Abbot Lissoir had brought with him from Schleussenried in Swabia. M. was received into the monastery, and became deputy-organist in 1778, but went in the same year to Paris, where, by the help of good recommendations, he found employment as teacher of music. He was presented to Gluck, who recognised his gifts for dramatic composition, and encouraged him to write for the stage. After some compositions by way of exercise (*Psyché*, *Anacréon*, *Lausus et Lydie*), his *Alonso et Cora* was accepted by the Grand Opéra; but the work was only produced six years later (1791), and had been preceded by the production of *Euphrosine et Corradin* at the Opéra Comique (1790). Already in 1792 *Syralonice* came out at the Opéra, and after some further successes, not, however, altogether of a sensational character (ballet, *Le jugement de Paris*, 1793; operas, *Le jeune sage et le vieux fou*, 1793; *Horatius Coclès*, *Phrosine et Mélidore*, 1795; *La Caverne*, 1795; and *Doria*, 1797), came a

work that was hissed, and which it was impossible to continue till the end; the reason of this rough reception was the appearance, in the fifth year of the *République*, of a king on the stage whom France honoured, *Le jeune Henri* (Henri IV.). But the overture had to be repeated thrice, and for a long time was a piece of *entr'acte* music much in vogue. Meanwhile, on the establishment of the Conservatoire (1794), one of the four posts of inspector was bestowed on M. His theoretical training was incomplete, and of the vocal exercises written by him for the Conservatoire there is not much to be said. In 1795 he was elected member of the Académie. After *Le jeune Henri* came the operas *Le pont de Lodi* (1797, *pièce d'occasion*), *La toupie et le papillon* (1797), *Adrien* (1799), *Arion* (1799), *Épique* (1800, jointly with Cherubini), *Bion* (1800), *L'irato* (1801), *Une folie* (1802), *Le trésor supposé* (1802), *Joanna* (1802), *L'heureux malgré lui* (1802), *Hélène* (1803), *Le baiser et la quittance* (1803, jointly with Kreutzer, Boieldieu, and Isouard), *Les Hussites* (1804), *Les deux aveugles de Tolède* (1806), *Uthal* (1806, without violins), *Gabrielle d'Estrées* (1806), and, finally, in 1807, the work which has made his name immortal: *Joseph*, but which, on its production, only met with a *succès d'estime*. M. did not write much after *Joseph*. The successes of Spontini threw him more and more into the shade, and he fell into a morose humour, intensified by a chest complaint, which gradually became worse. In vain, in 1817, did he seek relief in Provence; he died soon after his return to Paris. Besides the works above named, M. produced the ballets: *Le retour d'Ulysse* (1807) and *Persée et Andromède* (1810), also the operas *Les Amazones* (1812), *Le prince troubadour* (1813), *L'oriflamme* (1814, jointly with Berton, Paer, and Kreutzer), and *La journée aux aventures* (1816). His last work, *Valentine de Milan*, was completed by his nephew, Daussoigne Méhul (q.v.), and only given in 1822. *Hyppisile* (offered to the Grand Opéra in 1787), *Arminius* (1794), *Scipion* (1795), *Tancrède et Clorinde* (1796), *Sésostris*, *Agar dans le désert*, and the music to *Le Roi Cédipe* were never produced. His youthful pf. sonatas are of small importance; his symphonies, which were performed at the pupils' concerts of the Conservatoire, made no other impression than that of having been composed with diligence. On the other hand, several cantatas, hymns, and patriotic songs ("Chant du départ," "Chant de victoire," "Chant de retour," etc.) met with a good reception. As member of the Académie M. read a paper on "L'état futur de la musique en France," and "Les travaux des élèves du Conservatoire à Rome" (reprinted in the *Magasin encyclopédique*, 1808). Quatremère de Quincy (1818) read before the Académie the customary *éloge* of M. The composer's friend, Vieillard, wrote a detailed description of his life (1859), and A. Pougin wrote a comprehensive biography of 400 pages (1889).

Meibom (Meibomius), **Marcus**, learned philologist and musical theorist, b. 1626, Tönnning (Silesia), d. 1711, Utrecht, lived first in Holland, then, successively, at the Swedish and Danish courts, was for some time professor and librarian at the Upsala University, went then to Holland and France in order to sell a discovery for the improvement of war-ships, which he thought he had made whilst reading ancient history. But he found no purchaser, and then tried in England, with equally barren results, to have his revised Hebrew text of the Old Testament published; he died finally in very impoverished circumstances. M.'s famous work is "*Antiquæ musicæ auctores septem*" (1652, Greek and Latin text of Aristoxenos ["*Harmonica*"], Euclid ["*Introductio harmonica*" and "*Sectio canonis*"], Nicomachos, Alypius, Gaudentios philosophos, Bacchius the Elder, and Aristides Quintilianus; and, in addition, the ninth Book of the "*Satyricon* of Martianus Capella). Of his works there are also the following: "*Anmerkungen zu Laets Ausgabe des Vitruv*" (1649), and a dialogue, "*De proportionibus musicis*" (1655), together with some polemical pamphlets (the "*Dialogue*" was hotly attacked by Professor W. Lange of Copenhagen and J. Wallis of Oxford, and the numerous errors of M. exposed).

Meifred, **Joseph Jean Pierre Émile**, horn-player, b. Nov. 22, 1791, Colmars (Lower Alps), d. Aug. 29, 1867, Paris; from 1833-65 he was professor of the horn at the Paris Conservatoire (pupil of Dauprat). He had the merit of perfecting the valve-horn. He wrote duets for that instrument, also: "*De l'étendue, de l'emploi et des ressources du cor en général et de ses cors de rechange en particulier, avec quelques considérations sur le cor à pistons*" (1829); "*Méthode pour le cor à deux pistons*" "*Méthode pour le cor chromatique*" (with three valves); "*Notice sur la fabrication des instruments de cuivre en général et sur celle du cor chromatique en particulier*" (1851).

Meiland, **Jakob**, b. 1542, Senftenberg (in Oberlausitz), court capellmeister at Ansbach, afterwards at Celle, where he died in 1577. He was one of the best German contrapuntists of his time. He published three books 5-6, "*Cantiones sacræ*" (1564, 1572, 1573); thirty-four motets with German and Latin text (1575, composed note against note; also under the title "*Neue auserlesene teutsche Gesänge mit 4 und 5 Stimmen*" etc.); "*Sacræ aliquot cantiones latinæ et germanicæ 5 et 4 voc.*" (1575); "*Cantiones aliquot novæ . . . 5 voc.*" (1576, 2nd ed. 1588), and "*Cygneæ cantiones latinæ et germanicæ*" (1577, 5-4, his "*Swan Song*," published by E. Schell).

Meinardus, **Ludwig Siegfried**, renowned composer and writer on music, b. Sept. 17, 1827, Hooksiel (on the Oldenburg coast), where

his father was in Government service. At Jever, where he attended the Gymnasium, he received only defective instruction in 'cello-playing until 1846, when, owing to the favourable judgment of Robert Schumann, to whom, without any previous theoretical training, he had sent his essays in composition, he attended the Leipzig Conservatorium. As early as 1847 he left that institution and became a private pupil of A. F. Riccius (up to 1849). After he had been private tutor for a short time at Kaputh, near Potsdam, he went to Berlin to continue his studies, but was expelled (1850), remained then for several months in Weimar with Liszt, acted as theatre capellmeister at Erfurt and Nordhausen, and then returned to Berlin, where he studied diligently under A. B. Marx; he then conducted the Singakademie at Glogau, 1853-65, and in 1865 was called by Rietz to Dresden as teacher at the Conservatorium. In 1874 he moved to Hamburg, composing diligently, and doing active work as musical critic of the *Hamburger Korrespondent* (1874 to 1885). In 1887 he went to reside at Bielefeld. In 1862 M. received the title of "*Grossherzoglich oldenburgischer Musikdirektor*." From the goodly number of compositions by M. the following deserve mention: the oratorios *Simon Petrus*, *Gideon*, *König Salomo*, *Luther in Worms*, *Odrun*, the ballads for chorus "*Rolands Schwanenlied*," "*Frau Hitt*," "*Die Nonne*," "*Jung Baldurs Sieg*;" a "*Passionslied*" and "*Messgesänge*" à 4 for chorus and organ, several violin sonatas, a 'cello sonata, three pf. trios, a pf. quintet, several quartets for strings, an octet for wind instruments, many songs (two books of "*Biblische Gesänge*" and three books "*In der Stille*"), two symphonies, pf. pieces, among which three "*Novellen*" and three suites, etc. M. made a name as writer:—"*Kulturgeschichtliche Briefe über deutsche Tonkunst*" (2nd ed. 1872); "*Ein Jugendleben*" (1874, two vols.); "*Rückblick auf die Anfänge der deutschen Oper*" (1878); "*Mattheson und seine Verdienste um die deutsche Tonkunst*" (1879); "*Mozart, ein Künstlerleben*" (1882) and "*Die deutsche Tonkunst im 18.-19. Jahrhundert*" (1887). Two operas, *Bahnusa* and *Doktor Sassafras*, have not as yet been produced.

Meister, **Karl Severin**, b. Oct. 23, 1818, Königstein (in the Taunus), d. Sept. 30, 1881, Montabaur (Westerwald). After attending the Teachers' Seminary at Idstein from 1835-37, was employed till 1842 as assistant-teacher and organist at Montabaur, up to 1849 as teacher in Wiesbaden, till 1851 in Eibingen, and from Nov., 1851, as principal teacher of the seminary and as music director at Montabaur. He published cadenzas and preludes for the organ, hymns for male choir, a Method of modulation, and an organ accompaniment to the melodies in the Limburg Diocesan Gesangbuch. Of great importance is his work, "*Das katholische*

deutsche Kirchenlied in seinen Singweisen von den frühesten Zeiten bis gegen Ende des 17ten Jahrhunderts" (1862; continued by Bäumker; 2nd vol. 1883; 1st vol., revised edition, 1886).

Meistersänger (Ger.; "Mastersingers") was the name given to the citizens (following some trade), poets, and singers of the 14th to the 16th century, connected by their traditions with the Minnesingers. They formed societies in various German towns, with strict rules ("Tabulatur"), and various grades, in conformity with the statutes, which had to be won by trial: Scholar (Schüler), Schoolman (Schulfreund), Singer (Sänger), Poet (Dichter), Master (Meister). The subject-matter of the poems of the M. was for the most part Biblical, and its treatment somewhat homely. Poems of the M. have been preserved in large numbers; but, unfortunately, without the Weisen (melodies). The following were famous M.: Michael Behaim, Hans Rosenblüt, Hans Folz, and, especially, Hans Sachs. Mayence, Strassburg, Frankfurt, Würzburg, Zwickau, Prague, were the principal places where Mastersong was cultivated in the 14th century, and during the 15th and 16th centuries Augsburg and Nuremberg (under Hans Sachs, with over 250 Master Singers), Colmar, Ratisbon, Ulm, Munich, etc. According to tradition (Frauenlob, Regenbogen), Mayence was the cradle of Master Singing. Richard Wagner, in his "Meistersinger von Nürnberg," has given a graphic picture of the M., and one, too, based on sound historical research. Cf. J. Grimm, "Ueber den alt-deutschen Meistergesang" (1811); Schnorr von Carolsfeld, "Zur Geschichte des deutschen Meistergesangs" (1872); of older writers especially Adam Puschmann, "Gründlicher Bericht des deutschen Meistergesangs zusamt der Tabulatur" (1571), and Wagenseil, "Buch von der Meistersinger holdseliger Kunst" (1697).

Melchior, Edward A., b. Nov. 6, 1860, Rotterdam, where he lives as music-teacher. He has published "Wetenschappelyk en biografisch woordenboek der Toonkunst" (1889), which includes, more especially, many biographies of contemporary Dutch musicians.

Melgunow, Julius von, pianist and theorist, b. 1846, in the Russian government of Koscroma. He attended the Alexander Lyceum at Petersburg, turned his attention to music, and studied the pianoforte under Henselt and the two Rubinsteins. He was for some time a pupil of the Conservatoire at Moscow, then under R. Westphal (q.v.) in Moscow he studied the art of rhythm. The result of these studies was the publication of a collection of Bach Fugues and Preludes with indication of the rhythmical articulation on the lines of Westphal's system. M. also performed some of these works with the new phrasing at Leipzig, Berlin, and other places. In the matter of harmony M. is a partisan of harmonic

dualism (cf. A. v. OETTINGEN), and has published a collection of Russian popular melodies with national harmonies (using, by preference, the *pure* minor), together with a comprehensive preface (1879).

Melisma (Gk.), a melodic ornament, a grace.

Melodicon, an instrument the sounds of which were produced from a series of tuning-forks which were struck by means of keys. It was invented by Peter Riffelsen of Copenhagen in 1800.

Melodik (Gk.), the science of melody.

Melodion, a keyboard instrument in which metal bars are made to sound by a rotating cylinder. Invented in 1806 by Dietz.

Melodium-Organ, same as Alexandre-Organ. (See AMERICAN ORGANS.)

Melodrama (Gk.), formerly a drama with music, *i.e.* opera; the term is now used exclusively for declamation with instrumental accompaniment (cf. ROUSSEAU) in a stage piece, as in *Egmont* (the dream), whether as an independent work, as in Stör's music to the *Lied von der Glocke*, or as in the numerous ballads for declamation with pianoforte or orchestral accompaniment. As a rule, M. is a hybrid art-species of reprehensible esthetic character, for it is impossible to understand why the speech is not intensified so as to become recitative or something even beyond. (See DRAMATIC MUSIC.) Again, as speech uses the vocal organs, and as the voice-tones have a definable pitch, the reciter must accommodate himself as much as possible to the key and harmonies of the accompaniment, *i.e.* make good to some extent the composer's sins of omission, or there will be inevitable contradiction between the voice tones and the music. In certain cases, however, M. is justifiable, as in *Fidelio* (dungeon scene), where it appears as intensification in contrast to the singing (as Leonore says:—"What is passing within me cannot be expressed," *i.e.* "cannot be sung" in the opera).

Melody is the succession of notes mutually intelligible, just as harmony is the sounding together of such notes. The *ultimate principle of melody* is change of pitch upwards or downwards (rising and falling), and this must not be thought of as taking place by leaps, but by a steady shading off; it is only under the ban of the science of harmony that the change of pitch proceeds by degrees. Hence in melody formation of a natural kind chromatic steps which come nearest to gradual changes of pitch are used by preference; and those steps which in a well-harmonised composition are the smallest (the tone and semitone progressions) count as genuine *melodic* steps, whereas the larger ones (thirds, fourths, fifths, etc.) are generally termed *harmonic*. When the pitch is raised, there is increase of animation, and therefore intensity, and when it falls, a diminution, in

consequence, relaxation. The movement of a M. resembles then the movements of the soul when the feelings are stirred; positive movement (rise) answers to longing, yearning, striving, wishing, etc.; and negative (fall), to renunciation, faint-heartedness, introspection, calming down, etc. These elementary effects are concerned, as stated, with change of pitch, as can be clearly perceived in the howling of a storm (or in the chromatic passages in the *Flying Dutchman*, which so closely resemble it). M. as a well-ordered succession of various sounds harmonically intelligible one with the other, has suffered the loss of a part of that elementary effect for the sake of harmonic intertexture, which possesses, certainly, far higher aims (the language of melody presented in an artistic form). A science of melody-formation for practical purposes would have to concern itself about (1) the foundation of diatonic scales as a most intelligible scheme of gradation in place of a continuous change of pitch; (2) the investigations of the various meanings of a chord according to its position in a key; (3) the simplest elements of the science of musical forms (imitation). At the present time there does not exist, either in music-schools or in instruction-books, a course of instruction in melody developed systematically from fixed principles, but the elements of the science of melody are to be found in harmony books, and the higher stages in treatises on composition. Of attempts to open up such a path may be named:—J. Riepel's "Tonordnung," etc. (three parts, 1755–57–65), Nichelmann's "Die Melodie," etc. (1755), Reicha's "Traité de Mélodie," 1814 (1832); L. Bussler's "Elementar-Melodik" (1879); H. Riemann's "Neue Schule der Melodik" (1883).

Melograph (Gk.; *Pianograph*, *Eidomusikhon*, *Phantasiermaschine* [?]), a kind of mechanism for pianofortes, which puts on paper in notation, more or less exact and readable, all that is played on the instrument, so that improvisations, which one so often wishes to retain, are by this means preserved. Very many attempts to prepare good melographs have been made (Adorno, Carey, Clifton, Creed, Engramelle, Fréke, Guérin, Hohfeld, Keller, Pape, Unger, Witzels, v. Elewyck, etc.), but none have been specially successful.

Melone, *Annibale*; anagram: Alemanno Benelli (Bonelli). (See BOTTRIGARI.)

Melophone. See (HARMONIUM and ACCORDION.)

Meloplast, the name given by Pierre Galin (q.v.) to his simple method for teaching the elements of music. So as not to torture the pupil at the same time with the many kinds of notes, clefs, etc., he made, as vehicle of instruction, a table with note-lines, sang over to the pupil a well-known melody, and, for the time, replaced words by the names of the notes (*do, re, mi*, etc.), pointing out with a stick the

place on the staff for the notes in question. He gave a clear idea of rhythmical distances by means of a double metronome, which simultaneously marked whole and divided beats (*Chronométriste*).

Membrée, Edmond, French composer of operas, b. Nov. 14, 1820, Valenciennes, d. Sept. 10, 1882, at the castle of Damont, near Paris; he received training at the Paris Conservatoire in pianoforte-playing under Alkan and Zimmermann, in composition under Carafa. In 1857 he produced his first opera, *François Villon*, at the Grand Opéra, Paris, also at the Théâtre Français the choruses to *Œdipe roi*, in 1861 the cantata *Fingal*, in 1875 at the Grand Opéra *L'Esclave*, in 1876 at the Opéra Populaire *Les Parisiens*, in 1879 at the Opéra Comique *La Courte-échelle*. He also published songs, ballads, etc., and left two operas not produced, *Colomba* and *Freyghor*.

Mendel, Hermann, writer on music, b. Aug. 6, 1834, Halle-a.-S., d. Oct. 26, 1876, Berlin; he received his musical training at Halle and Leipzig, went in 1853 as apprentice into Schlesinger's music-publishing house, Berlin, served as a clerk afterwards in Bote and Bock's firm, and in 1862 founded a musical business of his own, which ceased to exist in 1868. M. was a diligent contributor to the musical papers: *Echo*, *Tonhalle*, but especially to the *Deutsche Musikerverzeitung*, which he edited from the year of its foundation (1870) up to his death, and in which, among other things, he brought out a comprehensive biographical notice of O. Nicolai. He published, besides: "G. Meyerbeer, eine Biographie" (1868), and "G. Meyerbeer, sein Leben und seine Werke" (1869; Ital. by Lazaneo, 1870); but he became widely known by the edition of the great "Musikalisches Konversationslexikon," which he began in 1870, and carried on up to the letter *M* (in Vol. VII.). A. Reissmann undertook the editing after the death of M.

Mendelssohn-Bartholdy, Jakob Ludwig Felix (usually only called Mendelssohn; the father added the name Bartholdy to his family name in memory of his brother-in-law, and to distinguish his family from the other branches), b. Feb. 3, 1809, Hamburg, d. Nov. 4, 1847, Leipzig, grandson of the philosopher and Jewish reformer, Moses Mendelssohn (d. 1786), and son of the banker Abraham Mendelssohn (from 1812 in Berlin). M. displayed musical gifts at an extraordinarily early age, and these were affectionately nourished by his well-to-do and art-appreciating parents. His mother, Leah (daughter of the banker Salomon of Berlin), gave the first pianoforte instruction to her children; it was first of all Fanny (see HENSEL), three years older than her brother, who showed great talent, and Felix soon became a rival (the brother and sister remind one in a most striking manner of Mozart and his sister Nanerl).

Also their younger sister Rebecca (b. 1811, afterwards wife of Professor Dirichlet), and their younger brother Paul (b. 1813) were musically disposed: Rebecca sang and Paul played the 'cello. Ludwig Berger soon took the mother's place as pianoforte-teacher, Hennings taught them the violin, and Zelter theory. Heyse (afterwards Professor), the father of the poet, Paul Heyse, was private tutor for languages, etc., and Rösel for drawing and painting (M. was also clever with his pencil). In 1818 Felix played for the first time at a public concert: he performed the pianoforte part of a trio by Wölfl, and with great success. In 1819 he entered the "Singakademie" as alto singer. Musical performances were held every Sunday in his father's house, on which occasions there was a small orchestra; and this was of great advantage to the boy's precocious talent for composition, for by this means he could at once bring to a hearing what he had written. M.'s regular activity as a composer dates from 1820: in that year he wrote a violin sonata, two pf. sonatas, a small cantata (*In rührend feierlichen Tönen*), a small operetta with pf. accompaniment, songs, a few quartets for male voices, etc. The ease with which he worked, and which he shared in common with the greatest masters, was then already manifest; painful worrying was unknown to him. A pf. sonata written at that time was published after his death as Op. 105. In 1821 M. made the acquaintance of Weber, for whom he displayed enthusiastic admiration, and from whom he imbibed romantic ideas; and towards the end of the same year Zelter introduced him to Goethe, who took a lively interest in the boy. In 1824, on his birthday, his fourth small opera, *Die beiden Neffen*, was performed in his father's house with orchestra; and in the name of Bach, of Haydn, and of Mozart, Zelter solemnly proclaimed the boy no longer an apprentice, but a journeyman. Already in 1816 M. had accompanied his father to Paris, whither the latter went for business purposes, and there he had the advantage of instruction from Madame Bigot; in 1825 both visited Paris for the second time, and the youth, now sixteen years of age, made the acquaintance of all the musical notabilities in that city, and played with Baillot and other artists. He was examined by Cherubini with favourable results, but the father did not accept his offer to continue the training of Felix, and returned with his son to Berlin. M. was seventeen years old (1826) when he wrote his overture to *A Midsummer Night's Dream*, which displayed the hand of a master and genuine originality, and which is not inferior to any of the works which he produced in later years (the other numbers of the *Midsummer Night's Dream* music were written fifteen years later). In 1827 he brought out his first and last opera, *Die Hochzeit des Camacho*, in the Berlin opera-house; but, in spite of the very favourable reception, it was

withdrawn (Spontini not being friendly towards him). For some years M. attended lectures at the Berlin University. A great artistic deed of M. was enacted in the year 1829, viz., the first performance since the death of Bach of the St. Matthew Passion: it took place in the "Singakademie" under his direction. In the same year M. visited England, and to this he was principally induced by Moscheles, who in 1824 spent six weeks in Berlin, and held daily intercourse with the Mendelssohn family, and even gave M. pianoforte lessons. His fame as composer first spread from London; he produced there his symphony in c minor (at a concert of the Philharmonic Society, to which he therefore dedicated it), and the *Midsummer Night's Dream* overture; both works were received with enthusiasm. After a long pleasure tour through Scotland, he returned, full of musical plans, to London; but he was detained in bed for a long time owing to an injury to his knee, so that he was unable to return to Berlin in time for his sister Fanny's wedding, and was obliged to walk for some time with the aid of a stick. In 1830 he undertook a long journey to Italy, went from there to Paris (1832), where he had an attack of cholera, then to London, where he conducted the *Hebrides* overture, which he had meanwhile completed, and played also his g minor Concerto and b minor Capriccio. He also published here the first book of his "Lieder ohne Worte." During this time Eduard Rietz, the dearest friend of his youth, his teacher Zelter, and Goethe, to whom he had paid a visit for several weeks on his way to Italy, all died. On his return to Berlin he arranged concerts for the benefit of the Orchestral Pension Fund, and conducted the *Midsummer Night's Dream*, the *Hebrides*, and *Calm Sea and Prosperous Voyage* overtures, the Reformation Symphony, the g minor Concerto, and the b minor Capriccio. He tried, but failed, to obtain the post of conductor of the "Singakademie" as Zelter's successor. (See RUNGENHAGEN.) In 1833 he was commissioned to conduct the Lower Rhenish Musical Festival at Düsseldorf; from there he visited London once again, in order to stand as godfather to Moscheles' son Felix, and conducted his "Italian Symphony." He returned to Düsseldorf, where he had been engaged as Town Musical Director, and remained there two years; he conducted, besides, the Musical Festival at Cologne in 1835. Meanwhile, however, he had accepted the post of conductor of the Gewandhaus Concerts at Leipzig, and entered on his duties in August, 1835. His rare gifts as a conductor, his comprehensive musical culture, and his importance as a creative artist quickly made him the central point of musical life in Leipzig, and through Leipzig, of all Germany, nay, even of Europe. The Gewandhaus Concerts rose to a degree of fame for which they had never previously attained, and which, after his death, they had some

difficulty in maintaining. He was powerfully supported, especially by Ferdinand David (q.v.), whom he drew to Leipzig in 1836 as leader of the band. In 1836 he was named *Dr. Phil. hon. causâ* by the University. To this period belongs also the production of his *Paulus* (Düsseldorf, May 22, 1836). The year 1837 formed a landmark in his life; on March 28 he married Cäcilie Charlotte Sophie Jeanrenaud, the daughter of a Huguenot minister, who lived with her mother in Frankfort. The marriage was a happy one, and there were five children, Karl, Marie, Paul, Felix, Lili. In 1843, jointly with "Kreisdirector" v. Falkenstein, Court Councillor Keil, the music-publisher Kistner, the lawyer Schleinitz, and the town councillor Seeburg, as directors, and Moritz Hauptmann, Robert Schumann, F. David, and Chr. A. Pohlenz, forming the first staff of teachers, M. founded the Conservatorium at Leipzig; it was under the patronage of the King of Saxony, and soon became a musical nursery of the first rank. The pecuniary basis of the undertaking was a legacy (Blümner) of 20,000 thl., at the disposal of the king for art purposes. King Friedrich Wilhelm IV. of Prussia made repeated attempts to draw M. to Berlin. In 1841 the composer accepted an engagement for a year, and went for a time to Berlin, and produced, at the king's desire, the music which he had written for *Antigone*, but he soon returned to his duties at Leipzig. Also in 1842, when he was named Royal General Musical Director, and likewise in 1845, he spent a short time in Berlin, and conducted performances of his music to *Œdipus* and *Athalia*. He remained, not reckoning short absences for concert purposes (winter of 1844-45 in Frankfort; August, 1846, in Birmingham for the first performance of *Elijah*), in Leipzig; but a shock was given to his system by the unexpected death of his loved sister Fanny, whom he survived only a few months. The merits of M. have been unduly cast into the shade by the attacks which have been made—and not without certain justification—on one side of his creative faculty, viz., melodiousness tending towards sentimentality, and this was imitated in a one-sided manner by his successors. M. was not only a divinely-gifted creative genius, whose works still enchant his hearers as they did half a century ago; but he was, above all, a man who eminently understood the works of the classical composers, and to him must be ascribed the great merit of having revived Bach. At the head of the works of M. (Op. 1-72 published during his lifetime, 73-121 after his death, besides many without opus number) stand his oratorios: *St. Paul* (1836) and *Elijah* (1846), the most important works in that branch of art since Handel and Haydn; then his concert overtures (*Midsummer Night's Dream*, Op. 21; *The Hebrides*, O. 26 [*Fingal's Cave*]; *Calm Sea and Prosperous Voyage*, Op. 27; *The Story of the Lovely Melusina*, Op. 32; *Ruy Blas*, Op. 95;

Trumpet Overture, Op. 101; also one for wind band, Op. 24); the music (choruses, etc.) to *Antigone*, Op. 55; *The First Walpurgis Night*, Op. 60; *A Midsummer Night's Dream*, Op. 61; *Athalia*, Op. 74, and *Œdipus in Colonus*, Op. 93; four symphonies (c minor, Op. 11; a minor [Scotch], Op. 56; a [Italian], Op. 90; d [Reformation Symphony], Op. 107), and a symphony-cantata, *Lobgesang*, Op. 52; also a violin concerto (Op. 64), one of the finest ever written. His two pf. concertos (g minor, Op. 25, and d minor, Op. 40) are, to say the least, great favourites; also the B minor Capriccio, Op. 22; "Rondo brillant," Op. 29; and the Serenade, Op. 43 (all three for pf. and orchestra). His chamber works take high rank; an octet for strings, Op. 20; two quintets ditto, Op. 18 and Op. 87; seven quartets, Op. 12, 13, 44 (3-5), 80, 81; a pf. sextet, Op. 110; the pf. quartets, Op. 1, 2, 3; the pf. trios, Op. 49, 66; violin sonata, Op. 4; two cello sonatas, Op. 45, 58, and a set of "Variations concertantes" for cello and pf., Op. 17; but, undeniably, the compositions for pianoforte enjoy the greatest popularity, "Lieder ohne Worte" (eight books, Op. 19b, 30, 38, 53, 62, 67, 85, 102); Capriccio, Op. 5; Characteristic pieces, Op. 7; Rondo capriccioso, Op. 14; Fantasia, Op. 15; Fantaisies, Op. 16; Caprices, Op. 33; Kinderstücke, Op. 72; Preludes and Studies, Op. 104; Albumblatt, Op. 117; Capriccio, Op. 118; *Perpetuum mobile*, Op. 119; besides four sonatas, Op. 6, 28 (Fantasia "Scotch Sonata"), 105, 106; three sets of variations, Op. 54 (*Variations sérieuses*), Op. 82 (B♭) and Op. 83 (B♭; also for four hands, as Op. 83a); *Allagro brillante*, Op. 92 (pf. duet); six preludes and fugues, Op. 35; a fugue in E minor without opus number; three preludes and fugues for organ, Op. 37; six organ sonatas, Op. 65. He wrote also eighty-three songs for voice with pf.; thirteen duets (Op. 63, 77, No. 12 in Op. 8, and three without opus number); twenty-eight quartets for mixed voices, Op. 41, 48, 59, 88, 100; twenty-one quartets for male voices, Op. 50, 75, 76, 120 ("Nachtgesang," "Stiftungsfeier," "Ersatz für Unbestand"); two concert arias ("In felice," Op. 94, and one without opus number); two festival cantatas (*An die Künstler*, for male chorus and wind band, and *Zur Säcularfeier der Buchdruckerkunst* ["Gutenberg" Cantata], for male chorus and orchestra); six "Sprüche" (anthems) for eight pt. chorus, Op. 79; five psalms (Nos. 42, 95, 98, 114, 115) for soli, chorus, and orchestra; three others (2, 22, and 43) à 8, a cappella; motets (Op. 23, for solo, chorus, and organ; three motets for female chorus and organ, Op. 39; three motets a cappella, Op. 69); "Funeral Song" for mixed chorus, Op. 116; Kyrie Eleison for double chorus; Lauda Sion, with orchestra, Op. 73; Hymn, Op. 96, for solo, chorus, and orchestra (organ); *Tu es Petrus*, à 5, with orchestra, Op. 111; two sacred songs, Op. 112; two sacred choruses for

male voices, Op. 115; fragments of an oratorio, *Christus*; fragments of the opera *Lorelei* (finale of the first act, Ave Maria, and chorus of vine-dressers); an operetta, *Son and Stranger*, Op. 89; two concert pieces for clarinet, basset-horn, and pf., Op. 113, 114; a Lied ohne Worte for cello and pf., Op. 109; a duo concertant for two pf. (jointly with Moscheles); a pf. accompaniment to Bach's Chaconne (D minor); additional accompaniments to Handel's "Dettingen Te Deum" and *Acis und Galatea*, and a great number of youthful works, among which eleven symphonies for stringed, and one for full orchestra, five small operas, etc., which are not yet published.

Mendelssohn's letters were published by his brother, Paul M.: "Reisebriefe" [1830 to 1832] (1861, two vols.), and "Briefe" [1833-47] (1863; English by Lady Wallace). There also appeared eight letters to Frau Voigt in 1871, others in Ludwig Nohl's "Musikerbriefe," and in the various biographies of the master, the most important of which are:—Lampadius, "Felix M., ein Denkmal" (1848; English by Gage), and the same enlarged as "F. M. B. ein Gesamtbild seines Lebens u. Schaffens" (1886); Benedict, "A Sketch of the Life and Works of the late F. M." (2nd ed. 1853); J. Schubring, "Reminiscences of F. M." (1866); Ed. Devrient, "Meine Erinnerungen an F. M." (1869; English by Lady Macfarren); Karl M. (eldest son of Mendelssohn), "Goethe und F. M." (1871); F. Hiller, "F. M." (1874, German and English); S. Hensel, "Die Familie M." (1879, three vols.); Felix Moscheles, "Briefe von F. M. B. an I. und C. Moscheles" (German and English, 1888), and also J. Eckardt, "Ferdinand David und die Familie Mendelssohn-Bartholdy" (1888). The number of biographies at second hand is very great, like those of A. Reissmann, E. Polko, La Mara ("Studienköpfe"), F. Gleich ("Charakterbilder," etc.). Grove's "Dictionary of Music" contains an excellent article on M.

Mendelssohn Scholarship, (1) the one in London, from a fund obtained by a performance of Mendelssohn's *Elijah* in London, under the direction of J. Benedict, in 1848; the interest of the money (as in the case of the Mozart Scholarship at Frankfort) is given as a stipend to talented young English composers. The first M. S. was held by Arthur Sullivan (1856-60), the second by C. Swinnerton Heap (1865-67); then followed W. Shakespeare (1871), Miss Crawford (1871), and E. Fanning (1873), the last two, short scholarships out of accumulated interest; F. Corder (1875), Miss Maude White (1879); E. d'Albert (1881), and Miss Marie Wurm (1884).—(2) The one in Berlin consists of a stipend of 1,500 marks for composers, and one of like amount for executive artists, and it is only granted to natives of the German empire who have studied for at least six months at a musical institution subsidised by the state.

Occasionally, however, in the case of those born within Prussian states the trustees need not consider this last condition binding.

Mengal, Martin Joseph, horn virtuoso and composer, b. Jan. 27, 1784, Ghent, d. there July 3, 1851, director of the Conservatoire; he studied at the Paris Conservatoire under Catel and Reicha, and for his chosen instrument (horn) under Duvernoy, went through the campaign in Germany from 1805-6, then became horn-player at Paris theatres, and from 1825 was theatre director at Ghent, Antwerp, and The Hague. From 1835 he undertook the direction of the Ghent Conservatoire. M. wrote several operas, much chamber-music, horn concertos, duets, etc.

Mengewein, Karl, b. Sept. 9, 1852, Zaunroda (Thuringia); from 1874-86 teacher at W. Freudenbergs Conservatorium at Wiesbaden, and from 1881-86 conductor of the Society for Sacred Music. In 1886 he founded a new Conservatorium with W. Freudenbergs at Berlin. M. wrote a vaudeville, *Schulmeisters Brautfahrt* (Wiesbaden, 1884); an overture, *Dornröschen*; a festival cantata, *Martin Luther*, a requiem, choruses for female voices, etc.

Mengozi, Bernardo, singer and opera composer, b. 1758, Florence, d. March, 1800, Paris, studied under Pasquale Potenza at Venice, first became known as a singer on Italian stages, then appeared at concerts in London and Paris. He was one of the chief ornaments of the Théâtre de Monsieur, formed by the amalgamation of the Italian Opera Buffa and the French Opéra Comique, which, however, was dissolved at the time of the Revolution. M. himself wrote thirteen operas and a ballet for the Théâtre de Monsieur (Théâtre Feydeau), the theatres Montansier, Favart, and the Théâtre National. In 1794 he became professor of singing at the newly-founded Conservatoire; the "Méthode de chant du Conservatoire" published after his death by Langlé is, in the main, his work.

Meno (Ital.), less; *m. allegro*, *m. forte*, etc.

Mensurable Music is, in fact, all music which possesses definite signs for the duration of the notes; but by the term is specially understood the notations from the time of the invention of the mensural note (*q.v.*) down to the introduction of the bar-stroke, and the period when ligatures (*q.v.*) disappeared, because in these, the same notes, according to the *measure* prescribed by the time signatures, could have various relative values. The most brilliant period of M. M. was that of the Netherlands (*q.v.*), and of their German and Italian contemporaries:—Alex. Agricola, P. Hofhaimer, Ludwig Senfl, Palestrina, A. and Joh. Gabrieli, etc. Fétis ("Biographie Universelle") and A. W. Ambros (in the second and third volumes

of his "History of Music") rendered special service to the history of M. M. The works and collections of Coussemaker have greatly facilitated the study of the theory and practice of M. M.

Mensural Note, the note of definite duration (*mensurabilis* = measurable) invented about the commencement of the 12th century, in contradistinction to the notes of *Musica plana*. (See CHORAL-NOTE.) The M. N. became necessary when a second voice (*discantus*) began to be placed over the *Cantus firmus* (tenor) of the Gregorian chant. The only mensural notes used up to the end of the 13th century were: the *Longa* ♮, *Brevis* ■, and *Semibrevis* ◆, as well as the *Duplex Longa*, or *Maxima* 𐌹. The smaller values of the *Minima* ♪ and the *Semiminima* ♪ first occur about 1300. About the middle of the 15th century white notes were introduced in place of these black, the latter colour being reserved only for the smallest note-values, and for the larger ones only for special mensural values. (See COLOR.) The signs, therefore, now received the shape: *Maxima* 𐌹, *Longa* 𐌺, *Brevis* 𐌸, *Semibrevis* 𐌶 (our whole-bar note) ♫, *Minima* (minim) ♪, *Semiminima* (crotchet) ♪ or ♪, *Fusa* (quaver) ♪ or ♪, *Semifusa* (semiquaver) ♪ or ♪; and, for a time, like the note-signs from the *semiminima*, the

pause-signs from the *Fusa* downwards wavered between ♪ or ♪ (quaver), ♪ or ♪ (semiquaver), until, finally, in both cases, the second form given became predominant. Concerning the meaning of the tied figures of M. N. cf. LIGATURE. The round form of the notes customary at the present day was already in use in the 16th century for ordinary writing (but not for calligraphy); apart from the solitary attempt made by Carpentras (1532), it was only introduced into print about 1700. Concerning the special determinations of the value of the various note-signs (measure), according to the time-signature (*Modus, Tempus, Prolatio*), and to their position between notes of longer or shorter value (Perfection, Imperfection, Alteration), also concerning Proportion, especially *Hemiochia* and *Sesquialtera*, likewise Augmentation, cf. the respective articles. A great number of old writers on theory have dealt with the subject of M. N.; for example, Franco of Cologne, Walter Odington, Hieronymus de Moravia, Marchettus of Padua, Philipp von Vitry, Johannes de Muris, Johannes Hothby, Johannes Tinctoris, Franchino Gafori, Sebald Heyden, and Heinrich Glarean. (Cf. the collections of writers on music-writers of the Middle Ages, of Gerbert, and Conssemaker.) Among modern writers, especially Ambros, H. Beller-mann, G. Jacobsthal, and H. Riemann have written on M. N. (See biographies). The Kyrie from Hobrecht's Mass, *Ave Regina Caelorum*, may serve as a specimen of M. N. :—

Mensural Theory. (See MENSURAL NOTE.)

Menter, (1) Joseph, famous 'cellist, b. Jan. 19, 1808, Deutenkofen (Landshut), d. April 18, 1856, Munich; he was first a member of the court band at Hechingen, and from 1833 of the court orchestra at Munich. M. made concert tours through Germany, Belgium, England, Austria, etc., and thus became known as a celebrated virtuoso.

(2) Sophie, daughter of the former, b. July 29, 1846, Munich, is a highly-distinguished pianist, studied under Fr. Niest (Munich), Bülow, and Liszt, and in 1872 married the 'cellist Popper (divorced in 1886). She was for several years (until 1887) lady professor at the Conservatoire, Petersburg, and now lives, during the intervals between her concert tours, at her country seat Itter in the Tyrol.

Menuett. (See MINUETTO.)

Merbecke (the name is thus written in Grove's "Dictionary," and not Marbeck, as in Fétis, Mendel, etc.), John, organist of St. George's Chapel, Windsor, Calvinist, condemned to death in 1544 for heresy, but was pardoned, passed Mus. Doc. degree, Oxford, in 1550; d. 1585. He is the author of the "Booke of Common Prayer Noted" (1550), the first musical setting of the Anglican Liturgy (reprinted in facsimile 1844; also in 1845 by Rimbault, and in 1857 by Jebb in the second volume of "Choral Responses and Litanies"). A mass of M. has been preserved in Burney's "Musical Extracts" (manuscript), also a hymn à 3 in Hawkins's "History of Music."

Mercadante, Giuseppe Saverio Raffaele, gifted Italian opera composer, b. June 26, 1797, Naples, d. there Dec. 17, 1870; he studied under Zingarelli at the Real Collegio di Musica, Naples (the outcome of the amalgamation of former conservatoria); he made his *début* in 1818 at the Teatro del Fondo with a cantata, and in 1819 at the San Carlo Theatre with the opera buffa *Violenza e Costanza*. With increasing success he now composed opera after opera (altogether about sixty) for Rome, Bologna, Milan, Venice, Vienna (1824), Madrid (1827), Lisbon (1829), Paris (1836), etc., always residing, according to the custom of Italian opera composers, in the city for which he was writing. In 1833 he became maestro of the cathedral at Novara, in 1839 filled a similar post at Lanciano, and in 1840 director of the Royal School of Music at Naples. In Novara he lost the sight of one eye and the other became affected; in spite of this, he continued to compose and dictate. In 1862 he became totally blind. Of M.'s operas *Elisa e Claudio* (1821), *La donna Caritea* (1826), *I Normanni a Parigi* (1831), *Ismaïlia* (1832), and *Il Giuramento* (1837) appeared in pf. score; also numerous detached arias, duets, etc., from other operas. In addition to works for the stage, M. wrote about twenty

masses, a cantata, *Le sette parole*, for four solo voices, chorus, and strings; psalms, motets, two *Tantum ergo* à 5 with orchestra, and other sacred pieces, several "homage" cantatas, hymns (one to Garibaldi, 1861), fantasias and characteristic pieces for orchestra ("Il lamento dell' Arabo," "Il lamento del bardo," "L'aurora," "La rimembranza," etc.), several *Omaggi*, i.e. funeral symphonies—a *Donizetti*, a *Beilini*, a *Rossini*, a *Pacini*—violin romances and other instrumental pieces, innumerable songs, and many solfeggi for the Naples Conservatorio.

Mercadier, Jean Baptiste (M. de Belesta, thus named from his birthplace), b. April 18, 1750, Belesta (Department Ariège), d. Jan. 14, 1815, Foix; an engineer, and in his leisure hours, musical theorist. He wrote "Nouveau système de musique théorique et pratique" (1776, dedicated to D'Alembert), a work which certainly criticises the systems of Tartini and Rameau severely, yet strongly inclines to that of the latter.

Méreaux, (1) Jean Nicolas Amédée Lefroid de, b. 1745, Paris, d. there, 1797, organist and opera composer, wrote for Paris, 1772-93, nine operas and vaudevilles (seven performed), also several oratorios, cantatas, etc.

(2) Joseph Nicolas Lefroid de, son of the former, b. 1767, Paris, organist and pianist, wrote sonatas for piano alone and with other instruments.

(3) Jean Amédée Lefroid de, son of the former, b. 1803, Paris, d. April 25, 1874, Rouen, a meritorious pianist and writer on music, pupil of Reicha, published (1867) a valuable collection of old clavier music, "Les clavicinistes de 1637 à 1790." He composed a number of pf. works, also vocal and church pieces.

Merk, Joseph, distinguished performer on the 'cello, b. Jan. 18, 1795, Vienna, d. there June 16, 1852, studied under Schindlöcker, from 1818 principal 'cellist at the Vienna Court Opera, in 1823 teacher of his instrument at the Conservatorium of the "Gesellschaft der Musikfreunde;" in 1834 imperial chamber virtuoso. M. made a name by his many concert tours at home and abroad; he published a concerto, a concertino, several concert pieces, variations, also two books of études (Op. 11, Op. 20) for his instrument, which are highly esteemed.

Merkel, (1) Gustav Adolf, distinguished organist, b. Nov. 12, 1827, Oberoderwitz (near Zittau), where his father was teacher and organist, d. Oct. 30, 1885, Dresden; he studied under J. Otto (counterpoint) and Joh. Schneider (organ) at Dresden; and he was indebted to K. Reissiger and R. Schumann for further progress and encouragement. After he had been for some years teacher at a Dresden school, he became organist of the "Waisenhauskirche," the Kreuzkirche, and in 1864 court organist of the Catholic court church: from

1867-73 he was conductor of the Dreyssig Singakademie, and from 1861 teacher at the Dresden Conservatorium. M. was an excellent organ-player, and important as composer for the organ. He published nine organ sonatas (Op. 30 [for four hands, with double pedal], 42, 80, 115, 118, 137, 140, 178, 183), an organ Method, Op. 177, thirty pedal studies, Op. 182, three organ fantasias, and many chorales, fugues, etc. With the sonata Op. 30 he gained a prize, from the Mannheim "Tonhalle"; he also published pf. pieces, songs, motets, an organ school, etc.

(2) Karl Ludwig, Dr. Med., professor at the Leipzig University, occupied himself with deep researches into the functions of the vocal organs, and published: "Anatomie und Physiologie des menschlichen Stimm- und Sprachorgans" ("Anthropophonik" [1856, 2nd ed. 1863]), "Die Funktionen des menschlichen Schlund- und Kehl-köpfes" (1862).

Merklin, Joseph, famous organ-builder, b. Jan. 17, 1819, Oberhausen (Baden), pupil of his father, the organ-builder at Freiburg; he worked with Walcker of Ludwigsburg, and settled in 1843 at Brussels, where he obtained a medal from the National Exhibition in 1847. In the same year he received his brother-in-law, F. Schütze, into his business: the latter became a partner, and in 1853 the firm was extended into "M., Schütze and Company." In 1855 they bought the manufactory of Ducrocquet (see DAUBLAINE) in Paris, and kept up two great factories, one in Brussels, one in Paris. From 1858 they traded under the title, "Établissement anonyme pour la fabrication des orgues, établissement M.-Schütze." At the present day the house of M.-Schütze is well known all over the world; from among the great number of organs they have built the most important are those of the Cathedral at Murcia and of St. Eustache, Paris.

Mersenne, Marie, Franciscan monk in Paris, b. Sept. 8, 1588, Oizé (Department Maine), d. Sept. 1, 1648, Paris; with the exception of three tours to Italy (1640-45), he led a quiet life, corresponded with well-known savants of his time, viz. Doni, Huygens, Descartes, etc., and was especially active in philosophy, physics, and music. The writings of M., in spite of lack of critical acuteness and genuine scientific knowledge, are priceless mines for the musical history of the 17th century, especially his chief important work, "Harmonie universelle" (636-37, two folio volumes of over 1,500 pages, with numerous illustrations and music examples; the work contains, among other things, a *Traité des Instruments*, detailed descriptions and illustrations of all the instruments of the 17th century). Not to be confounded with this work is the "Traité de l'harmonie universelle" (487 pages), which appeared in 1627, and which must be regarded only as a forerunner of the principal work. The following must be looked

upon in a similar light: "Questions harmoniques" (1634); "Les préludes de l'harmonie universelle" (1634); "Harmonicorum Libri XII." (1635 [1636]; augmented edition 1648). His earliest work, "Questiones celeberrimæ in Genesin" (1623) treats principally of the music of the Hebrews. Also his "Questiones theologiques, physiques, morales, et mathématiques" (1634), "Les mécaniques de Galilée" (1634), and "Cogitata physico-mathematica" (1644, three vols.) contain matter relating to music.

Mertens, Joseph, Belgian composer, b. Feb. 17, 1834, Antwerp, principal violinist of the Opera there, and violin-teacher at the Conservatoire. Since 1866, in Antwerp, Brussels (where from 1878-79 he conducted the Flemish Opera), and in Holland he has produced a series of Flemish operas, mostly of one act; and these have been favourably received by his own countrymen. *De zwarte capitain* (1877), which alone found its way to Germany, there met with but little success. The following of his compositions are also known: an oratorio, *Angelus* (1876), many songs, and instrumental works of various kinds.

Mertke, Eduard, pianist and composer, b. June 7, 1833, Riga, lived as teacher of music at Wesserling (Alsace), Lucerne, and, finally, Mannheim, until, in 1869, he was appointed teacher of the pianoforte at the Cologne Conservatorium. Of his compositions the following became known: an opera, *Lisa oder die Sprache des Herzens* (produced at Mannheim, 1872); a cantata, *Des Liedes Verklärung* (printed); a collection of Russian folk-songs, pf. pieces, technical studies for piano, also an edition of Chopin's works.

Merula, Tarquinio, one of the first composers for violin, and improver of the technique of this instrument, about 1628 church concert leader at Cremona, afterwards in his native place, Bergamo. He published, commencing in 1623, besides several volumes of masses, motets and madrigals with instruments: "Canzoni ovvero sonate per chiesa e camera a 2 e 3" (four books, 1623-51); his *Concerti spirituali* of 1628, also the "Pegaso musicale" of 1640, likewise contain some sonatas.

Merulo, Claudio, famous organist and composer, b. beginning of April (baptised April 8), 1533, Correggio (hence called "Da Correggio"), d. May 4, 1604, Parma; his real name was Merlotti, but he called himself M. He received his first musical training from a French musician, Menon, then from Girolamo Donati; he was, at first, organist at Brescia, and became in 1557 organist of the second, and in 1566 of the first, organ of St. Mark's, Venice (successor of Annibale Padovano). In this high post he remained until in 1586 the Duke of Parma, Ranuccio Farnese, persuaded him to become his court organist. His vocal compositions which have been preserved are: two books of

madrigals à 5 (1566 [1579, 1586], 1604); a book each of madrigals à 4 and 3 (1579-80); two books of motets à 5, *Sacra cantiones* (1578); three books of motets à 6 (1583 [1595], 1593, 1606); "Ricercari da cantare a 4 voci," 2nd and 3rd books, 1606, 1608 (the last published by M.'s grandson, Hiacinto M.); a book of "Canzoni alla francese" (1592), of which the library of the University of Upsala contains a copy. The importance of M. as musical historian lies, however, in his organ compositions, the oldest monuments of instrumental music, since it acquired an independent style: "Toccate d'intavolatura d'organo" (1604, two books), and "Ricercari d'intavolatura d'organo" (1605). (Cf. CATLANI "Memoire, etc." [1859].)

Merz, Karl, b. Sept. 10, 1836, Bensheim (near Frankfurt-a.-M.), d. 1890, Wooster (Ohio), went to Philadelphia in 1853, and afterwards lived in various American towns, highly respected as a music-teacher. Articles by M. appeared as "Music and Culture," &c.

Mess. (See GREEK MUSIC V. [p. 300].)

Messa di Voce, not to be confused with *mezza voce*, is the name given to the Italian singing method for the slow production of sound swelling to fortissimo and diminishing to pianissimo, ——— over a long note. The M. d. V. is one of the most important studies for singers. (See VOICE FORMATION.)

Messanza (Ital.), Quodlibet.

Messel (Arabic, "measure"). This was the name given by the Arabic-Persian theorists (Mahmud, Schirasi, etc.) to their particular mode of determining musical intervals: they named the lower note of an interval a multiple of the higher (according to string-length); for example, the M. for the octave whose lower note requires a string of double the length of that of the higher = 2 (2 M.), for the fifth = $\frac{3}{2}$ (M. + $\frac{1}{2}$), etc. The messel theory is of the highest interest, because, at a time when the West held fast to the Greek theory of intervals, it had already established the consonance of the third, the minor third, even of the major and minor sixth (in the 14th century, if not much earlier). (Cf. Kiesewetter's "Die Musik der Araber und Perser," also the necessary corrections with regard to that work by Riemann, "Studien zur Geschichte der Notenschrift," pp. 77-85.)

Mestdagh, Karel, b. Oct. 22, 1850, Bruges, pupil of Waelput, Gbeluwe and Gevaert, composer (overture, *Les noces d'Attila*; festival overture, chorus with orchestra: "Lenzfeier" and "Vrijheidshymne").

Mesto (Ital.), sad.

Mestrino, Niccolò, violinist and conductor, b. 1748, Milan, d. Sept. 1790, Paris; he was at first solo violinist in the band of Prince Esterhazy, then in that of Count Erdödy; and

he made a name by his concert tours through Italy and Germany. He went to Paris in 1786, and played at the *Concert spirituel* with great success; he remained in that city as teacher of his instrument, and in 1789 undertook the conductorship of the Théâtre de Monsieur. M. published twelve violin concertos, a number of violin duets (Op. 2, 3, 4, 7), études and caprices for violin alone, and sonatas for violin and figured bass.

Metamorphoses (Gk.), transformations; generally used as a title for variations.

Metastasio, Pietro Antonio Dom. Bonaventura, the most famous and most prolific librettist, b. Jan. 13, 1698, Assisi, d. April 12, 1782, Vienna; his real name was Trapassi, but he was induced by his patron, Gravina, to Hellenise his name. Of his poems in connection with musical drama the following have to be mentioned: "Didone abbandonata," "Siface," "Siroe," "Catone in Utica," "Ezio," "Serramide riconosciuta," "Alessandro nell'Indie," "Artaserse," "Demetrio," "Adriano in Siria," "Issipile," "Olimpiade," "Demofonte," "La Clemenza di Tito," "Achille in Sciro," "Ciro riconosciuto," "Temistocle," "Zenobia," "Attilio Regolo," "Ipermestra," "Antigone," "Il rè pastore," "L'Eroe Cinese," "Nitteti," "Il trionfo di Clelia," "Romolo ed Ersilia," "Ruggero," further, the "Feste teatrali," "Azioni teatrali," "Drammatici componimenti, etc." "La contesa de' Numi," "Enea negl' Elisei," "L'asilo d'amore," "Le Cinesi," a "Componimento drammatico" without title (1735, set to music by Caldara), "Le Grazie vendicate," "Il palladio conservato," "Il sogno di Scipione," "Il Parnasso accusato e difeso," "La pace fra la virtù e la bellezza," "Aстреa placata" (serenade), "Il natale di Giove," "L'amor prigioniero," "Il vero ommaggio," "La rispettosa tenerezza," "L'isola disabitata," "Tributo di rispetto e d'amore," "La gara," "L'innocenza giustificata" (pastorale, 1755, for Gluck), "Il sogno," "Alcide al bivio," "Tetide" (serenade), "L'inverno" (pastorale), "Atenaide," "Egeria," "Il Parnasso confuso," "Il trionfo d'amore," "La corona," "Partenope"; the cantatas: "La festività del santo natale," "La danza," "Augurio di felicità," "Il quadro animato," "L'armonica"; and the oratorios ("azioni sacre"): "La passione di Gesù Christo," "S. Elena al Calvario," "La morte d'Abele," "Giuseppe riconosciuto," "La Betulia liberata," "Gioia," "Isacco." Nearly all these works have been many times set to music, and they are associated with the names of the most celebrated Italian composers.

Methfessel, (1) Albert Gottlieb, favourite song composer, b. Oct. 6, 1785, Stadtilm (Thuringia), d. March 23, 1869, Heckenbeck (near Gandersheim); in 1810 chamber-musician at Rudolstadt, in 1822 musical director at Ham-burg, 1832-42 court capelmeister at Brunswick.

Besides songs and part-songs, especially for male voices ("Liederbuch," "Liederkranz"), many of which are still sung by Liedertafel societies, he published also pianoforte pieces, sonatas (one for four hands), and sonatinas. He also wrote an opera, *Der Prinz von Basra*, and an oratorio, *Das befreite Jerusalem*.—His brother (2) Friedrich (b. Aug. 27, 1771, Stadtilm, d. there May, 1807, as a student of divinity), published songs with guitar and with pf. accompaniment.—A younger relation, (3) Ernst M., b. 1802, Mühlhausen, d. Nov. 19, 1878, as musical conductor in Berne, after occupying a similar post at Winterthur [1837] and at Zürich, published compositions for oboe, songs, etc.—Another of the same name, (4) Ernst M., b. May 20, 1811, died Jan. 20, 1886, as musical conductor at Winterthur.

• **Métra**, Jules Louis Olivier, favourite dance-composer, b. June 2, 1830, Rheims, d. Oct. 22, 1889, Paris, son of an actor; he followed in his father's footsteps, but turned to music, and played at various small Paris theatres the violin, 'cello, or double-bass, as occasion required. Not until 1849 did he enter the Conservatoire as harmony pupil of Elwart, received in 1854 the first prize of the class, and was advanced to the composition class of A. Thomas; but he soon gave up serious study, and became conductor at the Théâtre Beaumarchais. As such he published, in 1856, his first waltz, "Le tour du monde," which was speedily followed by a great number of mazurkas, polkas, quadrilles, etc., which made him enormously popular. He now became successively orchestral conductor at several ball salons (Robert, Mabille, Château des Fleurs, Athénée musical, Elysée-Montmartre, Casino-Cadet, and Frascatti); and when, in 1871, the Opéra Comique arranged masked balls, the direction of them was entrusted to M. From 1872-77 he was *chef-d'orchestre* at the Folies-Bergère, conducted from 1874-76 the balls at the Théâtre de la Monnaie, Brussels, and afterwards conducted the ballet at the Grand Opéra, Paris. From 1872-77 he wrote for the Folies-Bergère eighteen operettas and ballet-divertissements, and brought out in 1879 at the Grand Opéra a grand three-act ballet, *Yedda*, which, however, was not very successful.

Metre, Art of. This is the name given in the art of poetry to verse-measurement (Metre), transferred already by the theorists of Grecian antiquity to musical rhythm (Aristoxenos). The opinion that rhythm was not transferred from poetry to music, but that it had its origin in music, and was only displayed and presented theoretically by union with speech in verse has recently led to an attempt to point out the principles of metrical (likewise rhythmical) art in their pure and original form. Indeed, during a long period a simple system of musical measure (for that indeed is the meaning of metre),

a *time-system*, has been evolved from the practical art-system of the last centuries, which differs in a marked manner from the art of metre derived from poetic forms and handed down to us from a remote period, such as Rudolf Westphal has recently attempted to resuscitate and make binding on us. The time-system differs in so far as it proceeds from much simpler structures than the art of metre in speech, which is drawn from living speech with its syllables of various values.

The nature of musical art has itself directly created the necessity for a progressive measure-determination for the duration of notes. On the one hand, the works of plastic art (architecture, sculpture, painting) present themselves in space, to the eye of the spectator, one with the other, enabling him to receive a total impression, and then to examine this and that detail; musical art-works, on the other hand, gradually built up in temporal course (successively) from small atoms, present themselves gradually to the imagination of the hearer (also to the reader), and it is impossible to survey their larger proportions otherwise than by the help of memory; while on the degree of power and training of the latter musical art-enjoyment depends. Thus if the enjoyment of the works of plastic art is essentially of an *analytical* character, that of music is essentially *synthetical*. It is not sufficient for the notes, harmonies, and melody phrases which follow one another to be perceived and strung together, but this stringing together must represent some continued relationship by means of analogies, contrasts, etc. First of all, it is manifestly impossible for the memory to retain without articulation a movement of a sonata or symphony, and then, as in the works of plastic art, to analyse it in detail: all lines become effaced, and the details are no longer reducible, unless during the process of listening they can be perceived in their order according to rules of art.

The necessity which thus arises for sharp perception of the rapidly vanishing tone-picture demands also a physiognomy as sharply marked as possible, clear design, and an easily-intelligible form through which the ideal contents are revealed. The means of which musical art makes use to communicate its ideas are: pitch, intensity, and duration of sounds. With the relationship of sounds with regard to pitch, and the laws by which the mind of man connects sounds of various pitch and combines them into tone-pictures, the theories of harmony and melody are concerned, while those of metre and rhythm have, on their side, to investigate what share the various durations of tone have in the determination of musical form; finally, the science of dynamics establishes how far, on the one hand, the varied intensity of sound supports the two other means of determining form, and, on the other, how far the

artistic idea is revealed by it in an immediate and elementary manner.

The articulation of the temporal course of a piece of music by regular pulse-beats takes place, first of all, so that the changes of pitch occur especially at the beginning of such time-sections. The first symmetry, the first synthetical formation of a metrical kind is, therefore, the bar motive consisting of two counts, thus 2 ♩ | ♩. That note, within such narrow limits, on which stress is laid, is pointed out in notation by having a bar-stroke placed before it. Such a unity of two (at first only of two) beats is called a *bar*; the points of stress of bar motives, rendered evident to the ear by the highest point of the dynamic shading, are then to be regarded as beats of a higher order, and they are as capable of a similar combination towards a higher unity as the simple ones. The next point of stress of higher order is the so-called *accented bar*, i.e. the bar which answers to a preceding one, and which is perceived as symmetrical with it. In notation the accented bar is only indicated when, instead of the bar with two beats ($\frac{2}{2}$), the one with four (C; $\frac{4}{4}$) is chosen, i.e. the bar-stroke has its place not before the accented of two, but before the accented of four beats. This combining together for larger formations can be pursued still further, i.e. as the second bar stress appears of more weight than the first; so again the fourth than the second, the eighth than the fourth. This growth of stress importance known to the musician as increased *cadential power*; and symmetry, the correspondence alluded to, necessarily renders this cadential power metrical. The effect of close absolutely depends on the moment of entry of that beat which thus forms the point of stress of a bar group establishing symmetry.

With the theory of measure established on such a basis, triple time appears less natural because the form is not completely symmetrical. But it has only to be remembered that even in duple time there is a slight dwelling on the accented beat, in order that the form may become clear. A motive 3 ♩ | ♩ does, therefore, not appear to be a very important modification of 2 ♩ | ♩: the doubling of the duration of

the accented note must be regarded as a mode of writing, a particular character given to the note; the irrational increase of duration is changed, in the simplest conceivable manner (by the addition of a beat), into a rational one.

On this new basis, musical metre appears to be the *science of symmetries*, the smallest of which are represented by the bars as defined above (a bar = 2 or 3 counts or beats), whereas the greatest consist of periods divisible into a fore and an after phrase. Larger forms must not be regarded according to their purely metrical structure, but rather according to the

grouping of the thematic contents. Simple movements in song-form are frequently worked out in strict symmetrical eight-bar periods; but the master displays his art in breaking through such rigid regularity by intentional, and, as such, intelligible deviations. The most frequent alterations are:—(a) an accented bar, and, mostly, one possessing in a marked degree cadential power (4th, 8th), changed into an unaccented bar, by commencing a new thematic formation instead of the expected close;—(b) *Cadence Repetitions*, after the usual symmetrical limit has been reached (a joining together of formations, for the most part of two bars, or even one bar after the eighth or sixteenth bar, practically a confirmation of cadential effect); (c) Prolongation of a close by an *intensified imitation* of the last member of the symmetrical phrase, whereby this imitation appears both as a second member to the one preceding, and as a first to the one following (often by transposition of the cadence formation into another key [modulation.]) (d) *Extensions* of every kind, especially in the responsive portion of the symmetry, to obtain a somewhat broader effect; and these are usual and of long standing; by such extension (supported, of course, by harmonic and melodic means) two unaccented bars frequently take the place of one, so that the effect of a close is delayed for the length of a bar [a bar-triplet]; also greater extensions are possible (four bars in place of two, and even more, especially if there is the help of a sequence formation with its effect of suspense). In regard to these matters cf. Riemann, "Musikalische Dynamik und Agogik" (1884); and "Katechismus der Kompositionslehre" (1889; an English edition will appear shortly); also his phrasing editions, in which the metrical structure is clearly exposed. (See also E. Prout's "Musical Form" [1893], which is partly based on Riemann's theory.)

Metronome (Gk., "time-measurer"), a pendulum with a movable weight, and a scale indicating, according to the position of the weight, how many movements to and fro the pendulum makes in a minute. The M. serves to determine exactly the *tempo* in which the composer desires that his work shall be performed; it is, therefore, an invention of the highest importance, since *allegro*, *andante*, etc., do not determine speed in a very precise manner. The M. now used everywhere is the one patented by Maelzel (1816), yet not actually his invention (see MÄLZEL); and that instrument is referred to by composers in their indications M.M. ♩ = 100, etc. (the minims of the duration of one beat of the pendulum, when the weight is placed at 100, i.e. 100 per minute). Similar, but more or less imperfect attempts had previously been made by Loulié, Stöckel, and others.

Mettenleiter, (1) Johann Georg, Catholic church composer, b. April 6, 1812, St. Ulrich

(near Ulm), d. Oct. 6, 1858, as *regens chori* and organist of the Collegiate Church at Ratisbon. He composed numerous sacred vocal works (masses, hymns, a Stabat Mater, etc.), which, with the exception of the 59th Psalm for six male voices, remained in manuscript. He published at Ratisbon: "Enchiridion chorale, sive selectus locupletissimus cantionum liturgicarum juxta ritum S. Romanæ ecclesiæ," etc. (1853), and "Mannale breve cantionum ac precum" (1852), both with added organ accompaniment. (Cf. "J. G. M., ein Künstlerbild," by Dr. Dominicus Mettenleiter [1866].)

(2) Dominicus, *Dr. Theol.* and *Phil.*, b. May 20, 1822, Tannhausen (Württemberg), d. May 2, 1868, Ratisbon, was a contributor to his brother's "Enchiridion," and, on his own account, published: "Musikgeschichte der Stadt Regensburg" (1866), "Musikgeschichte der Oberpfalz" (1867), also a sketch of the life of J. G. Mettenleiter (*q.v.*). His rich musical collection was acquired for the Bishop's Library at Ratisbon, and united with that of Proske's.

(3) Bernhard, a cousin of the former, lives as *regens chori* at Kempten (Bavaria), also a composer of sacred music (a Stabat Mater printed).

Metter la voce, same as *Messa di voce*.

Metzdorff, Richard, composer, b. June 28, 1844, Danzig, son of a horn-player (afterwards horn professor at the Petersburg Conservatoire), Gustav M. (b. May 16, 1822, Wehlau, from 1868 court musician in Brunswick), studied in Berlin under Fl. Geyer, Dehn, and Kiel, and acted as capellmeister at various theatres (Düsseldorf, Berlin, Nuremberg, Hanover). M. has earned a good reputation with two symphonies (F and D minor), an overture to *King Lear*, also pf. pieces and songs. His grand opera, *Rosamunde*, was given at Weimar in 1875.

Metzler & Co., firm of music-publishers in London, founded by Valentine M. about 1790 for the sale of musical instruments. In 1816 they started in addition a publishing department, and later on became agents for Mason and Hamlin's famed American organs.

Metzler-Löwy, Pauline, b. about 1850, Theresienstadt, was first engaged in Altenburg, afterwards, from 1875 to 1887 at the Leipzig Stadttheater as contralto. In 1881 she married Ferdinand Metzler, piano-teacher. She is a much-esteemed concert singer.

Meursius, Johannes, learned philologist, b. Feb. 9, 1579, Loozuinen (near The Hague); in 1610 professor at Leyden and historiographer to the General States of Holland, afterwards professor at the Academy at Sorø (Denmark), where he died on Sept. 20, 1639; he published, besides many historical and philological works: "Aristoxenos, Nikomachos, Alypios" (1616, Greek text with Latin comments), also "Orchestra, sive de saltationibus veterum" (1618).

Meusel, Johann Georg, writer on music, b.

March 17, 1743, Eyrichshof, d. Sept. 19, 1820, as professor of history at Erlangen; he published "Deutsches Künstlerlexikon" (1778, 1789, two vols.; 2nd ed. 1808-9; supplement 1814); "Das gelehrte Deutschland" (1783, up to 1784, four vols.; supplements 1786-88, three vols. This is the fourth edition of the work commenced by Hamberger, and only continued by M.; the fifth appeared 1802-20, seventeen vols.); "Deutsches Museum für Künstler und Liebhaber" (1772-89, newspaper); "Miszellaneen artistischen Inhalts," 1779-83).

Meyer, (1) Joachim, professor of music, later also of law and history at Göttingen, b. Aug. 10, 1661, Perleberg (Brandenburg), d. April 2, 1732, Göttingen. He made an attack on the church cantatas then coming into vogue, "Unvorgreifliche Gedanken über die neulich eingerissene theatralische Kirchenmusik" (1726); Mattheson, on the other hand, wrote "Göttingischer Ephorus," and M. replied with "Der anmassliche hamburgische Criticus sine crisi," etc. (1728).

(2) Leopold von, pianist, b. Dec. 20, 1816, Baden (near Vienna), d. March 6, 1883, Dresden, studied under Czerny and Fischhof; from 1835 he made extensive concert tours through Europe, lived for some time in Constantinople, went in 1845 to America, returned in 1847, and settled in Vienna.

(3) Jenny, excellent singer and teacher of singing, b. March 26, 1834, Berlin, d. there July 20, 1894; she made a name as concert singer, was from 1865 teacher of singing at the Stern Conservatorium, Berlin, and from 1888 owner and directress of that institution.

(4) Waldemar, violinist, b. Feb. 4, 1853, Berlin, pupil of Joachim, from 1873-81 member of the Berlin Hofkapelle; he has since devoted himself to public playing, and has become known as a tasteful, talented violinist.

Meyer-Helmund, Erik, b. ca. 1860, Petersburg. He is known as the composer of light, taking songs, to most of which he has written the words; also two of his operas have recently been produced, *Margitta* (Magdeburg, 1889), and *Der Liebeskampf* (Dresden, 1892).

Meyer-Lutz, Wilhelm, b. 1829, Münnersstadt, near Kissingen; he studied under Eisenhofer and Keller at Würzburg, has lived since 1848 in England, where he was successively organist at Birmingham, Leeds, and London (St. George's Roman Catholic Church); at the same time he has filled the post of conductor at the Surrey Theatre (1851-55), and since 1869 at the Gaiety Theatre. He is known as composer for the church (masses) and for the stage (up to 1887 eight operas); he has also written much chamber-music.

Meyer-Olbersleben, Max, b. April 5, 1850, Olbersleben, Weimar, teacher at the Royal School of Music at Würzburg. He is a gifted composer (songs, pf. pieces, chamber-music).

Meyerbeer, Giacomo (Jakob Liebmann Beer, the addition of the name Meyer was the condition on which he received a rich inheritance left to him by a relative of that name), b. Sept. 5, 1791 (not 1794), Berlin, d. May 2, 1864, Paris. M. was the son of a wealthy Jewish banker, and, as he showed talent for music from an early age, was carefully trained by Franz Lauska, pupil of Clementi, and received pianoforte lessons for a short time from Clementi himself, also from Zelter. He studied composition under capellmeister Bernh. A. Weber, pupil of Abt Vogler, and from 1810-12 under the master himself at Darmstadt; K. M. von Weber and Gansbacher were his fellow-pupils under the latter. In Darmstadt he wrote, among other things, an oratorio, *Gott und die Natur*, and the opera *Jephthas Gelübde*; the former was produced at the Berlin "Singakademie," the latter at the Munich Court Theatre (1813), but without any particular success. A second opera, *Abimelek* (*Die beiden Kalifen*), already made its way from Stuttgart to Vienna (1813-14), and later, under the title *Wirt und Gast*, to Prague and Dresden (where Weber was capellmeister); yet still the road to success was toilsome. M., annoyed at his slow progress, devoted himself heart and soul to the pianoforte, prompted thereto by Hummel, whom he heard in Vienna. He also had the satisfaction to find that as a pianist he met with general recognition and admiration. It was Salieri who gave him the hint that to write a successful opera he must learn something more than the art of counterpoint, and that this something more could best be obtained in Italy. In 1815 M. travelled to Venice. Rossini's star was beginning at that time to shine with clear brilliancy (*Tamcred*), and M. soon discovered what he lacked: melody and temperate vocalisation. He soon cast aside learned Darmstadt pedantry, threw himself into the arms of the attractive Italian muse, and speedily won some success with *Romilda e Constanza* (Padua, 1818), *Semiramide riconosciuta* (Turin, 1819), *Emma di Resburgo* (Venice, 1819; produced in Germany under the title *Emma von Leicester*), *Margherita d'Angiù* (Milan, at La Scala, 1820), *L'esule di Granata* (Milan, 1822), and *Il crociato in Egitto* (Venice, 1824). An opera, commenced in 1823, *Almanzor*, remained unfinished, as M. was prevented by illness from getting it ready in time for the stage. A German opera, *Das Brandenburger Thor* (1821), which he wrote for Berlin, was not accepted, although M. visited that city in 1824. On that occasion he met Weber, who was exceedingly angry to find that his fellow-student had become an Italian. It appears that Weber's reproach fell upon good ground, for after the *Crociato*, which, already before the journey to Berlin, had been put in rehearsal, M. wrote no more Italian operas, and was silent for more than six years (this may, however, be explained by family matters: M.'s father died, and the

composer married, and within a few years lost two children). The Protean nature of M., his extraordinary powers of assimilation again were active during the pause (1824-30), and for the last time. As in Italy he had become an Italian composer, so now in Paris, where he settled in 1826 for the purpose of staging the *Crociato*, and which for the following sixteen years he made his headquarters, he became French; German in harmony, Italian in his art of melody, French in that of rhythm—such is the M. as he revealed himself after this second transformation. All his earlier operas vanished soon after their production, and only the *Crociato* held the boards for a certain time; on the other hand, M. made a decided, sensational, but lasting success with his first French opera, *Robert le Diable*, which was produced at the Grand Opéra November, 1831; and he not only established his reputation as composer, but founded a new era of financial prosperity for the Grand Opéra. The success of *Les Huguenots* (1836) was still greater than that of *Robert*; after the former was produced at Berlin, in 1842, Friedrich Wilhelm IV. named M. "General musical director," and the composer removed to Berlin. For that city he wrote, in 1843, *Das Feldlager in Schlesien*, an opera which, however, only achieved a brilliant success when, in 1844, Jenny Lind took the part of Vielka; he afterwards used a great portion of the music for the opera *L'Étoile du Nord*, which was produced at the Opéra Comique, Paris, in 1854. Already in 1838 he had commenced *L'Africaine* (libretto by Scribe), but let it lie, as he had many objections to the libretto; in its place he wrote *Le Prophète* in 1848 (libretto also by Scribe), which, however, was only produced in Paris in 1849; *Dinorah*, or *Le Pardon de Ploërmel*, followed in 1859 at the Opéra Comique; *L'Africaine* only appeared after his death (at the Grand Opéra, Paris, April, 1865; at Berlin, Nov., 1865). During the last fifteen years of his life M.'s health was uncertain, and he was compelled every year to take the waters at Spa: death overtook him in Paris, whither he had betaken himself to arrange the rehearsals for the production of *L'Africaine* at the Grand Opéra.

M.'s importance lies in his operas, and will die with them. In spite of many moments of undoubted nobility, they are losing their hold—at any rate, on the German public—more and more; the hollowness of M.'s pathos becomes ever more glaring. The playing with dynamic contrasts, which was pursued by M. so willingly for the sake of effect, and without satisfactory motives; the all too perceptible arrangement of solo and concerted numbers with a view to applause; and other means which he adopted to ensure success, will not stand before a searching, esthetic analysis. M., in any case, possessed eminent musical gifts, and had acquired perfect

mastery in handling forms and in the means of expression; but he lacked that high conception of his artistic calling which would have enabled him to make effect a means, and not an end. Besides the operas mentioned, M. wrote incidental music to the tragedy *Struensee* of his brother, Michael Beer (overture and entr'actes), perhaps his finest work (performed at Berlin in 1846), the choruses to the *Eumenides* of Æschylus, a festival play, *Das Hoffest von Ferrara* (both for Berlin); and a monodrama, *Thevelindens Liebe*, for soprano solo, chorus, and clarinet (a youthful work). In addition, he wrote orchestral works, of which the best-known are:—three Torch Dances ("Fackeltänze") for wind band (composed for the weddings of the King of Bavaria and of the Princesses Charlotte and Anna of Prussia); the Schiller Festival March (1859), an Overture (march) for the inauguration of the London Exhibition of 1862, and the Coronation March for King Wilhelm I. He wrote a cantata for the unveiling of the Gutenberg memorial at Mayence, and one for the silver wedding of Prince Charles of Prussia, a serenade for the wedding of Princess Louisa of Prussia, a festival hymn for the silver wedding of the royal pair; a hymn, "An Gott;" cantata, *Der Genius der Musik am Grabe Beethovens*; seven sacred Odes of Klopstock (à 4 and a cappella); ode to Rauch (the sculptor), for soli, chorus, and orchestra; "Freundschaft" (à 4 for male chorus), the 91st Psalm (à 8, for the Berlin Domchor), and a "Paternoster" (à 4 with organ). Twelve psalms for double choir, a Miserere, Stabat, and Te Deum remained in manuscript. In addition to these works, there are a series of songs with pf. accompaniment (about forty), one with cello obl. ("Neben dir"), one with clarinet obl. ("Des Schäfers Lied"), and one with horns ("Des Jägers Lied"); a canon à 3 ("Dichters Wahlspruch"), etc., and many pf. compositions (youthful works), which, however, are not printed. A. de Lassalle (1864), A. Pougin (1864), H. Blaze de Bury (1865), H. Mendel (1868; an epitome of the same in 1869), J. Schucht (1869), and others wrote biographies of M.

Meyerbeer Scholarship. G. Meyerbeer left in his will a legacy of 10,000 thalers, the interest of which was to be devoted every two years (1,000 thl.) to talented young German composers (under twenty-eight years of age), to enable them to reside for six months, for the purpose of study, successively in Italy, Paris, likewise in the German cities of Vienna, Munich, and Dresden (these three together, six months). For the scholarships are eligible only: the pupils of the Berlin royal academical "Hochschule für Musik" (branch for composition), of the Stern Conservatorium, and of the Cologne Conservatorium (formerly also those of the Kullak Akademie, and the private pupils of A. B. Marx and Flodoard Geyer). The judges include members from the

musical section of the Berlin Akademie, the two principal court capellmeisters, and the directors of the Stern and Kullak Conservatoria. To obtain the scholarship, a vocal fugue for eight-part, double choir (text and theme given), an overture for full orchestra, and a dramatic cantata for three voices, with orchestra (text given), must be written. During the holding of the scholarship, a fragment of an opera or oratorio, and an overture or symphonic movement must be sent, as proof of diligence, to the "Königliche Akademie." The following have held the scholarship: 1867, Wilhelm Claussen, of Wismar; 1871, Julius Butts, of Wiesbaden; 1874, Otto Dorn; 1877, Arnold Krug; 1881, E. Humperdinck.

Mézeray, Louis Charles Lazare Costard de, maître de chapelle at the Grand Théâtre, Bordeaux, b. Nov. 25, 1810, Brunswick, d. May, 1887, Asnières (near Paris), son of an official of the French Government, who afterwards (after the Restoration) became opera singer at Strassburg. Already at the age of fifteen M. became *repétiteur* at the Strassburg Opera, where, about the same time, he produced a small opera, *Le Sicilien, ou l'amour peintre*; and at the age of seventeen became maître de chapelle of the Liège Theatre and conductor of the Conservatoire Concerts there, and of the Grétry Concerts. He became in 1830 principal capellmeister at the Court Theatre, Hague, where in 1832 he produced an heroic opera, *Wilhelm von Nassau*; he then occupied similar posts at Ghent, Rouen, and Marseilles. For some time he was stage-singer (baritone) at Bordeaux, Montpellier, Antwerp, and Nantes, and finally became, in 1843, principal maître de chapelle at the Grand Théâtre, Bordeaux, which through his efforts attained a high reputation. He also founded in Bordeaux a Cecilia society (concerts, pension fund, etc.).

Mezzo (Ital.), middle, half, e.g. *mezzoforte* (mf.), half-loud; *mezzopiano* (mp.), somewhat soft; *mezza voce* (m.v.), with half-voice; *mezza manica*, the half-shift, or second position in playing on stringed instruments: for example, on the *a*-string the first finger touches not *b*, but *c*.

Mezzo legato (Ital.), "half-legato"), also called in Italy *Legato staccato*, is the specially brilliant mode of touch in pianoforte-playing which, like *Leggiero*, is the result of a blow, and not of pressure, but differs from it in that the player's chief aim is not the rapid drawing back of the finger, but the production of a nervous touch (beating, throbbing).

Mezzo soprano (Fr. Bas-dessus) is the name given to the voice (of boys or women) between soprano and contralto, just as baritone lies between tenor and bass. As there are baritone voices of two widely-differing kinds of timbre—tenor-baritone and bass-baritone, according as they lie nearer to the one or

the other kind, so M. s. has either soprano or alto timbre, and its compass extends either more upwards or more downwards. As a rule, the compass of a M. s. voice is a small one; the characteristic feature of this kind of voice consists in its having narrow compass, but, at the same time, fullness of tone in the middle notes.

Mi is the solmisation name of the note E. (*Cf.* SOLMISATION and MUTATION.) *Mi contra fa* (*diabolus in musica*) is the false relation of the tritone (*fa* = F in the *Hexachordum naturale*, and *mi* = B in the *Hexachordum durum*), which was formerly not only forbidden as a melodic progression, but also as an harmonic relation.

Mi-re-ut. (*See* SHORT OCTAVE.)

Michaelis, (1) Christian Friedrich, writer on esthetics, b. 1770, Leipzig, d. there Aug. 1, 1834, teacher at the University. He wrote: "Ueber den Geist der Tonkunst mit Rücksicht auf Kants Kritik der ästhetischen Urtheilskraft" (1795-1800, two vols.); "Entwurf der Aesthetik, als Leitfaden bei akademischen Vorlesungen" (1796); "Katechismus ueber J. B. Logiers System der Musikwissenschaft," etc. (1828); translations of Busby's "History of Music" (1820), Villoteau's treatise on the music of the ancient Egyptians in the "Description de l'Égypte" (1821), etc.; also a large number of partly very interesting esthetico-musical treatises in the *Allg. Mus. Z.*, in Reichardt's *Mus. Zeit.*, in the *Cacilia*, *Eutonia*, *Freimüthige*, etc.

(2) Gustav, b. Jan. 23, 1828, Ballenstädt, d. April 20, 1887, Berlin; as capellmeister at the Wallner Theatre he wrote music for a number of farces, etc., also some operettas.

(3) His brother Theodor, b. March 15, 1831, Ballenstädt, d. Nov. 17, 1887, Hamburg, where he lived as orchestral player, was known as a composer of open-air music ("Turkish Patrol").

Michel (clarinet virtuoso). (*See* YOST.)

Micheli, Romano, excellent contrapuntist, b. about 1575, Rome, d. there as maestro of the French church of St. Louis, but not before 1655. As master of canon he had few equals; he published "Musica vaga ed artificiosa" (1615, containing fifty elaborate canons); "Madrigali a sei voci in canoni" (1621); "Canoni musicali composti sopra le vocali di più parole," etc. (1645); "La potestà pontificia diritta della sanctissima trinità" (in manuscript at Rome; only partly printed on some detached sheets); besides complines à 6 (1616), psalms à 4 (1638), masses à 4 (1650), and responses à 5 (1658); finally a small treatise: "Lettere di Romano M. romano alli musici della cappella di N. S." etc. (1618, on a species of canon invented by him).

Mickwitz, Harald von, pianist, b. May 22, 1859, Helsingfors; he studied at the Petersburg Conservatoire under Ark. L. Brassin, Rimsky-Korsakoff, then from 1880-83 under

Leschetitzky, Vienna. During a concert tour through the Baltic provinces and Germany (1886), he received the appointment of piano-teacher in the higher classes of the Carlsruhe Conservatorium, and exchanged this post in 1893 for a similar one in the Wiesbaden Conservatorium. As a composer M. has written graceful pf. pieces, somewhat in Tschaiikowsky's style.

Middle parts, in a musical composition, are those which lie between the highest (upper part) and lowest (under part, bass) parts. In plain harmonic writing, M. p. have many ties, and consequently little movement, and it is the object of training to set aside this thoroughly natural weakness, and also to give to them life and melodic flow. But it is absolutely essential for the student first to work, and for a considerable time, with strict use of ties, with progressions of a second, and without crossing of parts, etc., before he can venture to treat middle parts in free style.

Mieksch. (*See* MIKSCH.)

Mierzwinski, Ladislaus, b. Oct. 21, 1850, Warsaw, concert singer (dramatic tenor) of phenomenal means, but little training; hence he was only able for a short time to electrify the public.

Mihalovich, Edmund von, Slavonic composer, b. Sept. 13, 1842, Fericsancze, received his school education and first instruction in music at Pesth, studied afterwards (1865) theory at Leipzig under M. Hauptmann, and higher pianoforte-playing at Munich under Bülow; he now lives at Pesth. As a composer, M. belongs to the New German School, and has become specially known by several ballads for orchestra; also a symphony, etc. His opera *Hagbarth und Signe* was produced at Dresden in 1882.

Miksch (Mieksch), Johann Aloys, famous singer and teacher of singing, b. July 19, 1765, Georgenthal (Bohemia), d. Sept. 24, 1845, Dresden; in 1777 he was chorister at Dresden, in 1786 "Zeremoniensänger" at the Hofkirche. He tried to change his voice from baritone to tenor, and this brought on inflammation of the lungs, which nearly cost him voice and life; he afterwards went through solid training under Caselli, and appeared on the stage in 1799, became master of the chorister boys in 1801, and in 1820 chorus-master at the Opera. He received his pension in 1824, and was appointed *Custos* of the Royal Musical Library. Among his pupils were Schröder-Devrient, A. Mitterwurzer, etc.—A younger brother of M. was a famous player on the Waldhorn, and the creator of the modern style of guitar-playing (d. 1813 as member of the Dresden court band).

Mikuli, Karl, pianist, b. Oct. 20, 1821, Czernowitz; he first studied medicine at Vienna, but went to Paris in 1844, and studied the

pianoforte under Chopin, and composition under Reber. The Revolution of 1848 drove him back to his home. After he had made himself known by concerts in various Austrian cities, he became, in 1858, artistic director of the Galician Musical Society (Conservatorium, concerts, etc.). M.'s edition of Chopin's works (Kistner) contains many corrections and variants written by Chopin himself in the margin of M.'s copy.

Milanollo, Teresa and Maria, two violin virtuose, b. Aug. 28, 1827, and July 19, 1832, Savigliano (near Turin), of poor parents, attracted notice as children in France, England, Germany, etc. The younger (Maria) died early, Oct. 21, 1848, Paris, of consumption. Theresa married, in 1857, the military engineer, Permentier of Toulouse, and abandoned her itinerant career.

Milchmeyér, Philipp Jacob, pianist and mechanician, b. 1750, Frankfort-o.-M., d. March 15, 1813, as pianoforte-teacher in Strassburg, was at first royal Bavarian court musician, then lived for a long time in Paris, and settled in 1780 as court mechanician at Mayence. M. invented a keyboard with three manuals, which, according to the statement of C. F. Cramer, *Magazin der Musik*, produced 150 (?) various combinations of sound. His book, "Anfangsgründe der Musik um das Pianoforte sowohl in Rücksicht des Fingersatzes als auch der Manieren und des Ausdrucks richtig spielen zu lernen" (1797), is of greater importance.

Milde, Hans Feodor von, b. April 13, 1821, on the estate Petronek, near Vienna; he studied under Fr. Hauser and Manuel Garcia (life member of the Court Opera, Weimar: baritone). He created the part of Telramund in Wagner's *Lohengrin* (1850); his wife Rosa (née Agthe), b. June 25, 1827, Weimar, studied under Götze. She created the part of Elsa, and, up to the time of her withdrawal from the stage (1876), sang likewise at Weimar.

Milder-Hauptmann, Pauline Anna (née Milder), famous singer, b. Dec. 13, 1815, Constantinople, d. May 29, 1838, Berlin; she was the daughter of an Austrian courier, and lived after her father's death as waiting-maid to a lady of high position in Vienna, when Schikaneder discovered her voice, and had her trained by Tomascelli and Salieri. She made her *début* in 1803, was engaged at the court theatre, and achieved extraordinary fame, although she had to rely principally upon her natural gifts. Beethoven wrote the *role* of Fidelio for her. In 1810 she married the jeweller Hauptmann. She celebrated her greatest triumphs in Berlin, where, in 1816, she was *prima donna*, and sang up to 1829 (she quarrelled with Spontini). For some time she paid visits to Russia, Sweden, etc., but in 1826, at Vienna, took her last farewell of the stage.

Mildner, Moritz, b. Nov. 7, 1812, Türrnitz

(Bohemia), pupil of Pixis at the Prague Conservatorium, of which institution M. became violin-teacher from 1842 till his death, Dec. 4, 1865. He trained many excellent pupils (Laub, Hfimaly, Zajic), and was also leader at the theatre.

Military music, musical bands for the several regiments, at the head of which stands the *band-master*; the term must not be confused with the players under the drum-major (drummers and fife-players, also horn-players). The M. m. of the Prussian Infantry now has two flutes, ten to twelve clarinets (seven to nine in \mathcal{B} , two in \mathcal{B} , one in \mathcal{A}), two alto clarinets in \mathcal{E} , two oboes, two bassoons, one to two double bassoons, four valve horns, four valve trumpets in \mathcal{E} , two cornets in \mathcal{B} , two alto cornets in \mathcal{E} , two tenor horns in \mathcal{B} , one baritone horn, four trombones, three tubas, large and small drums, and cymbals, and sometimes also a "Glockenspiel" (lyre). The *Jäger* Brigade has only one piccolo (cornet) in \mathcal{B} , two \mathcal{B} cornets, four \mathcal{B} trumpets, two alto cornets in \mathcal{E} , two tenor horns in \mathcal{B} , four \mathcal{E} horns, a baritone horn, two tubas; the cavalry bands are composed in somewhat similar manner (the horns are wanting). Those for infantry are, in Germany, now mostly so arranged that each member can play on two instruments; and thus, the wind-band can be turned into a symphony orchestra.

Miller, Edward, composer and theorist, b. 1731, Norwich, d. Sept. 12, 1807, Doncaster. He studied under Burney, was organist at Doncaster in 1756, and graduated as Mus.Doc., Cambridge, 1786. He published flute solos (with remarks on double-tonguing, 1752), pf. sonatas, elegies and songs with pf., psalms, etc. He wrote: "Institutes of Music for Young Beginners" (piano Method, 16th ed.); "Letters on behalf of Professors of Music residing in the Country" (1784), and "Elements of Thoroughbass and Composition" (1787).

Millerville, Francesco, b. about 1565, Ferrara, where his father, Alexandre M., and grandfather, Jean de M., were musicians in the service of the duke; he was for a time in the service of the King of Poland, afterwards in that of the Emperor Rudolf II., returned to Italy in 1614, and became maestro both at Volterra and Chioggia. His preserved compositions are: six books of madrigals à 3-4 (1614-24), seven books of motets à 2-6 (up to 1626), a Mass à 8, Dixit, Magnificat, and a motet à 9 (1626), one Mass à 4, two Masses à 8 (1617), Masses and psalms à 3 (1620), Litanies (1619, 1639), "Concerti spirituali" and "Gemme spirituali" (1622).

Millöcker, Karl, composer of operettas, b. May 29, 1842, Vienna, pupil of the "Conservatorium der Musikfreunde," in 1864 theatre capellmeister at Graz, in 1866 at the Vienna "Harmonietheater," which soon became bankrupt. Since 1869 he has been capellmeister

and composer at the Theater an der Wien. He has written the operettas: *Der tote Gast* (1865), *Die beiden Binder* (both for Graz), *Diana* ("Harmonietheater"), *Die Fraueninsel* (Pesth), *Der Regimentstambour*, *Ein Abenteuer in Wien*, *Drei Paar Schuhe*, *Die Musik des Teufels*, *Das verwunschene Schloss* (with songs in Upper Austrian dialect), *Gräfin Dubarry* (1879), *Apafune der Wassermann*, *Die Jungfrau von Belleville*, *Der Bettelstudent* (1882), *Der Feldprediger* (1884), *Der Dieb* (Berlin, 1886), *Der Viceadmiral* (1886), *Die sieben Schwaben* (1887), *Der arme Jonathan* (1890), *Das Sonntagskind* (1892); and several musical farces. M.'s music is, as one would expect, light and piquant. M. published for several years a collection of pf. pieces in monthly parts (*Musikalische Presse*).

Mills, Sebastian Bach, b. March 13, 1838, Cirencester (England). He received his first musical training from his father, 1856–59 pupil of the Leipzig Conservatorium (Plaiddy, Moscheles), appeared as a pianist in 1859 at New York, under Bergmann, in Schumann's concerto and Liszt's "Midsummer Night's Dream" fantasia, and was so brilliantly received that he resolved to remain in New York, where he is highly esteemed both as teacher and player. M. has published some pf. pieces.

Milton, John, the father of the celebrated poet, d. 1646 or 1647; he was an able musician, and composed the famous madrigal à 6, "Fayre Oriana in the Morne," in the "Triumphes of Oriana" (1601). To Leighton's "Teares or Lamentations" (1614) he contributed four motets, also several psalm tunes to Ravenscroft's "Whole Booke of Psalmes" (1621).

Mingotti, Regina (*née* Valentini), famous singer, b. 1728, Naples, the daughter of an Austrian officer, who was sent to Graz at a later period, d. 1807, Neuburg-on-the-Danube. She was brought up in the "Ursuline" convent at Graz, where she received her first instruction in singing. The director of the Dresden Opera discovered her voice, married her, and had her trained under Porpora; she then soon became a rival, and a formidable one, of Faustina Hasse. In 1751 she went to Madrid, where for two years she sang under Farinelli, and obtained great triumphs in London, also in various cities of Italy. She went afterwards to Munich (1763), and, finally (1787), to Neuburg-on-the-Danube.

Minim (♩), *Minima* (Lat. and Ital.), our half-bar note, which formerly (to the end of the 13th century) was the smallest of the note species in use: *Maxima*, *Longa*, *Brevis*, *Semibrevis*, *M*. In mensurable music, to the end of the 16th century M. was, according to the signature (see PROLATION), the half or the third part of the semibreve, but itself always subject to binary division. In modern music (since the 17th century) it is always the half of the semibreve (whole bar note). *Fuga in minimam* was

in the 16th century the term for a canon in which the imitating part entered a minim later than the first part. (Cf. canon under *Entry Signs*.)

Minnesänger (Minne-singers) was the name given to the lyric singers of noble birth in Germany during the 12th and 13th centuries; they were, in fact, contemporaries of the Provençal and Northern French Troubadours (Trouvères), but were distinguished from them by the more sincere, more modest, homage which they paid to women (Minne). The songs of the M., like those of the Troubadours, were accompanied by a stringed instrument (pointed harp, fiddle). Minne-song flourished first in Austria, spread thence to the Rhine, and later on to Thuringia and Saxony. Von Kürenberg, Dietmar von Eist, Heinrich von Veldeke, Reinmar, Hartmann von der Aue, Wolfram von Eschenbach, and, above all, Walter von der Vogelweide, were celebrated representatives of the same. Richard Wagner drew a graphic picture of the essence of Minne-singing in his *Tannhäuser*, in which especially Wolfram stands as a type of Minne-singing in its ideal purity. (Cf. MEISTERSÄNGER.) For further details respecting the M. see v. d. Hagen's "Sammlung der Dichtungen der M." (1838, four vols.), and the epitome with introduction by Bartsch (1864), Wolf's "Ueber die Lais, Sequenzen und Leiche" (1841), etc. The notations of the melodies of the M., like those of the Troubadours, require careful investigation, and must not be explained straight off according to the mensural theory of their time, but rather (especially the older ones) must they be regarded as noted merely with Longs and Shorts (■ and ■ or ■ and ♦ as ♩, ♪, and Ligeatures as short notes equivalent in value to a Long):

Minoja, Ambrogio, teacher of singing and composer, b. Oct. 21, 1752, Ospitaletto (near Lodi), d. Aug. 3, 1825, Milan, cembalist at La Scala, Milan, for which he wrote an opera, *Tito nelle Gallie*; afterwards maestro at La Scala monastery and inspector of studies (Censor) at the Milan Conservatorio. He is known by his Solfège, which are still in vogue as teaching material, and by his "Lettere sopra il canto" (1812, to B. Asioli; in German 1815). M. wrote for the iron crown coronation of Napoleon I. a *Veni creator* and *Te Deum*, a cantata for the marriage of the vice-king Eugen Beauharnais, also a march for the entry of the French into Italy, and a funeral symphony for General Hoche; and, besides, numerous sacred compositions, quartets for strings ("I divertimenti della campagna"), church sonatas, etc.

Minor Chord (*Minor Triad*) is the sounding together of a principal note with (perfect) under-fifth and (major) under-third; or, according to the usual definition in thorough-bass, the chord consisting of perfect (upper) fifth, and minor

(upper) third. If in the minor triad the lowest note of the triad, for example, *c* in 

be taken as principal note (that *c* is the fundamental note is not in dispute), it is not clear how the minor third can blend into unity with this note, since the upper-tone series has, in place of it, the major-third, with which the minor comes into collision, and must give rise to violent beats. Helmholtz, as a matter of fact, characterises the minor consonance as a "troubled consonance" ("getrübte Konsonanz"). In another place he explains *c : e♭ : g* as a *c*-clang (*c : g*) + an *e♭*-clang (*e♭ : g*); this at once takes away the consonance of the chord, for, however consonance be defined, unity as the cardinal point of consonance must not be lost sight of. O. Hostinsky (q.v.) goes still further, and in *c : e♭ : g* takes *c : g* as *c*-clang, *e♭ : g* as an *e♭*-clang, and *c : e♭* as an *a♭*-clang: thus three clangs are represented. The minor triad in a major sense, and the major chord, likewise, in a minor sense, is dissonant, as was first skilfully pointed out by v. Oettingen. The minor triad must be explained in a totally different way, and in one the very reverse of that employed for the major chord, since the third and fifth relationships have to be sought not above, but below the principal note. In *c : e♭ : g* *g* is then principal note, *e♭* third, and *c* fifth; *e♭* and *c* are undertones of *g*. Although this mode of considering the minor chord is more than three hundred years old, and was established by Zarlino (1558), father of the modern science of harmony, and has been repeatedly revived by theorists of the greatest distinction (Tartini, 1754; Hauptmann, 1853), yet not the smallest use has been made of it in practical treatises on harmony. V. Oettingen in recent times has made suggestions with that view, and the compiler of this Dictionary, in his theoretical writings, has developed this idea for the first time in a logical manner. (Cf. CLANG, CONSONANCE, DISSONANCE, and TRIAD MAJOR.)

Minor Key. The key in which a minor chord can form the close (tonic) is called a M. K. Since the principle of clang representation has been established, *i.e.* the conception of tones in the sense of chords, a scale is said to consist of a system of three clangs: tonic, dominant, and subdominant, *i.e.* the minor key, of minor tonic, minor subdominant, and major upper-dominant; for example:—

$$\begin{array}{c} \text{°T} \\ \text{d f a } \text{---} \text{c e } \text{---} \text{g}^{\#} \text{ b;} \\ \text{°S} \qquad \qquad \text{D+} \end{array}$$

and these three chords, at any rate, occur most frequently in the harmonies of a minor key. But they produce a scale which contains the progression of an augmented second:—

A B c d e f—g[#] a.

Only since the 19th century have theorists ventured to set up this succession of tones as the true type of minor melody, as, the *normal minor scale* (the so-called "harmonic"). On the other hand, the older, and, since the evolution of minor keys from the Church Modes, more usual, form of minor scale is as follows:—

Upwards: A B c d e f[#] g[#] a
Downwards: a g f e d c B A,

the so-called "melodic" minor scale. Without doubt this is really melodic, which, on account of the hiatus f—g[#], cannot be asserted of the other. From modern music, however, we learn that scale and key by no means coincide (even without modulations). Cf. TONALITY. Discussion is therefore idle. From the standpoint of our present knowledge of the nature of harmony, scales are merely types of melodic movement through chords, *i.e.* filling up the gaps between the tones of a chord with passing tones, which must differ according to the position of the chord with respect to the tonic, and which, in the case of the tonic, may differ. Now the simplest form of the scale of the tonic is the one which makes use of the tones of the two dominants of the same clang genus, *i.e.* the simplest representation of the M. K. by means of three clangs is not the one given above, with major upper-dominant, but the one with minor upper-dominant:—

$$\begin{array}{c} \text{°T} \\ \text{d f a } \text{---} \text{c e } \text{---} \text{g b} \\ \text{°S} \qquad \qquad \text{°D} \end{array}$$

The point of union of the various relationships of the tones of a minor chord (q.v.) is the uppermost tone of that minor triad; and if from this we trace the scale downwards to its lower octave, we have

e' d' c' b a g f e,

which is the exact counterpart of the rising major scale

c d e f g a b c.

This pure minor scale was the favourite one (the Doric) of the ancient Greeks; it is also that of the *Phrygian Church Mode*, which since the evolution of polyphonic music has been so utterly misunderstood. Its true meaning was first thoroughly grasped by K. Fortlage ("Das musikalische System der Griechen in seiner Urgestalt," 1847), and by O. Kraushaar ("Der akkordliche Gegensatz," 1852). There followed: K. F. Weitzmann, A. v. Oettingen, v. Thimus, Riemann, Thürlings, v. Hostinsky, Y. v. Arnold, v. Melgunow, Fr. Marschner; and before Fortlage already Blainville defended the idea of the scale with the minor second ("Troisième mode," "Mode hellénique"), and he was afterwards followed by Nicola d'Arienzo (Cf. also Zarlino and Tartini). It is only by regarding the use of the major upper-dominant in the minor key

as somewhat similar to the use of the minor subdominant in the major key (Hauptmann's "Minor-Major") that a safe basis is won for the consideration of a minor system of harmony, and for the peculiar moments in Greek, Scotch, Irish, Scandinavian, Russian, Hungarian, and Czech melodies, the adequate harmonisation of which was for so long an unsolved problem. It is a fact well worthy of note, that before the rise of polyphony the conception of melodies in a pure minor sense was quite a common one, and is still so among nations where music is little cultivated, whereas we incline exactly in an opposite direction. The reaction in favour of a minor conception was certain to come: it is now in full swing, and will probably leave its impress on a future phase of the development of music.

Minor Scale. (See MINOR KEY.)

Minore (Ital.), smaller, hence equivalent to minor chord (*harmonia di terza m.*), also minor key. M. is often used as superscription to an episodical movement (trio), when in minor, the chief section of the piece being in major; also a minor variation of a major theme is marked M. M. is also written as a sign, that after a major trio the chief key, when minor, returns. (Cf. MAGGIORE.)

Minstrels (*Ménestrels* *Ménétriers*) was the special name of the musicians in the service of the Troubadours (*Trouvères*); they developed the songs devised by the Troubadours (with viol, and probably also hurdy-gurdy, accompaniment). But those poets and singers who were not born of noble blood were also termed M. (*Troverei bastardi*); the name Troubadour was only given to knights. Finally the term M. acquired the general meaning of musician, especially fiddler (performer on the viol).

Minuet (Fr. *Menuet*; Ger. *Menuett*; Ital. *Minuetto*), an old French dance-form, which, however, in artistic music does not extend further back than Lully. The M. is written in triple time, and was originally performed at a moderate pace, with all due dignity and without ornaments (with which especially the Sarabande was overladen). The well-known M. in *Don Juan* is a masterpiece of the older sort. Bach and Handel occasionally introduced the M. into their suites, and then, as a rule, it is inserted between the Sarabande and the Gigue. Haydn also made a place for it in the symphony, but gave to it a somewhat more lively tempo, a more jovial, humorous character, whereas Mozart infused into it greater charm and tenderness. Beethoven further developed the Haydn M. into a *Scherzo* (q.v.); by tempo *di minuetto* he indicated a movement of more moderate pace.

Miracle-plays. The miracle-play is distinguished from the Mystery in that it connects itself less closely with the Scriptures and the services of the Church, and embodies, for the

most part, various apocryphal legends concerning the saints and the Virgin. (See MYSTERIES.)

Mirus, Eduard, b. 1856, Klagenfurt; as a student at Vienna, he was a pupil of Hanslick, then studied singing (baritone) in Italy, appeared at various theatres, and in 1891 settled in Vienna as teacher of singing; he has published songs.

Miry, Karel, Flemish composer, b. Aug. 14, 1823, Ghent, d. there Oct. 5, 1889, studied under Mengal and Gevaert. From 1847 he wrote eighteen Flemish operas and operettas, also some ballets, etc., for Ghent, Antwerp, and Brussels. M. was finally professor of harmony and deputy-director at Ghent conservatorium.

Miserere (*Miserere mei Deus*), the commencement of the 51st Psalm, which has been set to music by an innumerable number of composers. The M. is sung with special solemnity in the Sistine Chapel during Holy Week, on the Wednesday, Thursday, and Friday in the so-called *Tenebra* service; and, indeed, only the works of three composers, Allegri, Bai, and Baini (see the respective articles), have been considered worthy of performance on this occasion. Other settings in vogue before Allegri were completely thrown into oblivion by his music. The manuscript of Allegri's M. was preserved as a sacred treasure, and was not allowed to be copied. It was only towards the close of last century that it appeared in print (Burney, Choron, etc.).

Missa. (See MASS.)

Misterioso (Ital.), mysterious.

Mistichanza, same as Quodlibet.

Mitterwurzer, Anton, famous stage-singer (baritone), b. April 12, 1818, Sterzing (Tyrol), d. April 2, 1872, Döbling (near Vienna), nephew and pupil of Gänsbacher (q.v.), sang as chorister at St. Stephen's Cathedral, and made his *début* as *Fäger* in *Nachtlager von Granada* at Innsbruck. After he had sung for several years at small provincial theatres in Austria, he finally obtained, in 1839, an engagement at the Dresden Court Opera, receiving his pension in 1870. M. was a dramatic singer of the first rank, and specially excelled in the operas of Marschner and Wagner (*Tannhäuser*, *Lohengrin*), also in *Don Juan*, *Zar und Zimmermann*, etc.

Mixed voices, (1) (Ital. *covo pieno*; Lat. *Plenus chorus*), mixed chorus, full chorus, i.e. the union of men's and women's, or boys', voices (bass, tenor, alto, soprano), in contradistinction to one composed of equal voices (*voces aequales*), i.e. of men's or of women's, or of boys' voices. M.v. offer to the composer a richer combination of sounds than only high or low voices.—(2) In the organ this term is equivalent to mixture stops (*Jeux composés*) [Mixture, Rauschquinte, Cornet, Sesquialtera, Tertian, Scharf, Cymbal]

Mixolydian. (See CHURCH MODES and GREEK MUSIC.)

Mixture (Lat. *Mixtura*, *Regula mixta*; Ital. *Ripieno*, *Accordo*; Sp. *Lleno*; Ger. *Mixtur*; Fr. *Fourniture*, but the more general term is *Plein jeu*; Dutch *Mixtuur*), the most used of all the "mixed" stops of the organ. As a rule, it is compounded of octaves and fifths, but often contains also a third, or even seventh (for example, in the great organ in the Oliva Monastery there is a M. of six ranks with third and seventh). Formerly there were mixtures with a great number of pipes (for example, in the Weingarten Monastery mixtures of eight, twelve, twenty, and twenty-one ranks; in the Marienkirche, Danzig [1585], a twenty-four rank M.; but then naturally the same tone was represented by several pipes). At the present day three is taken as the minimum, six as the maximum of the number of pipes. Such mixtures repeat in the higher octaves, i.e. employ for the highest octaves relatively lower overtones than those for lower octaves (a three-fold M. generally has *c' g' c'* for the key *c*, but, on the other hand, for *c'*, not *c'' g'' c''*, but *c' g' c'*, etc.). Also mixtures of several ranks are constructed, which, below and above, have fewer pipes than in the middle register. The M. is only used in combination with many other stops, and, as in most cases it produces as lowest sound the double octave (at least for the lowest sounds), it pre-supposes not only foundation, but also octave and quint stops. The legend that the M. is the oldest stop of the organ has long been set aside; on the other hand, it is certainly probable that still in the 12th and 13th centuries the organs had no separate stops, and, hence, all the pipes belonging to one key spoke at the same time.

Mizler, Lorenz Christoph (afterwards raised to the rank of a nobleman as M. von Kolof), writer on music, b. July 25, 1711, Heidenheim (Württemberg), d. March, 1778, Warsaw; he attended the Gymnasium at Ansbach, and, from 1731 to 1734, studied philosophy at Leipzig, and received instruction from J. S. Bach in clavier-playing and composition. In 1734 he took the degree of Magister, and his theme for discussion was "Dissertatio, quod musica ars sit pars eruditionis musice" (printed 1734; 2nd ed., with slight alteration of the title, 1736). After that he still continued his studies in Wittenberg, and qualified himself in 1736 at Leipzig, and gave lectures on mathematics, philosophy, and music. In 1738 he established the "Societät der musikalischen Wissenschaften" in Leipzig, to which Bach afterwards belonged, although the latter troubled himself little about the principal aim of that society, viz., to establish the laws of composition: he could afford to leave that to others. In 1743 Count Malachowski attracted M. to Konskie (Poland) as private teacher to his son. M. went some years later to the court at Warsaw, was raised to the rank of a nobleman and named court councillor. In 1747 he received from the

University of Erfurt the diploma of a Doctor of Medicine. M. was one of the first who published a kind of musical newspaper, viz., the *Neu eröffnete musikalische Bibliothek oder gründliche Nachricht nebst unparteiischem Urteil von musikalischen Schriften u. Büchern* (1736-54). Another newspaper, issued in an octavo sheet every month, *Musikalischer Staatsteicher* (criticisms of practical musical works), appeared only up to the seventh number (1739-40). M. wrote, besides, "Die Anfangsgründe des Generalbasses, nach mathematischer Lehrart abgehandelt" (1739); further, a humorous pamphlet in Latin, in which the probable course of the war of the Emperor Karl VII. with France was expressed by the combination and opposition of various musical sounds: "Lusus ingenii de præsentii bello," etc. (1735, dedicated to Count Lucchesini, one of the original founders of the "Societät"), and an excellent translation of Fux's "Gradus ad Parnassum" ("Gradus ad Parnassum, oder Anführung zur regelmässigen musikalischen Komposition," 1742); his compositions (odes, suites, flute sonatas) are unimportant.

M.M. = Mälzel's *Metronome* (q.v.).

Mockwitz, Friedrich, b. March 5, 1785, Lauterbach (Saxony), d. Dec., 1849, Dresden; he became known by his clever (the first) four-hand pianoforte arrangements of classical orchestral works.

Mode (Lat. *Modus*), (1) equivalent to key, octave species, e.g. *M. Lydius* (the Lydian mode; cf. CHURCH MODES).—(2) Among the older theorists of mensurable music (12th and 13th centuries), a rhythmical scheme for the formation of melody, e.g. ■ ■ ■ (Longa Brevis), in regular repetition (trochaic), or ■ ■ ■ (Brevis, Brevis, Longa, anapæstic).—(3) In the measured music of the 15th and 16th centuries, the determination of the measure of the *Maxima* (*M. major*) and of the *Longa* (*M. minor*). The tripartite nature of the *Maxima* (*M. major perfectus*), also of the *Longa* (*M. minor perfectus*), could, according to the teaching of various theorists, be indicated in various ways. (Cf. Chapter IX. "Geschichte der Taktzeichen," in H. Riemann's "Studien zur Geschichte der Notenschrift"). In actual practice, however, this was very seldom indicated, but had, as a rule, to be inferred from certain peculiarities of the notation. These latter (*Signa implicita* or *intrinseca*, in contradistinction to the *Signa indicialia*, the time signatures) were for *M. major perfectus* the occurrence of three blackened *Maxima* (see HEMIOLIA), for the *M. minor perfectus*, the occurrence of three blackened *Longa*, or of two *Brevis*-rests at the beginning of a *M.*-unity (perfection). The figures 3 and 2 (see DIMINUTION) after the time-signatures (O 3, O 2), were signs for the measure of the *M. minor*, as by them the *Longa* acquired the previous value of the *Brevis*.

Mode (Tonal Genus, Clang Genus). A chord or key (tonality) differs according as it is major or minor. Keys with different signatures are so many various kinds of transpositions, whereas clangs, or keys varying in M., differ essentially. (See CLANG.)

Modena, Giulio di. (See SEGNI.)

Moderato (Ital., "moderate"), a time indication which falls somewhere between *Allegretto* and *Alliegro*, and is not to be distinguished from *Allegro moderato*.

Modernus, Jakobus (really Jacques Moderne, on account of his *embonpoint* also named Grand Jacques, or Jacobus M. de Pinguento), was maître de chapelle of Notre Dame at Lyons, where he established a music-printing business, which lasted from 1532-58; he printed especially the works of French contrapuntists. M. himself was a composer, and published chansons à 4 and motets à 5-6, but these appear to have been lost.

Modulatio, also *Modulus* and *Modulamen*, stands for Motet in titles of the 16th century.

Modulation is the passing from one key to another, or, in modern parlance, a change of tonality (q.v.), passing from the meaning of the principal clang (tonic) to that of another clang. A distinction is made between transition and M. proper, and by the first is understood a quitting of the old tonality, but with speedy return to the same. Thus in the themes of sonatas there are frequently transitions, but a real M. only takes place before the entry of the second subject, which, according to rule, stands in another key. For the rest, in a musical work of art in which unity prevails, even those portions which do not move within the principal key are under its sway; these other keys have their peculiar meaning in relation to the principal key, so that the modulations of the piece as *tonality progressions* are subject to the same considerations as *successions of clangs* (harmony progressions). The *relationship of keys* is the standard for modulation, and this is nothing else than the relationship of the principal clangs (tonics). Progressions to keys not directly related, but only in the second degree, require supplementary justification, i.e. the transition to a key related in the first degree, as the result of distantly related clangs. (Cf. TONE-RELATIONSHIP.) A further distinction is made between movements in various keys merely in juxtaposition, which happens in dance pieces, and forms related to these (Rondo, Scherzo), and real modulation by chord succession which completes the change of tonality. (Cf. Dräseke's "Anweisung zum kunstgerechten Moduliren" [1876], and Riemann's "Systematische Modulationslehre" [1887] and "Vereinfachte Harmonielehre" [London, 1893].)

Mohr, Hermann, b. Oct. 9, 1830, Nienstedt (near Sangerhausen), attended the teachers'

seminary, Eisleben, went (1850) to Berlin, where he founded the Luisenstadt Conservatorium; since 1886 M. has lived in Philadelphia as teacher in Zeckwer's Conservatorium. He has composed instructive pf. pieces, choruses for male voices, songs, a cantata *Bergmannsgruss*, etc.

Möhring, Ferdinand, favourite composer of part-songs for male chorus, b. Jan. 18, 1816, Altruppin, d. May 1, 1887, Wiesbaden; he was originally intended for an architect, and attended the Polytechnic school at Berlin, but entered the Berlin Akademie as pupil for composition, became organist and musical director at Saarbrücken in 1840, received in 1844 the title of "Königlicher Musikdirector," and in 1845 became organist and teacher of singing at Neuruppin. He retired from active life during his last years and lived quietly at Wiesbaden. Besides his well-known quartets for male voices (for example, the vigorous "Normannenzug"), M. composed vocal and instrumental works of all kinds (including two operas), which, however, met with little approbation.

Molck, Heinrich, b. Sept. 7, 1825, Gross-Himstedt, d. Jan. 4, 1889, Hanover, pupil of Hauptmann. He was a composer of choruses for male voices, and organist at the Marktkirche, Hanover.

Molique, Wilhelm Bernhard, famous violinist and composer, b. Oct. 7, 1802, Nuremberg, d. May 10, 1869, Kannstadt (near Stuttgart); he was the son of a "Stadtmusikus," from whom he first learnt to play on several instruments; was trained, at the cost of King Maximilian I. of Bavaria, by the leader Rovelli at Munich; was then for some time member of the orchestra at the Theater an der Wien, Vienna, and in 1820 became successor to Rovelli in Munich. From 1826-49 he displayed meritorious activity as court leader at Stuttgart, whence, by numerous concert tours, he became famous in Germany and abroad. In 1849 he resigned his post, settled in London, and obtained high repute as a solo and quartet player, and was much esteemed as a teacher of his instrument. In 1866 he retired to Kannstadt. M.'s compositions, still prized, are: six violin concertos, one concertino, one 'cello concerto, eight string quartets, concertantes for two violins, for violin and piano, for flute and piano, for flute and violin; fantasias, rondos, etc., for violin, two pianoforte trios, one symphony, two masses, and an oratorio, *Abraham* (composed for the Musical Festival at Norwich, 1860).

Molitor, Ludwig, b. July 12, 1817, Zweibrücken, d. there, Jan. 12, 1890, pupil of the Munich Conservatorium, chief justice in the provincial court at Zweibrücken. He wrote choruses for male voices, songs, pf. pieces, a Grand Mass, a Te Deum, a Stabat Mater, etc.

Moll (Ger., "minor"). The Latin *mollis* ("soft"), was used (probably first by Odo of

Clugny in the 10th century) to indicate the round B (♭, *B molle*), as opposed to the angular (♮, ♯, *B durum*); *B durum* had like meaning with *B quadratum* or *quadrum*; *B molle* with *B rotundum*. The name M. was then transferred to the hexachord *f-d*, which used *b* flat, not *b* natural (see *MUTATION*), and later on stood for the key and the chord with minor (lowered) third. (Cf. *MAJOR*.)

Moller, or Möller, Joachim. (See *BURCK*.)

Molloy, James L., b. 1837, Ireland, popular and prolific song-writer; has also written operettas.

Molto (Ital.), much, very; *allegro m.*, very quickly; *m. largo*, very slowly, etc.

Momigny, Jérôme Joseph (de), theorist, b. Jan. 20, 1762, Philippeville. He was at the age of twelve organist at St. Omer, then at St. Colombe, in 1785 at Lyons; during the Revolution he fled to Switzerland, and set up in 1800, at Paris, a music-warehouse, in which he published pamphlets of his own. Afterwards he settled at Tours, where he was still living in 1855, according to Fétis: the date of his death is unknown. M. wrote: "Cours complet d'harmonie et de composition d'après une théorie neuve" (1806, three vols.; M. derives the scales from the series of upper-tones up to the 13th); also "Exposé succinct du seul système musical qui soit vraiment bon et complet" (1809); "La seule vraie théorie de la musique" (1823); "Cours général de musique, de piano, d'harmonie et de composition depuis A jusque Z" (1834). M. was convinced of the importance of his supposed discoveries, as is evident from the titles of his writings. His compositions are:—stringed quartets, trios, violin sonatas, pf. sonatas, and other pf. works, songs, cantatas, an operetta (*Arlequin Cendrillon*), and an elementary method of the pianoforte: "Première année de leçons de pianoforte."

Momoletto. (See *ALBERTINI*, 2.)

Monasterio, Jesus, distinguished violinist, b. March 21, 1836, Potes, in the Spanish province of Santander; from 1849–51 he was pupil of De Bériot at Brussels. Soon after M. became violin professor at the Madrid Conservatorio, and solo violinist of the royal band and of the royal chamber musicians. He has also played with much success in France and Germany. In 1894 M. was appointed Director of the Madrid Conservatorio.

Monbelli, Marie, famous singer, b. Feb. 15, 1843, Cadiz, pupil of Mme. Eugénie Garcia at Paris, shone as *prima donna* at London, and made sensational concert tours with Ullmann.

Mondonville, Jean Joseph Cassanea de (added his wife's family name, De M., to his own [Cassanea]), violinist and composer, b. Dec. 25, 1711, Narbonne, d. Oct. 8, 1772, in his country house at Belleville, near Paris. He

was at first violinist at Lille, afterwards in the orchestra of the *concerts spirituels* at Paris, at which he produced motets of his own composition, and with such success that he became royal chamber musician, also in 1744 *intendant de la musique de la chapelle* at Versailles. In 1755 he succeeded Royer as conductor of the *concerts spirituels* (up to 1762). Besides his motets, which, even after his withdrawal from the direction, remained specially attractive pieces in the programmes of the *concerts spirituels*, M. wrote several operas and oratorios.

Monferrine, a dance common in the district around Monferrato. (Cf. *Clementi*, Op. 49.)

Moniot, Eugène, composer, b. about 1820, d. Nov., 1878, Paris; he was conductor at various small Paris theatres, at which a number of his operettas were produced; he became known also by his chansons and (pianoforte) drawing-room pieces.

Moniuszko, Stanislaw, Polish composer, b. May 5, 1820, Ubil, on his father's estate, in the Government Minsk (Lithuania), d. June 4, 1872, Warsaw; he received his musical training from the organist Freyer at Warsaw, and from Rungenhagen at Berlin, 1837–39. He was for a long time private music-teacher and organist at the Johanneskirche, Wilna, and became in 1858 Opera capellmeister at Warsaw, and afterwards professor at the Conservatoire there. M. wrote the national operas: *Lotterie* (1846), *Der neue Don Quixote*, *Ideal*, *Betty*, *Der Zigeuner*, *Halha*, *Jawnutz* (*Der Paria*), *Der Flossknecht*, *Verbum nobile*, *Rokitschana*, *Die Gräfin*, *Das Gespensterschloss*, *Beata* (1872), also some incidental music to *Hamlet*, many songs; likewise sacred works (*Ostrovramer Litanei*, masses), several cantatas, pf. pieces, a theoretical work ("Pamiętnik do nanki harmoniji"), and a "Hansliedebuch," in six parts. Al. Walicki wrote a biography of M. (Polish, 1873).

Monk, (1) Edwin George, organist and musical director of the cathedral at York, b. Dec. 13, 1819, Frome (Somersetshire), pupil of Macfarren for composition, Doctor of Music (Oxford, 1856), published, besides several of his own compositions, "Anglican Chant Book," "Anglican Choral Service Book," "Anglican Hymn-book" (with E. Singleton), "Psalter and Canticles, Pointed for Chanting," and "Anglican Psalter Chants" (both with Ouseley).

(2) William Henry (not related to the former), b. 1823, London, d. March 1, 1889, became, after he had occupied various posts as organist in London, teacher of singing at King's College in 1874 (successor of Hullah), 1876 teacher at the National Training School for Music, and 1878 at Bedford College. M. also gave lectures in London, Edinburgh, and Manchester, and was editor of the *Parish Choir* (sacred songs, a serial work), and co-editor of "Hymns Ancient and Modern."

Monochord (Gk., from *monos*, "one"; and *chorde*, "string"), an instrument of extreme antiquity for the mathematical determination and explanation of relationships of musical sounds; it consists of one string, stretched over a sound-chest, which can be divided at pleasure by a movable bridge. A scale indicates exactly under what point of division the bridge must be placed; so that by help of the M. every interval can be produced, so far as is possible, in acoustic purity. During the Middle Ages the M. (in contradiction, however, to its name) was constructed with several strings and respective bridges, for the purpose of producing combination of sounds. For the process of evolution by which it became a clavichord, see PIANO-FORTE.

Monodrama (Gk.) is the term applied to a stage piece for only one person; *Duodrama*, for two persons. The name M., however, is often used for pieces of the latter kind.

Monody ("single song") is the term applied to the new kind of music which sprang up in Italy about 1600, and which established singing for one voice, with instrumental accompaniment, in place of the customary singing in several parts, which for a long time previously had been regarded as the only music of an artistic kind. The accompaniment was at first extremely simple (a figured bass, executed on a clavicymbal, organ, lute [theorbo], or gamba), but it soon developed, and became more interesting. Singing for one voice was, nevertheless, much older than part-singing, and, with accompaniment otherwise than in unison, was, without doubt, in vogue long before the 17th century (among the Troubadours, especially in popular and home music during the Middle Ages): it was only something new that artists and theorists took up a neglected style of music. The musical drama, the oratorio, the cantata, even pure instrumental music itself, i.e. our whole system of modern music, sprang from this humble beginning. (Cf. PERI, CACCINI, CAVALIERI, etc.)

Monotone, of one tone. A monotone recitative is one without melodic inflection, the voice preserving throughout the same pitch.

Monpon, Hippolyte, b. Jan. 12, 1804, Paris, d. Aug. 10, 1841, Orleans, pupil, and afterwards *chef de chant*, at Choron's School of Music in Paris; he composed many romances to words by A. de Musset and Victor Hugo. After the dissolution of Choron's school he was compelled to maintain his family, and wrote numerous operas; but he was only a half-trained musician gifted with talent for melody.

Monsigny, Pierre Alexandre, famous composer of operas, b. Oct. 17, 1729, Fauquembergue (near St. Omer), d. Jan. 14, 1817, Paris; he attended the Jesuit College at St. Omer, and began to practice the violin with zeal. When, by

the early death of his father, he had to support his family, he obtained, in 1749, a clerkship in the Bureaux des Comptes du Clergé, Paris, and after some time became maître d'hôtel to the Duke of Orleans. Only in 1754 did a performance of Pergolesi's *Servu padrona* revive his musical inclination, which now turned with full force to composition. M. had received little or no theoretical instruction; he now studied harmony and thorough-bass with such zeal, under Gianotti, that already after five months he was able to write a comic opera: *Les Auteurs Indiscrêts*, which was produced in 1759 at the Théâtre de la Foire St. Laurent, and with great success. When the same theatre produced in quick succession, and with increasing success, new operas by M.:—*Le Maître en deux*, *Le cadet dupé* (both in 1760), and *On ne s'avise jamais de tout* (1761), the Comédie Italienne made use of its privilege, and closed that theatre. Both theatres were now united, and the Comédie Italienne profited by M.'s further triumphs. There followed; *Le roi et le fermier* (1762), *Rose et Colas* (1764), *Aline, reine de Golconde* (1766), *L'île sonnante* (1768), *Le déserteur* (1769), *Le faucon* (1772), *La belle Arsène* (1773), *Le rendez-vous bien employé* (1774), and *Félix ou l'enfant trouvé* (1777). M. had found in Sedaine an excellent librettist, who, from 1761, wrote nearly all his libretti. Félix met with an enthusiastic reception almost without parallel; this appears to have preyed upon M.'s mind, feeling that now he must go down hill; so he laid aside his pen and wrote not a single note more. He left behind two operas, *Pagamin de Monégue* and *Philémon et Baucis*, which were already completed in 1770. Meanwhile he had become administrator of the estates of the Duke of Orleans and General Inspector of Canals. The Revolution cost him his posts, and he even lost his savings; so that he would have fallen into bitter need had not the Opéra Comique granted him a pension of 2,400 francs. After the death of Piccini he became Inspector of Instruction at the Conservatoire, but resigned that post in 1802, not feeling equal to it, on account of his superficial theoretical training. In 1813 he was elected member of the Académie in place of Grétry. M. was one of the creators of French comic opera; what he lacked in training he atoned for by his melodic gifts and dramatic instinct. His name is not forgotten, and even his music not quite dead in Paris. Quatremère de Quincy (1818), Alexandre (1819), and Hédouin (1820) wrote biographical notices of the composer.

Monte, Philippus de (Filippo de M., Philippe de Mons), famous contrapuntist of the 16th century, b. 1521, Mons, Hainault (or at Malines), d. July 4, 1603, Vienna; he became in 1568 capellmeister to the Emperor Maximilian II., and afterwards to Rudolf II. His works which have been preserved are: a book of masses à 5-8 (1557), mass, *Benedicta es*, à 6 (1580), a book of masses à 4-5 (1588), six books

of motets à 5-6 (1569-74; also 1572-76; the sixth book 1584), two books of motets à 6 and 12 (1585, 1587), nineteen books of madrigals à 5 (1561-88), eight books of madrigals à 6 (1565-92), "La fiammetta," canzonets and madrigals, à 7 (1598), a book of *Madrigali Spirituali* à 5 (1581), a book of French chansons à 5-7, and "Sonnets de Pierre de Ronsard" (à 5-7, 1576). Many collections contain pieces of M., which are taken from the above-named works. There are to be found in modern editions a few others, namely, a madrigal à 4 in Hawkins' "History," a motet in Dehn's "Sammlung," and Commer's "Collectio."

Montéclair, Michel Pignolet de, b. 1666, Chaumont, d. Sept., 1737, St. Denis, near Paris. He was (1707-37) contrabassist in the orchestra of the Grand Opéra, Paris, being one of the first performers on the modern contrabass. He composed the ballet-opera *Les fêtes de l'été* (1716), and the grand opera *Jephthé* (1736); also cantatas, duets for two flutes, duets for flute and bass, six chamber sonatas for two violins and bass, and "Brunettes" for flute and violin, and a requiem (1736). M. wrote an excellent "Méthode pour apprendre la musique" (1700; entirely rewritten as "Nouvelle méthode," 1709 and 1736), also a "Méthode pour apprendre à jouer du violon" (1720, 2nd ed. 1736), one of the first violin schools written. In a dispute on theory with Rameau M. was outmatched.

Monteverde, Claudio, the great innovator, who at the time of the origin of the modern style of music (1600), by the side of the purely negative efforts of Caccini, Peri, and their associates, gave positive proof of creative ability. He was born May, 1567, Cremona, d. Nov. 26, 1643, Venice. M. entered when young as violinist into the service of Duke Gonzaga at Mantua, and received instruction in the art of counterpoint from the duke's maestro, Marc Antonio Ingegneri, whom he succeeded in 1603. In 1613 he was distinguished by receiving the post of maestro at St. Mark's, Venice, was reimbursed for the expenses connected with his change of residence, and received a much higher salary than his predecessor (400 ducats), a house, and besides, from time to time, extra fees; he occupied this high post until his death. When called thither he was already a widower, but had two sons, who likewise obtained important positions at Venice: the elder, Francesco, as tenor singer at St. Mark's; the younger, Massimiliano, as physician. M. was already a composer of fame before he commenced writing music dramas. His first work was a book of "Canzonette a 3 voci" (1584; there is a copy in the Munich Library); his second, a book of madrigals à 5 (1587), followed by four other books (1593, 1594, 1597, 1599, all of which were several times republished). In these works

M. often shows himself as an innovator in the matter of harmony, introduces unprepared dissonances, uses the chord of dominant seventh, and works according to a system of harmony closely allied to that of our day, i.e. he moves no longer among the ecclesiastical modes, but among modern keys. M.'s merit was simply to have broken away from rules which had outlived their day; but German composers had already proved hardy pioneers. The diatonic basis of Church Modes had indeed long been ignored, and the chromatics of a Vicentino and Gesualdo di Venosa settled its fate. When, however, M. was attacked in 1600 by Artusi on account of his innovations (in "L'Artusi, ovvero delle imperfettioni della moderna musica"), he was one of the many against whom the conservative theorists levelled their attacks. M.'s services with regard to musical drama are of quite a different, and, undoubtedly, original, character. The fame of the *Stilo rappresentativo* of the Florentines (see CACCINI and PERI) had quickly spread through Italy, and the Duke Vincenzo Gonzaga of Mantua wished to arrange theatrical performances of this kind for the wedding festivities of his son (1607); Gagliano and M. were entrusted with the composition. M.'s first attempt in this new sphere was a brilliant success (*Orfeo*; libretto not by Rinuccini). In the following year (1608) he produced *Arianna* (libretto by Rinuccini); the lament of Ariadne has been preserved to us as a Latin lament to the Virgin in the *Selva*, see below), also the ballet, *Ballo delle ingrate*. With this opera was brought to an end in Mantua, Venice, whither M. went in 1613, had at that time no opera house; and, besides, it was M.'s duty as church maestro to write sacred works. The following years only produced in the *Stilo rappresentativo*: 1624, *Il combattimento di Tancredi e Clorinda*, a work, half-dramatic, half-epic (with a narrator [testo] connecting the speeches), produced at the house of Senator Mocenigo, and printed in the 8th book of madrigals (1638), in 1627, five *Intermezzi* for the court of Parma, and, finally, in 1630, the *Proserpina rapita* (libretto by Strozzi), also produced at the house of Mocenigo on the occasion of the marriage of his daughter. The desolation caused by the plague in 1630 effaced the impression made by *Proserpina*, and only in 1637 arose the first opera house (di San Cassiano); and then, in Venice alone, nearly a dozen sprang up, like mushrooms from the ground, within the space of sixty years. Besides *Arianna*, four more operas of M., *Adone* (1639); *Le nozze di Enea con Lavinia* (1641), *Il ritorno d'Ulisse in patria* (1641), and *L'incoronazione di Poppea* (1642), were brought out in this city. Only the following operas have been preserved: *Orfeo* (printed in 1609), and *Ulisse*, in manuscript at the Vienna Court Library. (Cf. Ambros' *Gesch. d. M.*, IV. 363.) If the musical drama of the Florentines was dry

and barren, an endless recitation over a meagre continuo accompaniment, not unlike Gregorian Chant, M., on the other hand, struck chords of warmer feeling; he frequently introduced *arioso*, and attached great importance to the instruments accompanying the song; and he became the father of the art of instrumentation. It is known that he invented the tremolo of strings (in the *Combattimento di Tancredi*); Orpheus mourns to the accompaniment of bass viols, and the chorus of spirits answers, supported by small *organi di legno*, to the song of Pluto strengthened by four trombones. The sacred works of M. which have been preserved are: a mass à 6, together with several vespers and motets (1610); "Selva morale e spirituale" (masses, psalms, hymns, Magnificats, motets, Salve, and the above-named Lamento, à 1-8 with violins, 1623); finally, masses à 4 and Psalms à 1-8, with litanies to the Virgin (posthumous, 1650). Besides the madrigals already mentioned, there are: the sixth book (madrigals à 5, and a dialogue à 7, 1614), the seventh book ("Il concerto," madrigals à 1-6, and other songs, 1619), and the eighth book ("Madrigali guerrieri e amorosi, con alcuni opuscoli in genere rappresentativo," 1638). Finally, Giulio Cesare M., the master's brother, published: "Scherzi musicali a tre voci" (1607), which are written in the "French style" (i.e. after the manner of chansons); according to the report of his brother in the preface, M. visited the Spa Baths in 1599, whence he brought back a knowledge of this style. Of madrigals by M. lately reprinted there are: "Cruda Amarilli," in Martini's "Esemplare," Choron's "Principes de composition," and Kiesewetter's "Geschichte," etc.; "Strazziami pure il core," in Burney's "History," and in the *Antologia of the Milan Gazette musicale*; the Lament from the *Arianna* in Kiesewetter's "Geschichte der abendländischen Musik," Winterfeld's "Gabrieli," etc.; fragments from *Orfeo* in Hawkins' and in Burney's Histories, Kiesewetter's "Geschichte," etc.; psalms in La Fage ("Diphthéographie"), besides detached pieces in Martini, Choron, Winterfeld, Reissmann, Gevaert; and, finally, in 1881, the complete *Orfeo*, with worked-out general-bass by R. Eitner (Publications of the "Gesell. f. Musikforschung," tenth vol.).

Moore, Thomas, the famous poet, b. May 28, 1779, Dublin, d. Feb. 25, 1852, Sloperton Cottage, near Devizes, was a gifted, though not trained, musician. For many of his songs he wrote melodies, which became popular; he also wrote some part-songs. (Cf. Grove's "Dictionary of Music.")

Morales, Cristofano, important Spanish contrapuntist of the 16th century, b. Seville; about 1540, Papal singer at Rome. He published two books of masses (the first without date, at Paris; 2nd ed. 1546; 2nd Book 1544, and frequently), Magnificats à 4 (1541, and

frequently), two books of motets à 4 (1543-46), motets à 5 (1543), Lamentations à 4-6 (1564). Among modern publications Eslava's "Lira sacro-hispana," especially, contains motets and portions of masses; Martini's "Esemplare," Choron's "Principes de composition," Rochlitz' "Sammlung," Proske's "Musica divina," etc., also contain pieces by M.

Moralities. (See MYSTERIES.)

Moralt Brothers established a famous quartet of strings at Munich about the beginning of this century. Joseph (b. Aug. 5, 1775, Schwetzingen (near Mannheim), leader at Munich, d. 1828), played first violin; Johann Baptist (b. Jan. 10, 1777, Mannheim, d. Oct. 7, 1825, Munich), second violin (composed symphonies, concertantes, and duets for two violins, quartets, etc.); of the twin brothers Jacob and Philipp, b. 1780, Munich, the former died as early as 1803; Philipp, who died 1829, Munich, was the 'cellist of the Quartet. The youngest, Georg (b. 1781, Munich, d. there 1818), was the viola-player of the excellent ensemble.

Moran-Olden, Fanny, celebrated stage-singer (dramatic soprano, with voice of great compass), b. Sept. 28, 1855, Oldenburg; she was the daughter of the chief medical councillor, Dr. Tappenhorn; and, after efforts for a long time unavailing, she overcame the opposition of her parents to her wish to go on the stage. She was trained by Haas, at Hanover, and Auguste Götte, at Dresden, and made her *début* in 1877, under the assumed name of Fanny Olden, at a Leipzig Gewandhaus concert, appearing some months later as Norma on the Dresden court stage. In the autumn of 1878 she obtained her first engagement at Frankfurt, and, at once, for a principal rôle. In 1879 she married the tenor singer Karl Moran. Since the autumn of 1884 she has been a member of the Leipzig Stadttheater company.

Mordent (Fr. *Pincé*, *Mordant*) is the name of the ornament which consists of a single and quick exchange of the principal note with that of the under minor second; it is indicated by . If the auxiliary note has to be chromatically altered, the sharp, flat, or natural, etc., must be placed under the sign; but even if one of these signs is absent, or placed by mistake above, the *minor* under second must be taken:—

Only a part of the value of the note is taken up by the M. The *long* M., , is executed, in corresponding manner, with two or three repetitions of both notes:—

Older signs of the M. are > after the note (♩ >) and v (Martellement), likewise vv (double martellement). (Cf. PRALLTRILLER, SHAKE, and BATTEMENT.)

More, Félicité. (See PRADHER.)

Morel, Auguste François, composer, b. Nov. 26, 1809, Marseilles, d. April 22, 1881, Paris, went in 1836 to Paris, and first made himself known as a composer of songs; he wrote the music to Autran's *Fille d'Eschyle*, which was produced at the Odéon Théâtre. He also wrote a ballet for the theatre of the Porte St. Martin. He went in 1850 to Marseilles, and in 1852 became director of the Conservatoire there. In 1860 he produced a grand opera at the Grand Théâtre, *Le Jugement de Dieu*, which was also successfully performed at Rouen; but M. excelled especially as a composer of chamber-music: five quartets and a quintet for strings, also a pf. trio. He was twice honoured with the *Prix Chavrier* from the Académie for chamber-music.

Morelli, Giacomo, librarian of St. Mark's, Venice, where he was born, April 14, 1745, and d. May 5, 1819. He deserves, apart from his other numerous and meritorious publications, a place of honour in every musical dictionary, for he discovered the long-lost fragments of the "Art of Rhythm" of Aristoxenos, which he published together with some other discoveries (1785).

Morelot, Stéphen, a learned connoisseur of sacred music, b. Jan. 12, 1820, Dijon, dean of the Faculty of Jurisprudence there. He was one of the editors of Danjou's "Revue de la musique religieuse, populaire et classique," was commissioned (1847) by the Ministry of Public Instruction to make a journey through Italy in connection with the reform of Church song; he collected notices concerning important libraries, and contributed highly valuable articles to Conssemaeker's "Histoire de l'harmonie au moyen-âge," and published himself some important pamphlets, namely: "De la musique au XV. siècle" (1856, with transcripts of compositions by Dunstable, Binchois, and Haynes), and "Éléments d'harmonie appliqués à l'accompagnement du plain-chant" (1861), besides many articles in Danjou's "Revue" and in the church musical paper, *La Maîtrise*; finally, a practical realisation of his ideas on the accompaniment of plain-chant: "Manuel de psalmodie en faux-bourdon à 4 voix" (1855).

Morendo (Ital., "dying away"), for an extreme *diminuendo* with slight *ritardando*.

Moresca ("Moorish dance"), a kind of Saltarello or lively Gigue in vogue during the 16th

and 17th centuries. Monteverde's *Orfeo* concludes with an M.—

(it continues thus, in sets of three members, and in triple rhythm, except at the close of each half period, at which point of rest there are two instead of three bars).

Moretti, Giovanni, b. 1807, Naples, d. Oct., 1884, Ceglie (near Naples); pupil of P. Casella and G. Elia. He was theatre maestro at Naples and a prolific composer of operas (1829-60, twenty-four operas); he also wrote a large number of sacred works (twelve masses, a requiem, litanies, etc.).

Morlacchi, Francesco, noteworthy composer, b. June 14, 1784, Perugia, d. Oct. 28, 1841, Innsbruck; he received his first instruction in his native town from the maestro Caruso and the organist Mazetti, then for a short time from Zingarelli at Naples, whose teaching, however, did not satisfy him, so that he went to Bologna to Padre Mattei (1805). Still in the same year was produced a cantata of his in celebration of the coronation of Napoleon as King of Italy; also sacred works (Te Deum, Paternoster) at various churches. In 1807 he appeared as a dramatic composer with the operetta *Il posta in campagna* at the Pergola Theatre, Florence, and the comic opera *Il Ritratto* at Verona. A *miserere* à 16 (Bologna) was written about this time. His reputation grew apace, and Parma, Livorno, Milan, and Rome produced operas of his; so that in 1810 he was appointed capellmeister of the Italian Opera at Dresden, and in 1811 was engaged for life. M. occupied this post with distinction for thirty years, lived in friendly intercourse with men such as Reissiger and C. M. v. Weber, while his style became less superficial under the influence of German music. He also wrote operas and sacred music, not only for Dresden, but still for Italy, and revisited it for longer or shorter periods. Death overtook him while on a journey to Pisa with his physician, for the purpose of restoring his health, which had suddenly given way. The number of M.'s compositions is great: more than twenty operas, mostly comic, ten grand masses with orchestra, a requiem for the King of Saxony (1827), a Passion oratorio, the oratorios *Isacco* and *La morte d'Abele*, also a great number of sacred pieces of all kinds, and cantatas, chansons; likewise organ sonatas, etc.

Morley, Thomas, famous English contrapuntist of the 16th century, b. 1557, studied under William Byrd; Bachelor of Music (Oxford, 1588), Gentleman of the Chapel Royal, d. about

1604. He published: "Canzonets, or Little Short Songs to Three Voices" (1593); "Madrigals to Four Voices" (1594); "Ballets to Five Voices" (1595, dance songs); "Canzonets to Two Voices" (1595); likewise seven instrumental pieces; "Madrigals to Five Voices" (1595); "Canzonets; or, Little Short Ayres, to Five or Six Voices" (1598); "Aires; or, Little Short Songs to Sing and Play to the Lute with the Base-viol" (1600); he also edited the collections: "Canzonets . . . to Four Voyces, selected out of the best approved Italian Authors" (1598); "Madrigals to Five Voyces, selected out of the best Italian Authors" (1598); "The Triumphes of Oriana, to Five and Sixe Voyces, composed by divers several Authors" (1601, reprinted in score edition by Hawes); and "Consort Lessons, made by divers exquisite Authors for Sixe Instruments to play together, viz. the Treble Lute, the Pandora, the Citterne, the Base-viol, the Flute, and the Treble Violl" (1599; 2nd ed. 1611). Finally, he was the author of an excellent theoretical work, "A Plaine and Easie Introduction to Practicall Musicke" (1597; republished 1608 and 1771; German by J. K. Trost: "Musica practica"). Some of his harpsichord pieces are to be found in the so-called Queen Elizabeth "Virginal-Book"; sacred works (services, anthems) are preserved in the collections of Barnard and Boyce; others are still in manuscript. His canzonets à 3-4 and madrigals appeared in a modern score edition by Holland and Cooke; ballets à 5, revised by Rimbault, were published by the Musical Antiquarian Society in 1842, detached pieces by Vincent Novello, J. J. Maier, and others.

Mornington, Garret Colley Wellesley, Earl of, the father of Wellington, b. July 19, 1735, Dangan (Ireland), d. May 22, 1781; he was an excellent composer of glees, Dr. of Music and professor (1764-74) at the Dublin University. He himself published glees, and gained prizes several times from the Catch Club. H. R. Bishop published a complete collection of his glees and madrigals (1846).

Morris dance, a dance in imitation of the Moors. In England the Morris dance formed a part of the May-games, although its use was not confined to these occasions. (See MORESCA.)

Morsch, Anna, b. July 3, 1841, Gransee, studied under Tausig, Ehlert, and Kriger at Berlin, where she lives as teacher; since 1885 she has been proprietress of an institution of music in that city; and, besides, she is a diligent contributor to musical papers (historical articles).

Mortelmans, Lodewijk, b. Feb. 5, 1868 Antwerp, studied at the Conservatorium there and also at Brussels. He composed a cantata, *Sinai*; a symphony, "Germania"; a symphonic poem, "Wilde jacht"; pieces for string-

orchestra, and a dramatic scena from *Ariadne* (tenor and orchestra).

Mortier de Fontaine, Henri Louis Stanislaus, a distinguished pianist, b. May 13, 1816, Wisniowiec, Volhynia, d. May 10, 1883, London, who attracted notice by his exceptional technique. He lived from 1853-60 at Petersburg; afterwards at Munich, Paris, and finally, London.

Mortimer, Peter, b. Dec. 5, 1750, Puttenham, Surrey, d. Jan. 6, 1828, Dresden, a Moravian brother. He received his education at Niesky (Silesia) and Barby, was engaged as teacher at Ebersdorf (1774), Niesky (1775), and Neuwig (1777), finally settling at Herrnhut. He wrote, among other works on Church history, "Der Choralgesang zur Zeit der Reformation" (1821), one of the best books on the old Church Modes.

Mosca, (1) Giuseppe, b. 1772, Naples, d. Sept. 11, 1839, Messina, studied under Fenaroli; from 1823 he was theatre maestro at Messina, and wrote for the important Italian theatres, forty-four serious and comic operas, also two ballets.

(2) Luigi, brother of the former, b. 1775, Naples, d. Nov. 30, 1824, Naples, professor of singing at the Conservatorio there, and second maestro; he wrote, likewise, a series of (fourteen) operas, also a festival mass, an oratorio (*Foas*), etc.

Moscheles, Ignaz, distinguished pianist and composer, b. May 30, 1794, Prague, d. March 10, 1870, Leipzig, first studied under Dionys Weber at Prague, appeared in public at the early age of fourteen, and played a concerto of his own composition; soon after that he went to Vienna, where he made further study in composition, under Albrechtsberger and Salieri, maintaining himself, meanwhile, by giving pianoforte lessons. He was received there in the best circles; even Beethoven took notice of him, and in 1814 he was asked to arrange a pianoforte edition of the master's *Fidelio*. Between M. and Meyerbeer, who was also in Vienna at that time, there arose an artistic rivalry, which, however, did not affect personal relationship. In 1816 M. undertook his first concert tour, visiting Munich, Dresden, and Leipzig, went to Paris in 1820, where he made a sensation, and settled in London in 1821, where he soon became much sought after as a teacher, whilst at the same time his reputation as a composer grew rapidly. Repeated visits to the Continent kept his virtuosity in fresh remembrance, and when Mendelssohn founded the Leipzig Conservatorium (1843), he secured M. as a colleague. In 1846 M. settled in Leipzig, and contributed in a marked manner towards the development of the new institution, to which he devoted his teaching powers to the end of his life. The compositions of M. (142 opus numbers) differ considerably in value; side by side with many brilliant virtuoso pieces and

light *morceaux de salon*, he wrote works of lasting importance and original colouring. A pathos, which cannot be exactly described as affected, is one of his characteristics, also a certain grandeur which seldom forsakes him; his harmony is interesting, his rhythm, sharply marked. Of his seven pf. concertos (Op. 45, 56, 58, 87, 90, 93, the last without opus number), the third (G minor) and the seventh (*concerto pathétique*) are still prized and popular. His chamber compositions (pf. sextet with violin, flute, two horns, and 'cello, Op. 35; pf. sextet with strings, clarinet, and horn, Op. 88; trio, Op. 84; duets for pianoforte and various instruments, variations, rondos, etc., for ensemble of various kinds) are now seldom heard. On the other hand, the grand duet for two pianofortes ("Hommage à Haendel"), Op. 92; the "Sonate mélancolique," Op. 49 (for pianoforte solo); also the "Sonate caractéristique," Op. 27; and the "Allegri di bravura," Op. 51, never fail to produce a good effect. His twenty-four "Études" (Op. 70) and the "Charakteristische Studien" (Op. 95) are excellent educational works, and enjoy a large circulation. M. translated into English Schindler's "Beethoven-Biographie," and made many additions to it ("The Life of Beethoven," 1841, two vols.). For further details concerning M.'s life, likewise for a complete catalogue of his works, consult "Aus M.'s Leben. Nach Briefen und Tagebüchern herausgegeben von seiner Frau" (1872, two vols.). The life of M. was translated into English by A. D. Coleridge. The correspondence with Mendelssohn was published in 1888, in German and English.

Mosel, Ignaz Franz (Edler von), meritorious writer on music, b. April 1, 1772, Vienna, d. there April 8, 1844; he composed several operas, overtures, hymns, psalms, etc. In 1816 he conducted the first concert of the "Gesellschaft der Musikfreunde," received the title of Court Councillor, and was raised to the rank of a nobleman, became vice-director of the court stages in 1820, and from 1829 until his death was *Custos* of the court library. M. wrote: "Versuch einer Aesthetik des dramatischen Tonsatzes" (1813); "Ueber das Leben und die Werke des Antonio Salieri" (1827); "Ueber die Originalpartitur des Requiems von W. A. Mozart" (1829); "Geschichte der Hofbibliothek" (1835); and "Die Tonkunst in Wien während der letzten fünf Decennien" (1818, in the *Vienna Allg. Musik. Zeit.*; printed separately, 1840).

Möser, Karl, important violinist, b. Jan. 24, 1774, Berlin, d. there Jan. 27, 1851. He was the son of a trumpet-player, and received his first instruction in the violin from his father, afterwards from Böttcher and Haacke. After holding for a short time an appointment in the royal band, he went to Hamburg, where intercourse with Rode and Viotti urged him on to fresh study.

After numerous journeys, he returned to Berlin in 1811, and once more joined the royal band; for the last ten years of his life he bore the title of "Königl. Kapellmeister." His compositions are of small importance; among his pupils were Karl Müller and his own son August Möser. The latter, b. Dec. 20, 1825, Berlin, died on concert tour in America, 1859; he published some pieces for violin (Op. 4, "Freischütz" fantasia).

Mosewius, Johann Theodor, b. Sept. 25, 1788, Königsberg, d. Sept. 15, 1858, Schaffhausen, during a holiday excursion; he studied law, but afterwards turned to music. He was, at first, opera singer at Königsberg and Breslau, afterwards sub-professor of music at the University in the latter city (1827) and director of the academical Institution for Church Music, musical director at the University 1832. To M. belongs the credit of having founded the Singakademie at Breslau (1825), and thereby influenced musical life in that city. Not only was that influence invigorating, but M. understood how to lead awakened minds into the right paths. In no other city in Germany were the old and new classics, Bach and Handel, Mozart and Beethoven, so cultivated at that time, nor such excellent performances of their works given from year to year as under M. in Breslau. He wrote: "J. S. Bach in seinen Kirchenkantaten und Choralgesängen" (1845), and "J. S. Bachs Matthäuspassion" (1852).

Mosonyi (Michael Brandt, called M.), national Hungarian composer, b. Sept. 4, 1814, Wieselburg, d. Oct. 31, 1870, Pesth, published his first compositions (songs) under his real name, Brandt, produced a symphony at Pesth, and wrote an offertory and gradual for the consecration of the basilica at Graz. It was only in 1860 that he began to produce national compositions under the pseudonym M.; first of all pianoforte pieces ("Studien zur Vervollkommenung der ungarischen Musik," "Kinderwelt"), but afterwards, also orchestral works (a funeral symphony in memory of Count E. Szechenyi, an overture including the national song, "Szozat," a symphonic poem, "Triumph and Trauer des Honvéd"), and two operas (*Die schöne Ilka*, given at Pesth, 1861; and *Almos*, not produced). Liszt wished to produce at Weimar (1857) a German opera, *Maximilian*, but demanded certain alterations from the composer, whereupon the latter threw the score into the fire.

Mosso (Ital.), "moved," fast.

Moszkowa, Joseph Napoléon Ney, Prince de la, the eldest son of Marshal Ney, b. May 8, 1803, Paris, d. July 25, 1857, St. Germain en Laye; a French statesman and member of the Chamber of Peers, senator and brigade-general under Napoleon III. He was a well-trained and gifted musician, produced

in 1831 a grand orchestral mass at Choron's School of Music, which showed mastery of the fugal style; and the same quality was displayed in the two operas successfully produced at the Opéra Comique: *Le Cent-Suisse* (1840) and *Yvonne* (1855). In 1843 he established the "Société de musique vocale, religieuse et classique," with the object of producing vocal works of the 16th and 17th centuries, and at these concerts the prince himself conducted in his own palace. The society published a highly valuable collection of the works which he produced ("Recueil des morceaux de musique ancienne exécutés," etc., eleven vols.).

Moszkowski, Moritz, composer and able pianist, b. Aug. 23, 1854, Breslau, where his father, a native of Poland, lived as an independent gentleman. M. received his first musical instruction at Breslau and Dresden, and his artistic training at Stern's, and, especially, Kullak's, Conservatorium, Berlin, in the latter of which he also became for some time teacher. In 1873 he arranged his own first concert at Berlin, which was a brilliant success; since that time he has made repeated concert tours, visiting Berlin and various other cities, also Paris, Warsaw, and quickly brought his name into high repute. As a composer, M. certainly has a practised pen, but lacks deep originality. His "Spanische Tänze" for pf., fresh pieces of refined workmanship, first made him known in wider circles; subsequently his symphonic poem in four movements, "Jeanne d'Arc," met with great approval at Berlin, Wiesbaden (Tonkünstlersammlung, 1879), Warsaw, Amsterdam, Hanover, etc. There are still to be named two concert pieces and a scherzo for violin with pf., three concert pieces for pf. and 'cello, two orchestral suites (Op. 39, 47), "Phantastischer Zug" for orchestra, a violin concerto (Op. 30), a number of pf. pieces, three concert études, concert waltzes, gavottes, etc., and songs, also a pf. concerto. An opera, *Boabdil*, was produced successfully in April, 1892, at Berlin. His brother Alexander, b. Jan. 15, 1851, Pilica (Poland), lives as musical critic of the *Deutsches Montagsblatt*, and co-editor of the *Berliner Wespen*, at Berlin.

Motet (Lat. *Motetus*, *Mutetus*, *Motellus*, *Motecta*, etc.; Ital. *Motetto*; Ger. *Motett*; Fr. *Motet*), a term applied for centuries to Church Music in several parts, and of moderate length, without instrumental accompaniment. The words of motets are biblical, and, as a rule, in Latin; they can, however, be in other languages. It is true that when vocal music was first accompanied (after 1600), motets were frequently written with accompaniment of continuo, or several violins, etc., and even motets for one voice (*a voce sola*) with accompaniment; but these formed exceptions, and the *cappella* style was the rule. As regards the etymology of the much-dislocated word *motetus* (especially in the

16th century), Walter Odington (about 1225) defines it as "*brevis motus cantilena*," i.e. *motetus* as a diminutive formed, after the French manner, from *motus*; Ambros refers it to the French *mot* (Ital. *motto*). Odington's guide to the composition of a *motetus* points to a continued movement of the measure, on the plan of one of the six modes (see *MODE*), in the part specially characteristic of the *motetus*, the so-called *medius cantus* (the third part inserted between the tenor and discant, and hence frequently called *motetus*). From Franco of Cologne's "*Ars cantus mensurabilis*" we learn that the *motetus* had two sets of words (the tenor different from alto and discant); and the still older "*Discantus vulgaris positio*" (12th century) expressly mentions that the *motetus* is not arranged note against note of the tenor, but differs from it in note values and rests. Unfortunately there is no monograph on the oldest art-forms (*organum*, *motetus*, *conductus*, *vondellus*, etc.); the necessary material for such a work is accessible to everyone in the collections of Gerbert and Coussemaker.

Motion. (See *MOVEMENT*, 2.)

Motive (Ger. *Motiv*) is the term applied in music, as in architecture, to the ultimate characteristic members of an art formation. (Cf. *THEME* and *IMITATION*.) One speaks, first, of *rhythmical motives*, i.e. characteristic mixing of longs and shorts. If a motive fills a bar consisting of two or three beats, so that its point of stress, each time, is a bar point of stress, it is named a bar motive; but if the point of stress of a motive only occupies the time of one beat, the more exact term for the M. is *M. of subdivision* (Untertheilungsmotiv). Rhythmical motive and metre do not, however, always coincide: for example, the rhythmical motive can be duple in triple time, etc.; and then there are different modes of executing the motive resulting from the metre, so as to render the bar-measure recognisable; for example, in Beethoven (Sonata, Op. 14, No. 2):

Here the first motive has its last note on the principal stress of the bar; the second, on the other hand, remains entirely in suspense, for it does not even reach the beginning of the second beat; wherefore it happens that the first note of the third forms a common point of stress. In the course of a theme, frequently-recurring progressions which give a special cachet to the theme are termed *melodic motives*. Finally, one speaks of *harmonic motives*, i.e. chord combinations, which return, transposed into other keys, and, like rhythmical and melodic motives, stand out as prominent members of the art-structure. (Cf. *LEITMOTIV*.)

Mottl, Felix, b. Aug. 29, 1856, Unter-St. Veit (near Vienna), was received into the Löwenburg *Konvikt* owing to his lovely soprano voice, and was further trained at the Vienna Conservatorium, where he distinguished himself. He afterwards conducted the academical "Wagnerverein," and in 1881 succeeded Dessoff as court capellmeister at Carlsruhe (until 1892 conductor also of the Philharmonic Society). At the end of 1886 M. received an invitation to become capellmeister at the Berlin Court Opera, which, however, he declined. M. composed the opera *Agnes Bernauer* (Weimar, 1880), the Festspiel *Eberstein* (Carlsruhe, 1881; words by G. of Putlitz), songs, etc. In 1886 M. became chief conductor of the Bayreuth *Festspiele*, and as such has achieved great success. M. produced Berlioz' *Les Troyens* (1st and 2nd parts, Carlsruhe, 1890). M. gave concerts at London in 1893 and 1894.

Motus, Lat., movement.

Mouret, Jean Joseph, b. 1682, Avignon, d. Dec. 12, 1738, Charenton (in the madhouse). In 1707 he went to Paris, soon made himself popular, and rose to be Intendant to the Duchess of Maine. M. was conductor of the *concert spirituel* and composer to the Comédie Italienne; but when the Duchess died, in 1736, he suddenly lost all his posts, and, in addition, his intellect. M. wrote operas and ballets in the style of Lully, which, however, met with no lasting success.

Mouthpiece, that part of a wind instrument which the player puts in or to his mouth. To the former class of mouthpieces belong those of the oboe, clarinet, and bassoon; to the latter those of the horn, trumpet, and trombone.

Mouton, Jean (de Hollingue, named M.), one of the most important contrapuntists of the first half of the 16th century, born probably at Holling (near Metz), d. Oct. 30, 1522, St. Quentin; he was a pupil of Josquin and teacher of Willaert, chapel singer to Louis XII. and Francis I. of France, canon of Théroutanne, and afterwards of St. Quentin. M. was thoroughly master of the most complicated arts of counterpoint, of which, among other works, proof is given by his most harmonious motet, "Nesciens mater," an eight-part quadruple canon; but, as a rule, he made no use of these arts, and in this proved a worthy successor to his teacher, whose style of writing is so similar that many works of the one have been ascribed to the other. The compositions of M. which have been handed down to us are: five masses, the "Alleluja," "Alma redemptoris," "Regina mearum," and two "Sine nomine," printed by Petrucci, 1508 (2nd ed. 1515); the mass "Regina mearum" is also to be found as "Missa d'Allemagne" in the third book of Attaignant's great collection of masses (1532), which contains still another, "Tua est potentia;" the mass "Alma redemptoris," and one of the unnamed as "Dites

moy toutes vos pensées," are to be found also in Andreas de Antiquis' "XV. Missæ," 1516; another, "Quem dicunt homines," in the "Liber X. missarum" of Jacques Moderne (1540). Lastly come two unprinted masses: "Missa de sancta trinitate" (in the Ambras collection at Vienna), and "Missa sine cadentia" (Cambray). Other known mass manuscripts (in which the Munich Library is specially rich) contain only those enumerated (in all, nine). A great number of M.'s motets have been preserved; in the "Motetti della Corona" Petrucci alone (1514-1519) printed twenty-one, besides two already in "Motetti libro quarto" (1505); Le Roy and Ballard printed "Joannis Mouton Someracensis (of the Somme, on account of his last residence at St. Quentin) aliquot moduli" (1555, twenty-two motets); detached ones are to be found in Books VII.-XI. of Attaignant's great collection (1534), and in his "XII. Motetz" (1529); in Otts' "Novum et insigne opus" (1537), and other collections; a Gospel narrative in Montan-Neuber's "Evangelia dominicarum" (1554-56); psalms in the collection of Petrejus, and chansons in the collections of Tilman Susato. Of modern reprints of M. there are very few, viz. three motets and a hymn in the histories of Forkel, Burney, Hawkins, and Busby, and in Commers' "Collectio," etc. Those to whom Glareanus' "Dodekachordon" is accessible will be able in the quickest way to form a judgment concerning M. from the examples given therein.

Mouzin, Pierre Nicholas (called by his family Edouard; hence he often uses this name), b. July 13, 1822, Metz, pupil of the branch of the Conservatoire de Paris in that town; in 1842 teacher, and 1854 director of that institution. M. went to Paris in 1871, after the annexation of Alsace and Lorraine, and was appointed teacher at the Conservatoire. He wrote symphonies, cantatas, two operas, many sacred works, songs, etc.; two historical sketches on the School of Music at Metz, and on the male choral society there (Société chorale de l'Orphéon), and a "Petite grammaire musicale" (1864).

Movement, **Kinds of**, (1) the absolute time-value of the notes indicated by means of words (*Adagio*, *Allegro*), or by metronome marks (see **METRONOME**); in particular cases *Presto* minimis may actually be taken faster than quavers in a *Largo*. (See **TEMPO**).—(2) (or *Motion*) In a melodic sense, the rising and falling of pitch; two parts have either the same M., viz. when they rise or fall in parallel motion (*motus rectus*, *parallel movement*), or a different one when one rises and the other falls (*motus contrarius*, *contrary movement*); or one part may remain while the other rises or falls (*motus obliquus*, *oblique movement*).—(3) The different divisions of a sonata, symphony, etc.

Movimento (Ital.), movement, tempo.

Mozart. (1) Johann Georg Leopold, father of Wolfgang M., b. Nov. 14, 1719, Augsburg, d. May 28, 1787, Salzburg. He was the son of a bookbinder of small income, and devoted himself to the study of jurisprudence at the University of Salzburg, earning money for that purpose by teaching music. Lack of means compelled him, however, to enter the service of Count Thurn, Canon of Salzburg, who procured for him occupation as violinist in the archbishop's band. His previous musical training must have been excellent, for he was not only an able violinist and teacher of that instrument, but active as a composer, and so was named "Hofkompositeur" to the archbishop, and in 1762, Vizekapellmeister. In 1747 he married Anna Maria Pertlin, a native of Salzburg, from whom Wolfgang inherited a humour peculiar to the Salzburgers, one bordering on the low comic. Of the seven children of that marriage five died before they were one year old; only Nannerl and Wolfgang (*see below*) grew up. The parents devoted themselves earnestly to the education and musical training of their gifted offspring; their life, henceforth, was determined by that of the children; M. even ceased composing when Wolfgang commenced. This renunciation must not be undervalued, for he was a fruitful composer, wrote much sacred music, symphonies, serenades, concertos, divertimentos, twelve oratorios, operas, pantomimes, and all kinds of *pièces d'occasion*; of these the sacred works were especially esteemed. The following appeared in print: a divertissement, "Musikalische Schlittenfahrt;" six trio sonatas for two violins with *basso continuo*, and twelve clavier pieces ("Der Morgen und der Abend"). A work of greater importance is his "Versuch einer gründlichen Violinschule," printed in the year in which his celebrated son was born (1756), and with the exception of that of Geminiani (1740) probably the oldest; but, in any case, it was the first generally recognised Method for the violin (2nd improved edition 1770, and, after that, frequently republished up to 1804: in French by Röser, 1770, and by Woldemar, 1801; also in Dutch).

(2) Maria Anna (Nannerl), daughter of the former, b. July 30, 1751, at Salzburg; she developed at a very early age into an excellent pianist, and accompanied her brother on his first artistic tours. Their correspondence shows how devoted they were to each other all through their lives. In 1784 she married the Salzburg Councillor, Baron v. Berchthold zu Sonnenberg, lived at Salzburg after his death and gave piano lessons; she died there, having been blind for nine years, on Oct. 29, 1829.

(3) Wolfgang Amadeus (really Johannes Chrysostomus Wolfgangus Theophilus; his father translated Theophilus into Gottlieb, M. himself later, into Amadé; his confirmation name was Sigismund), b. Jan. 27, 1756, Salzburg, d. Dec. 5, 1791, Vienna. Probably of no

other distinguished artist are so many details known concerning the period of youth as of M. His musical gifts were displayed at an exceptionally early age, and in so strong a manner as to command attention. The communication made later by the court trumpeter Schachtner to Maria Anna M. (Frau v. Berchthold) is known; how already at the age of four M. scrawled down a clavier concerto, before he really knew his notes, and how he could not listen to the sound of the trumpet without experiencing physical pain, etc. In 1761 the five-and-a-half-year-old boy took part (probably in the boys' choir) in the performance of a Liederspiel by Eberlin, "Sigismundus Hungariæ rex," in the hall of the Salzburg University. In 1762, when Nannerl was eleven and Wolfgang six years old, their musical performances were already so extraordinary that the father felt induced to make an artistic tour with them, in the first place (January) to Munich, and after that (September) to Vienna. The story is well known of how M. excited the astonishment of the monks at Ips by his organ-playing, how he met with a most hearty reception at the court, and held intercourse with the princesses, especially with Marie Antoinette; how he played on a covered keyboard, etc. It may be mentioned, further, that numerous poems about the wonder-child M. were printed in various languages. The result of this first journey encouraged Leopold M. to undertake a greater one already in the following year, and, indeed, to Paris. Naturally, the breaks which were made occurred mostly at the courts of princes: the residences and country seats of the Bavarian Elector at Nymphenburg, of the Duke of Württemberg at Ludwigsburg, and of the Elector Palatine at Schwetzingen. At Mayence and Frankfurt they gave some public concerts with extraordinary success, played besides at Coblenz before the Elector of Trèves, at Aix la Chapelle before the Princess Amalie of Prussia, sister of Frederick the Great; lastly, at Brussels before Prince Charles of Lorraine, Governor of the Austrian Netherlands, and arrived in Paris November 18, 1763. They stayed there with the Bavarian ambassador, Count Eyck, found a zealous protector in Baron Melchior Grimm, played before Madame de Pompadour and their Imperial Majesties, and gave two public concerts with immense success. At Paris M.'s first compositions were printed: four violin sonatas, of which two were dedicated to the Princesse Victoire, and two to the Comtesse de Tessé. From Paris they went straight to London; they performed before the Royal Family, while capellmeister (music-master) Johann Christian Bach (youngest son of J. S. Bach) arranged all kinds of musical performances with M.: improvisations of all kinds, transpositions into difficult keys, extemporaneous accompaniments which seemed almost impossible for the child. In England M. wrote likewise six

violin sonatas, which he dedicated to Queen Charlotte; small symphonies of his were also repeatedly performed. Leaving London, they accepted an invitation from the Princess of Nassau-Weilburg (to whom M. dedicated his next six violin sonatas) to visit The Hague. At Lille, Wolfgang was seized with violent illness which lasted four weeks; at The Hague, first Marianne, and again Wolfgang, were at death's door. Altogether they were confined to bed for about four months, and the father almost lost self-control. On the return journey they passed through Paris, where Grimm was astonished at Wolfgang's progress; they gave concerts at Dijon, Berne, Zürich, Donaueschingen, Ulm, and Munich; and, at length, towards the end of November, 1766, after three years' absence, arrived once more in Salzburg. There M. wrote (at the age of ten) his first oratorio (*St. Mark* xii. 30). After a year's serious study, a fresh journey was undertaken, and to Vienna; an outbreak of smallpox frightened them away to Olmütz, where the children, nevertheless, were attacked. On their return to Vienna, they played before Joseph II., but there was no opportunity for public concerts. Young M. was exposed to bitter calumny, and was compelled, by improvising music to words placed before him, to prove that he, and not his father, was the author of his works already made public. At that time, by command of the Emperor, M. wrote his first opera, *La finta semplice*, which was accepted by the theatrical manager Affligio; yet, in spite of the recommendations of Hasse and Metastasio, intrigue prevailed, and it was not, after all, produced (it was, however, performed at Salzburg in 1769). On the other hand, a "Liederspiel" (vaudeville), *Bastien und Bastienne*, was put on the stage in a private circle; and on Dec. 7, 1768, the twelve-year-old M. conducted, for the first time, a grand concert, viz. the performance of his solemn Mass, on the occasion of the consecration of the orphan asylum chapel. On his return to Salzburg the boy was appointed "Concertmeister" to the archbishop, but only remained a year there; in December, 1769, he started with his father on a journey to Italy. This was a triumphal procession for the young master; the churches and theatres in which he gave concerts (Nannerl was not with him this time) were filled to overflowing; and he passed with brilliant success the severe examinations of serious masters, such as Sammartini at Milan, Padre Martini at Bologna, and Valotti at Padua; at Naples he charmed the court, at Rome he was invested by the Pope with the order of the Golden Spur (hence at that time he signed himself "Cavaliere M."), and, on his return to Bologna, after passing the stipulated examination, was admitted as member of the *Accademia dei Filarmonici*. A halt was made at Milan, and by Christmas, 1770, the opera *Mitridate, rè di Ponto*, which he had been commissioned to write, was produced,

and repeated twenty times in succession with enormous success. In March, 1771, they returned to Salzburg, where he wrote the oratorio *La Betulia liberata*; but already in the autumn of the same year father and son were again in Milan, where a theatrical serenade of M.'s, *Ascanio in Alba*, in commemoration of the marriage of the Archduke Ferdinand with the Princess Beatrice of Modena, was produced; this work drove Hasse's festival opera, *Ruggiero*, completely off the field. Soon after this the Archbishop of Salzburg died, and his successor, Hieronymus, Count of Colloredo, was by no means musically disposed. For his installation M. wrote the opera *Il sogno di Scipione* (1772). By Christmas, 1772, we find M. again in Milan for the production of his opera *Lucio Silla*. After this, M. led a quieter life; he diligently composed symphonies, masses, concertos, the music to *König Thamos* (1773), and chamber-music. But for the Carnival of 1775 he was commissioned to write an opera for Munich, viz. *La finta giardiniera*, which met with a brilliant reception; and shortly afterwards *Il re pastore* followed at Salzburg to celebrate the visit of the Archduke Maximilian. Notwithstanding all this success, M. as yet had no sufficient income, and the father meditated another journey. The archbishop refused leave of absence, and the now twenty-one-year-old M. saw himself compelled to resign, in order to seek a position elsewhere. With heavy heart the father, this time, allowed his son to go out into the world with his mother; they went first to Munich, where, after long delay, nothing was obtained; through Augsburg to Mannheim, where M. fell in love with the singer Aloysia Weber (afterwards Frau Lange); and only through pressure on the part of the father could he be urged to proceed on his journey to Paris, where one of his symphonies was performed at the *concert spirituel*. But he met with a bitter loss: his mother died July 3, 1778. Deeply moved, and without having accomplished anything, M. returned to Salzburg, and again resumed his duties of concertmeister, becoming, in 1779, court organist. A new commission from Munich caused him to write the opera *Idomeneo* (produced 1781), which forms the transition to his classical works. Soon after M. definitely broke off his untenable relations with the Archbishop of Salzburg and settled in Vienna; even there it was some time before he obtained a position (1789, as imperial private composer, with a stipend of 800 fl.); but here he had, at least, opportunity to produce great works, and of this he made use. By commission from the Emperor he wrote, in 1781, the Singspiel *Die Entführung aus dem Serail* (*Belmonte und Constanze*), which, amid renewed intrigues, at last, by special order of the Emperor, was put on the stage. In the same year M. married Constance Weber, the sister of his youthful love. She was, unfortunately, a bad housewife, and the family, in consequence,

was perpetually in pecuniary straits. In 1785 M. produced *Le Nozze di Figaro*, which in Vienna, owing to the intentionally bad singing of the Italians, proved nearly a failure; for this, on the other hand, the success at Prague made full amends. Hence M. wrote his next opera, *Don Giovanni*, for Prague (1787), and only allowed it to be played afterwards at Vienna, and again with bad result. It is sad to see how M., who as a boy was worshipped, had as a man to fight with the cares of everyday life; how his works, now universally honoured, gave place in Vienna to productions of second rank, and now long forgotten; and how he could not obtain any one of the more honourable posts. At the suggestion of, and in company with, Prince Karl Lichnowski, he undertook a journey to Berlin in 1789, played at the Dresden court, at Leipzig in St. Thomas's Church (Doles and Görner pulled out the stops for him), and lastly at Potsdam before Friedrich Wilhelm II., who offered him the post of principal capellmeister with a salary of 3,000 thlr.; here M.'s Austrian patriotism interposed, and the one opportunity of obtaining a comfortable post slipped by. The slender gratitude on the part of the Emperor was the commission to write a new opera, *Così fan tutte* (1790). During the last year of his life M. produced further: *La clemenza di Tito* (*Titus*) for Prague, for the coronation of Leopold II. (Sept. 6, 1791), and for Vienna (Schikaneder) *Die Zauberflöte* (Sept. 30, 1791). His last work was the Requiem. (Cf. Joh. Ev. Engl's festival pamphlet, written on the occasion of the M. centenary [1891]: in it he shows that the work was left by M. in an almost complete state.) His burial was as simple and as inexpensive as possible: he had not even a special grave, but without funeral escort (his few friends accompanying the coffin only half way), he was buried in "the common ditch;" so that his exact resting-place is really unknown. In 1859, on the anniversary of his death, a monument was erected to his memory in the churchyard of St. Marx; a noble monument had already adorned Salzburg, his native city, since 1841. We marvel to-day at the rich inheritance left to the world by the so-early deceased master. He held unequalled dominion over the means of musical expression, and over musical form. Sweetness and sincerity are his distinguishing marks; his humour is less extravagant than that of Haydn, and the resentful seriousness of Beethoven is quite foreign to him. His style is the happiest mixture of Italian joyfulness of melody with German thoroughness and depth. The natures most akin to him are those of Schubert and Mendelssohn, who also resemble him in their astonishing productivity and ease in creating, as well as in the shortness of their lives. The importance of M. the composer is universal. In opera, in the province of orchestral as well as that of chamber-music, and also in that of sacred composition, he denotes progress, and has produced

master-works of undying beauty. The transfer of the reformatory ideas of Gluck—which this composer brought to bear upon material derived from ancient and mythical sources—to lively, every-day subjects, created types which will serve as models for a long time to come. The first century which has passed since they came into existence has not been able to find any fault in them: in *Don Giovanni*, *Figaro*, *Così fan tutte*, and *Zauberflöte* nothing, absolutely nothing, is at the present day old or antiquated.

The catalogue of Breitkopf & Härtel's monumental complete critical edition of M.'s works, 1876-86, contains:—I. *Sacred Music* (Series 1-4):—Fifteen masses, four litanies, a Dixit and a Magnificat, four Kyries, a madrigal, a Veni sancte, a Miserere, an antiphon, three Regina cœli, a Te Deum, two Tantum ergo, two German hymns, nine Offertories, a De profundis, an aria, a motet for soprano solo, a four-part motet, a graduate, two hymns, funeral music (Passion cantata), *Davidde penitente* (cantata), also two Freemason cantatas (*Masonic Joy* and *A Short Masonic Cantata*). II. *Works for the Stage* (Series 5):—*Die Schuldigkeit des ersten Gebotes* (*The Observance of the First Commandment*, only partly by M.), *Apollo et Hyacinthus* (Latin drama with music), *Bastien et Bastienne* (*Liederspiel*), *La finta semplice* (opera buffa), *Mitridate, rè di Ponto* (opera seria), *Ascanio in Alba* (theatrical serenade), *Il sogno di Scipione* (ditto), *Lucio Silla* (opera seria), *La finta giardiniera* (opera buffa), *Il rè pastore* (dramatic cantata), *Zaide* (German opera), *Thamos, König in Ägypten* (*Thamos, King of Egypt*, heroic drama with music), *Idomeneo, rè di Creta* (*Iliad ed Adamante*, opera seria), *Die Entführung aus dem Serail* (*The Seraglio*, light comic opera), *Der Schauspieldirector* (comedy with music), *Le Nozze di Figaro* (*Die Hochzeit des Figaro*, opera buffa), *Don Giovanni* (*Don Juan*, ditto), *Così fan tutte* (ditto), *La clemenza di Tito* (opera seria), *Die Zauberflöte* (*The Magic Flute*, romantic opera). III. *Concerted Vocal Music* (Series 6):—Twenty-seven arias and a rondo for soprano with orchestra, an aria for alto, eight arias for tenor, five arias and an arietta for bass, a German war-song, a duet for two sopranos, a comic duet for soprano and bass, six trios, a quartet. IV. *Songs, etc.* (Series 7):—Thirty-four songs for one voice with pianoforte, a song with chorus and organ, a three-part chorus with organ, a comic trio with pianoforte, twenty canons for two and more voices. V. *Orchestral Works* (Series 8-11):—Forty-one symphonies, two symphonic movements, thirty-one divertimentos, serenades and cassations, nine marches, twenty-five dances for orchestra, "Masonic Dirge," "A Musical Joke," for strings and two horns; also a sonata for bassoon and cello, an adagio for two basset-horns and bassoon, an adagio for two clarinets and three basset-horns, adagio for harmonica, an adagio and rondo for harmonica, flute, oboe,

viola, and violoncello; adagio and allegretto (ditto), fantasia for Glockenspiel, andante for a barrel-organ. VI. *Concertos and Solo Pieces with Orchestra* (Series 12 and 16):—Six violin concertos, six solo pieces for violin, concertone for two violins, concertante for violin and viola, a concerto for bassoon, a concerto for flute and harp, two flute concertos, an andante for flute, four concertos for horn, a concerto for clarinet, twenty-five concertos for pf., a concert rondo for pf., a double concerto for two pfs., a triple concerto for three pfs. VII. *Chamber-music* (Series 13-15, 17, 18):—Seven quintets for strings (two violas), a quintet for violin, two violas, horn (*ad lib.* cello), and 'cello; a quintet for clarinet and strings, twenty-five quartets for strings, a quintet "Nachtmusik" for strings (double bass), adagio and fugue for strings, a quartet for oboe and strings, a divertissement for strings, two duos for violin and viola, a duo for two violins, a quintet for pf., oboe, clarinet, horn, and bassoon; two pf. quartets with stringed trio, seven pf. trios, one trio for pf., clarinet, and viola, forty-two violin sonatas, also an allegro and two sets of variations for pf. and violin. VIII. *Pianoforte Music* (Series 19-22), (a) For four hands:—Five sonatas and an andante with variations; (b) for two pianos: a fugue and a sonata; (c) for two hands: seventeen sonatas, fantasia and fugue, three fantasias, fifteen sets of variations, thirty-five cadenzas to pf. concertos, several minuets, three rondos, a suite, a fugue, two allegros, allegro and andante, andantino, adagio, gigue. IX. *For Organ* (Series 23):—Seventeen sonatas, the greater part with two violins and 'cello. The Supplement (Series 24) gives the unfinished (among which the Requiem), and doubtful works, also transcriptions of the works of other composers (five fugues from Bach's "Wohltemperirtes Klavier" for strings, etc.).

The biographies of Niemtschek (1798), Nissen (1828), Ulibischeff (1843), Holmes (1845), etc., have been absorbed in, and surpassed by, the exhaustive Mozart biography of Otto Jahn (1856-59, four vols.; 2nd ed. 1867, two vols.; 3rd ed., 1891-93, revised by H. Deiters; English translation by P. D. Townsend), a truly worthy memorial of the world's favourite musician. In addition, Ludwig Nohl has contributed valuable material concerning M. ("Die Zauberflöte," 1862; "Mozarts Leben," 2nd ed. 1876; English by Mrs. Wallace, 1877; "Mozarts Briefe," 2nd ed. 1877; "Mozart nach den Schilderungen seiner Zeitgenossen," 1880). Another work of the highest value deserving of mention is v. Köchel's "Chronologisch-thematisches Verzeichniss sämtlicher Tonwerke W. A. Mozarts" (1862; supplement 1889). Of M.'s two sons the elder, Karl (b. 1784), died as a government official at Milan in 1859; the younger—

(4) Wolfgang Amadeus, named after his father, b. July 26, 1791, d. July 30, 1844, Carls-

bad, studied under A. Streicher, Albrechtsberger and Neukomm as pianist; he lived at Lemberg for several years as music teacher and conductor of the Cecilia Society, afterwards at Vienna. His works are:—Two pf. concertos, a sonata for pianoforte solo, and one for pianoforte and violin, a quartet for strings, a pf. trio, a set of variations, polonaises, etc. They are not of much importance, and must not be confused with those of his father.

Mozart Scholarship, at Frankfort-on-Main, obtained from the surplus fund of the Frankfort "Liederkranz" musical festival, established in 1838; the interest is given for a period of four years to young composers of small means; the trustees appoint the teachers. The year's stipend was 400 Rh. florins, but has now risen to 1,800 marks (£90). The recipients of the stipend have been: J. J. Bott, K. J. Bischoff, M. Bruch, K. J. Brambach, E. Deurer, L. Wolf, A. Krug, F. Steinbach, E. Humperdinck, Paul Umlauf and Alexander Adam (the last two simultaneously, 1879-83), Adolf Weidig and Otto Urbach.

Muck, Carl, b. Oct. 22, 1859, Darmstadt, studied philosophy at Heidelberg and at Leipzig, where he obtained the degree of Dr. Phil., becoming meanwhile more and more of a musician. For three years he attended the Leipzig Conservatorium, and then became conductor at Zurich, next at Salzburg (1881), Brünn (1882), Graz (director of the Steyermark-Musik-Verein, 1884), and Prague (German Opera, 1886). In 1892 he withdrew from an engagement with Pollini for Hamburg and accepted the post of Hofkapellmeister of the Berlin Royal Opera.

Mudie, Thomas Molleson, English composer, b. Nov. 30, 1809, Chelsea, d. July 24, 1876, London, pupil of Crotch at the Royal Academy, 1832-44 pianoforte professor at that institution, then, from 1863, teacher of music in Edinburgh, and after that in London up to his death. He published numerous pf. pieces, duets and fantasias on Scotch airs, a collection of sacred songs, many other songs, etc. Also three symphonies, a pf. quintet, and a pf. trio were produced at the Society of British Musicians, and, according to Macfarren, these are works of note.

Muffat, (1) Georg, remarkable composer of the 17th century, probably born in Germany, of an English family which had emigrated during the 16th century, d. Feb. 23, 1704, Passau; he studied Lully's style in Paris for six years, then became organist of Strassburg Cathedral until 1675, lived for a time in Vienna, and already some years before 1682, must have been organist to the Bishop of Salzburg, for it was owing to the latter that he was able to make a stay in Rome, whence he was recalled by the bishop on Oct. 18, 1682. When the latter died, May 3, 1687, M. sought to enter the service of the Bishop of Passau.

He was at first only organist, and probably was not named capellmeister and master of the pages until 1695. M. published:—"Armonico tributo" (1682, sonatas for several instruments), "Suavioris harmoniæ instrumentalis hyporchematicæ florilegium" (1695, 1698, two parts, containing fifty and sixty-two dance pieces for four and eight violins with continuo), "Apparatus musico-organisticus" (1690: twelve toccatas, a chaconne, and a passacaglia), and twelve concertos for strings (1701).

(2) August Gottlieb, son of the former, b. April 17, 1683, d. Dec. 10, 1770, Vienna; pupil of J. J. Fux, in 1717 imperial court organist at Vienna, received his pension in 1764. He published:—"72 Motetten oder Fugen samt 12 Tokkaten" (for organ, 1726), and "Componimenti musicali" (for clavier, 1727; with a treatise on ornaments).

Mühdörfer, Wilhelm Karl, b. March 6, 1837, Graz; until the middle of 1881 sub-capellmeister at the Leipzig Stadttheater, then capellmeister at Cologne. He has composed several operas (*Kyffhäuser*, *Der Kommandant von Königstein*, *Prinzessin Rebenblüte*, *Der Goldmacher von Strassburg* [Hamburg, 1886], *Iolanthe* [Cologne, 1890], also much incidental music to plays, overtures, a ballet (*Waldeinsamkeit*, 1869), songs, and part-songs.

Mühling, August, b. Sept. 26, 1786, Raguhn, d. Feb. 3, 1847, as royal music director and cathedral organist at Magdeburg. He published many sacred duets and songs (among others, settings of forty poems from Spitta's "Psalter und Harfe"); orchestral works and oratorios remained in manuscript.

Müller, (1) Christian, celebrated organ-builder at Amsterdam about 1720-70; among other things, he was the builder of the great organ at Haarlem (1738, sixty stops).

(2) Wilhelm Christian, writer on music, b. March 7, 1752, Wasungen (near Meiningen), d. July 6, 1831, Bremen, as musical director. He wrote: "Versuch einer Geschichte der Tonkunst in Bremen" (in the *Hanseatisches Magazin*, 1799); "Versuch einer Aesthetik der Tonkunst" (1830).

(3) Wenzel, a popular composer in his time, b. Sept. 26, 1767, Tyrnau (Moravia), d. Aug. 3, 1835, Baden (near Vienna); theatre capellmeister at Brünn, 1786 at the Marinelli Theatre, Vienna; afterwards at the Leopoldstadt Theatre. He composed instrumental and vocal works of all kinds, but not of much depth; yet with his numerous vaudevilles, fairy operas, and farces he made a real furore (*Das neue Sonntagskind*, *Die Schwestern von Prag*, *Die Zaubertrommel*, *Die Teufelsmühle*, etc.). His son Wilhelm, b. 1800, Vienna, was also a composer, and died Sept., 1882, as capellmeister at Agram.

(4) August Eberhard, one of the worthy successors of Bach in the cantorship of St.

Thomas's, Leipzig, b. Sept. 13, 1767, Northeim (Hanover), d. Dec. 3, 1817, Weimar; an excellent pianoforte- and organ-player, in 1789 organist of the Ulrichskirche, Magdeburg, and in 1794 of the Nikolaikirche, Leipzig; in 1800 he became assistant, and in 1804 successor, of A. Hiller, as cantor of St. Thomas's School, and town musical director; and in 1810 court capellmeister at Weimar. He published two pf. concertos, five pf. sonatas, two sets of organ pieces, one organ sonata for two manuals and pedal, chorales with variations, etc.; one pf. trio, two violin sonatas, six caprices and fantasias for pianoforte (excellent pieces), sets of variations for pianoforte, eleven flute concertos, one fantasia for flute and orchestra, four flute duets, and a few vocal pieces. His instructive works take high rank, especially his pianoforte Method (1804, really the 6th ed. of Löhlein's "Pianoforteschool," revised and rearranged by M.; the 8th ed. was published by Czerny in 1825; Kalkbrenner's Method is based on that of M.); likewise, 1797, a guide to the rendering of Mozart's concertos (in which M. excelled), instructive pf. pieces for beginners, a flute Method, and tables for fingering the flute.

(5) Iwan, famous clarinet-player, b. Dec. 3, 1786, Reval, d. Feb. 4, 1854, Bückeburg; he was the inventor of the clarinet with thirteen keys, and of the altclarinet, which, by the introduction of the basset-horn, became antiquated. He went in 1809 to Paris, and, under the patronage of a banker, established a manufactory for his improved clarinets; but, nevertheless, he failed, because the Académie thought fit to oppose the inventions of M., and by so doing they exposed the worthlessness of their judgment, since within a few years the instruments met with general recognition. M. left Paris in 1820, and then lived for some time in Russia, afterwards at Cassel, Berlin, London, Paris, also in Switzerland, and died, finally, as court musician at Bückeburg. M. published a Method for his improved instruments, six flute concertos, a concertante for two clarinets, several pieces for clarinet and pianoforte, and three quartets for clarinet, violin, viola, and 'cello.

(6) Friedrich, b. Dec. 10, 1786, Orlamünde (Altenburg), d. Dec. 12, 1871, Rudolstadt, an able, all-round musician, distinguished clarinet-player. In 1803 he became member of the royal band at Rudolstadt, in 1831 succeeded Eberwein as capellmeister, and in 1854 received his pension. He composed two symphonies, two concertos, and two concertinos, as well as other solos for clarinet, variations for clarinet and stringed quartet, clarinet études, pieces for four horns, horn terzets, variations for bassoon and orchestra, also pieces for wind band.

(7) The Brothers M., two famous stringed quartet parties, of which the older consisted of the four sons of Aegidius Christoph M. (b. July 2, 1766, Görsbach, near Nordhausen, d. Aug. 14, 1841, as court musician [violinist] in

Brunswick), viz., for the first violin: Karl Friedrich M., b. Nov. 11, 1797, Brunswick, for many years leader there, d. April 4, 1873; viola: Theodor Heinrich Gustav, b. Dec. 3, 1799, "herzoglicher Symphoniedirector," d. Sept. 7, 1855, Brunswick; violoncello: August Theodor, b. Sept. 27, 1802, chamber-musician, d. May 22, 1875, Brunswick; and the second violin: Franz Ferdinand Georg, b. July 29, 1808, ducal capellmeister, d. Oct. 20, 1875, Brunswick. The brothers played together from 1831 to 1855, and, besides Germany, went to Paris, Holland, Denmark, and Russia.—The younger M. quartet party was formed immediately after the older one, owing to a death, had been broken up (1855); it was composed of the four sons of Karl Friedrich M., who were—first violin: Karl (M.-Berghaus), b. April 14, 1829, afterwards capellmeister at Rostock, from which time Leopold Aner became leader of the quartet; second violin: Hugo, b. Sept. 21, 1832, Brunswick, d. there June 26, 1886; viola: Bernhard, b. Feb. 24, 1825; and cello: Wilhelm, b. June 1, 1834. All four brothers, born at Brunswick, became court musicians at Meiningen (Karl was previously leader at Berlin); but in 1866 they settled in Wiesbaden, and when Karl received a call to Rostock the others followed him there. The quartet party was definitely broken up by the appointment of Wilhelm as principal 'cellist of the royal band and teacher at the "Hochschule," Berlin (as successor to De Sweert in 1873). Karl became conductor of the Electoral band at Wiesbaden, and for some time of the private band of the Russian Baron von Dervies at Nice, settled in 1880 at Stuttgart, where his wife founded a vocal academy, whilst he himself was active from 1881–86 in Hamburg. M. composed two stringed quartets, a symphony, overture to *Fiesco*, "Vortragsstücke" for violin, also for cello; songs, a cantata, *Jephthas Tochter*; lately an operetta; he also scored Beethoven's c sharp minor quartet as a "Tenth Symphony," Wagner's "Album Sonata," etc. Berghaus was the maiden name of his wife, Elvira M., daughter of the geographer Berghaus, an excellent concert singer ("Königl. Württemb. Kammersängerin"), pupil of the Stern Conservatorium, then of Frau v. Milde at Weimar, of Götte at Leipzig, and of Ettore at Milan.

(8) Peter, b. June 9, 1791, Kesselstadt (near Hanau, d. Aug. 29, 1877 (pastor at Staden), Langen, attended the University at Heidelberg, was afterwards teacher at Giessen, Gladenbach, and of the seminary at Friedberg. Here he wrote his male choruses, organ preludes, two stringed quintets, and his well-known "Jugendlieder." In the year 1839 he settled as pastor at Staden, where he wrote five quintets, most of which were brought out at Darmstadt. At Christmas, 1853, his opera, *Die letzten Tage von Pompeji*, was produced, for which his eldest

son wrote the libretto after Bulwer Lytton's novel. Among the works he left behind are still many songs (unpublished), a stringed quartet, and the opera *Claudine von Villabella*, libretto by Goethe.

(9) Adolf (really Schmid), b. Oct. 7, 1801, Tolna (Hungary), d. July 29, 1886, Vienna, was first, and for a long time, an actor at Austrian theatres, and afterwards, when his shallow compositions began to achieve success, capellmeister and composer at the Theater-an-der-Wiener, Vienna. He wrote over sixty works of minor importance for the stage (comic vaudevilles, farces, burlesques), also two operas, which, however, had no success, and instrumental and vocal pieces by the dozen.—His son, also Adolf, b. Oct. 15, 1839, Vienna, since 1875 capellmeister at the German Opera, Rotterdam (operas: *Heinrich der Goldschmied*, *Waldmeisters Brautfahrt*, *Van Dyck*; operettas: *Das Gespenst in der Spinnstube*, *Der kleine Prinz*, *Der Liebeshof*, *Des Teufels Weib*).

(10) Johannes, famous physiologist, b. July 14, 1801, Coblenz, d. April 28, 1888, Berlin, became in 1824 lecturer at Bonn, in 1826 occasional, and in 1830, ordinary professor of physiology in the latter town; in 1833 he went to Berlin. In addition to numerous and important works, he wrote:—"Untersuchungen ueber die menschliche Stimme" (1837), and "Ueber die Kompensation der physischen Kräfte am menschlichen Stimmorgan" (1839); also his great "Handbuch der Physiologie des Menschen" (1833–40, two vols.) contains much that is new and important respecting the organs of speech and hearing.

(11) Franz Karl Friedrich, b. Nov. 30, 1806, Weimar, d. there Sept. 2, 1876, as government councillor. He wrote: *Tannhäuser* (1853), "R. Wagner und das Musikdrama" (1861), *Der Ring des Nibelungen* (1862), *Tristan und Isolde* (1865), *Lohengrin* (1867), and *Die Meistersinger* (1869), also sketches on theatrical matters in Weimar: "Im Foyer" (1868).

(12) August, distinguished performer on the double-bass, b. 1810, d. Dec. 25, 1867, as grand-ducal leader at Darmstadt; he published variations, etc., for the double-bass.

(13) Karl, esteemed conductor, b. Oct. 21, 1818, Weissensee (near Erfurt), d. July 19, 1894, Frankfurt, pupil of J. N. K. Götte, Weimar, was at first violinist in the court band there under Hummel, fulfilled his military duties at Düsseldorf from 1837, where he was often engaged as deputy by J. Rietz, remained there as private teacher of music and conductor of a vocal society of artists. He then became, 1846–60, musical director at Münster (Westphalia), and, finally, undertook in 1860 the direction of the Cecilia Society at Frankfurt, which he continued till 1892. M. was active also as a composer:—cantatas (*Tasso in Sorrent*, *Rinaldo*), overtures, and other works of more or less importance, with which he obtained success.

(14) Bernhard, b. Jan. 25, 1824, Sonneberg, d. Dec. 5, 1883, Meiningen, pupil of the Hildburghausen Training College, in 1850 cantor at Salzungen, where he established an excellent church choir.

(15) Richard, b. Feb. 25, 1830, Leipzig, son of K.G.M., the conductor of the Euterpe Concerts, pupil of his father, of K. Zöllner, Hauptmann, and Rietz, conductor of the academical vocal society "Arion" (until 1893), the male choral society, "Hellas," and the "Liedertafel," and teacher of singing at the "Nikolai" Gymnasium, etc. He composed songs, children's songs, part-songs, motets, and a choral work, "Die Lotsen" (with connecting declamation).

(16) Carl C., b. 1831, Meiningen, pupil of Fr. W. Pfeifer, H. Pfeifer (junior), and A. Zöllner (theory); he went in 1854 to New York, where he is esteemed as teacher of theory. M. published an English version of the Sechter system, besides three sets of exercises in connection therewith: "Three Series of Tables for writing Harmonic Exercises." Of his compositions (songs, quartets for male voices, symphonies, etc.), there appeared in Germany two organ sonatas, Op. 47, in F and B \flat minor, also choruses for male voices.

(17) Joseph, b. 1839, d. June 18, 1880, Berlin, as secretary of the "Hochschule für Musik," from 1871-74 editor of the *Allg. Mus. Zeitung*; he published a valuable catalogue, "Die musikalischen Schätze der königlichen und Universitätsbibliothek zu Königsberg" (1870).

(18) Gustav. (See BRAH-MÜLLER.)

(19) William, excellent stage-singer (tenor), b. Feb. 4, 1845, Hanover, son of a shoemaker, and originally a thatcher. In 1868 he made his *début*, after previous training under H. Dorn, Lindhult, and K. L. Fischer, in the opera *Joseph*, at Hanover, and soon made a name there. From 1874-76 he was at Leipzig, and after that, was engaged at the Berlin Court Opera.

(20) Hans, son of the Rhenish poet, Wolfgang Müller von Königswinter, b. Sept. 18, 1854, Cologne, attended the colleges at Cologne and Wiesbaden; in the year 1873 he had a severe attack of inflammation of the lungs, which forced him for three years to betake himself to health resorts in Switzerland and Italy. After a stay of a year and a half in Davos, he was completely restored to health, and devoted himself to philosophical and art-historical studies at the Universities of Leipzig and Bonn, was made *Dr. Phil.* at Leipzig, and published various historical, art-historical, and poetical works. In the year 1879 he settled in Frankfurt, and began to occupy himself with the study of the science of music, especially with matters relating to the Middle Ages; and, in order to treat his subjects thoroughly, he made

several important journeys through Germany, Italy, France, Belgium, and Switzerland. In 1885 he received appointments at the Grand Ducal court and at the national library at Carlsruhe, and in the autumn of the same year was called to the musical section of the Royal Library at Berlin. In 1888 he became teacher of the history of music at the Royal High School, Berlin, and in the following year royal professor. Up to the present his most important works in connection with the history of music are: "Die Musik Wilhelms v. Hirschau" (1884), "Hucbalds echte und unechte Schriften über Musik" (1884), "Eine Abhandlung über Mensuralmusik" (Leipzig, 1886).

Müller-Berghaus. (See MÜLLER, 7; KARL in the junior MÜLLER QUARTET.)

Müller-Hartung, Karl, b. May 19, 1834, Stadtsulza (Thuringia), attended the Gymnasium at Nordhausen, studied theology at Jena for a short time, then turned his attention to music and studied under Kühmstedt at Eisenach. After having been opera conductor for two years, from 1857, at Dresden, he was called to Eisenach, after Kühmstedt's death, as musical director and teacher at the training college, received in 1864 the title of professor, became director of church music at Weimar in 1865, opera capellmeister there in 1869, and, in 1872, founder and director of the Grand Duke's "Orchester- und Musikschule." In 1889 he resigned his other posts. Of his compositions, the organ sonatas deserve special mention, besides psalms, part-songs for male choir, and liturgical choruses. M. is now publishing a theory of music in several volumes (Vol. I. "Harmonielehre," 1879).

Müller-Reuter, Theodor, b. Sept. 1, 1858, Dresden, studied under Friedrich and Alwin Wieck (pianoforte), and Meinardus and Julius Otto (composition), from 1878-79 at the Hoch Conservatorium, Frankfurt. In 1879 he became teacher for pianoforte and theory at the Strassburg Conservatorium, moved in 1887 to Dresden, became conductor of the "Männergesangverein Orpheus" in 1888; in the following year also of the Dreyssig "Singakademie," and in 1892, teacher at the royal Conservatorium. M.-R. has composed songs, choruses for female voices with pianoforte, choruses for male voices with and without accompaniment, two operas (*Ondolina*, Strassburg, 1883; and *Der tolle Graf*, Nuremberg, 1887), a Paternoster for mixed choir and orchestra, also pf. pieces (studies, Op. 20, with "change of finger").

Müller von der Werra (Friedrich Konrad Müller, named M. v. d. W.), b. Nov. 14, 1823, Ummerstadt (Meiningen), d. April 26, 1881, Leipzig. He was the well-known poet of the people, founded the *Deutsche Sängerbund*, and published (1861-71) the *Neue Sängerkhalle*; he

Musical-box. (See SNUFFBOX, MUSICAL.)

Musical Dictation (Fr. *Dictée musicale*), a highly important, though, unfortunately, much neglected branch of musical education; the teacher plays or sings a short composition, and the pupils have to write it down. It forms a supplement to the teaching of singing, and during the period of mutation it offers the advantage of developing the progress already made by scholars. Already since the middle of this century attention has been called to M. D., as, for example, by Pflüger in his "Anleitung zum Gesangunterricht in Schulen" (1853), Hipp. Dessirier "Méthode de musique vocale" (1869, a work which gained a prize). Collections of examples were published by H. Duvernoy, "Recueil de dictées," M. A. Thurner, "Solfège de rythmes," "Dictées d'intonation," H. Götz, "Musikalische Schreibübungen" (1882), and A. Lavignac, "Cours complet de dictée musicale" (1882). H. Riemann, in his "Katechismus des Musikdikts" (1889) treats of M. D. as a means of teaching phrasing.

Musical Periodicals. (See PERIODICALS, MUSICAL.)

Music, History of. A general history of music was first attempted only in the last century, and within a brief space of time, by Padre Martini ("Storia della musica:" three vols., 1757, 1770, 1781); Hawkins ("A General History of the Science and Practice of Music," five vols., 1776); Burney ("A General History of Music," four vols., 1776-89); and Forkel ("Allgemeine Geschichte der Musik," two vols., 1788, 1801). In contradistinction to this older group, there are the modern works belonging to our century:—Ambros ("Geschichte der Musik," four vols. 1862-78, with an extra volume containing musical illustrations [edited by O. Kade], 1882, and index by W. Bäumker, 1882); and Fétis ("Histoire générale de la musique," five vols., 1869-75). Of all these only the two English histories of Hawkins and Burney were completed; Martini does not extend beyond Greek music, while Fétis ends with the 15th, Forkel with the 16th, and Ambros with the 17th century. This regrettable result is to be explained by the overpowering quantity of material which the historiographer has to face, and one which ever increases as he approaches modern times. But as, indeed, the modern history of music, the history of the living present, is by far the most interesting, certain historians have limited themselves to a representation of it in compressed form:—thus Kiese-wetter ("Geschichte der europäischen abendländischen oder unserer heutigen Musik," 1834; 2nd ed. 1846), Brendel ("Geschichte der Musik in Italien, Deutschland u. Frankreich," two vols. 1852; 7th ed. 1888), and Langhans ("Geschichte der Musik des 18. u. 19. Jahrhunderts," two vols., 1882-86). In the second

rank must be mentioned the histories of music of Busby (1819), and Reissmann (1863), for they are not, like the six learned works above mentioned, the result of independent investigation. From the almost innumerable series of compendiums of the history of music, v. Dommer's "Handbuch der Musikgeschichte" (1867; 2nd ed. 1877) is distinguished for its careful, conscientious work; it may, unreservedly, be recommended as a reference book, in which all modern investigations are taken note of (unfortunately, it stops at the death of Beethoven). As guides for lectures, etc., the following deserve mention:—H. A. Köstlin's "Musikgeschichte im Umriss" (3rd ed., 1884), and by way of comparing views of a totally opposite character, L. Meinardus "Die deutsche Tonkunst," 1888, ultra-conservative, and R. Pohl's "Die Höhenzüge der musikalischen Entwicklung," 1888, radical progressive; also, by way of completion, H. Riemann's "Katechismus der Musikgeschichte" (1888-89; English, 1891-2). The modern principle of division of labour, and specialisation of talents, has been of late largely employed in the department of musical history. The biographers, especially, by concentrating their attention to one striking phenomenon, obtain, and offer to the world a living image of a phase, however brief, of the history of music, thus:—Baini (Palestrina), Winterfeld (J. Gabrieli), Spitta (Bach), Chrysander (Handel), Pohl (Haydn), O. Jahn (Mozart), Thayer (Beethoven), M. M. v. Weber and Jähns (Weber), L. Ramann (Liszt), Niecks (Chopin). Besides life-portraits of the various composers, these works offer pictures of the times in which they lived—true sections of history. Other specialists have occupied themselves with a more extended epoch (Coussemaker [middle ages], Westphal [antiquity], Gevaert [ditto], etc.); others, again, have followed an art species through long periods of time (Artega [opera], Gerbert [ecclesiastical music], Kiesewetter ["Schicksale u. Beschaffenheit des weltlichen Gesangs im Mittelalter," 1841], Wasielewski ["Geschichte der Instrumentalmusik im 16. Jahrh." and "Die Violine u. ihre Meister"], etc.). There is still much to be done before the various, and apparently endlessly extended departments have been dealt with, however slightly. The *Monatshefte für Musikgeschichte*, which have appeared since 1869 under the editorship of Rob. Eitner; the "Kirchenmusikalische Jahresbücher," continuation of the "Caecilienkalendar," published since 1886 by Fr. X. Haberl, and the *Vierteljahrsschrift für Musikwissenschaft*, which appeared at Breitkopf u. Härtel's from 1885 under the editorship of Guido Adler, Philipp Spitta (d. 1894), and Friedrich Chrysander—all these form valuable bases for the history of music. Cf. the subjoined synchronous synopsis. For the rest, reference must be made to separate articles, and to the above-named histories of music.

Ancient Times.

Egyptians.

The only monuments of a musical culture which once stood high, are representations of musical instruments, and of musicians in the exercise of their art, preserved to us from a remote period. It seems, however, that the Hebrews, Greeks, and Arabians received not only the practice of music, but also the elements of musical theory from the Egyptians. *Instruments*: Harp (Tebuni), Lute (Nabla), Flute (Mem), etc.

Indians—Chinese.

Developed system of sounds. Fundamental scale with succession of sounds similar to ours (two tones and a semitone), and three tones and a semitone). Signs of written language used for musical notation. Instruments of all kinds, some of them of ingenious construction. *Chinese Instruments*:—Flute (Yo), Psaltery (Tscheng), a stone-mouthed Harmonica (Tscheng), a stone-mouthed Harmonica (Kin), and the Tam-tam (Gong-Gong). *Indian Instruments*:—a species of Cithar (Vina), bowed instruments—Serinda, Ravanashetron (age doubtful), Beak-Flute (Bassae), etc.

Hebrews.

Practice of music of an elaborate kind, especially song with instrumental accompaniment for the glorification of the service of God. Probably the temple-singing of the Jews, in spite of the unavoidable changes which thousands of years must bring about in a tradition, however conscientious, is in substance old pre-Christian. *Instruments*:—Harp (Kinnor), Lute, (Nebel), Flute (Netabim), Chalil, Ugabb, Matroschita, Trumpet (Asorra or Chazozra), Drum (Toph), etc.

Greeks.

Highly prosperous state of music as an art: it enjoyed equal rights with the other arts at the national festivals. Fully-developed theory of the relationship of sounds, and also of rhythm. A notation capable even of expressing the chromatic and enharmonic progressions of modern music. Distinction between accompanied vocal music (singing accompanied by strings: Citharædic; by flutes: Autœdic); and pure instrumental music (Citharistic and Autœtic). Also drama with music existed. *Instruments*:—Lyre, Cithar, Pectis, Magadis, Barbitos, Trigonon, Simnicon, Phorminx (all stringed instruments of the harp or other kind), Canon, Monochord (scientific instrument); Aulos (Beak-Flute), Syrinx (Pan's-Pipe), Salpinx (Trumpet), Keras (Horn), etc. (*Cf.* GREEK MUSIC.)

Polyphony was only employed by the ancients in the form of unison or octave doubling; the modern conception of harmony was unknown; for them the relationship of sounds (consonance) only referred to *succession of sounds*. The oldest form of the system of sounds among all ancient nations was, it seems, originally strictly diatonic, with the avoidance of the semitone relationship (scale of five degrees). The fundamental scale of seven degrees has everywhere the same form, and, as a result of further development, five intermediate tones were inserted (Indians, Chinese); in its notation the Greek system of sounds distinguished even between the diatonic and the chromatic semitones.

Middle Ages.

Music of Western Lands.

1. *Development of the System of Church Modes from the Old Greek System of Music*.—The obsolete theory of the Greeks was described in detail by Boëtius (d. 524) in Latin, and this was studied by the monks during the whole of the Middle Ages. The musical theory of this period appeared therefore in Grecian guise, but the system of modes, in consequence of a misunderstanding, was different. (*Cf.* CHURCH MODES.) *Ambrosius* (d. 397) introduces the singing of antiphons and hymns. *Gregory I. (II., III. f.)* prepares an antiphonary for the universal Church.

Byzantine Music.

The artificial chromatic and enharmonic system of Greek music appears in simplified (diatonic) form in the music of the Greek Church, in connection with which the names of Basilus (d. 379) and Athanasius (4th century) deserve honorable mention. An elaborate notation, even expressing rhythm (Johnannes

Arabians and Persians.

Musical culture was highly developed; the theory was elaborate, and differed from other systems (system of sounds of seventeen degrees with pure thirds which were regarded as consonances). *Theorists*: Chali (8th century), Alfarabi (10th century), Mahmud Schirazi (13th century), Saffiedin (14th century).

Improvement of church singing by the establishment of schools for singing under Charlemagne (St. Gallen, Metz). The oldest notation of the West is that of Neumes. Gradual decay of the rhythm of Gregorian Song, in consequence of the faulty notation, led to the introduction of Sequences (Notker).

Damasenus, d. 766), preserved the latter in the Ritual Song. There was no real development of Byzantine music. (Cf. BRYENNUS and CHURCH MODES.)

Abdolkadir (14th century). *Instruments*: Late, Tanbur, Kannon, Kamantsche and Rebab (both stringed instruments). Rey (Beaked-Flute), and Arganum (Sack-Pipe), etc.

II. *Beginning of Music in Several Parts: Attempts at a Perfect Notation* (9th-12th centuries).—Instead of the octave, the only polyphony employed in antiquity, now appears the accompaniment of a slow Church melody in the upper fifth and under fourth (*Organum, Diaphony*). Pseudo-Hucbald first describes the Organum; Hucbald tries for a better notation, and was the first to use *Lines*. About the same time appears the notation

with the first seven or fifteen letters of the Latin alphabet. *Guido's Arseno* (d. 1037) combines letter notation and neume writing, and thus becomes the founder of modern notation; he (or the school to which he belonged), by means of *Solmisation* and *Mutation* frees the system of sounds from the fetters of stiff diatonic treatment.

III. *Discant and the Development of Mensural Notation: Secular Music* (12th-14th centuries).—The Organum assumes a freer form; the charm of contrary motion is recognised, and is enjoined as a rule (*Discantus*); parallel motion in thirds and sixths (*Fauxbourdon*) is adopted, and this causes the older Organum to be forgotten. A richer development of the rhythm of *Discantus* renders signs necessary for the duration of notes, and leads to the introduction of *Mensural Music*. Distinguished masters of the

new polyphony (already in four parts) are: *Perotinus, Johannes de Garlandia*, the two *Francos, Petrus de Cruce*. Even outside the Church new music is produced (*Troubadours* and *Minnesingers*). Traces of primitive national melody appear in the themes of the contrapuntists during the 13th century. Instrumental music is enriched by the rapidly developing stringed instruments, organs, and other keyboard instruments. Examples of instrumental music of that period have not as yet been discovered.

IV. *Flourishing Period of Counterpoint Proper* (14th-16th centuries).—From the 12th to 13th centuries mensural music was freed from the unnatural limitation of exclusive triple time, by the introduction of *time signatures*; the possibility of various kinds of mensural determination soon led to the artifice of coupling various kinds of time in simultaneous vocal parts. The form of the signature, ever becoming more varied, matured the art of canon. Distinguished masters, such as Walter Odington, Hieronymus de Moravia, Marchettus of Padua, Philipp of Vitry, Johannes de Muris, Simon Tunsted, Johannes Hothby, Johannes Tinctoris, Gafuri, Pietro Aron, Sebald Heyden, Glarean and Zarlinò gave to mensural composition a more definite shape. An almost endless series of distinguished contrapuntists produced a literature so rich that even the 18th and 19th centuries can scarcely rival it; the invention of the art of book-printing, which was soon followed by that of music (Petrucci) offered greater facilities for the circulation of works, and contributed materially to the prosperity of the art. The mass, motet, madrigal, chanson, and

the simpler canzonets, frottole, villanelli, villote, the Liedlein in Germany ("Gassenhaverlin," "Reuterliedlein," etc.) were the forms in which these masters worked. In addition there appeared during the 16th century the music form of the Protestant Choral, which originated in the German Volkslied. During the whole of this period music became more polyphonic, and, as a rule, in four parts, seldom more than five, and *a cappella*. Only dance pieces (Pavans, Gagliards, Passemezzis, etc.) represent the first attempts at pure instrumental music for organ or harpsichord. Towards the end of this period the Ricercar (fantasia [fugue]) make their appearance. About this time the number of instruments greatly increased (stringed instruments of various forms and dimensions [violin], lutes [theorbo, guitar, chitarrone, etc.], clavier [dulcimer, clavichord, clavicymbal, etc.], organ [positive, regal, etc.], Schalmel, Bombard, *fûte à bec*, *fûte traversière*, cromorne, cornetto, drum, etc.). The most important masters of the epoch are:—

Netherland and French.

Zelandia, Binchois, *Dufay*, Faugues, Busnois, Regis, *Okeghem*, Heinrich Isak, Hobrecht, Bar-biers, Basiron, *Ysaquin de Près*, Larue, Brumel, Ghiselin, Orto, Pipelare, Divitis Lupi, Bauldevijn, Frevin, Carpentras, Mouton, *Willart*, Rore, Danc-kerts, *Goudimel*, Arcadelt, Gombert, Ducis, Clemens non Papa, Clément Jannequin, Philipp de Monte, Verdolot, Hollander, Claude Lejeune, Richafort, *Orlando Lasso*.

German.

A. Agricola, Hofhaimer, Heiar, and Herm. *Finck*, Th. *Stolzer*, Stephan Mahn, Paninger, Dietrich, Ludwig *Seyff*, Jakob Paix, Hasler, Gallus, Georg Rhaw, Wolf Grefinger, etc.

Spanish.

Morales, Vittoria, Ramos.
Dunstable, Tye, Tallis, Byrd, John Bull, Morley, Orlando Gibbons, John Dowland.

English.

Italian.

The Venetian School (founded by Willaert): Merulo, Andrea and Giovanni *Gabrieli*, Orazio Vecchi, Porta, Asola, Croce, Donati, Banchieri, Leonl.
Roman (School of Goudimel): Costanzo Festa, Animuccia, *Pales-trina*, G. M. and C. B. Nanini, Auerio, Suriano, Marenzio.

Modern Times.

A powerful impulse was given about 1600 to music generally: there was a strong reaction against over-elaborated counterpoint; and a return was made to a simpler style of composition, restoring to poetry a larger share of its rights. If the contrapuntal art of the Netherlands, with its complete denial of individuality, was an adequate expression of the spirit of the Middle Ages, reform, on the other hand, answered exactly to the spirit of the new period. Next came monody with

instrumental accompaniment in chords for dramatic singing (*Stilo rappresentativo*): from this sprang the opera and the oratorio, also singing in parts with instrumental accompaniment (concerto, duet, cantata, etc.), and finally, pure instrumental music (overture, suite, sonata, symphony). At the same time the *a cappella* style put forth fresh and glorious blossoms.

I. *The Period of Musical Reforms (1600-1700)*. The attempts to reproduce the wonderful effects of old Greek music led, already in the middle of the 16th century, to *Chromatics* (Willaert, De Kere, Vincentino, Venosa), i.e. to an intensification of expression heedless of old rules. From a similar antique view of art arose *Musical Drama* (Florentine Reform of Music: Peri, Caccini). *Thorough Bass* (*Basso continuo*), which probably sprang

Church Music.

Roman School (polyphonic: two or more choirs, *a cappella*): Allegri, Agostini, Cifra, Abbatini, Valentini, Ugolini, Foggia, Benevoli, Bernabei, Mazocchi, Bonnetpi, Landi, Pitoni, Baj; *Venetian*: Giov. Gabrieli, Grandi.

Organ and Clavier

Music.

16th century: Merulo, A. Gabrieli: 17th century: G. Gabrieli, Sweelinck, Frescobaldi, Froberger, J. M. Bach, Kerl, Pachelbel, Scheidt, Schein, Scheidemann, Buxtehude, Reinken.

Oratorio.

Cavalieri, Kapsberger, Agazzari, Landi, Mazzocchi, *Carissimi*, Alessandro Scarlatti, H. Schütz, J. Christoph Bach.
Cantata and Concerto.
Viadana, Agazzari, Carissimi, Cesti, A. Scarlatti.
Chamber Duet.
A. Steffani, G. M. Clari.

All forms in vogue during the

II. Highest period of prosperity. Classical period: Bach, Handel, Gluck, Haydn, Mozart, Beethoven (1700-1827). All forms in vogue during the previous century are here developed to their fullest extent. New forms of instrumental music arise.

Opera.	Oratorio.	Instrumental Music.
ITALY. <i>Neapolitan School:</i> Durante, Leo, Feo, Greco, Porpora, Pergolesi, Loggrosino, L. Vinci, Jomelli, Teradellas, Piccini, Sacchini, Traetta, Pacisoli, Cimarosa, Zingarelli, Fioravanti. <i>Other Italian composers:</i> Caldara, Fetti, Pistocchi, Bononcini, Salieri, Paer, Righini, Sarti, Cherubini, Spontini, Rossini, Donizetti, S. Mayr. FRANCE. Desmarests, Colasse, Camprea, Destouches, Rameau, Philidor, Monsigny, Grétry, Gossec, Le Sueur, Isouard. <i>Hamburg (from 1678):</i> Theile, J. W. Franck, Strungk, Kusser, Keiser, Mathieson, Handel, Telemann. <i>Other German composers:</i> Hasse, Graun, Neumann, J. A. Hiller, Dittersdorf, Schenck, Weigl, Benda, P. v. Winter, Gluck, Mozart, Beethoven.	Handel, Graun, Haydn (nearly all Italian composers of operas have written oratorios). Passion and Church Cantatas. Keiser, Mathieson, Telemann, J. S. Bach, Graun. Mass, Requiem, etc. Graun, J. S. Bach, Mozart, Beethoven, Cherubini.	Instrumental Music. (Suite, <i>Concerto grosso</i> , sonata, overture, symphony, stringed quartet, solo concerto). <i>Corelli</i> , Torelli, <i>Couperin</i> , Rameau, Tartini, <i>Geminiani</i> , Kuhnau, J. S. Bach, <i>Handel</i> , <i>Domenico Scarlatti</i> , Telemann, K. Ph. E. Bach, Sammartini, Gossec, Grétry, Haydn, Mozart, Beethoven. Organ Music. (Fugue, figured Chorale, etc.) J. S. Bach, Handel, J. L. Krebs.

The opera is developed to the highest point as regards melody: action and truth of expression fall into the background, and *il bel canto* becomes the essential. In Italy vocal virtuosity (evitato) was developed from the second half of the 17th century, after which the operas were written expressly for the singers. Lully (1672), and Gluck (1762) brought about a reaction in the principles formulated by the founders of the opera. Another reaction in favour of the drama, as opposed to mere music, was the transition to comic subjects (*Opera buffa*) by Pergolesi (1731), Loggrosino, Cimarosa, etc.; the French *Opéra Comique* (at first O. *buffon*) speedily followed (1752; Duni, Monsigny, Philidor, Gossec, etc.), likewise the German "Singspiele" (1767; Hiller, Schenk, etc.). The *Opéra seria* became the model opera until the heroic opera arose, and a tendency towards nationality. In Handel, the Oratorio; in Bach, the Passion and Cantata were displayed at their best, and the unexampled impulse given to instrumental music was owing to the efforts of Bach's sons and Haydn. Mozart and Beethoven perfected various forms, and produced classical works in every branch of the art.

III. The present (19th century): the romantic period. Prominence given to subjectivity. Tendency to tone-painting.

Orchestral and Chamber Music.	Opera.	Choral Music (with orchestra).	Church Music.	Songs.	Pianoforte Music.
Schubert, Lachner, Mendelssohn, Schumann, Berlioz, Liszt, Gade, Brahms, Raff, Volkmann, Bruckner, Rubinstein, Rheinberger, Svendsen, Grieg.	<i>Cherubini</i> , <i>Spontini</i> , <i>Rossini</i> , <i>Donizetti</i> , <i>K. M. v. Weber</i> , <i>Spohr</i> , <i>Marschner</i> , <i>Méhul</i> , <i>Boieldieu</i> , <i>Hérold</i> , <i>Halévy</i> , <i>Auber</i> , <i>Adam</i> , <i>Bellini</i> , <i>Lortzing</i> , <i>Meyerbeer</i> , <i>Wagner</i> , <i>Gounod</i> , <i>Anbroise</i> , <i>Thomas</i> , <i>Verdi</i> , <i>Offenbach</i> .	Schubert, Mendelssohn, Schumann, Gade, Bruch, Brahms, Pet. Benoit.	Mendelssohn (oratorios), Berlioz (requiem), Liszt, Kiel, Brahms.	F. Schubert, Mendelssohn, Rob. Schumann, Liszt, Rob. Franz, Jensen, Rubinstein, Brahms.	Weber, Schubert, Mendelssohn, Rob. Schumann, Liszt, Chopin, Rubinstein, Reinecke, Hiller, Saint-Saëns, Tschalkowsky, Grieg.

The task of purifying the style of dramatic music, undertaken in the first period of modern music by the founders themselves of that style (Caccini), and again in the 17th century by Lully, and successfully carried out still further, by Gluck, was continued within recent times by R. Wagner, a champion not a whit behind his predecessors in energy and genius. The modern German song has rendered essential aid in deepening the means of expression. Freer forms are being worked out in instrumental music, which no longer prove barriers to imagination. Sacred music is advancing on parallel lines with operatic and concert music.

Music-printing. Not long after the invention of book-printing, music-notes began to be printed; and, first of all, in missals. At first, however, only (red) lines were printed and the notes added afterwards by means of coarse types worked by hand (stencilling). The next step was the plan of block-printing for short musical illustrations, first employed for figured music in 1487, at Bologna, by Hugo de Rugeris in the "*Musices opusculum*" of Burtius; also the examples in Gafori's "*Practica musicæ*" (1492) are in block-print. For missals movable types were soon introduced, *i.e.* the red lines were printed with the initials, etc., and the black notes with the black letters (as early as 1488); but probably these coarse types of the "*Chorale*" note were of wood. Petrucci (q.v.) was the first who printed with cast metal types, for which he obtained the sole privilege from the Seignior at Venice (1498); his work, like that of the missals described above, consisted of separate printings, but of rare perfection: the types were of delicate shape, and the notes always printed exactly over the lines, which was by no means the case with later imitators (for example, Junta at Rome). Simple types combining lines and notes (*i.e.* each note was a vertical section of a staff) were used in France at the commencement of the 16th century. Ceglin, about 1507, printed the odes of Tritonius at Augsburg with wood types, but already with metal types (double printing) in 1512; similar ones were also used by Peter Schöffer at Strassburg in 1513. Type-printing of notes exercised an influence on the mode of writing them; for in order to be able to use the same type twice, for example, ♯ also as ♭ (inverted), the distinction, formerly strictly observed, with regard to the direction of the stem for the species of notes of great and of small value (below for Maxima and Longa, above for Minima and the smaller values) was abolished. The attempt of Carpentras (1532) to introduce the round form of note, which was gradually making its way into cursive notation, in place of the square form, appears to have produced just the contrary effect; for still during the whole of the 16th century, the latter form was used in written choral-books. The oldest great French music-printer and publisher was P. Attaignant (1526); the family Ballard (q.v.) became of still greater importance. Towards the close of the 16th century it was found necessary to return from type- to plate-printing, not indeed to the clumsy wood-block system, but to copper-plate, which, meanwhile, had made great strides towards perfection. The impossibility of placing together types, such as were then used, so as to bring together several notes one over the other on the same staff (*cf.* SCORE), rendered other means necessary for the printing of the first fruits

of the art of organ-playing. According to Dr. Chrysander, Simon Verovio (1586) was the first to use copper-plates. Since then plate- and type-printing have been carried on simultaneously, and will continue thus. Plate-printing was perfected by means of instruments, which made the note-heads all exactly of the same size, and simplified the work of engraving, until, by the introduction of tin and zinc printing, the notes could be beaten in by the stroke of a hammer on a punch (this advance was made by the Englishmen Cluer and Walsh about 1730). But type-printing was still further developed, after experiencing no material change for nearly 250 years: Gottlob Imanuel Breitkopf (*cf.* BREITKOPF U. HÄRTEL) in 1755 solved the problem how to be able to use it for organ and clavier music, and especially for the writing of several parts on one staff. His movable and divisible types are distinguished from earlier ones, also called movable (*caratteri mobili*), in that, for example, the head, the stem, and the tail of a quaver are separate types (♩ | ♪), and the portions of the lines are separate pieces; for no type takes in the whole staff. Music-printing with such type is certainly troublesome and expensive; still it can hold its own against engraving. As a rule, type-printing is reserved for musical examples in book-printing, whereas sheet music is almost always engraved on pewter or zinc plates, then transferred to stone and printed by lithography.

Musikerverband, Allgemeiner deutscher. (See SOCIETIES.)

Musikverein, Allgemeiner deutscher. (See SOCIETIES.)

Musin, (1) see FURLANETTO.—(2) Ovide, a distinguished violinist, b. Sept. 22, 1854, Nandrin (near Liège), pupil of Heynberg and Léonard; he lives in America, where he soon made himself a name.

Musiol, Robert Paul Joh., b. Jan. 14, 1846, Breslau, trained at the seminary at Liebenthal (Silesia), from 1873 teacher and cantor at Röhrsdorf, near Fraustadt (Posen), pensioned in 1891. M. is a diligent writer on musical matters:—"Musikalisches Fremdwörterbuch," "Katechismus der Musikgeschichte," "Tonger's "Konversations-Lexikon der Tonkunst" (1888), and "Musikerlexikon" (1890), "Wilhelm Förster" (biography), "Theodor Körner u. seine Beziehung zur Musik" (1893). He also edited the 10th edition of Jul. Schubert's "Musikalisches Konversations-Lexikon" (1877), was contributor to various musical papers, etc., composed pieces for pianoforte and for organ, songs, part-songs for male voices, and made transcriptions for pianoforte and violin, etc.

Mussorgski, Modest Petrowitsch, noteworthy Russian composer, b. March 16, 1839, Toropez (Government Pskow), d. March 16,

1881, Petersburg. M. went to that city and entered the Preobraschenski regiment when only seventeen years of age, with the intention of following a military career; but he was introduced by a comrade, an enthusiast for music, to Dargomyzski (q.v.), and was soon on friendly terms with Balakirew and Cui, the former superintending his musical studies; M. was thus drawn towards the new school of National Russian composers. In 1874 his opera *Boris Godunow* was first produced at the Imperial Russian Opera, and has since proved attractive. He completed two other operas, *The Mass of Sarotschin* and *The Chovan-ski at Moscow*; he published, besides, short songs and pianoforte pieces ("Danse macabre russe," "Scènes d'enfants," etc).

Muta (Lat.), a usual sign in written-out parts for drums, also for horns, trumpets, and clarinets, intimating that the tuning must be changed; for example, if the drums are tuned in *F C*, the "*m. in G D*" shows that the large drum must be altered to *G* and the small one to *D*. For natural horns and trumpets, "*m. in D*," etc., indicates a change of crook.

Mutation, (1) in *Solmisation* (q.v.) is the change from one hexachord to another. The hexachords are the bracketed vertical series of the following table (the old letters are replaced by the ones now in use):

				$\overline{\overline{e}}$	la
			$\overline{\overline{d}}$	la	sol
			$\overline{\overline{c}}$	sol	fa
		$\overline{bz(b)}$		fa	mi
			\overline{a}	mi	re
			\overline{g}	re	ut
			\overline{f}	ut	
		\overline{e}		la	mi
		\overline{d}		la	sol
		\overline{c}		sol	fa
	$\overline{bz(b)}$			fa	mi
a				mi	re
g				re	ut
f				ut	
e				la	mi
d				sol	re
c				fa	ut
B				mi	
A				re	
G				ut (T ut, Gamma ut)	

The series with \sharp marked underneath were *Hexachorda dura* (with \sharp); those with \flat , *Hexachorda mollia* (with \flat); those without any sign,

naturalia (containing neither \sharp nor \flat). The *horizontal* series give the compound Solmisation names of the notes *Gamma ut* up to $\overline{\overline{e}}$ *la*, in use in Italy, Spain, etc., up to the end of last century. A change in the naming of notes, proposed by L. Bourgeois, was adopted in France from the 16th century; *F* is the lowest note, and is represented by *ut*, and the same order of naming is preserved through all octaves. These names remained in use even after the introduction of *si* (*Cf.* BOBINATION). (2) The change of a boy's voice to that of a man as he approaches the age of puberty, when a considerable enlargement of the vocal cords occurs. During the period of M., which sometimes lasts a whole year, the boy ought not to sing.

Mutation stops are the simple Quint, Tierce, and the (rare) Seventh stops, also the compound ones: Mixture, Cornet, Tertian, Rauschquinte, Sesquialtera, Scharf, etc.; these cannot be employed alone, but only in combination with foundation stops.

Mute, the name of various appliances for damping musical instruments. The most important ones are these two: (1) A contrivance like a small comb with three teeth, slit lengthwise, made of wood, horn, or metal, and placed on the bridge of a violin, viola, violoncello, or double bass. (2), A round piece of wood with apertures which is placed in the bell of wind instruments. (See also SORDINI.)

Myśliweczek, Joseph (in Italy called "Il Boemo" or "Venatorini"), Bohemian composer, b. March 9, 1737, in a village near Prague, d. Feb. 4, 1781, Rome. He was the son of a miller, studied counterpoint and organ-playing under Habermann and Segert at Prague, and published in 1760 six symphonies bearing the names of the first six months (January to June). In order to make a thorough study of opera, he went in 1763 to Pescetti at Venice, wrote already in 1764, an opera for Parma, which was so successful that he received a commission for Naples (*Bellerofonte*). A whole series of operas, about thirty, were now written for Naples, Rome, Milan, Bologna, etc.; yet M. had always to struggle against want; for the sums which he received for his operas were small, and he lived in very extravagant fashion. In 1773 he wrote *Eryfile* for Munich, but it did not prove a success. He therefore returned to Italy, where he died. Twelve of his stringed quartets (1780 and 1782) were published, also six trios for two violins and cello. He left oratorios, masses, concertos for flute and violin in manuscript.

Mysteries, scenic representations of Biblical events. M. were by no means rare in the Middle Ages. The *Passion Plays* extend back to the 8th, the *Virgin Mary Plays*, to the 12th

century. At first they were probably performed in the churches, but afterwards, by monks in booths in the market-places. At these performances music was employed from a very early period, and, probably, vocal music taken from the church antiphonaries. But even instrumental music was introduced when the action required it (trombones, organ, etc.). The *Moralities*, which sprang up in the 13th century, were a special kind of M. in

which abstract conceptions were personified. The *Oratorio* (q.v.) was evolved from the M. about the year 1600. It remains to be mentioned that the Greeks in their religious services introduced dramatic performances with music, called M., from which the name passed over to the Christian Church Plays. The Greeks themselves received the idea of such M. from the most ancient cultured peoples (Egyptians, Indians).

N.

Naaff, Anton E. August, b. Nov. 28, 1850, Weitenrebelitzsch (German Bohemia), poet and writer on music, studied law, edited newspapers at Prague, Teplitz, etc.: in 1881, the *Musikalische Welt* at Vienna, and since 1882, the *Lyra*. N.'s poems have been frequently set to music by Abt, Speidel, Tschirch, etc. ("Es rauscht ein stolzer Strom zum Meer," "Deutsche sind wir und wollen bleiben").

Nabulm (Nebel), a stringed instrument similar, according to tradition, to the small pointed harp of the ancient Hebrews. It is, however, highly probable that it was identical with the old Egyptian *Nabla*, a kind of lute. (See EGYPT.)

Nacaire (Fr.), formerly the name of a kettle-drum, small as well as large.

Nachbaur, Franz, opera singer, b. March 25, 1835, at Giessen Castle, near Friedrichshafen; he attended the Stuttgart Polytechnic, where he became a pupil of the singer Fischek. He was at first chorister at Basle, then sang at various theatres (Lunéville, Mannheim, Hanover, Prague, Darmstadt, Vienna), and was engaged at Munich from 1866 until 1890, when he received a pension; he bore the title of "Kammersänger."

Nachez, Tivadar (Theodor Naschitz), violinist, b. May 1, 1859, Pesth, pupil there of Sabatil, and afterwards of Joachim and Léonard. He lives in London, whence he makes concert tours. N. devotes himself somewhat exclusively to virtuosity pure and simple; yet he is a violinist of excellent technique, and the composer of some Gipsy Dances.

Nachsatz (Ger.), a term borrowed from the terminology of grammar, to indicate the second part of a musical period (q.v.) which answers to a previous *Vordersatz* ending with a half-close, or a transition; it leads back either to the principal key or turns the transition into a real modulation.

Nachschlag (Ger., "after-beat") is the German name of two ornaments, viz.—(1) The introduction of the lower auxiliary note at the conclusion of a shake, followed once again by the principal note. The N. is frequently written out (a), or, in old compositions (Bach) indicated

by the so-called Nachschleife appended to the shake sign (b).

The N. forms the close of the shake, and at the same time offers a convenient start towards the nearest note above; when, therefore, the latter follows, the N. is self-intelligible. On the other hand, in passing to the nearest lower note, it forms the anticipation of it; this kind of shake close is frequent in old music—

In any case, when the shake is followed by a figure of the N. kind, the N., naturally, is omitted (e.g. at the commencement of Beethoven's violin sonata, Op. 96). The N. is not used in a chain of shakes (unless expressly indicated by the composer), because it is only, as it were, a moving forward of the shake (without formal close.) (2) The opposite of the *Vorschlag* (q.v.), viz., a short note appended to a note, and connected as rapidly as possible with the following note. In notation, this kind of N. is distinguished from the short *appoggiatura*, being connected, by means of a slur, with the preceding principal note; also, at the end of a bar, by the small notes occurring before, and not after the bar-stroke—

Nachschleife (Ger., "after-slide"). (See SHAKE.)

Nachspiel (Ger.). (See POSTLUDE.)

Nachtanz (Lat. *Proportio*) is the name given to the second part (*secunda pars*), so frequently appended to dance songs of the 15th and 16th centuries, and especially when the first was in even time, and the second, on the other hand, in triple time (*proportio sesquialtera*). The *Sesquialtera* (q.v.) indicated, at the same time, a hurrying of the tempo, since it gave to three

minims the same value which two had in the *Tempus imperfectum*. Generally the *Vortanz* (fore-dance) was a *Reigen* (chain-dance), but the N., a *Springtanz* (round-dance). (See *SALTARELLO* and *GALLIARD*.)

Nachtgall. (See *LUSCINIUS*.)

Nachthorn (*Nachtschall*, *Pastorita*), a somewhat obsolete covered stop in the organ, a kind of Quintatön of smaller dimensions, but frequently similar in tone to the Hohlflöte (mostly of 2- or 4-, seldom 8-feet tone).

Nadaud, Gustav, b. Feb. 29, 1820, Roubaux (Nord), d. April 28, 1893, Paris, a favourite French chanson poet and composer (he also wrote several drawing-room operettas).

Nadermann, (1) François Joseph, a distinguished harpist and composer for his instrument, b. 1773, Paris, d. there April 2, 1835; he was a pupil of Krumpholtz, 1816 court harpist, 1825 professor of the harp at the Conservatoire and partner with his brother in the harp factory inherited from their father. He published two harp concertos, two quartets for two harps, violin, and 'cello; trios for three harps, and for harp with other instruments, duets for harp and pianoforte, harp and violin or flute, as well as sonatas and other works for the harp alone; also a guide to the art of preluding and modulating for harp and piano.

His brother (2) Henry, b. 1780, harp manufacturer, though only a mediocre performer, was appointed assistant to his brother in the royal band, as well as at the Conservatoire. In 1835 he withdrew from the Conservatoire. The harps manufactured by him were crook-harps of the old style (see *HARP*), which he in vain sought to uphold in opposition to Erard's double pedal harps, against which he wrote several pamphlets.

Nägeli, Hans Georg, b. May 27, 1773, Wetzikon (near Zürich), from 1792 proprietor of a music business there, d. Dec. 26, 1836; he was much esteemed for his good editions of old instrumental works (Bach, Handel), for the series "Répertoire des clavecinistes." He himself composed songs ("Freut euch des Lebens"), part-songs, and pf. pieces; and founded the Swiss Association for the culture of music, of which he was president. He was for many years singing teacher at a primary school, and published a series of musical pamphlets: "Gesangbildungslehre nach Pestalozzischen Grundsätzen" (jointly with M. G. Pfeiffer, 1812); "Christliches Gesangbuch" (1828); "Auszug der Gesangbildungslehre" (1818); "Vorlesungen über Musik mit Berücksichtigung der Dilettanten" (1826); and "Musicalisches Tabellenwerk für Volksschulen zur Bildung des Figuralgesangs" (1828). N. wrote a critical notice in the *Tübinger Literaturblatt* of Thibaut's "Ueber Reinheit der Tonkunst;" a hot dispute arose between the two men, and N. wrote besides,

"Der Streit zwischen der alten und neuen Musik" (1827). The following are biographies of N.: an anonymous one at Zürich (1837), Bierer (1844), Keller (1848, on the occasion of the unveiling of his monument in Zürich), and J. Schnabeli (1873).

Nagiller, Matthäus, b. Oct. 24, 1815, Münster (Tyrol), d. July 8, 1874, Innsbruck, pupil of Preyer, Vienna. He lived at Paris, then later at Limburg, Munich, Bozen, and finally (1866), as conductor of the Musical Society, at Innsbruck. N. composed many orchestral and choral works, which met with approval on their performance; also an opera (*Herzog Friedrich von Tirol*, Munich, 1854).

Nanino (Nanini), (1) Giovanni Maria, celebrated composer of the Roman School, b. about 1545, Tivoli, d. March 11, 1607, Rome; he was pupil of Palestrina, became in 1571 successor to Palestrina at Santa Maria Maggiore, and founded a school of composition, from which sprang many excellent composers (amongst others Allegri). In 1575 he exchanged his post at S. M. Maggiore for a similar one at the St. Louis church; yet in 1577 he became singer in the Pope's chapel, and in 1604 maestro di cappella of the Sistine Chapel. N. was a member of Gregory XIII.'s famous musical society. N. is one of the best representatives of the so-called Palestrina style—though this was in no sense whatever a personal invention of Palestrina's, but rather a purification already perceptible in the time of Josquin, and an harmonic absorption of the counterpoint of the Netherland School, which had degenerated into artificialities of imitation. Of his works which have been preserved are a book of motets à 3–5 (1586; canon-form with cantus firmus), four books of madrigals à 5 (1st book, 2nd ed., 1579; 2nd book, 1586; 3rd and 4th, 1581), and a book of canzonets à 3 (2nd ed. 1599). Amongst his best works are to be numbered some psalms à 8, which are printed in Constantini's "Salmi a 8 di diversi" (1614); some motets and madrigals in contemporary collections. (Cf. Haberl's monograph on N. in the "Kirchenmusikalisches Jahrbuch," 1891, in which five Lamentations à 4 were printed for the first time.) A madrigal à 8 is to be found in manuscript in the Munich Library. A master-work: 150 counterpoints and canons (à 2–11) on a *cantus firmus* by C. Festa, and a *Trattato di contrappunto* remain in manuscript. Motets (three à 3 and one à 4), and a *Miserere* à 4 were printed by Proske in "Musica divina;" a few others are to be found in the collections of Rochlitz, Tucher, Lück, and the Prince de la Moskwa.

(2) Giovanni Bernardino, nephew of the former, b. about 1560 (?), Vallerano, d. 1624, Rome, teacher in his uncle's school of music, 1677 maestro di cappella of the French church of St. Louis, and afterwards of San Lorenzo, Damaso. He published three books of madrigals

à 5 (1598, 1599, 1612), four books of motets à 1-5 with organ bass (so he was not averse to the innovations of Viadana; they appeared 1608, 1611, 1612, 1618); psalms à 4 and à 8, and a "Venite exultemus" à 3 with organ (1620). A few other compositions remained in manuscript. Proske has reprinted four psalms à 4 in his "Musica divina."

Napoleon, Arthur, pianist, b. March 6, 1843, Oporto, son of a music teacher of Italian descent. He made a great sensation as a boy (1852 at the courts of Lisbon and London, 1854, Berlin). He then studied under Hallé at Manchester, and afterwards travelled all over the Continent, and through North and South America. He suddenly gave up the fame-earning career of a concert virtuoso, and in 1868 established a music and instrument business in Rio de Janeiro. Since then, however, he has published some works for piano and orchestra and has been active also as conductor.

Náprawník, Eduard, Bohemian composer, b. Aug. 24, 1839, Bejst (near Königgrätz), attended (1853-54) the Prague Organ School, was (1856-61) teacher at the Maydl Music Institute, Prague; he then became private capellmeister to Prince Yussupow at Petersburg; afterwards sub-, and in 1869 principal, conductor at the Russian Opera. From the time of Balakirew's retirement until 1882 N. also conducted the symphony concerts of the Musical Society. He can with perfect right be counted amongst the Russian composers; at least the subjects and the texts of his works are in part Russian; for instance, the opera *The Inhabitants of Nishnij Novgorod* (1869), the symphonic poem "The Demon" (after Lermontow's poem, which is also the groundwork for the operas of A. Rubinstein, Baron v. Vietinghoff-Scheel, and G. Blaraberg). Besides the compositions already mentioned, the following are known: pf. works, chamber music (trio, quartet), Bohemian and Russian songs, a fantasia for piano and orchestra (Op. 39), overtures, the opera *Harold* (1886), and an older opera, *The Storm*.

Nardini, Pietro, celebrated violinist, b. 1722, Fribiana in Tuscany, d. May 7, 1793, Florence, pupil of Tartini at Padua; from 1753-67 he was solo violinist in the court band at Stuttgart, and then lived for some time with his old master, Tartini, at Padua, until the death of the latter, in 1770; from that time until his death N. was court maestro at Florence. Leopold Mozart thought very highly of him; his characteristic was not so much imposing technique as the rare purity and singing quality of his tone. His published works are: six violin concertos, six violin sonatas with bass, six flute trios, six solos for violin, six quartets for strings, six duets for violins. Alard ("Les maîtres classiques," etc.), David ("Hohe Schule des Violinspiels"), and G. Jensen ("Classische Violinmusik") have each reprinted pieces of N.

Nares, James, English composer, b. April, 1715, at Stanwell (Middlesex), d. Feb. 10, 1783, London. He was chorister under Gates at the Chapel Royal, afterwards a pupil of Pepusch, was deputy organist at St. George's Chapel, Windsor, afterwards, in 1734, organist of York Minster, 1756 organist and composer to the Chapel Royal, as successor to Greene, taking in this year his degree of Doctor of Music at Cambridge, 1757 master of the children of the Chapel Royal; he retired in 1780. N. published many instructive "Harpsichord Lessons," "Il principio; or, A Regular Introduction to Playing on the Harpsichord or Organ;" two treatises on singing, six organ fugues, a collection of catches, canons, and glees, twenty anthems, a morning and evening service, together with six anthems, likewise a dramatic ode, *The Royal Pastoral*. Other pieces are to be found in collections (Arnold's "Cathedral Music," Page's "Harmonia Sacra," and Stevens' "Sacred Music").

Naret-Koning, Johann Jos. David, violinist, b. Feb. 25, 1838, Amsterdam, pupil for violin of F. B. Buntin (Amsterdam) and of Ferdinand David (Leipzig), was (1859-70) leader of the band at Mannheim, and, for a part of this time, and until 1878, director of the Musical Society and of the Sängerbund there. Since then he has been leader at the Stadttheater, Frankfurt (member of the Heermann Quartet). N. has published songs, etc.

Nasat (Fr. *Nasard*; Sp. *Nasardo*), usual term for Quint stops (2½-feet), belonging to the 8-feet Diapason work in the organ. *Grossnasat* (Ger.) has 10½-feet tone (at Salzwedel and the Marienkirche, Berlin), or 5½ (*Gros Nasard*); the Quint, 1½, is called *Petit Nasard* (also *Larigot*; in Sp. *Octava de Nasard*).

Nasolini, Sebastiano, opera composer, b. 1768, Piacenza, d. certainly not before 1816, for in that year his last opera was first given at Naples (thirty-three operas from 1788 onwards, written for Trieste, Parma, Milan, Venice, London, Florence, etc.).

Natale, Pompeo, composer of the Roman School, choir singer at Santa Maria Maggiore, Rome; teacher of Pitoni. He published "Madrigali e canzoni spirituali a 2, 3, e 4 voci col basso per l'organo" (1662).

Nathan, Isaac, writer on music and composer, b. 1792, Canterbury, d. Jan. 15, 1864, at Sydney (run over by a tramcar); he published "Essay on the History and Theory of Music," "Essay on the qualities, capabilities, and management of the Human Voice;" "The Life of Madame Malibran de Bériot" (1836). He supplied part of the music for the comedy *Sweethearts and Wives*, which became popular; and he wrote a comic opera, *The Alcaid* (1824), and an operetta, *The Illustrious Stranger* (1827). In his early years he came out as an opera singer at Covent Garden.

National Concerts, a series of concerts given in Her Majesty's Theatre in 1850 with Balfe and Charles D'Albert as conductors. It was during this short series that Arabella Goddard made her first public appearance.

National Training School for Music. The late Prince Consort formed the idea of an institution of this kind, but it was not founded until 1873. The building was raised through the liberality of C. J. Freake, and completed in 1875, and the school was opened in 1876. It was succeeded in 1882 by the Royal College of Music (q.v.).

Natorp, Bernhard Christian Ludwig, well-known teacher, b. Nov. 12, 1774, Werden-on-the-Ruhr, d. Feb. 8, 1846, Münster: he studied theology and the art of teaching at Halle-on-Saale, was teacher at Elberfeld, 1798 pastor at Essen, 1808 member of the School Council at Potsdam, 1819 General Superintendent at Münster. He published, in addition to many works not relating to music: "Anleitung zur Unterweisung im Singen für Lehrer an Volksschulen" (1813 and 1820; two courses, which passed through several editions), also "Lehrbüchlein der Singekunst" for elementary schools (1816 and 1820; two courses, frequently reprinted), both founded on the employment of figure notation, and "Ueber den Gesang in der Kirche der Protestanten" (1817); "Ueber den Zweck, die Einrichtung und den Gebrauch des Melodienbuchs für den Gemeinde-gesang in den evangelischen Kirchen" (1822); soon after this appeared the "Melodienbuch" itself (1822); then the melodies with harmony in four parts, "Choralbuch für evangelische Kirchen" (1829, with preludes and interludes by C. H. Rinck); finally, "Ueber Rincks Präludien" (1834).

Natural revokes a preceding sharp (#) or flat (b), double sharp (x), or double flat (bb). If the chromatic sign is changed for the same note (for example #c in the place of x, or b c in place of #c), the first chromatic sign is usually, though unnecessarily, replaced by a ♯ and the new one indicated. bb after b and x after #, however, require no ♯. (See ACCIDENTALS.)

Natural horn. (See HORN.)

Natural notes are those which are produced from wind-instruments without shortening or lengthening of the tube, merely by the pressure of the player's lip. They are the notes properly belonging to the tube—i.e. all the harmonics of the prime or lowest tone, which, however, does not sound in all wind instruments; in the clarinet and quint-sounding instruments of the same family, only those bearing even numbers are produced.

Natural trumpet. (See TRUMPET.)

Nau, Maria Dolores Benedicta Josephina, famous singer, b. March 18, 1818, New

York, of Spanish parents, pupil of the Paris Conservatoire (Madame Damoreau), made her *début* (1836) as the Page in the *Huguenots* at the Paris Grand Opéra, but was only engaged in small rôles; and in 1842, when her contract expired, she was not re-engaged. She then sang with quickly-increasing renown on provincial stages, also at Brussels and London, and was at length (1845) won back, at high terms, for the Paris Grand Opéra. In 1848 she went to England and to America, but was again engaged in Paris from 1851 to 1853; she then once more revisited America, and finally quitted the stage in 1856.

Naubert, Friedrich August, b. March 23, 1839, Schkeuditz (Saxony), pupil of the Stern Conservatorium, Berlin, renowned composer of songs (also of important vocal works); he is organist and teacher of singing at the Neubrandenburg Gymnasium.

Naudin, Emilio, opera singer (tenor), b. Oct. 23, 1823, Parma, of French descent; he first studied medicine, but soon afterwards, singing, under Panizza (Milan), and made his *début* at Cremona. He then sang on many Italian stages, made professional tours throughout Europe, and was engaged in 1862 at the Théâtre Italien, Paris. He created the part of Vasco de Gama on the production of Meyerbeer's *L'Africaine* in 1865 (according to the composer's testamentary desire), but soon left the Grand Opéra and went back to the Théâtre Italien.

Naue, Johann Friedrich, b. Nov. 17, 1787, Halle-on-the-Saale, d. there May 19, 1858, pupil of Türk, in 1813 musical director of the University and organist in his native town, became in 1835, Dr. Phil. (Jena). He was the son of a rich manufacturer, but sacrificed the whole of his fortune in collecting a costly musical library, and in making preparations for the great musical festivals at Halle, 1829 and 1835, the first of which was conducted by Spontini; his pecuniary circumstances were, however, only temporarily improved by the purchase of a part of his library by the Royal Library at Berlin; he died in the greatest poverty. N.'s most important works are a ritual book, "Versuch einer musikalischen Agende" (1818; this was taken up and introduced by Friedrich Wilhelm III.), and an "Allgemeines evangelisches Choralbuch mit Melodien, grossentheils aus den Urquellen berichtigt, mit vierstimmigen Harmonien" (1829, with historical introduction); besides these, he composed a few motets, hymns, responses, a triumphal march for chorus and wind band, pf. pieces, etc.

Nauenburg, Gustav, b. May 20, 1803, Halle-on-the-Saale, studied theology, but afterwards was trained as a concert-singer (baritone) and teacher of singing, finally under Bernhard Klein, after whose death (1832) he returned to Halle. Löwe wrote several songs for N. N.'s "Tägliche Gesangstudien" and "Tägliche

Koloraturstudien" will be found useful to teachers. N. was also very active as a writer on music; besides numerous interesting contributions to the Leipzig *Allgemeine Musikalische Zeitung* (1826-44), *Cäcilia* (1830-35), and *Berliner Musikzeitung* (1832), he was the author of "Ideen zu einer Reform der christlichen Kirchenmusik" (1845).

Naumann, (1) Johann Gottlieb, prolific composer, b. April 17, 1741, Blasewitz (near Dresden), d. Dresden, Oct. 2, 1801; he attended the Dresden Kreuzschule, and was, with the exception of the singing lessons he received there, musically self-taught. A rich Swedish musician, Weeström, on hearing him play Bach's sonatas, made a proposition to accompany him on a journey to Italy for the purpose of study. At the end of May, 1757, they travelled, first of all to Hamburg, where they remained for ten months. In consequence of bad treatment, N. separated from Weeström at Padua. In 1761 he went with the violinist Pitscher, through Rome, to Naples, returning to Rome, Easter, 1762. A letter of recommendation from Padre Martini smoothed the way for him at Venice; after he had made a successful *début* there as opera composer at the San Samuele Theatre, also in consequence of a church composition sent to the widowed Electress, Maria Antonia of Saxony, he was appointed, in 1764, at a salary of 240 thalers, church composer to the court of the Elector of Saxony. In 1765 he had already advanced to the rank of chamber composer, with a liberal grant of leave of absence for a journey to Italy (1765 to Oct., 1768) in order to obtain further training in opera composition. He wrote for Palermo, (1767) *Achille in Sciro*; and for Venice, *Alessandro nelle Indie*; in 1769 for Dresden, *La clemenza di Tito*, *Il villano geloso*, *L'Ipocondriaco*; in 1772, again for Venice, *Solimanno*, *Le nozze disturbate*, *L'Isola disabitata*, *L'Ipermestra*; and for Padua, *Armida*. In 1776 followed his appointment as capellmeister, with a salary of 1,200 thlr.; in 1786 as chief capellmeister, with 2,000 thlr. In 1777 he was called to Stockholm to reform the orchestra (opera *Amphion*), 1780 he was there again (operas *Cora* [revised 1882], and *Gustav Wasa*, 1785, a new version of his Copenhagen *Orpheus*). N. wrote in all twenty-three operas, the last being *Acis e Galatea* (Dresden, 1801); a ballet, *Medea* (Berlin, 1789); ten oratorios (*Davidde in Terebinto*; *I Pellegri*), a number of psalms, masses, Klopstock's "Vater unser" (N.'s masterpiece), a Te Deum, smaller sacred pieces, eighteen symphonies, sonatas for pf., for violin, and for harmonica; trios, duets for violin, songs, Freemasons' songs, elegy: "Klopstocks Grab." Only a small part of the works appeared in print, but all his songs in a new edition by Breitkopf and Härtel. For further details, see "Bruchstücke aus Naumanns Lebensgeschichte" (1803-4, two vols.); also the biography of N. by G. H. v. Schubert

(1844), and Emil Naumann (in the *Allgem. Deutsche Biographie*); a catalogue of his works was published by Mannstein.

(2) Emil, writer on music and composer, b. Sept. 8, 1827, Berlin, d. June 23, 1888, Dresden, grandson of the former, and son of the physician, Moritz Ernst Adolf N., who was called in 1828 to Bonn. N. received his first training in this town from "old" Ries (father of Ferd. Ries) and Frau Matthieu, continuing his studies in Frankfurt under Schnyder von Wartensee. In 1842 he became private pupil of Mendelssohn, and 1843-44 of the recently-opened Leipzig Conservatorium; he lived afterwards at Bonn, occupied with composition and literary work, at the same time attending the University. He first made himself known by some important vocal works (opera *Judith*, Dresden, 1858; oratorio *Christus der Friedensbote*, produced at Dresden 1848; a mass, a cantata, *Die Zerstörung Jerusalems*, etc.). The overture to his opera *Lorelei* appeared in print, also a pf. sonata and songs. In 1856 he published a treatise, "Die Einführung des Psalmengesangs in die evangelische Kirche," which caused him to be appointed royal court church musical director, Berlin; he wrote psalms and motets for the cathedral choir, and brought out a collection, "Psalmen auf alle Sonn- und Feiertage des evangelischen Kirchenjahrs," as vols. 8-10. of "Musica Sacra" (See COMMER). He received the degree of Doctor of Philosophy for his treatise "Das Alter des Psalmengesangs," and the title of Professor, after the publication of his book "Die Tonkunst in der Kulturgeschichte" (1869-70). With this book N. entered the domain of the esthetics of musical history, to which subject he was from that time drawn:—"Deutsche Tondichter von Sebastian Bach bis auf die Gegenwart" (1871, several times republished); "Italienische Tondichter von Palestrina bis auf die Gegenwart" (1876); "Illustrierte Musikgeschichte" (1880-85); these books do not contain results of his own investigation, but, counting on the widest possible circle of readers, of extracts in florid style from other works. There are still to be mentioned "Nachklänge; Gedenkblätter aus dem Musik-, Kunst- und Geistesleben unsrer Tage" (1872); "Deutschlands musikalische Heroen und ihre Rückwirkung auf die Nation" (1873); "Musikdrama oder Oper" (1876: against Wagner); "Zukunftsmusik und die Musik der Zukunft" (1877); "Ueber ein bisher unbekanntes Gesetz im Aufbau klassischer Fugenthemen" (1878, one of N.'s most peculiar productions); "Der moderne musikalische Zopf" (1880), and a few other pamphlets of no great moment. In 1873 N. removed to Dresden, where, later on, he lectured on the history of music at the Conservatorium. After his death, his opera *Lorelei* was performed (1889).

(3) Karl Ernst (likewise a grandson of J. G. Naumann, son of the privy councillor of mines,

and professor of mineralogy, K. F. N.) b. Aug. 15, 1832, Freiberg (Saxony); he attended the Nikolai Gymnasium and the University of Leipzig, and trained himself for the career of a musician, receiving private lessons from Hauptmann, Richter, Wenzel, and Langer in Leipzig, and from Johann Schneider in Dresden, obtained his degree of Dr. Phil. in 1858 at Leipzig with the dissertation "Ueber die verschiedenen Bestimmungen der Tonverhältnisse und die Bedeutung des pythagoreischen oder reinen Quintensystems für unsere Musik;" in 1860 he became musical director of the University and town organist of Jena, and from this time conducted the Academy concerts there, and was named professor in 1877. N. wrote some successful chamber music:—a sonata for viola (Op. 1), a quartet for strings (Op. 9), two quintets for strings (Op. 6, 13), a trio for piano, violin, and viola (Op. 7), and a serenade for strings, flute, oboe, bassoon, and horn.

Nawratil, Karl, b. Oct. 7, 1836, Vienna, Dr. Jur., was, at first law official, then advocate, and lastly, secretary to the board of Austrian state railways; from his youth he was a lover of music. After a time he was induced by Brahms to become a pupil of Nottebohm's for counterpoint, and published a series of interesting chamber-music works (trios, pf. quintets, string quartet), also an overture, Psalm xxx. for soli, chorus, and orchestra, pf. pieces, and songs; he has other large works (masses) in manuscript. Dr. N. is much esteemed as a teacher (Mme. Essipoff, Schütt, Rückauf).

Naylor, (1) John, distinguished English organist, b. June 8, 1838, Stanningley (near Leeds), pupil of R. S. Burton, Leeds, for piano, otherwise self-taught. In 1856 he became organist at Scarborough, in 1863 Bachelor, and in 1872 Doctor of Music, Oxford, and in 1883 was appointed organist of York Minster. He has composed anthems, services, also several cantatas (*Jeremiah*, 1884; *The Brazen Serpent*, 1887), with organ accompaniment.

(2) Sidney, b. July 24, 1841, London, d. March 4, 1893. He was a pupil of Dr. Hopkins for organ and harmony, held the post of organist, successively, at several London churches, and became well known as conductor and accompanist. In 1868 N. married the concert-singer Miss Blanche Cole. He composed a *Te Deum*, songs, etc.

Neapolitan School, the name given to the succession of teachers and pupils at Naples, commencing with Scarlatti, men who specially cultivated opera, but in a widely different sense from that of the Florentine creators of the *Stilo rappresentivo*; the later composers aimed principally at the formation of beautiful melodies. Hence Naples became the cradle of Italian Opera in the narrower sense of the term; for singing was the principal element in it, and instrumentation and dramatic pathos were

reduced to a minimum; thus Gluck was compelled to return to the Florentine School. The chief representatives of the N. S. are:—Al. Scarlatti himself, Durante, Leo, Feo, Greco, Porpora, Pergolesi, Logroscino, Vinci, Jomelli, Teradellas, Piccinni, Sacchini, Traetta, Paisiello, etc.

Neapolitan Sixth, the name given by many theorists to the minor sixth on the subdominant of a minor key, as, for example, in a minor:

With the lower note (*d*) as under dominant the *b flat* may best be regarded as a suspension (*b* before *a*); the progression from *b* to *a* is, however, frequently passed over, and *b flat* passes by step of a diminished third to *g sharp*, or returns to *b*, the scale note from which it is derived:—

Through the introduction of the N. S., a great number of daring harmony progressions come into tonal harmony; for instance, the skip of the tritone 4th (*b* to *e*).

Nebel. (See NABLUM; cf. EGYPT.)

Neck is the name given to the narrow, solid prolongation of the sound-box in lute and stringed instruments over which the strings pass towards the "head," in which lies the peg-case. The finger-board is glued on to the smooth side turned towards the strings; the other side is rounded off, and permits the (left) hand to glide, upwards or downwards in an easy manner.

Neeb, Heinrich, b. 1807, Lich (Upper Hesse), d. Jan. 18, 1878, Frankfurt, attended the seminary for school teachers at Friedberg, and became a pupil of Peter Müller. In 1831 he went to Frankfurt, where Aloys Schmitt exercised a powerful influence over his musical training. He soon succeeded in obtaining a good position there as teacher of music, and became conductor of the choral societies "Germania," "Neeb's Quartett," the still existing "Teutonia," and the "Neescher Männerchor." As a composer N. made himself favourably known by his ballads: "Die Zobeljagd," "Andreas Hofer," "Der tote Soldat," "Der sterbende Trompeter," "Der Flüchtling," "Die deutsche Mutter," etc.; further by his cantata, *Das deutsche Lied und sein Sänger*. He was not, however, so fortunate with his operas, three of which (*Domenico Baldi*, *Der Cid*, and *Die schwarzen Jäger*) were played only a few times, while the last, *Rudolf von Hapsburg*, was never put on the stage. There still remain in manuscript, quartets for strings, pf. pieces, many songs and ballads.

Neefe, Christian Gottlob, composer, b. Feb. 5, 1748, Chemnitz, d. Jan. 26, 1798, Dessau. He studied law at Leipzig and music under A. Hiller, passed his public examinations, but finally turned his attention to music. He conducted first (1776-77) at Leipzig and

Dresden, then for the Seiler Opera Company on their circular Rhine tours, and, when this broke up (1779), for that of Grossmann-Hellmuth at Bonn. N. remained at Bonn, fettered by his appointment as vice-organist at the Electoral court, and, after Eeden's death (1782), became court musical director. N. also succeeded Eeden as teacher of Beethoven. In 1784 the Elector Max Friedrich died, whereupon the theatre company was disbanded and N.'s income reduced. It is true that a court theatre was opened in 1788, but the French war of 1794 soon brought it to an end, and N. felt the pinch of poverty. Only in 1796 did he obtain an appointment as conductor of the Opera at Dessau. N. wrote for Leipzig and Bonn eight stage works (vaudevilles and operas), a Paternoster, a Klopstock ode: "Dem Unendlichen" (for four voices and orchestra), a double concerto for pf., violin, and orchestra, pf. sonatas, variations, fantasias, songs, and children's songs, and pf. arrangements of operas by Grétry, Paesello, etc. He also contributed to musical newspapers.

Negligente (Ital.), negligent, careless.

Nehrlich, Christian Gottfried, teacher of singing, b. April 22, 1802, Ruhland (Oberlausitz), d. Jan. 8, 1868, Berlin; he studied theology at Halle, but gave it up for music, and established a school for singing at Leipzig, which he transferred to Berlin in 1849. After he had repeatedly changed his place of residence (Paris, Basle, Stuttgart, Cassel, Frankfurt), he returned to Berlin in 1864. N. published: "Die Gesangkunst oder die Geheimnisse der grossen italienischen und deutschen Gesangsmeister vom physiologisch-psychologischen, aesthetischen und pädagogischen Standpunkt aus" (1847, 2nd ed. 1853; new edition, as "Der Kunstgesang," etc., 1868), and "Gesangsschule für gebildete Stände" (1844). N.'s method is very minute, and his arguments are bombastic; the books were not successful.

Neidhardt, Johann Georg, writer on music, Silesian by birth, d. Jan. 1, 1739, as capellmeister at Königsberg. He wrote "Die beste und leichteste Temperatur des Monochordi, vermittelst welcher das heutigen Tags gebräuchliche Genus diatonico-chromaticum eingerichtet wird" (1706); "Sectio canonis harmonici" (1724), and "Gänzlich erschöpfte mathematische Abtheilung des diatonisch-chromatischen temperierten Canonis Monochordi" (1732); a manual of composition remained in manuscript. N. also set to music the seven Penitential Psalms.

Neihardt, August Heinrich, founder of the Berlin Domchor (cathedral choir), b. Aug. 10, 1793, Schleiz, d. April 18, 1861, Berlin; he was already oboe-player in the Gardejäger battalion during the War of Liberation, and in 1816 was appointed bandmaster to the same, and in 1822 bandmaster of the Franz-Regiment; the latter post he occupied until 1840.

In 1843 he was appointed teacher of singing to the newly-founded Domchor, and in 1845, director. Journeys to Rome, Petersburg, etc., usefully employed in hearing the best choirs, enabled him to bring the Domchor to a state of great perfection. N.'s most important publication is "Musica sacra, Sammlung religiöser Gesänge älterer und neuerer Zeit" (Vols. V.-VII. and XII. by N.; cf. *COMMER*). N. was composer of the Prussian song "Ich bin ein Preusse, kennt ihr meine Farben?" (1826), and distinguished himself by an excellent series of instrumental and vocal works (many for military band, trios and quartets for horn, pf. sonatas, variations, and pieces, quartets for male voices, also an opera, *Julietta*, 1834).

Neitzel, Otto, pianist and writer on music, b. July 6, 1852, Falkenburg, Pomerania (his father was a teacher); by the assistance of a rich manufacturer he became a student at Kullak's Academy, Berlin, while he attended the Joachimsthalsches Gymnasium, and afterwards the University. In 1875 he obtained the degree of Dr. Phil., accompanied Pauline Lucca and Sarasate on a concert tour, and in 1878 undertook the direction of the Musikverein at Strassburg. From 1879-81, N. was music director of the Strassburg town theatre and teacher at the Conservatorium; then teacher at Moscow Conservatoire, next (1885) at the Cologne Conservatorium; in 1887 he became musical critic of the *Kölnische Zeitung*. As composer he brought out the operas *Angela* (Halle-a-S., 1887), *Dido* (Weimar, 1888), and *Der alte Dessauer* (Wiesbaden, 1889, etc.), without, however, any marked success. He has also written a "Führer durch die Oper" (three volumes).

Nel (Ital.), i.e. in it; *nello* = in lo ("in the"); *negli* = in gli ("in the").

Nenien (Gk.), funeral songs (the threnodies of mourning women in ancient times).

Nenna, Pomponio, madrigal composer at the end of the 16th and commencement of the 17th century, b. Bari (Naples); some of his madrigals appear as early as 1585 in the printed collection of two-part madrigals by composers native of Bari, and others in Phalese's "Melodia Olympica" (1594); but his eight books of madrigals à 5 were not published until 1609-24, and a book of madrigals à 4 in 1631. Notwithstanding the fact that they passed through several editions, they are of almost unexampled rarity.

Neri, Filippo (called "Saint"), b. July 21, 1515, Florence, d. May 26, 1595, Rome. When scarcely eighteen years old he went to Rome, where he retired into a monastery and devoted himself to learned studies and to the care of pilgrims. In 1551 he was ordained to the priesthood, and from that time held meetings, in which he gave lectures on biblical history, first in the oratory (*oratorio*) of the monastery San Girolamo, and later on, at Santa Maria, Vallicella. These meetings became larger and larger,

and grew into a regular organised training society for secular priests, which in 1575 Gregory XIII. acknowledged as *Congregazione dell' Oratorio*. N. soon made music a prominent feature, and secured the services of Animuccia, the Pope's maestro di cappella, who wrote for the meetings the so-called "Laudi spirituali." After Animuccia's death, Palestrina took his place. These songs, connected in spirit with the biblical lectures, were the forerunners of the oratorio (q.v.), the name of which was certainly taken from N.'s oratory.

Neruda, Wilma Maria Francisca, celebrated performer on the violin, b. March 29, 1839, Brünn, where her father, probably a descendant of a celebrated Bohemian violinist of the last century, was organist of the principal church. She studied under Jansa, came out (1846) at the age of seven years, together with her sister Amalia (pianist), at Vienna; then with her father, sister, and brother (Franz N., 'cellist), she made a concert tour through Germany, and appeared in 1849 at the Philharmonic Society, London. After continued tours, she made a furore at Paris in 1864, and there she married Ludwig Normann (q.v.). Since 1869 Mme. Normann N. has been the constant ornament of the London season; she is often leader and soloist at the Monday and Saturday Popular Concerts, and appears also at the Crystal Palace and Philharmonic Concerts, etc. In July, 1888, she married Sir Charles Hallé, and with him visited Australia in 1890, and again in 1891. Madame N. is considered by many the equal of Joachim.

Nessler, Victor E., composer, b. Jan. 28, 1841, Baldenheim, near Schlettstadt (Alsace), d. May 28, 1890, Strassburg; he studied theology at Strassburg, besides being trained in music under Th. Stern. The success of his opera *Fleur-de-lis* at Strassburg (1864) induced him to give up theology and to seek to perfect his musical knowledge at Leipzig. He had not been long there before he became chorus-master at the Stadttheater, leader of the vocal society "Sängerkreis," and one of the most popular musical personages. The Leipzig Stadttheater produced his romantic fairy opera *Dornröschen's Brautfahrt* (1867), the operetta *Die Hochzeitsreise* (1867), the one-act *Nachtwächter und Student* (1868), and *Am Alexandertag* (1869); also the grand operas *Irmgard* (1876), *Der Rattenfänger von Hameln* (1879), *Der wilde Jäger* (1881), and *Der Trompeter von Säckingen* (1884), of which the last three quickly made the round of Germany. His last operas were *Otto der Schütz* (Leipzig, 1886) and *Die Rose von Strassburg* (Munich, 1890). N. was eclectic, inclined to popular, melodious airs, and he possessed meritorious knowledge of stage technique; but he had little originality, and his style was not pure. His popular songs and quartets for male voices are widely known; he also wrote the ballads "Der Blumen Rache" (chorus with soli and orchestra), the double

chorus "Sängers Frühlingsgruss," for male voices, a cycle of part-songs with soli, and piano accompaniment, "Von der Wiege bis zum Grabe," likewise some successful comic songs ("Drei Schneider," "Frater Kellermeister," etc.). During his last years N. lived in Strassburg.

Nestler, August Julius, b. Dec. 3, 1851, at Grumbach, near Annaberg (Saxony), was trained for the calling of schoolmaster, but turning to music, he attended the Leipzig Conservatorium, and in 1878 founded a musical institution in that city, conducting at the same time several musical societies. He became, in 1880, teacher of singing at the Gymnasium, and was appointed *Kgl. Sächs. Musikdirector* 1892.

Nešvadba, Joseph, composer and conductor, b. Jan. 19, 1824, Vyskeř (Bohemia), d. May 20, 1876, Darmstadt; he studied philosophy at Prague, but made his *début* at the Bohemian Theatre there as dramatic composer with the opera *Blaubart* (1844), and thenceforward devoted himself entirely to music. In quick succession he officiated as bandmaster at Carlsbad (1848), Olmütz, Brünn, Graz, 1857-58 as principal capellmeister at the Bohemian Theatre, Prague; 1859-60 at the Italian Opera, Berlin; 1861-63 at the Stadttheater, Hamburg; and in 1864 was called to Darmstadt as court capellmeister. N.'s compositions are prized in Bohemia, especially his songs and part-songs to Bohemian words.

Nešvera, Joseph, b. Oct. 24, 1842, Proskoles (near Horowitz, Bohemia), was trained as a school-teacher, but studied music diligently at the same time, so that he received an early appointment as choir-master of a church in Prague. In 1878 he went to Königgrätz as music director of the Episcopal Church; he is now (since Krizkowsky's departure) capellmeister of Olmütz Cathedral. N. is an able church composer (masses, *De profundis* for soli, chorus, and orchestra), but he has also written pf. pieces (concert studies, bagatelles, dances, marches), violin music (ten eclogues, suite, etc.), many Bohemian songs, choruses for male and mixed voices, an idyll for three violins, two violas, 'cello, and bass, etc.

Nete (*Synemmenon*, *Diezeugmenon*, *Hyperbolaon*). (See GREEK MUSIC.)

Netherland School is a term which sums up briefly the goodly series of masters of counterpoint, who, born in the country between the Maas and the Scheldt, quickly caused to flourish an art which they all but created, and, in any case, first exercised with a certain degree of perfection; we now stand in astonishment before such men as we do before Gothic cathedrals. As from 1600 to 1700 Italy, and after that Germany, so from 1450 to 1600 the Netherlands attracted the admiring attention of the musical world as the country whence it received master-works, and the masters themselves (capellmeisters, etc.). It was the N. S. which

transformed the art of polyphony, which, previously, had been handled in a manner more or less clumsy (*cf.*, however, DUNSTABLE), into the imitative style with refinements of every kind. (*See* IMITATION, CANON, COUNTERPOINT.) If music were nothing more than architecture with life infused into it, a playing with arabesques, as many believe, then had the N. S. achieved the highest in music; that they not only worked out artistic combinations, but, occasionally, struck chords warm with feeling, lies in the very nature of the art itself. To make music the true language of the soul was reserved, however, for the Italians and the Germans; for what in the N. S. almost became an aim, became in the hands of the latter a highly effective means towards an end. The N. S. is the real representative of the Middle Ages in the history of music, although, at times, it points to the future. The dogmas of the Church exercising their sway over subjectivity find an adequate picture in the polyphony of the N. S., which, vainly striving to render four or more parts independent, failed to give true freedom to any one of them. It was, therefore, in a certain sense, opposed to the free melody of ancient homophony, and even a backward step as compared with the Minnesingers and Troubadours; yet it constituted an indispensable transition stage to music of homophonic and at the same time polyphonic character, viz. music based on harmony and on melody intensified to the highest degree of efficiency. The release of melody from the life-destroying ban of the polyphony of the N. S. was a service rendered by Italy, whilst the depth which it acquired through the development of a new, but subordinate polyphony was that rendered by Germany. Three phases of Netherland music are to be distinguished:—(1) That introduced from England to the Netherlands, of the final establishment of rules of composition and of the formation of real counterpoint, represented by (Dunstable) Busnois, Binchois, Dufay, and their contemporaries (first N. S., 1400–1450); (2) that of the development and perfection of the art of imitation (second N. S., 1450–1525), with Okeghem at the head, followed by Hobrecht, Josquin, Larue, Brumel, Orto, Pipelare, Fevin, Gombert, Ducis, Clemens *non papa*, etc.; (3) that of reaction, of Italian influence: the new creation of Netherland art by Italian masters: Willaert, Arcadelt, Goudimel, Lasso, Palestrina, Gabrieli (1525–1600).

Netzer, Joseph, b. March 18, 1808, Imst (Tyrol), d. May 23, 1864, at Graz; he studied at Innsbruck and Vienna; in the latter city (1839) his first opera, *Die Belagerung von Gothenburg*, as well as a symphony were produced; later followed the operas *Mara* (Vienna, 1841), *Die Eroberung von Granada* (Vienna, 1844). During this period he was associated with Lortzing as capellmeister at the Leipzig Stadttheater and conductor of the Euterpe concerts there. In 1845 he went to

Vienna as capellmeister of the Theater-a.-d.-Wien, where in 1846 he brought out a new opera, *Die seltene Hochzeit*, but soon exchanged this post for his former one at Leipzig. After several years he went as conductor of a choral society to Graz, where he died. N. wrote another opera, which was not produced, *Die Königin von Castilien*, and a number of songs, which became favourites.

Neubauer, Franz Christian, violin performer and composer, b. 1760, at the Bohemian village Horzin, d. Oct. 11, 1795, Bückeburg. He went in his youth to Vienna, where he brought out an opera, *Ferdinand und Yariho*; he was a restless spirit, and led a strolling life, now here, now there, appearing in Germany only to vanish again. In 1789 he was appointed capellmeister at the Weilburg court, but when the prince dissolved his band N. went further north, to Bückeburg, where he at first found a post as composer to the Lippe electoral court, by the side of Chr. Fr. Bach, and, after the death of the latter, as principal court capellmeister. An irregular and intemperate life soon ruined his health. The number of his published works is not insignificant (twelve symphonies, ten quartets for strings, trios for strings, duets, violin sonatas, 'cello, flute, and pf. concertos, etc.); these show abundant talent, but little application.

Neudeutsche Schule (New German School), the name which has been given, since the time of Schumann, to German composers who pay homage to the romantic tendency; especially to the followers of Schumann, and the pupils of Liszt (programme musicians). (*Cf.* ROMANTIC.)

Neukomm, Sigismund, prolific composer, b. July 10, 1778, Salzburg, d. April 3, 1858, Paris, pupil of M. Haydn at Salzburg, and of J. Haydn at Vienna, who looked upon him almost as a son. N. led an unusually stirring life. In the year 1806 he went through Stockholm, where he was named member of the Academy, to Petersburg, and there he undertook the post of conductor at the German theatre; he returned to Vienna shortly before Haydn's death, and afterwards went to Paris. In that city he held friendly intercourse with the most famous musicians (Cherubini, Grétry, etc.), became pianist to Talleyrand, whom he accompanied to the Vienna Congress. The composition of a requiem to the memory of Louis XVI. procured for him from Louis XVIII. the cross of the *Légion d'honneur* and a patent of nobility. In 1816 he went with the Duke of Luxemburg to Rio de Janeiro, and there became court conductor to the Emperor of Brazil; but on the outbreak of the revolution (1821) he sailed back to Lisbon. Forfeiting his pension, he returned to Talleyrand, and still made numerous and long journeys, sometimes with Talleyrand, sometimes alone (Italy 1826, Belgium and Holland 1827, England 1830, Italy 1833, Algiers 1834, etc.). He was bereft

for a time of his eyesight, but after a successful operation, he spent the latter years of his life partly in London, partly in Paris. Considering his many travels, N. wrote an incredible number of works: 5 German and 2 English oratorios, 15 masses, 5 Te Deums, 5 church cantatas, a complete Morning and Evening Service (for London); 17 German, 10 English, 7 Italian, and 4 Latin psalms for one voice; 10 Latin, 2 Russian, and 18 English psalms for several voices, and many other smaller sacred works; 10 German operas, 3 Italian dramatic scenas, 2 oratorios, about 200 German, French, English, and Italian songs, a few duets, terzets, and choruses; 7 orchestral fantasias, a symphony, 5 overtures, over 20 chamber ensembles (quintets, quartets, etc.), many military marches, dances, etc.; for pianoforte: 1 concerto, 10 sonatas and caprices, 9 sets of variations, fantasias; finally, 57 organ pieces (he was an excellent performer on the organ), also solfeggi. His works, however, though fluent, and often interesting, were not long-lived.

Neumann, Angelo, b. Aug. 18, 1838, Vienna, was originally a merchant, but took singing lessons from Stilke-Sessi, and in 1859 went on the stage; he was first engaged at Cologne as lyrical tenor, but, as the theatre was burnt down, did not appear there. He afterwards sang on various stages, Cracow, Odenburg, Pressburg,

Danzig, and, from 1862-1876, at the Vienna Court Opera. In 1876 he became director of the Opera at Leipzig under Förster, but soon made excursions thence with the object of producing the *Nibelungen* (Berlin, London). When Förster gave up the directorship (1882), N. started his itinerant Wagner theatre, with which he travelled as far as Italy; at the end of the year, however, he established himself as opera-director at Bremen, whence in 1885 he was called to Prague to undertake the direction of the German national theatre.

Neumark, Georg, the poet of "Wer nur den lieben Gott lässt walten," b. March 6, 1621, Langensalza, d. July 8, 1681, as secretary of the secret archives, and librarian at Weimar; he was an able musician, and noted for his skill on the gamba. He also published some poems of his own with melodies: "Kenscher Liebesspiegel" (1649), "Poetisch und musikalisches Lustwäldchen" (1652; third part, 1657), and "Poetisches Gesprächsspiel" (1662), "Geistliche Arien" (1675), etc. Three songs are printed in Schneider's "Das Musikalische Lied" (1863); "Wer nur den lieben Gott" in Winterfeld's "Evangelischer Kirchengesang," Vol. II. Manuscripts are also to be found in the Weimar Library. Cf. E. Pasqué's article in the *Allg. Mus. Ztg.*, 1864.

Neumes, (1) the melodic ornaments of Gregorian Song, especially at the end of Antiphons,

• • • Punctum : Bispunctum : Tripunctum : Apostropha : Distropha : Tristropha
 (1) Orga (2) Birigis (3) Tririgis (4) Scandicus (5) Salicus (6) Climacus (7) Fleus (Climis
 Plia descendens) (8) Pos (Podatus, Plia ascendens) (9) Pos Fleus (Forculus) (10) Straphicus
 (11) Sinuosa (12) Peractas (Culturalis) (13) Gomo (Hemirocallis Biphonous) (14) Quisima

I. Synopsis of Neumes

II. From the Antiphony of St. Galen (9th century).

III. From 10th to 11th century.

IV. From 12th to 13th century.

V. Nota quadrata (12th to 19th century).

Hallelujahs, etc.—(2) A kind of stenographic notation used in the Antiphonary of Gregory, and, indeed, in all the sacred rituals of song up to within modern times. The origin of N. is unknown, but it was probably Greek or Roman (*Nota yomana*). The oldest known shape of the N. (from the 9th century) is strikingly similar to the signs of modern stenography (see Examples I.–III.). In the course of centuries the lines of the N. grew thicker, and assumed nail and horse-shoe shapes. Attempts of various kinds were made to get rid of the indefiniteness of neume notation, about which complaint was already made by writers of the 9th century. Thus over the N., the letter names of the sounds (see LETTER NOTATION), or even the interval signs of Hermannus Contractus (q.v.) were written. In the 10th century an experiment was made to fix the pitch meaning of the N. by means of lines. The first line used was the *f*-line; and, before the year 1000, the *c*-line was added to it; the former was marked red, the latter, yellow. After Guido d'Arezzo had perfected the stave, and had fixed the mode, still in force, in which it was to be used, the last remains of uncertainty in the pitch meaning vanished (Example IV.). At this time, too, the so-called *Nota quadrata*, or *quadriv-quarta*, the square note (see CHORALNOTE) was developed, and completely supplanted the N. (Example V.).

It is probably impossible thoroughly to decipher the N. without lines, since, according to the testimony of writers of the early Middle Ages, they were an aid to the memory rather than an exact notation; hence they were also named *usus*—singers were expected to have a previous knowledge of the plain-song, which was read off from neume notation. The elements of neume writing were:—(1) The signs for a single note: *Virga* (*Virgula*) and *Punctus* (*Punctum*); (2) the sign for a rising interval: *Pes* (*Podatus*); (3) the sign for a falling interval: *Clinis* (*Flexa*); (4) some signs for special manners of performance: *Tremula* (Bebung), *Quilisma* (shake), *Plica* (turn), etc. The others were either synonyms of the above-named or combinations of them; for example: *Gnomo*, *Epiphonus*, *Cephalicus*, *Oriscus*, *Ancus*, *Tramea*, *Sinuosa*, *Syrphicus*, *Bivirga*, *Trivirga*, *Distropha*, *Semivocalis*, etc. (Example I.). The question of N. has, within recent times, been discussed in detail by Lambillote, Coussemaker, A. Schubiger, H. Riemann, and, above all, by Dom Joseph Pothier (q.v.).

Neusiedler, (1) (Newsidler), H a n s, lute-maker and performer on the lute, b. Pressburg, d. Jan., 1563, Nuremberg, where he appears to have spent the greater part of his life (at least after 1536). He published: "Ein newgeordnet künstlich Lautenbuch, in zwen theyl getheylt" (1536; the first part contains the explanation of the lute and its tablature; the second, "Fantaseyen, Preambeln, Psalmen und Muteten"

in tablature), which, like all lute books, is of the greatest importance for the history of harmony. Lute tablature does not prescribe sounds, but fingering, and hence leaves no doubt concerning the use of the semitone, etc.

(2) Melchior (Neysidler), also a lutenist, b. Augsburg, lived in 1566 in Italy, and published at Venice two books of pieces for the lute (1566), which in 1571 were reprinted by P. Phalèse at Louvain and Jobin at Strassburg; he then went to the family Fugger at Augsburg, and died at Nuremberg, 1590. N. also published: "Deutsch Lautenbuch, darinnen kunstreiche Motetten, etc." (1574, 2nd edition 1596; Italian, "Il primo libro in tabulatura di liuto," 1576, according to Fétis, but 1566 according to Eitner, *Monatshefte*, 1871, p. 154); likewise, six motets of Josquin in lute tablature (1587).

Newsidler. (See NEUSIEDLER, 1.)

Ney, Joseph Napoléon. (See MOSZKOWA.)

Neysidler. (See NEUSIEDLER, 2.)

Niccolini, Giuseppe, b. Jan. 29, 1762, Fidenza, d. there Dec. 18, 1842; a prolific Italian opera composer, whose *Trajano in Dacia* in its time (1807) quite eclipsed Cimarosa's *Gli Orazii e Curiatii*. He attended the Conservatorio of Sant' Onofrio at Naples, became a pupil of Insanguine (Monopoli), made his *début* at Parma, 1793, with an opera: *La famiglia stravagante*, and wrote, in all, not less than forty-eight operas for Naples, Rome, Milan, Turin, Vienna, Venice, Genoa, etc. In 1819 he became cathedral maestro at Piacenza, and from that time wrote mostly sacred works (thirty masses, two requiems, one hundred psalms, etc.), three oratorios, cantatas, pf. sonatas, etc. At the present time his works are all forgotten.

Niccolò. (See ISOUARD.)

Nichelmann, Christoph, b. Aug. 13, 1717, Treuenbrietzen (Brandenburg), d. July 20, 1762, Berlin; he attended the St. Thomas School, Leipzig, and had the good fortune to study under J. S. Bach. He lived for some time at Hamburg, where Mattheson and Telemann were distinguishing themselves as chorus-masters, then went to Berlin, where he enjoyed the teaching of Quantz. In 1744, probably on the recommendation of Ph. E. Bach, he was appointed second cembalist to Frederick the Great. In 1756 he was dismissed. N. is noteworthy as the author of "Die Melodie, nach ihrem Wesen sowohl als nach ihren Eigenschaften" (1755), a book which he successfully defended against the attacks of a pseudonymic "Dünkelfeind" ("Gedanken eines Liebhabers der Tonkunst über, etc.") with "Die Vortreflichkeit des Herrn C. Dünkelfeind . . . ins rechte Licht gesetzt von einem Musikfreunde." N. also composed a serenade, *Il sogno di Scipione*, and a pastoral play, *Galatea* (jointly with Graun and Quantz),

and wrote pretty songs and clavier pieces for collections by Marburg, Voss, etc.

Nicodé, Jean Louis, b. Aug. 12, 1853, Jerczik (near Posen), was the son of a landowner, who, after the loss of his property, went to Berlin, where he supported his family by his violin-playing, which until then had been merely a pleasant pastime; he also became his son's first teacher. N. afterwards received lessons from the organist Hartkäs, and in 1869 became a pupil of the new "Akademie der Tonkunst," especially of Kullak for pianoforte and of Wüerst for theory; finally, Kiel taught him counterpoint and the art of free composition. After he had spent some years in Berlin as a teacher, and repeatedly appeared as pianist at the Monday Concerts which bore his name, and, in 1878, had made a concert tour through Galicia and Roumania with Mme. Artôt, he was appointed, in the same year, teacher of the pianoforte at the Dresden Conservatorium, which position, however, he gave up in 1885, on Wüllner's departure, in order to undertake the direction of the Philharmonic Concerts. This he resigned in 1888, in order to devote himself entirely to composition. N. is a noteworthy composer, strong in invention, sound in the development of his ideas; his most prominent works are the symphonic poem: "Maria Stuart," symphonic variations, two orchestral suites, a grand choral symphony with organ, "Das Meer" (Op. 31, 1888); 'cello sonata (Op. 25), pf. sonata (Op. 19), studies (Op. 20, 21), and songs (Op. 15, 30).

Nicolai, (1) Otto, the composer of *The Merry Wives of Windsor*, b. June 9, 1810, Königsberg, d. May 11, 1849, Berlin. His father was a teacher of singing, lived separated from his wife, was tyrannical, and only trained his son in pianoforte-playing from selfish motives; when, however, N. was sixteen years old he secretly left his father's house, and went out into the world to seek his fortune. At Stargard he found a kind helper in Councillor Adler, who had him trained in Berlin under Klein and Zelter (1827), and N. had already become a first-class teacher when, in 1833, the Prussian ambassador in Rome (v. Bunsen) offered him the appointment of organist at the chapel of the embassy. In Rome he had the benefit of instruction from Baini, so that his training was thoroughly good. In 1838 he was for a time capellmeister at the Kärntnerthor Theater, Vienna, but returned already in the same year to Rome, where, allured by the easy successes of the Italians, he gave himself up with zeal to operatic composition. Thus originated his operas: *Enrico II.* (1839), *Rosmonda d'Inghilterra* (1839), *Il templario* (1840, and frequently performed also in Vienna as *Der Tempeler*), *Odoarda e Guldippe*, and *Il proscritto* (1841, afterwards given in Vienna [1844] under the title "*Die Heimkehr des Verbannten*"). His suc-

cesses completely answered to his expectations: the Italians considered him a fellow-countryman (in consequence of the *i*), and celebrated him as one of their best *maestri*. In 1841 he was called to Vienna as court capellmeister (successor to Kreutzer), where he founded the Philharmonic Concerts, still held in high esteem. A mass dedicated to Friedrich Wilhelm IV. in 1843, and a "Festouvertüre" for the Jubilee of the Königsberg University in 1844 led immediately to his appointment as director of the Domchor, and as court capellmeister at Berlin, on the duties of which posts he entered in 1847. At his farewell concert at Vienna (April 1, 1847) some of the instrumental numbers of *The Merry Wives of Windsor*, upon which he had already been at work, were performed (libretto by Mosenthal); but he did not complete this work until the beginning of 1849, and the first representation took place eight weeks before his death. This charming, fresh opera, bubbling over with humour, will long keep N.'s name alive. Besides the works already mentioned, N. wrote songs and part-songs, pf. pieces, and a few orchestral works. A symphony, a requiem, and a Te Deum remained in manuscript, and were only performed in Berlin. A biography of N. was written by M. Mendel (1868).

(2), Willem Frederik Gerard, meritorious Dutch composer and writer on music, b. Nov. 20, 1829, Leyden, became (1849) pupil of the Leipzig Conservatorium (Moscheles, Rietz, Hauptmann, and Richter), as well as of Johann Schneider at Dresden (organ). In 1852 he became teacher of organ, piano, and harmony at the royal music school at The Hague, and, after Lübeck's death (1865), director of that institution. N. is also active as conductor, and of late years has exercised great influence over the musical tendencies of his countrymen as editor of the music journal *Cæcilia*; he is a man free from prejudice, and helps on, with all his powers, the understanding of the works of such men as Wagner, Liszt, etc. As a composer, he has had success, and first with German songs; later on he devoted himself to higher tasks, composed numerous cantatas to Dutch words, set to music Schiller's "Lied von der Glocke" for chorus, soli, and orchestra, and wrote an oratorio, *Bonifacius* (words by Lina Schneider). On Dec. 1, 1880, his cantata *The Swedish Nightingale* (words by J. de Geyter) was produced. It was written in honour of Jenny Lind, who had started the pension fund for musicians "De toekomst" at The Hague (present capital 100,000 florins), and the twenty-fifth anniversary of this endowment was the occasion of the performance. One other cantata, *Jahveh's Wraak* (*Jehovah's Vengeance*), was produced at Utrecht, 1892. In that year N. received the title of Officer of the French Académie.

Nicolini. (See NICCOLINI.)

Nicolo, (1) name (see ISOUARD.)—(2) Instrument (see BOMHART.)

Niecks, Friedrich, writer on music, b. March 3, 1845, Düsseldorf, was first trained as a violin-player under Langhans, F. Grunewald, and Auer, and made his *début* at the early age of twelve. As he was without means, he was compelled to earn a living as he best could, until, in 1868, he met with an appointment as music teacher and organist at Dumfries (Scotland), also as viola-player in a stringed quartet to which A. C. Mackenzie also belonged. Here by eager private study, he remedied the deficiencies of his training, spent two terms (1877) at the Leipzig University, and made a journey to Italy for the purpose of study. N. subsequently became one of the most esteemed London musical critics, especially of *The Monthly Musical Record* and the *Musical Times*. In 1891 he was appointed Reid Professor of Music at Edinburgh University (inaugural lecture, "Musical Education and Culture," printed). N. commenced his new career with a series of lectures on the first development of instrumental music, with musical performances in illustration, besides giving some historical concerts; and thus it can already be said that N. has given a new impetus to the musical life of Edinburgh. N.'s most important work is his biography of Chopin: "Fr. Chopin as a Man and a Musician" (1888; German by W. Langhans, 1889). He also published a "Dictionary of Musical Terms" (2nd ed. 1884), and brought out in the "Proceedings of the Musical Association," 1890, a monograph on the history of the accidentals ("The Flat, Sharp, and Natural").

Niedermeyer, Louis, composer and founder of the Institute for Church Music in Paris, which still bears his name, b. April 27, 1802, Nyon (Lake of Geneva), d. March 13, 1861, Paris; he was pupil of Moscheles (piano) and Förster (composition) at Vienna, of Fioravanti at Rome, and of Zingarelli at Naples, where he brought out his first opera, *Il reo per amore*. In 1821 he settled in Geneva, and gained a name by his songs. In 1823 he went to Paris, and, with the exception of two years' stay in Brussels (about 1830) as piano-teacher at the Gaggia Institute, remained there. All his attempts to gain success on the stage ended in disappointment (*La casa nel bosco*, 1828, at the Théâtre Italien; *Stradella*, 1837; *Maria Stuart*, 1844; and *La Fronde*, 1853; all three given at the Grand Opéra). After the failure of *La Fronde*, he concentrated his attention on sacred music, and revived the school founded by Choron for church music ("École Niedermeyer"); and with State support he was soon successful in bringing the institution into repute. N.'s best compositions are his sacred works (masses, motets, etc., probably the so-called "Kirchenarie" ascribed to Stradella is

by N.), also organ pieces, many songs, and some pieces for pianoforte.

Niedt, Friedrich Erhardt, writer on music, notary at Jena, afterwards held a position at Copenhagen, where he died in 1717. He was the author of a Method on composition, "Musikalische Handleitung" (three parts, the first of which treats of thorough-bass [1700, 2nd ed. 1710]; the second, of the varied interpretations of thorough-bass [1706, 2nd ed. by Mattheson, with addition of sixty organ dispositions, 1721]; and the third, of counterpoint, canon, and the vocal forms: motet, chorale, etc. [1717, published by Mattheson after N.'s death]); also "Musikalisches ABC zum Nutzen der Lehrer und Lernenden" (1708). With exception of a few airs with oboe obligato and figured bass contained in the last-named work, only six suites for three oboes and figured bass (1708) have survived.

Niemann, (1) Albert, eminent stage-singer (tenor), b. Jan. 15, 1831, Erxleben (near Magdeburg), son of an innkeeper, was to have been a machine-maker, but his parents fell into impoverished circumstances, and he resolved to try his fortune on the stage; he appeared first at Dessau (1849), in inferior rôles, afterwards as chorus-singer. F. Schneider took note of his remarkable voice, and he, together with Nusch, the baritone, undertook his training; later on N. went from Hanover, and studied at Paris under Duprez. After he had won his spurs at Halle and other places, he was engaged, in 1860, as dramatic tenor at Hanover; but through the political events of 1866, came under the sway of Herr v. Hülsen, who drew him to Berlin; since then he has been the pride of the Berlin Court Opera, and, only a few years ago, was still a powerful Tannhäuser, Prophet, Siegmund, etc., perhaps even more admirable as an actor than as a singer. He first married the actress, Marie Seebach (1861), but soon obtained a divorce, and married for the second time (1870) another actress, Hedwig Raabe.

(2) Rudolf Friedrich, pianist and composer, b. Dec. 4, 1838, Wesselburen (Holstein), where his father was a musician and organist; and from him he received his first instruction in music. He studied afterwards (1853-56) at the Leipzig Conservatorium (Moscheles, Plaidy, Rietz), later on at the Paris Conservatoire under Marmontel (piano) and Halévy (composition), and, finally, at Berlin under H. v. Bülow and Fr. Kiel. N. first made himself known, as accompanist to A. Wilhelmj, in tours through Germany, Russia, and England (1873-77). As a composer, he devotes himself principally to songs, and small *genre* pieces for the piano. His Gavotte (Op. 16) is especially well known; the violin sonata (Op. 18) and the variations (Op. 22) deserve mention. N. lived for a long time at Hamburg, but since 1883 has settled in Wiesbaden; he occasionally accompanies Wilhelmj in his tours. N. taught

at Wilhelm's School at Biebrich; that institution, however, existed only a short time.

Nietzsche, Friedrich, the gifted philosopher, b. Oct. 15, 1844, Röcken (near Lützen), 1869-79 professor of classical philology at the University of Basle, which appointment he gave up in consequence of an affection of the eyes; he was a zealous partisan of Richard Wagner, and published:—"Die Geburt der Tragödie aus dem Geiste der Musik" (1872; 2nd ed. 1874), and "Richard Wagner in Bayreuth" (1876); the first is a mystico-philosophical, rather than an historical combination of the meaning of Wagner in the history of music, together with that of the worship of Apollo and Dionysius and of the tragedies of classic Greece. The writing veils the artist in fantastical mist, and to so great an extent that he becomes a divinity. N.'s enthusiasm veered round, later on, to the opposite side ("Der Fall Wagner," 1888), shortly before the night of insanity obscured his rich intellect. The rest of his writings, which occupy in their entirety a unique position in literature, also comprise much that is interesting relating to music.

Niggli, Arnold, b. Dec. 20, 1843, Aarburg (Canton Aargau, Switzerland), passed through the schools at Aarau, where his father held (from 1851) the position of principal of the girls' school. N. afterwards studied jurisprudence at the Universities of Heidelberg, Zürich, and Berlin. Since 1875 he has been town clerk (secretary to the municipal council) at Aarau. From his youth an ardent piano-player, he occupied his leisure hours principally with the study of musical history, and has furnished contributions to various musical papers, especially to the *Schweizerische Musikzeitung* (of which he has been editor since 1891), the *Allgemeine Musikalische Zeitung*, the *Deutsche Kunst- und Musikzeitung*, and the *Musikalische Rundschau* at Vienna. His writings of greater importance appeared in a collection ("Sammlung musikalischer Vorträge") by Breitkopf und Härtel:—essays on Frédéric Chopin, Franz Schubert, Faustina Bordoni-Hasse, Gertrud Elizabeth Mara, Nicolo Paganini, Giacomo Meyerbeer; and in the collection of public lectures held in Switzerland ("Schweigaussersche Verlagsbuchhandlung," Basle): two:—one on Robert Schumann and the other on Jos. Haydn; in the musical *Zentralblatt* (1881) a treatise on the literary and musical history of the *Freischütz*; also an important work:—"Die Schweizerische Musikgesellschaft; eine musik- und kulturgeschichtliche Studie," 1886; and "Geschichte des Eidgenössischen Sängervereins 1842-92" (a jubilee work). N. has written a biography of Adolf Jensen.

Nikisch, Arthur, a gifted conductor, b. Oct. 12, 1855, Szent Miklos (Hungary), where his father was head book-keeper to Prince Liechtenstein, pupil of the Vienna Conservatorium, es-

pecially of Dessoff (composition) and Hellmesberger (violin). N. left the institution in 1874 with prizes awarded for composition (sextet for strings) and violin-playing, then became violinist in the court orchestra, and was engaged in 1878 by Angelo Neumann as second capellmeister for the Leipzig Stadttheater, in which post he so distinguished himself that he was placed on equal footing with Sucher and Seidl. When M. Stägemann undertook the direction (1882) N. became principal capellmeister, but went in 1889 to Boston as successor to Gerike, conductor of the symphony concerts, and in 1893 became principal capellmeister and opera conductor at Pesh.

Nikomachos (Gerassenus, after the place of his birth, Gerasa, in Syria), Grecian writer on music of the 2nd century A.D. His treatise, "Harmonices Enchiridion," was printed by Meursius in 1616, and by Meibom, 1652.

Nilsson, Christine, celebrated singer, b. Aug. 20, 1843, on the small estate Sjöabel, near Wexjö, Sweden. She received her first lessons in singing from Baroness Leuhausen (*née* Valerius) and from F. Berwald at Stockholm; with the former she afterwards went to Paris to continue her studies. In 1864 she made her *début* at the Théâtre Lyrique, and was engaged for three years. N. paid occasional visits to London, with ever-increasing success, and in 1868 was secured for the Paris Grand Opéra; she, however, gave up this highly honourable position, and undertook fatiguing tours (1870-72, with Strakosch in America), and performed on the most important stages of Europe, thereby gaining considerable wealth. In 1872 she married a young Frenchman, Auguste Rouzaud, who died in 1882; in 1887 she married Count Casa di Miranda. The voice of Mme. N., who still sings with brilliant success at London, Petersburg, Vienna, etc., is not very strong, but tender and rich, and of great compass; in dramatic rôles which do not require too great strength, it is especially effective.

Nini, Allesandro, Italian opera composer, b. Nov. 1, 1805, Fano (Romagna), d. Dec. 27, 1880, as maestro di cappella of the cathedral at Bergamo, was from 1830-37 director of the School of Singing at Petersburg. N. wrote the operas *Ida delle Torre* (1837), *La marescialla d'Ancre* (1839), *Cristina di Svezia* (1840), *Margherita di York* (1841), *Odalisa* (1842), *Virginia* (1843), and *Il corsaro* (1847). Two others remain in manuscript; N. also wrote many sacred compositions, amongst others a *Miserere* (*a cappella*).

Ninth (*nona*, *sc. vox*), the ninth (diatonic) degree, which is of the same name as the second. In the

Ninth. Second. theory of harmony, however, a distinction is made between the interval of a N. and a Second; the N. is regarded as an essential element of chords which are built up

by thirds (this building up of chords by thirds, as is well known, is the *punctum saliens* of the theory of German harmonists of the 18th and 19th centuries). According to the standpoint arrived at in the article *DISSONANCE*, the N., as well as the Second, is a note disturbing the consonance, and a note, indeed, which generally appears as a suspension before the octave (the more usual), or before the tenth. It appears then (1) as a N., when the fundamental note, in spite of the suspension before the octave, is represented, and (2) as a Second when the fundamental note is absent:

Ninth, Chord of the. (See NINTH.)

Nisard, Théodore, pseudonym of the Abbé Théodule Eléazar Xavier Normand, b. Jan. 27, 1812, Quaregnon, near Mons (Hainault), son of a French teacher, who afterwards received an appointment at Lille. In this city N. received his first instruction in music, was chorister at Cambrai, studied there, also at Douay, and became an able 'cellist; but, after finishing his education at the Gymnasium, he entered the priests' seminary at Tournay, and in 1839 was appointed director of the Gymnasium at Enghien. His inclination for musical studies, repressed for a time, now broke out afresh, and N. became absorbed in the theory and history of church music. In 1842 he exchanged his appointment for that of second *chef de chant* and organist of the church of St. Germain at Paris; after a few years, however, he retired from these posts and confined himself to his work as an author. His most important publications are:—"Manuel des organistes de la campagne" (1840; an explanation of the organ, of plain chant, and the manner in which it should be accompanied, organ pieces, etc.); "Le bon Ménestrel" (1840; songs for religious training institutions; both these works were published under his real name, Normand); "Le plain-chant Parisien" (1846); a new edition of Jumilhac's (1672) "La science et la pratique du plain-chant" (1847, in collaboration with Le Clercq, principal conductor at St. Germain and a bookseller; both, indeed, added many notes); "De la notation proportionnelle au moyen-âge" (1847, reprint of an article commenting on the former work); "Études sur les anciennes notations musicales de l'Europe" (1847); "Dictionnaire liturgique, historique, et pratique du plain-chant et de musique d'église au moyen-âge et dans les temps modernes" (1854, jointly with d'Ortigue); "Méthode de plain-chant pour les écoles primaires" (1855); "Études sur la restauration du chant grégorien au XIX. siècle" (1856); "Du rythme dans le plain-chant" (1856); *Revue de musique ancienne et moderne* (monthly pamphlet, only for 1856; it contains an excellent article on Franco of Cologne); "Mé-

thode populaire de plain-chant romain et petit traité de psalmodie" (1857); "L'accompagnement du plain-chant sur l'orgue enseigné en quelques lignes de musique" (1860); "Les vrais principes de l'accompagnement du plain-chant sur l'orgue d'après des maîtres du XV. et XVI. siècles" (1860). To these may be added monographs on Odo de Clugny, Palestrina, Lully, Rameau, Abbé Vogler, Pergolesi, etc. N. threw himself into the dispute regarding the authenticity of the Antiphony of St. Gallen, at first taking the side of Kiesewetter, who answered the question in the affirmative (in the *Revue de musique ancienne et moderne*); Schubiger's investigations, however, caused him to take the opposite view, which he now defended in "Le P. Lambillote et Don A. Schubiger" (1857). N. discovered the famous Antiphony of Montpellier, which has neumes and Latin letter-notation (a-p).

Nissen, (1) Georg Nikolaus von, Danish state councillor, b. Jan. 27, 1765, Hadersleben (Denmark), d. March 24, 1826. He married Mozart's widow, and collected materials for a biography of Mozart; he died, however, before its publication, but it was carried out in 1828 by his widow: "Biographie W. A. Mozarts; nach Originalbriefen," etc. A catalogue of Mozart's works appeared in 1829.

(2) Henriette (N.-Saloman), b. March 12, 1819, Gothenburg (Sweden), d. Aug. 27, 1879, at the Harzburg Baths, showed musical talent at an early age, went to Paris, in 1839 became pupil of Manuel Garcia for singing, and of Chopin for piano, made her *début* there at the Italian Opera in 1843 as Adalgisa (*Norma*) and Elvira (*Don Juan*), upon which she was at once engaged. With ever-increasing success, she sang (1845-48) in Italy, Russia, England, Norway and Sweden. From 1849-50, also in 1853, she sang at nearly all the Gewandhaus Concerts at Leipzig; at Berlin she proved herself a worthy rival of Jenny Lind. In 1850 she married the Danish composer Saloman (q.v.), made with him joint concert tours, sang at the Conservatoire concerts of Paris and Brussels, and finally (1859) received a call to Petersburg as teacher of singing in the newly-established Conservatoire. She remained in this honourable position until her death, training a large number of noteworthy pupils; she constantly refused offers from Stuttgart and Vienna. A singing Method at which she had worked during her last years appeared in 1881 (Russian, French, and German).

(3) Erica N. (See LIE.)

Nivers, Guillaume Gabriel, writer on music and composer, b. 1617, Melun, d. after 1700, Paris; he studied theology at the Seminary of St. Sulpice, Paris, and received clavier lessons from Chambonnières, became in 1640 organist of the church of St. Sulpice, 1667 tenor singer of the royal chapel, later on chapel

organist and music teacher to the queen. His writings are: "La Gamme du Si, nouvelle méthode pour apprendre à chanter sans nuances" (1646; one of the most influential works against solmisation; republished four times up to 1696); "Méthode pour apprendre le plain-chant d'église" (1667); "Traité de composition de musique" (1667, and frequently; also in Dutch); "Dissertation sur le chant grégorien" (1683). Of practical music he published sacred songs for the community of St. Sulpice (1656); "Graduale romanum juxta missale Pii V." (1658); "Antiphonarium romanum juxta breviarium Pii V." (1658); Services for Palm Sunday and Good Friday (1670 and 1689); songs and motets for the Louis Institute of St. Cyr (1692), and several books of organ pieces ("Livre d'orgue," 1665, 1671, 1675).

No. (See NON.)

Nöb, Victorine. (See STOLTZ.)

Nocturne (Fr.; Ital. *Nocturno*), "nightpiece," i.e. serenade or *cassation*, *divertimento* (q.v.) of several movements for wind band, especially horns, but also for strings. Also a term much in vogue since Field and Chopin for pianoforte pieces of dreamy character, and quite indefinite as to form. The name of N. is also given to songs of one or more parts of similar character (serenades).

Noël (Fr.), a Christmas carol.

Nohl, K. Fr. Ludwig, writer on music, b. Dec. 5, 1831, Iserlohn, d. Dec. 16, 1885, Heidelberg, son of the advocate, F. L. N.; he passed through the Gymnasium at Duisburg, and studied jurisprudence at Bonn, Heidelberg, and Berlin; also, in the last-named city, thorough-bass under S. W. Dehn. After he had officiated for some time as referendary at Iserlohn, he went as a teacher of music to Heidelberg, qualified himself there as lecturer (1860), and made himself known by publishing a "Beethoven Biographie" (1864-77, three vols.); "Briefe Beethovens" (1865), "Briefe Mozarts" (1865); in 1865 he became honorary professor at the University of Munich, but resigned this post in 1868, lived in retirement at Badenweiler until 1872, then returned as private lecturer to Heidelberg; from 1875 he was also lecturer at the Polytechnic, Karlsruhe, and in 1880 was named professor at Heidelberg. Besides the works already mentioned, N. published the following: "Neue Briefe Beethovens" (1867); "Musikerbriefe" (1867); "Mozarts Leben" (2nd ed. 1877); "Beethoven, Liszt, Wagner" (1874); "Beethoven nach den Schilderungen seiner Zeitgenossen" (1877); "Mozart nach den Schilderungen seiner Zeitgenossen" (1880); "Die geschichtliche Entwicklung der Kammermusik" (1885, a very feeble pamphlet, which, however, gained a prize at Petersburg), etc.

Nohr, Christian Friedrich, b. Oct. 7, 1800, Langensalza, d. Oct. 5, 1875, Meiningen,

was one of Spohr's first pupils, studied composition under Umbreit and Hauptmann. After making several concert tours, and with good results, he became, in 1830, leader of the band of the Duke of Meiningen. N. composed numerous songs, quintets, quartets, orchestral pieces, violin pieces, many of which appeared in print; also the operas:—*Der Alpenhirt* (Gotha, 1831), *Liebeszauber* (Meiningen, 1831), *Die wunderbaren Lichter* (ditto, 1833), *Der vierjährige Posten* (ditto, 1851); finally, the oratorios *Martin Luther* (Eisenach, 1850), *Frauenlob*, and *Helvetia*.

Nolæ. (See TINTINABULA.)

Nomos ("Law") was the name given by the ancient Greeks to a melody formed according to the requirements of the art—a song divided into several sections. There were special Nomoi for cithara- or flute-playing, without singing. (See GREEK MUSIC.)

Non (Ital., "not"), *n. legato*, i.e. half-staccato.

Nonet, a composition for nine voices or instruments.

Norblin, Louis Pierre Martin, distinguished 'cellist, b. Dec. 2, 1781, Warsaw, d. July 14, 1854, at Château Connantre (Marne). He studied at the Paris Conservatoire, and from 1811 to 1841 was principal 'cellist at the Grand Opéra, also from 1826 to 1846, professor of the 'cello at the Conservatoire.—His son Émile, b. April 2, 1821, Paris, d. there Aug. 18, 1880, was, likewise, an excellent 'cellist.

Normal pitch. (See A.)

Normand. (See NISARD.)

Normann, Ludwig, b. Oct. 28, 1831, Stockholm, d. there March 28, 1885, was a pupil of Lindblad, and studied afterwards (1848-52) at the Leipzig Conservatorium. In 1857 he became teacher of composition at the Royal Academy, Stockholm, in 1859 conductor of the new Philharmonic Society, in 1861 conductor of the Opera in that city, and from 1879 to 1884, leader of the Symphony Concerts. In 1864 he married the violinist Wilma Maria Neruda (q.v.). He wrote pf. pieces for two and for four hands, a violin sonata, a pf. trio, a pf. quartet, etc.

Noskowski, Sigismund, b. May 2, 1846, Warsaw, was at first music teacher at an institute for the blind; he invented a musical notation for blind people, then studied under Kiel, and became (1876) Town Musical Director at Constance. At present he is teacher at the Warsaw Conservatoire, and conductor of the Warsaw Musical Society. N. is known as a gifted composer (quartet for strings, overture: "Das Meerange," symphonies, ballet music [Op. 42], part-songs, pf. pieces, etc.).

Nota (Lat. and Ital.), note; *N. romana* (see NEUMES); *N. quadrata*, *quadrivarta* (see CHORAL-NOTE); *N. cantiva*, a note falling on the unaccented part of a bar; *N. cambiata*, changing note.

Notation is the designation of sounds by writing. The oldest kinds of N. are probably *letter notations*; the ancient Greeks possessed a highly-developed letter notation. (See GREEK MUSIC.) The neumes (q.v.) which were used during the Middle Ages for noting Catholic ritual song were a species of musical stenography or running hand. Our Western notation is the outcome of the combination, since the 11th and 12th centuries, of a letter-notation of the early Middle Ages, the falsely so-called Gregorian (see GREGORY I.), with neume notation, and has gradually assumed its present form. Guido d'Arezzo (q.v.), the inventor of the *stave* now in common use, rendered special service in regard to the same: but the employment of one or two lines with clefs (*f* and *c*) is older than Guido. The introduction of rhythmical value signs for the duration of sounds transformed the "choral note" into the *mensural note* (q.v.). With the 14th century came *time signatures*, and with the 17th, release from the complicated determinations of the theory of measured music by the introduction of the *bar-line*. Letter tabulation for organ and lute (see *TABLATURE*) maintained itself up to the 18th century side by side with the now fully developed modern notation. The compiler of this Dictionary, in his "Studien zur Geschichte der N." (1878), has given a summary of the development of our notation, of which M. Lussy's "Histoire de la Notation Musicale" is in the main a repetition.

Notes (cf. Lat. *nota*, "sign") are conventional signs for musical sounds. The word *nota* in the sense of note was already used by Fabius Quintilian (2nd century after Christ). Boëtius (about 500) uses it to denote Greek notation; later on, however, the term was employed for *neume notation* (*Nota romana*), and after the invention of staves, for the *Choral-note* and *Mensural-note* (cf. the respective articles). N. have to serve a double purpose: they must indicate both the pitch and the duration of sounds. With regard to the former, a synoptical table is given under A; for historical details see LETTER NOTATION and NEUMES. With regard to the signs of duration, see what is said under RHYTHMICAL VALUE SIGNS and TABLATURE.

Note sensible (Fr.), leading-note (q.v.).

Notker (Balbulus), monk of the monastery of St. Gallen, b. 840, d. April 6, 912, one of the oldest and most important composers of sequences, from whom, amongst other things, the "Media in vita in morte sumus" has been handed down to us. For particulars of his life, as well as for a partial reproduction of his sequences, see Schubiger's "Die Sängerschule von St. Gallen" (1858). According to tradition, N. was also the author of several small German treatises on music which by many have been ascribed to the St. Gallen monk Notker Labeo, who flourished a hundred years

later; but scarcely with good reason, for it is not known of the latter that he was skilled in music. Philological assertions are of little avail in this question, since the manuscripts which have been preserved are not autographs. Gerbert printed ("Script." I.) four of the treatises:—"De octo tonis," "De tetrachordis," "De octo modis," "De mensura fistularum organicarum," and the Editor of this Dictionary has given a fifth (Division of the monochord), together with the first and last of the above-named, in his "Studien zur Geschichte der Notenschrift." N.'s explanation of the "Romanus" letters ("Explanatio quid singulæ litteræ in superscriptione significant cantilenæ"), which has frequently been printed, in Gerbert, etc., is of doubtful value; it appears, indeed, that N. himself no longer understood the meaning of these signs.

Notograph (*Melograph*). (See SCHMEIL.)

Nottebohm, Martin Gustav, meritorious writer on music, b. Nov. 12, 1817, Lüdenscheid (Westphalia), d. Oct. 31, 1882, Graz, on the return journey from a hydropathic establishment. He served as a volunteer in the "Gardeschützen-bataillon" at Berlin from 1838-39, and during that time studied under L. Berger and Dehn, went to Leipzig in 1840, and continued his studies under Mendelssohn and Schumann. In 1846 he settled in Vienna, studied counterpoint for a while with S. Sechter, and from that time became active as a teacher of music, yet without holding any regular appointment. N. was a special Beethoven investigator, and brought to light much that is of very great interest. His literary works are: "Ein Skizzenbuch von Beethoven" (1865); "Thematisches Verzeichnis der im Druck erschienenen Werke von Beethoven" (1868); "Beethoveniana" (1872; 2nd vol. 1887, from posthumous papers); "Beethovens Studien" (Vol. I.: Beethoven's lessons with Haydn, Albrechtsberger, Salieri, according to the original manuscripts, 1873); "Thematisches Verzeichnis der im Druck erschienenen Werke Franz Schuberts" (1874); "Neue Beethoveniana" (in the *Musikalisches Wochenblatt*, 1875, etc.); "Mozartiana" (1880); "Ein Skizzenbuch von Beethoven aus dem Jahr 1803" (1880). N. composed a pf. quartet, several trios, and pieces for pianoforte only (in all seventeen works).

Nocturno. (See NOCTURNE.)

Nourrit, Adolphe, distinguished stage-singer (tenor), b. March 3, 1802, Paris, son of the Grand Opéra tenor singer, Louis N. (b. Aug. 4, 1780, Montpellier, d. Sept. 23, 1831, Brunoy, near Paris), who brought him up with the idea of a commercial career; for the father, in spite of very fair success as a singer, had little ambition, and in addition to his professional engagements, was manager of a jewellery business. The son, however, worked secretly at music, and finally, on the recommendation of Garcia,

was permitted to devote himself to the stage. In 1821 he made his *début* at the Grand Opéra as Pylades in Gluck's *Iphigénie en Tauride*, and, through his striking likeness to his father, both as a man and as an artist, he won the good graces of the audience. When the father retired, in 1825, N. took his place as principal tenor, and for many years was a favourite with the public and with composers. At the same time he held office as professor of singing at the Conservatoire. Of the rôles written for and created by him may be named Masaniello, in the *Muette di Portici*; Arnold, in *Tell*; Robert, in *Robert le Diable*; Eleazar, in *La Juive*; and Raoul, in *Les Huguenots*. The joint engagement of Duprez at the Opéra induced him to resign (1837). Restless and dissatisfied, he paid visits to Belgium, the South of France, and Italy; but, notwithstanding his cordial receptions, his melancholy increased, and on March 8, 1839, after a performance of *Norma*, at Naples, he threw himself out of a window. N. was not only a distinguished singer, but was otherwise richly gifted; among other things, he wrote some ballets for Taglioni and Fanny Elssler which became famous (*La Sylphide*, *La Tempête*, *Le diable boiteux*, etc.).—Auguste, brother of Nourrit, b. 1808, Paris, d. July 11, 1853, L'Isle Adam, was likewise an excellent singer, and for a time opera director at The Hague, Amsterdam, and Brussels.

Novelette, a term probably first used by Schumann (Op. 21) for pianoforte pieces of free form and containing a considerable number of themes. Schumann very likely chose the new name because he brought forward much that was new: harmonic and rhythmical combinations of the boldest sort. The name has often been employed since; it does not express anything definite more than do the terms Romance, Ballad; but it is chiefly employed for pieces of some length, in which occur rapid changes of theme.

Novello, Vincent, the founder of the important London music-publishing house: "N., Ewer & Co." (1811), b. Sept. 6, 1781, London, d. Aug. 9, 1861, Nice. On his father's side, he sprang from an Italian family, enjoyed a good musical training, became already in 1797 organist of the chapel of the Portuguese Embassy (up to 1822), was one of the original founders of the Philharmonic Society, the concerts of which he occasionally conducted; from 1840 to 1843 he played the organ at the Roman Catholic Chapel, Moorfields, and from 1849 resided, for the sake of his health, at Nice. N. was himself a prolific composer (masses, motets, cantatas, etc.), but he rendered special service by the collections which he edited:—"A Collection of Sacred

Music" (two vols., 1811), followed by many collections of the works of English composers ("Purcell's Sacred Music," five vols., 1829; "Croft's Anthems;" "Greene's Anthems;" "Boyce's Anthems," etc.); also of German composers (masses by Haydn, Mozart, Beethoven, etc.).—N.'s fourth daughter, Clara Anastasia, b. Jan. 10, 1818, was a distinguished oratorio singer, married in 1843 Count Gigliucci, and sang still up to 1860.—His eldest son, Joseph Alfred, b. 1810, a bass singer, made a name, however, as manager of the business established by his father. He retired to Italy in 1856.

Noverre, Jean Georges, famous authority on dancing, b. April 29, 1727, Paris, d. Nov. 19, 1810, St. Germain, near Paris. He was solo dancer at Berlin, ballet-master at the Opéra Comique, Paris (1749), then at London (1755), Lyons, Stuttgart, Vienna, Milan, and finally, 1776-80, at the Grand Opéra, Paris; in the last-named year he withdrew from public life. N. was the first to introduce dramatic action into pantomimic ballet, and considerably raised the standard of this art. He wrote: "Lettres sur la danse et les ballets" (1760; frequently republished, also under the title, "Lettres sur les arts imitateurs en général et sur la danse en particulier," 1802), and "Observations sur la construction d'une nouvelle salle d'opéra" (1781).

Nowakowski, Joseph, b. 1805, Mniszck (near Radomsk, Poland), d. 1865, Warsaw; he was a distinguished pianist, pupil of the Warsaw Conservatoire, made extensive concert tours, and became professor at the "Alexander" Institute, Warsaw. About sixty of his compositions appeared in print (an overture, twelve piano études, quintets, quartets, sacred pieces, fantasias, nocturnes, a piano Method, many songs).

Nuceus. (See GAUCQUIER.)

Null (O. °). (See GENERALBASS and KLANG-SCHLÜSSEL; cf. also O.)

Nunc dimittis, the opening words of the Song of Simeon (*Canticum Simeonis*), Luke ii. 29—"Lord, now lettest Thou Thy servant depart in peace"—which has been set to music by many composers.

Nut, (1) (Ger. *Sattel*) is the small ridge of the finger-board of stringed instruments just below the peg-box. "Sattel machen" (to make a nut) is an expression used in violoncello-playing when flageolet tones are produced, not by a division of the whole string, but only of that part cut off by the thumb firmly pressed across the string, and thus forming a temporary nut. (2) (Ger. *Frosch*), a piece of ebony attached to the end of a violin bow.

O.

O, (1) (Ital.), or; for example, *Violino o flauto*.—(2) (Lat.) The interjection *O*!, specially, *Les O de Noël*, the antiphons to the Magnificat during the nine days before Christmas, which begin with *O*!—(3) Circle *O*, the sign of *Tempus perfectum* (q.v.).—(4) In the *Tonaria* of the Middle Ages with chants, in neume notation, *o* is the sign in the margin, indicating that they belong to the fourth Church Mode.—(5) Null (q.v.).

Oakeley, Sir Herbert Stanley, late professor of music at the University of Edinburgh (from 1865-91), b. July 22, 1830, Ealing; he was trained at Christ Church, Oxford, studied harmony under Elvey, the organ under Joh. Schneider at Dresden, and attended for a time the Leipzig Conservatorium. He graduated as B.A. in 1853, and as M.A. in 1855, received his Mus. Doc. in 1871 from the Archbishop of Canterbury, who, apart from the Universities, alone possesses the right of conferring the latter degree. In 1879 *O.* was created Mus. Doc. Oxford, 1881 Dr. Jur. Aberdeen, 1887 Dr. Mus. hon. causâ Dublin, and had the degree of LL.D. hon. causâ conferred on him by the University of Edinburgh in 1891, etc. He was knighted in 1876. *O.* is a distinguished organist, and gave regular organ recitals at Edinburgh. The following of his compositions have been published: songs with pf. or orchestral accompaniment, duets, twelve part-songs for mixed choir, choruses for male voices, choral arrangements of twelve Scottish national melodies, students' songs; also pf. compositions, a festival and a funeral march for orchestra, Jubilee ode (1887), also church music (anthems, a Morning and Evening Service, etc.).

Ob., abbr. for Oboe.

Obligato ("binding," indispensable, essential) is the term applied to a concertante accompanying part, which, therefore, cannot be omitted. It is specially used for an instrumental part combined with a vocal part, in which case, however, the latter is always the chief part. But instead of saying violin sonata with obligato viola and continuo, it is usual to speak of it as a duo for violin and viola, or, if the viola part is really of equal importance, as a concertante for violin and viola. Songs for a solo voice with organ, pianoforte, or even orchestral accompaniment, and with one obligato instrument (flute, violin, etc.), have been written in great number, especially during the last century.

Oberthür, Karl, performer on the harp and composer, b. March 4, 1819, Munich, lived first in Wiesbaden, Zürich, and Frankfurt, but from 1844 in London, where he is held in esteem, both as performer and teacher. He has repeatedly made successful concert tours on the

Continent. His numerous compositions consist for the most part of solo pieces for harp: a quartet for four harps, a nocturne for three harps, trios for harp, violin, and 'cello, a concertino for harp. There are also pf. pieces, songs, a grand mass with harp (*S. Filippo Neri*), two overtures ("Macbeth" and "Rübezahl"), a legend with harp ("Loreley"), and an opera (*Flor de Namur*, produced at Wiesbaden), etc.

Oberwerk (Ger.), upper manual. (See MANUALS.)

Obligato. (See OBLIGATO).

Obliquus, "slanting;" *motus o.*, oblique motion (see MOVEMENT, KINDS OF, 3); *Figura obliqua*, the slanting strokes in the ligatures of mensural notation, which were handed down from the neumes, and of which the beginning and end indicated a note,  or . (Cf. LIGATURE, 2.)

Oboe (Eng., Ger., Ital., etc.). The French call it *Hautbois*, i.e. a "high wood-wind instrument," in contradistinction to *Basson* (Bassoon), the "low" wood-wind instrument; and from the fact that the French word passed into all languages, it is supposed that the instrument was invented in France. In its present form the *O.* is somewhere about two hundred years old, apart, of course, from the perfecting of the measure, and the increase in the number of the keys, of which, at first, there were only two, increased in 1727 to four by Gerhard Hoffmann, burgomaster at Rastenburg; at the present day, in which oboes are constructed according to different systems, there are instruments with from nine to fourteen keys. The *O.* has been evolved from the primitive *Schalmei* (q.v.), as was the bassoon from the *Bomhart*; all belong to the same family, and are double-reed instruments. The compass of the *O.* at present is (I.); yet for orchestra it is better to

write only as at (II.); the lower *b \flat* is lacking to many instruments, and every player is not able to produce the highest notes. (Cf. also what is said under *BASSOON* respecting the hardness of reeds.) The tone of the *O.* is somewhat nasal, but it has more body than that of the flute, and it is less voluptuous than that of the clarinet; in sustained cantilena it assumes a character of *naïveté*, modesty, and for this reason, in operatic, and in programme music, it plays an important rôle as representative of maidenliness. In church music of the present day it is much preferred to the clarinet. The *alto oboe* is a variety of *O.* now much in vogue—or, to speak

more correctly, coming more and more into favour; it is known under the name English Horn (*Cor anglais*, *Corno inglese*), and has the compass

i.e. a fifth lower than the O. The English Horn is treated as a transposing instrument; the notation gives the sounds a fifth higher, thus:

(as in the horn in F). On account of its length, the tube of the English Horn is bent; in the 17th and 18th centuries, when as *O. da caccia* it was in common use, it had a sickle shape, like the Zink, and was covered with leather.—The *O. d'amore* (*Hautbois d'amour*) is quite obsolete; its pitch was a minor third lower than the usual O., *i.e.* in A, but it differed from the *O. bassa* (*Grand hautbois*), which had a similar pitch, in that it had a globular bell with a narrow opening, whereby the sound was considerably muffled. *O. piccola* was the old name for the ordinary O. The following are famous performers on the O., past and present:—Sallantin, Lebrun, J. Ch. Fischer, Garnier, Barth, G. Vogt, Lavigne, Sellner, Thurner, Barret; of O. Methods and compositions are to be named Methods by Sellner, Barret, Garnier (Ger. by Wieprecht), the forty-eight études (Op. 31) by Ferling, concertos by Rietz (Op. 33), Ed. Stein (Op. 10), Klughardt (Op. 18), etc.; also all the above-named masters have written exercises, concert pieces, concertos, etc., for the instrument.

The organ stop O. is an 8-ft. reed, with cylindrical tube, surmounted by a bell, so that the shape of the tube resembles that of the orchestral instrument. The O. is a so-called half-stop, *i.e.* it only runs through the upper half of the keyboard, and is completed below by the bassoon (q.v.).

Obrecht. (See **HOBRECHT.**)

Obstinato. (See **OSTINATO.**)

Ocarina is a pipe made of clay, having the shape of a bird's body; there are a number of soundholes, which are the only outlets for the wind; the sound is, therefore, similar to that produced from a covered pipe.

O'Carolan, Turlough, one of the last of the Irish bards, b. 1670, Newtown, near Nobber (Meath), d. March 25, 1738, Alderford House, Roscommon. At the age of sixteen smallpox resulted in blindness. When twenty-two years old O. became an itinerant singer, *i.e.* he went through the country with a horse, accompanied by a servant, who carried the harp and led the horse; he was received

everywhere with hospitality, and sang his modes of a national kind, yet of his own invention. One of his sons published a collection of his songs (1747).

Ochetus (*Hoquetus*, *Hocetus*, *Hochetus*, *Hocquetus*), one of the oldest forms of composition, a contrapuntal trifle, and at the same time a torture for the singers; in many respects it reminds one of the English Catch. The O. consisted, indeed, of an alternate and quick breaking off of the voices (Walter Odington [1228], "Dum unus cantat, alter tacet"). They were written in two and also in three parts. The name of the O. occurs already in the "Discantus positio vulgaris" (12th century), *i.e.* it is as old as Discant. On the other hand, one loses traces of it at the beginning of the 14th century. (Cf. also Johannes de Garlandia in Coussemaker, "Script." I., p. 116.)

Ochs. (1) Traugott, b. Oct. 19, 1854, Altenfeld (Schwarzburg-Sondershausen), pupil of Stade at Arnstadt, and of Erdmannsdörffer at Sondershausen; from 1879-80 at the Royal Institute for Church Music, also private pupil of Kiel; 1880 music teacher at the Neuzeile Seminary; 1883 organist at Wismar, and in 1889 conductor also of the Singakademie. He is an able composer ("Deutsches Aufgebot" for male chorus and orchestra, requiem, organ pieces, part-songs, Method for male voices, etc.).

(2) Siegfried, b. 1858, Frankfort, studied at first medicine, but afterwards music, at the Royal High School, Berlin, where he is now conductor of the Philharmonic Choir. He is likewise a gifted composer, especially for humorous subjects (comic opera, *Im Namen des Gesetzes*, Hamburg, 1888; songs, duets, etc.).

Ochsenkuhn, Sebastian, lutenist at the court of Otto Heinrich of the Palatinate, d. Aug. 2, 1574, Heidelberg; he published a "Tabulaturbuch auf die Lauten" (1558), together with 77 motets, German songs, French chansons, etc., arranged for lute.

Ockenheim. (See **OKEGHEM.**)

Octava. (See **OCTAVE.**)

Octave (*Octava*, sc. *von*), the eighth degree of the scale, bearing the same name as the first. (Cf. **INTERVAL.**) Concerning the harmonic meaning of the O., see **CLANG.**—The rule of the O. (*Regula dell'ottava*, *Règle de l'octave*; cf. **CAMPION**, 2) was the name given to the brief method of teaching accompaniment used in Italy during the 17th and 18th centuries, which proved the germ of the system of the inversion of chords, and of Rameau's fundamental bass; it gave as the natural harmonies of the scale—

It is evident that this household rule is of greater practical use than the scheme of German theorists, in which a triad is placed on each degree of the scale. Yet it is only a handle for beginners; for higher stages of development it is an arbitrary limitation.

Octave doublings. (See PARALLELS.)

Octave horn. (Cf. EICHBORN.)

Octet (*Ottetto*, *Ochtor*), a composition for eight instruments (for strings or wind, or both). It differs from the double quartet inasmuch as it does not consist of two groups of four instruments opposed to each other, but of all the eight instruments working together as one band. A vocal ensemble of eight voices is also called O.

Octobasse. (See VUILLAUME.)

Octuor (*Ottetto*). (See OCTET.)

Ode (Greek, "song"), lyrical poem, or the setting to music of one.

Odenwald, Robert Theodor, b. May 3, 1838, Frankenthal (near Gera), pupil of W. Tschirch and A. Helfer, was at the age of eighteen *Prefect* in the Gera church choir, from 1859–60 teacher of singing at Gera Schools; he also founded in 1868 a vocal society, which speedily prospered; in 1870 he was called to Elbing as cantor at the Marienkirche, and teacher of singing at the College. In 1871 he founded the Elbing Church Choir, and developed it so successfully that the Minister of Public Worship granted a subsidy. In 1882 O. was called to Hamburg as teacher of singing at the "Realgymnasium" and "Wilhelm" College; he also founded in Hamburg a church choir, which prospered greatly. O. is himself a singer, and has also published some vocal works (psalms, part-songs).

Ode-symphonie (Fr.), symphony with chorus.

Odington, Walter, the "Monk of Evesham" (not identical with the Archbishop of Canterbury of that name a century later), d. about 1316, one of the most important of old writers on mensural music. He compiled, about 1280, his treatise, "De speculatione musicae," which lay for a long time unheeded in the library of Christ's College, Cambridge, and has only recently been printed by Coussemaker ("Script," I.). This is one of the most important documents relating to the period of discant.

Odo de Clugny (St.), writer on music of the 10th century, pupil of Remi d'Auxerre, was in 899 canon and chapel singer at Tours, entered in 909 the monastery of Baume (Franche Comté), and afterwards became abbot of the monasteries of Aurillac, Fleuri, and, in 927, of Clugny, where he died, Nov. 18, 942. O.'s work "Dialogus de musica," also called "Enchiridion (musices)," has been printed by Gerbert ("Script," I.). O. is, as it seems, the one who introduced, instead of the old letter notation (A–G, in the sense of our C–B), the

letters (A B C D E F G = our A B C D E F G) with the meaning which they have since had; he also used Γ (gamma) for the note below A. (Cf. LETTER NOTATION.)

Oeglin, Erhard, the first German printer (Augsburg) who printed figured music with types, viz. the "Melopoeiae sive harmoniae tetracenticae," which was issued by Riman (the father of the German book-selling trade), of Peter Tritonius (1507, with wood types), and the German "Liederbuch," for several voices (1512, with metal types. A new score edition of the latter work, together with a piano score by Eitner, appeared in the publications of the Gesellschaft f. Musikforsch., Vol. IX.). (Cf. MUSIC PRINTING.)

Oelschlägel, Alfred, b. Feb. 25, 1847, Anseha (Bohemia), student of the Prague Organ School, was theatre capellmeister successively at Hamburg, Teplitz, Würzburg, Carlsbad, and Vienna (Karltheater), and later on, military capellmeister at Klagenfurt. He composed the operettas *Prinz und Maurer* (Klagenfurt, 1884) and *Der Schelm von Bergen* (Vienna, 1888).

Oesten, Theodor, prolific composer *à la mode*, b. Dec. 31, 1813, Berlin, d. there March 16, 1870: he was a pupil of the school of composition of the Royal Academy, Berlin (Rungenhagen, A. W. Bach); but after he had learnt the taste of the majority of the public, he abandoned the serious style of composition in which his teachers had trained him, and wrote numerous pianoforte trifles which belong to the *genre of salon music*.

Oettingen, Arthur Joachim von, b. March 28, 1836, Dorpat (son of the Marshal of the Livland province and Councillor v. O.), received his school training at the private institution Fellin, in Livland, and first studied astronomy and physics at the University of Dorpat (1853–58), continued his studies in physics, physiology, and mathematics, at Paris and Berlin (1859–62), and in 1863 qualified himself as private lecturer of physics at the University of his native town. In 1865 he was named occasional, and, in 1866, professor in ordinary of physics, was (1869–74) secretary of the Society of Natural Science, Dorpat, and since 1877 has been corresponding member of the Petersburg Academy of Sciences. This eminent savant, who has made a name in his special department by works of the highest value ("Die Korrektion der Thermometer," "Elektrische Entladungen," "Mechanische Wärmetheorie," "Meteorologische Beobachtungen," etc.), is, at the same time, an excellent musician, president of the Musical Society at Dorpat, and conductor of a trained orchestra of amateurs. His contributions to the theory of music are of great importance; his "Harmoniesystem in dualer Entwicklung" (1866) is an intelligent criticism of the works of Hauptmann, and Helmholtz on musical theory,

a happy blending together and further development of the views of both; it must prove of importance in the building up of a modern system of sounds standing in intimate relationship to the science of acoustics. The followers of O. on this path are: O. Thürlings, O. Hostinsky, and, especially, the compiler of this Dictionary.

Offenbach, Jacques, celebrated composer of operettas, b. June 21, 1819, Cologne, d. Oct. 5, 1880, Paris. He was the son of the cantor of the Jewish community at Cologne, Juda O. (really Juda Eberscht), who in 1830, published, among other things, an "Allgemeines Gebetbuch für die israelitische Jugend." O. cannot be properly ranked among German composers, for he went as a boy to Paris, and was for a short time pupil of the Conservatoire (in the 'cello class of Vaslin); he sent, indeed, his operettas into every corner of the world, but, with the exception of short excursions, never left Paris himself. After playing for some time as 'cellist in the orchestra of the Opéra Comique, and making a name by pleasing musical settings of Lafontaine's fables, he was, in 1849, appointed conductor of the Théâtre Français, where he obtained his first stage success with *Chanson de Fortunio*, inserted in A. De Musset's *Chandelier*, and in 1855 became an opera manager himself; he opened his "Bouffes-Parisiens" first in the Salle Lacazes (Champs Élysées), but after some months, moved to the Théâtre Comté in the Passage Choiseul. A large number of his well-known works were produced there. In 1866 he gave up the direction and produced his pieces on various Parisian stages (Variétés, Palais Royal, etc.), but already in 1872 he appeared again as manager, and, indeed, at the Théâtre de la Gaîté, which in 1876 he handed over to Vizentini; later on it was called "Théâtre Lyrique." After a somewhat unsuccessful tour through America, which he described in his "Notes d'un musicien en voyage" (1877), he only attended to the staging of his works; in his later years he was cruelly tormented by gout. O. wrote altogether 102 stage works, among them many one-act pieces; also more important ones of three and four acts belonging to that *genre* of music for which the French have that untranslatable word *musiquette* (equivalent to miniature music, but with a *souçon* of contempt: miniature and, at the same time, caricature). A large number of his operettas were of the same kind as those first cultivated by Hervé, of jeering or frivolous tendency; an outgrowth of the taste of our century, and one much to be regretted, in that it pays homage to the bad taste of the million, and lowers it still further. Among those best known and (unfortunately!) most popular are: *Orphée aux enfers* (1858), *La Belle Hélène* (1864), *Barbe-Blue* (1866), *La Vie Parisienne* (1866), *La Grande Duchesse de Gérolstein* (1867), *Madame Favart* (1879). His first pieces were: *Les Alceves*

(Paris, 1847, at a concert), *Marietta* (Cologne, 1849), and *Pépito* (Paris, 1853); his last, the comic opera *Les Contes d'Hoffmann* (first produced after his death, 1881), and the operetta *Made-moiselle Moucheron* (ditto). Before he began his theatrical career, O. wrote 'cello duets, pieces for pf. and 'cello, and songs.—A brother of his, Jules O. (b. 1815, d. Oct., 1880), was for several years conductor at the Bouffes-Parisiens.

Offertorium (*Offerenda*; Fr. *Offertoire*). This is the term applied to the singing of the choir during the oblations of the priest (immediately after the *Credo*). The Gregorian Antiphony contains for the daily mass throughout the year, except Good Friday and the Saturday in Holy Week, a special verse, an O. from the Psalms; it has, however, long been the custom after the Gregorian Chant, to sing a motet on the same, or some other verse from the Bible as O. Of such kind are the Offertories composed by Palestrina and other composers; many are also written with instrumental (organ) accompaniment.

Officium (Lat.), divine service; the special term for the singing of the mass. *O. defunctorum*, same as Requiem; *O. matutinum*: Matins; *O. vespertinum*: Vespers.

Oginski, name of two Polish princes who distinguished themselves as composers of national songs. (1) Michael Casimir, grand commander of Lithuania (b. 1731, Warsaw, d. there 1803); he maintained an orchestra at his residence, Stonin, and is said to have improved the harp. (2) Michael Kleophas, grand treasurer of Lithuania, b. Sept. 25, 1765, Gutzow (near Warsaw), d. Oct. 31, 1833, Florence; he was especially famous for his Polonaises.

Ohrenquinten (Ger.; "ear fifths"), a species of faulty fifth parallels (hidden fifths) established by many theorists, which are heard, but do not actually exist. (Cf. PARALLELS.)

Okeghem (Ockenheim, Okekem, Okenghem, even Okergan) Jean de, the old master of the second Netherland School, which includes the names of Josquin, Pierre de la Rue, Brumel, Compère, etc., i.e. the man under whom the art of imitative counterpoint reached its zenith. (Cf. NETHERLAND SCHOOL.) He was b. c. 1430, for he was a chorister at Antwerp Cathedral 1443-4, pupil of Dufay at Cambrai probably about 1450, in 1453 at the court of Charles VII., Paris (mentioned already in 1454 as composer and *premier chapelain*), 1459 in the honourable position of treasurer to the Abbey of St. Martin at Tours, after 1461, however, living in Paris. In 1465 he became royal maître de chapelle, in 1469 travelled to Spain at the king's expense, in 1484 likewise to Flanders (on the conclusion of the Treaty?), and died in 1495. Of O.'s compositions there are preserved seventeen masses, also seven motets, a thirty-six-part "Deo gratia" (ninefold canon), nineteen chansons

(among which the fine "Se vostre cœur"), and a number of canons. (Cf. M. Brenet, "J. de O.," 1893.) The poet Crestin (d. 1525) wrote an elegy on O.'s death, which was frequently reprinted. In modern publications, the historical works of Forkel, Kiesewetter, and Ambros, also in Rochlitz's collection, are to be found some movements from the mass "Cujusvis toni," a fragment of the "Missa prolationum" in Bellermann's "Kontrapunkt," and a riddle canon in most music histories (Ambros, Vol. 5), also the chanson "Se vostre cœur."

Ole (*El Ole*), Spanish solo dance of moderate movement in $\frac{3}{8}$ time with the castanet rhythm

Ole Bull. (*See BULL.*, 2.)

Olibrio, Flavio Anicio, pseudonym of Joh. Friedr. Agricola (q.v.).

Oliphant, Thomas, zealous writer on madrigals, b. 1799, d. March 9, 1873, London, member, and finally president of the Madrigal Society. He wrote: "A Brief Account of the Madrigal Society" (1834); "A Short Account of Madrigals" (1836); "La musa Madrigalesca" (1837; a collection of the words of four hundred madrigals). He adapted English words to old Italian madrigals, translated *Fidelio* into English, and edited Tallis' "Service and Responses."

Olsen, Ole, Norwegian composer, b. July 4, 1851, Hammerfest, writes orchestral and pf. works of the most modern tendency, but has hitherto only obtained recognition in his native land.

Once-accented, twice accented. (*See A.*)

Ondricek, Franz, distinguished violinist, b. April 29, 1859, Prague. He was the son of a professional musician (violinist at the National theatre), from whom he received his first instruction. At that time his father conducted a kind of band for dance music, and the boy, whose musical gifts were developed at an exceedingly early age, was made to accompany the dancing. Only at the age of fourteen was he withdrawn from the dangers of such a life and received into the Prague Conservatorium. Three years later he left that institution, a finished virtuoso. A merchant of Prague then provided the means for him to continue his studies at Paris under Massart, and at the expiration of two years O. left the Paris Conservatoire as winner of the first prize. Since then he has made extensive concert tours, and has everywhere added to his reputation.

Ongarese, All'o. (*See HUNGARIAN.*)

Onslow, George, prolific composer, especially in the department of chamber-music, b. July 27, 1784, Clermont Ferrand (Puy de Dôme), d. there Oct. 3, 1852, grandson of the first Lord O.; he spent a part of his youth in

London, where Hüllmandel, Dussek, and Cramer taught him the pianoforte. He then returned to France, and regularly spent some of the winter months at Paris, and the rest of the time, for the most part, on his estate near Clermont, where he practised music diligently with some amateurs, especially concerted chamber-music, in which he played the 'cello part. He had already written and published much chamber-music when, in order to be able to write successfully for the stage, he yet went through a course of lessons in composition with Reicha. His three comic operas, *L'Alcade de la Véga* (1824), *Le Colporteur* (1827), and *Le Duc de Guise* (1827), made no lasting impression on the Parisians. O. was held in high esteem by the musical world of Paris, and in 1842 was elected Cherubini's successor at the Académie. He published: thirty-four stringed quintets, all *ad lib.* for two violins, viola, and two 'cellos, or for two violins, two violas, and 'cello, or for two violins, viola, 'cello, and bass (Op. 1 [Nos. 1-3], 17-19, 23-25, 32-35, 37-40, 43-45, 51, 57-59, 61, 67, 68, 72-74, 75, 78, 80, 82; the double-bass parts, impossible for ordinary players, were written for Dragonetti); also thirty-six stringed quartets (Op. 4, 8, 9, 10, 21, 36 [arrangement of the Trio, Op. 14], 46—each of the Ops. containing three quartets—Op. 47-50, 52-56, 62-66, and 69); ten pf. trios (Op. 3, 14, each containing three; 20, 26, 27, and 83); three pf. sonatas (Op. 2, 13, 28), two ditto for four hands (Op. 7, 22); six violin sonatas (Op. 11, Nos. 1-3; Op. 15, 29, 31); three 'cello sonatas (Op. 16); a sextet (Op. 30), for pf., flute, clarinet, horn, bassoon, and double-bass (or with stringed quartet instead of wind); a septet (Op. 79) for pf., flute, oboe, clarinet, horn, bassoon, and double-bass (also as quintet for pf., violin, viola, 'cello, and double-bass); a nonet (Op. 77) for flute, oboe, clarinet, horn, bassoon, and stringed quartet (with double-bass); finally, four symphonies (Op. 41, 42, 69, and 71), and "La mort d'Abel," solo scena for bass with orchestra. At the present day nearly all this music is as good as dead; only his quintets are revived from time to time by zealous lovers of music.

Op., abbreviation for *Opus* (Lat.), *Opera* (Ital.), work. Composers are in the habit of numbering (opus numbers) their works in the order of composition or publication, Op. 1, 2, etc.

Opelt, Friedrich Wilhelm, theorist, b. July 9, 1794, Rochlitz (Saxony), district councillor of finance at Plauen, later at Dresden, d. there Sept. 22, 1863, as privy councillor of finance. He wrote: "Ueber die Natur der Musik" (1834), and "Allgemeine Theorie der Musik, auf den Rhythmus der Klangwellenpulse gegründet und durch neue Versinnlichungsmittel erläutert" (1852). O. treats music from a purely mathematico-physical standpoint.

Open lip-pipes. (*See LIP-PIPES and WIND INSTRUMENTS.*)

Open notes, (1) on stringed instruments, those notes which are produced without stopping—that is, without placing, the fingers on the strings for the purpose of shortening their sounding length, and thus changing their pitch. (2) On wind instruments, the natural notes—those produced without any artificial or mechanical means (stopping, or valves), simply by the management of the breath.

Open octaves, fifths. (See PARALLELS.)

Opera. The name O. comes from the Italian, and indicates, quite generally, a musical work. The Italian name for O. is *dramma per musica*; it is only by adding the more specific terms *buffa*, *seria*, *semiseria*, that the word acquires, in Italy, the meaning of O. The art form of the O., or, to use the term in vogue since Wagner, "music-drama," is ancient; it reached a stage of great prosperity under the Greeks, but was probably much older. In the tragedies of Æschylus, Sophocles, Euripides, there was musical recitation, and the choruses were sung in unison; unfortunately we are unable to form any conception of the musical construction of these works, because, with the exception of a few measures from a chorus in Euripides *Orestes* (papyrus "Arch-duke Rainer"), not a line of the music has been preserved. The age of the Renaissance, with its attempts to revive ancient Grecian art as it existed at the zenith of its prosperity, effected a new birth of the music-drama. The first-fruit of these Renaissance efforts was chromatics, (see CHROMA, 1), which paved the way to modern tonality, the music-drama, and the O. It was, in fact, a circle of men of learning and refined culture—so to speak, an esthetic tea-circle—who reconstructed the music drama on a theoretical basis. The *salon* of Count Bardi (q.v.) at Florence was the cradle of O. A reaction against the contrapuntal art of the Netherlanders, which completely stifled the meaning of the words, was inevitable, and had begun to show itself in various ways. Already Josquin, but still more so Orlando Lasso and Palestrina, returned to a simpler style of writing; and not only in Rome, but also in Venice, a process of clarification took place, which, without recourse to violent means, promised to turn art into new paths. (See GABRIELI.) That this happened was, however, not so much a necessity of nature as the result of philosophical argument: Bardi, Vincenzo Galilei (the father of Galileo Galilei), Pietro Strozzi, Girolamo Mei, Ottavio Rinuccini, Corsi, and others, were the men who spurred on Giulio Caccini and Jacopo Peri, two talented musicians, to wage war against counterpoint, and to create a new kind of music which should prove a revival of ancient art, at that time less understood than at the present day. Count Bardi and Vincenzo Galilei, indeed, first set them an example. The "new music" which they established was accompanied song for one voice i.e. monody. At first there were

sonnets and canzonas; then soon followed small dramatic scenes (*Intermezzi*); but in 1594, in the house of Jacopo Corsi, a real small O., *Dafne*, libretto by Rinuccini, music by Peri and Caccini, was produced for the first time, and with tremendous enthusiasm; the dramatic style of the ancients was supposed to have been re-discovered. Not much new music flowed from the new source, for only in 1600 do we again hear of new music dramas: Peri's *Euridice* and Caccini's *Rapimento di Cefalo*. But when, in 1602, Caccini sent into the world a volume of compositions in the monodic style, the famous "Nuove musiche," fermentation set in on all sides; it was not long before the monodic style had also its representative (Kapsberger) in Rome, where, for the rest, contemporaneously with the Florentines, Viadana had invented accompanied solo-singing for the church (his church concertos appeared in 1602; cf. GENERAL-BASS, CONTINUO); and, finally, Cavalieri, who lived in Florence, had inaugurated the art-form of the oratorio (q.v.). As Cavalieri (q.v.) was already dead in 1600, it is exceedingly probable that he was the earliest composer in the new style. The first attempts of the Florentines, in conformity with their abstract origin, were poor and barren. Caccini, indeed, in the preface to his "Nuove musiche," boasts of cultivating a "noble contempt for song" ("nobile sprezzatura del canto"), i.e. the *Stilo rappresentativo*, as it was called, and desiring only natural musical declamation of the words, he intentionally avoided purely melodic formation. The sacred compositions of Cavalieri and Viadana, starting from a totally different point of view, did not, on the other hand, aim at the mortification of the musical flesh; and even in the department of dramatic composition the healthy musical feelings of the Italians did not long neglect to pour life-blood into the mere framework of the Florentines. The first great step was taken by Claudio Monteverde (q.v.), the first opera composer by the grace of God, a real musical genius, the father of the art of instrumentation; at the same time the development of accompanied singing in the church, by Cavalieri, Viadana, and afterwards Carissimi, brought the new style gradually to perfection and new forms (aria, duet) were introduced into the O. Next to Monteverde the leading spirits were Cavalli and Cesti. (Cf. also ZANOBI DA GAGLIANO, LEGRENZI, ROVETTA, and PALLAVICINO.) A new epoch for the O. opens with Alessandro Scarlatti, the founder of the Neapolitan School (q.v.); with him begins Italian O. in the sense in which we understand it to-day, the period of *bel canto*, i.e. Caccini's noble contempt for music was forgotten, and melody completely gained the upper hand; the singer in a new opera was the chief personage, and the composer soon became merely a servant. This transformation, which brought about the next reaction (through Gluck), was, however, in its

beginnings, *i.e.* under Scarlatti and his immediate pupils, Leo, Durante, and Feo, itself a reaction in favour of the just claims of music, which only later on exceeded the proper measure. Meanwhile O. had sprung up abroad. Mazarin, already in 1645, summoned an Italian opera company to Paris, which first of all produced Saccati's *Finta pazzia*, also, in 1647, Peri's *Euridice*, and settled definitely in that city. But as early as 1650 French opera began; and in 1671 Perrin (q.v.), holding a royal patent, opened the Académie, with Cambert's *Pomone*. How Lully, an Italian by birth, but a Frenchman by naturalisation, acquired the patent, and thus became the nominal creator of French opera, is related in detail under LULLY. French, as opposed to Italian O. indicated the new reaction in favour of poetry; on it were clearly stamped the rhythm and pathos of the French language, and coloratura was forbidden; to these principles Rameau also remained faithful. Before long, however, the Italians got the upper hand in Paris, and, indeed, with comic opera (*opera buffa*), which meanwhile had been created by Logroscino and Pergolesi; and in 1752 in Pergolesi's *Servio padrona* and *Maestro di musica*, an Italian buffo company managed to divide Paris into two camps, that of the buffonists and anti-buffonists (defenders of the French national O.); and when, after two years, the Italians were driven away, there arose an imitation of the *opera buffa*, the French *opéra comique*, of which Duni, Philidor, Monsigny, and Grétry were the first and most important representatives. In Germany, apart from the quite isolated production of an O., *Dafne*, by Heinrich Schütz, and of Staden's *Seelewig* (1640), O. was introduced in 1678, and indeed at Hamburg, where a public theatre was established by a number of well-to-do citizens—the first public theatre in Italy had been opened at Venice, 1637 (*see* MONTEVERDE)—it lasted till 1738, and for half a century rendered Hamburg the musical metropolis of Germany. The most important composers connected with the Hamburg O. are: Theile, J. W. Franck, Strungk, Kusser, Keiser, Mattheson, Handel, and Telemann. Meanwhile Italian opera companies had obtained footing in Vienna, Munich, Dresden, Stuttgart, Berlin, Brunswick, etc., and in 1740 also Hamburg. Even England rejoiced for a short time in a national O., under her greatest composer, H. Purcell (q.v.), who wrote 39 works for the stage, and at whose death (1695) the blossom quickly faded. When Handel came to London, Italian O. had long been in full bloom, and up to the present it has not been superseded by a national O. The most important representatives of Italian O., until the appearance of Gluck, are, besides those already named: the German Hasse, further, Bononcini, Porpora, Duni, Vinci, Greco, Jomelli, Terradellas, Gaglielmi, Sacchini, Traetta, Piccinni; the last-

named, as is well known, was the one whom the opponents of Gluck in Paris raised on their shields. The creation of *opera buffa* had, without doubt, rejuvenated and revived Italian O.; true dramatic life opposed itself to the mere manufacture of operas on antique subjects, which, indeed, only afforded a weak pretext for the vocal evolutions of *primi uomini* and *prime donne*. The reform inaugurated by Gluck only touched *opera seria*: comic O., in the works of Paisiello, Cimarosa, put forth blossoms by no means to be despised: to these works a Mozart had no need to offer resistance; with him, indeed, they rather formed a connecting point. The true German "Singspiel," inaugurated meanwhile by A. Hiller, offered to him other ideas and a national basis. Thus equipped both with a will and a power, which the Italians lacked, he created his noble musical works, which we may well call the German comic O. Italy produced still another great master, Rossini, who in the *Barbiere* raised Italian comic O. to a height which, in a manner, almost rivalled that of Mozart, while his *Tell* belonged to the *genre* of French Grand O. The serious, impassioned tones struck by Beethoven, not only in his *Fidelio*, but also in his symphonies, exercised a lasting influence on the creations, especially of the German O. composers who came after him, as may be clearly seen from Weber up to Wagner. The O. of the 19th century cannot be summed up in a word; but there are various tendencies rising side by side which have to be distinguished. There is, first, the carrying on of the "Volks" O. by the adoption of new national elements, especially from the Saga (romanticists: Spohr, Weber, Marschner); then the formation of the grand heroic O. (Cherubini, Spontini, Meyerbeer, Halévy); at the same time some healthy works have sprung up in the department of comic O. (Auber, Boieldieu, Lortzing, Nicolai); while the lyric O. of Gounod and A. Thomas is difficult to classify. Finally, Richard Wagner must be named, whose giant mind raised romanticism to its highest power, and accomplished a reaction against the overgrowth of the melodic element similar to that of the Florentines and of Gluck; but he also enriched the means of musical expression in an unparalleled manner. To compare such men as Monteverde, Gluck, and Wagner is in the highest degree instructive to those who would understand the development of dramatic music. On the evolution of the forms of which the O. is at present composed (aria, duet, ensemble, finale, overture) *cf.* the corresponding articles.

Opera (Ital.), work; *O. in musica*, musical work, composition, opera; *O. seria*, serious opera; *O. buffa*, comic opera; *O. semiseria*, an opera for the most part serious, but containing comic episodes.

Opéra (Fr.), opera. The French distinguish

between *grand O.* or simple *O.* (in which everything is sung), and *O. comique* (with spoken dialogue). The two most important opera houses in Paris bear the names of *O.*: Grand *O.* (Académie de musique) and *O. Comique*, answering to their *répertoire*.

Operetta, small opera, *i.e.* either an opera of short duration, or an opera of small *genre*, *i.e.* a comic opera or a vaudeville, in which song and spoken dialogue alternate; and finally of recent years the caricature and "persiflage" opera, in which the action is not only jocose, but of a low comic character, or in the form of parody; in works of this class even music avoids serious effects and becomes semi-caricature and semi-pathos (Offenbach, Lecocq, Strauss, etc.).

Ophicleide, the bass instrument of the family of bugle horns (brass instruments with keys), now almost entirely obsolete. It was built of various sizes, and in various keys: (1) as bass *O.* in *c*, *e♭*, and *A♭*, compass three octaves and a semitone, with chromatic notes from

(2) As *alto O.*, in *F* and *e♭*, similar compass, but from

(3) As *double-bass O.*, in *F* and *e♭*, compass only two and a half octaves; it is an octave lower than the *alto O.* Only the bass *O.* was for a time in general use.

Opposita proprietates. (See PROPRIETAS.)

Opus. (See OP.)

Oratorio (Lat., *Oratorium*; Ital. *Oratorio*) really has the meaning of "hall for prayer." The name of *O.* for the well-known semi-dramatic, semi-epic, and lyrico-contemplative form of composition arose from the fact that at the meetings of the Oratorians (*cf.* NERI) musical performances took place—at first plain singing of the hymns (*Laudi*) of Animuccia and Palestrina, but later on, a kind of Mystery of moral tendency, with personification of abstract conceptions (pleasure, time, world, etc.). The first (so far as is known) *rappresentazione* (*storia, esempio, misterio*) given in the Oratory was Cavalieri's *Anima e corpo* (1600); *rappresentazione* was a name which had long been handed down by tradition, yet not in connection with the *Stilo rappresentativo*; its novelty, however, consisted in the employment of the *Stilo rappresentativo* (recitative singing), which, in its turn, preserved its name because it was recognised as suitable for dramatic performances (*rappresentazioni*); whether secular or

sacred. (*cf.* OPERA.) The instrumental accompaniment (this was, indeed, the indispensable condition of the new style) consisted of cembalo, chitarrone, *Lira doppia* (double-bass viol), two flutes, and *ad libitum* violins *unisono* with the soprano part. The first oratorios (the term *O.* probably came gradually into use as an abbreviation for *rappresentazione per il [or nel] oratorio*) were, therefore, real stage performances with a symbolical representation of abstract ideas; or, if there was a representation of a biblical story (*azione sacra*), with acting personages, as in Kapsberger, Landi, etc. The *role* of the narrator (*historicus*) first appears in Carissimi, while the stage performance disappears. Handel gave the final touches to the art-form of the *O.*; his *Trionfo del tempo e del disinganno* constitutes almost a connecting link (at any rate with regard to the subject) with Carissimi, and is really an allegory of the older kind.

Orchestik (Gk.), art of dancing. *Orchesographie*, teaching the art of dancing by means of characters and demonstrations. (See CHOREOGRAPHIE.)

Orchestra (a "dancing place") in the theatre of the Greeks was the part of the stage nearest to the public on which the chorus moved. When an attempt was made to revive ancient tragedy, which, as is known, called into existence the art-species Opera (*q.v.*), the name *O.* was given to the space occupied by the accompanying instrumental players (between the stage and the public), and, finally, to the players themselves. At the first attempts at music-drama by the Florentines (*see* BARDI) the accompanists were placed behind the *coulisses*, *i.e.* invisible to the public, as in the low-lying orchestra according to Wagner's principle. But by this arrangement the sound of the instruments was too much deadened, and we may assume that at the opening of the first public opera-house (Venice, 1637) the placing of the musicians in front of the stage was introduced. At the present day any union of a considerable number of instrumental players for the performance of instrumental works, or of choral works with instrumental accompaniment, is called an *O.*, and differs according to the combination: String *O.* (only stringed instruments); wood-wind *O.* (only wood-wind instruments); and Brass *O.* (Ger. *Hornmusik*; Fr. *fanfare*). The *O.* composed of wind and percussion instruments is called Military band, also Janissary music (Turkish music). The *full O.* includes strings, and wind and percussion instruments; it can be a *large* or a *small O.* The *small O.* contains, besides the quintet of strings (1st and 2nd violins, tenors, 'celli, and basses), two flutes, two oboes, two clarinets (which, indeed, are often absent, as in the *G minor* symphony of Mozart in its original form), two bassoons, two horns, two trumpets, and two kettle-drums (these also are often wanting)

The symphonies of Haydn, Mozart, Beethoven, sufficiently prove what fulness of tone and variety of colour can be obtained with such modest means. If to the above-named two more horns and two or three trombones are added, the O. is then called *great*, i.e. (with or without piccolo flute) the real symphonic orchestra, to which not only Beethoven in his great symphonies, but even the symphony-writers since his time (Schubert, Mendelssohn, Schumann, Gade, Rubinstein, Volkmann, Raff, Brahms) have adhered down to the present day. On the other hand, the great O. of modern opera, of modern masses, especially of modern choral music with O., and of programme-symphonies, has been considerably enlarged. The striving after characterisation and special effects, illusory tone-painting, etc., has induced composers continually to seek after new tone-colours for all these kinds of illustrative instrumental music. Thus, besides the instruments above-named, we meet with: English horn, bass clarinet, double bassoon, bass-tuba, harps, drums small and great, cymbals, triangle, Glockenspiel (Stahlharmonika), frequently also organ, etc. Berlioz, for the *Tuba Mirum* of his gigantic Requiem required: four flutes, two oboes, two C-clarinets, eight bassoons, four ϵ flat horns, four horns in ϵ , four horns in G, four cornets-à-piston in \flat flat, two trumpets in ϵ , six in ϵ flat, four in \flat flat, sixteen tenor trombones, two C-ophicleides, two \flat flat ophicleides, one monster double-bass ophicleide *à pistons*, eight pairs of kettle-drums, two large drums, and an orchestra of strings of exceptional strength (eighteen double-basses). This prodigious demand stands, anyhow, unique of its kind. The largest opera orchestra is the one used by Wagner in the *Nibelungen*: strings greatly strengthened, six harps, three flutes, one piccolo, three oboes, one English horn, three clarinets, one bass clarinet, three bassoons, eight horns, four tubas (one tenor, two bass, and one double-bass), three trumpets, one bass trumpet, two tenor trombones, one bass trombone, one double-bass trombone, two pairs of kettle-drums, cymbals, triangle, great and small drum. In Wagner's earlier operas the increase of the symphony-orchestra was limited to the threefold wood-wind and trumpets, and to the introduction of English horn, bass clarinet, bass tuba, harp, and a few instruments of percussion. For the most part other composers do not adopt the threefold wood-wind and trumpets. From the O. of Monteverde in *Orfeo*, 1607, it may be seen that wealth of tone-colour is, in fact, a necessity for illustrative music: two *gravicembali* (*clavicembali*), two *contrabassi da viola*, ten *viola da braccio*, one *arpa doppia* (bass harp, great harp), two *violini piccioli alla francese* (*quartgeigen* tuned an octave higher than the viola), two *chitarroni*, two *organi di legno* (positives), one *regale*, three *bassi da gamba*, four *tromboni* two *cornetti* (*zinken*), one *flautino*

alla 22^a (of one-foot tone, hence flageolet), one *clarino* (discant trumpet), and three *trombe sordine* (muffled trumpets). The successors of Monteverde reduced the wind out of consideration for the voices, and Legrenzi wrote only for: eight *violini*, eleven *violette*, two *viola da braccio*, three *violoni*, four *tiorbi*, two *cornetti*, one *fagotto*, and three *tromboni*. The Germans had, and retained, special preference for wind instruments; thus Bach's O. consists of four groups: strings, oboes, and bassoon, cornetti and trombones, and trumpets (horns), and drums. The instruments with plucked strings (lute, theorbo, etc.) fell more and more into disuse; the harp is now their only representative. The *pizzicato* of the strings is indeed a bad substitute. We are now on the road to completing the families of the various wind instruments, so that each may be represented by a complete set of parts, as in the 16th century. We have flutes of two sizes (the bass-flute will certainly not be left out); the oboe in soprano and alto register, and the bassoon for the bass and double-bass register; clarinets in soprano, alto, and bass register; and with the trumpet the bass-trumpet, with the bass-tuba the tenor-tuba, etc. The only difference is that we unite all these instruments to form a powerful O., while in the 16th century music for the most part was played in four parts with instruments of the same family.

The disposition of the O. may be considered from the following points of view: (1) Combination of instruments which are accustomed to be regarded as a special group; hence the players, for the most part, receive signs in common from the conductor. (2) Mixture as much as possible of the collective tone mass. From the latter point of view the arrangement is to be preferred which spreads each kind of instrument as much as possible over the whole breadth of the orchestra space. (a) If the wood-wind be placed in one, and the brass in another corner (b), they produce the effect of *Cori spaziali* (divided choirs), one much to be desired if the various groups answer one another. Also a radiating form (c) has its advantages, since all the groups are equally near to the conductor. The three kinds are as follows:—

(a) Conductor  in front of O.

(b) Conductor behind the O. (theatre O.).

(c) Conductor in front of O.

The better blending of the collective sound has been arrived at in recent times by the first practical sinking of the O. platform by Wagner at Bayreuth, which withdraws the O. entirely from the spectator's sight.

Orchestrate, to, *i.e.* to score for instruments.

Orchestrion was at first the name given by Abbé Vogler (q.v.) to the chamber-organ he used to travel about with, but nowadays O. stands for a mechanical musical machine (invented by Fr. Th. Kaufmann) with strong vibrating reeds, which, with the help of variously-shaped channels, imitate fairly well the tones of the instruments of the orchestra; it is often used as a substitute for a real orchestra in parks, fairs, etc. (*Cf.* APOLLONICON and PANSYMPHONIKON.)

Ordenstein, Heinrich, b. Jan. 7, 1856, Worms; from 1871-75 he was a pupil of the Leipzig Conservatorium (Wenzel, Coccius, Reinecke, Jadassohn, Richter, Paul). He made a concert tour with Frau Peschka-Leutner and Leop. Grützmacher, and settled in Paris for the purpose of study; in 1878 he played in Leipzig, and with great success, Rubinstein's D minor Concerto; he was teacher of music at the school kept by the Countess Rehbinder at Carlsruhe from 1879-81, and from 1881-82 teacher at Kullak's Akademie, Berlin; during all this time he made concert tours. In 1884 he founded the Conservatorium at Carlsruhe under the patronage of the Grand Duchess of Baden, and it quickly prospered. The yearly reports of the Conservatorium contain valuable articles from the pen of O.

Ordre (Fr.), "series," *i.e.* Suite. (*Used by COUPERIN.*)

Organ (Lat. *Organum*; Fr. *Orgue*) is a wind instrument of powerful dimensions, both as regards space occupied or compass. It may, with equal right, be looked upon as a combination of many wind instruments, and compared to an orchestra, from which, however, it differs in that it only requires two men, the one to play, the other to blow. In spite of the dimensions of the instrument—often huge, always very great—it is possible, by the help of complicated mechanism, for one man to open and shut at pleasure the hundreds or thousands of keys (valves) which regulate the pitch. On the

other hand, it is quite impossible for one man, with the help of his lungs, to supply the air for the gigantic instrument: air-pumps are employed, and mechanical contrivances whereby the air drawn in can be compressed at pleasure and guided to the pipes which are to sound. The three principal parts of organs are, therefore, the pipe-work, the mechanism for blowing (bellows, channels, wind-chest), and the mechanism by which the wind is conducted to the various pipes (keyboard, trackers, draw-stops). The pipes fall into a number of groups named *stops* or *registers*, each of which includes pipes of various sizes, but of like construction and clang-colour, *i.e.* a stop really represents one wind instrument. As the wind is supplied, not by human lips and lungs, but by mechanism, tones of various pitch cannot be produced from the same pipe by varying force of wind: each pipe only gives one sound, and the number of pipes must equal the number of sounds required; again, an organ with only one stop must have at least as many pipes as there are keys on the clavier. The pipes belonging to the same register are so disposed that they can all at the same time be placed in communication with the wind or shut off from it, and this by means of the draw-stop action. The pulling out of the draw-stop rods in front of the organ, to the right and left of the player, so far admits the wind to the pipes that it is only necessary to press down a key, which opens a small valve, to make the pipe connected with it speak; the pushing back of the register-rod (the whole sweep of the movement is only about an inch) silences the stops. (*See* WIND-CHEST.) On modern organs there are a number of contrivances to open or shut off several stops at the same time. (*See* PEDALS, COMPOSITION.) The whole pipe-work of an O. is not managed by one keyboard; on the contrary, the smallest O. has two *manuals* (keyboards played with the hands) and a *pedal-board* (keyboard for the feet); very large organs have up to five manuals and two pedal-boards. Particular stops are arranged for each keyboard; but by coupling (*see* COUPLER) several or all of the manuals, or the pedals and great organ, stops belonging to various keyboards may be used at the same time. There can be no expression in playing the O. (*Cf.* however, HARMONIUM and CRESCENDO); gradation of tone can only be obtained by pulling out or pushing in stops, or by changing manual; the characteristic, therefore, of organ tone is that of rigid rest.

Space prevents details with respect to the construction of organs; there are numerous treatises on the subject by Töpfer, Schlimbach, Seidel, Sattler, Heinrich, Ritter, Wilke, Kuntze, Hopkins, and Rimbault, etc. (also Riemann's "Katechismus der Orgel"). Only a few remarks can be added respecting the various *stops* of the O. According to the tone-production, they are divided into *Lip-* or *Flute-work* and *Reed-work*.

(*Cf.* WIND INSTRUMENTS, LIP-PIPES, REED-PIPES.) With regard to the pitch (*see* FOOT-TONE) given out by the pipes of a stop, a distinction is made between *Foundation* and *Mutation* stops. A *Foundation* stop always gives the sound *c* for the key *c*; but only the *c* of the same octave in the case of eight-feet stops (*i.e.* the sound *c* for the key *c*, the sound once-accented *c* [*ċ* or *c'*] for key once-accented *c*). The *Octave*, or *Secondary* stops, on the other hand, give a higher or lower octave. The *Foundation* stops form the basis of organ tone, and must, therefore, be represented in greater number than any other foot-pitch (*i.e.* than the sixteen-, four-, two-foot or one-foot stops. Of these the chief one is the *Open Diapason* (Ger. *Principal*, eight-feet), the oldest O. stop, constructed nearly a thousand years ago almost in the same manner as to-day. The real foundation stop for the pedals is a sixteen-feet *Open Diapason*, as the pedal-part has to sound an octave lower than written; but small organs frequently have, instead of a sixteen-feet open diapason, a sixteen-feet stopped diapason; and great organs, even an open diapason of thirty-two feet. The *Mutation* stops (*q.v.*), like the higher octave stops, are only for the purpose of strengthening the sound, as they give out the overtones of the foundation stop notes; they are divided into *Simple* and *Compound*. All mutation stops are lip stops, and have open diapason measurement. *Half* stops are those which only run through half the keyboard—as, for example, the oboe, which is only a discant stop, and is replaced in the bass by the bassoon. Transferring stops are such as have no real pipes in the bass, but use those of another stop (without any participation from the player). An O. without pedals and only lip-pipes is called *Choir O.*, and one with only reed-pipes *Rogal*. The outer part of the O. is called the *Case*; the front part, ornamented with the finest open diapason pipes, is termed the *Prospect*. In small organs the front pipes are only imitations. In many organs the keyboards are not placed in a niche of the organ-case, but in a separate chest in front of the same, called in Germany *Spieltisch*. For further information respecting the clang character of the various O. stops, *cf.* the special articles.

A satisfactory history of the O. is still wanting, although many attempts have been made (Bedos, Hamel, Rimbault, Sponsel, Antony, and more recently Wangemann, Ritter, etc.). The origin of the O. reaches far back into antiquity; its predecessors were the bag-pipes and Pan's-pipe. Already, however, in the 2nd century B.C. we find real organs with generation of wind by air-pumps (bellows), compression of air (by water), and with a species of keyboard. The inventor of this so-called water-organ (*Organum hydraulicum*) was named Ctesibius (170 B.C.): there exists a description of this instrument by his pupil Heron of Alexandria (in Greek, and in German translation in Vollbed-

ing's translation of Bedos de Celles). The water was not in any way a component part of this kind of O., and it appears that organs were built in Greece and Italy with and without water-pressure. We have a Greek description of an O. belonging to Julian the Apostate (4th century A.D.), another in Cassiodor (commentary on the 150th Psalm), a third in St. Augustine (to Psalm lvi. v. 16), which contribute many details of importance. There are, besides, many old representations (reliefs) which show that the O. was already known in the West before the Emperor Constantine (Coprnyomos) made a present of one to King Pepin in 757. Those very old organs were very small, and had, as a rule, only eight, at most fifteen, pipes (1-2 octaves of diatonic notes) constructed in a similar manner to the open diapason pipes of the present day, but at first of copper or brass. In the course of the 9th century the monks, especially in Germany and France, seem to have been actively engaged in building these small organs. The instruments were used in teaching singing; their compass was from *c* to *c'* (the longest pipe four feet). The keyboard consisted of small upright wooden plates, on which were inscribed the alphabetical names of the notes (A B C D E F G); the performer gave access to the wind by pressing down these plates, and the sound lasted until they were restored to their original position (further details have been given by the compiler of this Dictionary in the *Allgemeine Musikalische Zeitung*, 1879, Nos. 4-6, "Orgelbau im frühen Mittelalter"). About 980 there was already an O. at Winchester, which had 400 pipes and two claviers, for which there were two performers (each clavier had twenty keys [the compass of the Guido Monochord], with ten pipes for each key, reinforced in the octave and double-octave). Nothing, however, was known of Mixtures at that time. The division of pipe-work into registers appears to have taken place in the 12th century. The organs from the 4th to the 11th century were easy to play; but after the introduction of complicated mechanism, which necessitated great increase in the size of the instrument, the touch in the 13th and 14th centuries became so heavy that the keys had to be struck with the fists, or pressed down with the elbows. The introduction of reed-pipes followed in the 15th century; the invention of pedals about 1325, in Germany. Concerning the peculiar notation in use for the O. during many centuries, *cf.* TABLATURE; and concerning further inventions and improvements in organ-building, *see* the special articles. The following are the names of celebrated organ-builders of ancient and modern times: Esayas Compenius, Arp Schnitzler, Zacharias Hildebrand, the Trampelis, the Silbermanns, Hering, Gasparini, Daublaine-Collinet, Cavaillé-Coll, Schulze, Buchholz, Merklin & Schütze, Ladegast, Walcker, Reubke, Schmidt, Renatus Harris,

Jordan, Green, Hill & Son, Gray & Davison, Willis, Walker. Distinguished organ-players and composers are: Paumann, Schlick, Buus, Paix, A. & G. Gabrieli, Merulo, Frescobaldi, Froberger, Buxtehude, Sweelinck, Pachelbel, Reincken, Schein, Scheidt, Scheidemann, the Couperins, the Bachs, Marchand, Schröter, Türk, Kittel, Knecht, Rinck, Vogler, Vierling, Séjan, Serassi, Bastiaans, Adams, J. G. Schneider, Töpfer, Engel, Ritter, Ad. Hesse, Merkel, Best, Thiele, Faisst, Haupt, Saint-Saëns, Volkmar, Guilmant, etc. The most important works on the structure and treatment of the O. are: M. Pretorius' "Syntagma musicum" (3rd and 4th Part of the 2nd vol. 1619), Adlung's "Musica mechanica organoedi" (1768), Bedos de Celles' "L'art du facteur d'orgues" (1766-78, three vols.), Töpfer's "Lehrbuch der Orgelbaukunst" (1855, two vols, 2nd ed. by Max Allihn 1888), and some smaller works by the same author, J. Hopkins's "The Organ, its History and Construction" (1855; 3rd ed. 1877). (Cf. also SCHLIMBACH, J. J. SEIDEL, A. G. RITTER, E. F. E. RICHTER, etc. A "Führer durch die Orgel Litteratur," by B. Kothe, jointly with Th. Forchhammer, 1890.)

Organicen, i.e. organist (Lat. *organum* = "organ," and *canere* = "singing," "making music").

Organista (Lat.), organ-player, organist; in the writings of the Middle Ages on music the same as composer, as *organum* was the oldest kind of writing in several parts, and later on (up to the 13th or 14th century) the name of a special mode of writing. (See ORGANUM, 2.)

Organ metal, a mixture of tin and lead, used for metal lip-pipes. The metal is bad if lead predominates in the mixture, but the more tin, the better it is. Pure tin (16 carat; this indication agrees altogether with the usual one formerly adopted for silver) is used for the front pipes on account of its beautiful appearance. The mixture of three-quarters tin and one quarter lead is called by organ-builders common tin. A preponderance of tin makes the tone stronger and brighter, and it is especially necessary for the open diapason.

Organ Point. (See PEDAL POINT.)

Organ tablature. (See TABLATURE, 2.)

Organum, (1) Gk. ὄργανον, means generally instrument (organ), but specially a musical instrument; and finally the "instrument of instruments," the organ (q.v.).—(2) The oldest and most primitive kind of polyphonic music, consisting of continued parallel movement of voices in fifths or fourths (also termed *Diaphony*). However repulsive the thought of music of such a kind may be, it is not only an historical fact, but a thoroughly natural transition to polyphonic music. The O. was not real polyphony, but a doubling in fifths, a first and most natural step from the doubling in octaves which had been practised from an exceedingly remote

period; but the reduction of the *organising* voices (cf. PEDAL POINT) soon led to the discovery of discant (ص.ص.). However, the name O. was retained for some time longer, after that the three- and four-part movement had already come into vogue, and the old principle of the O. had become modified. Spitta published a happy solution of the hitherto difficult problem of the elimination of the augmented (tritone) fourth and the (diminished) fifth from the O. as Pseudo-Huchbald wrote it, in the "Vierteljahrsschrift für Musikwissenschaft," 1890.

Orgel Wolf (Ger.). (See HOWLING.)

Orgeni, A glaja (anagrammatical stage-name of Anna Maria Aglaja von Görger St. Jörgen), excellent coloratura singer, b. Dec. 17, 1843, near Tismenice, in the Sambor district (Galicia), pupil of Madame Viardot Garcia at Baden-Baden, engaged 1865-66 at the Berlin Court Opera. O. has subsequently made many starring tours; since 1886, teacher of singing at Dresden Conservatorium.

Orgue expressif (Fr.). (See HARMONIUM.)

Oriana is the name under which Queen Elizabeth was celebrated in a volume of madrigals by English composers: "The Triumphs of Oriana" (1601), edited by Morley.

Orlandi, Fernando, opera composer and teacher of singing, b. 1777, Parma, d. there Jan. 5, 1848. He wrote twenty-six operas for Italian stages, but ceased writing for the theatre when Rossini's rising fame threw everything into the shade. As teacher of singing O. was first at the Pages' School, Milan, from 1809 at the Conservatorio there, and from 1828 at the Munich School of Music.

Orlandini, Giov. Maria, Italian opera composer, b. about 1690, Bologna, wrote twenty-nine operas, principally for Venice (also Bologna, Florence, etc., 1708-45), likewise oratorios (*Judith*, *Esther*, *Joas*).

Orlandus Lassus. (See LASSO.)

Orlow, Gregor Wladimir, Count, b. 1777, d. July 4, 1826, Petersburg. He wrote: "Essai sur l'histoire de la musique en Italie" (1822, two vols.; German by Ad. Wagner, under the title "Entwurf einer Geschichte der italienischen Musik," 1824), a compilation of no value.

Ornaments (Ger. *Manieren*, *Verzierungen*; Fr. *Agréments*, *Broderies*; Ital. *Fiorette*, *Fioriture*) is the usual name for the embellishments of a melody, indicated by special signs or by smaller notes. Formerly (for example, in Corelli) it was understood that the player or singer would embellish a simple melody according to his or her own judgment and taste; few, therefore, were written out by composers. The French harpsichord writers, however, introduced the custom of indicating O. by special signs, and with these their compositions are overloaded to an irritating degree. J. S. Bach preferred to

write out in notes of definite value the principal O., into the forms of which he introduced many variations; and for this he frequently drew upon himself the reproach of his contemporaries, since his writing acquired thereby a more complicated appearance. To a certain extent the execution of O. indicated by signs is still to-day a matter of taste and artistic intelligence; the execution varies according to the tempo, measure, and general figuration of the piece; it cannot, without great detail, be determined by rules. In replacing, therefore, O. expressed in signs by actual figuration we have gone far beyond Bach; and hence the number of signs of abbreviation has been greatly reduced. The most important and most common at the present day are: the shake, the short shake (Pralltriller or Schneller), mordent (Pincé), long mordent, turn, inverted turn. The following are altogether obsolete: *Bebung* (Balancement), Accent (Chute, Port de voix), Schleifer (Coulé), Martellement and Aspiration. Of the O. indicated by small notes not taken into account in the time measurement of a bar, the following are the most important: the *appoggiatura* (Vorschlag), the double *appoggiatura* (Anschlag), the Schleifer, the *Battelement*, and the *acciaccatura* (Zusammenschlag). (Cf. the special articles.) Very many other O. are, naturally, possible; they can be indicated by small notes, but have no special names. In executing them the same principles which have been named for the O. mentioned above apply. The *Nachschläge* (after-beats) have assumed a great importance in modern music, i.e. O. which follow the principal note, and hence diminish its value, while the note which comes after them loses nothing of its value. In passages like the following (Chopin, Op. 62, No. 2)

the small notes must not be understood as a *Vorschlag* (fore-beat) to the second crotchet, but the *an* suffers a loss of its value equivalent to the time necessary to execute the notes before the second chord of the accompaniment; only the *g* with a stroke through it is an ordinary *Vorschlag*, i.e. falls on the entry beat of the second crotchet. O., therefore, are appropriately divided into (a) *anschlagnende*, i.e. O. embellishing the commencement, the entry beat of the note value (short shake, mordent, inverted mordent, double *appoggiatura*, Schleifer, *Battelement*, *appoggiatura*, and turn signs above the note); (b) the *nachschlagende*, embellishing the end of the note-value (*Nachschlag*, turns after the note); and (c) the *ausfüllende* (i.e. filling-out), absorbing the whole of the note-

value (shake, *battelement*). In a certain sense the *Arpeggio* and the *Tremolo* must be reckoned among O.

Ornithoparchus (Hellenistic name for *Vogelsang*), Andreas, appears to have led a wandering life, for he makes frequent mention of his journeys through Germany, Austria, Hungary, and Russia. According to the album of the Academy at Wittenberg, he was born at Memmingen, and about 1516 was *Magister artium* at Tübingen. The only work of his which has been handed down is "*Musicae activae micrologus*" (1517, new editions 1519, 1521, 1533, 1535, 1540; in English by Dowland, 1609), one of the best theoretical works of the 16th century. (Cf. the comments of J. W. Lyra in the *Monatsh. f. Mus. Gesch.*, Vol. X., p. 105.)

Orphéon is the general term in France for male choral societies, as "*Liedertafel*" is in Germany. Bocquillon-Wilhem (1818) rendered great service by introducing the teaching of singing into the primary schools at Paris. In 1835 such teaching became obligatory, and, at the same time, choral societies were started for the working-classes; the organisation met with enthusiastic approval, and in 1852 Gounod was appointed general director of all the Paris Orphéons; and when he resigned this post in 1860, Bazin became conductor for those on the left bank of the Seine, and Pasdeloup, for those on the right. In 1873 Bazin became sole conductor, and in 1878 Dannhauser succeeded him. By 1881 France had about 1,500 Orphéons, with over 60,000 members (*Orphéonistes*); several musical newspapers specially represent the interests of these societies, which collectively are termed O. (similar to the "*Deutscher Sängerbund*").

Orpheus, the fable-encircled singer of Greek antiquity, is said to have lived at the time of the Argonaut expedition (1350 B.C.), and to have taken part in it. O. was not only a powerful singer to the accompaniment of the seven-stringed cithara, but also the founder of a special mystic sect which worshipped Dionysios Zagraeus, which lasted through many centuries, and which has a literature of its own. (Cf. Gottfr. Hermann, "*Orphica*" [1805].)

Orthography. Musical O. is a somewhat complicated science, and one which, to some extent, is in a sorry plight. Many composers write orthographically from pure musical instinct; others—through the observance of wrong, superficial rules—in a manner the reverse of orthographical. Faults of orthography can be made, for instance, (1) with regard to rhythmical values, especially in pianoforte music, if too long value is given to a note, so that it lasts on into another chord, in which it has not even a place as dissonance, and in which is contained a note to which the one in question ought to have progressed. (2) With regard to harmonic

conditions, faults frequently occur both in the free and in the strict style; they consist of the substitution of a note enharmonically identical, for example, $c\sharp$ for $d\flat$, e for $f\sharp$, etc. Only a true knowledge of harmony will avail against such faults of orthography. One must get accustomed always to grasp the major or minor chord-meaning of a passage or dissonant chord, and the nature of the progression of the latter to the following chord: only then will writing be really correct. The greater number of faults are made in the chromatic scales (q.v.), or in chromatic passing-notes. The following rule will be found of great help:—A note belonging to (a major or minor) chord ought never to be disguised by enharmonic notation.

Ortigue, Joseph Louis d', writer on music, b. May 22, 1802, Cavaillon (Vaucluse), d. Nov. 20, 1866, Paris; he devoted himself especially to the history of church music, and was frequently commissioned by the French Government to write works concerning music of this kind. His most important are: "De la guerre des dilettanti, ou de la révolution opérée par M. Rossini dans l'opéra français" (1829); "Le balcon de l'opéra" (1833, a collection of feuilletons which had been written for various papers); "De l'école italienne et de l'administration de l'académie royale de musique à l'occasion de l'opéra de M. Berlioz" (1839, on Berlioz' "Benvenuto Cellini"); also under the title "Du théâtre italien et de son influence sur le goût musical français" (1840); "Abécédaire du plain-chant" (1841); "Palingénésie musicale," and "De la mémoire chez les musiciens" (in separate articles for the *Revue et Gazette musicale*); "Dictionnaire liturgique, historique et théorique de plain-chant" (1854, in part, jointly with Nisard); "Introduction à l'étude comparée des tonalités et principalement du chant grégorien et de la musique moderne" (1853); "La musique à l'église" (1861); "Traité théorique et pratique de l'accompagnement du plain-chant" (1856, jointly with Niedermeyer; 2nd ed. 1876). O. founded in 1857, together with Niedermeyer, the musical paper *La Maîtrise* (for sacred music), and was sole editor from 1858-60. In 1862 he was again connected with it under its new title, *Journal des Maîtrises, revue du chant liturgique et de la musique religieuse* (only one year's issue). In addition, he was contributor to the *Gazette musicale*, *France musicale*, *Revue de musique ancienne et moderne*, the *Ménestrel*, and to several political papers; he also wrote many articles not relating to music. In his younger years he was an enthusiastic admirer of Berlioz' Requiem, but afterwards opposed instrumental music of all kinds in the church.

Orto, Giovanni de, with the nickname or surname Marbriano, an important contrapuntist of the end of the 15th and beginning of the 16th century. Petrucci printed a book of his masses

("Misse de O.," 1505), Ave Maria à 4, and eleven chansons à 4 in the "Odhecaton" (1500-1503), and a lamentation in the "Lamentationum Jeremiæ prophetæ liber I." (1506). Some masses in manuscript are in the library of the Papal Chapel in Rome: the mass "Mi-Mi" and some pieces are in the Vienna library; a few motets and chansons are in private hands.

Osborne, George Alexander, pianist and drawing-room composer, b. Sept. 24, 1806, Limerick (Ireland), d. Nov. 16, 1893, London, son of an organist, pupil of Pixis, Kalkbrenner (pianoforte), and Fétis (composition) at Paris. He lived in London after 1843, where he was highly esteemed as a teacher. O. wrote many duets for piano and violin (forty-three with Bériot, one with Lafont, one with Artôt, two with Ernst), also three pf. trios, a pf. sestet (flute, oboe, horn, cello, contra-bass), and numerous fantasias, variations, rondos, etc. for piano solo. His "Pluie de perles" was a drawing-room piece at one time much in vogue.

Oscillations, vibrations. (See ACOUSTICS.)

Oser, Friedrich Heinrich, b. Feb. 29, 1820, Basle, pastor of the house of correction there, a favourite poet and song composer.

Osiander, Lukas, Protestant Abbot of Adelberg, at Wurtemberg, b. Dec. 16, 1534, Nuremberg, d. Sept. 17, 1604, Stuttgart. He published: "Geistliche Lieder und Psalmen mit vier Stimmen auf kontrapunktische Weise" (1586).

Ossia (Ital., "or"), a usual term when in a piece of music a different or simplified reading is printed above the text.

Ostinato (Ital., from Lat. *Obstinatus*, "stiff-necked"), the technical expression for the continual return of a theme with ever fresh contrapuntal treatment. An O. frequently occurs in the bass (*Basso O.*; Fr. *Basse contrainte*). The Chaconne and Passacaglia have always an O., i.e. a short phrase of a few notes, which is always repeated in the same form, constitutes the bass part. In the contrapuntal artifices of the Netherland School (q.v.) the O. already played a prominent rôle: composers loved to work out a whole mass, or motet of considerable length, on some short song theme, which was assigned to the tenor, though not, indeed, always in exactly the same form, but with all kinds of modifications of tempo, with note values augmented or diminished, with inversion, repetition on various degrees of the scale (in other Church Modes), etc.

Othmayer, Kaspar, b. March 12, 1515, Amberg. In 1545 he became *Magister artium* in his native town, was then rector at the school of Heilbronn monastery, but already in 1546 applied for the post of canon of St. Gumbert in Ansbach, which he received in 1547. He married the daughter of the Heilbronn judge, Hans Hartung, and received permission to reside in Ansbach. In 1548 he became rector

there, and died at Nuremberg Feb. 4, 1553. He was an able and much-prized composer; of his existing works are a book "Tricinia," a book "Bicinia," an "Ode auf den Tod Luthers," and a set of songs in G. Forster's song collection.

Otho. (*See* Odo.)

Ott (Ottl, Otto), Hans, Nuremberg publisher about 1533-50 (in which year he died, if not already in 1549), who had his books printed by Graphäus (Formschneider, Resch), for which reason they bore only the imprint "Arte Hieronymi Graphei." Only the "115 gute und neue Lieder" (1544) name O. himself as printer.

Ottani, Abbé Bernardino, b. 1735, Bologna, d. Oct. 26, 1827, Turin, pupil of Padre Martini, was already at the age of twenty-two church maestro at Bologna, from 1779 at the principal church at Turin. He wrote twelve operas for various Italian stages, but especially a quantity of excellent church music (forty-six masses, vespers, psalms, motets, etc.; also two oratorios).

Ottava (Ital.), octave, mostly abbreviated as 8^{va}; when placed above the notes it signifies the higher; when below the same, the lower octave (O. bassa). (*See* ABBREVIATIONS.)

Otto, (1) Ernst Julius, composer of songs for male voices, b. Sept. 1, 1804, Königstein (Saxony), d. March 5, 1877, Dresden; he attended the "Kreuzschnle" at Dresden, where Weinlig was his teacher for music. O. produced, when quite a young man, motets and cantatas, and received in Leipzig a thorough musical training from 1822-25. After acting for some years as teacher at the Blochmann Institute of Music at Dresden, he became, in 1830, cantor of the Kreuzkirche, which honourable post he filled up to 1875; on the other hand, he was for many years musical director of the principal Evangelical Church and conductor of the Dresden Liedertafel. O.'s name became best known by his collection of choruses for male voices, "Ernst und Scherz," which included many of his own compositions, and, especially, only original compositions; also by the cycles for male voices, "Der Sängersaal," "Burschenfahrten," "Gesellenfahrten," "Soldatenleben;" the Liedertafel operetta, *Die Morgengründbruch bei Dresden*, and the settings of Hofmann's "Kinderfesten,"—"Schulfest," "Weihnachtsfest,"—"Pfingstfest," and "Vaterlandsfest." He turned, however, his powers to more serious work, and wrote several motets, festival cantatas, masses, a Te Deum, the oratorios *Des Heilands letzte Worte*, *Die Feier der Erlösten am Grabe Jesu*, and *Hiob*; also two operas, *Das Schloss am Rhein* and *Der Schlosser von Augsburg*.

(2) Franz, composer of songs for male voices, b. 1809, Königstein, d. 1841, Mayence ("In dem Himmel ruht die Erde," "Blauer Montag," etc.).

(3) Rudolf Karl Julius, distinguished oratorio singer, b. April 27, 1829, Berlin, was, already as pupil, solo soprano singer at the cathedral choir, Berlin, was engaged as tenor in 1848, and still sings there. He received in 1852 a post at the Stern Conservatorium as teacher of singing, and went (1873) in like capacity to the Königliche Hochschule für Musik.

Otto-Alvsleben, Melitta, *née* Alvsleben, opera-singer (dramatic soprano), b. Dec. 16, 1842, Dresden, d. there Jan. 13, 1893, was from 1856-59, pupil of the Dresden Conservatorium (Thiele). She was engaged first at the Dresden court theatre (for coloratura parts, but afterwards for dramatic) from 1860 till 1873, then for several years devoted herself to concert-singing (1873-75, in England and Scotland), next went as *prima donna* to the Hamburg Stadt-Theatre (1875-76), and, lastly (from 1877 till 1883), again to the Dresden court theatre, of which she was created an honorary member in 1879. In 1866 she was married to Commissioner of Customs Otto. In 1879 she sang in the Musical Festival at Cincinnati.

Oudin, Eugene, an excellent baritone singer; French-Canadian by birth, d. Nov. 4, 1894. He was brought up to the law, but soon turned to music. He made his first appearance in England in 1891, as the Templar in Sullivan's *Ivanhoe*.

Oudrid [y Segura], Cristobal, b. Feb. 7, 1829, Badajoz, d. March 15, 1877, Madrid, prolific and favourite Spanish composer of operettas, and conductor; in 1867 chorus director of the Italian Opera, Madrid; in 1872 maestro at the Zarzuela Theatre, finally at the Théâtre de l'Orient; he wrote, from 1850, more than thirty zarzuelas for Madrid (some jointly with Barbieri, Gaztambide, Rogel, Caballero, etc.). The last and posthumous *El consejo de los dios* was given in 1884.

Oulibicheff. (*See* ULIBISCHEW.)

Oury. (*See* BELLEVILLE-OURY.)

Ouseley, Sir Frederick Arthur Gore, Baronet, b. Aug. 12, 1825, London, d. April 6, 1889, Hereford, son of the Orientalist and Ambassador of the Russian and Persian courts, Gore O.; he attended Christ Church College, Oxford. In 1846 he took his degree of Bachelor of Arts, and in 1849 *Magister Artium*, in 1850 Bachelor of Music, and in 1854 Doctor of Music; and in 1855 he became Bishop's successor as Professor of Music at Oxford, and Precentor of Hereford Cathedral. O. was a distinguished pianoforte and organ performer, and was especially skilled in fugal extemporisation. His compositions are mostly sacred (eleven services, seventy anthems); he also wrote several sets of glees and part-songs, songs with pf. accompaniment, one sextet for strings, two quartets for strings, a pf. quartet, two trios, pf. sonatas, nocturnes, etc., many fugues, preludes, and other pieces for organ; finally two

oratorios, *St. Polycarp* and *Hagar*. At the age of eight he had already composed an opera, *L'Isola disabitata*. As a theorist he occupied himself with treatises on "Harmony," on "Counterpoint and Fugue," on "Form and General Composition," published in the Oxford Clarendon Press Series. He was also a contributor to Grove's "Dictionary of Music." O. was very wealthy, and left a valuable library.

Ouvert (Fr.), open; *accord à l'o.*, a chord produced by the open strings of violins, etc.

Overblowing is the production on a wind instrument of one of its upper tones in place of the fundamental tone. O. is needed in all the wind instruments of the orchestra, and the sound-holes, keys, valves, etc. are only there for the purpose of filling up the gaps between the natural tones. (See **OVERTONES**.) A distinction is made between instruments in which O. only produces overtones corresponding to the uneven numbers of the harmonic series (as first one, therefore, the twelfth) and those which give also the overtones answering to the even numbers; to the former class belong the clarinet and instruments allied to it, to the latter, flute, oboe, horn, trumpet, trombone, etc. In the organ O. is sometimes intentionally produced, as in the *Flûte octaviante*, but it is more frequently an unpleasant inconvenience connected with lip-pipe stops of narrow measure (Gamba, etc.).

Overtones (Aliquot tones, Partial tones; Fr. *Sons harmoniques*), the name given to those sounds which in their totality form a musical clang (q.v.). They were first pointed out by Mersenne, and explained by Sauveur (1701), who already laid emphasis on their importance for a knowledge of the principles of harmony. Rameau (1722) made them the basis of his musical system. O. are not a phenomenon merely connected with the perception of sound, i.e. they are not only perceived by the ear, but have a real existence, like the sounds after which the clangs are named. That they were not noticed earlier may be explained from the fact that in most clang-colours (q.v.) they are weaker than the fundamental tone. Mathematical theory explains the necessity of the formation of O.; for it is not possible to set elastic bodies into vibration in so regular a manner that they will only make simple pendulum vibrations. The compound form of vibration which arises in the production of sound from a string, by means of a bow, by plucking with the fingers, or striking by means of a hammer, or from a column of air in a pipe, can only be mathematically represented as the sum of the pendulum vibrations of a fundamental note, and an infinite series of tones, which (as regards number of vibrations) answer to simple multiples of the fundamental tone.

Overture (Fr. *Ouverture*; Ital. *Overtura*), open-

ing piece, introduction, especially of an opera. There was no O. in the first attempts at music-drama, which began, as a rule, with a vocal prologue, or directly with the action; but in those in which instruments had the first word (to enable the hearers to collect and prepare themselves), a madrigal was selected, which was played in place of being sung, or a short movement written in madrigal style (Monteverde's *Orfeo* begins with a "Toccata" of nine bars, which was played three times). The oldest form of the real O., the French, or Lully O. (see **LULLY**), shows clearly that it was derived from vocal music, especially in its first and last sections, which were of slow movement, and possessed none of the characteristic features of instrumental music; only the fugal middle section, in more lively tempo, was, to some extent, of instrumental structure. Of quite different nature was the introduction to the operas of Alessandro Scarlatti: the "Italian O." or, as it was then called, *Sinfonia* (a word which meant nothing more than music in several parts), beginning with an *Allagro*, followed, as contrast, by a *Grave*, and, finally, a second *Allagro* or *Presto*; its character was throughout instrumental. The O. is only to be looked upon as the forerunner of the modern symphony in so far as it is one of the older forms of instrumental music in several parts. The real first stage of the symphony with several movements is, rather, the Concerto (Concerto grosso). The overtures of the present day may be divided into three classes differing from one another in strongly marked manner. (1) The O. in sonata form, which has two (or even three) themes differing in character; these are preceded by a short, slow introduction of pathetic character, and after a development section of less or greater extent, are repeated (the repeated exposition section of sonata-form is thus wanting). This form is adhered to, more or less strictly, in *Concert Overtures*, and also in the majority of opera overtures not based on themes from the opera. (2) The O. of the *pot-pourri* kind, the only form of which consists of a set of themes drawn from the most taking numbers of the opera, in more or less complete shape, and arranged with a view to intensity of effect, also contrast (Rossini, etc.). (3) The O. thematically connected with the opera, but moulded and rounded off according to laws of musical formation; and this can also serve as a tone-picture (Symphonic Prologue), whether the composer develops the leading thoughts of the opera in concentrated form, establishes contrasts which are reconciled or left unreconciled, or whether he prepares the minds of his hearers for the first scenes, i.e. the exposition of the work. Overtures of this kind are quite modern; of such are those of Wagner and his disciples, and indeed those of Schumann, Weber, nay, even Mozart and Beethoven.

P.

P., **p.**, abbreviation for *piano*, rarely for *pedale* (Pedal, q.v.); *pp.*, *ppp.*, *pianissimo*, *mp.*, *mezzo-piano*; *fp.*, *fortepiano* (loud, and soft immediately afterwards); on the other hand, *pf.* indicates, not *pianoforte*, but *poco forte*; formerly (as, for example, in J. W. Hässler, weaker than *mezzo-forte*; now mostly with the meaning "somewhat loud," "rather loud," or even *più forte*, "louder"; in the latter sense, however, it is seldom abbreviated.

Pabst, (1) August, b. May 30, 1811, Elberfeld, d. July 21, 1885, as director of the Riga Conservatoire, was formerly cantor and organist at Königsberg, and in 1857 was named royal musical director. He wrote the operas:—*Der Kastellan von Krakau* (Königsberg, 1846), *Unser Johann* (ditto, 1848), *Die letzten Tage von Pompeji* (Dresden, 1851), and *Die Longobarden* (not produced). His son, (2) Louis, b. July 18, 1846, Königsberg, pianist and composer, studied music against the will of his father, and was a long time in Australia (1884–1894).

Pacchiarotti, Gasparo, famous singer (*evirato*), b. 1744, Fabriano (Ancona), d. Oct. 28, 1821, Padua; he was trained by a sopranoist of St. Mark's, Venice, enjoyed celebrity in Italy about the year 1770, and sang at the most important theatres. He visited London in 1778, 1785, and 1790, where he was received with enthusiasm. In 1792 he withdrew entirely from the stage, and lived in Padua, where he displayed his generosity to the poor. P. was lean and ugly; but his noble singing, distinguished for taste and intelligence, made one forget his appearance.

Pachelbel, (1) Johann, one of the most important promoters of the organ style before J. S. Bach, b. Sept. 1, 1653, Nuremberg, d. there March 3, 1706. He received his musical training at Nuremberg, Altdorf, and Ratisbon, became, in 1674, assistant organist of St. Stephen's, Vienna; in 1675, court organist at Eisenach; in 1678, organist of the "Prediger" church at Erfurt; in 1690, court organist at Stuttgart; in 1692 at Gotha; and in 1695, of the Sebaldus Church at Nuremberg. By these frequent changes P. found opportunity of studying and amalgamating the peculiarities of style of the organists of South and Middle Germany; his toccatas, chaconnes, and his workings of chorales (Choralbearbeitungen) approached very closely to those of J. S. Bach; and, as compared with those of Joh. Christoph Bach they show a marked advance, for the writing is more natural and more flowing. The following works have been preserved in the original editions: "Musikalische Sterbensgedanken" (1683, four chorales with variations); "78 Choräle zum Präambulieren" (1693);

"Hexachordum Apollinis" (1699, six themes [arias] with variations), and "Musikalische Ergötzung" (1691, 6 *Partien* à 4 for two violins and figured bass). A. G. Ritter is of opinion that the manuscript in the library of the Grand Duke at Weimar: "Tabulaturnbuch geistlicher Gesänge D. Martini Lutheri und andrer gottseliger Männer sambt beigefügten Choralfügen . . . von Johann Pachelbeln, Organist zu S. Sebald in Nürnberg 1704" (160 choral melodies with figured bass, and the half of them with short fugal preludes), is a collection of pieces of P. in abbreviated form. Franz Commer printed in the *Musica sacra*, I. (Nos. 48–144), a goodly series of organ pieces by P., from the old editions, also the manuscripts in the Royal Institution for Church Music, Berlin; G. W. Körner, some others in the 340th book of the "Orgelvirtuose," and in the first book of a complete edition of the organ works of P., of which, however, only one volume appeared; it is, therefore, easy to make direct acquaintance with his works. Winterfeld also gives some examples in the "Evangelischer Kirchengesang." A chaconne with thirteen variations (Veränderungen), a fugue in *c* minor, and a fuguetta in *c* were published in 1860 by Trautwein, Berlin.

A son of P. (2) Wilh. Hieronymus, b. 1685, Erfurt, in 1706 organist of the Jacobskirche, Nuremberg, in 1725 of St. Sebald's there, published in 1725 "Musikalisches Vergnügen" (prelude, fugue, and fantasia for organ or clavier), also a fugue in *F* major for clavier.

Pachmann, Vladimir de, pianist, b. July 27, 1843, Odessa, pupil of his father (who was a university professor at Vienna and a capable violinist), and later on of Dachs at the Vienna Conservatorium. He made successful appearances in Russia as a concert performer in 1869, subsequently also at Vienna, Paris, London, etc. In 1884 he married the pianist, Maggie Okey, his pupil (from whom, however, he has since been divorced).

Pachymeres, Georgios, Byzantine writer; the biographer of the Emperor Michael Palæologus, b. 1242, Nicea, d. about 1310, Constantinople; he wrote a work, "Περὶ ἁρμονικῆς" ("concerning music"), of which a copy is preserved in the Paris Library.

Pacini, (1) Antonio Francesco Gaetano Saverio, b. July 7, 1778, Naples, d. March 10, 1866, Paris. He was trained at the Conservatorio della Pietà, Naples, and was for some time theatre *maître de chapelle* at Nîmes. He went in 1804 to Paris, where he produced some comic operas, and became a favourite teacher of singing in the imperial court circle. He

afterwards established a music business, which especially favoured Italian opera composers.

(2) **Giovanni**, opera composer, b. Feb. 17, 1796, Catania, d. Dec. 6, 1867, Pescia, pupil of Marchesi at Bologna and of Furlanetto at Venice. He made his *début* as a dramatic composer in 1813 with *Annella e Lucinda* at the Santa Redegonda Theatre, Milan, and wrote, during the following twenty years, forty-two operas for the best Italian theatres; but after a failure at the Fenice Theatre, Venice, for a long time he entirely gave up dramatic composition, set up a school of music at Viareggio, which quickly came into high repute, and for which he even built a theatre of his own (he afterwards transferred the school to Lucca). His best works were written after 1840:—*Saffo* (Naples), *Medea* (1843, Palermo), *La regina di Cipro* (1846, Turin), and *Niccolò de' Lupi* (1855, Rio de Janeiro). P. wrote in all about ninety operas and many oratorios, cantatas, and masses, etc. He was also very active as a writer, and in addition to numerous articles for the musical papers *Gazzetta musicale di Napoli* and *Gazzetta musicale di Firenze*, *Boccherini*, *La Scena*, *L'Arpa*, *Il Pirata*, he published a series of small pamphlets, partly of an instructive nature (for his School of Music):—"Corso teoretico-pratico di lezioni di armonia," "Principj elementari col metodo del meloplasto," "Cenni storici sulla musica e trattato di contrappunto" (1864), "Memoria sul migliore indirizzo degli studi musicali" (1863), etc., and his autobiography: "Le mie memorie artistiche" (1865, concluded by Cicconetti, 1872).

Pacius, **Friedrich**, b. March 19, 1809, Hamburg, d. Jan. 9, 1891, Helsingfors, pupil of Spohr, became, in 1834, music director at Helsingfors University. He was a distinguished violinist, and two operas of his obtained performance (*Karls XII. Jagd*, 1854, and *Loreley*, 1857, both at Helsingfors).

Pad, the covering beneath the butt of hammers in the pianoforte, to render them elastic and bring about a quick rebounding from the string. Formerly only soft, tanned leather was used, but for the last half-century thick, firm felt has come into vogue, while leather is only occasionally employed for the highest notes. In order to produce the required elasticity, the leather or felt strips must be firmly stretched over the hammer heads.

Paderewski, **Ignaz Johann**, distinguished pianist, b. Nov. 6, 1859, Podolien, studied under Leschetitzky, was professor of the pianoforte at the Warsaw Conservatoire (1878-83). Since then P. has made concert tours as a virtuoso; he has also displayed gifts as a composer, especially for his instrument.

Padilla y Ramos, eminent opera singer (baritone), b. 1842, Murcia, Spain. He was a pupil of Mabellini at Florence, first appeared at Messina, then at Turin, Florence, Milan, Naples, Madrid,

Petersburg, Vienna, Berlin, etc. In 1869 he married the singer Désirée Artôt.

Padovana (Paduana). (See **PAVANE**.)

Pæan, the name of the song in which Apollo celebrated his victory over the Python; hence generally song of victory, song of thanksgiving, etc.

Pærr, **Ferdinando**, opera composer, b. June 1, 1771, Parma, d. May 3, 1839, Paris, received his first musical training from Ghirelli, a violinist at the court theatre, Parma, and brought out, at the early age of sixteen, a comic opera, *La locanda de' Vagabondi* at Parma (1789), and soon after (1790) *I pretendenti burlati*, one of his best works; the latter quickly established his reputation. Having been appointed maestro at one of the theatres of Venice (1791), he wrote opera after opera, somewhat in the style of Cimarosa and Paesiello, light and pleasing, and always melodious. After he had settled in Vienna (1797), where his wife, the opera singer Signora Riccardi, was engaged as vocalist, a greater depth became perceptible in his operas; it was, doubtless, the influence of Mozart which led him to pay greater attention to harmony and scoring. The opera *Camilla* (1799) is accounted his best work. In 1802 P. became Naumann's successor at Dresden as court capellmeister, and wrote there, among other things, *Eleonora, ossia l'amore conjugale* (1805, the same subject as Beethoven's *Fidelio*). The triumphal advance of Napoleon in 1806 drew P. from Dresden to Warsaw, and afterwards to Paris, where he was appointed Imperial *maître de chapelle*. In 1812 he succeeded Spontini as conductor at the Italian Opera, and held this post even under *la Catalani* (q.v.), but in 1823 he had to endure the unpleasantness of being subordinate to Rossini; the latter, who was not born to be a *maître de chapelle*, retired in 1826; P., however, was compelled, in 1827, to accept his own resignation, as he was accused of being the cause of the impoverished circumstances of the theatre. For the rest he was elected member of the Académie in 1831, and in the following year was named conductor of the royal chamber music, and up to the last was held in high consideration. His dramatic successes were, indeed, at an end when Rossini's operas appeared on the Paris stage, and these for a long time P. sought to oppose. Of P.'s forty-three operas none met with any lasting success; like many another composer, he has become an historical name. Besides operas, he wrote two oratorios, one passion, many cantatas, arias, duets, and other vocal pieces, a "Symphonie bacchante," orchestral variations on "Vive Henri IV.," marches and dances for military band, violin sonatas with 'cello *ad libitum*, pf. variations, and a fantasia for pf., two flutes, two horns, and bassoon.

Paesiello, **Giovanni**, famous opera composer, b. May 9, 1741, Tarento, d. June 5, 1816,

Naples. He attended the Jesuit School at Tarento, was then for five years the pupil of Durante, Cotumacci, and Abos at the Conservatorio Sant' Onofrio, Naples (1754-59), and was subsequently appointed assistant teacher (*maestro primo*). After writing a number of masses, psalms, oratorios, etc., he made an essay in dramatic composition with an Intermezzo, which was produced in the school theatre of the Conservatorio (1763), and which revealed his gift for opera buffa; it also procured for him the engagement to write for Bologna the comic opera *La pupilla (Il mondo a rovescio)*. Then soon followed many other operas for Modena, Parma, Venice, and Rome, of which *Il marchese di Tulipano (Il matrimonio inaspettato)* quickly attained to European fame. P. was, however, only counted among the first composers of Italy after he had made a name (with his *L'idolo Cinese*) at Naples, where Piccinni then stood at the zenith of his fame. The latter soon went to Paris, but shortly afterwards there arose in Cimarosa a rival not less dangerous; and against him, and also against the aged Guglielmi, who had returned from England, P., in his artistic rivalry, did not always use the most honourable means, but had recourse to intrigues. In 1776 he followed the Empress Catherine to Petersburg, where he remained until 1784, and wrote, among other things, *Il barbiere di Siviglia*, which afterwards became a stock piece at all Italian theatres; it was so successful that Rossini was considered bold when he desired to write new music to the libretto. On his return, Ferdinand IV. of Naples named him court maestro, and during the following years P. wrote his operas which became most popular:—*La molinara*, *Nina*, and *I Zingari in fiera*. At the outbreak of the Revolution in 1799, P. knew how to place himself on good terms with the Republican Government, and retained his post as conductor of the national music; but he naturally fell into disgrace with the king, and, on the return of the latter, had to wait two years before he was again received into favour. In 1802 the Consul Napoleon requested of the King of Naples that P. should be sent to him to organise and conduct his band: Napoleon had long been favourably disposed towards his music, and already in 1797, at his suggestion, P. had composed a funeral march for General Hoche. P. naturally found jealous rivals in Paris; he did not, however, remain there long, but in 1803 asked permission to return to his family at Naples, and again filled his old post which he afterwards held under Joseph Bonaparte and Murat. The restoration of the Bourbons (1815) cost him his post; he received, however, his salary as conductor, but only enjoyed it for a few months. P. wrote more than one hundred operas, of which only the following appeared in print:—*Nina*, *Il re Teodoro*, *La serva padrona*, *La molinara*, *Il barbiere di*

Seviglia, *Il marchese di Tulipano*, and *Proserpina*. He also composed a "Passion" oratorio, a Christmas Pastoral, two requiems, three grand masses for orchestra, and about thirty smaller masses à 4, a Te Deum for double choir, a miserere à 5 with obbl. viola and 'cello, etc. And in addition to these works, much instrumental music:—12 symphonies for orchestra (dedicated to Joseph II.), 6 pf. concertos, 12 pf. quartets, 6 quartets for strings, a sonata and a concerto for harp, etc. Pamphlets on P. have been published by J. F. Arnold (1810), Gagliardo (1816), Le Sueur (1816), Quatremère de Quincy (1817), Schizzi (1833), and others.

Paganini, Niccolò, the most renowned of all violinists, and one whose technique has, perhaps, never been equalled, b. Oct. 27, 1782 (according to certificate of baptism), Genoa, d. May 27, 1840, Nice. He was the son of a tradesman of limited means, who, though possessing little culture, was a sincere lover of music. When he perceived his son's musical talent he at first instructed him personally in the art of playing the mandoline, and then handed him over to more skilful teachers, especially the violinist and maestro G. Costa at Genoa. P. soon began to play in public, especially at church concerts, and in 1795 he was placed under the excellent violinist Alessandro Rolla at Parma, who, however, only instructed him for a short time; he studied also under Ghiretti (Paër's master) for a longer period. With so independent and original a nature as P.'s, we can easily assume that, in spite of his numerous instructors, he was, on the whole, self-taught, and that he soon went entirely his own way. He soon wearied of his father's supervision: of this, indeed, he rid himself by flight (1798); instead of returning home from Lucca, whither he had gone to a concert, he made that city the starting-point of his wanderings. The little virtuoso already indulged in the passions of the rich, and was a rabid player at games of hazard; indeed, at Leghorn he had to part with his fiddle to pay his gambling debts; this loss was, however, made good; a first-rate Joseph-Guarnerius violin was presented to him by a certain Mr. Levron, and this was P.'s favourite instrument until his death (it is now preserved under a glass case, and is one of the objects of interest visited by travellers to Genoa). It was only in 1804 that P. returned to Genoa, studied industriously for a year, and devoted himself with zeal to composition. In 1805 he started again on his travels, and everywhere excited the greatest admiration; in the same year he was appointed ducal solo violinist at Lucca, also teacher to Prince Bacciocchi, and remained there until 1808. From 1809 until the year of his death he held no fixed position. It is true that in 1828 the Emperor of Austria appointed him chamber-virtuoso, but this was merely an honorary title. The restless artist

hurried from town to town and country to country, his renown increasing as he went, his fortune accumulating at the same rate. It is well known that P. was avaricious, and that his passion for gambling was born of this vice; the only incident which would seem to prove the contrary, namely, his gift of 20,000 fr. to Berlioz (1838), has been brought forward by Ferdinand Hiller, in his "Künstlerleben" (1880), as the most glaring proof of avarice; according to this writer, P. had willingly consented that the present should be given by another under his name. Up to 1827 he threw all Italy into ecstasy, and entered into glorious and successful competition with Lafont at Milan and with Lipinski at Piacenza. P. went in 1828 to Vienna and through Germany, in 1831, to London: he travelled through England, Scotland, and Ireland, spent the winter 1833-34 in Paris, to which city he often returned from his villa Gaiona at Parma. His long-failing health forced him, however, in 1839 to seek the milder climate of Marseilles. He spent the last winter of his life, from 1839-40, at Nice. Phthisis of the larynx, which entailed much suffering, was the cause of his death. P. married the singer Antonia Bianchi, and left to his only son, Achille P., the magnificent fortune of about £60,000. P.'s life has been ornamented by the most thrilling legends: he is said to have murdered a girl to whom he was attached, and to have languished for many years in prison; also that when the strings of his violin were broken he was reduced to playing only on the G-string. The germ of truth to be extracted from all these legends is as follows:—P. had many love adventures, and was often in danger of becoming a victim to jealousy; again, having broken a string during a performance he continued to play on the remaining ones, and eventually cultivated playing on the G-string alone as a feat of virtuosity. No further peculiarities of P.'s playing can be instanced, because he combined all those qualities which individually would make any one virtuoso celebrated: inspired conception, powerful tone, wonderful technique in double-stopping, in staccato and harmonics, pizzicato with the left hand, etc. Many apparent impossibilities, by which he reduced contemporary violinists to speechless astonishment, are explained from the fact that for special purposes he tuned the strings of his violin differently; for instance, he tuned the A-string half a tone higher. As a quartet-player P. never distinguished himself; he could never subordinate himself to ensemble-playing. Many compositions have been attributed to P. which he himself disowned. The only genuine ones are:—"24 Capricci per violino solo" (Op. 1; arranged for piano by Schumann, also by Liszt); "12 Sonate per violino e chitarra" (Op. 2, 3; P. played the guitar as an amateur, but with the skill of a virtuoso); "3 gran quartetti a violino, viola, chitarra,

e violoncello" (Op. 4, 5). Also the works published after his death:—concerto in E♭ major, Op. 6 (the violin plays in D major with the strings tuned up a semitone); concerto in B minor, Op. 7 (*à la clochette*); "Le streghe," Op. 8 (variations on a theme by S. Mayr); variations on "God Save the King," Op. 9; the "Carnival of Venice," Op. 10 (variations); "Moto perpetuo," Op. 11 (Concert Allegro); variations on "Non più mesta," Op. 12; variations on "Di tanti palpiti," Op. 13; and sixty variations in all keys on a Genoese national air, "Barucaba." Numerous accounts of P.'s life have appeared in print; those to be specially noticed are:—Schottky's "Paganini's Leben und Treiben" (Prague, 1830); Fétis' "Notice biographique sur N. P." (1851, translated into English by Guernsey, 1852); Gühr's "Ueber Paganini's Kunst, die Violine zu spielen" (1829; English translation, 1831), and A. Niggli's "Paganini" (1882; Nos. 44 and 45 of the collection of musical "Vorträge"); also Italian biographies by Conestabile (1851) and Bruni (1873).

Page, John, tenor singer of St. George's Chapel, Windsor, from 1790-95, afterwards (1801) vicar choral of St. Paul's, London, died August, 1812. He published "Harmonia sacra" (1800, three vols., containing seventy-four anthems of the most important English composers of the 16th-17th centuries, in score edition [Purcell, Croft, Boyce, Greene, Blow, Clark, etc.]); "A Collection of Hymns by Various Composers," etc. (1804); "Festive Harmony" (Madrigals, Elegies, Glee, etc.); "The Burial Service, Chant, Evening Service, Dirge, and Anthems appointed to be Performed at the Funeral of Lord Nelson" (1806, containing compositions by Croft, Purcell, Greene, Attwood, and Handel); and, finally, jointly with W. Sexton, a selection from Handel's Chandos Anthems (1808).

Paine, John Knowles, North American composer, b. Jan. 9, 1839, Portland (Maine), received his musical training from H. Kotschmar at Portland, made a public appearance as organist, and studied at Berlin from 1858-61 under Haupt, Fischer, and Wieprecht (organ, singing, and instrumentation). He gave concerts there, and afterwards in various American cities as an organ virtuoso; in 1862 he became teacher of music at the Harvard University, Cambridge (Mass.), and in 1876 he obtained the newly-created professorship of music. P.'s earliest compositions breathe a classical, the later ones (from about Op. 22) a romantic spirit. He has published: variations (Op. 3) and preludes (Op. 19) for organ, pf. pieces (Op. 7, 9, 11, 12, 26), songs (Op. 29), a grand mass (Op. 10; performed by the Berlin "Singakademie" under his direction, 1867), an oratorio, *St. Peter*, and several symphonies (No. 2 in A major, "Spring," Op. 34, produced 1880 at Boston). His first symphony (C minor)

has hitherto remained in manuscript (Op. 23, produced in 1876 at Boston by Thomas's Orchestra), also his music to *King Edipus* (produced at Boston); an orchestral fantasia, "The Tempest," an overture to Shakespeare's *As You Like It*; pf. sonatas, violin sonatas, organ pieces, a quartet for strings, two trios, a duet concertante for violin, cello, and orchestra, songs, motets, etc.

Paisiello. (See PAESIELLO.)

Paix, Jakob, German organist, b. 1550, Augsburg, probably d. about 1590 as organist at Lauingen. He published "Ein schön Nütz- und Gebräuchlich Orgel Tabulatur" (1583, containing motets à 4-12, songs, passamezzi, and other dance pieces in tablature); "Selectæ, artificiosæ et elegantes fugæ" (1587 [1590], à 2-4, and pieces in several parts arranged for the organ partly by P., partly by the most important masters of the period); also the "The-saurus motettarum" (1589, twenty-two motets by various authors), and two Masses of his own composition, one à 6, "Missa parodia" (1587), and one à 2-4, "Missa Helveta" (1584). A small pamphlet by P. bears the title "Kurzer Bericht aus Gottes Wort und bewährte Kirchen-historie von der Musik" (1589).

Paladilhe, Émile, b. June 3, 1844, in a village near Montpellier, received his first musical teaching from his father, a well-known literary physician, then at Montpellier from the cathedral organist, Sebastian Boixet. At the age of nine he became a pupil of the Paris Conservatoire, especially of Marmontel (piano), and afterwards of Halévy (composition) up to 1860, when he received the *Grand Prix de Rome*, having previously distinguished himself by carrying off several smaller prizes. P. is a member of the tuition committee of the Conservatoire, and since 1892 member of the Académie as successor to Guiraud. From among his compositions should be mentioned the comic operas produced at Paris: *Le passant* (1872), *L'amour Africain* (1874), *Suzanne* (1878), and *Diane* (1885), a grand opera, *Patrie* (1886), besides a symphony, two Masses, etc. P. has become popular through his "Mandolinata."

Palatal tone (Ger. *Gaumenton*). (See EMBOUCHURE.)

Palestrina, Giovanni Pierluigi (named da P., also Gianetto P., or merely Gianetto; the son of Sante Pierluigi), the greatest composer of the Catholic Church, b. probably 1514 or 1515* (the dates vary up to 1529; Haberl is in favour of 1526), at Palestrina (the

old Præneste), d. Feb. 2, 1594, Rome; he is usually named after the place of his birth (Lat. *Petrualoisius Prænestinus*). Nothing is known of his early youth, but it is safe to say that he showed special musical gifts. P.'s first post was that of organist and maestro at the principal church of his native town, from 1544 to 1551. The young master, however, was already held in such consideration that in 1551 he was appointed *Magister puerorum* of St. Peter's, Rome, and in the same year advanced to the post of maestro. Pope Julius III., to whom P. dedicated (1554) a book of Masses à 4, his first printed work, recognised the great importance of the master, and ordered him to be received among the collegiate singers of the Sistine Chapel, dispensing with the usual strict examination, and ignoring the fact that P. was not a priest, but, indeed, married and the father of several sons. He evidently wished to give him leisure for composition—a leisure which, naturally, seldom fell to the lot of a busy maestro of St. Peter's. On Jan. 13, 1555, P. resigned the post of maestro, and entered the Papal Chapel. Pope Marcellus II., successor of Julius III., who already, as cardinal, had been the patron of P., approved of the measure, but, unfortunately, he died after a reign of three weeks; Paul IV. (July 30, 1555), on the other hand, dismissed P. and two other married singers from the chapel, bestowing on them a scanty pension. This blow of fate, and perhaps also the intrigues of the other chapel singers, proved such a shock to P. that he fell ill. On his recovery, however, he was appointed canon of the Lateran, and soon afterwards maestro of the same church (Oct. 1, 1555). This was the most changeful year of P.'s life. In his new post he wrote the celebrated *Improperia*, which were performed for the first time in 1560, and made such an impression, that Pope Pius IV. at once desired to secure them for his Chapel; from that time up to the present they have been performed every year on Good Friday. The post of maestro at the Lateran was poorly endowed; P., therefore (1561), out of consideration for his family, begged for an increase of salary; then, as this was refused, for his dismissal. He next undertook the post of maestro of the principal church of Santa Maria Maggiore, and there he remained until 1571. The revision of Church Music by the Council of Trent (1545-63) formed a decisive turning-point in P.'s life. The Council had indeed come to no settled determination, further than to exclude all secular elements (especially canto fermo based on melodies of obscene songs, to which even the best maestri so frequently had recourse), and to retain the most worthy and solemn of the Church songs. A congregation of cardinals was summoned by Pius IV. in 1564 to discuss matters in detail, and figured music ran the danger of being entirely banished from

* It is inconceivable how the statement of Hyginus Palestrina in the dedication of the seventh book of his father's Masses (1594): "70 fere vitæ suæ annos in dei laudibus componendis consumens," can have been taken to mean that P. only lived to the age of seventy (Baini, and afterwards Fétis, etc.). It points out clearly enough that he composed for nearly seventy years, one of the surest proofs for the correctness of the date 1514.

the Church. In consideration of his *Impropria*, P. was ordered to show that contrapuntal music need not interfere either with intelligibility of the words or with true sacred feeling. Instead of *one* Mass, which he was asked to write, P. composed three; and the third so satisfied the college that from that time the thought of banishing polyphonic music was abandoned. The third Mass, named "*Missa papæ Marcelli*," was dedicated in thankful remembrance to his patron, Pope Marcellus II. But P. not only saved Church Music, he also reformed it; for he again made the art of counterpoint a means, whereas before that (*see* NETHERLAND SCHOOL) it had become only too much an aim. P.'s reward was his appointment as *maestro compositor* to the Papal Chapel, an honorary post which after P. was only filled by Felice Anerio. When in 1571 Annimuccia, P.'s successor as *maestro* of St. Peter's Church, died, P. again undertook the post which he had resigned in 1555, and held it up to his death. The desire of Sixtus V. (1585) to transfer to P. the post of *maestro* of the Sistine Chapel had to be given up owing to the opposition of the chapel singers, who declined to have at their head a layman; for one who could not be chapel singer could with still less right become *maestro*. Again in his position as composer of the Papal Chapel, P. had much to suffer from the ill-will of the chapel singers. P. was also active as composer for the Oratory of San Filippo Neri (q.v.), and as musical director to Prince Buoncompagni (1581); and for a time he gave instruction at the School of Music established by G. M. Nanini, his successor at Santa Maria Maggiore. He was, however, compelled to devote less time to these extra offices when commissioned by Gregory XIII. to revise Gregorian Song, a labour which he undertook with the assistance of his pupil, Guidetti, to whom, however, fell the lion's share of the work, viz., the historical researches and comparison of manuscripts; the result was the publication of the "*Directorium chori*" (1582), the Passions according to the four evangelists (1586), the Offices of Holy Week (1587), and the "*Præfationes*" (1588). When Guidetti died P. discontinued the work, as he did not feel equal to it. His son Hygin (the only one who survived him) attempted, after his father's death, to publish a "*Graduale de tempore*," the manuscript of which had been rejected by P. himself, but preserved; the Vatican chapter, however, decided that he had no claim to it. For the rest, this son, so unlike his father, speculated with his parent's posthumous manuscripts, so that they were scattered in a lamentable manner.

A worthy edition of P.'s works was published at Leipzig in 34 vols. (from 1862-94), by Breitkopf und Härtel (Vols. I.-III. edited by De Witt; IV.-VI. by Franz Espagne; VII.-XXXIV. by Fr. X. Haberl). The original editions of P.'s works are: 12 books of Masses (I.:—4 à 4, 1 à 5,

1554 [1572, 1591]; II.:—4 à 4, 2 à 5, and the "*Missa papæ Marcelli*" à 6, 1567 [1589]; III.:—4 à 4, 2 à 5, 2 à 6, 1570 [1599]; IV.:—4 à 4, 3 à 5, 1582 [1582, 1590]; V.:—4 à 4, 2 à 5, 2 à 6, 1590 [1591]; VI.:—4 à 4, 1 à 5, 1594 [1596, 2 à 5]; VII.:—[posthumous], 3 à 4, 2 à 5, 1594 [1595 and 1605, and also 1 à 6]; VIII.:—2 à 4, 2 à 5, 2 à 6, 1599 [1601]; IX.:—2 à 4, 2 à 5, 2 à 6, 1599 [1608]; X.:—2 à 4, 2 à 5, 2 à 6, 1600; XI.:—1 à 4, 2 à 5, 2 à 6, 1600; XII.:—2 à 4, 2 à 5, 2 à 6, 1601). Then comes a book of 4 Masses à 8, 1601. The prospectus of the Breitkopf und Härtel edition names 93 Masses (39 à 4, 28 à 5, 21 à 6, 5 à 8); the Masses and Motets not printed are in the Sistine, the Vatican, Lateran, Oratorio (Santa Maria in Vallicella), Santa Maria Maggiore, and the Roman College libraries. Of printed motets there are: 2 books à 4 (1563 [1585, 1590, 1601, 1620], 1581 [1590, 1604, 1605]), and 5 books à 5-8 (1569 [1586, 1600], the 2nd book only known in the 2nd edition of [1572] 1575 [1581, 1589, 1594], 1584 [words from the "*Song of Solomon*," republished 1584, 1587, 1588, 1596, 1601, 1603, 1608, with organ bass, 1613, 1650], 1584 [1588, 1595, 1601]). The prospectus of Breitkopf und Härtel mentions 139 motets: 63 à 4, 52 à 5, 11 à 6, 2 à 7, 47 à 8, and 4 à 12. There are, besides, a book of Lamentations à 4, 1588 (1589), which are reckoned among the finest works of P. (2 other books of Lamentations à 4-6 remained in manuscript), a book (45), "*Hymni totius anni*" à 4, 1589 (1625); a book (68) of offertories à 5, 1593 (1594, 1596); 2 books of Magnificats à 4 (each contains 8), 1591 (a book of Magnificats à 4-8 has also been preserved in manuscript); 2 books of Litanies à 4 (1600; a third in manuscript); 2 books à 5 of *Madrigali spirituali*, 1581 and 1594; a complete collection of vespers psalms (1596), and, finally, 2 books of madrigals à 4 (1555 [1568, 1570, 1594, 1596, 1605] and 1586 [1593]), also a book of madrigals à 5 (1581) [1593, 1604]. In modern publications P. has been more richly represented than any one of the older composers. Abbate Alfieri published from 1841-46, in seven stout folio vols., a selection from the works of P., among which the Lamentations of 1588, the Hymns of 1589, Magnificat of 1591, and Offertories of 1593 complete; also his collection of motets of 1841 contains many pieces by P. Bellermann republished the motets à 4 of 1563 in Chrysander's "*Denkmäler*." Proske published some Masses, Motets, etc., in his "*Musica Divina*," Masses in the "*Selectus missarum*," and, besides, separately, the "*Missa papæ Marcelli*" in its original form, in an arrangement à 4 by Anerio, also in one à 8 by Suriano (1850). Other pieces are to be found in the collections of Commer, Choron, Prince de la Moszkowa, Schlesinger, Rochlitz, Tucher, Lück, etc. We are indebted to Baini for an excellent monograph on P., "*Memorie storico-critiche della vita e dell' opere di G. P. da P.*" (1828, two vols.), German by Kandler and Kiesewetter (1834).

Bäumker published a short sketch (1877). A correspondence of P. with Duke Guiglielmo Gonzaga of Milan is to be found in Haberl's "Kirchenmusik. Jahrb., 1886.

Palestrina style, a cappella style, i.e. composition for voices only, without any accompaniment of instruments; after the development of accompanied Church Song (Viadana, Carissimi), this was especially adhered to by the Roman School (*see* NANINI), and, as the devices of imitation were proscribed (*cf.* PALESTRINA), an equivalent was sought after in a rich number of parts. Thus the chief representatives of the P. s. (Allegri, Benevoli, Bernabei, Bai, etc.) are also the composers for double choir for eight, twelve, or more voices. The manner of writing for double choir is to be ascribed less to Palestrina than to Willaert and to the Gabrieli; it owes its origin probably to the purely external circumstance that at St. Mark's, Venice, there were two great organs opposite one another, and that at each was placed a portion of the choir.

Pallavicini (Pallavicino), (1) Benedetto, madrigal and motet composer, native of Cremona and maestro to the Duke at Mantua, was still alive in 1616. He published one book of madrigals à 4 (1570), seven books of madrigals à 5 (1581, 1593, 1596 [1604], 1596 [1605], 1597, 1612, 1613), a book of madrigals à 6 (1587), also a book of motets à 8, 12, and 16, "Sacrae dei laudes" (1595), of which the "Cantiones sacrae" à 8, 12, and 16, of 1605 are probably the second edition. Some madrigals are to be found in collections of the time. P. is one of the first composers who wrote for so many voices.

(2) Carlo, opera composer, b. 1630, Brescia, d. Jan. 29, 1688, Dresden; in 1667 vice capellmeister, in 1672 capellmeister at the court at Dresden; he then lived for several years in Italy, was again in Dresden in 1685, and, indeed, capellmeister of the newly-established Italian Opera. He composed numerous operas for Italian stages, and for Dresden; his *Gerusalemme liberata* was produced at Hamburg under the title *Armida* (1695); his last work, *Antiope*, he left unfinished, but it was completed by Strungk, and given at Dresden in 1689. P. was teacher of composition to Legrenzi (?).—His son Stefano, b. March 31, 1672, Padua, was as early as his sixteenth year court poet and teacher of the dramatic art at Dresden.

Palme, Rudolf, excellent organist, b. Oct. 23, 1834, Barby a. E., pupil of A. G. Ritter, royal musical director and organist of the Heiliger Geist church at Magdeburg. He published a large number of compositions for organ (sonatas, Op. 12 and 27, chorale preludes, concert fantasias with male chorus, Op. 5, etc.), also songs for mixed and equal voices (choruses for male voices, sacred songs, school songs), which enjoy a wide circulation.

Paloschi, Giovanni, b. 1824, d. Jan. 2, 1892, Milan, the most energetic member of the staff

of the publishing house of Ricordi, Milan. He published in 1876 (2nd ed. 1878) an "Annuario musicale universale" ("General Musical Calendar"), arranged in a totally different manner from German publications of a similar kind; it contains a carefully-prepared table of days of birth and death of famous musicians, the first performances of operas, etc., on 144 large quarto pages, with many original rectifications of wrong dates; it has proved an important source of information for this Dictionary. P. was a contributor to the *Gazzetta musicale* (Milan), and edited the comprehensive catalogue of the Ricordi firm; for the latter he translated into Italian a series of foreign works.

Palotta, Matteo, church composer, b. 1680, Palermo (hence called "Il Panormitano"), pupil of the Conservatorio Sant' Onofrio, Naples; in 1733 he became court composer at Vienna, was dismissed in 1741, reappointed in 1749, and d. March 28, 1758, Vienna. He composed motets à 4-8, masses, etc., in the Palestrina style, of which a number have been preserved in the library of the "Gesellschaft der Musikfreunde." He also wrote a treatise, "Gregoriani cantus enucleata praxis et cognitio."

Paminger (Pammigerus, Pannigerus), Leonhard, one of the most skilful German contrapuntists, b. 1494, Aschau (Upper Austria), d. May 3, 1567, as school rector and secretary of the St. Nikolas Monastery at Passau, in which he first received his training, afterwards completed at Vienna. He left four books of motets, which his son, Sophonias P., published at Nuremberg, "Ecclesiasticarum cantiorum 4, 5, 6 et plurium vocum, a prima dominica adventus usque ad passionem Dei" (1573). During his lifetime there only appeared in collections detached pieces by P.

Pandean pipe (Syrinx), the ancestor of the organ, viz. the shepherd's pipe of the ancients, consisting of several reed pipes, stuck together with wax, and blown by the mouth (the instrument of Papageno in the *Magic Flute*).

Pandero, the name given by the Gitanos (Spanish gipsies) to the *Tambour basque* (incorrectly termed *Tambourin* in Germany).

Pandora (Pandura). (*See* BANDOLA.)

Panny, Joseph, violinist and composer, b. Oct. 23, 1794, Kolmitzberg (Anstria), d. Sept. 7, 1838, Mayence, where, after a restless, wandering life, he founded a school of music. He wrote, among other things, a scena for violin and orchestra (for Paganini), and published easy quartets for strings (Op. 15), a sonata for the G-string, solo pieces for the violin, trios, etc., but also several vocal works, masses, a requiem, choruses for male voices, songs, etc.

Panofka, Heinrich, celebrated teacher of singing, b. Oct. 3, 1807, Breslau, d. Nov. 18, 1887, Florence, where he first studied law. He, however, finally yielded to his liking for

music and went to Vienna, where Mayseder (violin) and Hoffmann (composition) became his teachers. After that he continued his studies at Munich and Berlin, and settled in Paris (1834), where he devoted all his attention to the study of the method of teaching singing. In 1842 he founded, jointly with Bordogni, an "Académie de chant," lived 1842-52 in London, where, under Lumley, P. was co-director for a time of the Italian Opera, and became famous as a teacher of singing. From 1852 he taught again in Paris, and from 1866 in Florence, but afterwards withdrew from public life. Of P.'s compositions may be mentioned the educational works on singing, "The Practical Singing Tutor," "L'arte del canto," Op. 81; the elementary "Abécédaire vocal;" the singing exercises, "24 vocalises progressives," Op. 85; "12 vocalises d'artiste," Op. 86; "Erholung und Studium," Op. 87; "86 nouveaux exercices," Op. 88; "12 vocalises pour contralto," Op. 89; "12 Vokalisieren für Bass," Op. 90; as well as some sacred vocal works, etc. P. was thoroughly trained as violinist, wrote in early years a series of variations for violin, rondos, characteristic pieces, and duos concertants for violin and pf., violin studies, a violin sonata, etc. He also translated Baillot's "Violin School" into German, and was contributor to the *Neue Zeitschrift für Musik* and other papers.

Panseron, Auguste Mathieu, famous teacher of singing, b. April 26, 1796, Paris, d. there July 29, 1859; he was the son of a musician, who trained him until he was able to enter the Conservatoire. He won the *Grand Prix de Rome*, went to Italy in 1813, and studied counterpoint under Mattei at Bologna, but more especially, under the best masters, the various methods of teaching singing. On his return to Paris, he became accompanist at the Opéra Comique, where his three one-act operas, of small importance, were produced. In 1826 P. became professor of "solfège" at the Conservatoire, was advanced in 1831 to the professorship of vocalisation, and in 1836 to that of singing. His educational vocal works are:—"A B C musical" (solfèges for one voice, composed for his little daughter, aged eight), solfèges for mezzo soprano, baritone, and alto; "Solfège d'artiste," 50 solfèges with change of clefs; 36 ditto, of greater difficulty; "Solfège du pianiste;" "Solfège du violoniste;" solfèges à 2-4 of various degrees of difficulty (three books); "Méthode de vocalisation" for soprano or tenor; ditto for lower voices; vocalizzi for two voices; ditto for two to four concertante voices; ditto with change of clefs; "Méthode complète de vocalisation" (three parts); lastly, for the higher art of singing, a series of books with special studies and exercises for the different species of voices, and of various grades of difficulty. P. also devoted himself to the subject of harmony, and published "Traité de l'harmonie pratique et de

modulation." Finally, he published "Mois de Marie" (motets à 1-3, hymns, also two Masses for three soprano voices).

Pansymphonikon, a kind of orchestrion. (See SINGER, 2.)

Pantaleon (Pantalon), name given by Louis XIV. of France to the improved dulcimer (1690) of Pantaleon Hebenstreit (q.v.), which for a time made a great sensation, and which, without doubt, gave the impulse to the construction of the Hammerklavier. When the P. went out of fashion, the name was transferred to the keyboard instruments with hammers striking from above, also to the "Giraffenflügel."

Pantalonzug (Ger.) was an apparatus in the clavicembalo which enabled one to dispense with the muffers (pieces of cloth), whereby arose the peculiar (but not beautiful) effect in the Pantalons of the after-sounding and confused humming of the notes.

Pantomime is the name given to a theatrical representation in which the action is made intelligible by gestures only, especially to those with music. (See BALLET.)

Paolucci, Giuseppe, Franciscan monk, b. 1727, Siena, pupil of Padre Martini, d. 1777, as maestro of the Assisi Monastery. He published in 1767, "Preces piæ" à 8 (double choir). But especially noteworthy is his "Arte pratica di contrappunto dimostrata con esempi di vari autori" (1765-72, three vols.; the examples are taken from the masters of the 16th-18th centuries, and special attention is paid to concertante writing for many voices).

Pape, Johann Heinrich, pianoforte maker, b. July 1, 1789, Sarstedt (near Hanover), d. Feb. 2, 1875, Paris; he went in 1811 to Paris, and worked for a time with Pleyel, but from 1815, on his own account. P. was indefatigable in inventing novelties; he reintroduced the hammer action from above, formerly attempted at various times (by Marius, Hildebrand, Streicher). He made a grand piano of the compass of eight octaves, and won recognition in various ways for his trouble, without, however, obtaining lasting influence for most of his ideas with regard to the improved construction of pianofortes. Only his system of padding the hammers and crossing of strings became generally imitated.

Papier, (1) Louis, able organist, b. Feb. 26, 1829, Leipzig, d. there Feb. 13, 1878, held various posts in that city as organist, finally (from 1869) at St. Thomas's. He was succeeded by W. Rust. P. published some pf. and organ pieces, also part-songs.

(2) Rosa (Paumgartner), distinguished stage and concert singer (a rich mezzo soprano), b. 1858, Baden (near Vienna), in 1881 married the musical critic Dr. Hans Paumgartner. She is Imperial court opera singer, Vienna.

Papillon de la Ferté, in 1777 Intendant of the *ménage-plaisirs* of Louis XVI., inspector of the

"École Royale de Chant" (afterwards the Conservatoire), founded by Breteuil, and chief superintendent of the Opera; but owing to the Revolution, he lost these posts, and also his life (he was guillotined in 1793). After the restoration of the Bourbons (1814), his son, of like name, occupied the post of chief musical intendant.

Papperitz, Benjamin Robert, highly-esteemed teacher of theory, b. Dec. 4, 1826, Pirna (Saxony), studied philology, and took the degree of Dr.Phil. He was active for two years as a teacher, but abandoned this profession and went to Leipzig, in order to devote himself to further, and especially musical, studies, and became a pupil of the Conservatorium (Hauptmann, Richter, Moscheles); and as early as 1851, he occupied the post of teacher of harmony and counterpoint there. In 1868 he was appointed organist of the Nikolaikirche. In both these posts he is still a zealous worker. As a composer he has published songs, choral works à 4 and 8, pieces for organ, and works on theory. In 1882 he was named royal Saxon Professor.

Papritz, Juliane (see ZELTER).

Paque, Guillaume, excellent 'cellist, b. July 24, 1825, Brussels, d. March 2, 1876, London. He was a pupil of Demunck, and, at first, teacher at the Conservatorio, Barcelona, then solo 'cellist at the Royal Theatre, Madrid. From 1863 he lived in London, as member of the Royal Orchestra, and teacher of the 'cello at Dr. Wylde's London Academy of Music.

Paradies (Paradisi), Pietro Domenico, b. 1710, Naples, d. 1792, Venice, a pupil of Porpora; he wrote several operas for Italian stages, and finally, in 1747, *Filonte* for London. He was, as it appears, not successful with the latter work, and lived from that time in London as a pianoforte teacher until, advanced in years, he returned to Italy. His twelve "Sonate di gravicembalo" (pf. sonatas; 2nd ed. 1770), printed about 1754, are interesting. Some of his pieces are to be found in Pauer's "Old Italian Masters." Numerous compositions of P. in manuscript, possibly autographs, are in the FitzWilliam Library.

Paradis, Maria Theresia von, pianist and composer, b. May 15, 1759, Vienna, d. there Feb. 1, 1824, was the daughter of an imperial councillor, and godchild to the Empress Maria Theresia. She became blind at the age of five, and sought and found consolation in music. Her teachers were Richter, Kozeluch (piano-forte), Salieri, Righini (singing), Friberth and Abbé Vogler (composition). In 1784 she made a grand concert tour, and played at the courts of Paris, London, Brussels, Hanover, Berlin, etc. In composing she used a method of notation invented especially for her by a friend. She wrote a melodrama, *Ariadne und Bacchus*; a vaudeville, *Der Schulkandidat*; a funeral ode for Louis XVI., "Deutsches Monument;" a fairy opera, *Rinaldo und Alcina*; all of which

were produced. There appeared in print, pf. sonatas, variations, a trio, and songs. She was also very successful as a teacher of the piano-forte and singing.

Paradisi. (See PARADIES.)

Parallel clangs are the tonics of parallel keys (for example, c major and A minor). P. c. are usually substituted for the principal clangs (tonic, dominant, subdominant) in a system of tonal harmony. *f a c* in A minor is not, however, always to be taken as parallel clang of the subdominant; it can also be the semitone-substitute (Leitonwechselklang) of the tonic; this is always the case in the minor deceptive cadence (*D-F*).

Parallel keys, the term applied to the pair of keys, the one major, the other minor, which have the same signature. If the minor key be constructed with the minor upper-dominant (pure minor), the parallelism of the keys is complete, for they only differ by one note, which varies by the comma syntomon 80:81. (See TONE, DETERMINATION OF.)

(c major) $f \underline{a} \underline{c} \underline{e} \underline{g} \underline{b} \underline{d}$.

(A minor) $\underline{d} \underline{f} \underline{a} \underline{c} \underline{e} \underline{g} \underline{b}$.

($\underline{d} : \underline{d} = 80 : 81$). (Cf. KEY.)

Parallel motion. (See MOVEMENT, KINDS OF.)

Parallels, *Faulty*, are the parallel octaves and parallel fifths which occur in music. Two real parts (not parts of which one is merely a reinforcement of sound of the other) in two successive chords must not be related to each other in the perfect octave or perfect fifth. For example, at (a) the alto moves from *c''* to *a'*, and the bass from *c'* to *a*, the two parts thus forming octave parallels. At (b), the tenor moves

from *b'* to *a'*, the bass from *c'* to *d'*, and thus the parts form fifth parallels. Both kinds are faulty. The prohibition of octave and fifth parallels, as it is accepted nowadays, was evolved from the practice (probably established in England during the 13th and 14th centuries; cf. FAUX-BOURDON) of the earliest contrapuntists five centuries before the germs of harmony had been discovered in physical phenomena; that is to say, parallel movement in octaves and fifths was forbidden, while that in thirds and sixths was allowed to remain. The old contrapuntists disallowed also the succession of two major thirds, whereas the moderns unhesitatingly permit them. As a reason for the prohibition, attention was called to the tritone (*mi contra fa*) which the upper

note of the second third formed with the lower note of the first, $\begin{smallmatrix} a \\ f \end{smallmatrix} \begin{smallmatrix} b \\ g \end{smallmatrix}$ (*relatio non harmonica*).

In fact, parallel major thirds, and still more so, tenths and seventeenth, are no more to be commended than parallel octaves and fifths (twelfths). The tones of our musical instruments are not simple tones, but sounds formed by a series of simple tones (overtones, partial tones); the effect, therefore, of adding the octave is really only a reinforcement of the overtones with even numbers (2, 4, 6, etc.). In like manner by the twelfth, those overtones are reinforced whose number, according to order, is divisible by 3 (3, 6, 9, etc.), and by addition of the seventeenth, those which are divisible by 5 (5, 10, 15, etc.). When the fifth is added, the under octave of the lower tone is produced as a combination tone, and the same with the tenth; the interval, therefore, is merged in the unity of the sound of this lower octave tone. Lastly, by the addition of the third, the double lower octave is produced as a combination tone. (*See COMBINATION TONE.*) With the octave, twelfth, and seventeenth, the upper part becomes wholly merged in the lower part; with the fifth, tenth, or third, of course, less fully, yet still perceptibly so; the interval loses its independence, and is only a reinforcement of the sound of the other. The fault is most glaring with the most easily intelligible interval (the octave). We, therefore, say: real parts should not progress in parallel octaves, twelfths, and major seventeenth, because their independence is endangered; and for a similar reason, parallel fifths and major tenths are to be condemned. But for the very same reason parallels are not faulty, but to be commended as of the best effect, when the part moving in a parallel manner is not to be looked upon as a real part, but only as reinforcing a real one. Hence the constant parallel octaves, fifths, twelfths, tenths, seventeenth, etc., to be found in the secondary stops of an organ (octave and quint stops, tierce, cornet, mixtures, etc.), are fully justified; and so with the usual *doubling in octaves* in all kinds of compositions. In piano-forte music parallel fifths may, therefore, often produce a good effect in a series of full chords. Moreover, P. rising or falling by degrees are the worst; by skip (particularly if there is no note in common) they are more easily tolerated by the ear. Great care must be taken in orchestral writing with the filling-up parts which mark particular accents, not to have parallels of the kind mentioned; for when the filling-up notes follow at brief intervals, the ear may easily mistake them for real parts, especially if very prominent (e.g. in the case of trombones). In the matter of octave and fifth parallels which occur through the breaking-up of parts (*i.e.* the presentation of several parts by means of the harmonic progression of a single one), theorists have brought to light many an error.

The so-called *accent-octaves*, *i.e.* consecutive octaves or fifths on relatively accented beats of the bar, separated by other intervals on the intermediate and unaccented beats, must, generally, not be considered as falling under the prohibition of parallels.

Here in both descending progressions the soprano goes from *e*, not *c*, to *d*. But where there is no such connecting step of a second, the fault is evident:—

Here *g* and *f* (under the *) mark a fourth part, and the octave and fifth parallels are actually taking place. Unessential octaves between a melody and an accompanying chord-figure (used frequently by Mozart) are only considered faulty by pedants. (*Cf.* POLYPHONY BY BREAKING.)

Effect:

When two parts progress by similar motion from any other interval to an octave or fifth, hidden octaves or fifths arise. These must not, however, be considered as faulty; for in that case the music of all the masters would fall under condemnation. That which in the prohibition of the hidden octave seems apparently justifiable, must be otherwise defined (parallel movement in the doubled third of a principal harmony [T, °T, S, °S, D, °D]) is of bad effect in a piece of no more than four parts. *Cf.* the detailed essay by the compiler of this Dictionary in the *Musikalisches Wochenblatt*, 1890.) At the close of compositions in many parts it is often impossible to avoid octave parallels; as, for example, in the progression of two parts from dominant to tonic, where contrary movement is but a thin disguise. Just as a two-part composition usually closes in the octave or unison, which intervals elsewhere are avoided, and thus gives up any distinction between the two parts, so, in a composition of many parts, is to be found a reduction of the number of different parts at the close; from an esthetic point of view, both, indeed, may be justified. If $\begin{smallmatrix} g \\ c \end{smallmatrix} \begin{smallmatrix} f \\ b \end{smallmatrix}$ be good, but $\begin{smallmatrix} f \\ b \end{smallmatrix} \begin{smallmatrix} g \\ c \end{smallmatrix}$ bad, it is not because in the latter a progression is made to a perfect fifth, but because *f*, instead of making a leading-tone progression towards *e*, has made a whole-tone progression towards *g*. In establishing the parallels which a figurative part forms with

itself in consequence of the polyphony resulting from the breaking up of chord into figure, theorists have fallen into the most fallacious arguments. Nearly all the cases supposed to have been discovered in the works of the good composers vanish the moment the figurative part is interpreted in a correct manner. For example (Bach) :

if understood as at (a) would be dreadful; but rightly read, as Bach *must* have imagined the passage, it forms the most harmless sequence (b) :

Faulty parallels are avoided by *contrary movement*, a self-evident means. There are, however, very many cases in which the composer prefers to write parallels rather than weaken the sound of the chords by avoiding them (by leaving out, for instance, the fifth of the second chord). P. are quite permissible, provided the parallel movement be covered by the contrary movement of *other* parts, or provided a *dissonance* in the second chord offer sufficient compensation for the want of independence of the parts which move in a parallel direction. Parallel fifths of this kind are not prominent, and they are far more entitled to be called *hidden* than those which in reality are not parallels (a). Finally

with change of chords from major to minor, or *vice versa*, the effect is better, the fault smaller (b). Parallels rising or falling by interval of a fourth are frequently met with. They are not of bad effect, probably because the ear receives them as crossing parts.

Parallel fifths rising or falling by interval of a third belong, as a rule, to chords which have two sounds in common; the effect of this chord progression is as if the first chord remained, and only the one note, which distinguishes the new from the old chord, was added. One can therefore proceed as in the change of position of the same chord, in which even octave parallels are permitted :

Effect :

Effect :

On this subject cf. Gottfr. Weber's "Tonsetzkunst," IV., p. 52; W. Tappert's "Das Verbot

der Quintenparallelen" (1869); Ambros' "Zur Lehre vom Quintenverbote" (without date), and Rischbieter's "Die verdeckten Quinten" (1882).

Paramēse, Paranēte, Parphypate. (See GREEK MUSIC.)

Paraphony (Gk.). Later antiquity described the fifth, fourth, twelfth, and eleventh as paraphonic ("near-sounding") intervals; on the other hand, the term antiphonic ("counter-sound") was applied to the octave and double-octave.

Pareja. (See RAMOS.)

Parent, Charlotte Francès Hortense, b. March 22, 1837, London; from 1853-57 pupil of Mme. Farrenc at the Paris Conservatoire; a gifted pianist and proprietress of a musical institution with seminary (École préparatoire au professorat) at Paris (1882). She has published a pianoforte Method (1872), also a series of supplementary exercise-books and educational primers.

Parepa-Rosa, Madame Euphrosyne (really Parepa de Boyescu, in 1867 married the impresario Carl Rosa), opera singer, b. May 7, 1836, Edinburgh, the daughter of a Walachian Boyar and the vocalist Seguin, d. Jan. 21, 1874, London. She made her first appearance at the age of sixteen at Malta, and sang with ever-increasing success on Italian stages; also at Madrid and Lisbon; she first went to London in 1857, and, with the exception of some concert tours to America, Germany, etc., remained there. Madame P. was equally distinguished as a dramatic and as an oratorio singer.

Parish-Alvars, Elias, famous harp virtuoso, b. Feb. 28, 1808, West Teignmouth, England, d. Jan. 25, 1849, Vienna; he was a pupil of Dizi, Labarre, and Bochsá, and not only travelled through Europe, but also in the East (1838-42). In 1847 he settled in Vienna, where he had already lived from 1836-38, and was named imperial chamber musician. P. was also an able pianist. His compositions rank among the best harp musical literature:—two harp concertos, a concertino for two harps and orchestra, many characteristic pieces, fantasias, romances, etc., of which should be mentioned the "Voyage d'un harpiste en Orient" (Greek, Bulgarian, Turkish, and other melodies).

Parisini, Federico, b. Dec. 4, 1825, Bologna, d. there Jan. 4, 1891, pupil of the Liceo Rossini of that city, and, later on, teacher of counterpoint, etc., at the same institution, also director of an institution for Church music. After the death of G. Gaspari, he became librarian of the "Liceo filarmonico," and from 1878-90 president of the Accademia filarmonica. P. was a worthy writer on music and a Church composer.

Parlando (*parlante*; Ital., "speaking"), indicates a mode of singing of almost recitative character, with easy production of tone.

Parlow, Albert, b. Jan. 1, 1822, Torgelow (near Uckeründe), d. June 27, 1888, Wiesbaden, was military bandmaster, and, finally, conductor of a large concert orchestra at Hamburg.

Parody (Gk., "parallel song"), an imitation, in caricature fashion, of a work of art; the form is, indeed, retained, whereas in the travesty the ideas are clothed afresh; between the two, however, there is no strict line of demarcation. The composers of the 16th century used the word P. in another sense, and named, for instance, a Mass which was worked out on the "tenor" of a well-known motet, a "Missa parodia."

Parratt, Sir Walter, b. Feb. 10, 1841, Huddersfield, sang in the church at seven years of age, and played the Wohltemperirtes Klavier by heart at ten. At the early age of eleven he became organist of a suburban church, from which post he rose by degrees to be organist of St. George's Chapel, Windsor (1882). In 1873 he took the Mus.Bac. degree at Oxford, and in 1883 was appointed teacher of the organ at the Royal College of Music. P. is an able church composer; he has written music to Æschylus' *Agamemnon* and *Orestes*, and is also active as an author (contributor to Grove's "Dictionary of Music"). P. was knighted in 1892.

Parry, (1) John, Welsh Bard, native of Ruabon (North Wales), and domestic harper of Sir Watkin Williams Wynne at Wynnstay, d. 1782. He published: "Ancient British Music of the Cimbro-Britons" (1742; Welsh melodies), besides "A Collection of Welsh, English, and Scotch Airs" (1761), and "Cambrian Harmony" (1781, collection of traditional relics of the old Welsh songs of the Bards).

(2) **John**, Welsh Bard, b. 1776, Denbigh (North Wales), d. April 8, 1851, London; he was at first clarinetist, afterwards bandmaster, of the county militia, but settled in London (1807) as teacher of the flageolet, then in vogue. He was for many years conductor of the Congresses of Welsh Bards ("Cymmrodorion," or "Eisteddvodau"), and in 1821 was named "Bardd Alaw" (Master of Song). The number of his published compositions is great, and includes pieces for harp, and for pianoforte, pantomimes, music for the stage, operas, glees,

songs, duets, a book of Welsh melodies, with English translation of words; but his principal work is "The Welsh Harp," a comprehensive collection of Welsh melodies, which almost reproduces the three-volume collection of Jones, together with an historical introduction on the harp and music in Wales. Lastly are to be named a small theoretical work, "Il Puntello; or, The Supporter" (elementary instruction-book), and an "Account of the Royal Musical Festival held in Westminster Abbey, 1834."

(3) **John Orlando**, son of the former, b. Jan. 3, 1810, London, d. Feb. 20, 1879, East Molesey; he was an excellent harpist, pianist, and singer. He composed comic songs, also romances, etc. He took part in German Reed's Entertainment from 1860-69.

(4) **Joseph**, gifted composer, b. May 21, 1841, Merthyr Tydvil (Wales), as son of a poor labouring man. He emigrated with his parents to America, but returned home and won prizes for his songs at several Eisteddfods. At last he was "discovered" by Brinley Richards, and became (1868) a pupil of the Royal Academy of Music, where he highly distinguished himself. In 1872 he was named Professor of Music at the University College, Aberystwith, and took his degree of Mus.Bac. at Cambridge, and that of Mus.Doc. in 1878. Among the principal works of P. are to be named an opera, *Blodwen*; the oratorios *Emanuel*, *Saul of Tarsus* (1892); the cantata *Nebuchadnezzar* (1884), and an overture, "The Prodigal Son."

(5) **Charles Hubert Hastings**, composer, b. Feb. 27, 1848, London, studied at Eton and Oxford, took his degrees of Mus. Bac., 1870, of Mus. Doc., 1883, Cambridge; 1884, Oxford. His teachers in music were: Elvey, H. H. Pier-son at Stuttgart, and Macfarren and Dann-reuther, London. He was appointed Director of the Royal College of Music on Sir George Grove's retirement in 1894. His principal works are:—*Prometheus Unbound* (produced at Gloucester Festival, 1880); music to the "Birds" of Aristophanes; a "Modern Suite" (1886); an overture, "Guillem de Cabestanh;" a pf. concerto in F sharp, a nonet for wind instruments, quintet for strings in E flat, pf. quartet in A minor and trio in E minor, sonata for pf. and 'cello in A, partita for pf. and violin in D minor, fantasia and fugue for organ, duet for two pianofortes in E minor, two pf. sonatas (B flat, D minor), and "Popular Tunes of the British Isles" (Piano Duet). Also symphonies in G (Birmingham, 1882); in F (Cambridge, 1883; also in a remodelled form 1887); oratorios, *Judith* (Birmingham, 1888), *King Saul* (Birmingham, 1894); psalm, "De Profundis" (Gloucester, 1891), etc.

Parsons, Albert Ross, b. Sept. 16, 1847, Sandusky (Ohio), studied at Leipzig Conservatorium from 1867-69, and from 1870-71 under Tausig and Kullak, Berlin. He is a composer of part-songs, also a writer on music (translation

of Wagner's "Beethoven"), and lives in New York esteemed as pianist, organist, and teacher.

Part-books are the separately-printed parts of the different voices of compositions in several parts. Modern works are always printed in score and in parts. Up to the 17th century there were scarcely any scores printed, but, instead of the part-books, only the *chorus-book*, i.e. all the voices were written successively on two pages, lying opposite to one another, in the order: Soprano | Tenor
Alto | Bass. The chorus-books were printed in fairly large type, so that the singers could read off the four parts at the same time from the chorus-book, without having to bend too much over it. On the other hand, the P., especially of the 16th century, were frequently printed with very small notes. Jaques Moderne at Lyons, from 1538-39, printed the chorus-books in small oblong 4to, quite in a way of his own, for he arranged the four voices, so that the singers in pairs had to sit opposite to each other. (See the facsimile in the *Monatsh. f. Musik-Gesch.*, V. 116.)

Parte (Ital.), movement of a work; also voice (part), principal part. Hence *colla p.* denotes that the accompaniment of a solo part is to follow the singer or player when the rendering is free.

Partial tones. (See OVERTONES.)

Participatum systema is the system of equal temperament, so called because in it one note has to represent several of the pure system, and these, therefore, have, as it were, a share, participate, in it. (Cf. TEMPERAMENT.)

Partie (*Partita*). (See SUITE.)

Partimento (Ital.), figured bass part, continuo.

Partitino (Ital.), "auxiliary score," i.e. the small extra score, the instruments added to certain scores.

Partition (Fr.), **Partitur** (Ger.), **Partitura** (Ital.), a score.

Part-song. In its widest sense, any song-like vocal composition, with or without accompaniment, for more than one voice. In the more restricted and generally accepted sense, an unaccompanied choral composition in at least three parts.

Pas (Fr.), step, especially in dancing (*P. de deux*, "dance-duet"), but also in military marching (*P. redoublé*, "Quick march").

Pasch, Oskar, b. March 28, 1844, Frankfurt-a.-d.-O., pupil of the Royal Institution for Church Music and of the Academy for Composition, Berlin; in 1874 he gained the Michael Beer prize (Psalm 130 for soli, chorus, and orchestra). In 1884 he became royal musical director, and lives in Berlin as organist and teacher of singing in schools. P. has composed a symphony, motets, psalms, oratorios, and several vaudevilles.

Pascucci, Giovanni Cesare, b. Feb. 28, 1841, Rome, first made a name through some comic operas (*Il pronosticatore fanatico*, Rome, 1877; *La vedova scaltra*, 1880, and *Ersilia*, 1882), but afterwards through a large number of operettas (up to 1890, fifteen of them) in Roman dialect.

Pasdeloup, Jules Étienne, the meritorious Paris conductor, b. Sept. 15, 1819, Paris, d. Aug. 13, 1887, Fontainebleau, son of a musician, entered the Conservatoire in 1829, distinguished himself in the pianoforte classes of Laurent and Zimmermann; in 1841 he became *répétiteur* of a solfège class, and in 1847 was appointed teacher of a pianoforte class, but resigned in 1850. In 1855 he was named "professeur agrégé" of a vocal ensemble class, which he conducted until 1868. He won his laurels, however, on another field. His first creation, by means of his talent as conductor, was the "Société des jeunes artistes du Conservatoire" (1851), which gave classical symphony concerts in the "Salle Herz," and from these sprang the "Concerts populaires de musique classique," for which P. engaged the "Cirque d'hiver" (1861), and, for the first time, gave the Parisians an opportunity of hearing good music at cheap prices. The undertaking prospered at once, and for many years maintained its reputation. The Pasdeloup Concerts were not, however, devoted exclusively to the masters of the classic school, but they also encouraged the new French School (Saint-Saëns, Massenet, Bizet, Lalo, etc.), and introduced for the first time to the Parisians the best foreign novelties. P. was for a time conductor of a section of the Paris male choral societies, and from 1868-69, director of the Théâtre Lyrique, but was not successful; also his attempt to establish regular choral concerts in the new Salle Athénée (1866) failed. He, therefore, confined his attention, subsequently, to the popular concerts; but these were gradually driven off the field by the rival enterprises of Colonne and Lamoureux, and came to an end in 1884 (a musical festival in P.'s honour at the Trocadéro brought him in about 100,000 francs). After Godard had fruitlessly endeavoured to resuscitate the "Concerts populaires," P. himself made yet another vain attempt in 1886, and did not long survive his failure.

Pasháloff, Victor Nikándrowitsch, b. April 18, 1841, Saratoff, d. Feb. 28, 1885, Kasan (Russia); he composed songs which obtained widespread popularity in Russia.

Pasquali, Nicolò, Italian composer, settled in Edinburgh 1740, and published, besides an opera and airs, a "Dirge on Romeo and Juliet," also two sets of violin sonatas with bass; a set for two violins, tenor (viola), and continuo; twelve "Overtures" for horns; and a Method ("Thorough-bass made Easy," 1757). P. died in 1757.

Pasqué, b. Sept. 3, 1821, Cologne, d. March

20, 1892, Alsbach (Bergstrasse); he was trained at the Paris Conservatoire as a singer (baritone), and made his *début* at Mayence, 1844. He was subsequently engaged at Darmstadt until 1855, in 1856 as opera *régisseur* at Weimar, in 1872 theatre director, Darmstadt; in 1874 he received his pension. P. wrote a great number of opera libretti, also novels and tales, besides a "Geschichte des Theaters zu Darmstadt 1559-1710" (1852), "Frankfurter Musik- und Theatergeschichte" (1872), "Aus dem Reich der Töne," etc.

Pasquini, Bernardo, one of the most famous Italian organists, b. Dec. 8, 1637, Massa di Valnevola (Tuscany), pupil of Cesti, was for many years organist of Santa Maria Maggiore at Rome, and, in addition, chamber-musician to Prince Borghese; he died Nov. 22, 1710, Rome. Durante and Gasparini were among his pupils. P. wrote several operas, and some of his clavier pieces have been preserved in the "Toccaten et suites pour le clavecin de MM. P., Paglietti et Gaspard de Kerle" (1704). A sonata of his is printed in Pauer's "Old Italian Composers." Organ pieces, and a treatise on counterpoint remained in manuscript.

Passacaglia, *Passacaglio*; French, *Passacaille*; an old Spanish or Italian dance in vogue during the last century in France. As a movement in suites, or as an independent instrumental piece (especially for organ or clavier), the P. scarcely differs from the chaconne. Like the latter, it is, for the most part, in triple time, is of stately movement, and has an ostinato; the definitions of various ancient authors contradict one another. A model P. is the one written by Bach for the organ, which has the following ostinato:—

Passage (Ger. *Gang*), a rapidly-played figure (varying as to extent) evolved from a motive. Two kinds of Ps. are distinguished: one consists of a chord passage (arpeggio) formed from chords broken up, while the other, corresponding better to the meaning of the word, of a scale passage running through the degrees of the scale; the majority of passages, however, are compounded of both elements.

Passamezzo, an old Italian dance in even time, and, according to Tabourot's "Orchésographie," less solemn than a Pavane, and played in faster time. The wildest conjectures have been started respecting the meaning of the word ("across the-room," "a step and a half," etc.). The diminution stroke (*alla breve* stroke) through the time signature (C), (C) in the theory of measured music was called *medium*—really *per medium*, Ital. *mezzo*; *passo a mezzo* simply means therefore "dance in hurried time."

Passepied (Fr.; Eng. *Paspy*), an old French round dance. According to tradition, it originated in Brittany, and was introduced into the ballet in the time of Louis XIV. The P. is in triple time, and of lively movement, evidently allied to the old Viennese quick waltz (Dreher). In the suite it was placed among the so-called "Intermezzi," i.e. the dances which did not form an essential part of the suite, and which were generally inserted between the saraband and the gigue.

Passing Notes are all notes which do not represent a clang; but are only inserted as smooth, melodic, intermediate members between harmonic notes. For example, in the following scale, the notes marked x are P. N.:—

When they fall on accented parts of the bar, they become free appoggiatura notes (C. G. P. Grädener's "*schwerer Durchgang*" ["accented passing note"]):—

The term *changing note*, for formations of the latter kind, is often employed, but does not denote them with sufficient clearness. That word should be reserved exclusively for the auxiliary notes, which only alternate in passing with a principal note, and thus change places with it:—

Passion (*Passio Domini nostri Jesu Christi*). Dramatic representations of the story of the sufferings of Christ sprang up in the early Middle Ages, about the 8th century; in the "Oberammergau Passion Play," they have continued up to the present day. (See MYSTERIES.) In them music was only occasionally employed ("Song of the Angels," etc.). Music in connection with the P. really dates from the Gregorian chorale; the ritual prescribed the performance of the P. according to the gospels during Holy Week; the narrative texts, and the sayings of Christ, of the disciples, of the high priest, etc., were at an early period sung by different singers; and of this, probably, the Passion Play was the direct outcome. When Filippo Neri started his sacred performances (see ORATORIO), he gave birth to a kind of sacred opera; for the pieces were through-composed (*durchkomponiert*) in the *stilo rappresentativo*, and performed in costume. On the

other hand, Carissimi abandoned the dramatic representation and reintroduced the narrator; and from that time there were two separate forms—the allegorical oratorio and the biblical oratorio, of which latter the P. is a species. The difference between such Ps. and the Christmas oratorio of Bach is only a matter of contents; the form is the same: what, however, distinguishes the new (Protestant) P. from the old biblical oratorios is the introduction into the former of the subjective element of pious reflection. Bartholomäus Gese probably took the first step, for he opened the P. with a chorus ("Erhebet eure Herzen," etc.) and concluded it with a chorus of thanksgiving ("Dank sei dem Herrn," etc.). Schütz in his Easter oratorio adopted this novelty, and added a few new musical moments (the "Victoria!" of the Evangelist, and the chorus à 6 of the disciples in the middle of the work), etc. Johann Sebastiani, who is generally spoken of as the creator of the new P., added chorales, the melodies of which were sung by the congregation "to awaken greater devotion," while the harmonies were played by instruments. The form was brought to completion finally by J. S. Bach, who inserted arias and choruses (of the so-called "Zionsgemeinde.")

Passione (Ital.), passion; *con p.* (*appassionato*), with passion.

Pasta, Giuditta (Negri, married P.), famous singer, b. April 9, 1798, Como, d. April 1, 1865, at her villa on Lake Como. She was trained by Asioli at Milan Conservatorio, made her *début* in 1815 on the Italian stage, and appeared also in 1816 at Paris, but without attracting notice. She and her husband, the tenor singer P., were (1817) engaged in London at a low salary; and here also she met with no success. Only after renewed and earnest study in Italy under Scappa did she attract attention, and in 1822 appeared as a shining star in the Paris firmament. Like so many vocalists, she divided her best years between London and Paris. In 1829 she built herself a villa on Lake Como, and after that rarely appeared in public. When she sang again in London in 1837, her voice was already ruined; she sang, nevertheless, at Petersburg in 1840, and at London, even in 1850. Her voice extended from (small) *a* to thrice-accented *a'''*, but, even in her prime, it showed signs of unevenness and forcing. Her strong points were intensity and truth of expression.

Pasticcio (Ital. "*pasty*") is the term for the "Flickopern" (patch-operas), pseudo-novelties which were formerly so much in vogue on Italian opera stages (also in London, Paris, Petersburg, Dresden, etc.). They were patched together, consisting of arias, etc., from older works by various composers, with new words. (For what happened to Gluck in London in 1736 with a P. from his previous operas, see GLUCK.)

Pastorale (Fr. *Pastourelle*), really "pastoral play," i.e. idyll, country scene. It occurs first as the name of a small stage play; and, indeed, before the invention of the *stilo rappresentivo* (see OPERA), at a time when the speeches of single individuals were sung in madrigal fashion in several parts (during the 15th and 16th centuries). The name was used later on for the smaller idyllic opera *genre*. Instrumental pieces, expressing the music-making of shepherds on their pipes, of simple rhythm, melody, and modulation, and as a rule in triple time, are likewise called P.

Pastorita. (See NACHTHORN.)

Pastou, Étienne Jean Baptiste, teacher of singing, b. May 26, 1784, Vigan (Gard), d. Oct. 8, 1851, Ternes (near Paris); he published "École de la lyre harmonique" (1821), a practical method of teaching ensemble singing, which obtained for him the post of professor at the Conservatoire (1836). He likewise conducted a singing school of his own from 1819.

Patetico (Ital.), *pathétique* (Fr.), pathetic, with passion, with sharply-marked rhythm, and with strong accents.

Patey, Janet Monach (*née* Whytock), eminent contralto vocalist, b. May 1, 1842, London, d. Feb. 28, 1894, Sheffield, during a farewell concert tour. She was a pupil of J. Wass, and afterwards of Pinsuti and Mrs. Sims Reeves, soon joined Leslie's Choir as an amateur, taking up music professionally in 1865, when she was engaged by Mr. Lemmens for a provincial tour, and won immediate popularity. The following year she married J. G. Patey, in 1871 travelled through America with a concert party, sang at Paris in 1875, and later on in Australia. She was unrivalled in oratorio, her style being remarkable for refinement and earnest feeling.

Paton, Mary Anna. (See WOOD.)

Patti, (1) Carlotta, b. 1840, Florence, d. June 27, 1889, Paris, daughter of the tenor singer Salvatore P.; she studied at first piano-forte under H. Herz, at Paris, but afterwards turned her attention to singing, and in 1861 made her *début* in New York, where she received an engagement for the stage, which, however, she soon gave up, as her lameness was detrimental to her presence. She made numerous concert tours through Europe and America, and acquired great reputation as a coloratura singer. She married the cellist Demunck in 1879.

(2) Adelina (Adela Juana Maria), sister of the former, one of the most remarkable representatives of *bel canto* in our days, b. Feb. 10, 1843, Madrid. She was trained by M. Strakosch, the husband of her sister Amelia, and made her *début* at New York (where her family had resided for years) in the rôle of Lucia (1859). Her reputation was solidly established when she appeared in London in

1861, and her tours to Paris, Petersburg, Vienna, Italy, etc., were, and still are, triumphal progresses. The *diva* is a coloratura singer of the first rank, and dazzles by the lovely quality of her voice, which, for the rest, is not over-strong. In 1868 she married the Marquis Henri de Caux, equerry to Napoleon III., but was afterwards divorced, and in 1886 she married the tenor singer Niccolini, who for years had accompanied her on her tours.

Pätzold, Hermann, b. Aug. 15, 1824, Neudorf (Silesia), d. Feb. 6, 1861, Königsberg, as conductor of the "Singakademie" during a performance of *Elijah*. He wrote a great number of vocal and pianoforte compositions, also the music to *Käthen von Heilbronn*.

Pauer, (1) Ernst, excellent pianist, and editor of classical pianoforte works, b. Dec. 21, 1826, Vienna, son of the Protestant Superintendent-General, was a pupil of Dirzka, W. A. Mozart (son), S. Sechter, and studied in Munich from 1845-47 under Franz Lachner, received in 1847 an appointment as musical director at Mayence, and wrote there three operas—*Don Riego* (1850), *Die rote Maske* (1851, performed), and *Die Brautschau* (1861), all of which were produced at Mannheim. In 1851 he appeared in London as a pianist, with success, where he settled definitely. Since 1861 he has given historical pianoforte recitals with detailed analytical programmes, has also played many times on the Continent, and in 1866 was named Imperial Austrian Court pianist. The lectures which he gave from 1870 on the history of pianoforte music were received with general favour. In 1859 P. succeeded Cipriani Potter as professor of the pianoforte at the Royal Academy of Music, in 1876 became principal teacher of the pianoforte at the National Training School for Music, since 1883 at the Royal College of Music, and in 1878 was made a member of the Board of Musical Studies at Cambridge University, and in the following year, examiner. P. has rendered special service to the cause of music by many publications of classical harpsichord and pianoforte music (published, principally, by Angener & Co., London):—"Alte Klaviermusik," "Alte Meister," "Old English Composers for the Virginals and Harpsichord," "Old German Composers," "Old French Composers," "Old Italian Composers," a popular edition of the classics from Bach to Schumann, Children's Albums, "The Pianoforte Library" (72 Nos.), "Sunday Music," several educational works:—"Culture of the Left Hand," "School of Technique and Expression," "Training School for the Pianoforte," "50 Celebrated Concert Studies," "New Gradus ad Parnassum," "Primer of the Pianoforte," and the pamphlets "Elements of the Beautiful in Music" (1876), and "Primer of Musical Forms" (1878), "The Pianist's Dictionary" (1895). He has also composed chamber music and orchestral works,

and arranged 42 overtures, and Beethoven's and Schumann's symphonies, for pf. (solo and duet), besides some for two pfs. (eight hands), also the orchestral works of Mendelssohn for pf. (four and eight hands).

His son (2) **Max**, b. Oct. 31, 1866, London, studied with his father up to 1881, and for theory, under Vincenz Lachner at Karlsruhe, until 1885. After some first concert tours he settled in London, but in 1887 responded to a call, and went as professor to the Cologne Conservatorium, where he quickly gained renown as a distinguished pianist and an excellent teacher. P. was named "Kammervirtuosus" (1893) by the Grand Duke of Hesse. He has made his *début* as a composer with some pf. pieces. (Cf. PAUR.)

Paul, Oscar, writer on music, b. April 8, 1836, Freiwaldau (Silesia), attended the Gymnasium at Görlitz, then studied theology at Leipzig from 1858, but soon turned his attention to music, and entered the Leipzig Conservatorium, and received private instruction from Plaidy in pianoforte playing, and from Hauptmann and Richter in theory. In 1860 he took the degree of Dr. Phil., lived for some years in various places, especially in Cologne. With a treatise on "Die absolute Harmonik der Griechen" (printed), he qualified himself at Leipzig University (1866) as a lecturer on music. In 1869 he was appointed teacher at the Conservatorium there, and in 1872, after the publication of his translation of the five books "De Musica" of Boetius, occasional professor at the University. As a theorist, P. belongs to the Hauptmann School; he has published Hauptmann's posthumous "Lehre von der Harmonik" (1868), also his own "Lehrbuch der Harmonik" (1880). P. has also written a "Geschichte des Klaviers" (1869), and a "Handlexicon der Tonkunst" (1873). He also founded two musical papers, the *Tonhalle* (1869), and the *Musikalisches Wochenblatt* (1870), but withdrew from the first after a year, and from the second, already after three months. At the Vienna Exhibition of 1873 P. represented the German Empire as juror and general reporter of the musical section, and in the summer of 1878 he was elected expert of the Imperial Patent Office.

Paumann (also written, but incorrectly, Paulmann, Baumann), **Konrad**, b. about 1410, Nuremberg (born blind), and d., laden with honours, Jan. 25, 1473, Munich. He is the author of the oldest organ book which has been handed down to us—"Fundamentum Organisandi" (1452, pieces for practice with some preambles, and various compositions partly by other composers), which F. W. Arnold published in 1867 in the second annual issue of Chrysander's "Jahrbücher," together with some other manuscript pieces found at Wernigerode (likewise printed by Arnold). Virdung in the "Musica

getuscht" (1511), and Agricola in the "Musica Instrumentalis" (1529), ascribe to P. the invention of German Lute Tablature ("die Alphabetische Tabulatur," to quote the words of Agricola), but without authority—a mere report. Anyhow, no one would venture to ascribe to him the Tablature value signs. (*Compare* TABLATURE.) A Lied à 3, "Weiblich Figur," in the Munich "Liederbuch" (Mus. MSS., 3232 in 12°), and, in an organ Tablature book of the Munich Royal Library recently acquired from the Carthusian Monastery of Buxheim, a series of organ pieces—or rather organ studies—have been discovered.

Paumgartner-Papier. (*See* PAPIER, 2.)

Paur, Emil, b. Aug. 29, 1855, Czernowitz (Bukowina), pupil of the Vienna Conservatorium, excellent pianist and violinist, capellmeister at Cassel (1876), Königsberg, 1880 principal court capellmeister and conductor of the subscription concerts at Mannheim, 1891 at the Leipzig Stadt-Theater, 1893 successor to Nikisch as conductor of the symphony concerts, Boston. (*Cf.* PAUER.)

Pausa (Ital.), **Pause** (Fr. and Ger.). A rest. In French the term *pause* is applied especially to a bar rest. (*Cf.* RESTS.)

Pauwels, Jean Engelbert, gifted composer, b. Nov. 26, 1768, Brussels, d. there June 3, 1804; he was educated in that city, but went to Paris in 1788, and still studied under Le Sueur; he was also violinist at the Italian Opera. But in 1790 he followed an actress to Strassburg, and remained there for some time as theatre capellmeister. In 1791 he again went to Brussels, and appeared as a violinist with a concerto of his own composition, and was engaged as solo violinist at the opera; in 1794 he became conductor at the opera. He established regular concerts remarkable for technical excellence, and thereby obtained high reputation. Of his compositions three operas were produced at Brussels. He also published at Paris a violin concerto, a horn concerto, six violin duets, three quartets for strings, etc.

Pavane (Padovana, Paduana), an old dance of Italian origin (from Padua), stately in movement, and written in binary time, which at a later period attained great popularity all over Europe. Owing to the second *a*, the derivation of the word from *pavo* (peacock), is untenable, and may be looked upon as one of the numerous horrible etymologies of the 17th and 18th centuries. Besides, already in 1603, Bésard ("Thesaurus Harmonicus") explained that P. meant quite the same as Paduana. The P. formed a principal element of the dance literature (vocal and instrumental) of the 16th century, but gradually disappeared in the 17th. It is the old and universally popular round dance (Reigen), to which generally followed a quicker "Nachtanz" in triple time (Proportz); hence

the regular combination of P. and Gaillarde (Saltarello, etc.).

Pavesi, Stefano, favourite Italian opera composer, b. Jan. 22, 1779, Casaleto Vaprio (Cremona), d. July 28, 1850, Crema, pupil of the Conservatorio della Pietà at Naples; from 1818 until his death he was maestro di cappella of Crema Cathedral, but from 1826–30, for six months in every year, conductor of a theatre at Vienna. He wrote over sixty operas, mostly for Venice, Naples, and Milan, of which *Ser Marc Antonio* (1810) and *La Donna Bianca d'Avenello* (1830) gained the most success.

Pax, Karl Eduard, b. March 17, 1802, Glogau, d. Dec. 28, 1867, as organist of the "Chariteekirche," Berlin; he was a pupil of the Royal Institute for church music there, and made himself known by songs, part-songs, also instructive pianoforte pieces.

Payer, Hieronymus, composer, b. Feb. 15, 1787, Meidling, near Vienna, d. Sept. 1845, Wiedburg, near Vienna; he was at first organist in his native village, afterwards capellmeister of the Theatre An-der-Wien, in 1818 theatre capellmeister at Amsterdam. He made concert tours to Paris and other places, performing on the physharmonika, and was finally again conductor at Vienna. P. composed several operas for Vienna and Amsterdam, and published pianoforte trios, a pf. concertino, several pf. solo pieces, organ fugues and concertos, Masses, motets, etc.

Peace, Albert Lister, distinguished English organist, b. 1845, Huddersfield. As a child he displayed wonderful gifts, and already, at the age of nine, became organist at Holmfirth, 1866 at Trinity Church, Glasgow, and for some years past has been organist of Glasgow Cathedral. He graduated as Bachelor in 1870, and in 1875 as Doctor, of Music at Oxford.

Pearsall, Robert Lucas, of Willsbridge, English musical amateur, b. March 14, 1795, Clifton, d. Aug. 5, 1856, after residing alternately at Mayence, Carlsruhe, London, etc., at the castle Wartensee on Lake Constance. He wrote part-songs à 4, madrigals à 4–10, a "Katholisches Gesangbuch" (1863), and a pamphlet in German on the English madrigal composers, etc.

Pearson. (*See* PIERSON.)

Pedal Coupler. (*See* COUPLER.)

Pedal Point (Ger. *Orgelpunkt*; Fr. *Point d'orgue*) is the name given to a prolonged bass note, over which there are frequent changes of harmony. It occurs especially towards the close of a composition where the P. P., as a rule, appears on the fifth of the key, and usually commences with a chord of six-four. There is early mention of this kind of P. P. Franco of Cologne (12th–13th century), in his "Ars Cantus Mensuralis" (Gerbert, "Script." III.;

Coussemaker, "Script." I.) writes: "usque ad notam penultimam, ubi non attenditur talis mensura, sed magis est ibi organicus punctus" (Ch. XI.). *Organicus punctus* was then the name given to a note of indefinitely long value, as in the Organum (q.v.) of the 12th century, which consisted of florid counterpoint over a tenor *cantus firmus*, the notes of which were marked as *Longæ*; these *Longæ*, however, varied considerably, and were, as a rule, much longer than their nominal value, which was not fixed, but depended entirely on the counterpoint, which, of course, the singer of the tenor part had before him (likewise the player; for probably the old Organum was accompanied by the organ). For a P. P. to be of good effect it must be clear as to tonality both at the beginning and at the end, whereas in the middle the most extraneous harmonies may be introduced. Its esthetic import is that of a delay of the consonance of the major chord of the bass note, i.e. it is practically the same as that of the chord of six-four on the dominant, which, indeed, must be looked upon as the germ of the P. P.

Pedalflügel (Ger.), a grand pianoforte placed on a box which contains a projecting pedal-board of organ compass, with set of strings belonging to it (contra-c to [small] d.). The P. is useful as an exercise for organ-playing. Gounod has written a suite concertante for P. with orchestra, likewise a fantasia on the Russian national anthem (1887, for Madame Palicot).

Pedal harp. (See HARP.)

Pedals (abbr. *Ped.*; seldom *P.*), (1) in the organ, the keys played by the feet, with the compass C'—d', at the most e' or f'. This pedal-board was invented about 1325 in Germany. (Cf. ORGAN.)

(2) In the pianoforte either a keyboard for the feet, as in the organ (see PEDALFLÜGEL); or, as a rule, the two actions worked by the feet, one of which (the right pedal, the loud pedal, *Fortezug*) raises the dampers from the strings, thereby not only enabling the notes to continue sounding, but also to be reinforced by the sympathetic tones of related-strings. In notation the use of this pedal is expressed by *Ped.* . . . and the removal of the foot from it by * (both signs, unfortunately, nearly always doubtful and misleading). The correct use of the loud P. in pianoforte playing is difficult to learn; it is best to look upon it, not as a means of strengthening the tone, but as a means of damping it, i.e. the dampers should generally be raised, so that the tone (even in *pianissimo*) be presented in all its fullness, and the sympathetic vibration of strings only prevented by timely application of the dampers; when, however, a short tone is required no use must be made of the loud pedal. In figurate passages in the bass, especially those moving by

progression of a second, the loud pedal should not be used. The principal moments for the dampers (raising the point of the foot) are the introductions of new harmonies; the sign for the dampers (*) is therefore generally placed under the notes which fall on the accent (down-beat). (Cf. the writings relative to this subject of L. Köhler ["Der Klavierpedalzug"] and Hans Schmid ["Das Klavierpedal"], also Riemann's "Klavierschule," III. Heft 5.) The left pedal of a grand pianoforte is the "shift" ("Verschiebung"), by means of which the keyboard and hammers are moved a little to the right, so that the latter touch only one string; the tone becomes considerably weaker and harp-like in effect. It is altogether wrong to put down the soft pedal whenever *piano* is marked; it must rather be reserved for special effects, or for the last shading off of a *pianissimo*. On the other hand, the use of the soft pedal in moderately loud playing is occasionally of excellent effect. In pianinos the left pedal generally acts on a damping apparatus, which prevents the strings from making vibrations of great extent; in rare cases it produces a shifting of the hammer-mechanism (not of the keyboard). For the clavier a great number of pedals were at one time used, setting into action all kinds of toy-mechanism; for example, the "Pantalonzug," the *Feu de buffle*, etc. (See PIANOFORTE.) Also within modern times attempts have been made to construct special kinds of pedal, among which Debain's "Prolongement" (sound-prolonging P.) occupies the foremost place: this allows a note or chord, whilst its respective P. is held down, to continue sounding at pleasure, while other tones remain dependent upon the dampers (1874, improved by Steinway); also Ed. Zachariä's "Kunstpedal" (four treadles enable the player, at pleasure, to remove the dampers from the following eight sections of the set of strings:—*2A—E*; *F—B*; *c—e*; *f—a*; *b flat—d*¹; *c*¹ *flat—g*¹; *a*¹ *flat—c*²; *c*² *sharp—e*²). (3) In the harp (q.v.) the seven treadles which shorten the strings, i.e. raise their pitch.

Pedals, Composition. A system of mechanism in which the sliders are acted upon by a set of pedals, producing a series of combinations of the stops in the organ.

Pedrotti, Carlo, b. Nov. 12, 1817, Verona, d. there, by his own hand, Oct. 16, 1893, pupil of Domenico Foroni, produced in 1840 an opera at Verona, *Lina*, to the success of which he owed his appointment as conductor of the Italian Opera at Amsterdam (1840-1845). After his departure from Amsterdam he lived for some years at Verona, devoting himself to composition only. From 1869 he was maestro of the Royal Theatre, Turin; conductor of the Popular Concerts and director of the Liceo Musicale; also of a new School of Counterpoint. P. produced a large

number of operas: *Clara del Mainland* (Verona, 1840), *Matilde* (Amsterdam, 1841), *La figlia dell'arciere* (1844, Amsterdam), *Romea di Monforte* (Verona, 1846), *Fiorina* (1851), *Il perrucchiere della reggenza* (1852, Verona), *Gelmira* (1853), *Genoveffa* (1854, La Scala, Milan), *Tutti in maschera* (1856 in Verona and 1869 in Paris in the Théâtre Athénée), *Isabella d'Arragona* (1859, Turin), *La guerra in quattro* (1861, Milan), *Mazeppa* (1861, Bologna), *Marion de Lorme* (1865, Trieste), *Il favorito* (1870, Turin), *Olema* (1873, Milan). P. was highly esteemed in Italy.

Pegli (Ital.), *per gli* (for the).

Pegs, the wooden pins in the neck of stringed instruments on which the strings are fastened, and by the turning of which the strings are tuned; the pegs must fit in pretty tightly, so that they may be able to resist the tension of the strings, and not get loose. In guitars, etc., pegs have been introduced connected with a cog-wheel, so as to prevent them from turning backwards.

Pel (Ital.), *per il* (for the).

Pellegrini, (1) Felice, stage singer (basso buffo), b. 1774, Turin, d. Sept. 20, 1832, Paris; from 1829 professor of singing at the Paris Conservatoire, previously up to 1826 on Italian stages, then engaged at London. He published some books of solfeggi, duets, terzets, etc.

(2) Giulio, stage singer (basso serio), b. Jan. 1, 1806, Milan, pupil of the Conservatorio there, d. July 12, 1858, Munich, where he was engaged almost constantly at the Court Theatre.

Pellisov (= *pellis ovis*), pseudonym (Latin name by translation) of K. v. Schafhäutl (q.v.).

Pello (Ital.), *per lo* (for the).

Pembaur, Joseph, b. May 23, 1848, Innsbruck; after commencing to study at the University, he became a pupil of the Vienna Conservatorium and of the Munich Royal School of Music (Buonamici, Hey, Wüllner, Rheinberger); since 1875 he has been director and principal teacher of the Music School at Innsbruck. P. is a well-known composer, especially in the domain of song (Op. 4, 7, 8, 15, 26, 33, 36) and of part-song; he has also published larger vocal compositions with orchestra ("Gott der Weltenschöpfer," for male choir and orchestra; "Die Wetheranne," ditto; "Bilder aus dem Leben Walthers von der Vogelweide," for soli, mixed chorus and orchestra), several Masses (Festival Mass in F), a symphony ("In Tirol"), Improvisation for organ (Op. 9), a book of studies for piano technique, a paper—"Ueber das Dirigieren," etc.

Penna, Lorenzo, composer and theorist, b. 1613, Bologna, d. Oct. 20, 1693, Imola; he entered the Carmelite Monastery at Parma, became maestro there, and afterwards undertook a similar post at Imola Cathedral. Of his compositions (printed between 1660-90) the following

have been preserved:—two books of Masses à 4, with instruments *ad libitum* ("Galeria del sacro Parnasso"), and two books of Psalms à 4 with instruments *ad lib.* ("Il sacro Parnasso" also "Salmi per tutto l'anno," the latter containing also a Fauxbourdon Mass, Antiphons, and Litanies). His writings—"Li primi albori musicali per li principianti della musica figurata" (1656), "Albori musicali per li studiosi della musica figurata . . . Lib. II." (1678; complete edition, 1679, etc.), and "Direttorio del canto fermo" (1689)—are of interest for the history of musical theory.

Pentenrieder, Franz Xaver, composer, b. Feb. 6, 1813, Kaufbeuren (Bavaria), d. July 17, 1867, Munich, as court capellmeister, organist, and "Repetitor" of the court theatre. He composed vocal works (masses, motets, cantatas, etc.), and two operas: *Die Nacht auf Paluzzi* and *Das Haus ist zu verkaufen*, of which the first was produced on many German stages. P. spent the last years of his life in a lunatic asylum; he had been run over by a carriage, and thereby lost both bodily and mental strength.

Pepusch, John Christopher (Johann Christoph), composer and writer on music, b. 1667, Berlin, d. July 20, 1752, London; he was the son of a Protestant minister of small means, and the training of his musical gifts was therefore limited. After receiving, however, an appointment at court, at the age of 14, he managed, by private study, not only to train himself thoroughly in the exercise of his art, but even became an authority on the theory and history of music. In 1698, for some unexplained reason (it is said that he witnessed an encounter between the Elector and an officer), P. left Berlin, and first went to Holland, but in 1700 he crossed over to England, and received an appointment in the orchestra of Drury Lane Theatre, first as violinist, afterwards as accompanist and composer, in which latter capacity he produced several English operas, consisting of Italian arias strung together. P. was the real founder of the Academy of Ancient Music, and to him is personally owing the revival of the music of the 16th century. In 1712 the Duke of Chandos, a famous musical Mæcenas (see HANDEL) appointed him organist and composer to his chapel at Cannons, and this led P. to write services, anthems, and other sacred works, also cantatas, etc. In 1713 he took his degree of Mus.Doc. at Oxford, his exercise being an ode on the Peace of Utrecht. For many years he occupied the post of musical director at Lincoln's Inn Fields Theatre, for which he wrote masques (*Venus and Adonis*, 1715; *Apollo and Dafne*, 1716; *The Death of Dido*, 1716; *The Union of the Three Sister-Arts*, 1723), and arranged the ballad operas, *The Beggar's Opera* (by Gay), *The Wedding*, etc. In 1724, jointly with Berkeley, he started for the Bermudas in order to found a college there, but

they suffered shipwreck and returned to England. By his marriage (1730) with the singer Margarita de l'Epine, who brought him a fortune of £10,000, P. was relieved from money worries. His last appointment was that of organist to the Charterhouse (1737), which gave him leisure for study. Besides the works already named, he composed dance pieces (airs), sonatas for flute and for violin, also trios; *concerti grossi* for two beak-flutes, two cross-flutes, oboe, and continuo, odes for various occasions, and motets, etc. He wrote a "Treatise on Harmony" (1731), previously (1730) published in very incomplete form under the title "A Short Treatise on Harmony," by a pupil of P., Lord Aberdeen, who wrote down the rules which he had learnt during his lessons. In this work P. revived (for the last time) the theory of Solmisation; a treatise on the three Genera of the Greeks is to be found in the "Philosophical Transactions" (1746). His last work, "A Short Account of the 12 Modes of Composition and their Progression in Every Octave" (1751, completed) remained in manuscript, but has been lost.

Per (Ital.), for. (Cf. PEGLI, PEL, PELLO.)

Perabo, Ernst, pianist and composer, b. Nov. 14, 1845, Wiesbaden, received his first training in New York, where his parents settled in 1852. He is said to have played the "Well-tempered Clavier" by heart at the age of nine. In 1858 he was sent to Europe, first to Hamburg, but in 1862, to the Leipzig Conservatorium (Wenzel). In 1865 he returned to New York, a finished pianist, and settled in Boston in 1866, where he has made a name both as pianist and teacher. He has also published some pleasing, good pianoforte pieces.

Percussion, Instruments of (Ger., *Schlag- or Krustische-Instrumente*; Fr., *Instruments à percussion*; Lat., *Instrumenta pulsantia, percussa*). The German term *krustisch* is derived from the Greek *κρούειν*, to beat; *κρουήσις*, however, was the term used by the Greeks for performances on stringed instruments). Instruments of P. are divided into those of definite pitch, and those which only produce noise; to the first belong kettledrums, ancient cymbals, and cymbals and *Nolæ* of the Middle Ages, the *carillons* (Glockenspiel), the *Stahlspiel* (see LYRE), and the instrument *Strohfiedel*, made of wood and straw; the *Dulciner* (Hackbrett), and all kinds of modern keyboard instruments (with hammer mechanism) may also be included among instruments of P.; in the classification of stringed instruments, wind instruments, and those of P., they belong, however, to those of the first category. Drums, the tamtam, cymbals, the triangle, castanets, the crescent (Schellenbaum), etc., are instruments of P. without definite pitch.

Perdendosi (Ital.), dying away (*pianissimo*).

Pereira, name of several noteworthy Portuguese musicians, viz.:—(1) Marcos Soares, b. towards the end of the 16th century, Caminha, d. Jan. 7, 1655, Lisbon, as court maestro to Juan IV. He was one of the best musicians of his time, and composed a mass à 12, also vesper-psalms à 12, motets, etc., a *Te Deum* à 12, likewise many psalms à 8, motets, responses, etc.

(2) Thomas, b. 1645, San Martinho do Valle (near Barcellos), d. 1692, Pekin. He was a Jesuit, and first went as a missionary to India, and afterwards (1680) to China. P. wrote a theoretical and practical treatise on music in the Chinese language, which the Emperor of China ordered to be translated into the Tartar language.

(3) Domingos Nunes, b. Lisbon about the middle of the 17th century, d. Mar. 29, 1729, on his estate at Camarate, near Lisbon; he was for a long time maestro of Lisbon Cathedral. P. composed responses à 8 for Holy Week, Requiem Masses, villancicos, etc.

Perepelitzin, Polycarp de, Russian writer on music, b. Dec. 14, 1818, near Odessa, pupil of C. Lipinski (violin), was for a long time officer (colonel of hussars) in the Russian army, but when pensioned, occupied himself with musical history:—"Dictionary of Music" (1884), "Illustrated History of Music in Russia" (1885-86), "Album of Musical History, with Illustrations" (monographs and drawings of musical instruments of all times and peoples, etc.); he also composed various instrumental works.

Perez, Davide, noteworthy composer, b. 1711, Naples, of Spanish parents, d. 1778, Lisbon. He was a pupil of Francesco Mancini, at the Conservatorio di Loreto, in 1739 church maestro at Palermo, made his *début* as an opera composer with *Siroë*, at the San Carlo Theatre, Naples, and in 1752, in consequence of the success of his *Demofonte* at Lisbon, he obtained a post as royal Portuguese court maestro. P. wrote about thirty operas for Italian theatres and for Lisbon, and is often ranked near to, or even above, Jomelli. As a church composer he is not less important ("Responsorj de' morti" [1774], Masses à 5-8, motets, psalms, etc.).

Perfall, Karl, Freiherr von, b. Jan. 29, 1824, Munich, studied law, and entered government service, but from 1848-49 received musical training in Leipzig under M. Hauptmann, left government service in 1850, and undertook the direction of the Munich Liedertafel, founded in 1854 the still flourishing Oratorio Society, which he conducted up to 1864, when he was appointed court musical intendant; in 1867 the post of intendant of the royal court theatre was entrusted to him (until 1893). P. also composes; he has published songs, and successfully produced at Munich the operas *Sakuntala* (1853), *Das Konterfei* (1863), *Raymondin* (1881, also as *Melusine*), and *Junke Heinze* (1886); likewise the

fairy cantatas (choral works), *Dornröschen*, *Undine*, and *Rübezahl*, and the melodramas, *Barbarossa*, *Prinz Karneval*, and *Der Friede* (1871).

Perfect Cadence. (See CADENCE.)

Perfection, (1) in mensurable music (*q.v.*) of the 12th and 13th centuries, denoted the value of a perfect long, which at that time corresponded to what we now call a bar (the theory of that period only recognised triple time).

(2) From the 14th century, P. represents, generally, the tripartite value of a note (*Mensura perfecta*); but such threefold division, even when prescribed by the signature, did not take place unconditionally, *i.e.* the breve in *Tempus perfectum* was not always equal to three semibreves; the signature only indicated that the tripartite breve formed the unit of measurement. A bipartite (imperfect) breve, therefore, did not give full measure, but, to complete the same, still needed a semibreve (at that time a breve already corresponded to a "bar"; since the 17th century the bar measure has devolved upon the semibreve). The rules concerning imperfection showed when a note, tripartite division of signature notwithstanding, had only the value of two. It was perfect, either when followed by a note of the same species (thus in *Tempus perfectum* of the breve, a breve; in *Modus perfectus* of the long, a long), or, when the *Punctum perfectionis* was added to it (see POINT), or when it was followed by two (not separated by the *Punctum divisionis*) or three (but not more) notes of the next smaller species.

(3) In Ligatures (*q.v.*) the value of the concluding note (*Ultima*) as a *Longa*; this occurred when the *Figura obliqua* was not employed for the higher penultimate note; and when, in the case of a lower penultimate note, the last had a stroke descending on the right side (since the 15th century; from the 12th to the 14th century this stroke indicated the *Plica* [*q.v.*], and when the last note was to be perfect, it was placed perpendicularly over the penultimate). (Cf. LIGATURE.)

Perger, Richard von, b. Jan. 10, 1854, Vienna, a pupil of Brahms, and a gifted composer. In 1890 he succeeded Gernsheim as conductor of the Rotterdam branch of the "Maatschappij tot Bevordering van Toonkunst." P. has written:—a quartet for strings, in A, trio serenade in G, serenade in B flat for cello and strings, a vanderille, *Die 12 Nothelfer* (Vienna, 1891), and a comic opera, *Der Richter von Granada* (Cologne, 1889).

Pergolesi, Giovanni Battista, one of the most important composers of the Neapolitan School, b. Jan. 4, 1710, Naples, d. April 17, 1736, Pozzuoli (near Naples), at the age of twenty-six; according to others, b. Jan. 3, d. Mar. 6 (there is no doubt about the years). In 1726 he was a pupil of Greco, Durante, and Feo at the Conservatorio dei Poveri, Naples. His last school work was a biblical drama, *La conversione di San Guglielmo di Aquitania*, which was performed with

comic intermezzi at the monastery of Sant' Agnello (1731). The first operas of Pergolesi, which were performed in the same year (*La Salustia*, *Amor fa l'uomo cieco*, *Ricimero*), but which, perhaps, were written much earlier, also the above-mentioned drama, attracted little or no notice. It was only when, probably through the influence of Prince Stegliano (to whom he dedicated his trio-sonatas, who knew him and recognised his powers, P. received from the city of Naples a commission to write a solemn Mass, which, on the occasion of a violent earthquake during the same year, was presented as a votive offering to the patron saint of the city, that he became, at one stroke, a celebrated maestro—at least, in Naples. P. wrote a Mass for double choir, each à 5, and double orchestra, which was followed in a short time by another of a similar kind. In 1733 he composed his most celebrated opera, *La serva padrona*, a real gem of a piece, which is still effective to-day, and which proved a model for the opera buffa of the succeeding age, although the action is confined to only two persons, and the orchestra, to strings. P. never gained sensational success; the rest of his short life was uneventful. He wrote a few more operas for Naples (*Il maestro di musica*, *Il geloso schernito*, *Lo frato innamorato* [in Neapolitan dialect], *Il prigioniere superbo*, *Adriano in Siria*, including the Intermezzo, *Liuvietta e Tracolo* [= *La contadina astuta*], *Flaminio* [the last was only performed after his death]; but only one for Rome, *Olimpiade*, 1735, unfortunately without success). His last work was the expressive *Stabat Mater* for soprano and alto, with strings and organ, which will keep his name for ever fresh amongst us, even when his *Serva padrona* is forgotten; it is a highly emotional, and, with regard to the writing, highly interesting composition. Pergolesi's constitution was weak; his want of success on the stage, especially at the last, in Rome, excited him very much, and he was forced on that account to visit the baths at Pozzuoli in order to counteract the increased diminution of his powers; he died a few days after completing the "Stabat," which had been ordered by the monks of the cloister of San Luigi di Palazzo for a sum of ten ducats (thirty-five shillings), paid beforehand.

The complete list of his operas, as far as they are known, has been given. Besides the two Masses for double chorus (of which only one exists), and the "Stabat," he also wrote for the church a Mass à 4 and one à 5, with orchestra; a Mass à 2, with organ; a Miserere à 4, with orchestra; a Dixit for double choir, with double orchestra; a Dixit à 4, with strings and organ; a Kyrie and Gloria à 4, with orchestra; a Dies Iræ for soprano, alto, and strings; a Laudate à 5, with orchestra; a Confitebor à 4; Domine à 4; Domine à 5; Lætatus sum à 5 (*a cappella*); a Lætatus sum for two sopranos and two basses; a Laudate for solo voice and instruments; a

Salve Regina for solo voice, strings, and organ; also some works preserved in manuscript. Finally, P. wrote a cantata, *Orfeo*, for solo voice and orchestra, *Giasone* (cantata à 5), six cantatas with accompaniment for strings, and thirty trios for two violins and bass. Some monographs on P. may be named as further guides: C. Blasi's "Biografia di P." (1817), but especially Marchese Vallarosa's "Lettera biografica intorno alla patria ed alla vita," etc. (1831); "Memorie di compositori di musica del regno di Napoli" (1840); also an interesting biographical sketch by H. M. Schletterer (Waldersee's *Mus. Vortr.*, No. 17). Among modern reprints the "Stabat Mater" is well represented (also in various arrangements: the oldest, by Paesello, with addition of wind instruments; the most recent, by Lwoff, for grand orchestra, etc.).

Peri, (1) Jacopo, one of the joint founders of the *stilo rappresentativo* (see OPERA), styled by the Florentines "Il Zazzerino" (from *zazza*, "long hair," thus "shaggy head"). He was a Florentine by birth, and, after a sound musical education (from Cristoforo Malvezzi at Lucca), became maestro at the court of Florence (Ferdinand I., Cosimo II. of Medici). Afterwards (1609) he went in a like capacity to the court of Ferrara. The dates of his birth and death are unknown. P. belongs to the circle by which Bardi, and afterwards Corsi, was surrounded, and in which was discussed the monodic style (accompanied vocal solo) from an esthetic point of view. P. composed, jointly with Caccini and Corsi, the *Dafne* of Rinuccini (1594), and, after this success, alone (and at the same time as Caccini), the same poet's *Euridice*, the first of the numerous Orpheus-operas; it was written for the wedding festivities of Marie de Medicis with Henri IV. of France (printed 1600). Besides *Euridice*—fragments of which are to be found in almost all histories of music—the following works exist: "Le varie musiche del Sig. Jacopo P. a 1, 2 e 3 voci con alcuni spirituali" (1610; partly for harpsichord and chitarrone, partly for organ).

(2) Achille, Italian opera composer, b. Dec. 20, 1812, Reggio, d. there March 28, 1880; was for a long time opera maestro in his native town; he wrote a series of operas somewhat in the style of Verdi: *Una visita a Beilham* (1839); *Il Solitario* (1841); *Dirce* (1843, his first notable success); *Ester d'Engaddi* (1843); *Tancredi* (1848); *I fidanzati* (1856); *Vittore Pisani* (1857); *Giuditta* (biblical drama, 1850; entirely re-arranged, Venice, 1866); *L'Espiazione* (1861); *Rienzi* (1867); and *Orfano e diavolo* (1861).

Perigourdine (Perijourdine), an old French dance in triple time ($\frac{3}{8}$, $\frac{3}{4}$), of cheerful movement, named after the province of Périgord. The P. differs from the Gigue through the absence of dotted rhythm.

Period (Gk., *Periodos*), according to the actual meaning of the word, "revolution" (turn), *i.e.* an exclusive form, a development running its regular course. P. is the term used in music for the exclusive section of the most important form, developed only in a metrical sense of full, regular construction within the compass of eight (real) bars. (Cf. METRE, ART OF.)

Periodicals, Musical (generally weekly or monthly), giving special information concerning musical events, noticing novelties, and contributing articles on the history and theory of music, are of comparatively recent date. The first work worthy of the name of a musical periodical, which appeared in small fragments, and which, together with essays of some length, also gave news of current events, was Mattheson's *Musica Critica* (Hamburg, 1722). Of other old papers of similar tendency and mode of publication, assuming more and more the character of real newspapers, may be named: Scheibe's *Kritischer Musikus* (Hamburg, 1737-38, and 1739-40), Mitzler's *Musikalische Bibliothek* (Leipzig, 1736-54), and *Musikalischer Staarstecher* (1740), Marburg's *Kritischer Musikus an der Spree* (1750), *Historisch-kritische Beiträge* (1754-78), and *Kritische Briefe* (1759-64). A real musical periodical, appearing weekly, in which news and the criticism of novelties formed a prominent feature, was Adam Hiller's *Wöchentliche Nachrichten* (1766). This had been preceded by André's *Journal de musique française et italienne*, published at Liège about 1756, and the *Journal de musique*, founded by Mathon at Paris in 1764, and continued by Framéry and Framicourt up to 1768. There followed:—*The New Musical and Universal Magazine* (London, 1775 only), Eschstruth's *Musikalische Bibliothek* (1784-85), Abbé Vogler's *Betrachtungen der Mannheimer Tonschule* (1778-81), Forkel's *Musikalisch-kritische Bibliothek* (1778-79), Reichardt's *Musikalisches Kunstmagazin* (1782-91), *Musikalisches Wochenblatt* (1791), and *Berlinische Musikalische Zeitung* (1805-1806), C. F. Cramer's *Magazin der Musik* (Hamburg and Copenhagen, 1783-89), Bossler's *Musikalische Realzeitung* (Speyer, 1788-90), and *Musikal. Korrespondenz* (1791-92). Likewise Spazier's *Berlinische Musikalische Zeitung* (1793), Chr. H. Koch's *Journal der Tonkunst* (1795), *The Quarterly Musical Register* (London, 1812, editor Kollmann), the *Vienna Allgemeine Musikalische Zeitung* (1817-24, edited by J. v. Seyfried and Kanne), Marx' *Berliner Allgemeine Musikalische Zeitung* (1824-30), the *Berliner Musikalische Zeitung* (1844-47, edited by Gaillard), Gottfried Weber's *Cäcilia* (1824-39, continued by S. Dehn up to 1848), *Süd-deutsche Musikzeitung* (Schott; Mayence, 1849-66), Hientzsch's *Eutonia* (Berlin and Breslau, 1828-37), Rellstab's *Iris im Gebiete der Tonkunst* (1828-37), Bischoff's *Rheinische Musikzeitung* (1850-53, continued by the publisher until 1859), and *Niederrheinische Musikzeitung* (1853-67), the

Berlin paper *Echo* (1851-79; editors:—Kossak, Mendel, Langhans), *Fliegende Blätter für Musik* (1855-57; editor, Lobe), *Brendel's Anregungen für Kunst, Leben und Wissenschaft* (1856-61). The first musical paper which survived its founder was the *Allgemeine Musikalische Zeitung*; it was issued regularly every week from Oct. 3, 1798, to the end of 1848 by the firm of Breitkopf & Härtel (founded by Rochlitz, continued by G. W. Fink). After an interval of fifteen years, it reappeared, but only for two years (1863-65); the paper of like name which afterwards appeared (Rieter-Biedermann, 1866-82) must be regarded as its continuation, and all the more so since its first editor was the one who had superintended the issue of the Breitkopf & Härtel paper during its last two years, namely, S. Bagge (who had already published from 1860-62 at Vienna the *Deutsche Musikzeitung*). This paper, finally edited by F. Chrysander, was especially devoted to matters relating to the history of music. Its name was transferred in 1883 to the *Allgemeine Deutsche Musikzeitung* (see below). Of other existing newspapers the best-known are: the *Neue Zeitschrift für Musik* (Leipzig; published by Kahnt), founded in 1834 by Robert Schumann, of new German tendency (Liszt-Wagner), and, until 1892, organ of the "Allgemeiner deutscher Musikverein;" the *Signale*, founded in 1843 by Bartholf Senff of Leipzig, edited and published by him up to the present; the *Neue Berliner Musikzeitung* (formerly belonging to Bote & Bock), founded in 1847, passed in 1890 into the possession of Dr. Richard Stern, and in 1894 into that of August Ludwig; the *Musikalisches Wochenblatt*, founded in 1870 by O. Paul (who had already published the *Tonhalle* from 1868-69); after a few numbers it was edited by E. W. Fritzsche at Leipzig, who brought it into the highest repute; the *Deutsche Musikerzeitung*, founded in 1870, edited by H. Mendel till 1876, and since then by W. Lackowitz, organ of the "Allgemeiner deutscher Musikerverband;" the *Neue Musikerzeitung*, founded in 1881, organ of the "Berliner Musikverein;" *Das Orchester* (Dresden, 1884); the *Allgemeine deutsche Musikzeitung*, founded in 1874 at Leipzig by K. Luckhardt, edited from 1878-80 by W. Tappert, since then the property of O. Lessmann (from 1883 as *Allgemeine Musikzeitung*); the *Neue Musikzeitung* (Cologne, J. Tonger, since 1880; now published by Gröninger at Stuttgart). The following were short-lived: *Die Musikwelt* (Berlin, 1880-81, editor M. Goldstein), *Musikalisches Zentralblatt* (Leipzig, 1881-84; editor Robert Seitz), *Euterpe*, founded in 1841 (Leipzig, edited since 1871 by F. W. Sering), Albert Hahn's *Tonkunst* (since 1876), representing the idea of the new keyboard and the system of twelve half-tones (chromas); since Hahn's death (1880) it has been continued by O. Wangemann.

The following have special aims in view:—

Baireuther Blätter (exclusively a Wagner paper, since 1878; editor H. von Wolzogen); *Monatshefte für Musikgeschichte*, since 1869 published by "Gesellschaft der Musikforschung" (editor R. Eitner), relating especially to music of the 15th, 16th, and 17th centuries; *Vierteljahrsschrift für Musikwissenschaft*, edited by G. Adler, Chrysander and Spitta (1885-94). Then a series of papers specially devoted to Roman Catholic church music:—the *Cäcilienkalender* (edited by Haberl, 1876-1885) and its continuation, in extended form, as the *Kirchenmusikalische Jahrbuch* (since 1886); *Cäcilia* (Trèves, since 1862), *Musica sacra* (Ratisbon, Fr. X. Haberl, editor since 1868), and *Fliegende Blätter für katholischen Kirchenmusik* (organ of the Cecilian Society), both edited by F. Witt; *Gregorius-Blatt* (Aix-la-Chapelle, since 1876), *Der Kirchenchor* (Brixen, since 1871), *Der Chorwächter* (St. Gallen, since 1878), etc. Some papers for Protestant church music: *Fliegende Blätter des Schlesischen Vereins zur Hebung der evangelischen Kirchenmusik* (Brieg, since 1867), *Siona* (Gütersleben, since 1876), *Halleluja* (Quedlinb., since 1879), *Blätter für Hymnologie* (1887), etc.; *Der Chorgesang* (Leipzig, since 1885; in 1886 amalgamated with the *Deutsche Liederhalle*, which came into existence at the same time); *Der Klavierlehrer* (Berlin, fortnightly since 1878; editor E. Breslaar; mouthpiece of the "Verband der Musiklehrer-Vereine"). Several papers specially devoted to the organ:—*Urania* (Erfurt, since 1844), editor A. W. Gottschalg; and *Die Orgel* (editor, Lubrich); *Zeitschrift für Instrumentenbau* (Leipzig, since 1881; editor P. De Witt); *Musikinstrumentenzeitung* (Leipzig, 1892; editor K. Bätz). For male choral singing, the *Sängerhalle* (Leipzig, since 1861), organ of the "Deutscher Sängerbund." For military music, the *Deutsche Militär-Musikerzeitung* (Berlin, since 1880); for the zither, the *Zentralblatt deutscher Zithervereine*, organ of the German Zither Society (since 1878; editor, Hans Thauer, Munich); the *Harmonie* (Hanover, L. Oertel), etc.

Of other German papers may be named: *Musikalische Zeitung für die österreichischen Staaten* and *Wiener Musikalische Zeitung* (both only from 1812-13); *Allg. Musikalische Zeitung* (Vienna, 1817-23; editors, Strauss, Seyfried, Kanne); *Allg. Wiener Musikalische Zeitung* (1841-48; editors, A. Schmidt, Lubl); *Wiener Musikzeitung* (1852-60; editor, Glöggel); *Monatsschrift für Theater und Musik* (1855-61, editor, J. Klemm); *Recensionen und Mitteilungen für Theater, Musik und bildende Kunst* (Vienna, 1862-65; with valuable articles by Sonnleithner, M. Hauptmann, etc.); *Zellner's Blätter für Musik, Theater u. Kunst* (1855-68); the *Oesterreichische Musikerzeitung*, organ for preserving and promoting the material interests of musicians (Vienna, since 1875); A. A. Naaff's *Lyra* (ditto, since 1884); *Wiener Signale*, for theatre and music (since 1878, J. Kugel); *Musikalische Presse* (ditto, 1879); *Ziehler's Deutsche Kunst- und Musikzeitung* (ditto,

1879); *Musikalische Rundschau* (ditto, since 1885); Em. Kastner's *Wiener Musikalische Zeitung* (1885); *Internationale Musikzeitung* (editor, Fr. Wagner); *Schweizerische Musikzeitung u. Sängerbblatt*, organ of the Confederate Vocal Society (Zürich, since 1861; editor, A. Niggli); the Petersburg German *Novelliste* (1864); the *Musikalische Sonntagszeitung*, Russian and German (Petersburg, since 1879); the *Russische Musikbote* (ditto, 1880). Then the French papers:—*Revue musicale* (1827, founded by Fétis), *Gazette musicale de Paris* (since 1834), both of which were amalgamated into the celebrated *Revue et gazette musicale* (Paris, 1835–80); *Le Ménestrel* (since 1835, editor J. Heugel; highly esteemed); Nisard's *Revue de Musique ancienne et moderne* (1856), and *Revue de Musique sacrée* (1857–58); *Le Monde Artiste* (since 1860, editor, Ruelle); *L'Art musical* (1860–81, editor L. Escudier); *Le Bibliographe musical* (1862–76); *La Chronique musicale* (editor, M. Malibran, 1865–66; editor, A. Heulhard, 1873–76); *L'Écho des Orphéons* (since 1861, editor, E. Gebauer; now L. de Rillé); *La France musicale* (1837–70; M. and L. Escudier); *Le Guide musical* (Brussels, since 1854, an excellent paper; editor and proprietor, M. Kufferath); *L'Écho musical* (ditto, since 1868). English and American papers:—*The Quarterly Musical Magazine and Review* (London, 1818–28); *The Harmonicon* (monthly paper: London, 1823–33; editor, W. Ayrton); *The Musical Magazine* (London, 1835–36); *The Musical World* (founded in 1836 by Cowden Clarke, published first by Novello; from 1863 by Duncan, Davison & Co., London; editors, J. W. Davison, Dr. Hueffer, E. F. Jacques—an excellent paper, with distinguished contributors, which, however, came to an end Jan., 1891); *The Musical Examiner*, 1842, editor, J. W. Davison; *The Dramatic and Musical Review*, 1843–44; *The Musical Times*, a paper held in high esteem, published by Novello since 1844, a continuation of Mainzer's paper of the same name, edited from 1846–59 by Edward Holmes, afterwards by Henry C. Lunn, W. A. Barrett; present editor, E. F. Jacques; *The Musical Standard* (London, founded in 1862; editors, Broadhouse, Baughan); *The Orchestra* (from 1863); *The Choir* (1863–78); *Concordia* (1875–76, editor, J. Bennett); *The Monthly Musical Record* (London, since 1871, published by Augener & Co.; first editor, E. Prout, with well-known contributors); *The Tonic Sol-fa Reporter* (London, since 1851, editor, John Curwen; organ of the Tonic Sol-fa Society; since 1889 as *Musical Herald*); *Music* (1880); *The Musical Review* (London, 1883; only for a few months); *Magazine of Music* (since 1884, Coates); *The Quarterly Musical Review* (Manchester, since 1885); *Musical Society*, 1886; *The British Bandsman and Orchestral Times* (1887); *Musical News* (1891); *The New Quarterly Review* (1893); *The Lute*; *The Meister* (from 1888, London, editor, A. Ellis); *The Strand Musical Magazine* (1895); *Dwight's Journal of Music* (Boston, 1852–81; the most highly-

esteemed paper out of Europe); *The Musical Herald*, Boston (since 1880); *The Étude* (Philadelphia, since 1883); *The Musical Review* (New York, 1879); *The World of Art* (ditto, since 1878); *Musical Bulletin* (Chicago, 1880); and W. S. B. Matthew's monthly magazine *Music* (Chicago, 1892). Of Dutch papers:—*Caecilia* (The Hague, editor, Nikolai). Of Italian: *Gazetta musicale* (Milan, Ricordi, since 1845, editor, Salv. Farina), *Il Trovatore* (Milan, since 1863), *Boccherini* (Florence, 1853–83), *Gazetta Musicale di Firenze* (since 1877), *Palestra Musicale* (Rome, since 1878), *Napoli Musicale* (Naples, since 1878), *L'Osservatore Musicale* (ditto, since 1879), *Archivio Musicale* (ditto, since 1882), *Passello* (ditto, since 1883), *Il Menestrello* (Livorno, 1884), *Gazetta Musicale di Torino* (since 1879), *Musica Sacra* (Milan, since 1878), *Guido Aretinus*, organ of the international society, *Guido d'Arezzo*, Milan (quarterly, since 1885), *Roma musicale* (Rome, since 1885), and the quarterly magazine, *Rivista Musicale Italiana* (Turin, 1894). Of Spanish:—*La España musical* (Barcelona, since 1866), *La Crítica* (Barcelona, since 1878), *Notas musicales y literarias* (ditto, since 1882), *Cronica de la musica* (Madrid, since 1878), *La revista teatral* (Lisbon, 1885; fortnightly), *La Cronica musical de Buenos Ayres* (since 1885), *El Boletín musical* (ditto, since 1878), *L'America musicale* (New York, 1882, Spanish), *La revista musicale* (Havannah, 1882). Of Bohemian:—*Hudební a divadelní vestník* (Prague), the *Magyar Harmonia* (Pesth, 1882). A paper, not published at stated intervals, for the exchange of opinion on matters connected with the historiography, bibliography, and theory of music, is G. Becker's *Questionnaire de l'association internationale des musiciens-écrivains* (Genève, since 1877); compare W. Freystätter, "Die musikalischen Zeitschriften" (1884; a new edition much needed), and Ed. Gregoir "Recherches historiques," etc. (1882). Special organs for noticing new publications are:—Hofmeister's *Musikalisch-literarischer Monatsbericht* (Leipzig, since 1830; arranged also with composers' names in alphabetical order, and in yearly lists; from time to time it is added, as a new volume, to the "Handbuch der musikalischen Literatur"). For France the *Bibliographie musicale française* (since 1875); for England *The London and Provincial Music Trades Review* (since 1877); *Musical Opinion and Music Trade Review* (since 1877); for America *The Music Trades Review* (New York, since 1873); the last two also contain criticisms and concert notices.

Perne, François Louis, learned musician, b. 1772, Paris, d. there May 26, 1832. He received his first musical training as chorister at the church of St. Jacques de la Boucherie from the Abbé Haudimont, a supporter of Rameau's theory. In 1792 he joined the chorus of the Grand Opéra (at the same time as the celebrated Villoteau) as tenor, but in 1799

exchanged this trying post for that of double-bass player in the orchestra of the Grand Opéra. He now began to make himself known as a composer, first by some small instrumental works, but in 1801 by a grand festival Mass, which was performed by musicians of the Grand Opéra on St. Cecilia's Day to celebrate the "Concordat," also by a triple fugue which, by inverting the sheet, could also be sung backwards. He soon became absorbed in the study of musical theory and of the history of music, and entered into communication with Choron and other learned musicians. In 1811 he succeeded Catel as professor of harmony at the Conservatoire. He lost this position through the closing of that institution in 1815, but, when it was reopened in 1816 (as "École Royale de Chant et de Déclamation"), he was appointed general inspector, and in 1819 also librarian (as successor to Abbé Roze). In 1822 he resigned all posts (he had also been double-bass player in the royal orchestra since 1802), and retired to an estate in the neighbourhood of Laon, where he devoted himself to scientific studies, living on a modest pension. The disturbances of 1830 forced him to retire into a town, where he might feel safer in case of war. At first Laon was selected; but in 1832 P. went to Paris, where, however, he died after a few weeks. The library of the Conservatoire possesses the manuscripts left by P., and Fétis bought his library. The only items of his numerous writings which found their way into print were a series of valuable articles in Fétis's *Revue Musicale* (vols. 1-9) on Greek notation and troubadour songs, etc., also a study on Châtelain de Coucy in Michel's monograph concerning this troubadour (1830). With regard to practical music, P. published six easy pf. sonatas, the fugue already mentioned, and a volume of pf. variations, a large and a small pianoforte Method, likewise a "Cours d'harmonie et d'accompagnement" (1822).

Perotinus, Magister, with the surname "the great" (Magnus), maître de chapelle of Notre Dame, Paris, one of the most important composers of the 12th century (according to the report of Anonymus 4 in Coussemaker, "Script. I.;" cf. FRANCO). A number of compositions of P. are to be found in Coussemaker "L'art harmonique au XII. and XIII. siècles," facsimiles from the Codex H 196 of Montpellier.

Perotti, Giovanni Agostino, composer, b. April 12, 1769, Vercelli, d. June 28, 1855, Venice, pupil of his brother, Domenico P. (church maestro at Vercelli), and afterwards of Mattei in Bologna; he made himself known as an opera composer, and was for a time accompanist at the Italian opera in Vienna and London. From 1831 he lived at Venice, where in 1812 he became deputy, and in 1817, successor

to Furlanetto as maestro of St. Mark's. Besides operas and ballets, he wrote a number of good sacred works, also a prize-crowned article, "Sullo stato attuale della musica" (1812, also in French), and a poem, "Il buon gusto della musica" (1808).

Perpetuum Mobile (Lat., "perpetual movement"), the name given to pieces written from beginning to end in notes of equal, and short value (Weber, Op. 24; Mendelssohn, Op. 19; Paganini, Op. 11, etc.).

Perrin, Pierre, called l'Abbé P., though not ordained, b. about 1620, Lyons, d. April 25, 1675, Paris, in needy circumstances. P. wrote the librettos to the first attempts at French opera, namely, to Cambert's *La pastorale* (1659), *Pomone* (1671), and *Ariane* (1672), and in 1668 he obtained from Louis XIV. the privilege of founding an Académie de Musique, of which, however, Lully (q.v.) managed to deprive him.

Perry, George, English composer, b. 1793, Norwich, d. March 4, 1862, London. He settled in London in 1822, and was at first director at the Haymarket Theatre and organist of Quebec Chapel. From 1832-47 he was leader of the band of the Sacred Harmonic Society, and in 1848 he succeeded Surman, temporarily, as conductor; but he was not elected, and for that reason he resigned his post as leader; finally, in 1846, he became organist of Trinity Church, Gray's Inn Road. His principal works are the oratorios—*The Death of Abel*, *The Fall of Jerusalem*, *Hesekiah*, *Elijah* and *the Priests of Baal*; a Biblical cantata, *Belshazzar's Feast*. P. also wrote an opera (*Morning, Noon, and Night*), and an overture, "The Persian Hunters."

Persiani, Fanny (Tacchinardi, married P.), famous opera singer, b. Oct. 4, 1812, Rome, d. May 3, 1867, Passy (near Paris). She received her musical training from her father, Niccolò Tacchinardi (q.v.), who had built for his pupils a small theatre on his estate near Florence, where she first sang as *prima donna*. In 1830 she married the composer, Giuseppe P. (b. 1804, Recanati [Papal States], d. Aug. 14, 1869, Paris; he composed eleven operas, among them, *Eufemio di Messina*), appeared in 1832 at Livorno for the first time on the public stage with immense success, and, after a few years, became one of the most renowned singers of Europe. From 1837-48 she was a star both at Paris and London. She afterwards sang in Holland, Russia, and elsewhere, but from 1858 lived again in Paris.

Persuis, Louis Luc Loiseau de, director of the Grand Opéra, Paris, b. July 4, 1769, Metz, d. Dec. 20, 1819, Paris. He was the son of a musician, lived at first as a teacher of the violin at Avignon, whither he had followed an actress, went in 1787 to Paris, where he became known by his oratorio, *Le passage de la Mer Rouge* (performed at a concert spirituel). After

he had worked for some years as principal violinist in the orchestras of the Opéra Comique and of the Grand Opéra, he became in 1804 *chef du chant* of the Grand Opéra, in 1805 member of the managing committee, and of the committee for examining novelties. In 1810 he was appointed successor to Rey as maître de chapelle, in 1814 (under Choron) general inspector of music, and finally, in 1817, obtained the position of director at the Grand Opéra, which highly prospered under his management. Besides this he became, in 1794, professor at the Conservatoire, but was dismissed on the reduction of the teaching-staff in 1802. In the same year he joined Napoleon's band as *maître de musique* (assistant-conductor), became, in 1814, deputy *maître de chapelle* (with Le Sueur), and in 1816, successor to the latter as chief intendant of the Imperial band. P. wrote twenty operas (and ballets), of which *Jérusalem délivrée* (1812) is the most important, though it was received coldly. His real merit lay in his skilful management of the Grand Opéra.

Perti, Jacopo Antonio, famous church and opera composer, b. June 6, 1661, Bologna, d. there April 10, 1756, as maestro di cappella of San Petronio. He was pupil of Padre Petronio Franceschini, and produced already in 1680 a solemn Mass of his own at San Petronio; in the following year he became a member of the Accademia Filarmonica, of which he became six times president. Like most of the maestri of his time, he wrote a number of operas (20), and some oratorios, which appear to have met with a certain amount of success. In ripe manhood, however, he devoted himself principally to the composition of sacred music. He published "Cantate morali e spirituali" (1688, à 1-2 voices, with violins) and "Messe e salmi concertati a 4 voci con stromenti e ripieni" (1735). Unfortunately, his manuscripts, which were preserved in large numbers, became scattered. Santini possessed a fine selection. A chamber sonata by P. is preserved in a collection of the 18th century ("XII. sonate a violino e violoncello").

Pesante (Ital.), in a ponderous manner.

Pescetti, Giovanni Battista, organist and composer, b. about 1704, Venice, pupil of Lotti. In 1762 he became organist of the second organ of St. Mark's, and died at the beginning of 1766. From 1726-37 he brought out an opera nearly every year at Venice. Then (1737-40) he lived in London, and wrote some operas there, of which the publisher Walsh printed the overtures and a few arias (*Demetrio*, *Il vello d'oro*, and the cantata, *Diana ed Endimione*). P. also published nine harpsichord sonatas.

Peschka-Lentner, Minna, a distinguished coloratura singer, b. Oct. 25, 1839, Vienna, d. Jan. 12, 1890, Wiesbaden, pupil of H. Proch. She made her *début* 1856 at Breslau, but after a

year's engagement retired for a time from the stage, after which she was engaged at Dessau until her marriage with the Viennese physician Dr. Peschka (1861); then, after two years' interval, she sang several times at the Vienna Court Opera. Her talent for coloratura developed very rapidly under the guidance of Frau Bochkoltz-Falconi, and in 1865 Frau P. became *prima donna* at Darmstadt. The most brilliant period of her career, however, was during her engagement at Leipzig (1868-76), where she reigned supreme, not only on the stage, but also in the concert-room. When the Haase direction came to an end, she accepted an engagement from Pollini at Hamburg, and from there was drawn in 1883 by the director J. Hoffmann to Cologne.

Pessard, Emile Louis Fortuné, French composer, b. May 29, 1843, Paris, pupil of Bazin and Carafa at the Conservatoire, gained the Prix de Rome in 1866, and became inspector of the teaching of singing at the municipal schools of Paris. P. belongs to the younger school of talented French composers (operas: *La cruche cassée*, 1870; *Le char*; *Le Capitaine Fracasse*, *Tabarin*, 1885; *Tartarin sur les Alpes*, 1888; *Les folies amoureuses*, 1891; a mass à 2 and organ, a cantata *Dalila*; a quintet for wind instruments, pf. trio, a suite for orchestra, pf. pieces, songs, etc.).

Peters, Carl Friedrich, the founder of the well-known music-publishing firm at Leipzig which bears his name. In 1814 he bought the "Bureau de Musique," which had been founded in 1800 by Kühnel and Hoffmeister. The firm grew enormously by the introduction of cheap editions (1868, "Peters' edition"). At the present time Dr. Max Abraham is the sole proprietor of the business. On Oct. 1, 1893, the firm opened a large musical "Bibliothek P.," of which Dr. Emil Vogel is librarian.

Petersen, Peter Nikolaus, performer on the flute, b. Sept. 2, 1761, Bederkesa (near Bremen), d. Aug. 19, 1830, Hamburg, where he lived from his 12th year; he improved the flute by the addition of several keys, and published a flute Method, also studies, variations, and duets for flute.

Petit, Adrien. (See COCLICUS.)

Petrejus, Johannes, a Nuremberg music-printer of the 16th century, b. Langendorf (Franconia), d. Mar. 18, 1550, Nuremberg. He obtained the academical degree of Magister, and in 1526 bought a book-printing business at Nuremberg. He began music-printing in 1536.

Petrella, Errico, opera composer, b. Dec. 1, 1813, Palermo, d. April 7, 1877, Genoa. He was a pupil of Costa, Bellini, Furno, Ruggi, and Zingarelli, made his *début* in 1829 with *Il diavolo color di rosa* at Majella, and soon became one of the most celebrated operá composers of

Italy, Verdi alone being considered his superior. However, this verdict respecting him in Italy has somewhat changed, since the young Italian school, influenced by the German masters, has become active (Boito, Marchetti, Gómez, etc.). Of his 25 operas the most important are considered to be: *Le precauzioni* (1851), *Marco Visconti* (1854), *Ione* (1858), and *La contessa d'Amalfi* (1864).

Petri, (1) Johann Samuel, theorist, b. Sept. 1, 1738, Sorau, d. April 12, 1808, as cantor at Bantzen. He wrote "Anleitung zur praktischen Musik" (1767, 2nd ed. 1782), and "Anweisung zum regelmässigen und geschmackvollen Orgelspiel" (1802). His compositions remained in manuscript.

(2) Henri, excellent violinist, b. April 5, 1856, Zeyst (near Utrecht), son of an orchestral player and pupil of David, Leipzig. From 1882-89 he was leader (with Brodsky) at the Gewandhaus, Leipzig, and has been since then leader of the Dresden court band as Lauterbach's successor.

Petrini, Franz, performer on the harp, b. 1744, Berlin, d. 1819, Paris; his father was harp-player in the court orchestra. In 1765 he became court musician at Schwerin, and from 1770 teacher of the harp in Paris. He published 4 concertos, 8 sonatas, several variations, duets, etc., also a harp method and a "Système d'harmonie" (1796, new ed. as "Étude préliminaire de la composition," 1810).

Petrucchi, Ottaviano dei, the celebrated discoverer of the printing of notes by types—that is to say, the one who first made full use of the discovery of the art of book-printing for music. (Cf. MUSIC PRINTING.) He was born June 18, 1466, Fossombrone, near Urbino (Lat., *Forum Sempromii*; hence he calls himself *Petrutius Fossempromensis*). On May 25, 1498, he received from the Council of Venice the privilege of making use of his discovery for 20 years. He, therefore, printed for 10 years in Venice (1501-11), but later on he handed over the business to Amadeo Scotti and Niccolò da Rafael, and began printing, in 1513, in his native town (Fossombrone), having received from the Pope a privilege for 15 years in the Papal States; but he worked much less industriously than in Venice, where he had plunged into costly but unremunerative undertakings. He seems to have died about 1523—at least, no printing of his of later date is known. All the prints of Petrucci are very rare and much valued as specimens of antique music-printing from types; they deserve also special recognition with respect to the neatness of execution and correctness of the notes, even compared with publications of much later date. P. printed at a time when the contrapuntal art of the Netherland school was at its highest point; hence the works of that school are specially represented in his publications. Here is as complete

a list as possible:—1501: "Harmonice musices Odhecaton A." (2nd ed., May 25, 1504); a copy is in the library of the Liceo Musicale at Bologna, another in the Paris Conservatoire, which latter also contains Canti B and Canti C, the 2nd and 3rd parts of this collection; the 2nd is only to be found, besides, in Bologna, the 3rd, in Vienna. The three vols. contain 94 chansons à 3 and 222 à 4 (301) and 15 motets of the most celebrated masters before and about 1500 (Josquin, Hayne, de Orto, Obrecht, La Rue, Busnois, Compère, Alex. Agricola, Brumel, Isaac, Okeghem, Ghiselin, Tintoris, Regis, Caron, Lapicida, Japart, de Lannon, Infantis, Lourdais, de Stappen, Fortuila, Gregoire, Jo. Martini, Reingot, Pinarol, de Vigne, Stokhem, Ninot, Philippon, Hancart, Asel, Bourdon, Vincinet, de Wilder, Tadinghem, Bulkyn, Nic. Craen, Mathurin, Vaqueras, and many anonymous).

1502: Canti B (dated from Feb. 5, 1501; according to the reckoning of that time the new year at Venice began at Easter; thus Feb. 5, according to modern calculation, falls in the year 1502; 2nd ed., August 4, 1503). "Misse Josquin" and the 2nd edition of the same; "Missarum Josquin, Liber I."

1503: Canti C (*canto quintana*), Motetti B (Motetti A unknown); "Missarum Josquin Lib. II.-III.," "Misse Brumel"; "Misse Ghiselin"; "Misse Pierre de la Rue"; "Misse Obrecht."

1504: "Misse Alexandri Agricola"; Motetti C; Frottole, Lib. I.-IV. (the fourth book as "Strambotti, Ode, Frottole, Sonetti et modo de cantar versi Latini e capituli, Libro IV.")

1505: "Frottole," Lib. V.-VI.; "Misse de Orto"; Motetti, Libro IV.

1506: "Lamentationum Jeremie prophete, Liber I.-II.," "Misse Henrici Izac."

1507: "Frottole," Lib. VII.-VIII.; "Missarum diversorum auctorum, Lib. I."

1508: "Frottole," Lib. IX.; "Intabolatura de lauto," Lib. I.-IV. (Padoane, Calate, Frottole, etc.), "Misse diversorum auctorum."

1509: "Tenori e contrabassi intabolati col soprano in canto figurato . . . Francisci Bossinensis opus."

Without date, and printed at Venice: "Misse Gaspard" (van Verbeke); "Fragmenta missarum"; "Laudi, Lib. II." (which naturally presupposes a Liber I.), and "Frottole de misser Bartolomeo Tromboncino, etc."

Of the Fossombrone publications, the first was a volume of Masses (1513) printed as a chorus-book, i.e. in folio, the voice parts on opposite pages, printed thus:

Soprano	Tenor
Alto	Bass.

From 1514-16 P. printed a new edition of the Masses of Josquin, and, besides, in 1515, "Missarum Joannis Mouton, Lib. I.," likewise "Misse Antonii de Fevin," and "Missarum X. a clarissimis musicis. . . Libri II." The "Motetti della Corona" (Lib. I. 1514; Lib. II.-IV.

1519) form a rich collection of motets (83 compositions by the most distinguished masters). The last publications of P. were three Masses, or three books of Masses, printed in folio as chorus-books (1520-23). Anton Schmid wrote an excellent monograph on P. (1845); owing, however, to some recent discoveries, further additions to it are necessary.

Petrus de Cruce (Pierre de la Croix), one of the oldest writers on mensural music, lived in the 13th century, and was a native of Amiens (Ambianensis). A treatise of his was printed by Coussemaker ("Scriptores, etc.").

Petrus Platensis. (See LA RUE.)

Petechke, Dr. Hermann Theobald, court councillor, favourite composer of songs for male voices, b. Mar. 21, 1806, Bautzen, d. Jan. 28, 1888, Leipzig, where he had lived. He was a member of the direction of the Gewandhaus Concerts.

Petzold, (1) Christian, Electoral Saxon and royal Polish organist, also chamber composer, b. 1677, Königstein, Saxony, d. July 2, 1733, Dresden; he composed harpsichord concertos and chamber music, which have been preserved in the royal collection of music at Dresden.

(2) Wilhelm Leberecht (Petzhold), pianoforte manufacturer, b. July 2, 1784, Lichtenhain (Saxony); from 1806-14 he was associated with J. Pfeiffer, in Paris; he afterwards worked alone (the date of his death is unknown). He had much to do with the perfecting of the construction of square pianofortes, and also of grands; he introduced longer and stronger strings, and especially a more solid construction, for the purpose of obtaining a fuller and more powerful tone; until the appearance of Pape his square pianofortes were much in vogue.

(3) Eugen Karl, b. Nov. 7, 1813, Ronneburg (Altenburg), d. Jan. 22, 1889, Zofingen (Switzerland), received his training at Leipzig (St. Thomas's School and the University); he became, in 1839, theatre capellmeister at Bautzen, in 1840 teacher at a boarding-school in Switzerland, in 1842 organist at Murten, in 1844 musical director and organist at Zofingen; he rendered great service to the cause of music there by the establishment of subscription concerts, sacred concerts, etc. He was also active as a composer in various branches. From 1874 he had given up concert enterprises.

Pevernage, Andreas, Belgian contrapuntist, b. 1543, Courtray, d. July 30, 1591, Antwerp; he was maître de chapelle of the chief church at Courtray, afterwards director of the choir of Notre Dame, Antwerp. He published: a book of chansons à 5 (1574), four other books of chansons (1st-3rd books à 5, 4th book à 6-8; 1589-91), and a book of motets à 6-8 ("Cantiones sacræ," 1578). His heirs published yet another book of Masses à 5-7 (1593), a book of motets à 5-8 (1602, unless that be a new

edition of the motets of 1578), and "Laudes vespertinae Mariæ, hymni venerabilis sacramenti, hymni sive cantiones natalitiæ" (à 4-6, 1604). Other pieces are in collections. P. also published a collection of madrigals by various composers, "Harmonia celeste" (1583, 1593).

Pezel (Pezelius), Johann, town piper at Bautzen, and afterwards at Leipzig, one of the few composers who, in the 17th century, turned his attention almost exclusively to instrumental music, and who must hence be looked upon as a promoter of the instrumental style. He published: "Musica vespertina Lipsiaca oder Leipzigerische Abendmusik von 1-5 Stimmen" (1669); "Hora decima oder musikalische Arbeit zum Abblasen" (1669, à 5); "Musikalische Arbeit zum Abblasen, bestehend in 40 Sonaten mit 5 Stimmen" (1670); "Arien ueber die ueberflüssigen Gedanken" (1673); "Musikalische Seelenerquickungen" (1675); "Bicinia variorum instrumentorum, ut a Violinis, Cornettis, Flautis, Clarinis et Fagottis cum appendice a 2 Bombardinis vulgo Schalmey" (1674); "Intraden in zwei Theilen" (1676); "Deliciae musicales oder Lustmusik, bestehend in Sonetten, Allemanden, Balletten, Gavotten, Couranten, Sarabanden und Gigen von 5 Stimmen, als 2 Violinen, 2 Violon nebst dem B C" (1678); "Intraten a 4 nehmlich mit einem Kornett und drei Trombonen" (1683); "Fünfstimmige blasende Abendmusik, bestehend in Intraden, Allemanden, etc. . . . als 2 Kornetten und 3 Trombonen" (1684); "Musikalische Gemüthsergötzungen, bestehend in Allemanden," etc. (1685); "Opus musicum sonatarum præstantissimarum 6 instrumentis instructum, ut 2 Violinis, 3 Violis et Fagotto adjuncto B C" (1686); "Musica curiosa Lipsiaca, bestehend in Sonaten, Allemanden, Allabreven, Kapricen zc, mit 1-5 Stimmen zu spielen" (1686). His only vocal work is: "Jahrgang ueber die Evangelia von 3-5 Vokalstimmen nebst 2-5 Instrumenten" (1678). Finally are to be named his treatises on music: "Observationes Musicæ" (1678-83), "Infelix musicus" (1678), and "Musica politico-pratica" (1678).

Pfeiffer, Georges Jean, pianist and composer, co-proprietor of the Paris pianoforte factory, Pleyel, Wolff et Cie., b. Dec. 12, 1835, Versailles, received his first instruction from his mother, Clara P. (pupil of Kalkbrenner), and was a pupil of Maleden and Damcke for composition. In 1862 he appeared at the Conservatoire concerts with great success, and published a number of estimable works (oratorio, *Hagar*; operetta, *Capitaine Roche*, 1862; a one-act opera, *L'enclume*, 1884; a symphonic poem, "Jeanne d'Arc," a symphony, overture "Cid," several pf. concertos, a pf. quintet, trios, sonatas, études).

Pfeil, Heinrich, b. Dec. 18, 1835, Leipzig, lives there, and since 1862 has published the

Sängerhalle (organ of the German "Sängerbund"; see LIEDERTAFEL), and also a "Tonkünstlermerkbüchlein," an analysis of the "Musikgeschichte," "Liedertafelkalender" (1881), etc. He has also written numerous compositions for male choruses.

Pfughaupt, Robert, pianist, b. Aug. 4, 1833, Berlin, d. June 12, 1871, Aix, pupil of Dehn at Berlin, afterwards of Henselt, at Petersburg, where he married in 1854, and of Liszt, at Weimar; he lived from 1857-62 at Weimar, then at Aix-la-Chapelle. He bequeathed his fortune to the Allgemeiner deutscher Musikverein, of which the latter made use as the basis of a Beethoven scholarship. P. composed pf. pieces and songs.—His wife, Sophie Stschepin, b. Mar. 15, 1837, Dünaburg, d. Nov. 10, 1867, Aix-la-Chapelle, was a first-rate pianist, pupil of Henselt and Liszt.

Pfohl, Ferdinand, b. Oct. 12, 1863, Elbogen (Bohemia), at first studied law at Prague, afterwards (1885) philosophy and music at Leipzig, and soon displayed activity as a musical critic there. In 1891 he undertook the musical editorship of the *Hamburger Nachrichten*, as successor to Paul Mirsch. P. has written: "Höllenbreughel als Erzieher," "Bayreuther Fanfaren," guides to Wagner's *Tannhäuser* and *Meistersinger*, and has published some books of songs; an orchestral suite has also appeared, arranged for pianoforte, four hands.

Pfundt, Ernst Gotthold Benjamin, famous performer on the kettledrum, b. June 17, 1806, Dommitzsch, near Torgau, d. Dec. 7, 1871, Leipzig; he studied theology in the latter place, but, later on, pianoforte playing, under his uncle, Fr. Wieck (having already, as a child, learnt to play on various wind-instruments, also drum and kettledrum), and lived for some time as teacher of the pianoforte, and as chorus leader at the Leipzig town theatre. In 1835 Mendelssohn persuaded him to join the Gewandhaus orchestra, of which he was a member up to the time of his death. P. invented the "Maschinenpauke," and published a drum Method.

Phalèse, Pierre (Petrus Phalesius, really van der Phaliesen), b. about 1510, Louvain, established there, about 1545, a music-publishing business, which became one of the most important of the time. From 1556 he printed his own publications. In 1572 he entered into partnership with Jean Bellère (q.v.) of Antwerp, but each remained in his own city. It was only in 1579 (probably after the father's death) the son of Phalèse, of like name, transferred the Louvain business to Antwerp, and the firm assumed the title of Pierre P. and Jean Bellère. Bellère died in 1598, the younger P. in 1617; his daughter, Magdalene P., however, continued the business up to the time of her death, in

1650; and still in 1669 is to be found on a musical publication: "Presso i heredi di Pietro Phalesio."

Philidor is the name, or, according to a family legend, the surname (in remembrance of Filidori, an Italian oboe-player) bestowed by Louis XIII. or XIV. on one of the oldest members of a family (Michel or Jean), who distinguished himself as a musician. This highly-esteemed family of musicians lived in Paris during the 17th and 18th centuries; its original name (afterwards united with that of P.) was Danican. The grandfather of the most important representative of the family (François André) was (1) Jean Danican-P., d. Sept. 8, 1679, Paris, as "Phiphre de la Grande Écurie," i.e. piper of the royal military music; he played the *fifre*, cromorne, oboe, and the *trompette marine*. His sons were:

(2) André Danican-P., d. Aug. 11, 1730, at an advanced age. In 1659 he succeeded his uncle, or distant relation, Michel Danican (who did not assume the surname P.) as cromorne player in the Grande Écurie, and afterwards became member of the king's private band, consisting of oboe, cromorne, *trompette marine*, and bassoon. He composed marches, etc., for the army, also opera ballets (*Le canal de Versailles*, *La Princesse de Crète*), a divertissement, and several masques for the court at Versailles. A work of quite special merit was the superintendence of the Royal Musical Library at Versailles, to which P., as assistant-librarian, together with the too-busy violinist Fossard, attended with great diligence; and in this library he amassed a rich collection of old instrumental pieces (dances, banquet and hunting music, festival fanfares, ballets, etc.), which had been performed at court from the time of François I. (1515). Of these, unfortunately, a portion afterwards became scattered, while the remainder form price-less documents (the publication of which has been promised by E. Thoinan in Pougins's *Supplément to Fétis's "Biographie universelle"*). The printed works of André P. are:—"Mascarade des Savoyards" (1700); "Mascarade du roi de la Chine" (1700); "Suite de danses pour les violons et hautbois qui se jouent . . . chez le roi" (1699); "Pièces à deux basses de viole, basse de violon et basson," etc. (1700); "Pièces de trompettes et timballes" (1685); "Partition de plusieurs marches et batteries de tambour . . . avec les airs des fifres et de hautbois," etc. André P. was named P. l'aîné, to distinguish him from his younger brother, Jacques Danican (1657-1708), who, like himself, was a wind-instrument player in the king's band.

(3) Anne Danican-P., the eldest son of André P., b. April 11, 1681, Paris, d. Oct. 8, 1728, able flute player (published pieces for flutes, violins, and oboes, 1712); he composed

several pastoral operas (*L'amour vainqueur*, 1697; *Diane et Endymion*, 1698; *Danaë*, 1701), and founded the *concerts spirituels*.

(4) Pierre Danican-P, son of Jacques P., b. Aug. 22, 1681, d. Sept. 1, 1731; able flautist, who published three books of suites for two cross-flutes (1717, 1718), also flute trios. The most important of all, however, was

(5) François André Danican-P., the youngest son of André Philidor, by a second marriage, famous alike as chess-player and composer, b. Sept. 7, 1726, Dreux (whither his father had retired in 1722, on receiving his pension), d. Aug. 31, 1795, London. Already as a child, P. showed extraordinary talent for chess, and, although he studied music regularly under Campa, still he became the first chess-player in the world before his musical efforts were recognised. In 1745 he travelled to Amsterdam, where he competed with the chess-player Stamma; then to Germany, and in 1748, prepared at Aix-la-Chapelle an "Analyse du jeu des échecs," which he published in London in 1749 (2nd ed. 1777). From that time he went almost every year to London, gaining victories at the Chess Club from which he afterwards received a regular pension; and, finally, died in London. His zeal for composition commenced somewhat suddenly. In 1754 he wrote a *Lauda Jerusalem*, in the hopes of gaining the post of "surintendant de la Musique"; but this he did not obtain, as the queen took no pleasure in his music. In 1759 he suddenly appeared as a dramatic composer, and with such striking success, that for decades he was recognised as the chief representative of comic opera. The first were one-act pieces:—*Blaise le sautier* (1759), *L'huitre et les plaideurs* (1759), *Le quitproquo* or *Le volage fixé* (1760), *Le soldat magicien* (1760), *Le jardinier et son seigneur* (1761); then followed one of his best works, *Le maréchal ferrant* (1761, two acts), and afterwards some other one-act pieces (*Sancho Pança*, 1762; *Le duceron* or *Les trois souhaits*, 1763; *Le sorcier*, 1764, the first piece at Paris in which a composer was called before the curtain; *Tom Jones*, 1765, with the great novelty of an a cappella quartet); the grand opera *Ernelinde, Princesse de Norwège* (1767, Philidor's best work—in 1769 produced in revised form as *Sandomir, Prince de Danemark*). Then followed *Le jardinier de Sidon* (1768), *L'amant déguisé* or *Le jardinier supposé* (1769), *La nouvelle école des femmes* (1770), *Le bon fils* (1773), *Zémire et Mélide* (1773), *Berthe* (Brussels 1775, jointly with Gossec and Botson), *Les femmes vengées* (1775), *Le puits d'amour* or *Les amours de Pierre le Long et Blanche Bazu* (1799), *Persée* (Grand Opéra 1780), *L'amitié au village* (1785), *Thémistocle* (Grand Opéra, 1786), *La belle esclave* (1787), *Le mari comme il les faudrait tous* (1788). The opera *Bélisaire*, which he left unfinished, was completed by Berton, who wrote music for the third act; it was produced 1796. The breaks

1770-73 and 1775-79 are explained by the long visits which P. paid to England. In 1766 a requiem by P. was performed in *memoriam* Rameau.

Philipp de Caserta, see CASERTA; P. de Monte, see MONTE; P. de Vitry, see VITRY.

Philipps, (1) Peter (Petrus Philippus, Pietro Filippo), contrapuntist, 16th and 17th centuries, English by birth, afterwards canon at Béthune (Flanders), then organist of the Vice-regal Chapel at Antwerp, finally canon at Soignies. He published "Melodia olympica di diversi" (1591 [1594, 1611] à 4-8); two books of madrigals à 6 (1596, 1603 [1604]); a book of madrigals à 8 (1598 [1599]); motets à 5 (1612); motets à 8 (1613); "Gemmulae sacrae" à 2-3, with continuo (1613 [1621]); Litanies à 4-6 (1623); "Paradisus sacris cantionibus conditus" (1628). Burney asserts that P. wrote the first regular fugue (contained in the Fitz-William Virginal Book).

(2) Adelaïde, opera singer (contralto), b. 1833, Stratford-on-Avon, d. Oct. 3, 1882, Carlisle; she received her training in Boston, whither her parents had emigrated; she appeared first as a dancer and actress, but by the advice of Jenny Lind took up singing and became a pupil of Manuel Garcia at London. In 1854 she made her *début* as Rosina at Milan, sang subsequently at New York, Havana, and on the European continent also. She sang up to 1881, from 1879, however, only in operetta. Her sister, Mathilda, was also a distinguished contralto.

Philomathes, Wenzeslaus, native of Neuhäus, Bohemia (hence "de Nova domo"); he wrote "Musicorum libri quatuor" (Vienna, 1512), a short treatise on the theory of *Cantus planus* and measured music in connection with verse, which was repeatedly reprinted (1518, 1534, 1543).

Philosophy of Music is the investigation of the laws according to which musical works of art are framed; also an inquiry into the effect of music on the hearer, and of the elementary causes thereof; likewise the whole speculative theory of music which may be summed up in the question, Why? (cf. ESTHETICS, MUSICAL.)

Philp, Elizabeth, b. 1817, Falmouth, d. Nov. 26, 1885, London, was an esteemed teacher of singing and song composer; she also wrote a brochure, "How to Sing English Ballads."

Phocinx. (See KRUMMHORN.)

Phonascus (Gk.). (See SYMPHONETA.)

Phonetics (Gk.), the science of the voice.

Phorminx (Old Greek), a stringed instrument of the time of Homer, similar to the harp or cither.

Phrase Signs, i.e. the indication of the dismemberment, according to their meaning, of musical thoughts (cf. PHRASING); this by no means coincides with the connection and disconnection (*Legato* and *Staccato*) effected by

articulation; it directly contradicts, indeed, the peculiar system of grouping established by means of bar strokes and common cross-bars. Repeated attempts have been made after a systematic system of P. S. (during last century by J. A. P. Schulz, D. G. Türk, and others), recently by Eschmann, but first, in a practical, logical manner by H. Riemann in his "Phrasierungsausgaben," which now include the principal classical works (published by Simrock, Litolf, Steingraber, Schubert & Co., and Augener & Co.). The chief elements in Riemann's system are:—(1) The *slur*, showing the extent of the phrases, and indicating, so far as it does not run counter to any other articulation signs, legato playing.—(2) The *reading mark* (guide)

which points out the sub-division of phrases into motives.—(3) The *figures*, written beneath the bar-strokes, showing period structure (2 for the point of stress of the first group of two measures; 4 for the point of stress of the fore-section; 8 for the point of stress of the whole sentence), together with the various changes of meaning resulting from elision, insertion, and overlapping. (Cf. Riemann's "Katechismus der Kompositionslehre" [1889]).—(4) *Connection of slurs* (slurs joined together, and running to a point), *i.e.* signs to continue legato beyond the phrase limits.—(5) *Crossing of slurs*, a sign of double phrasing of single notes (end and beginning of two phrases, thus running one into the other).—(6) , the sign of a broken off, or interrupted phrase.—(8) The "Stuttgart Comma" (in a break in the slur ) which indicates a break before the last note of the phrase.

Phrasing, marking off of the phrases, *i.e.* of the natural, and more or less self-contained members of musical thoughts, whether in performance, by means of expression (q.v.), or in the notation, by special signs. (See PHRASE SIGNS.) Unfortunately, the term P. is often used in the sense of articulation (q.v.), and this has been the cause of much misunderstanding. The members of which musical thoughts naturally consist are:—(a) *Bar motives* ("Taktmotive"), *i.e.* formations which only contain one *accented* beat (with or without a preceding or following unaccented one), and which have their point of stress on this accented beat.—(b) *Bar groups* ("Taktgruppen"), two such bar motives taken together as a unit, of which the accented bar forms the point of stress.—(c) *Half-sections* ("Halbsätze"), four bar motives, whose point of stress is always the *accented bar* of the second group.—(d) *Periods* ("Sätze"), consisting of two sections, fore and after ("Vordersatz," "Nachsatz"). Concerning departures from this normal scheme,

Cf. METRE, ART OF. In addition there are *Sub-division motives* ("Unterteilungs-motive"), whose point of stress only forms one beat, so that as many are possible in a bar, as that bar has beats. *Phrases* ("Phrasen") is the term applied to those bar motives, bar groups, and half-sections, which, as independent members of symmetries, are opposed one to another (Cf. METRE, ART OF), and, as such, can be indicated by phrase slurs. In the construction of musical themes, the first two phrases are, as a rule, only bar motives, whereas those which follow may be extended to double or quadruple length (section members, sections). The composer indicates extension of phrases, approximately, by means of dynamic signs; for each phrase demands independence and unity of dynamic shading, *i.e.* it has only one dynamic culminating point. On the other hand, there is considerable difficulty in determining the exact limitation of phrases, one against the other, likewise their inner organisation, *i.e.* the sub-division motives; for the masters have seldom clearly indicated the limit of these formations. The most essential resting points for marking the limits of motives are:—(1) *Longs* ("Längen"), on the accented beat (of each order) give the effect of an end, unless the harmonic conditions render such a conception impossible. (Cf. 5.)—(2) *Rests* ("Pausen"), after the note falling on the accented beat (of each order) produce a like effect—form, indeed, memberment of a higher kind, yet with the same limitation.—(3) All *figuration* has, first and foremost, the sense of leading from one point of stress (of each order) to the next (of the same order), *i.e.* gives rise to new beginnings, up-beat formations.—(4) *Commencements on the accented beat* (of each order) are possible, and these are frequently repeated in formations which are symmetrically opposed (phrases). With regard to sub-divisions, there arises no departure of any kind from the law mentioned under 3.—(5) *Feminine endings*, *i.e.* extensions of the motive beyond the beat which has cadential power (*i.e.* the accented one of each order (even when a rest occurs on the point of stress) (Cf. METRE), are not only possible, but form artistic means of special intensity as regards effect. These always occur when (a) the note following after the point of stress absolutely demands, as close, resolution of a dissonance; (b) when the composer, by means of rests, special dynamic indications (opening accent), or by other means of notation (breaking up of cross-bars, legato slurs, signs of diminuendo), determines the conception in this direction. (Cf. Riemann, "Musikalische Dynamik und Agogik," 1884, and "Katechismus der Kompositionslehre," 1889; Riemann and Fuchs: "Praktische Anleitung zum Phrasiren," 1886, and Fuchs: "Die Zukunft des musikalischen Vortrags," 1884, and "Die Freiheit des musikalischen Vortrags," 1885. Otto Tiersch's book, "Rhythmik, Dynamik

und Phrasierungslehre," 1886, is eclectic, but not consistently carried out; so that neither clear determinations with respect to the limits of phrases, nor firm points of view as a help to interpretation, can be gathered from it. The writings of Rud. Westphal [q.v.] represent quite a different standpoint; he attempts to demonstrate the laws of P. from the writings of the ancient Greeks on rhythm. Interesting in certain details, but *manqué* as a whole, is Mathis Lussy's "Traité de l'expression" [1873], translated into German under the title "Die Kunst des musikalischen Vortrags" [1886]. In this work, in place of a system, we have an endless series of rules, for the most part contradicting one another.)

Phrygian Mode, (1) of the Greeks. (See GREEK Music, II., III.—(2) The *Church Mode* of the Middle Ages, consisting of the following scale: *e f g a b c d e*. (See CHURCH MODES.) The *Phrygian cadence* has been for centuries a constant source of perplexity, because harmonic conceptions have been brought to bear upon this series of notes which were entirely foreign to them at the period of homophonic music, to which, in fact, the Gregorian melodies belong. The P. M., as is known, answers to the Dorian of the Greeks, *i.e.* as we now know, to a scale of *purely minor character* (see MINOR KEY), one in which the conditions of the major scale are reversed, *i.e.* the tonic chord of the scale is not that of *E minor*, as supposed during the 16th and 17th centuries, but that of *A minor*, of which the principal note, according to the new theory of minor, is not *a*, but *e*. The cadence *f-e* answers, therefore, completely to the *b-c* of the *c major* key; and as the latter must be harmonised with the chords *G major-c major*, so the former must have *D minor-A minor* (1). Instead of this, a vain search was made after a satisfactory cadence to the *E minor* chord, which, without sharpening the *f* and *d*, was not possible. As the *f* was a *conditio sine qua non* of the mode, a decision was finally made in favour of the half close *D minor-E major* (2). This does not, it is true, contradict the spirit of the mode; but it is not a cadence, only a half one.

Physharmonika. (See HARMONIUM.)

Piacere (Ital.), pleasure; *a piacere* (*a piacere*, *a bene placito*), at pleasure.

Piacevole (Ital.), pleasing.

Piangendo, Piangevole, Piangevolmente (Ital.), plaintively.

Pianino, diminutive of piano; thus a small piano. The term is in general use for pianos with strings in a vertical direction (*Piano droit*), of which the Clavicytherium and Giraffenflügel

were the older forms (left higher than right, whereas the P. is straight along the top). (Cf. PIANOFORTE.)

Piano (Ital.), abbr. *p.*, soft; *pianissimo* (*pp.*), very soft; *mezzo-piano* (*mp.*), rather soft.

Pianoforte (Ger. *Clavier*). This instrument, although it has found its way to every corner of the globe, has a comparatively short history. In its present form as a "Hammerklavier," it is not two centuries old; but even counting the old stringed instrument with keyboard, it only extends back to the Middle Ages. Quite apart, however, from the keyboard which led to the term *Clavier* (*clavis*=key), all stringed instruments struck with a plectrum or played with the fingers must be looked upon as the predecessors of the P., *i.e.* its origin is lost in antiquity. Tradition points to the monochord as ancestor—that primitive instrument which helped to determine the relationship of tones, and which, by means of a single string and a movable bridge, showed the string-length ratios of the tones of the scale. Aristides Quintilian (2nd century A.D.) already describes a *heliikon* with four strings of like pitch, as a further development of this school instrument, in that it showed better the consonance of the intervals. The organ (q.v.) first led to the idea of a keyboard; the latter was transferred to the monochord as a system of bridges arranged so as to give the various intervals; each of these bridges, by pressing down the key connected with it, was raised so that the string lay firmly on it—that, however, was a scheme only gradually evolved. But the *Organistrum* (see HURDY-GURDY) shows that it was adopted at latest from the 8th to the 9th century, at a time when the organ began to be in common use for teaching purposes in the monasteries. (Cf. Riemann, "Orgelbau im frühen Mittelalter," *Allgemeine Mus. Ztg.*, 1879, Nos. 4-6.) The oldest name to be met with for instruments of the clavier kind is *Exaquir* (Span.), *Eschiquier* (Fr.), *Esquaquil*, etc. (all in the 14th century), described by G. de Machault, with the addition *d'Angleterre* (*i.e.* English chess-board), as a stringed instrument of the organ family. (Cf. the hereinafter named treatise by K. Krebs.) To all appearance the manufacture of the clavier was first developed in England, as also the first clavier literature worthy of mention.

The *Clavichord*, still at the beginning of the 16th century, had far fewer strings than keys; but already much earlier, there was bi- and tri-chord stringing (each string-group belonging to several keys). The primitive wooden bridges of the organistrum (and of the more ancient monochord) had been developed into metal tongues (*tangents*), which, fastened to the back end of the keys, were raised by the latter, and not only divided the strings, but also caused them to sound; whereas

in the old monochord that could only be effected by striking them with the plectrum or plucking them with the finger. The strings lay cross-ways, as in the square pianoforte of the present day; their sounding part was situated to the right of the performer, and the damping of the part to the left was probably managed with the left hand, or, already at an early period, bands of cloth were inserted. The compass of these small instruments was at first probably that of the Guidonian Monochord, *i.e.* from *G-e'*, with only *b* and *b'* as upper keys; but already, about 1400, we meet with a kind of dulcimer with keyboard (*Dulce melos*), with the compass *B-a²*, chromatic; (Bottée de Toulmon "Instruments de musique employés au moyen âge," 1844), and Virdung in 1511 already reports a compass of over four octaves. These instruments had, as yet, no feet, but were placed, like a chest, on a table (from which, perhaps, arose the old name *Echiquier* [chess-board]).

Soon after the *Clavichord* came the *Clavicembalo*. Virdung was of opinion that the latter was evolved from the Psalterium, a kind of three-cornered small harp. The name *Clavicembalo* seems to show that it was looked upon as a cymbal (dulcimer) with keyboard. (*Cf.* what is said above about *Dulce melos*). The chest of the instrument was three-cornered, corresponding to the dimensions of the strings which diminished towards the top. The principal difference between the clavichord and the clavicembalo was, that the latter had for each key a separate string tuned to the corresponding note, and therefore did not need any dividing-bridge (fret). The clavicembalo, as we find it described in Virdung, is thus the oldest *bundfrei* (unfretted) clavier. It was also, at an early period, made multi-chord for the strengthening of the tone; even constructed, according to Praetorius's account (1618), with a mixture arrangement (each note producing a chord). It naturally required quite a different mode of touch. Instead of the tangents of the clavichord, wooden bars (jacks) were introduced, which bore at the upper end a small pointed piece of hard quill (crow-quill), by means of which the strings were set in vibration. The clavichord and clavicembalo existed side by side until, at the end of the last and beginning of the present century, the Hammerklavier superseded both; but already in the 16th century they had developed to larger dimensions. The clavichord maintained, throughout, its four-cornered shape, but soon was placed on feet of its own; and the strings in it were arranged in a similar fashion to those of the clavicembalo, *i.e.* the shorter and thinner strings above. The common use of strings by several keys became more and more rare; yet unfretted (*bundfrei*) clavichords appear only to have been built at the beginning of the 18th century.

In Germany, the clavichord was briefly named *Klavier*; *Monocordo*, *Manicordo*, are synonymous terms. As an instrument for teaching purposes, also for practice, the clavichord, especially in Germany, was distinctly preferred, because, to a certain extent, it was capable of tone-shading; whereas the tone of the clavicembalo was always short, hard, and dry. The *Bebung* (*tremolo*) (produced by a slow balancing of the finger on the key, which caused a soft rubbing of the string by the tangent) was an effect only possible on the clavichord.

The clavicembalo was developed in manifold form. The small ones in table form were called *Spinett* (q.v.). The name *Virginal* occurs already in Virdung (1511), and has therefore no reference whatever to the "Virgin" Queen Elizabeth of England. Probably that term was applied to an instrument of narrow compass downwards, and whose middle position was therefore an octave higher than that of the large clavier, answering to the "Jungferntregal" stop of the organ. The larger instruments, built in the shape of a right-angled triangle, with the sharp corners rounded off (like grand pianofortes of the present day), retained the old name, *Clavicembalo* (or briefly *Cembalo*; also in corrupted form, or with regard to the compass downwards, *Gravicembalo*, Fr., *Clavecim*); they were called Harpsichord (*Arpicordo*); in German also *Flügel*, *Kieflügel*, *Steertstück* and *Schweinskopf*.

Our present Piano, already at the commencement of the 16th century, had a predecessor in the *clavicytherium*—a clavicembalo with cat-gut strings running vertically (behind the keyboard, an upright, three-cornered case); this vertical position of the strings, however, appeared before in the early clavichord. The *clavicytherium* lasted into the 17th century, and the later *Giraffenklavier*, common at the beginning of this century, was similar to it.

At the close of the 16th century, the repeated attempts to revive the chromatic and enharmonic genera of the Greeks brought about attempts to extend the keyboard and the strings of the "instruments" (such, for a long time, was the general name given to all kinds of Claviers), and special keys were introduced for *G[♯]* next to *A[♯]*, *D[♯]* next to *E[♯]*, etc. This scheme was not generally accepted, but it soon prompted the idea of equal temperament. Other, and in part much later, attempts at improvement were the different kinds of "Bogenklaviere," "Lautenklavicimbal," "Theorbenflügel," combination of bells with the C., etc. On the other hand, the clavicembalo with *double keyboard*, after the manner of an organ, came into general use; each keyboard had a special set of strings (probably an invention of Hans Ruckers, senior, q.v.). As a rule, the upper manual was pitched an octave higher (*c'* what was said above concerning the virginal),

and both keyboards could be coupled, so that the lower sounded with the upper one. This strengthening by octaves added materially to the tone of the instrument. For a time the *Clavécins à peau de buffle* of Pascal Tascin (Paris, 1768) were in great favour. They had not only quills, but also tangents of buffalo leather, and the *feu de buffle* could be used separately, or in combination with the quills. J. K. Österlein also constructed Claviers at Berlin in 1773 with leathern tangents.

The really brilliant period of keyboard instruments only begins, however, with the invention of the *Hammerklavier*, or, as it was first called, *Piano e forte* (*Pianoforte, Fortepiano*). The name indicates the essence of the matter. It had always been felt as a sad want, in the "Kiefflügel," that it was incapable of tone-shading. The tone was short and sharp, and always of the same intensity. It sufficed to keep the orchestra together, for which only sharp marking of the time or rhythm was necessary (the capellmeister did not conduct, but only played at the clavier as *Maestro al cembalo*); for solo performances it was indeed a defective instrument. On the other hand, the tender clavichord was incapable of giving strong accents. A new principle of tone production had to be, and was, discovered. The clavichord had once again to become a cymbal (*Dulcimer*), in order to resuscitate as a pianoforte. Without doubt, the passing sensation caused by the improved dulcimer of Pantaleon Hebenstreit (1705) gave the impulse to the introduction of hammer action in keyboard instruments. Almost at the same time, various attempts in the direction of this most important invention were made; to whom belongs the honour of the first idea has been frequently discussed. It has now been established (and probably beyond dispute) that Bartolommeo Cristofori (q.v.), instrument-maker at Florence, was the first inventor (1711). His hammer action contains all the essential elements of the action of the grand pianofortes of the present day—small hammers on a special ledge; spring action whereby the hammer, after striking, is drawn quickly back; cross or fork of silk thread (afterwards the "check"); and a special damper for each key. In comparison with this action, the schemes of Marinus (Paris, 1716) and of Ch. G. Schröter (published at Nordhausen 1763) were primitive and imperfect; the latter, however, asserts that he invented his action in 1717. Next to Cristofori—whose instruments did not go out of Italy, and indeed attracted but little attention—Gottfried Silbermann is the only one whose claims to independent discovery are of any value. He was the famous Saxon organ-builder (d. 1753). His first pianofortes did not, it is true, meet with the entire approval of J. S. Bach, but he succeeded, finally, in completely satisfying the demands of the latter. The pianofortes of Silbermann enjoyed considerable

reputation, and were instrumental, to a high degree, in gaining recognition for the new invention. His action was practically identical with that of Cristofori, i.e. with the so-called English action. The "German" or "Viennese" action was the invention of Georg Andr. Stein, of Augsburg, who was a pupil of Silbermann's. In Stein's action the hammers do not rest on a special ledge, but are placed on the back ends of the keys. Stein's instruments, and afterwards those of his son-in-law Streicher, were thought highly of in Vienna, and the way in which they were constructed was soon adopted all over Germany. As the English pianoforte-makers—especially Broadwood—perfected certain details in the Cristofori-Silbermann action, the term "English" was applied to it. Sebastian Erard made a new and important discovery in the construction of pianofortes (1823), viz. that of double escapement (*double échappement*), by means of which the hammer was made to touch the string a second time before the key returned to its equilibrium (repetition action). The construction of pianofortes has been further improved by Steinway, Bechstein, Bösendorfer, Chickering, Blüthner. (See the respective articles.)

Additional details respecting the development of the pianoforte will be found in: Fischhof, "Versuch einer Geschichte des Klavierbaus" (1853); K. A. André, "Der Klavierbau" (1855); E. F. Rimbault, "The Pianoforte, its Origin, Progress, and Construction" (1860); Welcker v. Gontershausen, "Der Klavierbau" (1870); O. Paul, "Geschichte des Klaviers" (1868); Poncicchi, "Il Pianoforte, sua origine e sviluppo" (1876); K. F. Weitzmann, "Geschichte des Klavierspiels" (2nd ed., 1879); Blüthner and Gretschel, "Lehrbuch des Pianofortebaus" (1875); and K. Krebs, "Die besaiteten Klavierinstrumente bis zum Anfang des 17. Jahrhunderts" ("Vierteljahrsschr. für Musik-Wissenschaft," 1892).

Pianoforte Playing. K. F. Weitzmann has written in monograph form a history of pianoforte playing (second edition, 1879), which may be recommended to all who desire knowledge of the subject conveyed in a comprehensive, yet convenient manner. See also F. C. Fillmore's "History of Pianoforte Music" (Chicago, 1883). The article on the same subject, by J. Alsleben, in the *Musikal. Centralblatt*, of 1882, is also of value. From the great number of masters of harpsichord and pianoforte playing, may be selected the following; as the most distinguished:—D. Scarlatti, F. Couperin, J. Ph. Rameau, J. S. Bach, K. Ph. E. Bach, Mozart, Steibelt, Clementi, Cramer, Kalkbrenner, Aloys Schmitt, Dussek, Czerny, Field, Hummel, L. Berger, Kessler, Herz, Mendelssohn, Moscheles, Thalberg, Liszt, Chopin, Henselt, Hiller, Reinecke, Tausig, Bülow, Ant. and Nic. Rubinstein, X. Scharwenka, Hallé, Saint-Saëns, Eug.

D'Albert, Paderewski; and the ladies:—Clara Schumann, Madame Belleville-Oury, Frau Auspitz-Kolar, Madame Clauss-Szarvady, Madame Essipoff-Leschetzki, Madame Sophie Menter-Popper, Therese d'Albert-Careño, etc. Among educational works, the following are the most celebrated, and the most trustworthy:—Ad. Kullak's "Aesthetik des Klavierspiels" (2nd ed., 1876), L. Köhler's "Mechanik als Grundlage der Technik" (3rd ed., 1888), the Methods of Hummel, Kalkbrenner, Fétis, Köhler, Lebert-Stark (also the most recent one by Riemann), and the studies of Clementi, Cramer, Czerny, Bertini, Moscheles, Berger, Thalberg, Chopin, Alkan, Heller, Rubinstein, Rheinberger, and Liszt; also (and above all), Bach's "Well-tempered Clavier."

Piatti (Ital.), cymbals; *senza p.* (in the great drum part) signifies "only drum, without cymbals."

Piatti, Alfredo, 'cello virtuoso, b. Jan. 8, 1822, Bergamo, son of the celebrated violinist, Antonio P., who died Feb. 27, 1878. P. studied under his grand uncle, Zanetti, from 1832–37 was pupil of the Milan Conservatorio (Merighi); he played in 1843 with Liszt in Munich, and in 1844 in Paris and London, and made such an immediate and favourable impression in the latter city, that he has made it his residence during the musical season. Since 1859 he has been one of the chief supports of the Monday and Saturday Popular Concerts (chamber music). P. has composed two 'cello concertos, a concerto, songs with 'cello obbligato, solo pieces, variations, etc., and he has also published a set of old compositions for strings (by Locatelli, Boccherini, etc.); also a method for 'cello (Augener & Co.).

Fibroch (Gaelic, *piobaireachd*, "pipe melody"), an old Scotch musical piece, a series of variations for the bagpipe on a theme (*urlar*), concluding with a lively finale (*creannluidh*). (Cf. Grove's "Dictionary of Music.") Both the *urlar* and *fibroch* are richly ornamented (appoggiaturas, single and double, etc.), and are characteristic, in that they make use of the eleventh overtone, the one midway between *f* and *ff*.

Piccinni, (1) Nicola [Picinni], the famous rival of Gluck at Paris, one of the most prolific of opera composers, and in his time highly celebrated, b. Jan. 16, 1728, Bari (Naples), d. May 7, 1800, Passy (near Paris). His father, though himself a musician, opposed the musical tendencies of the lad, but through the mediation of the Bishop of Bari, P. was sent, in 1742, to the Conservatorio Sant' Onofrio (Naples), where he became the favourite pupil of Leo and Durante. In 1754 he made his *début* as a dramatic composer at the Florentine Theatre, Naples, with *Le donne dispettose*, and this was followed by an immense series of operas. According to Ginguené, P. wrote 133

operas; Fétis mentions 80, but Florimo, indeed, discovered the scores of 22 others at a second-hand shop in Naples, and purchased them for the library of the Conservatorio. In 1756 P. married his pupil, the vocalist Vincenza Sibilla, but would not allow her any longer to tread the stage. His comic opera, *Cecchina*, or *La buona figliuola*, met with quite unexampled success at Rome, in 1760; it was given, not only at all theatres of Italy, but throughout the whole of Europe; and, amongst other honours, won unqualified recognition even from Jomelli. P. had written the opera within the space of three weeks, and it bears the stamp of fresh, free invention. P. introduced a novelty, viz. an elaborate finale, composed of several scenes with changes of tempo and key; he also extended the form of the duet, giving to it a more dramatic character. The Roman public is fickle; of this P. made bitter experience when suddenly, in 1773, Rome let him fall, raising on her shield Anfossi, to whom he was vastly superior. Excited by this, P. became ill, and vowed never to enter Rome again. At the special invitation of the queen, Marie Antoinette, through La Borde and the Neapolitan Ambassador, Count Caraccioli, P. went to Paris (1776) with his wife and children, and this formed a turning-point in his life. He was to compose there French operas, and received a salary of 6,000 francs, travelling expenses, and rooms free of charge. Marmontel rearranged for P. some of Quinault's libretti (he reduced them to three acts), and explained to the composer, as best he could, the prosody of the French language. The first fruit of this labour, certainly painful to P., was *Roland*, 1778. P. was an honourable, well-disposed man, and lived happily in his family circle. He was a stranger to intrigue, and, probably, scarcely knew that the zeal with which a strong party worked for his success was, to a great extent, by way of opposition to the reforms of Gluck; anyhow, amid the strife between the Gluckists and the Piccinnists, he remained perfectly passive. In spite of all the counter-efforts of the Gluckists, *Roland* achieved a splendid success. In the same year, when an Italian company was engaged to play alternately with the French one at the Grand Opéra, P. celebrated still greater triumphs. He was named manager of the Italian company, and found opportunity to introduce his best Italian operas: *Le finte gemelle*, *Cecchina*, *La buona figliuola maritata*, and *Il vago disprezzato*, works in which his imagination was not fettered by a foreign tongue. But the contest was not yet at an end. The management of the Grand Opéra stirred up anew the flames of discord, for Gluck and P. were commissioned at the same time to set *Iphigénie en Tauride* to music. Gluck's work was given already in 1779, and P. was foolish enough to complete his opera; he certainly did not suffer defeat in 1781, but met

with a very cool reception; he had not grown to the size of the giant Gluck. He had previously produced also the following French operas:—*Phaon* (Choisy, 1778, while the court was on a journey), *Le fat méprisé* (Comédie italienne, 1779), *Atys* (Grand Opéra, 1780). After Gluck's return to Vienna, P. found in Sacchini a new rival, but with *Adèle de Ponthieu* (1781), *Didon* (1783, published in a new edition, together with *Roland*, by Breitkopf and Härtel; cf. CAMBERT), *Le dormeur éveillé*, and *Le faux lord* (all in 1783), he fully maintained his reputation. On the other hand, with *Lucette* (1784), *Diane et Endymion* (1784), *Pénélope* (1785), and *Le mensonge officieux* (1787), he was decidedly unfortunate, while *Adèle de Ponthieu* (1786, in revised form), *L'enlèvement des Sabines* (1787), and *Clytemnestre* (1787) were not produced at all. The character of P. is displayed most clearly in the fact that he harboured no bitter feeling against either Sacchini or Gluck. When the former died, in 1786, he pronounced his funeral oration; and again, when Gluck died in the following year, he sought, but in vain, to organise a great memorial festival. In 1784 P. was named professor of the "École Royale de Chant et de Déclamation" (from which was evolved the Conservatoire in 1794). Owing to the Revolution he lost this post, and returned with the utmost speed to Naples, where he was well received by the court, and still wrote some new Italian operas. But the marriage of one of his daughters with a Frenchman of republican tendencies brought him into disgrace with the court, so that for a time he was confined a prisoner to his house. In 1798 he returned, first of all, alone to Paris, but his family soon followed him. He found himself at first in needy circumstances, although he had a pension, and received besides 5,000 francs to make good his losses. Through the confusion caused by the Reign of Terror, he lost all his Paris possessions, and, indeed, all his scores were sold. Shortly before his death a sixth post of inspector was created for him at the Conservatoire; after his death (when he was succeeded by Monsigny), his widow received half the appointed salary, in return for which she gave singing lessons at the Conservatoire. P. also wrote some oratorios, psalms, and other sacred pieces, especially during the period immediately before his return to Paris, when he lived at Naples in very depressed circumstances. (Cf. Ginguéné, "La vie et les ouvrages de P." [1800]; Desnoiresterres, "Gluck et P., 1774-1800" [1872]).

(2) Luigi, son of the former, b. 1766, Naples, d. July 31, 1827, Passy (near Paris); he wrote likewise a number of French and Italian comic operas for Paris, Naples, etc., but he was a man of only moderate gifts.

(3) Louis Alexandre, natural son of Joseph P., the eldest son of Nicola P., b. Sept. 10, 1779, Paris, d. there April 24, 1850;

he wrote over 200 plays for Paris theatres, from the Grand Opéra down to the smallest suburban theatre.

Piccolo (Ital.), little. *Flauto P.*, also, merely called P., small flute, octave flute, "Pickelflöte." (See FLUTE.) *Oboe piccola*, the ordinary oboe (*q.v.*). *Violino P.*, same as "Halbgeige"; *Violoncello P.*, a kind of 'cello, invented by J. S. Bach (also called *Viola pomposa*).—A modern brass wind instrument is also called P. (in π flat), the highest of the valve instruments evolved from the bugle horn.

Pichel (Pichl), Wenzel, violinist and prolific composer, b. Sept. 25, 1741, Bechin, near Tabor (Bohemia), d. Jan. 23, 1805, Vienna, where he had been, since 1796, violinist at the Court Theatre, and chamber composer to the Duke Ferdinand (long before, in Italy). He composed, according to his own statement (in *Diabacz's Dictionary*), about 700 works, among them 88 symphonies (28 printed), 13 serenades (3 printed), an enormous number of chamber works, of which the following were printed:—12 quintets for strings, 12 quartets for strings, 3 flute and 3 clarinet quartets, 6 octets and 7 septets for baryton (*q.v.*), violins, viola, flute, and 'cello; 6 sextets for strings, 6 quintets for strings, and 3 quartets for strings (all with baryton); also violin concertos, a concertante for two violins, with orchestra; duets for violin, violin solos, etc., concertos for clarinet, pf. sonatas, a quantity of sacred works (4 masses, 6 motets, 10 psalms, 2 graduals, and a miserere printed), 7 Italian operas, etc.

Picinni. (See PICCINNI.)

Pickelflöte. (See PICCOLO and FLUTE.)

Piel, Peter, b. Aug. 12, 1835, Kessenich, near Bonn, studied at the Teachers' Seminary, Kempen (Jepkens); after 1868 he became teacher of music at the Seminary, Boppard-a-Rh. He is an industrious Church composer, has written many Masses (à 2-4, for equal and mixed voices, with and without organ accompaniment), motets, eight Magnificats in the Church modes, Antiphons to the Virgin (à 4-8, for male choir), Litanies, a Te Deum, also preludes and trios for organ, organ accompaniments for the hymn-books of the Limburg and Trèves dioceses, a "Harmonie Lehre," several pf. and violin pieces, etc. In 1887 P. received the title of "Königlicher Musikdirektor."

Piàno (Ital.), full; *Organo P.*, full organ; *Coro P.*, full chorus, in contradistinction to choir, composed of only equal voices (male or female); *a voce piena*, with full voice (opposed to *mezza voce*).

Pierazzon, **Pierchon**, **Pierre de la Rue.** (See LA RUE.)

Pierre, Constant, b. Aug. 24, 1855, Passy, studied at the Paris Conservatoire, was engaged as bassoon player in various Parisian orchestras, and has since 1881 been assistant secretary

at the Conservatoire, and contributor to musical papers; he is now editor of the *Monde musical*. He has written: "La Marseillaise" (with variations, 1887), "Les Noël populaires" (1886), "La facture instrumentale à l'exposition de 1889" (1890), "Les facteurs d'instruments et des luthiers" (1893); he also drew up a history of the orchestra of the Paris Grand Opéra (to which was awarded a prize, in 1889, by the "Société des compositeurs de musique").

Pierson, (1). (See LA RUE.)

(2) Henry Hugo (really Pearson, Henry Hugh; though from about his 30th year he wrote his name as P.), excellent composer, b. April 12, 1815, Oxford, d. Jan. 28, 1873, Leipzig, son of an Anglican clergyman, studied medicine at Cambridge, but, at the same time, music under Attwood and Corfe; while still a student he published a set of songs. In 1839 P. went to Germany, and made a regular study of music under Rinck, Tomaschek, and Reissiger; he returned to England in 1844, and succeeded Bishop as Professor of Music at Edinburgh, but soon resigned office, and settled definitely in Germany, changing at the same time the orthography of his name. He lived first in Vienna, but in 1847 removed to Hamburg, and, later on, to Leipzig. P. was a composer of noble aim and solid knowledge. His chief works are:—the operas, *Der Elfenstein* (Brünn, 1845), *Leila* (Hamburg, 1848), *Contarini* (Hamburg, 1872), and *Fenice* (posthumous, Dessau, 1883); the oratorios, *Jerusalem* (written for the Norwich Musical Festival of 1852), and *Hezekiah* (the uncompleted fragment of which was produced at Norwich in 1869); music to the second part of *Faust* (some portions were given at Norwich in 1857); funeral march for *Hamlet*, several overtures, sacred songs, songs and part-songs. Some of his earlier works appeared under the pseudonym, Edgar Mansfeldt.

Piéton, Loyset, French contrapuntist, b. in the last quarter of the 15th century, Bernay, Normandy (hence Loyset de Bernais, also, le Normand). P.'s compositions (motets, psalms, chansons) are to be found in various collections between 1531 and 1545 (in the fourth book of Attaignant's collection of motets, the "Motetti del fiore" of Jacques Moderne, Salblinger's "Concentus 4-8 vocum," in Petrejus's psalm collection, and in Tylman Susato's collection of chansons, etc.), but also in the third book of Petrucci's "Motetti della Corona" (1519), which Fétis also mentions, but without perceiving that, thereby, his opinion, that P. was born after 1500, becomes, to say the least, highly doubtful.

Piffero (Pifaro) is the Italian name for the Schalmei (*q.v.*). Hence the shepherds who go to Rome about Christmas-time, and who, in imitation of the shepherds of Bethlehem, play before the pictures of the Madonna, are called "pifferari."—The word (*Piffara*) as the name of

a tremolo organ stop is a corruption of *Bifara* (*q.v.*).

Pilate, Auguste (Pilate called P.), b. Sept. 29, 1810, Bouchain (Buchain, Département du Nord), d. Aug. 1, 1877, Paris, pupil of the Paris Conservatoire, from which, however, he was dismissed. He became conductor at small Paris theatres, and wrote a great number of operas (about twenty-five), for the most part in one act; also ballets for Paris.

Pileata (Lat., "with a hat"), stopped (Gedackt, *q.v.*).

Pilger, Karl. (See SPAZIER.)

Pilotti, Giuseppe, composer and theorist, b. 1784, Bologna, d. there June 12, 1838. He was the son of the organist and organ-builder, Gioacchino P., devoted himself at first to organ-building, especially as, after his father's death, he had to maintain his family. Later on, however, he studied counterpoint under P. Mattei, and, indeed, worked so successfully, that he became Mattei's favourite pupil, and at the early age of twenty-one was a member of the Accademia Filarmonica. An opera, *L'ajo nell'imbarazzo*, which he soon produced with success, remained, however, his only work for the stage; for he perceived his true calling. After having been church maestro at Pistoja for several years, he succeeded Mattei, in 1826, as maestro of San Petronio, Bologna, and in 1829 was appointed professor of counterpoint at the Liceo Filarmonico. As such, he worked with distinguished success up to the time of his death. His numerous sacred compositions, among which Psalms à 8 and a Dies Irae, with orchestra, became celebrated, remained in manuscript. A treatise on instrumentation, "Breve insegnamento teorico sulla natura, estensione, proporzione armonica, etc., per tutti gli stromenti," appeared in print.

Pincé (Fr.), (1) pinched; *instruments à cordes pincées*, those whose strings are pinched (cithara, rotta, lute, theorbo, guitar, mandoline, zither, etc. Cf. HARP INSTRUMENTS); also the pizzicato of the violins is called *p.*—(2) An ornament—the mordent (*q.v.*) formerly expressed by ' behind the note (still by Rameau); since Couperin, generally by ; *p. renversé* (inverted mordent) is the Pralltriller .

Pinelli, Ettore, meritorious Italian violinist and conductor, b. Oct. 18, 1843, Rome, pupil of Ramacciotti there, and of J. Joachim at Hanover (1864), returned to Rome in 1866, where, jointly with Sgambati, he founded a society for classical chamber music, and established a violin and pf. school at the Santa Cecilia Academy; from the latter was evolved the Liceo Musicale, at which P. was appointed professor of the violin in 1877; as a teacher he displayed beneficial activity. The attempt to establish an orchestral society at Rome, which had been tried already in 1867 without

results, succeeded in 1874 (P. produced, among other works, *St. Paul*, *Creation*, and *The Seasons*). P. conducts the court concerts alternately with Sgambati. P. has written a quartet for strings, an overture, an Italian rhapsody, etc.

Pinner, Max, pianist, b. April 14, 1851, New York, of German parents, d. May 10, 1887, Davos, studied from 1865-67 at the Leipzig Conservatorium, from 1867-69 under Tausig and Weitzmann (theory), and from 1873-75 under Liszt. In 1877, after long concert-tours, he settled in New York, where he was highly esteemed as a pianist and as pianoforte teacher.

Pinsuti, Ciro, composer and renowned teacher of singing, b. May 9, 1829, Sinalunga (Sienna), d. Mar. 10, 1888, Florence. He developed at a very early age, and when eleven years old was made honorary member of the Accademia Filarmonica, at Rome. About the same time, an Englishman, by name Henry Drummond, brought him to London, and had him trained in pianoforte and in violin playing under Cipriani Potter and Blagrove; P., however, returned to Bologna in 1845, became a pupil of the Liceo Filarmonico, and studied privately with Rossini. From 1848 P. again lived in England, dividing his time between London and Newcastle, in which latter city he had established a musical society. His fame as a teacher of singing spread rapidly, and already, in 1856, he was appointed professor of singing at the Royal Academy of Music. P. paid many visits to Italy, produced operas at Bologna (*Il mercante di Venezia*, 1873), Milan (*Mattia Corvino*, 1877), and Venice (*Margherita*, 1882). The theatre of his native town is named after him, Teatro Ciro P. In 1859 he wrote a Te Deum to celebrate the incorporation of Tuscany into the kingdom of Italy, and was decorated with many Italian orders (since the establishment of the order of the Italian Crown, in 1878, he was styled "Cavaliere P."). In 1871 he represented Italy at the opening of the London Exhibition. His printed compositions consist of over 200 Italian and English songs, many duets, terzets, part-songs, and other vocal works; likewise, the first of his operas and the Te Deum.

Pipe, Bent (Ger., "Kropf") is the term applied in the organ to the rectangular bent tubes by means of which the wind-trunks are attached to the bellows; likewise the secondary channels to the principal wind-trunk and to the wind-chest. If a wind-trunk is fed by two bellows, it has a double bent pipe (Doppelkropf).

Pipegrop, Heinrich (known under his Hellesened name, Baryphonus), b. Sept. 17, 1581, Wernigerode, d. Jan. 3 (13), 1655, Quedlinburg; he was a music pupil of the cantor Joh. Krüger and the organist Paul Becker, at Wernigerode, in 1605 sub-deputy rector and town cantor of Quedlinburg. P., according to the judgment of Seth Calvisius, was already at this time a finished musician; Heinr. Grimm, Schütz, and

Mich. Prätorius also had a high opinion of him. Of P.'s writings there appeared an "Isagoge Musica" (Magdeburg, 1609?), "Plejades Musicae" (Halberstadt, 1615; 2nd ed. supervised by H. Grimm, Magdeburg, 1630), "Ars Canendi" (Leipzig, 1630); Michael Prätorius intended publishing a number of other writings, but death frustrated his schemes. Of P.'s celebrated compositions, only one, "Weihnachtsgesang" à 6, remains, and this will appear in the *Vierteljahrsschrift f. Musikwissenschaft*.

Pipelare, Matthäus (Pipe ) the notes

d g = la re), Belgian contrapuntist from the 15th to the 16th century, of whom only a Mass à 4, printed in Andreas de Antiquis' "Missæ XV." (1516), an Ave Maria in Petrucci's motets à 5 of 1505, and two movements à 2 in Rhaw's *Bicinia* (1545), are known. Among the works enumerated by Fétis as preserved in manuscript are:—a Mass à 5, "Forseulement," in two copies, and a Salve Regina à 5, both at the Munich Library. On the other hand, the excellent catalogue of J. J. Maier (1879), does not contain the antiphon "Vita dulcedo" mentioned by Fétis.

Pipes, Bending of (Ger., *Krüpfen*). This refers to the twisting of great organ pipes in order to be able to bring them within limited space. The tone of the pipes scarcely suffers at all, especially if the corners of the joints are rounded off.

Pipes in Prospect (Ger., *Prospekthfeifen*), the pipes placed in the front of the organ turned towards the church, which form the real ornamental portions of the same. As a rule, they are of tin (or metal), smooth and polished, and tastefully arranged in symmetrical groups; almost without exception, they are diapason pipes (Fr., *Montre*, *Préstant*). Organs which have no tin diapasons generally have blind P., i.e. not sounding ones, cut from wooden poles after the shape of tin-pipes, and covered with tin-foil.

Piqué (Fr.). (See SPICCATO.)

Pirani, Eugenio, pianist and composer, b. Sept. 8, 1852, Bologna, pupil of the Liceo Musicale there, also, in 1870, of Th. Kullak (pianoforte) and Fr. Kiel (composition), at Berlin. He was, from 1870-80, teacher at Kullak's Académie, and then settled in Heidelberg after an extended concert tour through Europe. P. is correspondent of Italian and German papers. In 1888 he was chairman of the German committee for the music exhibition at Bologna; he is member of the philharmonic academies of Bologna and Florence, of the Roman Cecilia, etc. He has composed many pianoforte pieces, also a pf. quartet, songs, duets, etc.; to these larger works have recently been added: "Im Heidelberger Schloss" (orchestral suite), "Venezianische Szenen" (for pf. and orchestra), an orchestral ballad, etc.

Pirker, Marianne, famous singer, about the middle of the last century, b. 1713, d. Nov. 10, 1783, Heilbronn; she won triumphs in London, Vienna, and, finally, Stuttgart, but in 1755 was imprisoned in the Hohenasperg, because she had been a true friend to the Duchess of Württemberg, who, at that time, was divorced from her husband. When, in 1765, she was set at liberty, she lived at Heilbronn as teacher of singing.

Pisa, Agostino, doctor of law about 1600, wrote a work, "Battuta della musica," which appeared in a second augmented edition in 1611 (the first is unknown), the oldest detailed treatise on conducting, but one which also refers to other musical matters. K. F. Becker names the author, Agostino da P. (native of Pisa); Schielen, the work, "De percussione musica;" and Mattheson, "Tractatus de tactu"; all three are in error.

Pisari, Pasquale, a highly-esteemed master of the Palestrina style, b. 1725, Rome, where he died 1778; he was a pupil of Biondi, maestro of the Spanish Church of St. James', Rome, became supernumerary member of the Papal Chapel, but spent his whole life in almost inconceivable poverty; he is said to have picked up the paper for his compositions in the street (?). His numerous sacred compositions (among which a Dixit for four choirs à 16 and a complete yearly series of motets à 4 for the court at Lisbon (the brilliant honorarium for which reached Rome after his death), remained in manuscript; they lie, for the most part, among the archives of the Papal Chapel.

Pisaroni, Benedetta Rosamonda, eminent singer, b. Feb. 6, 1793, Piacenza, d. there Aug. 6, 1872; she first appeared in 1811 at Bergamo. P. sang up to 1813 as a high soprano, but after a long and severe illness her voice changed into a wonderfully fine contralto. She achieved exceedingly great triumphs in Italy, and also at Paris, 1829, although her face, disfigured by smallpox, seems to have been terribly repulsive. In London she did not please. Some years later she returned to her native town.

Pischek, Johann Baptist, excellent baritone singer, b. Oct. 14, 1814, Mtscheno, near Melnik (Bohemia), d. Feb. 16, 1873, Sigmaringen; he sang first at Prague, Brünn, Pressburg, Vienna, and Frankfurt, and then became for many years court singer at Stuttgart.

Pisendel, Johann Georg, distinguished violinist, b. Dec. 26, 1687, Karlsburg, d. Nov. 25, 1755, Dresden. He was chorister at Ansbach, studied there under Pistocchi and Torelli, and attended the University of Leipzig in 1709; he appears, however, to have turned his attention entirely to music, since, already in 1711, he took the place of Melchior Hofmann. In 1712 he was appointed violinist at Dresden. He was often sent on foreign musical service by the Electoral Prince; in 1714, with the leader of the band,

Volumier, and others to Paris; in 1716, to Venice (where he had the benefit of instruction from Vivaldi); and in 1717, to Rome, where he became a pupil of Montanari, also to Naples. After the death of Volumier, P. became leader (1728). His journeys had made him familiar with the French and Italian schools of violin-playing; he amalgamated the two in himself, and thus became a truly classical performer. Quantz is full of his praise, also Türk ("Klavierschule," p. 113). Eight violin concertos, two soli for violin and bass, and three concertos for two oboes with strings, two *concerti grossi*, and one symphony, are preserved in the royal library of music at Dresden.

Pistocchi, Francesco Antonio, the famous founder of the school of singing at Bologna, b. 1659, Palermo, d. not before 1717; when young he went with his parents to Bologna, and published, already at the age of eight, his first work, "Capricci puerili variamente composti in 40 modi sopra un basso" (1667), and became, after he had concluded his studies, maestro of San Giovanni in Monte (Bologna). At the age of twenty he went on the stage, but with little success; he therefore gave up this career and entered the order of the Oratorians. In 1697 we find him as capellmeister at Ansbach, where he produced an opera, *Narciso*, but in 1699 at Venice (oratorio, *Il martirio di S. Adriano*), and in 1700 at Vienna (opera, *Le rise di Democritop*). Already in 1692 he was received into the composers' section of the Philharmonic Academy at Bologna; in 1708 he became, for the first time, "Principe" (post of president) of the Academy, and again in 1710, for the second time. About 1700 he is said to have founded the School of Singing, which has made his name immortal; there, for the first time, strictly methodical instruction in singing was given in the various classes. The example which he set was soon imitated in other parts of Italy, especially at Naples, by Gizzi. (Cf. BERNACCHI.) Besides the above-named compositions of P., he wrote the operas *Leandro* (1679) and *Il Girello* (1681), the oratorios *Maria Vergine addolorata* (1698) and *La fuga di S. Teresia* (1717), besides "Scherzi musicali" (Italian, French, and German arias), "Duetti e terzetti" (1707), and the 147th Psalm, which remained in manuscript.

Piston. (See VALVE.)

Pitch, Raising of, by one semitone is indicated by a ♯ (sharp), and a whole tone, by a × (double sharp, St. Andrew's Cross, Spanish Cross). In Germany, for the former, the suffix *is* is added to the letter-name of the notes: in the latter, *isis*, thus: f♯ = *fis*, f × = *fisis*. In France ♯ is called *dièse*, in Italy *diesti*; for instance, c♯ = *ut dièse*, d♯ = *do diesti*; in Holland the ♯ is called *Kruis*, thus b♯ = *b Kruis*.—P.-pipe, tuning-pipe (instead of tuning-fork).

Pitoni, Giuseppe Ottavio, distinguished composer of the Roman school, b. March 18,

1657, Rieti, d. Feb. 1, 1743, Rome. He studied at first under Pompeo Natale at Rome, was chorister of San Giovanni de' Fiorentini and Santi Apostoli, then a pupil for counterpoint of Foggia; he became, in 1673, church maestro at Terra di Rotondo, afterwards at Assisi, Rieti, and in 1677, at San Marco, Rome, which post he held until his death. At the same time he held, successively, similar posts at Sant' Apollinare and San Lorenzo, Damaso (1686), at the Lateran (1708), and finally, in 1719, at St. Peter's; he even conducted the musical performances of many smaller churches at Rome. Like all the masters of the Roman school, P. especially cultivated writing in a great number of parts. During his lifetime only one book of motets à 2 (1697) was printed. Only within recent times has Proske, in his "Musica divina," made known two Masses à 4, six motets à 4, and three other pieces. On the other hand, the number of manuscripts by P. which have been preserved is very great. At the head stand a Dixit à 16 for four choirs, which is sung every year during Holy Week in St. Peter's, and the Masses "Li pastori a maremme," "Li pastori a montagna," and "Mosca." In all, P. wrote over forty (for three choirs, à 12), and over twenty (for four choirs, à 16) Masses and psalms, also some psalms and motets for six and nine choirs (à 24, à 36); towards the close of his life he began to work at a Mass à 48, which, however, was not completed. To these works must be added a complete yearly series of Masses, vespers, etc., for St. Peter's, many motets à 8, 6, 4 and 3, hymns, etc. P. never allowed a work which he had written for one church to be performed in another, and that is why his music was not printed. P. was also active as a writer, and was the author of "Notizie dei maestri di cappella si di Roma che oltramontani . . . 1500-1700," a work, for purposes of reference, of the highest value, and one, unfortunately, not printed, but preserved in the Vatican. Also an important theoretical work, "Guida armonica," of which only 108 pages are printed (probably only a proof copy); the rest appears to be lost. Geronimo Chiti wrote a biography of P., which, however, remained in manuscript. Durante, Leo, and Feo were pre-eminent among the pupils of P.

Più (Ital.), more; *più forte*, *più andante* (quicker), etc.

Piutti, Karl, b. April 30, 1846, Elgersburg (Thuringia), distinguished organist, pupil of the Leipzig Conservatorium, and since 1875 teacher there; in 1880 he succeeded Rust as organist of St. Thomas's. P. is a composer for organ, not without merit (six fantasias in fugue form, Op. 1; eight preludes, Op. 2; three interludes, Op. 3; five choral preludes, Op. 4; five character-pieces, Op. 6; "Trauungssonata," Op. 9; "Pfingstfeier," Op. 16; ten choral improvisations, Op. 15; twelve pieces, Op. 10

and 11); he has also written "Regeln und Erläuterungen zum Studium der Musiktheorie."

Piva. (See STEFFANI.)

Piva (Ital.), bagpipe.

Pixis, (1) Friedrich Wilhelm, violinist, b. 1786, Mannheim; in 1810 conductor of the orchestra of the Town Theatre, Prague, afterwards teacher at the Conservatorium there; d. Oct. 20, 1842, Prague.

A brother, (2) Johann Peter, pianist, b. 1788, Mannheim, first went with him on concert tours, in 1825 was at Paris, in 1845 at Baden-Baden, where he died, Dec. 22, 1874. They were both excellent artists, and wrote a quantity of pleasing chamber music. Joh. Peter P. also produced at Vienna three romantic operas and a vaudeville (1820-36).—An adopted daughter of Peter P., Francilla P. Göhringer, was esteemed in Munich as an opera singer (in 1846 she married the Italian Cavaliere Minofrio).—A son of Fr. Wilh. P., Theodor P., b. April 15, 1831, Prague, d. Aug. 1, 1856, Cologne, was professor of the violin at the Cologne Conservatorium.

Pizzicato (Ital., "pinched"), plucked with the fingers (strings). This mode of tone production is suitable, in the first place, to instruments of the harp kind (harp, lute, guitar, etc.); but since, with the exception of the harp, these have disappeared from the orchestra, it has been adopted by players of stringed instruments, although the conditions of resonance in them are not favourable to the prolongation of a short speaking tone. (Cf. SOUNDHOLES.)

Placido (Ital.), quiet, placid.

Plaga protî, deuteri, triti, tetrarti (Greek-Latin of the Middle Ages), i.e. second, fourth, sixth, eighth Church Mode (cf. CHURCH MODES); *p.* or *plagis* (corrupted form of *plagius*, Gr. *πλάγιος*, at a later period usually called *plagalis*) is opposed to *authentus* (*authenticus*, *αὐθεντικός*), authentic. The plagal modes are really only accessory to the authentic, answering, in fact, to the "hypo" octave species of the Greeks, which bore a similar relation to their principal scales. But while the latter lay a fifth below the principal tone, the plagal modes lie a fourth below the authentic. (Cf. GREEK MUSIC and CHURCH MODES.)

Plagal Cadence, i.e. the close of the subdominant followed by the tonic S-T, °S-T, and °S-°T; the name derives its origin from the Plagal Church Modes (see PLAGA), in which not the fifth, but the fourth, degree of the scale was, next to the principal note, of essential influence.

Plaidy, Louis, meritorious pianist, pedagogue, b. Nov. 28, 1810, Hubertsburg, near Wernsdorf (Saxony), d. March 3, 1874, Grimma, pupil of Agthe (pianist) and Haase (violin) at Dresden. He first made himself known as a

violinist, and in 1831 went to Leipzig, and there entered the Wunderlich band, undertook concert tours as a violinist, but afterwards made the pianoforte his chief study, and, as a pianoforte teacher, turned his attention to the principles of technique. On the foundation of the Leipzig Conservatorium (1842) Mendelssohn persuaded him to become teacher of the pianoforte; he belonged to this institution till the year 1865, and achieved the finest results. During the last years of his life he was a private teacher at Leipzig. His "Technische Studien für das Pianoforte" (especially the third, and essentially improved edition) is an excellent educational work, which surpasses Knorr's "Materialien," etc., in research and copiousness, and has frequently been imitated; he also wrote a pamphlet, "Der Klavierlehrer" (1874).

Plain-chant (Fr.), Lat. *Cantus planus*, same as Gregorian Song (q.v.), thus named, since in the course of centuries it lost its former rhythmic motion, and, by the 12th century, became stiffened into a monotonous succession of notes of equal length (*planus*, Fr. *plain* = smooth, uniform).

Plain-song. (See PLAIN-CHANT.)

Planquette, Robert, opera composer, b. July 21, 1840, Paris, for a long time a pupil of the Conservatoire, yet without distinguishing himself. At first his romances gained for him popularity, but he soon made a stage venture in the *genre* of small music ("musiquette"), and from 1873-92 wrote sixteen operettas, among which the following: *Le serment de Mme. Grégoire*, *Paille d'avoine*, *Les cloches de Corneville* (1877), *Le chevalier Gaston* (1879), *Les voltigeurs de la XXXII.* (1880), *La cantinière*, *Rip van Winkle* (1882), *Nell Gwynne* (1884, also as *Colombine*), *La crémaillère* (1885), *Surcouf* (1887), *The Old Guard* (English, Liverpool and London, 1887), *La cocarde tricolore* (1892).

Plantade, (1) Charles Henri, composer, b. Oct. 19, 1764, Pontoise, d. Dec. 18, 1839, Paris; he first became known as a composer of romances, was appointed, in 1797, teacher of singing at the Campan Institut of St. Denis, where, by the way, Hortense Beauharnais, afterwards Queen of Holland, was his pupil. Later on she summoned him to her court as maître de chapelle, and after her husband's abdication, in 1810, he remained in her service as maître de chapelle, at Paris, until 1815. Already in 1802 P. had been appointed teacher of singing at the Conservatoire, but resigned his post when he went to Holland. In 1812 he became director of singing and manager at the Grand Opéra, and in 1813, member of the jury for examining novelties. In 1816, when the Conservatoire (École royale de Chant et de Déclamation) was reopened, he was reappointed teacher of singing (up to 1828), and, at the same time, succeeded Persuis as chef d'orchestre of the *chapelle royale*. Owing to the

Revolution of 1830 he lost all his posts. He withdrew to Batignolles in ill-humour and ill-health, and when he returned to Paris he was a dying man. Besides a dozen operas for various theatres, P. wrote masses, motets, a requiem, *Te Deum*, etc., for the *chapelle royale*. The scores of the operas *Palma* and *Le mari de circonstance*, a harp sonata, twenty sets of romances, and three books of nocturnes for two voices, appeared in print.

(2) Charles François, son of the former, b. April 14, 1787, Paris, d. there May 26, 1870, was "ministre de la maison de l'empereur et des beaux-arts;" he became known as a composer of romances, and in 1828 was one of the founders of the Concerts du Conservatoire.

Planté, Francis, famous pianist, b. March 2, 1839, Orthez (Basses Pyrénées), joined Marmontel's pianoforte class at the Paris Conservatoire towards the close of 1849. Already after seven months he received the first prize, and was immediately chosen by Alard and Franck as pianist for their Trio *soirées*. Later on (1853), he went through a course of harmony and playing from figured bass in Bazin's class. For ten years nothing whatever was heard of P., and then he presented himself in public as a pianist of the first rank; he had retired to his home and had fully developed both his technique and his style. He has not come forward as a composer.

Platanio, Pietro, director of the Conservatorio at Palermo (since 1863), b. April 5, 1828, Catania; he wrote several operas (*Spartaco*, 1891), a funeral symphony in memory of Pacini, a festival symphony with chorus on the occasion of King Humbert's "homage journey" (1878), and published a treatise on canon and fugue (1872).

Platel, Nicolas Joseph, famous performer on the 'cello, teacher and composer for his instrument, b. 1777, Versailles, d. Aug. 25, 1835, Brussels. He studied under L. Duport and Lamare, joined the orchestra of the Théâtre Feydeau in 1796, but in 1797 he followed a *cantatrice* to Lyons. In 1801 he returned to Paris, where he was looked upon as the best performer on the 'cello; yet he took no steps to obtain a post. In 1805 he undertook a concert tour, and for many years made long stays in unimportant towns, until, finally, in 1813, he accepted the post of principal 'cellist at the Antwerp Opera. In 1824 he went to Brussels in a like capacity, and, at the same time, became teacher of the 'cello at the Royal School of Music (named Conservatoire since 1831). Servais, Batta, Demunck, and others were his pupils. P. published five concertos, three sonatas, eight sets of variations, also romances, caprice, etc., for 'cello, three trios for strings, and six duets for 'cello and violin.

Platerspiel (possibly from the Fr. *Plastron*), "breastplate." A species of Krummhorn (q.v.),

with a widening immediately below the mouth-piece. Martin Agricola (1529) gives a picture of it, but without explanation.

Plato, the great Greek philosopher, pupil of Socrates and teacher of Aristotle, b. 429, d. 347 B.C. He ascribed high value to music, as may be seen from a passage in "Timæus," (§ 47), in which he says that musical movements (*φωναί*) are analogous (*συγγενεῖς*) to the movements of the human soul; and that music, therefore, is not for unintelligent enjoyment (*ἡδονῇ ἄλογος*), but rather for the harmonious formation of the soul, and for the softening of the passions (*ἐπὶ τὴν γενομένην ἐν ἡμῖν ἀνδροστον ψυχῆς περίοδον εἰς κατακόρυψιν καὶ συμφωνίαν ἑαυτῇ σύμμιχτος*). The most important passages in P. concerning music were collected by Deyk in an interesting article written in Gottfried Weber's "Cäcilia," VIII. 69, etc. (1828). With regard to the celebrated harmonic figures in "Timæus," cf. Th. H. Martin, "Études sur le Timée de P." 1841, two books, also R. Westphal's "Harmonik," p. 135, etc., and K. von Jan's "Die Harmonie der Sphären" (Philologus, Vol. LII). P. was the real founder of a system of philosophy of the arts (esthetics), but derived both his ideas and his method from his great master Socrates.

Playford, John, English musician and (from 1648) music publisher, b. 1623, d. 1693, London; published Hilton's "Catch that Catch Can," "Select Musickall Ayres and Dialogues," and "Musick's Recreation on the Lyra Violl" (in a collection, 1652): "Breefe Introduction to the Skill of Musick" (1654, extracts from the theoretical works of Morley, Butler, and others; 8th edition, 1679, with addition of Campion's "The Art of Descant, or Composing Music in Parts; the 12th edition corrected by H. Purcell, who replaced Campion's essay by a treatise of his own); further, a collection of three-part psalms: "Whole Book of Psalms, with the usual Hymns and Spiritual Songs" (1673), and others; also four-part psalms: "Psalms and Hymns in Solemn Music" (1671); "Six Hymns for one Voice to the Organ" (1671); "The Musical Companion" (1673), and "Choice Ayres and Dialogues" (5th book 1685).—His heir was his son, Henry P. (b. May 5, 1657, d. about 1710), who, amongst other things, published (jointly with Robert Carr), "The Theatre of Music" (1685); "Orpheus Britannicus" (1698–1702): "Amphion Anglicus" (1700); Purcell's ten sonatas and "Te Deum and Jubilate" for St. Cecilia's Day (1797), also Blow's ode on Purcell's death.

Plectrum (Lat.), a little stick (of tortoiseshell, ivory, wood, or metal) with which the strings of the cithara and of the mandoline are struck; also the name, within modern times, of the "Schlagring" of the cither. In the last century it was also a term applied to the sticks of the dulcimer (Pantaleon) and of instruments of percussion.

Pleyel, (1) Ignaz Joseph, a once celebrated and very prolific composer, b. June 1, 1757, Ruppersthal (near Vienna), d. Nov. 14, 1831, on his estate near Paris. He was the twenty-fourth child of a poor schoolmaster, and lost his mother at his birth; she was of very noble family (but disinherited on account of her *més-alliance*), which accounts for the fact that P. gained protectors at an early age, who bestowed on him an excellent musical education. Up to his fifteenth year, Wanhal at Vienna was his teacher, then Count Erdödy took charge of the boy, and sent him to Haydn, who for five years gave him board and instruction at a yearly sum of 100 louis d'or. In 1777 the Count appointed him his capellmeister: but, on an earnest wish expressed by P., he was provided with the means for a journey to Italy in order to study; he remained there for four years, and enjoyed intercourse with the most distinguished Italian composers, singers, and other eminent men. In 1781 he returned, but only soon to travel back to Rome. He did not return to Vienna at all, but in 1783 became deputy capellmeister of Strassburg Cathedral. In 1789 he was appointed principal capellmeister, which post he lost through the Revolution, a movement which even did away with religion. In 1792 the Society of "Professional Concerts" sent for him to London, in order to introduce some new symphonies, in rivalry with those of Haydn given at the Salomon Concerts. P. did his best, and the result was satisfactory. (Cf. HAYDN.) P.'s works, especially from 1783–93, were very numerous; only for them was there a market. They took complete possession of the public ear. In 1795 P. went to Paris, and established a music firm, by means of which he pushed his own compositions. Little by little he became quite a business man, started a piano manufactory, and gradually left off composing. He spent the last years of his life on his estate near Paris, occupying himself specially with farming. The disturbances of the July Revolution destroyed his already failing health. P.'s published compositions are:—twenty-nine symphonies for orchestra, forty-five quartets (twelve, and, in the opinion of Onslow, the best, remain unprinted), a septet for strings, two horns, and double bass, a sextet for strings (with double bass), five quartets, trios, duets for strings, pf. trios, two pf. concertos, two violin concertos, four cello concertos, concertantes for two violins, for violin and tenor, also for a larger number of instruments, twelve pf. sonatas, etc. A great number of works printed under P.'s name are only arrangements of original works already mentioned. P. understood how to make use of the public: he worked easily and fluently; what he lacked was an individual striving after better things, a deep, artistic, earnest feeling.

(2) Camille, son of the former, b. Dec. 18, 1788, Strassburg, d. May 4, 1855, Paris. He wrote a series of instrumental works in his

father's style, but became, however, specially known by his pianoforte manufactory, which attained its highest success under his direction. P. carried it on for a time in partnership with Kalkbrenner; his successor in the business was August Wolff (firm, "P., Wolff et Cie.").

(3) Marie Félicité Denise, wife of the former, a distinguished pianist, b. Sept. 4, 1811, Paris, d. March 30, 1875, St. Josse ten Noode (near Brussels). She was known as Mdlle. Moke, a renowned virtuoso (pupil of Jacques Herz, Moscheles, and Kalkbrenner), was assisted in her profession by the good taste of her husband, as well as by the counsel of Thalberg and Liszt, etc. From 1848-72 she was professor of the pianoforte at the Brussels Conservatoire.

Plica (Lat., "fold"), one of the most important characters in neume-writing, namely, an after-striking (*nachschlagende*) higher or lower note (*P. ascendens* or *descendens*). The P. was the only one of the ornaments of neume-writing which passed over to measured music, and remained, though with somewhat changed meaning (a kind of turn), up to the 14th century; before its final disappearance it seems, however, to have resumed its original meaning. It appeared alone, or attached to the concluding note of ligatures (q.v.) in the form of a stroke (*canda*) drawn on the right, upwards, or downwards, according as it was to be *ascendens* or *descendens*. Formerly the P. influenced the mode of notation of the concluding notes of the ligature, inasmuch as the imperfection of a ligature with P. had always to be indicated by a *Figura obliqua*. When the P. was set aside, the concluding note of the *Ligatura ascendens perfecta* took the shape of the concluding note which formerly the P. of that ligature had. For further details, see Riemann's "Studien zur Geschichte der Notenschrift" (pp. 126-136 and p. 250, etc.).

Plochflöte. (See **BLOCHFLÖTE.**)

Plüddemann, Martin, b. Sept. 24, 1854, Kolberg, pupil of the Leipzig Conservatorium, who, after acting for a short time as conductor at St. Gall, studied singing under Hey at Munich. In 1887 P. became conductor of the vocal academy at Ratibor, and from 1889 teacher of singing at the Styrian School of Music, Graz. P. is a composer of songs, ballads, and part-songs, and author of a number of *brochures* of Wagnerian tendency.

Plutarchos (Plutarch), Greek writer, b. 50 A.D., Chæronea (Bœotia), d. there, 120. Besides his famous parallel biographies of Greek and Roman generals and rulers, he wrote a number of small, detached treatises, which, with many spurious ones, are generally united under the title "Moralia." Among these is to be found one, "De musica," which R. Westphal (q.v.) translated into German, and published separately in 1865, with, by way of addition, a clever commentary.

Pneumatic Action. Wind (Gk. *πνεῦμα*) power plays a rôle in modern organs: it makes the pipes speak, and acts upon the mechanism. By means of the *Pneumatic Lever*, a clever invention (1832) of the English organ-builder Barker, the touch of large organs is lightened; by means of small bellows, into which, by pressing down the keys, wind is admitted, the playing valves, usually very numerous and demanding considerable pressure, are drawn up; and this is accomplished by the wind which is admitted pushing up the upper plates by which the tracker system is set into action. By P. A. the playing of an organ becomes light and equal, whether few or many stops are drawn. As a lever bellows is required for each key, P. A. is expensive. Also drawing of the stops, especially for Full Organ, or successive drawing for the so-called *Crescendo* (q.v.), has recently been effected by P. A. The "Röhrenpneumatik," first introduced in Germany by Emil Reubke (q.v.) into the organ of the town hall at Crefeld, is something quite different. Without any intermediate action, the playing- or stop-valve is at once opened as soon as the keys are pressed down, or the stops drawn.

Pochette (Fr., "pocket-fiddle"), kit, the small fiddle formerly used by dancing-masters; the *accordatura* was *c' g' d'*.

Poco (Ital.), a little, *p. largo*, *p. forte* (*pf.*), etc.; but also "less," i.e. "not very;" *p.a.p.*, little by little; *un pochettino*, a very little.

Pohl, (1) Karl Ferdinand, b. Sept. 6, 1819, Darmstadt, where his father was court musician, d. April 28, 1887, Vienna. He went in 1841 to Vienna, where S. Sechter became his teacher. From 1849-55 he was organist at Vienna, lived from 1863-66 in London, and there made deep research with regard to the residence both of Mozart and Haydn in that city. In 1866 he was appointed archivist and librarian of the "Gesellschaft der Musikfreunde" at Vienna. He published the results of his London discoveries in his "Mozart und Haydn in London" (1867, two vols.). As a sequel (Otto Jahn himself encouraged him in these publications), he published a detailed biography of Joseph Haydn, of which only two half vols. appeared (1875, 1882). E. von Mandyczewski has undertaken the continuation on the basis of P.'s posthumous sketches. Amongst his other works must be named, "Zur Geschichte der Glasharmonika" (1862, P.'s father was a virtuoso on this instrument), and "Die Gesellschaft der Musikfreunde . . . und ihr Conservatorium" (1871, a valuable historical sketch).

(2) Richard, b. Sept. 12, 1826, Leipzig, studied natural science at the Polytechnic at Carlsruhe, then philosophy and music at Göttingen and Leipzig, and after a short, active career as a teacher at Graz, went in 1852 to Dresden, in 1854 to Weimar, where he enjoyed intercourse with Liszt; he published, jointly

library went to the Berlin royal library; the remainder was purchased by the Singakademie.

Polidoro, **Federigo**, since 1874, teacher of the esthetics and of the history of music at the Conservatorio, Naples (Real Collegio di S. Pietro a Majella), b. Oct. 22, 1845, Naples. He was instructed by his father (Giuseppe P., professor of singing at the Conservatorio) in pianoforte-playing and singing, and studied theory under Lillo and Claudio Conti. P. made himself known in Naples by a series of interesting lectures, given at the musical societies "Cesi" and "Bellini," as well as at the Associazione di mutuo soccorso fra gli Scienziati, Letterati ed Artisti. He has won esteem as a sound historian, and as one well versed in esthetics; also as contributor to the *Milan Gazette musicale* (under the pseudonym Acuti), and as musical critic of the *Giornale napoletano di filosofia e lettere*. His writings of greatest importance are the life pictures and historical appreciations of Beethoven, Mozart, Mendelssohn, Wagner ("musicista, filosofo, poeta"), Cimarosa, Rossini, Gounod, Hérold ("Pré aux clercs"), Verdi, etc.; a complete course of lectures on the esthetics of music; studies on the history of music, "Dei pretesi portentosi della musica antica," etc. As a composer he has turned his attention to sacred and to chamber music; yet of his compositions, as of his writings, only very few have been printed.

Polka, a well-known round dance of recent date, derived from the old éccossaise (schottisch). It has nothing in common with the Polacca and Polonaise; the similarity of name is a chance one (the name P. originated in Bohemia about 1830). The movement is somewhat rapid, but much slower than a Galop (q.v.). The steps are (l = left, r = right foot):

Polko, **Elise** (*née* Vogel), poetess and authoress, b. Jan. 31, 1823, Leipzig, the sister of the well-known African traveller Vogel. She was gifted with a brilliant mezzo-soprano voice, and wished to be trained as an opera-singer; by Mendelssohn's advice, she studied under Garcia at Paris. P. went on the stage at Frankfurt, but married a railway official, and gave up her intention of singing in public. From that time she resided at Minden, afterwards at Wetzlar and Wiesbaden; at present she lives at Frankfurt-o.-M. All her novels and romances display particular love for music and understanding of the art: they belong, however, to the category of the so-called ladies' literature—that is to say, they are sweetly sentimental. The following are specially concerned with music: "Musikalische Märchen" (1852, three vols., several times republished), "Faustina Hasse" (novel, 1860, two vols.; 2nd ed. 1870); "Die Bettleroper" (1864, three vols.); "Alte Herren" (1866, the six predecessors of Bach at St.

Thomas's); "Verklungene Akkorde" (1868; 3rd ed. 1873); "Erinnerungen an F. Mendelssohn-Bartholdy" (1868); "Niccolò Paganini und die Geigenbauer" (1876; also in Italian); "Vom Gesang" (1876); "Aus der Künstlerwelt" (1878); "Die Klassiker der Musik" (Handel, Bach, Gluck, Mozart, Haydn, Beethoven; 1880), also several articles for musical and other papers.

Pollarolo, (1) **Carlo Francesco**, b. 1653, Brescia, d. 1722, Venice, pupil of Legrenzi, in 1665 singer at St. Mark's, in 1690 organist of the second organ, from 1692, up to his death, second maestro of St. Mark's. He did not become chief maestro; for he had too little judgment in the matter of church music. P. was one of the most prolific and most popular opera composers of his time; there are no less than sixty-seven operas of his composition known by name, which were nearly all produced at Venice between 1686–1721.

Also his son, (2) **Antonio**, b. 1680, Venice, d. there 1750, wrote eight operas for Venice, and in 1723 became his father's successor, also (probably because he wrote church music) in 1740 Lotti's successor as principal maestro at St. Mark's.

Polledro, **Giovanni Battista**, distinguished violinist, b. June 10, 1781, Piova (near Turin), d. there Aug. 15, 1853; he was a pupil of Paganini, violinist in the court orchestra at Turin, in 1804 solo violinist at Bergamo theatre, travelled in 1799 as a virtuoso, and lived for five years at Moscow. In 1814 P. became leader at Dresden, but exchanged this post in 1824 for that of court maestro at Turin. His published works are:—three violin concertos, several sets of variations for violin with orchestra, trios for strings, violin duets, studies for violin solo, a "Sinfonia pastorale," a Mass, and a Miserere with orchestra.

Pollini, (1) **Francesco**, pianist and composer, b. 1763, Leybach (Illyria), d. Sept. 17, 1846, Milan, studied at Vienna under Mozart, who dedicated a violin rondo to him; in 1793 he still worked under Zingarelli at Milan. Shortly after the opening of the Milan Conservatorio (1809), P. was appointed professor of pianoforte there. P. was the first who wrote music for the piano on three staves (in which he was imitated especially by Thalberg and Liszt), in one of the "32 esercizi in forma di toccata," in which rich passage-work for both hands plays around a melody in middle position. His printed compositions are:—three pf. sonatas; sonata, caprice, and variations for two pf.; introduction and rondo for pf. for four hands; also fantasias, rondos, capriccios, toccatas, variations, etc., for pf., a pf. Method (two editions), and an Italian Stabat Mater for soprano and alto, with two violins, two cellos, and organ. Bellini dedicated *La Sonnambula* to him.

(2) Bernhard (really Pohl), impresario, b. Dec. 16, 1838, Cologne, made his *début* there in 1857 as stage singer (baritone); after long travels, he became impresario of an Italian opera company, and then started an enterprise of his own (Lemberg). For some years he was director of the Italian Opera at Petersburg and Moscow, and in 1874 undertook the direction of the Hamburg Town Theatre, which since then has greatly prospered.

(3) Cesare, Cavaliere de', gifted Italian composer (chamber music), b. about 1855, for some years director of the municipal Conservatorio at Padua. He wrote (amongst other things) in the *Teatro illustrato* (Milan) on the theoretical reforms instituted by the compiler of this Dictionary, whose method he introduced into the Conservatorio.

Pollitzer, Adolf, b. 1832, Pesth, studied under Böhm (violin) and Preyer (composition) at Vienna, receiving in 1846 the first prize in the violin class, and, after a concert tour through Europe, he studied yet further under Alard at Paris. In 1851 he settled in London as leader of the orchestra at Her Majesty's Theatre, and later, at the New Philharmonic Society Concerts. He became teacher of the violin at the London Academy of Music, and after Dr. Wylde's death, in 1890, one of the directors of that institution.

Polnischer Bock, a kind of Bagpipe (q.v.).

Polonaise (Fr. *Polonaise*; Ital. *Polacca*), a Polish dance in $\frac{3}{4}$ time, of moderate movement (somewhat hurried andante), really a walk rather than a dance, similar to the *Entrée* of former days, which nowadays is represented at balls by the P. Much can be said in favour of the supposition that the P. was not originally a national Polish dance, but that it originated (cf. Grove's Dictionary) in the march past of the princes and nobility, at the enthronement of Henri III. of Anjou at Cracow (1574); and this supposition receives special support from the fact that the oldest known Polonaises were not dance songs, but purely instrumental. Characteristic features of the Polonaise are the commencement at the full bar

with strong accent, the rhythm  (cf. BOLERO), and the close on the third crotchet. 

Polska, a Swedish national dance, of which the "Neckens P." forms a well-known example,

 ^{*} $d\sharp$ in place of $d\flat$ is an unnatural innovation.

Poly = (Gk. many); *polyphonic*, in many parts; *polyphony*, multiplicity of parts in the sense of

independent treatment of the voices (in contradistinction to Homophony), the contrapuntal, concertante style; *polyrhythmic*, i.e. containing a mixture of various rhythms.

Polyhymnia ("rich in song"), name of the Muse of Song.

Polyphony by Breaking (Ger. "Mehrstimmigkeit durch Brechung"), that kind of movement of parts or voices which presents several parts moving to and fro, for example:

P. by B. is subject, according to our present critical feeling, to the same laws as real polyphony, though not quite so strictly; i.e. so far as the notes played one after the other, in arpeggio form, are perceived by us in their melodic relationship, so far are parallel progressions as distasteful as in regular polyphony. Real parallels, on the other hand, however, which occasionally occur between a principal part (melody or bass) and a part proceeding in such arpeggio style (as in Mozart frequently) are not faulty if the interval in question would disappear on resolving the progression into close (compact) harmony, e.g.:

Pommer. (See BOMHART.)

Pompôso (Ital.), pompous, grandiose. *Viola pomposa* (invented by J. S. Bach; an instrument between a viola and a 'cello). (See VIOLA.)

Ponchard, (1) Louis Antoine Eléonore, famous singer (tenor), b. Aug. 31, 1787, Paris, d. there June 6, 1866; he was the son of the maître de chapelle of St. Eustache, Antoine P. (b. 1758, d. 1827, composer of excellent sacred pieces, masses, etc.), and studied under Garat at the Conservatoire. He made his *début* in 1812 at the Opéra Comique in Grétry's *Tableau parlant*, and belonged to this stage until 1837. In 1819 he was named professor of singing at the Conservatoire. P. was the first stage-singer who was honoured with the *légion d'honneur*. His wife, Marie Sophie (Calault), b. May 30, 1792, Paris, d. there Sept. 19, 1873, was likewise an esteemed member of the Opéra Comique from 1818-36.

(2) Felix André, probably a brother of the former, b. 1793, d. July, 1886, Nantes, was also an esteemed teacher of singing.

(3) Charles, son of the first-named, b. Nov. 17, 1824, Paris, d. there May, 1891, was at first an actor, but turned to opera, and became, finally, professor of comic opera at the Paris Conservatoire.

Ponchielli, Amilcare, next to Verdi, the most famous of modern Italian opera com-

posers, b. Sept. 1, 1834, Paderno Fasolare (near Cremona), d. Jan. 17, 1886, Milan, pupil of the Milan Conservatorio, made his *début* as dramatic composer in 1856 with *I promessi sposi* at Cremona (remodelled 1872, Milan), and afterwards brought out *La Savojarda* (1861, reproduced as *Lina*, Milan, 1877), *Roderico* (1864), *La stella del monte* (1867), *Le due gemelle* (1873, ballet), *Clarina* (1873, ballet), *Il parlatore eterno* (1873, a farce [Scherzo]), *I Lituani* (1874, reproduced as *Alduna*, Milan, 1884), *Gioconda* (1876), *Il figliuol prodigo* (1880), and *Marion Delorme* (1885). His *Bertrand de Born* was not performed. Among his best-known works is to be reckoned the "Garibaldi Hymn" (1882). In 1881 P. became maestro of the cathedral of Bergamo. Only *Gioconda* has found its way into foreign lands.

Poniatowski, Joseph Michael Xavier Francis John, Prince of Monte Rotundo, nephew of Prince P., who fell at Leipzig, b. Feb. 20, 1816, Rome, d. July 3, 1873, Chislehurst (whither he followed Napoleon III. after the banishment of the latter). P. wrote for the Italian stage a number of operas:—*Giovanni da Procida* (Florence, 1838), *Don Desiderio*, *Ruy Blas*, *Bontifazio*, *I Lambertazzi*, *Malek Adel*, *Esmeralda*, *La sposa d'Abido*; four others for Paris, *Pierre de Médicis* (1860), *Au travers du mur*, *L'aventurier*, and *La contessina*, and, finally, for London, *Gelmina* (1872).

Pönitz, Franz, b. Aug. 17, 1850, Bischofswerda (West Prussia), at first studied the violin with his uncle, Heinrich P., at Berlin, then the harp with Louis Grimm, and appeared as soloist under Bille as early as 1857. In 1858 he became a member of Kroll's orchestra, and, after a successful concert tour, harpist, in 1866, of the royal orchestra, and in 1891, "Kammer-virtuose." P. has published compositions for harp, a string quartet, an opera (*Kleopatra*), sinfonietta for violin, 'cello, and harmonium, etc.

Pontécoulant, Louis Adolphe Le Doucet, Marquis de, b. 1794, Paris, d. Feb. 20, 1882, Bois Colombe (near Paris), a writer on music. He went through the Russian campaign of 1812 and the Hundred Days (1815); emigrated, after the restoration of the Bourbons, to America; took part in the revolt at Pernambuco (Brazil), and was condemned to death, but escaped and returned to Paris, where he made serious scientific studies, and in 1825 obtained an appointment in the ministry. In 1830 he took an active part in the Belgian insurrection, and was wounded. From 1831 he was engaged entirely on scientific works, which, at first, had nothing to do with music (astronomy, etc.). Only in 1837 did he turn his attention to the history of music, and to the construction of instruments; from that time he was contributor to various musical newspapers (*Gazette musicale de Paris*, *France musicale*, *L'art musical*). He published: "Essai sur la facture musicale

considérée dans ses rapports avec l'art, l'industrie et le commerce" (1857; 2nd enlarged edition as "Organographie; essai, etc.," 1861, two parts); "Douze jours à Londres. Voyage d'un mélomane à travers l'exposition universelle" (1862); "Musée instrumental du conservatoire de musique; histoires et anecdotes" (1864); "La musique à l'exposition universelle de 1867" (1868), and "Les phénomènes de la musique" (1868).

Ponticello (Ital.), bridge (of stringed instruments); *Sul ponticello*, abbreviated *s. pont.* (near the bridge), a technical direction, which produces a metallic, rough tone (opposed to *sul tasto*).

Pontoglio, Cipriano, b. Dec. 25, 1831, Grumello del Piano, d. Feb. 23, 1892, Milan, pupil of Anton Cagnoni, lived in Milan as director of a school of music. He wrote, with fair success, five operas (*Edoardo Stuart*; Milan, 1887), and also a ballet.

Popper, David, famous performer on the 'cello, b. Dec. 9, 1843, Prague, studied under Goltermann at the Conservatorium there. Since 1863, he has made concert tours through Europe, and is considered one of the greatest living 'cellists. From 1868–73 he was principal 'cellist at the Court Opera, Vienna. In 1872 he married Sophie Menter (q.v.; divorced in 1886). Since 1873 he has filled no public post, but has visited London, Paris; Petersburg, Vienna, Berlin, etc. P. has written for his instrument some solo pieces much in vogue, and admired by 'cello-players.

Forges, Heinrich, b. Nov. 25, 1837, Prague, pupil of Cölestin Müller (pianoforte), Rummel (harmony), and Zwonar (counterpoint), in 1863 joint editor of the *Neue Zeitschrift für Musik*, in 1867, at Munich, on the *Süddeutsche Presse*; also, for some time, teacher at the Royal School of Music, and in 1871, Royal Musikdirektor. He has been a zealous partisan of Wagner in musical papers of advanced tendencies. In 1886 he founded the "Porgesschen Gesangverein," with which he vigorously propagated the works of Berlioz, Liszt, Cornelius and Anton Bruckner, but also performed those of Bach, Palestrina, and other composers. P. wrote, besides articles for musical journals:—"Ueber die Ausführung der g. Symphonie unter R. Wagner," and "Die Bühnenproben zu den 1876er Festspielen;" he has also composed some songs.

Porpora, Niccolò Antonio, famous composer and master of singing, b. Aug. 19, 1686, Naples, d. there Feb., 1766, studied under Gaetano Greco, Padre Gaetano of Perugia, and Francesco Mancini at the Conservatorio di San Loreto; he wrote his first opera, *Basilio, re d'Oriente*, for the de' Fiorentini theatre, Naples, and became maestro to the Portuguese ambassador. In 1710 he received a commission from Rome to write a *Berenice*. Handel heard it, and

complimented P. Then followed *Flavio Anicio Olibrio* (1711), *Faramondo* (1719), *Eumene* (1721; P. describes himself on the title as chamber virtuoso to the Prince of Hesse Darmstadt), and a series of sacred works. Meanwhile, in 1719, he is said to have been appointed teacher of singing at the Conservatorio di Sant' Onofrio, for which he wrote an oratorio in 1722: *Il martirio di Santa Eugenia*. In 1723 followed the opera *Adelaide*. In 1724 Hasse came to Naples in order to become his pupil, but afterwards went to A. Scarlatti, for which P. never forgave him. In the year 1725 commenced the more important portion of P.'s life; he became teacher of singing at the Conservatorio degli Incurabili, Venice, afterwards at Vienna, where, however, he failed to gain a firm footing; and then again at Venice at the above-mentioned Conservatorio. There he brought out his *Siface* (1726). In 1728 he went, through Vienna, to Dresden, where he became teacher of singing to the electoral princess. In 1729, having obtained permission, he went to London, and appeared at the head of an undertaking set on foot by the enemies of Handel (*see* HANDEL); but he visited Venice in 1731 and 1733, where he produced *Annibale* and *Mitridate*. In 1734, he resigned his post at Dresden, and remained in London up to 1736. In 1744 we find him director of the "Ospedaletto" (Conservatorio for girls), Venice; in 1745 he went again for several years to Vienna (*see* HAYDN), was from 1748 to 1751 court capellmeister at Dresden with Hasse, who became, however, chief capellmeister in 1750; finally, in 1755 he returned to Naples, where in 1760 he succeeded Abos as maestro of the cathedral and director of the Conservatorio di Sant' Onofrio. In the same year his opera *Il Trionfo di Camilla* (of date 1740) was performed with new words. The total number of P.'s operas, of which the titles are known, is forty-six; they have no qualities whatever to guarantee their having a long life; and the same may be said of his six oratorios. He wrote a great number of masses and other sacred works, and very many cantatas for solo voice and clavier, of which twelve—probably his best works—appeared in London in 1735. His published instrumental works are not lacking in merit: six "Sinfonie da camera" for two violins, 'cello, and continuo; twelve violin sonatas with bass, and six fugues for clavier (two are to be found in Pauer's "Old Italian Composers"). Marchese Villarosa wrote a biographical notice of P. in the "Memorie dei compositori," etc. (1840).

Porporino. (*See* UBERTI.)

Porsile, Giuseppe, composer of the Neapolitan School, b. 1672, Naples, d. May 29, 1750, Vienna; he was at first court maestro to Charles III. of Spain (until 1711), was appointed court composer at Vienna in 1720, and wrote for that city, five operas, nine serenades, and

twelve oratorios in a simple, expressive style. They are preserved in the Vienna Court Library.

Port de voix (Fr.). (*Cf.* CHUTE and PORTAMENTO.)

Porta, (1) Costanzo, important contrapuntist of the 16th century, b. Cremona, d. May 26, 1601, Padua, pupil of Willaert at Venice, then, successively, maestro of the Franciscan monastery at Padua, and of the chief churches at Osimo, Ravenna, and Loreto. P. published: five books of motets *a* 5-8 (1555 to 1585), one book of masses *a* 4-6 (1578), two books of "Introitus missarum" *a* 5 (1566, 1588), four books of madrigals *a* 4-5 (1555, 1573, 1586, 1588), hymns *a* 4 (1602), vesper psalms and cantica *a* 8 (1605). One book of Lamentations *a* 5, and one book of madrigals *a* 4, also a work on counterpoint, remained in manuscript.

(2) Francisco della P., organist and church composer, b. about 1590, Milan, d. there 1666 as maestro of San Antonio. He published: "Villanelle *a* 1-3 voci" (1619); "Salmi da cappella *a* 4 voci con altri *a* 3, 4, 5 voci concertati" (1637); "Motetti *a* 2-5 voci con litanie . . . *a* 4 voci" (1645; marked as Op. 2, and therefore evidently not the first edition); "Ricerari *a* 4 voci" (Milan); "Motetti Liber II." (Venice); "Motetti 2-5 vocom cum una missa et psalmis 4 vel 5 vocom cum basso ad organum" (1654; marked as Lib. III., Op. 4).

(3) Other composers of this name, but of less importance, are: Hercule P. (church composer, 1610-20); Giovanni P., b. about 1690, Venice, in 1738 capellmeister at Munich, d. 1755 (composer of twenty-five operas for Venice, etc., 1716-39); Bernardo P., b. 1758, Rome, d. April, 1832, Paris (composer of two Italian and fourteen French operas, and chamber music: string trios, flute trios, quartets for two flutes and strings, and 'cello duets).

Portamento (Ital. *Portamento*, from *portar la voce*, "to carry the voice"; Fr. *Port de voix*) is a sliding from one sound to another. It differs from *legato*, in that the raising or lowering of the tone is effected in a slower manner, and appears continuous, not as if taken by leap. The P., if frequently employed, becomes a detestable mannerism; but, if occasionally used, it is of striking effect; it belongs only to the voice and to stringed instruments. The direction in many vocal methods that in P. the voice should run through the scale or chord until the desired second note is reached, is altogether wrong—a more misleading one could scarcely be given. On the contrary, the effect must be precisely similar to that produced by drawing the finger quickly up or down a violin string; for this produces a continuous change of pitch, not one by degrees. As a rule, P. is not prescribed; but it is sometimes indicated thus:

- (a) if no new syllable come on the second note,
 (b) when this is the case:—

Portar la Voce. (See PORTAMENTO.)

Portativ (Ger.), a small portable organ.

Portmann, Johann Gottlieb, court singer at Darmstadt, and cantor at the "Paedagogium," b. Dec. 4, 1739, Oberlichtenau (near Dresden), d. Sept. 27, 1798, Darmstadt. He published: "Leichtes Lehrbuch der Harmonie, Komposition und des Generalbasses" (1789, with a new system of figuring); "Kurzer musikalischer Unterricht für Anfänger und Liebhaber," etc. (1785; revised and augmented in 1802 by J. K. Wagner); "Die neuesten und wichtigsten Entdeckungen in der Harmonie, Melodie, und dem doppelten Kontrapunkt" (1798); besides a pianoforte edition of Graun's "Tod Jesu;" a "Musik-darf das Pfingstfest," and a "Neues Hesse-Darmstädtisches Gesangbuch" (1786).

Portogallo. (See PORTUGAL.)

Portugal, Marcos Antonio (according to Vasconcellos' "Os musicos portuguezes," p. 44, etc., his real name is P. da Fonseca, and not Marco Antonio Simão, as given by Fétis; his Italian name is Marc' Antonio Portogallo; his abbreviated Portuguese name, Marcos Portugal), the most eminent composer that Portugal has produced (to whom, therefore, Vasconcellos devotes forty-seven pages of his dictionary of Portuguese composers, i.e. about a twelfth of the whole volume), b. March 24, 1762, Lisbon, d. Feb. 7, 1830, Rio de Janeiro. He attended the priests' seminary at Lisbon, received his musical training from an Italian, Borselli, wrote, under his guidance, principally arias, canzonets, and sacred pieces; and, on his teacher's recommendation, was appointed accompanist at the Madrid Opera in 1782. The Portuguese ambassador at Madrid, to whom he was presented, provided him with the means of continuing his studies in Italy, whither he went in 1787. His first opera, *L'eroe Cinese* (Turin, 1788), met with little success; the second, however, *La bacchetta portentosa* (Genoa, 1788), was a complete triumph, while the third, *Il molinaro* (Venice, 1790), and the fourth, *L'astutto* (Florence, 1790), confirmed his reputation. He returned on a short visit to Lisbon, and while there was appointed royal maestro. His *Principe di Spazzacamino* (Venice, 1793) met with extraordinary success. The theatres of Turin (one), Genoa (one), Florence (seven), Venice (twelve), Parma (one), Milan (nine), Bologna, Naples, Rome, Verona, Piacenza, and Ferrara (each one), produced, altogether, twenty-nine different operas by P.; of these, twenty-four before 1799, in which year he returned to Lisbon, and commenced his duties as maestro. From 1799–1810 the San Carlos Theatre at Lisbon produced

twenty (Italian) operas, in part new, by P. The Paris Théâtre Italien was opened in 1801, by command of the Consul Napoleon, with P.'s *Non irritar le donne*. From 1801–6 Catalani sang at the San Carlos Theatre under his direction, and profited by his instruction. In 1807 the royal family was driven away by the French invasion to Brazil. At first P. remained behind, and was compelled, in 1808, to conduct his opera *Demofoonte* on Napoleon's birthday (Aug. 15); but after the San Carlos Theatre was closed in 1810, he followed his king to Rio de Janeiro, where, in 1811, he resumed his functions as maestro, and was appointed general musical director for church, theatre, and chamber-music. The royal theatre (São João) at Rio de Janeiro, opened in 1813, produced some new operas by P. The total number of P.'s operas is 40. Several of them were performed by Italian companies at Dresden, Vienna, and Breslau: two in German, viz. *Der Teufel ist los* (Dresden, 1799; Ital. *Le donne cambiate*) and *Verwirrung durch Ähnlichkeit*, or *Die beiden Buckeligen* (Vienna, 1794; Ital. *La confusione nata della somiglianza*); London produced one (*Argemide*, 1806), and Petersburg, three of his operas. In 1813 P., jointly with his brother, Simão P. (hence the wrong name given by Fétis), a diligent composer of sacred music, undertook the direction of the newly-established Conservatorio at Vera Cruz. P. visited Italy once again in 1815, but went back to Rio de Janeiro, and, when the court returned to Lisbon in 1821, remained there as an invalid. Already twice (1811, 1817), strokes of apoplexy had threatened his life; he succumbed to the third attack in Rio de Janeiro. Of his compositions the following have still to be mentioned:—a number of *pièces d'occasion*, operettas, etc., given at small theatres at Lisbon and Rio de Janeiro, five grand masses, five organ masses, two Te Deums with orchestra, psalms a 5, psalms with grand orchestra, Misereres, Matins, Sequences, etc.

Pos., abbrev. for *Posaune*, Ger. for trombone.

Position (Ger. *Lage*) is (1) a term referring to the position of the finger on stringed instruments. The first P. occurs when the first finger gives the nearest note above that of the open string. In the second P. (*Mezza manica*), and the third P., respectively, one and two notes higher, etc.—(2) Concerning the 1st, 2nd, 3rd positions of the major and the minor chord (in systems of harmony), cf. TRIAD, MAJOR and MINOR CHORD; concerning close and extended P., see CLOSE HARMONY.

Positiv (Ger.), a small chamber organ without pedals, or with pedals affixed. As a rule, the P. has only lip-pipes (and, to economise space, principally covered pipes), whereas the old Regal (q.v.) had only reed-pipes.

Possibile (Ital.), possible; *pianissimo p.* (*ppp*), *presto p.*, etc.

Posthorn (Ger.). A small horn formerly used by postillions. Also a small bugle.

Posthumous, published after the death of the author.

Postlude (Ger. *Nachspiel*) is the name for an organ piece intended to be played at the close of divine service, while the congregation are leaving the church. The organist will always choose pieces of different character, according to the particular day (for example, Good Friday or Easter Sunday). The thematically worked-out close of the accompaniment of a vocal piece is also called a P. (for example, in the last number of Schumann's "Frauenliebe und Leben").

Pothier, Dom Joseph, important writer on musical history, especially on the subject of Gregorian chant, b. Dec. 7, 1835, Bouzumont, near St. Dié, in 1859 entered the Benedictine order in Solesmes monastery, and, already in 1862, became sub-prior, and in 1866, professor of theology. Through Dom Guéranger he was introduced to the study of the history of Church song, and set himself the task of restoring Gregorian chant to its original purity. With the object of studying the most ancient MSS., he visited France, Switzerland, Italy, Spain, and Germany, and became one of the highest authorities in this branch. He embodied the results of his studies in the valuable and authoritative publications:—"Les mélodies Grégoriennes" (Tournai, 1880), "Liber gradualis" (ditto, 1883), and the unique, unrivalled, "Paléographie musicale" (Solesmes, 1889; phototyped facsimiles of Church music in neume notation from the 9th to 16th century).

Potpouri (Fr.), a medley of airs ("Quodlibet," "Allerlei").

Pott, August, violinist; b. Nov. 7, 1806, Northeim (Hanover), d. Aug. 27, 1883, Graz; he studied under Spohr at Cassel, and after many years' concert-touring became leader at Oldenburg in 1832, receiving his pension in 1861. He lived finally at Graz, and published two violin concertos, violin duets, variations, etc.

Potter, Philip Cipriani Hambly, pianist and composer, b. 1792, London, d. there Sept. 26, 1871; he received his first pianoforte instruction from his father, a pianoforte teacher in London, and, afterwards, studied theory with Attwood, Crotch, and Callcott, and pianoforte-playing with Wölfl. In 1818 he worked under Förster at Vienna, and Beethoven took notice of him. In 1822 he became teacher of the pianoforte at the Royal Academy of Music, and in 1832 succeeded Crotch as principal of that institution. In 1859 he resigned in favour of Charles Lucas. In addition to a number of fantasias, romances, dances, etc., for pianoforte, he published:—two pf. sonatas, nine rondos, two toccatas, six sets of variations, several pianoforte duets, also pf. duet transcriptions of two of his symphonies, and of an overture;

"Fantasia and Fugue" (two pfes.); a trio for three pfes. (six hands), a sextet for pf. and strings, three pf. trios, a violin sonata, a horn sonata, etc. Nine symphonies for orchestra, four overtures, three pf. concertos, a concertante for pf. and 'cello, etc., remained in manuscript.

Pougin, Arthur (really François Auguste Arthur Paroisse-Pougin), writer on music (also under the pseudonym Pol Dax), b. Aug. 6, 1834, Châteauroux (Indre), attended for some time at the Paris Conservatoire, studied the violin under Alard and harmony under Reber, in 1855 conductor at the Théâtre Beaumarchais, then leader at Musard's Concerts; from 1856-59 he was sub-conductor of the Folies-Nouvelles, and, from 1860-63, violinist at the Opéra Comique; but he soon gave up both the practice and teaching of music, and devoted himself entirely to literary work—belles lettres, history, even politics; principally, however, to subjects of a musical nature. P. was musical *feuilletoniste* to the *Soir*, the *Tribune*, the *Événement*, and since 1878 he has written for the *Journal Officiel*; he was, at the same time, contributor to various musical papers (*Ménestrel*, *France musicale*, *Art musical*, *Théâtre*, *Chronique musicale*), and published pamphlets and works of greater importance: "André Campra" (1861), "Gresnick" (1862), "Dezèdes" (1862), "Floquet" (1863), "Martini" (1864), and "Devienne" (1864; all these six pamphlets under the general title: "Musiciens français du XVIII. siècle"); "Meyerbeer" (1864); "F. Halévy, écrivain" (1865); "William Vincent Wallace" (1866); "Almanach . . . de la musique" (musical calendar for 1866, 1867, and 1868; the last two, with supplements, "Nécrologie des musiciens"); "De la littérature musicale en France" (1867); "De la situation des compositeurs de musique et de l'avenir de l'art musical en France" (1867, an address to the Ministry of Fine Arts); "Léon Kreutzer" (1868); "Bellini" (1868); "A. Grisar" (1870); "Rossini" (1871); "Auber" (1873); "A propos de l'exécution du *Messie* de Haendel" (1873); "Notice sur Rode" (1874); "Boieldieu" (1875); "Figures de l'opéra comique: Ellevion, Mad. Dugazon, la Tribu des Gavaudan" (1875); "Rameau" (1876); "Adolphe Adam" (1876); "Question de la liberté des théâtres" (1879, address to the Ministry); "Question du théâtre lyrique" (1879, ditto); "G. Verdi" (1881). P. brought out (1876-77) a musical paper, *Revue de la Musique*, but was forced to give it up at the end of six months. The many biographical works of P. (in addition to those named, there are still many in musical papers: for instance, on Perrin and Cambert, Philidor, Verdi, etc.) make it evident why he was commissioned to prepare the supplement to Fétis's "Biographie universelle" (1878-80, two vols.), which is certainly less thorough, and contains less forcible criticism than the chief work, but which, notwithstanding, fills up, in praiseworthy manner, many a gap.

Poussé (Fr.), *i.e.* up-bow. (Cf. **TIRÉ**.)

Pradher (Pradère), Louis Barthélemy, pianist and composer, b. Dec. 18, 1781, Paris, d. Oct., 1843, Gray (Haute-Saône), son of a violinist, pupil of Gobert (piano) at the École Royale du Chant, etc., and at the Conservatoire, where his teacher in theory was Berton. He married, at the age of twenty, a daughter of Philidor, and in 1802 succeeded Jadin as professor of the pianoforte at the Conservatoire. The brothers Herz, Dubois, Rosellen, and others, were among his pupils. P. was accompanist at the courts of Louis XVIII. and Charles X. After a second marriage, with Félicité More (b. Jan. 6, 1800, Carcassonne, in the department Aude, d. Nov. 12, 1876, Gray), singer at the Opéra Comique, he received his pension in 1827, and withdrew to Toulouse. P. composed several comic operas, also many pieces for pianoforte (a concerto, five sonatas, rondos [one for two pianos], variations, potpourris, etc.), a trio for pf., violin, and 'cello, an adagio and rondo, and 22 books of songs.

Praecambulum (Lat.). (See **PRÆLUDIUM**.)

Praecantor (Lat.), cantor or organist.

Praefatio (Lat., also **Illatio**, **Immolation**, **Con-testatio**), the prayer which is said or sung before the transubstantiation, in the rite of the Mass.

Praefectus chori (Lat. "leader of the chorus"), in school choirs, as, for instance, in that of St. Thomas's, Leipzig, an advanced pupil, who leads the choir as the cantor's deputy (and in similar manner, formerly, in the "Kurrendengesang").

Praeger, Ferdinand Christian Wilhelm, distinguished London teacher of music, b. Jan. 22, 1815, Leipzig, d. Sept. 1, 1891, London, son of the violinist and former capellmeister at Leipzig, Magdeburg, and Hanover, Heinrich Aloys P. (b. Dec. 23, 1783, Amsterdam, d. Aug. 7, 1854, Magdeburg; composer of much chamber music, also some operas). P. at first cultivated 'cello-playing, but, on the advice of Hummel, turned his attention to the pianoforte. After living for a short time at The Hague as teacher of music, he settled in London in 1834. P., from the time of the foundation of the *Neue Zeitschrift für Musik*, was appointed correspondent by Schumann. He was an enthusiastic supporter of Wagner, and, through him, the latter was called to London in 1855 as conductor of the Philharmonic Concerts. Of his compositions may be mentioned:—a trio; an overture: "Abellino;" a symphonic prelude to *Manfred*; a symphonic poem, "Life and Love, Battle and Victory" (1885). Under the title "Praeger-Album" (two vols.), a selection of his pianoforte works was published by Kahnt at Leipzig.

Prælium (Lat. "prelude," "introduction"), especially a chorale prelude; then, metaphoric-

ally (since organists, by way of introduction, frequently improvised on a Chorale motive), a free fantasia; *to prelude* means to improvise. A fugue is generally preceded by a P., which then stands in the same key, and prepares the mood of the fugue.

Pralltriller (Schneller, "Inverted Mordent"), is the name given to the ornament, which consists of a rapid alternation of the principal note with the upper second, and which is indicated by

If the auxiliary note is to be altered, a \sharp , b , \flat , etc., is placed above the sign:

Formerly the P. commenced with the auxiliary note,

The P. is always performed at a rapid rate, and therefore only occupies a small portion at the commencement of notes of a certain length:

Formerly the *double* or long P. was employed, which since Bach's time is indicated by

But with this sign, the ornament sometimes occupied the whole of the note, *i.e.* became a shake (q.v.). The older clavier masters named the ornament indicated by \sim "Cadence," "Tremblement," or "Pincé renversé" (inverted mordent), and understood by "Cadence appuyée" or "Tremblement appuyé" (\sim), a shake beginning with a long appoggiatura. The P. with under second is termed *Mordent* (q.v.).

Præstant (Ger.), Principal 4 ft.

Prätorius (Latinised for Schulz or Schulze),

(1) Gottschalk, professor of philosophy at Wittenberg, b. March 28, 1528, Salzwedel, d. July 8, 1573. He published, jointly with Martin Agricola, a vocal educational work: "Melodiæ scholasticæ . . . in usum scholæ Magdeburgensis" (1556).

(2) Christoph, who speaks of himself in 1581 as "der Music verordneten zu Linnneburgk," b. in Silesia, however, according to Gerber. He published two books of "Fröhliche u. liebliche Ehrenlieder, von züchtiger Lieb und ehelicher

Treue" a 4 (1581), a funeral song for Melancthon (1560), and, to use his own words, "viele geistliche Kirchengesänge und Ehrenlieder" ("many sacred Church and Festival songs").

(3) Hieronymus, famous organist and composer, b. Aug. 10, 1560, Hamburg, d. there Jan. 27, 1629. He was son of the organist of St. James's Church in that city; became, in 1580, after he had continued at Cologne the studies which he commenced under his father, town cantor at Erfurt, and in 1582 assisted, and in 1586 succeeded, his father as organist. His printed works are: I. "Cantiones sacræ" (a 5-8, 1599, augmented edition a 2-12, with three songs by Jakob P., 1607 and 1622); II. "Magnificat" (a 8, 1602 and 1622); III. "Liber missarum" (a 5-8, 1616); IV. "Cantiones variæ" (a 5-20, 1618 and 1623); the above-named works also appeared in a complete edition, entitled "Opus musicum novum et perfectum"; V. "Cantiones novæ" (a 5-15, 1618 to 1625). There also appeared some songs *d'occasion*. Jointly with his son, Jakob P. (d. Oct. 21, 1651, as organist of St. Peter's, Hamburg, pupil of J. P. Sweelinck), and the two equally famous organists, J. Decker and D. Scheidemann, P. published a "Choralbuch" at Hamburg in 1604. Jakob P.'s Wedding Songs (a 5-8) are full of merit.

(4) Bartholomæus, published in 1616 at Berlin "Newe liebliche Paduanen und Galliarden mit 5 Stimmen."

(5) Michael, the most celebrated bearer of the name, b. Feb. 15, 1571 (1572), Kreuzberg (Thuringia), d. Feb. 15, 1621, Wolfenbüttel, as capellmeister and secretary to the Duke of Brunswick; an extraordinarily gifted musician, of equal importance as writer on music, and as composer. His compositions which have been preserved are: "Musæ Sionia" (a gigantic work in nine parts, containing 1,244 songs, parts 1-4 "Konzertgesänge" on German psalms, and Church songs a 8-12; part 5, songs and psalms a 2-8; but parts 6 to 9, only Church songs a 4, in plain writing, note against note. Part 9 appeared from 1605-10, in a second edition as "Bicinia et tricinia" [1611]); "Musarum Sioniarum motetæ et psalmi 4-16 voc. I. pars" (1607); "Eulogodia Sionia" (60 motets a 2-8 for the "Beschluss des Gottesdienstes," 1611); "Missodia Sionia" (1611); "Hymnodia Sionia" (hymns a 2-8, 1611); "Megalyndia" (madrigals and motets a 5-8, 1611); "Terpsichore" (dance pieces a 4-6, by French composers and by P., 1612); "Polymymnia caduceatrix et panegyrica" (songs of peace and of joy, a 1-2, 1619); "Polymymnia exercitatrix" (a 2-8, 1619); "Uranodia" ("Uranochordia," 19 songs a 4, 1613); "Kleine und grosse Litaney," etc. (1606); "Epithalamium" for Friedrich Ulrich of Brunswick and Anna Sophie of Brandenburg (1614); "Puericinium" (14 Church songs a 3-12, 1621). However great may have been the services of

P. in furthering the cause of the new style of music with instrumental accompaniment, at the present day the services which he rendered by his literary activity are most thought of. His greatest work, "Syntagma musicum" (1614-20, three parts), is one of the most important sources for music, especially instrumental, of the 17th century. The first part (1614) is an historical treatise, written in Latin, of great merit, considering the period at which it was written. The second ("De organographia," 1618; in a new edition as Vol. XIII. of the "Publ. der Ges. f. Musikforsch."), to which belong the illustrations of instruments ("Theatrum instrumentorum seu Sciagraphia"), is of the deepest interest: and, scarcely less so, the third, on the theory of music (1619, an epitome in the *Monatsh. f. Musikgesch.*, X., p. 33, etc.). The Syntagma is to be found in most great libraries, and is recommended to all who wish to get a vivid idea of the practice of music at the commencement of the 17th century.

Pratt, Silas G., b. Aug. 4, 1846, Addison (Vermont), has made repeated studies in Europe, and attracted attention by his various compositions, amongst them an opera, *Zenobia*. He has lived in New York as a teacher since 1889.

Precipitando (Ital., "precipitate"), same as ACCELERANDO.

Predieri, (1) Angelo, b. Jan., 1655, d. Feb. 22, 1731, Bologna, from 1673 a Franciscan monk there, teacher of Padre Martini. He was a celebrated composer, of whose works, however, hardly anything is preserved.

(2) Giacomo Cesare, pupil of G. P. Colonna, was chief maestro at Bologna in 1698, wrote nine oratorios between 1681-1719, and also published a volume of "Canzoni morali e spirituali" a 3, with continuo (1696).

(3) Luca Antonio, b. Sept. 13, 1688, Bologna, principal of the Accademia filarmonica there (1723); from 1726 to the autumn of 1747, court capellmeister at Vienna. In 1751 he received a pension, and died 1769, Bologna. He wrote for Bologna, Venice, Florence, and Vienna, fourteen operas and serenades, also two oratorios.

Preghiera (Ital.), prayer.

Preindl, Joseph, composer, conductor, and theorist, b. Jan. 30, 1756, Marbach (Lower Austria), d. Oct. 26, 1823, Vienna; he studied under Albrechtsberger, in 1780 became choir-master of St. Peter's Church, Vienna, in 1809 capellmeister of St. Stephen's. He published: masses, offertories, a Requiem, a Te Deum, and other sacred pieces; two concertos, sonatas, variations, etc., for pianoforte; also a "Method of singing," and "Melodien aller deutschen Kirchenlieder, welche im St. Stephansdom in Wien gesungen werden," with cadenzas, preludes, etc. After his death, Seyfried published

his "Wiener Tonschule," a guide to thoroughbass, harmony, counterpoint, and the science of fugue (1827, two parts; 2nd edition 1832).

Preitz, Franz, organist, b. Aug. 12, 1856, Zerbst (Anhalt), was, from 1873 to 1876, a pupil of the Leipzig Conservatorium. He gave successful concerts as an organ virtuoso, in 1879 became teacher at the Stern Conservatorium, Berlin, and now lives at Zerbst as teacher of singing at the Gymnasium, and cantor of the court and collegiate church, since 1892, "herzog. Anhalt. Chordirektor." Of P.'s compositions there have appeared songs, motets, an *a cappella* Requiem, songs for three female voices (with pf.), pieces for violin and organ after preludes from the "Well-tempered Clavier," organ preludes, etc.

Première (Fr.), "the first" performance of a stage work.

Prentiss, Thomas Ridley, b. July 6, 1842, Paslow Hall, Ongar, d. July 15, 1895, London, studied under the two Macfarrens at the Royal Academy of Music, London, soon became a teacher at that institution, and appeared many times in public as pianist and with success. He was for some time organist of Christ Church, Lee, in 1880 was appointed teacher of the pianoforte at the Guildhall School of Music, and in 1881 at the Blackheath Conservatoire. P. composed many vocal works, besides pf. pieces, and published an instructive collection of pf. works and analyses; also six cantatas by Carissimi.

Pressel, Gustav Adolf, b. June 11, 1827, Tübingen, d. July 30, 1890, Berlin; he studied theology, but at the same time music seriously, (under Silcher), and subsequently became "Pfarrvikar" and tutor. He finally gave himself up, however, entirely to music, and became in 1850 a pupil of Sechter at Vienna, brought out at Stuttgart the operas *Die St. Johannisnacht* (1860) and *Der Schneider von Uhm* (1866), and lived from 1868 at Steglitz (near Berlin). P. composed a great number of excellent songs (a ballad, "Barbarossa"). To P. the credit is due of establishing the fact that Mozart finished his Requiem entirely himself, even to the smallest details.

Presser, Theodore, able teacher, author, and active publisher (numerous books on music by Fillmore, Matthews, etc.) at Philadelphia; he studied at Boston and Leipzig. Since 1883 he has published an excellent musical paper, *The Etude*, which gives especial prominence to articles on pianoforte pedagogics, and to which the ablest American musicians contribute.

Presto (Ital. fast), the quickest tempo. It is, however, possible to indicate greater intensity of speed by *Prestissimo*, "very fast." (Cf. MARKS OF EXPRESSION, etc.)

Prévost, Eugène Prosper, conductor and composer, b. Aug. 23, 1809, Paris, d. Aug. 30,

1872, New Orleans; he studied at the Paris Conservatoire (Jelensperger, Seuriot, Le Sueur); in 1831 he won the *Prix de Rome*, 1835 opera conductor at Havre, 1838-62 at New Orleans, then again in Paris, as conductor of the Bouffes-Parisiens, and, afterwards, of the Concerts des Champs Élysées until his return to New Orleans in 1867. He produced several operas at Paris, New York, and New Orleans, and also wrote masses and oratorios, etc.

Prayer, (1) Gottfried, conductor and composer, b. May 15, 1809, Hausbrunn (Lower Austria), studied under S. Sechter, in 1835 was organist at the Evangelical church, in 1844 deputy vice court capellmeister, in 1846 court organist, from 1853, up to the present time, capellmeister of St. Stephen's, 1862 actual vice court capellmeister, and, as such, received his pension in 1876. From 1838 he was teacher of harmony and counterpoint at the Conservatorium der Musikfreunde, and 1844-48, director of that institution. He published a symphony, several masses (one for male chorus), "Hymnen der griechisch-katholischen Kirche" (1847, three parts), and other sacred works, a quartet for strings, pieces for pianoforte and organ, and many songs. An oratorio, *Noah*, was frequently performed by the Tonkünstler Society.

(2) Wilhelm Thierry, distinguished physiologist, b. July 4, 1841, Manchester, was educated in Germany, studied principally at Bonn, where he qualified himself as lecturer in 1865, and in 1869 was appointed professor of physiology at Jena; in 1894 he retired to Wiesbaden. Of his numerous writings may be here specially mentioned, "Ueber die Grenzen der Tonwahrnehmung" (1876).

Prick-saw. The word *pricked* was formerly used in the sense of "written," as it were "dotted down." In contradistinction to an extemporaneous performance, a P.-s. was a *dis-cant* (counterpoint) or division (variation) noted down.

Prill, Carl, excellent violinist, b. Oct. 22, 1864, Berlin, pupil of his father, who was a music director, also of Helmich, Wirth, and, lastly, Joachim (at the Royal High School), during which period he acted as solo violinist in Brenner's, and, later, in Laube's, orchestra. From 1883 to 1885 he was leader of Bille's orchestra, in 1885 leader at Magdeburg, and since 1891 he has been leader of the Gewandhaus orchestra. He is equally renowned as a soloist and as a quartet player.

Prime (Lat. *Prima*), the first degree, same as unison; naturally, one cannot speak of an augmented unison, but only of an augmented P., which is the combination of a sound with its chromatic alteration (c-c#).

Primicerius (Lat.), cantor.

Primo (Ital.), abbrev. *Imo*, the first; *tempo Imo*, original tempo; *primo, secondo*, the first,

the second player in pianoforte duets, in which P. is the player of the treble part; *prima* (*I^{ma}*) *volta*, the first time, in a section which has to be repeated, *i.e.* the passage which leads back to the beginning, and which must be omitted when the player proceeds further (the *II.* [*II^{da}, seconda*]) has to be played). *Prima vista*, at sight.

Principal (Ital. *Principale*: Fr. *Montre*; Sp. *Baxoncillo*), the name given in Germany to Open Diapason, the "principal" open flue-stops of medium measure, the real normal measure (principal measure), and of powerful, clear intonation. A good 8-foot open diapason stop is the first requisite of a fairly serviceable organ. Organs of large size have, with exception of the echo-work, an open diapason of 8 feet (of slightly different intonation) for each manual; and very large ones, two open diapason stops of different intonation, both on the Great Organ. The normal pedal stop is of 16 feet, which, indeed, in very large organs is to be found in the chief manual (there are two open diapason stops of 16 feet on the great manual of St. Sulpice organ, Paris; one is *harmonique*, *i.e.* really of 32 feet, but overblows in the octave). Open diapason of 32 feet (Grossprincipal, subprincipal) only occurs in the pedal, and for the lowest C demands a length of nearly 40 feet. The P. stops are generally called Octave, P. 4 feet, also "Kleinprinzipal," Fr. *Préstant*; P. of 2 feet, Superoctave, Fr. *Doublette* or *Quart de nasard* (*i.e.* of the Quint $2\frac{2}{3}$ feet), Sp. *Quincena* (= double-octave); P. of 1 foot, Octave-fifteenth, Fr. *Fifre*, *Piccolo*, Lat. *Vicesima secunda* (*22^{da}*). A varied kind of P. is the Geigenprinzipal (violin diapason), of narrow scale, like that of the Gamba. The material of Open Diapason and P. stops is tin (*cf.* ORGAN METAL), when available; but the great pipes of 16 and 32 feet are mostly of wood.

Printz, Wolfgang Kaspar (von Waldthurn), writer on music, b. Oct. 10, 1641, Waldthurn (in the Upper Palatinate), d. Oct. 13, 1717, Sorau; he studied theology, but came into bitter conflict with the Catholic priesthood, as he sought to make proselytes to Protestantism, and was finally compelled to renounce theology. After a wandering and adventurous life through Germany and Italy, he became cantor at Promnitz, afterwards at Triebel, and in 1665 at Sorau, where he remained until his death. His biography may be seen in the preface to his "Historische Beschreibung." According to his own statement, P. composed many works, but nothing has been preserved. His writings are: "Anweisung zur Singkunst" (no copy known; printed, according to P.'s own statement, in 1666, 1671, and 1685); "Compendium musicæ signatoriae et modulatoariae" (1668, with misprint 1689 on the title-page; 2nd ed. 1714); "Phrynis Mytilenæus oder satirischer Komponist" (1676, 1677, two parts;

2nd ed. 1694, with a 3rd part); "Musica modularia vocalis" (1678); "Exercitationes musicæ theoretico-practicæ de consonantiis singulis" (1687 to 1689, in fragments); "Historische Beschreibung der edlen Sing- und Kling-Kunst" (1690, important for the history of music of the 17th century). Three novels under an assumed name are also ascribed to P.: "Musicus vexatus," etc. (1690, by Cotala, the "Kunstpfeifergeselle"), "Musicus magnanimus oder Pancalus, der grossmütige Musikant" (1691, signed Minnermus), and "Musicus curiosus oder Battalus, der vorwitzige Musikant" (1691, signed Minnermus). According to P.'s statement, a great number of his manuscripts were destroyed by fire. The writings of P. are bombastic, and form a peculiar mixture of learning and credulity; but, as forming part of the literature of the 17th century, they are of importance.

Proch, Heinrich, a once celebrated, but now almost forgotten composer of songs, b. July 22, 1809, Böhmisch-Leipa, d. Dec. 18, 1878, Vienna. He went through a course of study in jurisprudence up to 1832, at the same time training himself for a violinist, and, finally, turned a cold shoulder to law. In 1837 he became capellmeister at the Josephstadt Theatre, was appointed to the Court Opera in 1840, and remained in that post until he received his pension in 1870. A three-act comic opera, *Ring und Maske*, was performed in 1844, and three one-act operas were given between 1846 and 1848; all in Vienna. Of his songs "Von der Alpe tönt das Horn," "Ein Wanderbursch mit dem Stab in der Hand," and others, were once very popular. One of P.'s numerous lady pupils, Frau Peschka-Leutner, sang for many years P.'s coloratura variations with concertante flute. P.'s ability as an opera conductor was fully recognised.

Prochaska, Ludwig, Dr. Jur., b. about 1835, Prague, d. there July 18, 1888. He was town councillor in that city, but when his wife (an opera singer) received an engagement at Hamburg he removed to the latter city, and lived there for many years highly esteemed as a teacher of singing. The most noteworthy of P.'s compositions are his Bohemian songs and duets.

Professor of Music, in Germany is, for the most part, a title only bestowed by the sovereign on teachers of music and conductors. Even the professors of music at German Universities are only so nominally; but there exist some paid professorships of music (in Berlin [Bellermann, Fleischer], formerly also in Göttingen [Krüger] and Bonn [Breidenstein]); also Vienna (Ambros, Hanslick) and Prague (Hostinsky, Adler) have similar ones. In England there has been a professor of music in ordinary at Oxford since 1626 (1797 to 1855 Crotch, then Bishop, Onseley, and Stainer). The Cambridge professors are: Staggins (1684), Tudway, Greene, Randall,

Hague, Clarke-Whitefield, Walmisley, Bennett, Macfarren, and since 1887, Villiers Stanford; those of Edinburgh: J. Thomson (1833), Bishop, Pierson, Donaldson, Oakeley, F. Niecks; J. Dublin had already from 1764-74 a professor (Mornington), but after that only since 1845 (Stewart), 1894 (Prout). The English professors have to conduct the examination of candidates for musical degrees (Bachelors and Doctors). In Germany the professors of music only assist in this examination, while the graduation is effected by the philosophical faculty.

Programme Music, music which is said to be intelligible as a representation, in somewhat close detail, of a subjective or objective event, and to which, therefore, the hearer is not supposed to listen as if it were merely a succession of sounds, but to follow with critical ear the connection between programme and tone-piece. This, unfortunately, is the usual way of receiving programme compositions, even though the composer may have desired otherwise, viz. that the imagination of the hearer might be excited in a more determined manner than is possible by music having general meaning, *i.e.* absolute music without any programme. Concerning the justification of P. M. cf. **ABSOLUTE Music and ESTHETICS**. The idea of imitating outward events by sounds is old; cf. **JANNEQUIN, GOMBERT, and MATTHIAS HERMANN**.

Progressio Harmonica, a mixed stop in the organ with fewer ranks below, than above; for example, C only gives the 3rd and 4th upper-tones, G the 2nd, 3rd, and 4th, and from C' upwards, also the fundamental tone itself. (cf. **MUTATION STOPS**.)

Progression, (1) of the separate voices, *see* **PROGRESSION OF PARTS; PARALLELS**; (2) of harmonies *see* **CLANG SUCCESSION, MODULATION, TONALITY**; (3) of dissonances, *see* **RESOLUTION**.

Progression of Parts concerns the treatment of the separate voices or parts in musical composition. A sharp distinction must be made between a piece with *real parts*, which for voices is self-intelligible—also for strings and for wind instruments (especially wood-wind), usual—and free style, which, especially in modern times, is employed for keyed instruments and for full orchestra. The former is also named *legato* or strict style; yet by strict and free style is also understood the greater or less scrupulousness in avoiding unvocal voice progressions in *Stile legato*. Real parts are such as move in a clear, independent manner through a whole piece, or a section, or a considerable number of bars, so that they appear to possess musical individuality; in them pulsates the real life of the musical piece. Even the free style cannot altogether dispense with them; but besides real parts, there are many filling-up or *ripieno* parts, which cannot claim to be real parts, although they are spoken of as filling-up

parts (q.v.). With regard to *Polyphony by breaking*, *see* the special article. The essential points in P. of P. may be described in a few words. Progression by interval of a second forms its essence. The more the succession of chords is effected by progression of a second in the separate parts, the smoother, the more perfect, will be the writing. Even successions of chords which, harmonically, are difficult to grasp, appear to a certain extent unlaboured, if all, or most of the parts progress by intervals of a second, be these whole-tone, leading-tone, or chromatic half-tone steps. For example:

A special means of binding together two or more chords following one another is to allow notes in common (or enharmonically identical) to remain. The progression of the bass part forms an exception; it readily advances from one fundamental note to another, and serves to make clear the harmonic structure; also from fundamental to third tone, and from third tone to third tone or principal tone. On the other hand, the leap of the bass part to fifth tone must be dealt with carefully (*see* Six-four, Chord of). Although one should always aim at movement by interval of a second, it cannot always be managed; the very part which is, as a rule free, and which is first written, the melody part proper (in modern music generally the upper part), readily breaks off from movement of a second, by greater, so-called harmonic steps; and as such steps produce the effect of polyphony by breaking (q.v.), they enrich the writing: from the first there blossoms forth, so to speak, a second part (this happens very frequently in orchestral and pianoforte compositions). Certain progressions of parts, which, harmonically, are difficult of comprehension, and, on that account, far from pure, are readily avoided in vocal writing (and entirely in the "strict style"); these are augmented steps (tritone, augmented step of the second, etc.). The rules, which are to be found in all text-books of harmony, stating that the leading note must move a minor second upwards, and that the seventh must move downwards, are only correct under certain conditions. When the leading note appears in the dominant chord, and the latter proceeds straight to the tonic, the leading-tone step is naturally made, because, in fact, half-tone progressions should be taken whenever an opportunity presents itself which does not clash with some other rule of composition. In like manner the seventh also, will readily progress downwards in the cases in which it can make the falling leading-tone step (a leading step in the minor sense); for example, when the chord of dominant seventh resolves on the major tonic chord:

In this case, the rising leading-tone step, $b'-c'$, as well as the falling $f'-e'$ is obligatory; and only in exceptional cases is there any departure from either of these steps. But there is no reason why in chords like $b : d : f : a$ or $c : e : g : b$ the seventh (according to usual terminology, *i.e.* the highest tone) should move downwards, unless to avoid parallel fifths, or something of the sort. Everything depends upon the harmony which follows; if this contain the octave of the fundamental tone, the seventh will frequently rise. The rule of the seventh tending downwards, and of the leading-tone tending upwards, is, therefore, nothing more than a practical hint, since in the most usual succession of chords, such progression shows itself as the most convenient. On the other hand, the negative laws, prohibition of fifths and prohibition of octaves (parallels), are of the highest importance.

Progressionsschweller, a kind of *crescendo* apparatus for the organ, invented by Abbé Vogler, in which the sound was increased or diminished, by adding or removing the mutation stops. (*Cf.* CRESCENDO.)

Proksch, Josef, distinguished musical teacher, b. Aug. 4, 1794, Reichenberg (Bohemia), d. Dec. 20, 1864, Prague, was quite blind from his thirteenth year, but, nevertheless, an esteemed pianoforte teacher (pupil of Kozeluch). He mastered the system of Logier, whom he met at Berlin, and in 1830 established a pianoforte school ("Musikbildungsanstalt") at Prague, which, after his death, was carried on by his son Theodor (b. 1843, d. March 8, 1876) and his daughter Marie. P. himself wrote a long-winded "Versuch einer rationellen Lehrmethode im Pianofortespiel," a "Musikalisches Vademecum" (50 Nos.), "Aphorismen über katholische Kirchenmusik" (1858), and an "Allgemeine Musiklehre" (1857). He composed masses, cantatas, sacred songs, sonatas, a concerto for three pfs., etc., and transcribed many classical orchestral works for from four to eight pfs. (for his institution).—Also his brothers Anton (b. Oct. 4, 1804, d. May 17, 1866, as town organist at Prague), and Ferdinand (b. 1810, d. Sept. 12, 1866, violinist) were meritorious teachers at the "Musikbildungsanstalt."

Prolation, in mensurable music (q.v.), concerned (1) the relative values of the notes (P. from *proferre*, "to bring out"). There were four different kinds of P., established, according to tradition, by Philipp de Vitry: (a) with ternary division of the Breve and Semibreve (our $\frac{3}{2}$ time); (b) with ternary division of the Breve, but binary division of the Semibreve (our $\frac{3}{4}$ time); (c) with binary division of the Breve, but ternary division of the Semibreve (our $\frac{3}{8}$ time); (d)

with binary division of both Breve and Semibreve ($\frac{1}{2}$ time).—(2) A special term for the measurement of the Semibreve. If the Semibreve was to have the value of three minims (P. *major*), this was marked in the time sign by a dot \odot , \ominus ; the absence of the dot indicated binary division of the Semibreve: P. *minor*, \odot , C. Ternary division of the Semibreve, notwithstanding the sign for P. *minor*, could be indicated by $\frac{3}{2}$ (*Cf.* SESQUIALTERA); but then the value of the Semibreve remained unchanged, whereas P. *major* prolonged the same, *i.e.* rendered the tempo slower.

Prolongement (Debain's). (*See* HARMONIUM and PEDALS.)

Prony, Gaspard Claire François Marie Riche, Baron de, engineer and mathematician, b. July 12, 1755, Chamelet (Rhône), d. July 29, 1839, Paris; professor, afterwards examiner, at the Polytechnique, member of the Académie, etc. He wrote for the Académie a "Rapport sur la nouvelle harpe à double mouvement" (1815, Erard's double pedal harp; P. was himself an enthusiastic performer on the harp), also "Note sur les avantages du nouvel établissement d'un professeur de harpe à l'école royale de musique et de déclamation" (1825); still more important is his "Instruction élémentaire sur les moyens de calculer les intervalles musicaux" (1822); P. made use of the eminently practical system of logarithms on basis two, first introduced by Euler, in order to show musical ratios. (*Cf.* LOGARITHMS and TONE, DETERMINATION OF.)

Proportion (Lat. *Proportio*), (1) in mensurable music a determination of time by means of $\frac{3}{2}$, $\frac{3}{4}$, $\frac{3}{8}$, or reversed $\frac{2}{3}$, $\frac{4}{3}$, $\frac{8}{3}$, and many other fractions. P. determined either the note values in comparison with those immediately preceding, *i.e.* by $\frac{3}{2}$ after a preceding *Integer valor* (q.v.), a rate three times as fast (3 Breves = 1 Breve), and by $\frac{3}{4}$, on the other hand, a rate three times as slow (1 = 3); or it determined similar relation to the note values of another simultaneous voice part, having the sign of *Integer valor*. The proportions $\frac{2}{2}$ (*dupla*) and $\frac{3}{2}$ (*subsesquialtera*) determined imperfect measure, the former for the Breve, the latter for the Semibreve; while, with reversed meaning, $\frac{2}{3}$ (*trippla*) and $\frac{3}{4}$ (*sesquialtera*) established perfect measure for the same species of notes. Of especial importance was the (*Proportio*) *hemioiia* (q.v.). (*Cf.* also SESQUIALTERA.)

(2) *See* NACHTANZ.

Proposta (Ital. "fore-section"), theme, especially *Dux* in fugue, or the opening voice in canon. (*See* RISPOSTA.)

Proprietas (Lat.), in the *Ligatures* (q.v.) of mensurable music, the value of the first note as Breve. The P., when the second note was higher than the first, was not indicated by a descending tail (*cauda*), but when lower, was thus indicated, the tail being on the left of the

four-cornered first note (seldom on the right). Certain theorists of mensurable music have, quite inappropriately, named this stroke itself *P.* (Pseudo-Aristotle, Marchettus of Padua). *Opposita p.* was the semibreve value assigned to the first two notes of a *Ligature* (even when it had no more); it was indicated by an ascending stroke on the left of the first note. (Cf. *LIGATURE*, last line.) *Sine proprietate*, like *Improprietas*, indicated the contrary of *P.*, i.e. the value of the first note of the *Ligature* as long.

Prosa. (See SEQUENCE.)

Proske, Carl, famous connoisseur and publisher of old music, b. Feb. 11, 1794, Gröbnig (Upper Silesia), d. Dec. 20, 1861, as cathedral capellmeister at Ratisbon. He was the son of a landed proprietor, studied medicine, became physician to his regiment in the War of Liberation, passed his government examination in 1817, and settled as practising physician at Oberglogau, and, afterwards, at Oppeln. In 1823 he followed a long-cherished desire, and went to Ratisbon to study theology. He was ordained priest in 1826 by Bishop Sailer at Ratisbon, became vicar choral in 1827, and in 1830, capellmeister and canon of the church of Our Lady, Ratisbon. He had here an opportunity to render great service to those who investigated subjects relating to music; and this he did. He collected, first of all in Germany, but also from 1834-38 in Italy, a splendid library, especially of compositions of the 16th and 17th centuries. His first publication (in 1850) was Palestrina's masterpiece, the "*Missa Papæ Marcelli*," in three forms: the original one by Palestrina a 6, one a 4 by Anerio, and one for double chorus (a 8) by Suriano. In 1853 he began to publish his great collection, "*Musica divina*," frequently mentioned in this Dictionary. The contents are: 1st vol., 12 Masses a 4 (1853); 2nd vol., motets for the whole ecclesiastical year (1855); 3rd vol., Fauxbourdons, psalms, Magnificats, hymns, and antiphons (1859); 4th vol., Passions, Lamentations, Responses, Te Deum, Litanies (1863, published after his death by Wesselack). Schrems and Haberl (q.v.) edited the continuation of this undertaking. A further selection of Masses a 4-8 appeared 1855-59, "*Selectus novus missarum*." The following are represented in this collection:—Palestrina, Viadana, Asola, Vittoria, Porta, Lasso, Anerio, Marenzio, Suriano, Nanino, Turini, Gabrieli, Lotti, Vecchi, Pitoni, Constantini, Casini, Agostini, Scarlatti, Guidetti, Rosselli, Bernabei, Picotti, Biondi, Bai, Paminger, Aichinger, Hasler, Croce, Fux, Gallus, etc. P.'s costly library is in the possession (by purchase) of the episcopal see of Ratisbon.

Proslambanomenos. (See GREEK MUSIC.)

Protus (term used in the Middle Ages for *παῦρος*), the first Church Mode. (See CHURCH MODES.)

Prout, Ebenezer, Dr., composer and dis-

tinguished theorist, b. March 1, 1835, Oundle (Northamptonshire), B.A. (London, 1854), pupil of Charles Salaman for the pianoforte, but principally indebted for his musical ability and knowledge to serious private study. P. was for many years professor of counterpoint at the Royal Academy of Music, and was formerly teacher at the National Training School of Music, for many years conductor of a choral society, musical critic, etc. In 1894 he was appointed Professor of Music in Dublin University (successor to Sir R. Stewart). From 1871-74 he edited the *Monthly Musical Record*, and after that was musical critic of the *Academy*, afterwards of the *Athenæum*. P. is prolific as a composer, and as such highly respected. His Op. 1, a quartet for strings in *ef*, won a prize in 1862 at the Society of British Musicians, and his pf. quartet (Op. 2) gained a similar honour in 1865. He has published besides:—a pf. quintet (Op. 3), an organ concerto with orchestra, dramatic cantatas: *Hebrews*, *The Red Cross Knight* (London, 1887), *Alfred*; *The Song of Judith* (contralto solo with orchestra, Norwich, 1867), *Freedom* (baritone solo with orchestra), *Queen Aimée* (for female voices); sacred music (*Magnificat*, Op. 7, an Evening Service, Op. 8 [both with orchestra], Anthem, Op. 29, etc.); four symphonies, Minuet and Trio for orchestra, etc. P. first became known as a theorist through his "*Treatise on Instrumentation*" (1880; German by B. Bachur); but he has recently developed striking activity as an author with the extensive series of educational works:—"*Harmony*" (1889), "*Counterpoint*" (1890), "*Double Counterpoint and Canon*" (1891), "*Fugue*" (1891), "*Fugal Analysis*" (1892), "*Form*" (1893), and "*Applied Forms*" (1895), which place him in the foremost rank of living theorists. He is also a contributor to the *Monthly Musical Record*.

Pruckner, (1) Caroline, singer and teacher of singing, b. Nov. 4, 1832, Vienna; she sang from 1850-54 at the court theatres at Hanover and Mannheim with great success, but suddenly lost her voice, and has since lived in Vienna highly esteemed as a teacher of singing. The Grand Duke of Mecklenburg conferred on her the title of professor. Fr. P. published a pamphlet, "*Theorie und Praxis der Gesangkunst*" (1872).

(2) Dionys, distinguished pianist, b. May 12, 1834, Munich; he received there his first pianoforte instruction from Fr. Niest, and made his public appearance, when only seventeen, at the Leipzig Gewandhaus. During the following years, up to 1855, he continued his studies under Liszt at Weimar, and then settled in Vienna, whence he has made many concert tours. Since 1859 he has been teacher at the Stuttgart Conservatorium, and in 1864 was named royal court pianist. The chamber music evenings established by P., jointly with Edm. Singer, are held in high esteem.

Prudent, Émile (Beunie-), pianist and composer for the pianoforte, b. Feb. 3, 1817, Angoulême, d. May 14, 1863, Paris; he lost his parents at an early age, and was adopted by a pianoforte-tuner. P. studied under Lecouppéy, Laurent, and Zimmermann at the Paris Conservatoire, and, besides, took Thalberg and Mendelssohn as his models. P. was held in high esteem in Paris as teacher of the pianoforte. His compositions belong, for the most part, to the better class of salon-music, but he wrote also a *concert symphonique* (pf. and orchestra), a second pf. concerto in \flat , and a pf. trio.

Prums, François Hubert, performer on the violin, b. June 3, 1816, Stavelot (near Liège), d. there July 14, 1849; pupil of the Liège Conservatoire (1827), then of the Paris one under Habeneck; he held the post of violin professor at the Liège Conservatoire in 1833. His concert tours (from 1839) made him known as a violinist of taste and smooth *technique*. The Duke of Gotha granted to him the title of "Konzertmeister." Of his compositions must be named the widely popular "Mélancolie" for violin and orchestra (Op. 1), *Études* (Op. 2), and two concert pieces.

Prumier, (1) Antoine, performer on the harp, b. July 2, 1794, Paris, d. there Jan. 20, 1868, pupil of the Conservatoire, harpist at the Théâtre Italien, and, in 1835, at the Opéra Comique. He succeeded Nadermann as professor of the harp at the Conservatoire, and composed several fantasias, rondos, etc., for the harp.

(2) **Ange Conrad**, b. about 1821, d. April 3, 1884, Paris, son and pupil of the former. In 1840 he succeeded him as harpist at the Opéra Comique, but afterwards went over to the Grand Opéra, and took Labarre's place as professor of the harp at the Conservatoire, 1870. He composed solo pieces and special studies for the harp, nocturnes for harp and horn, and a number of sacred songs ("Ave verum," "O Salutaris," etc.).

Psallette (Fr.), equivalent to the *maîtrise*, a school of singing in connection with a church.

Psalm (Ital. *Salmo*; Fr. *Psaume*, from the Gk. *ψάλλειν* = to pluck [a string]), the name of David's hymns of praise, which he sang to an accompaniment of an instrument of the harp kind. The singing of Ps. descended from the Jewish, to the Christian worship, first in the form of unisonal alternate singing (see *ANTI-PHON*): it was thus that St. Ambrose received it from the Greek Churches; the "Response" sprang up on Italian ground. In the present Roman Catholic service a distinction is made between P. singing (complete psalms: Vespers, Matins) and the Antiphon, Gradual, *Tractus* and *Hallelujah*, which use only single verses. The original mode of singing the Ps. in the Christian Church was the Gregorian Chant with voices in unison, and without instruments.

This, however, in the antiphons, graduals, etc., was something quite different from what we now understand by psalmody (recitation without any other rhythm than that demanded by the words); it was, rather, according to the aim and contents, a joyful shout (with quick "colorature" passages), or a solemn lament. When music in several parts sprang up, it took possession of Church song under the form of Organum and Fauxbourdon. From as early as the 12th century Graduals, arranged for 3 or 4 voices, have been preserved. (See *PEROTINUS*.) When counterpoint was at its zenith, P. singing by 4 voices without accompaniment was developed to a state of perfection; and the after-blossom of the Roman school (q.v.) increased the number of voices up to 16, 24, and even more. But from 1600, accompanied singing for one or several voices again came into vogue, and thus, gradually, were evolved the noble P. compositions of our time for soli, chorus, and orchestra.

Psalter, (1) The Book of Psalms.—(2) (Psaltery) An old stringed instrument, plucked with the finger or struck with a plectrum; the Kinnor of the Hebrews, the Rotta of the Germans, a three-cornered pointed harp.

Psellos, Michael, Byzantine writer, about 1050, at Constantinople, tutor to the Emperor Michael Duka; he wrote, among other things, a treatise on music, which was first printed by Arsenius in "Opus in quatuor mathematicas disciplinas" (1532 and 1545); in German translation by Mitzler, in the 3rd volume of his "Musikal. Bibliothek." A treatise by P. on rhythm was published by Morelli, together with the rhythmical fragments of Aristoxenos (1785).

Ptolemy, Claudius, celebrated Greek mathematician, astronomer, and geographer at Alexandria about the beginning of the 2nd century B.C., probably a native of Ptolemais Hermii, in Egypt. He wrote, amongst other things, a work in three books on music, one of the most weighty documents of antiquity on theory. It was first published in bad Latin translation by Gogavinus (1562), in the original text by Wallis (1680). O. Paul, in an excursus to his translation of Boëtius (1872), published a fragment in Greek, with German translation.

Publishers, Music, have frequently rendered service to the art of music-printing in its various stages, as, for instance, the Italians: Petrucci, Gardano, Junta, Scotto, Antiquus, Verovio; the French: Modernus, Attaignant, Le Roy, Ballard; the Dutch: Phalèse (and Bellère), Tylman; the Germans: Oeglin (Augsburg), Graphäus, Petrejus, Montan and Neuber (Nürnberg), Breitkopf (Leipzig); the English: Este, Cluer, Walsh. (Cf. *MUSIC PRINTING*.) Of modern publishers may be named: Breitkopf & Härtel, Hofmeister, Peters, Schubert, Kistner, Rieter-Biedermann, Siegel, Senff, Leuckart, Kahnt, Steingraber, A. Fiesse (Leipzig), Schlesinger, Bote & Bock,

Challier, Simrock (formerly in Bonn), Meser, Ries & Erler (Berlin); Cranz [Spina], Artaria, Gutmann (Vienna), André (Offenbach), Schott (Mayence), Litolf (Brunswick), Holle (Wolfenbüttel), Aibl (Munich), Rahter (Hamburg), etc.; Ricordi (Milan); Durand, Brandus, Heugel, Lemoine (Paris); Novello, Augener, Boosey, Cocks (London).

Puccitta, Vincenzo, Italian opera composer, b. 1778, Civitavecchia, d. Dec. 20, 1861, Milan, studied under Fenaroli and Sala at the Conservatorio della Pietà, Naples. He wrote 30 operas for Venice, Milan, Rome, London and Paris (whither he was taken by Catalani as accompanist). In his music P. showed facility, but no originality.

Puchat, Max, b. 1859, Breslau, pupil of Fr. Kiel, Berlin; he won the Mendelssohn prize in 1884. Hitherto, P. has made his mark as composer with songs, an overture, and the symphonic poem "Euphorion" (for orchestra, 1888).

Puchtlar, Wilhelm Maria, gifted, but early deceased composer, b. Dec. 24, 1848, Holzkirchen (Lower Franconia), d. Feb. 11, 1881, Nice, after long suffering. He was intended by his parents for the Church, but on that account ran away from home, was brought back, and compelled to attend the seminary at Altdorf (near Nuremberg) until the death of his step-mother (his father had already been dead some years). He now studied music at the Stuttgart Conservatorium under Faissst, Lebert, and Stark (1868-73), then lived at Göttingen as teacher of music and conductor, until, in 1879, his health compelled him to travel southwards. His published compositions consist principally of pf. pieces (somewhat of the virtuoso order); a choral work, "Der Geiger von Gmünd," was produced at Cannstadt in 1881.

Pudor, J. Friedrich, b. 1835, Delitzsch, d. Oct. 10, 1887, Dresden; from 1859 he was proprietor and managing director of the Dresden Conservatorium. His son Heinrich, b. about 1860, disposed of the institution to E. Krantz in 1890, and has devoted himself especially to authorship, his writings making a sensation by their singularity.

Pugnani, Gaetano, famous violinist, b. Nov. 27, 1731, Turin, d. there June 15, 1798, studied under Somis, who was a pupil of Corelli and Tartini. In 1752 P. became principal violinist in the court orchestra at Turin. From 1754-70 he made concert tours, and resided for several years in London, where he was leader at the Italian Opera, and produced an opera of his own. From 1770 he was maestro at the court theatre, Turin. His pupils were Viotti, Bruni, etc. P. composed 7 operas, which, however, only met with moderate success; also a ballet and a dramatic cantata. Of his 9 violin concertos only one was printed; he published, likewise, 14 sonatas for violin solo, 6 quartets for strings, 6 quintets for 2 violins, 2 flutes, and

bass, 2 sets of duets for violins, 3 sets of trios for 2 violins and bass, and 12 octets (symphonies) for strings, 2 oboes, and 2 horns. One of his violin sonatas is to be found in Jensen's "Classische Violinmusik."

Pugni, Cesare, b. 1805, Milan, d. Jan. 26, 1870, Petersburg, studied under Asiofi at the Milan Conservatorio. He lived during the last 30 years of his life at Petersburg. P. wrote 5 operas and 21 ballets for Milan, Paris, and Petersburg, which were of no great value.

Puliti, Leto, b. June 29, 1818, Florence, d. there Nov. 15, 1875; an able connoisseur, who published several valuable monographs on the "Atti del Real Istituto di musica di Firenze," among which "Cenni storici della vita del serenissimo Ferdinando dei Medici" (1884, also separately), in which he communicated important documents respecting the inventor of the "Hammerclavier," *Cristofori* (q.v.); also respecting some madrigals by Tromboncino and Arcadelt to poems of Michael Angelo, etc. Death prevented him from completing a history of Florentine music.

Punto, Giovanni. (See *STICH*.)

Puppo, Giuseppe, violin virtuoso, b. June 12, 1749, Lucca, d. April 19, 1827, Florence. He led a very restless life, and, altogether, was a very curious creature. A residence of many years in London (up to 1784), his activity as conductor at the Théâtre de Monsieur, Paris, also later as accompanist and teacher in the best circles until 1811, and as maestro at the San Carlo Theatre, Naples (1811-17), form long episodes of his life. During his last years he lived at Florence in the greatest poverty. Of his compositions 3 concertos, 8 études, and 3 duets for violin, likewise 6 fantasias for pf. were published.

Purcell, (1) Henry, England's greatest composer, b. about 1658, Westminster, d. there Nov. 21, 1695. He was the second son of a gentleman of the Chapel Royal, and Master of the choristers of Westminster Abbey. P. lost his father when quite young (Aug. 11, 1664), received his musical training under Cooke and Humphrey, as chorister of the Chapel Royal, and also received instruction from Blow. Already at an early age, P. was led to dramatic composition, and, finally, in 1680, received a commission from Josias Priest to write an opera, *Dido and Aeneas*, for his boarding-school. P. composed overtures and incidental vocal music to Dryden's *Aurange-Zebe*, Shadwell's comedy, *Epsom Wells*, the tragedy *The Libertine*, and Behn's *Abdelazor*. A song appeared in the first book (1676) of Playford's "Choice Ayres," and in the second book (1679), an elegy on the death of Matthew Lock, also several songs. To P.'s first creative period belong also the incidental music to Shakespeare's *Timon of Athens* (Shadwell's version), to Lee's *Theodosius*, and D'Urfey's

The Virtuous Wife (1680). A new phase of his life begins with his appointment as organist of Westminster Abbey (1680), since for the next six years he turned completely away from the stage, and composed, especially, a great number of odes, or so-called "Welcome Songs." Opportunity for so doing was afforded by his position, especially from 1682, when he became organist of the Chapel Royal (thus, on the occasion of the return of the Duke of York from Scotland [1680, the first of the above-named odes], likewise for the coronation of James II., etc.); yet within this time falls also the composition of 12 sonatas for 2 violins and bass (printed in 1683; 3 of these, edited by G. Jensen, appeared recently in Augener's edition). Only in 1686 did P. again devote his attention to the stage, and wrote music for Dryden's tragedy, *Tyrannic Love*; in 1688, for D'Urfey's comedy, *A Fool's Preferment*; in 1690, for Shadwell's version of the *Tempest*; he also composed his first real opera, *Diocletian* (printed in score in 1690). P. gave to England for a short time a national opera (after his death, the Italians became conquerors). In the year 1691 he produced his most important musical drama, *King Arthur*, text by Dryden (airs from it appeared in the "Orpheus Britannicus"; but the score was only printed in 1843 by the Musical Antiquarian Society). In 1692 followed the opera *The Fairy Queen* (the libretto based on *Midsummer Night's Dream*). To the above must be added the incidental music to Lee's *The Massacre of Paris* (1690), Dryden's *Amphitryon* (1690), Elkanah Settle's *Distressed Innocence*, and *The Gordian Knot Untied*, Southerne's *Sir Anthony Love*, Howard and Dryden's *Indian Queen*, Dryden's *Indian Emperor*, Cleomenes, Southerne's *The Wives' Excuse*, D'Urfey's *The Marriage-Hater Match'd*, Lee and Dryden's *Edipus*, Congreve's *Old Bachelor*, D'Urfey's *Richmond Heiress*, Southerne's *The Maid's Last Prayer*, Bancroft's *Henry II.*, to the first and second parts of D'Urfey's *Don Quixote* (1694), to Congreve's *Double Dealer*, Crowne's *The Married Beau*, Southerne's *The Fatal Marriage*, Dryden's *Love Triumphant*, Beaumont and Fletcher's *Bonduca*, Scott's *Mock Marriage*, Gould's *Rival Sisters*, Southerne's *Oroonoko*, Ravenscroft's *The Canterbury Guests*, Beaumont and Fletcher's *Knight of Malta*, and, finally, to Part III. of D'Urfey's *Don Quixote*. A copious selection of airs from P.'s stage works and odes was published by his widow in 1697, "A Collection of Ayres Composed for the Theatre and upon other Occasions;" also the "Orpheus Britannicus," the first part of which she published in 1698 (2nd ed. 1706); the second part followed in 1702 [1711], 3rd ed., both parts, 1721), and also some songs for 1, 2, and 3 voices from his odes and dramatic works. Less epoch-making, but perhaps of higher musical value, are P.'s sacred compositions, which exercised a decided influence over Handel's activity as a composer from

the time of his arrival in London. P. wrote a "Te Deum and Jubilate" for St. Cecilia's Day, 3 services, 20 anthems with orchestra, 32 with organ, 19 songs (some with chorus), 2 duets, 1 terzet, 11 hymns a 3-4, 2 Latin psalms, and 5 canons; for these works, all included in Vincent Novello's "Purcell's Sacred Music" (1829-32) must be added: 3 anthems, 1 hymn, 2 motets, which are not printed. Many sacred songs of P.'s appeared already in the "Harmonia Sacra" and other collections of his time. (See BOYCE, ARNOLD, PAGE.) The number of odes and welcome songs amounts to 28. Of chamber and instrumental music, besides the already named 12 trio sonatas, he wrote 10 sonatas in 4 movements (printed in 1697, the 9th being the celebrated "Golden Sonata," frequently reprinted), and "Lessons for the Harpsichord or Spinnet" (1696). Catches by P. are to be found in "The Catch Club; or, Merry Companions," and other collections. In 1876 the P. Society commenced to publish an edition of his works, but hitherto only *The Yorkshire Feast*, *Timon of Athens*, *The Duke of Gloucester's Birthday Ode*, and the 12 Sonatas have appeared. —The only son who survived him, Edward (b. Sept. 6, 1689, d. beginning of Aug., 1740), was an able musician (organist of St. Clement's, Eastcheap).

(2) Daniel, brother of Henry P., b. about 1660, d. 1717. He was certainly far less gifted than his brother, but still was one of the most famous musicians of his time. In 1688 he became organist of Magdalen College, Oxford, went to London after his brother's death, and took his place as composer of incidental music to plays. In 1713 he became organist of St. Andrew's, Holborn. He published "The Psalm Tunes set full for the Organ or Harpsichord"; six anthems have been preserved in the choir-books of Magdalen College Chapel, and songs in various collections of the time. He composed a funeral ode on the death of Henry P.

Puteanus, Ericius (van de Putte, Dupuy), learned philosopher, b. Nov. 4, 1574, Venlo (Holland), d. Sept. 17, 1646, Louvain. He lived for many years in Italy, and was professor of elocution at Padua (1601); but, after the death of Justus Lipsius (1606), he was appointed professor of literature at Louvain. P. was also an intelligent musician, and one of the oldest opponents of solmisation. He wrote: "Modulata Pallas sive septem discrimina vocum" (1599; 2nd ed. as "Musathena sive notarum heptas" [1602]; also in the 2nd vol. of his "Amoenitatum humanarum," 1615); a smaller pamphlet on the same subject is, "Pleias musica" (1600; 2nd ed. as "Iter Nonianum seu dialogus qui Musathenæ epitomen comprehendit," etc. 1602). (Cf. BOBISATION.)

Pykna (πυκνά), the semitone and quarter-tone progressions of the enharmonic and

chromatic genera of the Greeks. (See GREEK Music, V.)

Pyramidon, like the Spitzflöte, a flue-stop with pipes narrower at the top than at the mouth.

Pyrophon (Gk., "Organ of flames"), a peculiar instrument invented by Fr. Kastner (q.v.) in 1875, in which gas flames burn in tubes of various lengths, and produce definite sounds. The instrument is played by means of a keyboard. The flames are produced and regulated by electric currents whenever the keys are pressed down. The compass extends from (great) C to c².

Pythagoras, the celebrated philosopher, the one, indeed, who used the word *philosophos* (a striver after wisdom) in place of the older *sophos* (teacher), b. about 582 B.C. In 529 he established a partly religious, partly political community at Croton, the dogmas of which were connected with the teachings of the Egyptian priests, from whom P. is said to have acquired his knowledge. P. committed nothing to writing; his teaching, like that of Socrates, only lives in the writings of his pupils. Among the Pythagoreans the conception of musical ratios is, naturally, a strictly mathematical one, i.e. they consider the essence of consonance according to the mathematical ratio of the sounds, the ratio of the string lengths, or, the vibration figures of the sounds (of these Euclid already makes mention). The Pythagorean writers on music (Archytas, Eratosthenes, Didymos, Ptolemy, Euclid, etc.) are accounted "Canonists" in strict opposition to Aristoxenos and his pupils, the "Harmonists," who do not acknowledge the importance of numbers. The mathematical theory of sound ratios among the Pythagoreans

differs in one principal point from that of the present day, namely, in the conception of the third. For the Greeks, the third was, and remained, a dissonant interval, because they did not recognise its ratio as 4 : 5, or did not recognise that ratio as sufficiently simple to be classed by the side of 1 : 2, 2 : 3, 3 : 4, as a consonance of elementary meaning. They determined all tone ratios by steps of the fifth, whereas at the present day they are determined by steps of the fifth and steps of the third (we are even inclined to include the seventh in the determination of tone ratios). On that account we name all values differing from our modern determinations of tone, *Pythagorean*; thus the Pythagorean third (4th fifth), the Pythagorean minor third (3rd under-fifth), the Pythagorean semitone (256 : 243, 5th fifth), etc. Also the excess, which twelve fifths give, as compared with the octave, is therefore called the Pythagorean comma. (Cf. TONE, DETERMINATION OF.) Throughout the whole of antiquity and the Middle Ages the basis for the determination of intervals was the one by fifths (cf. however, DIDYMOS); only the Arabians knew the consonance of the third as 4 : 5, the minor third as 5 : 6, and even the sixth 5 : 8 and 3 : 5. (Cf. MESSEL.)

Pythian (*Pythian Games*), the name given to the festival games of the Greeks held at Delphi in honour of Apollo (the conqueror of the dragon Pytho). At the Pythian games musical contests (singing to the accompaniment of the cithara, also performances on the cithara and flute), from the earliest times, formed a special feature; races were only introduced at a later period. The conqueror was adorned with a laurel crown from the holy grove in the vale of Tempe. (Cf. GREEK Music.)

Q.

Quadrat (*B quadratum, quadrum*), sign which revokes sharps and flats (♯). (See NATURAL.)

Quadri, Domenico, musical theorist, b. at the end of 1801, Vicenza, d. April 29, 1843, Milan; he published "La ragione armonica" (1830; only two numbers appeared), and "Lezioni d'armonia" (1832; 3rd ed. 1841). Q., who propounded the system of building up chords by thirds, met with hot opposition at Naples, where he first sought to gain a footing for his theory; also, later on, at Milan, from the professors of counterpoint at the Conservatorio. He died in needy circumstances.

Quadrille, a "square" dance, a kind of *contredanse* which came into vogue at Paris at the beginning of this century, and which mainly differs from the Française (Anglaise) in that the couples dance, not in rows, but form a small

square, two to each side. The Q. consists of five short figures, alternately in $\frac{3}{8}$ ($\frac{3}{8}$) and $\frac{2}{4}$ time.

Quadrio, Francesco Saverio, writer, b. Dec. 1, 1695, Ponte (Veltlin), d. Nov. 11, 1756, at the Barnabite Monastery, Milan; he wrote, among other things, "Della storia e della ragione d'ogni poesia" (1739-59, 7 vols.), a work in the second and third volume of which the cantata, the opera, and the oratorio are discussed.

Quadruplet (*Quartole*), a figure of four notes, having the same value as three of the same shape—

A Q., in place of six, is a double duplet—

but it can also be written in notes of the next greater value (*i.e.* here, in crotchets).

Quagliati, Paolo, composer, published : *Carro di fedeltà d'amore* (1611), one of the oldest musical dramas, containing not only monodies, but also ensembles *a 5* (probably plain madrigals); further, "Motetti e dialoghi *a 2-3 voci*" (1620).

Quandt, Christian Friedrich, amateur musician and writer on music, b. Sept. 17, 1766, Herrnhut (Saxony), d. Jan. 30, 1806, Niesky (near Görlitz), wrote in the *Lausitzische Monatschrift* (1795 and 1797), and in the *Allgemeine Musikalische Zeitung* (1798 to 1800) concerning the Æolian harp, Harmonica, etc., also concerning the natural foundation of harmony.

Quanon. (See KANON.)

Quantity of Syllables, correct emphasis. (See DECLAMATION). Ancient prosody distinguished between longs and shorts; hence the term Q. (magnitude); whereas now, we distinguish between accented and unaccented syllables. In the German word "bei" (by), for instance, on account of the diphthong, the syllable is long, but usually unaccented; hence it appears in modern verse where the ancients introduced a short, and with corresponding musical treatment.

Quantz, Johann Joachim, the famous flute-master of Frederick the Great, b. Jan. 30, 1697, Oberscheden (Hanover), d. July 12, 1773, Potsdam. His father was a simple blacksmith, who died when the lad was ten years of age. As the latter showed musical disposition, and already, when only eight, handled the double-bass at the village inn, an uncle, the town musician, Justus Q., of Merseburg, made him his apprentice. Q. now learnt various instruments, including the clavier, and, when in 1713 his apprenticeship came to an end, he went as travelling journeyman ("Geselle") to Radeberg, and then to Pirna, and in 1716 to Dresden, where he joined the band of the town musician Heine. In 1717 leave of absence was granted, and of this he made use to study counterpoint at Vienna under Zelenka and Fux, and in 1718 he was appointed member of the Royal Polish orchestra at Dresden and Warsaw, first as oboist, which instrument, however, after a thorough course of study under Buffardin (1727), he exchanged for the flute. The court of Saxony has always done much towards the training of her gifted musicians, and Q. met with a similar experience, for in 1724 he was sent in the suite of the Saxon ambassador to Italy. He now studied counterpoint at Rome under Gasparini, made acquaintance with the chiefs of the Neapolitan School,

and in 1726 went through Geneva and Lyons to Paris, where he remained seven months. He also passed three months in London at the time when Handel's success as an opera writer was at its height, returning, finally, to his post at Dresden in 1727. In 1728 he played at Berlin before the Crown Prince Frederick, whom he so pleased that the latter began himself to study the flute, and Q. was engaged to pay two long visits to Berlin every year. When Frederick the Great ascended the throne he engaged Q., in 1741, as chamber musician and court composer, at a salary of 2,000 Thlr.; but, in addition, for every new composition he paid him an honorarium, and for every flute which Q. supplied, 100 ducats. This comfortable post Q. held until his death. He wrote for the king not less than 300 concertos and 200 other pieces for one or two flutes, flute soli, trios, quartets, etc., most of which have been preserved at Potsdam; also songs, a serenade, etc. The following appeared in print: six flute sonatas with bass (1734), six duets for flutes (1759), chorale melodies to 22 odes by Gellert ("Neue Kirchenmelodien," 1760); also "Versuch einer Anweisung, die Flöte traversière zu spielen" (1752 [1780, 1789], French, 1752; Dutch, 1755), and "Application pour la flûte traversière à deux clefs" (without date). Q. himself improved the flute by addition of the second key. There is an autobiographical sketch of Q. in Marpurge's "Beiträge" (I.), and in IV. a reply of Q.'s to a criticism of his Flute Method. His grand-nephew, Albert Q., published a detailed biography of Q. in 1877.

Quarenghi, Guglielmo, 'cellist, b. Oct. 22, 1826, Casalmaggiore, d. Feb. 4, 1882, Milan, cathedral maestro and professor of the violoncello at the Conservatorio. He wrote an excellent violoncello Method (1877); and also composed sacred pieces, and an opera, *Il di di San Michele* (1863).

Quart- . . . as a prefix to names of instruments, refers to such as stand a fourth lower (Quartposaune, Quartfagott), or higher (Quartgeige, Quartflöte), than the usual instruments.

Quartet (*Quatuor*), a composition for four instruments or voices. From the 15th century, writing in four parts or voices was recognised as the most suitable; it combined simplicity of structure and ease of execution, with harmonic fullness and clearness. Hence it was the art-form chosen by preference both for vocal and instrumental music. Most of the master-works of contrapuntists of the 16th century are written *a 4*: the masses and motets of Josquin, the German Lieder of Hofheimer, Isaak, Senfl, also the French chansons and Italian canzonets (yet madrigals, for the most part, *a 5*, form an exception); the dances, likewise, of the 16th century were mostly *a 4*. The polyphonic (for double choir), *a cappella*, style of the Venetian and Roman Schools, on the one hand, and

accompanied monody (*Stilo rappresentivo*) on the other, both of which were developed simultaneously during the 17th century, certainly left four-part writing in the background. Music for three instruments, however, flourished during the 17th century (*sonate a 3*, mostly for two violins with bass continuo); but about the middle of the last century, the instrumental Q., especially the stringed quartet (Grétry, Gossec, Van Malder, Sammartini, Haydn), and, in our century, the four-part song (male voice quartet, quartet for mixed voices) came again into vogue. There are now various quartet combinations; for example, *horn quartets* (four horns), *pf. quartet* (mostly for pf., violin, viola, and 'cello; in this Dictionary the term "pf. quartet" is thus used by way of abbreviation), *flute quartet* (mostly for flute, violin, viola, and 'cello, and also other combinations). Accompanied vocal pieces are called Quartets, if, apart from the instruments, they are set for four voices.

Quasi (Ital.), almost, as it were; for example, *Andante q. allegretto*.

Quatremère de Quincy, Antoine Chrysostome, secretary of the Paris Académie des Arts, b. Oct. 28, 1755, Paris, d. there Dec. 28, 1849. He wrote a pamphlet, "De la nature des opéras buffons" (1789); also a number of biographical sketches (so-called "éloges," for the Académie, i.e. notices of deceased members of that institution), among which, Paesiello, Monsigny, Méhul, Boieldieu, Catel, and Gossec; these appeared separately and also together with others concerning painters, sculptors, etc., in the "Recueil de notices historiques lues dans les séances publiques de l'académie," etc. (1834-37, 2 vols.).

Quatricinium (Lat.), composition in four parts, or voices (quartet). (Cf. *BICINIUM*, *TRICINIUM*.)

Quatuor. (See *QUARTET*.)

Quaver, the eighth part of a semibreve (♩), or, if several quavers have a cross-stroke in common, (♩♩). The old name for the Q. was *Fusa*; its shape, even up to the beginning of the last century, was ♩, as distinguished from the

crotchet, ♪. The Q. *Rest* has the shape ♩ (old shape ♩); during the 16th and 17th centuries it was ♩, corresponding to the white-headed quavers.

Queisser, Karl Traugott, b. Jan. 11, 1800, Döben (near Grimma), d. June 12, 1846, Leipzig; from 1830 he was principal trombone-player of the Gewandhaus orchestra (during his last years first viola player); he was renowned as a performer.

Querou, Simon de (Latin form for Van Eycken or Du Chesne), first chapel singer

of Ludovico Sforza in Milan, native of Brabant, accompanied Maximilian and Francesco Sforza to Vienna, where he published: "Opusculum musices perquam brevissimum de Gregoriana et figurativa atque contrapuncto simplici" (1509 [1513, 1516, 1518]), and "Vigiliæ cum vesperis et exequiis mortuorum" (1513).

Querflöte (Ger.). (See *FLUTE*.)

Querpfefe (Ger.), the old "Schweizerpfefe," "Feldpfefe", a small kind of flute, standing an octave higher than the cross-flute, still used in Prussian military bands (drums and fifes). It is similar to, though not identical with, the "Pickelflöte"; it has no keys.

Quidant, Alfred, b. Dec. 7, 1815, Lyons, d. Oct. 9, 1893, Paris; eminent pianist and composer.

Quieto (Ital.), quiet, smooth.

Quilisma, an ornamental figure of neume-writing (see *NEUMES*), answering to our shake (also to the sign ~~~~~). The name comes from the Gk. *κύλισμα* (*κυλινδρεω*, "to roll").

Quill, to, the putting of new quills (crowquills) in the *Clavicembalo*. (See *PIANOFORTE*.) A cembalist had himself to understand the art of quilling, since it frequently happened that a quill got bent, and had to be replaced by a new one.

Quinault, (1) Philippe, Lully's (q.v.) librettist, b. 1635, Paris, d. there Nov. 26, 1688. He was one of the few who understood that a good opera libretto must also be a good poem.

(2) Jean Baptiste Maurice, singer, actor, and dramatic composer, sang 1712-18 at the Théâtre Français, was then from 1733 engaged as actor, and d. 1744, Gien. He wrote music for more than 20 pièces (intermèdes, ballets, etc.), and in 1729 produced at the Grand Opéra a grand ballet in four acts, entitled *Les amours des déesses*. His sister, Marie Anne, made her début at the Grand Opéra in 1709, but afterwards went over to the Comédie Française.

Quindezime (Ger.; Lat., *quinta decima*), the 15th degree, double octave.

Quint (Lat. *quinta*; Gk. *diapente*), (1) the fifth degree in diatonic succession; for example, *c* (*d, e, f, g*). The fifth is either perfect, diminished or augmented. Of special importance is the perfect fifth, as it is one of the fundamental intervals of a major and a minor chord. The diminished Q. is less by a semitone, and the augmented, greater by a semitone, than the perfect Q.

A born musician knows fifths instinctively, but one less gifted has to learn them; no one, unless the Q. of any note be quite familiar to him, can make progress in harmony. The simplest way to gain a speedy

knowledge of fifths is to learn by heart, mechanically, the series of notes of the fundamental scale in fifth-succession (forwards and backwards):

f . c . g . d . a . e . b .

likewise raised :

f♯ . c♯ . g♯ . d♯ . a♯ . e♯ . b♯ .

and lowered (backwards):

f♭ . c♭ . g♭ . d♭ . a♭ . e♭ . b♭ .

In notes :

It should be noticed that, with exception of the fifths derived from the two limiting tones of the first series (f . c . g . d . a . e . b .), which connect the various series given above, notes which stand in fifth relationship always have no sign, or the same one, either both natural, or both ♯, or both ♭, or ×. With this impressed on the memory, the (major) thirds should be learnt (see THIRD); in the major chord, the third is above the lowest note; in the minor chord, below the highest.

—(2) an organ stop. (See MUTATION STOPS and FOOT-TONE.)—(3) French name for a species of old viol. The *Viola da braccio* was made in three different sizes; the smallest, with only five strings, was called *Quinton*, or *Q.*, the second *Hautecontre* (alto), the third *Taille* (tenor); all three, for the rest, were tuned in the same manner. Rousseau, ("Dictionnaire de Musique") understands by *Q.* the tenor viol, and considers that its name is derived from *Quinta vox* (see QUINTUS), as holding the middle between high and low.—(4) The E-string of the violin (e"). The name may have passed from the highest string of the lute (q.v.) to that of the violin.

Quinta. (See FIFTHS and QUINTUS.)

Quinta decima. (See QUINDEZIME.)

Quintatoen (Quintadena, Quintam tenens), a covered organ stop of narrow measure and low mouth, of 16, 8, and (seldom) 16 or 4ft., which sounds the fifth of the octave as loud as the fundamental note. (Cf. GEDACKT.)

Quinterne. (See GUITAR and LUTE.)

Quintet, a composition for five voices or instruments, or in accompanied vocal works, a piece for five voices in which the instruments are not taken into consideration. (Cf. QUARTET.)

Quintfagott. (See BASSOON.)

Quintfuge (Ger.), the ordinary fugue (q.v.), with answer at the fifth.

Quintole. (See QUINTOLET.)

Quintoyer, in wind instruments, the overblowing in the twelfth (fifth of the octave), instead of in the octave. *Q.* is a special feature of wind instruments with single reed (clarinet, bass clarinet, basset horn, bass horn); whereas all other wind instruments give the octave (in overblowing the tubes give the octave of the lowest note). Also the "Gedackt" pipes of the organ in overblowing give the twelfth (cf. QUINTATOEN), and share the peculiarity of "quintoyer" instruments, in that they lack the overtones represented by even numbers.

Quint Stops. (See FOOT-TONE and MUTATION STOPS.)

Quint-tones, or **Fifth-tones** and **Third-tones** (Ger. *Quinttöne* and *Terztöne*). Modern theory of music (since Fogliano and Zarlino), in contradistinction to ancient, regards the third as a directly intelligible interval, and possessing fundamental meaning equal to the fifth, and assigns to it the ratio 4 : 5 (= 64 : 80), whereas the Pythagoreans regarded it as 4th fifth = 64 : 81. The difference between the two ratios is the *Comma synonum*, 80 : 81. But tones more distantly related can be tuned in various ways, according as they are arrived at by fifth- or by fifth- and third-steps, or only by the latter. The following table, which can be extended at pleasure, and in every direction, may make this clearer; every step in a horizontal direction, is a fifth-step, and every one in a vertical, a third-step. All major and minor chords are arranged in a similar manner, as follows :

e	
c	g and f c
	a♭

that is, the major chord from the principal tone forms a right angle from above, bearing to the right, and the minor chord a right angle from below, bearing to the left. The strokes (*comma* strokes) under the letters, indicate the lowering by 80 : 81 of the tone reached from *c* by fifth-steps, and the strokes above the letters, the raising by the same interval. Thus, for example, the *f* × nearest related to *c* is reached by three third-steps and a fifth-step, and it is three commas lower than the *f* × in the horizontal row is from *c* (13th fifth). (Cf. the table under TONE, DETERMINATION OF.)

R.

R. (r.) = right (hand), also = *ripieno*. **R.** in Catholic Church song is an abbreviation for *Responsorium*; **R. G.** = *Responsorium graduale*.

Raaff (Raff), Anton, famous tenor, b. 1714, Holzern (near Bonn), d. May 27, 1797, Munich; he was brought up at the Jesuit college at Cologne in order to become a priest, and was already twenty years old when he learnt his notes. When his splendid tenor voice was discovered, the elector sent him to Ferrandini at Munich, and afterwards to Bernacchi at Bologna, and in 1742 R. returned, a finished vocalist, to Bonn, and sang during the following years at various other German courts (Vienna, 1749). In 1752 he left Bonn, and went first to Italy, and afterwards to Lisbon, sang at the Italian Opera there up to 1755, and during the next four years in Madrid under Farinelli, whom he also accompanied to Naples in 1759. He only returned to Germany in 1770, and, indeed, to the court of Karl Theodor at Mannheim, which, as is known, was removed to Munich in 1779. Mozart wrote the part of "Idomeneo" (1781) for R., likewise the aria "Se al labro mio;" he had a high opinion of R., who also accompanied him to Paris in 1778.

Rackett (Ranket), (1) an obsolete wood-wind instrument belonging to the family of the Bomharts (q.v.), i.e. it was blown by means of a double reed placed in a kettle-shaped cup, only it had not a straight or once-bent tube, like the unwieldy great bomhart, which it resembled in pitch, but one with many bends, so that the space occupied by the instrument was comparatively small. The numerous bends were naturally injurious to the development of a full, strong tone; hence it was described by Praetorius as "gar stille, fast wie wenn man durch einen Kamm bläst" ("quite quiet, almost like the sound produced by blowing through a comb"), and could only be effectively employed in combination with other instruments (for instance, with gambas). The R., like all instruments of that time, was constructed in (five) different sizes. Denner, the inventor of the clarinet, improved the R. by making it more like the bassoon, i.e. he probably reduced the number of bends (the R.-bassoon, "Stockfagott.")—(2) In the organ an obsolete reed-stop almost entirely covered, of quiet tone (16 and 8 feet).

Radecke, (1) Rudolf, b. Sept. 6, 1829, Dittmannsdorf (near Waldenburg, Silesia), where his father was cantor, d. April 15, 1893, Berlin. He studied, from 1850–51, at the Academical Institute for Church Music at Breslau (under Baumgart), then, until 1853, at the Leipzig Conservatorium, lived since 1859 in Berlin, at first privately, then, from 1864 to 1871, as teacher

at the Stern Conservatorium, and from 1864–68, as conductor of the Caecilian Society; from then, as conductor of the "Radecke" Choral Society, which he founded, and from 1869 as proprietor of a musical institution. He published songs and part-songs.

(2) Albert Martin Robert, brother of the former, b. Oct. 31, 1830, Dittmannsdorf, trained, up to 1848, at the Gymnasium, Breslau, after that, up to 1850, at the Leipzig Conservatorium. He then became violinist in the Gewandhaus orchestra; in 1852, second conductor of the "Singakademie," together with David, in 1853 musical director of the Stadttheater, but only for a short time; in the same year he was compelled to serve as a soldier, and went for that purpose to Berlin. When his year's service had expired, he appeared as pianist and organist with great success, also arranged quartet soirées in Berlin, and from 1858 to 1863 gave grand choral and orchestral concerts. In 1863 he became musical director of the royal court theatre, and in 1871 was named royal court capellmeister. After Stern's decease, he carried on, until 1888, the artistic direction of the Stern Conservatorium, and, after he had withdrawn, in 1887, from the direction of the opera, was from 1892 director of the Royal Institute for Church Music, as Haupt's successor. From 1874 R. was a member of the "Akademie," from 1882, member of the Senate. Of his compositions, the songs and part-songs, which appeared in great number, deserve special mention, likewise 2 pf. trios, a vaudeville in one act, *Die Mönchgüter* (Berlin, 1874), two overtures, a symphony, a capriccio, two Scherzi, and a "Nachtstück" for orchestra, etc.

(3) Luise, b. June 27, 1847, Celle (Hanover), pupil of Madame Marchesi at the Cologne Conservatorium in 1866, made her *début* in the rôle of Agathe in 1867 (Cologne), and was at once engaged. In 1869 she went to Weimar, in 1871 to Riga, and in 1873 to Munich, where she became prima donna at the court theatre. For several years she won triumphs there, until in 1876 she married a Livonian, Baron von Brümmer, and withdrew entirely from public life.

(4) Ernst, son of Robert R. (see above), b. Dec. 8, 1866, Berlin, pupil of the Stern Conservatorium, studied philology at Jena, Munich, and Berlin, taking his degree as Dr.Phil. in 1891, with the dissertation "Das deutsche weltliche Lied in der Lautenmusik des 16. Jahrhunderts" (printed in the *Vierteljahrsschr. für Musikwissenschaft*, 1891).

Radoux, Jean Théodore, b. Nov. 9, 1835, Liège, son of an armourer who was fond of music and gave him his first instruction; he then studied at the Liège Conservatoire (Daussoigne-

Méhul), becoming, in 1856, teacher of the bassoon at that institution. He further studied under Halévy in Paris, after he had gained the *Prix de Rome* with the cantata *Le juif errant* (1859), and became director of the Liège Conservatoire in 1872. R. is esteemed as a composer in his native land (symphonic tone-pictures: "Ahasverus," "Le festin de Balthazar," "Epopée nationale," *Te Deum*, 1863; operas: *Les Béarnais*, 1866; *La coupe enchantée*, 1872; oratorio, *Cain*; cantata, *La fille de Jephthé*, etc. R. also wrote "Henri Vieuxtemps, sa vie et ses œuvres," 1891).

Radziwill, Anton Heinrich, Prince, "Statthalter" of Posen, b. June 13, 1775, Wilna, d. April 7, 1833, Berlin. He was an able musician, an enthusiastic amateur, and a patron of musical talent. He published French romances (1802), vocal duets with pf. (1804), "Complainte de Maria Stuart" (with 'cello and piano), songs with guitar and 'cello, quartets for male voices (for Zelter's Liedertafel); likewise incidental music to Goethe's *Faust* (published 1835), of which, already in 1810, fragments were performed by the Berlin Singakademie.

Raff, (1) Joseph Joachim, one of the most distinguished of modern composers, b. May 27, 1822, Lachen (on the Lake of Zürich), d. in the night of June 24/25, 1882, Frankfort (of heart disease). Son of an organist, he was educated at Wiesenstetten in Würtemberg, and attended the Jesuit Lyceum of Schwyz. Compelled, however, by want of means, to give up his intention of studying at the University, he became elementary teacher. But already at that time he was moved to composition; some first-fruits sent to Mendelssohn met with the approval of the latter, and in consequence R. soon found a publisher, Breitkopf und Härtel (pf. pieces, Op. 2-14; Op. 1, a "Serenade" for pf. was published by André, Offenbach). With sudden resolution he bade farewell to the profession of schoolmaster and threw himself wholly into art; encouraged by Liszt, he accompanied the latter in a concert tour as far as Cologne (1846), where he sought to earn a living. His plan of studying under Mendelssohn at Leipzig was frustrated by the death of that composer (1847); and so, likewise, the death of his Vienna publisher, Mechetti, destroyed his hopes of obtaining, on Liszt's recommendation, remunerative employment with that firm. Somewhat disillusioned, yet not disheartened, R. returned to Wiesenstetten and tried to gain a firm footing in Stuttgart. And this much he accomplished: Bülow played in public a Concert-stück of his, and his *König Alfred* was accepted for performance at the court theatre. But future hope was destroyed by the disturbances of 1848 and 1849. In 1850 he followed Liszt to Weimar, then the citadel of new German tendencies. R. himself entered with enthusiasm into the ranks of its combatants, became a contributor to the

Neue Zeitschrift für Musik (he had previously written critical notices for Dehn's *Cäcilia*), and published a pamphlet, "Die Wagnerfrage" (1854). He now became more and more prolific as a composer; his opera *König Alfred* was revised and produced in 1851, though it did not achieve the success he expected; for it never found its way beyond Weimar. This was probably the reason why from that time R. devoted himself to instrumental music, in which he produced works of importance, especially in the department of chamber music and of the symphony. In 1853 he became engaged to the actress Doris Genast, followed her in 1856 to Wiesbaden, and married her in 1859. He only left Wiesbaden in the autumn of 1877, when called to Frankfort as the head of the Hoch Conservatorium. During his residence in Wiesbaden he wrote his best chamber and orchestral works. R. was a frank representative of new German tendencies, but with a reserve which must not be overlooked; he wrote programme music, yet within the traditional forms; his symphonies, therefore, are not free in form as, for instance, the symphonic poems of Liszt; and his orchestra was the symphonic orchestra used by Beethoven.

R.'s works, which exceed 200 in number, are by no means of equal value; side by side with masterpieces of art stand hastily-sketched drawing-room pieces of inferior rank. The first 46 opus numbers of R. are exclusively solo pieces for pf. (Serenade, Op. 1; sonata and fugue, Op. 14; impromptus, rondos, nocturnes, caprices, paraphrases, dances, etc.; Op. 16, 18, 29, and 34 are wanting). Op. 47-53, songs; Op. 55, the pleasing "Frühlingsboten" (pf. pieces). Only in Op. 58 do we meet with two fantasias for pf. and violin, and in Op. 59, a duo for pf. and 'cello. There follow afterwards, in motley succession, pf. works, songs, concerted pieces, orchestral works, etc. A complete catalogue of his works was published by the Raff Memorial Society at Frankfort (1886); here there is only room for a brief synopsis. R. wrote for orchestra 11 symphonies: "An das Vaterland," Op. 96 (gained the prize at the Gesellschaft der Musikfreunde in 1863; five movements); No. 2, in c, Op. 140; No. 3, "Im Walde," Op. 153 (probably R.'s most important work, 1869); No. 4, in g minor, Op. 167; No. 5, in e, "Lenore," Op. 177; No. 6, in d minor, "Gelebt, gestrebt; gelitten, gestritten; gestorben, umworben," Op. 189; No. 7, in b flat, "In den Alpen," Op. 201; No. 8, in a, "Frühlingsklänge," Op. 205; No. 9, in e minor, "Im Sommer," Op. 208; No. 10, in f minor, "Zur Herbstzeit," Op. 213; No. 11, in a minor, "Der Winter," Op. 214 (posthumous; revised by Erdmannsdörfer); there also to be mentioned a Sinfonietta for 8 wood-wind instruments and 2 horns (Op. 188), 2 orchestral suites (Op. 101 in c, and Op. 194 in f [in Hungarian style]), also an Italian suite in e minor (without opus

number); a fourth (Thuringian Suite in B flat) remained in manuscript. Five overtures (Op. 103, "Jubilee" overture in F; Op. 117, Festival overture in A; Op. 123, concert overture in F; Op. 124 for the "Burschenschaftsfeier" at Jena [for wind band]; Op. 127, on "Ein' feste Burg"); 4 others (to Shakespeare's *Romeo and Juliet*, *Othello*, *Macbeth*, and *Tempest*) remained in manuscript; "Festmarsch," Op. 139; "Abends" (rhapsody for orchestra, Op. 163, in B flat). An "Elegie" for orchestra, remained in manuscript, a grand orchestral fugue, incomplete. For pf. and orchestra: "Ode au printemps," Op. 76; concerto in c minor, Op. 185, and a suite in E flat, Op. 200. For violin and orchestra: 2 concertos (Op. 161, in B minor; Op. 206, in A minor) and a suite, Op. 180; a 'cello concerto in D minor, Op. 193 (a second, in G, in manuscript). Chamber music: 8 stringed quartets (Op. 77 in D minor, Op. 90 in A, Op. 136 in E minor, Op. 137 in A minor, Op. 138 in G, Op. 192 [No. 6 in c minor, "Suite älterer Form"; No. 7 in D, "Die schöne Müllerin"; No. 8 in c, "Suite in Kanonform"]); a sextet for strings, Op. 178, and an octet for strings, Op. 176; a pf. quintet, Op. 107; 2 pf. quartets, Op. 202 (in G and c minor), 4 pf. trios (Op. 102, 112, 155, 158), 5 grand violin and pf. sonatas (Op. 73, 78, 128, 129, 145), suite for pf. and violin (Op. 210), and pieces for the same instruments (Op. 58, 63 [on motives from Wagner's operas; three books], Op. 67 ["La fée d'amour," with orchestra], Op. 85, 203 ["Volker," nine books]), a duo (in G) remained in manuscript; a 'cello sonata (Op. 183), a duo for pf. and 'cello (Op. 59), and two books of pieces (Op. 86), 2 romances for horn ('cello) and pf. (Op. 182), 2 pf. sonatas (Op. 14, 168), 3 sonatinas (Op. 99), and 7 suites (Op. 69, 71, 72, 91, 162, 163, 204). Of the many pieces for pf. only there are still to be mentioned those for four hands: Op. 82 (12 drawing-room pieces without octaves), Op. 150 (Chaconne), Op. 159 ("Humoresken" in waltz form), Op. 160 ("Reisebilder"), Op. 174 ("Aus dem Tanzsalon"), Op. 181 (second Humoreske "Totentanz"); also for two pianos, the Chaconne, Op. 150, and the fantasia, Op. 207a (also for pf. and strings), from the "Hommage au Néo-Romantisme" (Op. 10, for two hands); Ballad, Scherzo, Metamorphoses (Op. 74), "Suite" without octaves (Op. 75), "Chant d'Ondine" (Op. 84, "Arpeggio tremolo-Etüde"), "Introduction and Allegro scherzando" (Op. 87), "Ungarische Rhapsodie" (Op. 113), "Spanische Rhapsodie" (Op. 120), Gavotte, Berceuse, Espiègle (Op. 125), Tarantella (Op. 144), Scherzo (Op. 148), *Allegro agitato* (Op. 151), Variations on an original theme (Op. 179), "30 Études" (without opus number), "Cavatina" and "La fileuse" (Op. 157), "Reisebilder" (Op. 160), "La Cicenerella" (new carnival, Op. 165), "Polka glissante" (Op. 170). The number of R.'s paraphrases (among others, "Die Oper im Salon," twelve books, Op. 35, 36, 37, 43, 44, 61, 65), etc., is very great. Of R.'s vocal composi-

tions some songs from Op. 88, "Sangesfrühling" (30 numbers) have found especial favour ("Keine Sorg' um den Weg"). R. wrote a large number of songs, Op. 47-53, 66 ("Traumkönig und sein Lieb"), 172 ("Maria Stuart"), 173, 191, 192 ("Die Jägerbraut," and "Die Hirtin," with orchestra), 211 ("Blondel de Nesle"), without opus number: "Frühlingslied" and "Ständchen"; 12 duets (Op. 114), 6 tertzets for female voices with pf. (Op. 184), 10 songs for mixed chorus (Op. 198), 2 ditto, (Op. 171), 30 quartets for male voices (Op. 97, 122, 195), "Wachet auf" (Geibel) for male chorus, soli, and orchestra (Op. 80), "Deutschlands Auferstehung" (Op. 100, male chorus and orchestra), "De profundis" a 8, with orchestra (Op. 141); 4 antiphons to the Virgin (a 5-8); a Kyrie and Gloria (a 6, a cappella), Pater Noster (a 8), and Ave Maria (a 8) remained in manuscript. He also published "Im Kahn" and "Der Tanz" (Op. 171, mixed chorus and orchestra), "Morgenlied" and "Einer Entschlafenen" (for soprano solo, mixed chorus, and orchestra, Op. 186), "Die Tageszeiten" (Op. 209, for chorus, pf., and orchestra; four movements), and "Weltende, Gericht, neue Welt" (Op. 212, oratorio to words from the "Revelation" (produced at Leeds, 1882). Two choral works, "Die Sterne" (words by Heldt) and "Dornröschen" (poem by W. Genast), remained in manuscript. Besides the already-named opera, *König Alfred*, R. also wrote for the stage: music to Genast's *Bernhard von Weimar* (1858), the comic operas *Dame Kobold* (Weimar, 1870, Op. 154), *Die Eifersüchtigen* (libretto by the composer; not performed), *Die Parole* (ditto), the lyric opera *Benedetto Marcello* (ditto), and the grand opera *Samson* (ditto). R. also arranged Bach's D minor Chaconne for orchestra, also the same composer's 6 'cello sonatas, 3 orchestral suites, and pieces from the violin sonatas for pf. (two hands), likewise 2 marches from Handel's *Saul* and *Jephtha*.

(2) Anton. (See RAAFF.)

Raick, Dieudonné, b. 1702, Liège, d. Nov. 30, 1764, as choral vicar at Notre Dame, Antwerp; he published 6 suites and 3 harpsichord sonatas.

Raif, Oskar, b. July 31, 1847, The Hague, pupil of Tausig; he has been since 1875 teacher of the pf. at the Royal High School, Berlin, and "Kgl. Professor."

Raillard, F. . . , Abbé, b. 1804, Montormentier (near Langres), learned theologian and physicist at Paris, published: "Explication des neumes ou anciens signes de notation" (1852); "Le chant grégorien restauré" (1861); "Mémoire sur la restauration du chant grégorien" (1862), also two treatises on the occurrence of quarter tones in Gregorian Song.

Raimondi, (1) Ignazio, b. 1733, d. 1802, violinist, for some time concert director at Amsterdam (1762-80), where he produced his

symphony, "Die Abenteurer des Telemach"; he published: 3 trios for violin, viola, and 'cello, 3 violin concertos, and 6 stringed quartets.

(2) Pietro, a wonderfully prolific composer and master of counterpoint, b. Dec. 20, 1786, Rome, d. there Oct. 30, 1853, as maestro of St. Peter's. He was at an early age a pupil of La Barbara and Tritto at the Conservatorio della Pietà at Naples, produced at Genoa in 1807 his first opera, *La bizzarria d'amore*, and led the usual life of a composer of Italian operas, *i.e.* he always stayed in the towns for which he was asked to write a new opera (Genoa, Florence, Rome, Milan, Naples, Messina, etc.). From 1824-32 he was director of the royal theatres at Naples, and from 1825, at the same time, professor of counterpoint at the Royal Conservatorio; 1832-50 professor of counterpoint at the Conservatorio, at Palermo; in 1852 (Dec. 12) he succeeded Basili at St. Peter's, Rome. R. composed no less than 62 operas and 21 ballets, 8 oratorios, 4 orchestral masses, 2 masses *a cappella* for double choir, 2 requiems with orchestra, 1 ditto in 8, and one in 16 real parts, a complete book of the psalms a 4-8, in the Palestrina style (15 vols.), a Credo a 16, and many other sacred works. A speciality of R.'s (in which he shows himself a master of counterpoint, and deserves to rank among the boldest combiners of the 16th century, with additional claim to originality) was the working out of compositions for a great number of real parts, which could be sub-divided into a number of works for a moderate number of parts, each of which was a complete movement in itself; his masterpieces of this kind were published, *viz.*: 4 fugues a 4, which could be performed together as a quadruple fugue a 16; also 6 fugues a 4, which could be performed as a sextuple fugue a 24. The 24 fugues a 4-8, published by Ricordi, at Milan, contain two examples of such combination. The *ne plus ultra* in number of parts is a fugue a 64 for 16 choirs a 4; but his highest achievement in this line was the composition of three Biblical dramas—*Potifar*, *Giuseppe*, *Giacobbe*—which were produced successively at the Argentine Theatre, Rome, on Aug. 7, 1852; and on the following day were performed simultaneously. Naturally, with such a combination, much dramatic fire, or striking effect in the works taken singly, could not be expected; anyhow, the achievement was a colossal one. R. did not keep the secrets of his art to himself, but published several theoretical guides to contrapuntal combinations of this kind. Filippo Cicconetti wrote a biographical notice of him (1867).

Rallentando (Ital.), abbr. *rallent.*, *rall.*, becoming slower.

Ramann, Lina, writer on music, b. June 24, 1833, Mainstockheim (near Kitzingen), pupil of Frau Brendel at Leipzig, founded, in 1858, a

College of Music for female teachers at Glückstadt (Holstein), and in 1865 (with Ida Volkmann) a School of Music at Nürnberg. She wrote: "Die Musik als Gegenstand der Erziehung" (1868); "Allgemeine Erzieh- und Unterrichtslehre der Jugend" (1869; 2nd ed. 1873); "Aus der Gegenwart" (1868, collection of articles for the Hamburg "Jahreszeiten"); "Liszt's Christus" (1880), a biography of Liszt (vol. i., 1880, embracing the period from 1811-40, and first part of 2nd vol. from 1841-47); she also edited (including some translations), the complete edition of Liszt's writings. She has composed four sonatas (Op. 9), and has also written a "Grundriss der Technik des Klavierspiels" (12 books).

Rameau, Jean Philippe, the founder of the real science of harmony, *i.e.* a science of relationship of sounds, and of their natural connection; also a distinguished organist and musical composer, b. Sept. 25, 1683, Dijon, d. Sept. 12, 1764, Paris. He attended the Jesuit College at Dijon, but left after four years, and devoted himself exclusively to music, for which he showed talent at an early age. In 1701, on account of an *affaire de cœur*, his father sent him away to Italy; but Italian music was by no means to his taste, and he returned as fiddler in a theatre company, which was making a tour in the south of France; and at the expiration of two years, returned home. Already at that time R. was a distinguished performer on the organ, and, in 1717, refused the post of organist at the Sainte Chapelle, Dijon, in order to try his luck at Paris. There he soon found in Louis Marchand—who, at first, took him for a pupil, and patronised him—a rival; for Marchand was too much occupied with his own reputation, and would not suffer anyone to advance with him on the road to fame. R., for better or for worse, was obliged to return to provincial life, and first became organist at Lille, but, soon afterwards, at Clermont, where he found leisure to sketch out his theoretical system. In 1721 he reappeared in Paris, and published his "Traité de l'harmonie," which soon attracted public attention; he also published some clavier sonatas and cantatas, and became organist of Sainte Croix de la Bretonnerie. The Académie examined, and approved of his first theoretical works (1737); while in the *fermier-général* La Popelinière, to whose wife he gave lessons, he found a Mæcenas, who opened for him the doors of the Grand Opéra, to which access was so difficult. His first opera, *Samson* (libretto by Voltaire), was, indeed, refused by director Thuret, who did not wish to have a Biblical subject (R. rearranged it later on under the title *Zoroastre*); but, in 1733, his *Hippolyte et Aricie* was produced with the very best success; he, however, did not meet with general recognition, but stirred up party strife. (Cf. the list of the pamphlets in Fétis's Dictionary.) Finally,

however, R., with his genuine French style, made his mark. Louis XV. created for him the post of Compositeur de Cabinet. R. composed for the stage, in addition to incidental music of various kinds, the operas: *Samson* (see above); *Hippolyte et Aricie* (1733); *Les Indes galantes* (1735); *Castor et Pollux* (1737); *Les talents lyriques* (= *Les fêtes d'Hébé*, 1739); *Dardanus* (1739); *Les fêtes de Polymnie* (1745); *La princesse de Navarre*, *Le temple de la gloire*, *Les fêtes de l'Hymen et de l'Amour* (= *Les dieux d'Égypte*, 1747); *Zaïs* (1748); *Pygmalion*, *Nais*, *Phaëte* (= *Funon jalouse*, 1749); *Zoroastre* (see above); *Acanthe et Céphise* (1751); *La guirlande*, *Daphné et Églé* (1753); *Lysis et Délia*, *La naissance d'Osiris* (= *La fête de famille*, 1754); *Anacréon*, *Zéphire*, *Nélée et Mirthis*, *Jo*, *Le retour d'Astrée* (1757); *Les surprises de l'amour* (1759); *Les Sybarites*, *Les Paladins* (1760); *Abaris, ou les Boréades*, *Linus*, *Le procureur dupé* (the last three not produced); also *Roland* (libretto by Quinault), which remained unpublished. Most of R.'s operas appeared in print in short score (vocal parts, bass and violin; the ritornelli in full). New editions appeared (Breitkopf und Härtel; cf. CAMBERT) of *Castor et Pollux*, *Dardanus*, *Les talents lyriques*, and *Les Indes galantes*. In addition to these, there was a series of cantatas, and some motets, none of which, however, appear to have been printed. R. wrote for clavier: "Premier livre de pièces de clavecin" (1706; probably R. was about this time in Paris); "Pièces de clavecin avec une méthode pour la mécanique des doigts" (without date; containing valuable educational remarks); "Pièces de clavecin avec une table pour les agréments" (1731); "Nouvelles suites de pièces de clavecin avec des remarques sur les différents genres de musique" (without date); "Pièces de clavecin en concerts" (1741 [1752], with accompaniment of violin [flute] and viola [2nd violin]). Farrenc brought out the complete set of the "Pièces" of 1731, and the "Nouvelles suites" in the "Trésor des pianistes" (1861). Numerous fragments of the operas were reprinted by Delsarte in the "Archives du chant." For detached clavier pieces, see Paner's "Old French Composers," "Popular Pieces by R.," etc., published by Augener & Co., London. A complete edition of the clavier works was published by the compiler of this Dictionary (Steingraber). The clever fundamental idea of R.'s theoretical system was the reduction of the great number of possible chords to a limited number of fundamental chords (*accords fondamentaux*); also his inversion of chords; R. was the first to declare that *e g c* was the same harmonically as *c e g*. His *basse fondamentale* is something quite different from general-bass; it is an imaginary (not a sounding) part which gives the series of the fundamental tones of the root chords of which the composer introduces inversions at pleasure; his aim was

to make the harmonic relationships of the chords succeeding one another easily intelligible. The successors of R. have been one-sided enough to look upon the building up of chords by thirds as the central idea of R.'s system, and have overlooked his marked tendency to derive dissonant chords from consonant ones (*f a c d* = *F major chord* with the sixth *d*; *b d f* related to *g b d f*, etc.). The compiler of this Dictionary seized hold of this fundamental thought of R.'s, and from it developed a new system of figuring, and new terminology (cf. KLANGSCHLÜSSEL). The theoretical writings of R. are: "Traité d'harmonie réduite à ses principes naturels" (1722; English, by Jones, without date, and by French without date [1737, 1752]); "Nouveau système de musique théorique" (1726); "Plan abrégé d'une méthode nouvelle d'accompagnement" (1730); "Dissertation sur les différentes méthodes d'accompagnement" (1732); "Génération harmonique" (1737); "Démonstration du principe de l'harmonie" (1750); "Nouvelles réflexions sur la démonstration," etc. (1752); "Observations sur notre instinct pour la musique" (1754); "Code de musique pratique" (1760). Three other works remained in manuscript; to those above named, however, must be added some newspaper articles ("Mémoires de Trévoux," 1736 and 1762; "Mercure de France," 1752), several polemical pamphlets against the Encyclopædists, with whom he had fallen out (cf. ALEMBERT); and a pamphlet against Euler on the identity of octave tones (1753). For further details concerning R. see Du Changer's "Réflexions sur divers ouvrages de M. R." (1761), Nisard's "Monographie de J. P. R." (1867), and A. Pougin's "R., sa vie et ses œuvres" (1876). In 1880 a memorial statue to R. was unveiled at Dijon.

Ramos de Pareja, Bartolomeo (Ramis), Spanish theorist, b. about 1440, Baeza (Andalusia); he gave lectures on music at Salamanca, but from 1480 at Bologna, where he was still living in 1521. He published a theoretical work, hitherto undiscovered, in Spanish (before 1480); and at Bologna, one in Latin, "De Musica Tractatus" (1482).

Randegger, Alberto, teacher of singing and composer, b. April 13, 1832, Trieste, pupil of Lafont (piano) and Luigi Ricci (composition); he produced two ballets and an opera (written jointly with two other young composers), *Il Lazzarone*, at Trieste. R. was for several years maestro at various Italian theatres, and in 1854 produced his grand opera, *Bianca Capello*, at Brescia. Soon afterwards he settled in London, and made a great name as teacher of singing. In 1868 he became professor of singing at the Royal Academy of Music, and has been several times conductor of Italian opera. In 1881 he conducted the Norwich Musical Festival. Besides the stage works already named, he has

written a comic opera, *The Rival Beauties* (London, 1864); a dramatic cantata, *Fridolin* (Birmingham, 1873); two scenas for soprano and orchestra, *Medea* (Gewandhaus, 1869), and *Saffo* (London, 1875); the 150th Psalm, for soprano solo, choir, orchestra, and organ (Boston Musical Festival, 1872); a funeral anthem in memory of the Prince Consort, and many other vocal pieces; also a vocal Method.

Randhartinger, Benedict, b. July 27, 1802, Ruprechtshofen (Lower Austria), d. Dec. 22, 1893, Vienna, a fellow-pupil of Schubert's under Salieri; he occupied himself with both music and jurisprudence, and was for ten years secretary to Count Szechenyi; but in 1832 he became tenor in the Vienna Court Chapel. In 1844 he was appointed vice-Court capellmeister, and in 1862 succeeded Assmayer as principal capellmeister. After 1866 he retired from active life. R. wrote a large number of vocal and instrumental works, among which, the opera *König Enzo*, 20 Masses, 60 motets, several hundred songs and part-songs, symphonies, quartets, etc., many of which have been published; also a book of Greek national songs, and a Greek liturgy.

Ranket. (See RACKETT.)

Ranz des Vaches (Fr.; Ger., "Kuhreihen," "Kuhreigen"), a Swiss national melody, originally sung by Alpine shepherds, or played upon a pipe. In the course of time it has assumed, in the various cantons, various forms. The passing from one to another of the notes of the same chord is a characteristic feature of the R. des V.; and this, repeated again and again by echo, is of fine effect.

Raoul de Coucy. (See COUCY.)

Rappoldi, Eduard, excellent violinist, b. Feb. 21, 1839, Vienna, pupil of L. Jansa and J. Böhm (violin), also of S. Sechter (theory), at the Vienna Conservatorium; from 1854-61 member of the Vienna court opera orchestra; from 1861-66, leader at Rotterdam; from 1866-70, capellmeister at Lübeck, Stettin, and Prague; from 1871-77, teacher at the Royal High School for Music, Berlin, and afterwards leader at Dresden; since 1893, also principal teacher of the violin at the Conservatorium. R. has published some chamber music.—His wife, Laura R.-Kahrer, b. Jan. 14, 1853, Mistelbach (near Vienna), is a distinguished pianist, a pupil of the Vienna Conservatorium and also of Liszt.

Rastral (from Latin *rastrum*, "rake"), a well-known simple instrument for drawing the lines of a stave.

Rastrelli, (1) Vincenzo, able teacher of singing and fairly good composer, b. 1760, Fano, d. March 20, 1839, Dresden, as composer to the Court Chapel. He studied under Padre Mattei at Bologna, and left some church music and other vocal pieces, which have been preserved in Dresden.

(2) Joseph, son of the former, b. April 13, 1799, Dresden, d. there Nov. 14, 1842; he journeyed with his father in 1814 through Italy, and became likewise a pupil of Mattei's. In 1829 he became sub-conductor of the Court Opera at Dresden, and in 1830, court capellmeister. He produced at Ancona, Milan, and Dresden, operas of his own composition (1832, *Salvator Rosa*), and also wrote a number of masses (one a 8), motets, vespers, etc.

Rasumowski, Andreas Kyrillowitsch, Count (1815, Prince), Russian ambassador at Vienna. In 1788 he married the Countess Thurn, sister of Princess Karl Lichnowsky, maintained from 1808-16 the celebrated quartet party which bore his name, and in which he himself played the second violin (first violin, Schuppanzigh; viola, Weiss; cello, Lincke). But after the Prince had withdrawn, it continued for a long time, with Sina as second violin (under the name of Schuppanzigh's Quartet). Beethoven dedicated to R. his three quartets, Op. 59.

Ratez, Émile Pierre, b. Nov. 5, 1851, Besançon, studied at the school of music there (P. Demol), also from 1872-81 at the Paris Conservatoire (Bazin, Massenet). He entered the orchestra of the Opéra Comique as viola player, became chorusmaster, under Colonne, and in 1891, director of the branch of the Paris Conservatoire in Lille. In 1886 his opera *Ruse d'amour* was performed at Besançon; he has also published 3 pf. trios, pieces for pf. and violin, ditto for horn and pf., and oboe and pf., a cello sonata and a pf. quartet.

Rathgeber, Valentin, Benedictine monk at Banz (Franconia), b. about 1690, d. after 1744. He composed a large number of masses, psalms, hymns, litanies, offertories, antiphons, etc.; also some instrumental works ("Chelys sonora, constans 24 concertantionibus," 1728, and "Musikalischer Zeitvertreib auf dem Klavier," 1743).

Ratzenberger, Theodor, pianist, b. April 14, 1840, Grossbreitenbach (Thuringia), d. March 8, 1879, Wiesbaden; he was a pupil of Liszt, Schwarzburg court pianist at Sondershausen; 1864 at Lausanne, and from 1868 at Düsseldorf. He has published only a few pf. pieces and songs.

Rauchenecker, Georg Wilhelm, composer, b. March 8, 1844, Munich, son of a town musician, pupil of Theodor Lachner (piano, organ), Baumgartner (counterpoint), and Joseph Walter (violin). From 1860-62 he was violinist at the Grand Théâtre, Lyons; until 1868, maître de chapelle at Aix and Carpentras, and afterwards director of the Avignon Conservatoire; in 1873 he became musical director at Winterthur. R. conducted the Philharmonic Concerts, Berlin, for one season (before Mannstädt's advent). He wrote for the Zürich Musical Festival (1874) a cantata, *Niklaus von der Flüe* (which gained a

prize). The Florentine Quartet has made favourably known 2 of his 3 quartets for strings. An opera, *Le Florentin*, and a symphony remain in manuscript.

Rauscher, Max, b. Jan. 20, 1860, Wettstetten (Bavaria), son of a teacher. In 1884 he was ordained priest, and was for a long time precentor of the cathedral chapter at Ratisbon, where he was trained as a conductor under Dr. Haberl and J. Mitterer; he has been since 1885 "Domkapellmeister" and inspector of the cathedral at Ratisbon.

Rauschquinte (*Rauschpfeife*, also *Rauschquarte*), a mixture stop in the organ of two ranks, consisting of the third and the fourth overtone, i.e. either of the fifth, $5\frac{1}{3}$ feet, and octave 4 feet; or of fifth, $2\frac{2}{3}$ feet, and octave 2 feet; the former belonging to the diapason of 16 feet, the latter to that of 8 feet. The R. is not a repeating stop.

Rauzzini, Venanzio, famous singer (tenor) and composer, b. 1747, Rome, d. April 8, 1810, Bath; he first appeared at Rome in 1765, at the Teatro della Valle in the rôle of a woman, and in 1767 was engaged at Munich. His striking beauty of face and figure drew him into entanglements which caused him to move to London in 1774. He sang up to 1778, and then lived in London until 1787 as teacher of singing, and was there held in the highest esteem; later on he retired to Bath. R. produced 8 operas at Munich and London, and also wrote 3 quartets for strings, 1 pf. quartet, 3 violin sonatas, and 2 pf. sonatas for 4 hands, etc.

Ravanastron (Serinda) is said to be a stringed instrument of Indian origin. (Cf. Rühlmann, "Geschichte der Bogeninstrumente," p. 14, etc.)

Ravenscroft, Thomas (Mus. Bac., Cambridge, 1607). He published "Pammelia. Musickes Miscellanie, or Mixed Varietie of Pleasant Rondelays and Delightful Catches of 3-10 Parts in One" (1609; 2nd ed. 1618); "Deuteromelia, or the Second Part of Musickes Melodie," etc. (1609); "Melismata. Musical Phantasies, Fitting the Court, City and Country Humours" (1611, a 3-5); "A Briefe Discourse of the True (but Neglected) Use of Charactering the Degrees by their Perfection, Imperfection, and Diminution," etc. (1611), and, finally, "The Whole Booke of Psalmes, with the Hymnes Evangelicall and Spirituall," etc. (a 4, 1621; 2nd ed. 1633).

Ravina, Jean Henri, pianist, b. May 20, 1818, Bordeaux, pupil of Laurent and Zimmermann at the Paris Conservatoire, received in 1834 the first piano prize, and, in that same year, was appointed assistant teacher (only seventeen years of age). He still studied composition under Reicha and Leborne, left his post in 1837, and made concert tours as a virtuoso, but resided in Paris. R. is

known as the composer of a somewhat large number of salon pieces of smooth structure; but he also wrote numerous études, a pf. concerto, a theme of his own with variations, and arrangements for four hands of all Beethoven's sets of variations, etc.

Raymond, (1) Georges Marie, writer on music, b. 1769, Chambéry, d. there April 24, 1839; teacher of history, afterwards of mathematics at Geneva, in 1811 director of the Gymnasium at Chambéry. He wrote: "Essai sur la détermination des bases physico-mathématiques de l'art musical" (1813); "Des principaux systèmes de notation musicale, usités ou proposés chez divers peuples tant anciens que modernes" (1824; he ventilates the question as to whether a reform of our note-system is necessary); "Lettre à M. Villoteau, touchant ses vues sur la possibilité et l'utilité d'une théorie exacte des principes naturels de la musique" (1811). Cf. also the *Magasin encyclopédique* (1809-10); "Décade philosophique" (1802), and the reports of the session of the Royal Academy of Savoy (1828.)

(2) Joseph, writer on music at Paris, author of "Essai de simplification musicographe" (1843), and "Nouveau système de notation musicale" (1846).

Re, the Solmisation name of the note *d*. (Cf. SOLMISATION and MUTATION.)

Rea, William, organist, pianist, and conductor, b. March 25, 1827, London, pupil of Pittmann, and—after having been already appointed, in 1843, organist of Christ Church, Watney Street—of Bennett. He then became organist of St. Andrew's, Undershaft. In 1849 he studied under Moscheles and Richter at Leipzig, and then under Dreyschock at Prague. On his return to England R. gave chamber concerts at the Beethoven Rooms, became organist to the Harmonic Union (1853), founded the Polyhymnian Choir (1856), and conducted an amateur orchestral society. In 1858 he became organist at Stockwell, and in 1860 was appointed organist to the corporation of Newcastle-on-Tyne, of which city he considerably raised the musical status. Towards the end of 1880 he became organist at South Shields.

Reading, John, name of three English composers during the 17th and 18th centuries:—

(1) Organist at Winchester, d. 1692; songs in Hayes's "Harmonia Wiccamica."

(2) Organist at Chichester, 1674-1720 (songs in collections of 1681-88 are by one or other of the two Readings named).

(3) B. 1677, London, d. Sept. 2, 1764; chorister of the Chapel Royal under Blow, organist at Dulwich (1700), lay vicar (1702) and master of the choristers at Lincoln Cathedral (1704). He returned to London in 1707, and became organist of several London churches. He published: "A Book of New Songs with Symphonies, and a Thorough-Bass

fitted to the Harpsichord," also "A Book of New Anthems."

Rebec (*Rebeca, Ribeca, Rubeca, Ribeba, Rubella*; Span., *Rabé, Rabel*; Arab., *Rebab, Erbeb*), probably the oldest stringed instrument, according to general acceptance, of Eastern origin, and brought to Spain by the Arabians in the 8th century. The correctness of this opinion is by no means thoroughly established; the contrary one, viz. that by the conquest of Spain stringed instruments became known to the Arabians, is equally entitled to consideration. Anyhow, it is a remarkable fact that, already of the 8th to the 9th century, we possess a drawing (Gerbert, "De Cantu," II.) in which the type of the later *Gigue* is fully marked, though it has only one string; whereas, for instance, the Lute, which, as is well known, was imported from the Arabians, only spread over Europe in the 14th century, causing a revolution in the construction of bowed instruments. (Cf. INSTRUMENTS.) From the 9th century we meet with the *Fidula* (first mentioned by Otfried, V. 23, 395), in the 13th century, with the *Rubeba* and *Vielle* (Fidel), sister instruments, the latter having five, the former two strings. Neither had frets (cf. the account in the *Allgemeine Musikalische Zeitung*, July, 1879). Even the theory that the R. is related to the British Chrotta (q.v.) is not an extravagant one, and it is by no means impossible that there is some etymological connection between *rebec* and *crewth* (the Breton form of the latter word); *rebet* or *rebed* seems, indeed, to point to that conclusion.

Rebel, (1) Jean Ferry, violinist, b. 1669, Paris, d. there 1747. In 1699 he was violinist at the Grand Opéra, in 1707, maître de chapelle, also member of the 24 "*violons du roi*," and was appointed royal chamber composer. R. published a book of violin sonatas (with bass), and a book of trios for two violins and bass. His opera, *Ulysse* (1703), was a failure; only one ballet number (*La Caprice*), with solo violin, had a brilliant success, and caused him to write some more music of the same kind for insertion in other ballet operas.

(2) François, son of the former, also violinist and composer, b. June 19, 1701, d. Nov. 7, 1775, entered, at the early age of thirteen, into the orchestra of the Grand Opéra, became an intimate friend of Franc. Francoeur (q.v.), and wrote in conjunction with him ten operas; both were leaders at the Opéra (1733-44), after that, inspectors, from 1753-57 directors, and impresarios on their own account until 1767. Louis XV. bestowed on R. the post of chief *Intendant de la musique du roi*, and in 1772 that of General Inspector of the Opéra; and, shortly before his death, R. retired to the rest which he so well deserved. He composed, besides operas, several cantatas and sacred pieces.

Rebello, João Lourenço (João Soares), one

of the most important Portuguese composers, b. 1609, Caminha, d. Nov. 16, 1661, San Amaro (near Lisbon); teacher of King John IV. (q.v.), who dedicated to him his "Defensa de la musica moderna." Of his numerous sacred works there only appeared in print, at Rome, a book of psalms a 16, Magnificats, Lamentations, and Misereres, with continuo (1657, 17 part-books). Masses, etc., are preserved in manuscript at Lisbon.

Reber, Napoléon Henri, one of the most remarkable French composers of the immediate past, especially in the sphere of instrumental music, b. Oct. 21, 1807, Mühlhausen i. E., d. Nov. 24, 1880, Paris. He was a pupil of Reicha and Le Sueur at the Paris Conservatoire, and through family relationships and good education he was received into the most cultivated circles, and was, therefore, guided from an early age towards the noblest forms of composition. He wrote chamber music, and set to music the new songs of the best French poets. He first approached the stage with *Le diable amoureux* (ballet, 1840); then followed the comic operas: *La nuit de Noël* (1848), *Le père Gaillard* (1852), *Les papillottes de M. Benoit*, and *Les dames capitaines* (1857); a fifth comic opera, *Le ménestrier à la cour*, and a grand opera, *Naim*, were never produced, though the overtures are printed. In 1851 R. was appointed professor of harmony at the Conservatoire, and in 1853 was elected as Onslow's successor by the Académie. In 1862 he succeeded Halévy as professor of composition, and in 1871 became inspector of the branches of the Conservatoire. He was succeeded, in 1880, by Saint-Saëns as professor of composition. R.'s instrumental works, which are written in the spirit of the German classics, consist of 4 symphonies, 1 overture and 1 suite for orchestra, 3 stringed quartets, 1 stringed quintet, 1 pf. quartet, 7 pf. trios, pieces for pf. and violin, also pf. pieces for 2 and 4 hands. For voice he wrote: 33 songs with pf. accompaniment, a "Chorus of Pirates" for male voices a 3 with pianoforte, "Le soir" for male chorus a 4 with pf., an Ave Maria and Agnus Dei for 2 sopranos, tenor, bass, and organ; also *Vocalises* for soprano or tenor (Op. 16). His "Traité d'harmonie" (1862, several times reprinted) ranks among the best modern works on theory.

Rebicek, Josef, excellent violinist, b. Feb. 7, 1844, Prague, for six years student at the Conservatorium there. In 1861 he became a member of the court band, Weimar; in 1863 leader of the orchestra of the Bohemian National Theatre, Prague, in 1865 of the German Royal "Landestheater" there; in 1868 principal leader at the royal theatre, Wiesbaden (in 1875, royal music director). In 1882 he was appointed opera director and leader at the Imperial Court Theatre, Warsaw; in 1891, capellmeister at the National Theatre, Pesth;

and in 1893, capellmeister at Wiesbaden Court Theatre.

Rebling (1), Gustav, performer on the organ, and composer, b. July 10, 1821, Barby. He was son of the cantor there, studied under Fr. Schneider at Dessau (1836-39), was then organist of the French church at Magdeburg, and in 1847 succeeded Mühling as teacher of music at the seminary. In 1853 he became conductor of the cathedral choir, and collegiate teacher of music; 1856, royal musical director; and from 1858, organist of the Johanniskirche. In 1846 he established a church choral society. R. has composed psalms, motets with and without accompaniment, songs, pf. and organ pieces, a cello sonata, etc.

(2) Friedrich, opera singer and teacher of singing, b. Aug. 14, 1835, Barby, pupil of the Leipzig Conservatorium, private pupil for singing of Götz; he sang as lyric tenor at Rostock, Königsberg, Breslau, and from 1865-78 at Leipzig. In 1877 he was appointed teacher of singing at the Leipzig Conservatorium.

Récit. (See MANUALS.)

Recital, a performance, and, indeed, a solo performance. The term is used especially for concerts in which pianoforte performances are given by one player. According to Grove's Dictionary, recitals were first introduced by Liszt in 1840.

Recitative (Ital., *Recitativo*, from Lat., *recitare*, "to recite") is the name given to that kind of singing which, in favour of natural accentuation, and even of the cadence of speech, reduces to a minimum the purely musical element, both as regards melodic formation, and rhythmical articulation; it is, so to speak, the prose speech of song. The invention of R. coincides with the rise of opera (q.v.). The art of counterpoint had caused music completely to overshadow poetry; and the endeavour to restore to the latter its rights, and to render natural expression of feeling possible in singing, led, by way of esthetic reasoning, to the invention of the *Stilo rappresentativo*, of which R. is the core. Instrumental accompaniment, at once added to R. by its creators, Peri, Caccini, Cavalieri, was at first nothing more than an harmonic support to secure correct intonation; a figured bass (see GENERAL BASS) played on the harpsichord, or on the organ, lute, or gamba. It was only when the dramatic style was improved, first by Monteverde, and afterwards by Alessandro Scarlatti, that the accompaniment of recitative assumed a more lively form; they created the *Accompagnato*, i.e. an accompaniment worked out in a musically important manner; while R. with general bass has continued up to the present as *Recitativo secco*, or merely *Secco*. The *Arioso* represents the transition from R. to the Aria cultivated both in church and chamber. Modern R., as written by Wagner, only differs from older R. in that a more important function

is assigned to music, and in that instrumental music develops interesting formations, while the vocal part, faithfully answering to the natural, though art-intensified declamation, moves along freely.

Reckendorf, Alois, b. June 10, 1841, Trebitsch (Moravia), after pursuing his scientific studies at Vienna and Heidelberg, was trained at the Leipzig Conservatorium as a musician from 1865-67; he has acted as teacher of pf. and theory at the above-named Conservatorium since 1877. R. has published various pf. and vocal works.

Recorder, an obsolete English kind of beak-flute, with seven finger holes, and an eighth covered with a thin plate (goldbeater's skin).

Recte et Retro (forwards and backwards), an indication (*Canon*) for the execution of retrograde (*Crab*) canon. (See CANON.)

Red-Notes. (See COLOR.)

Redowa (Rejdovák), a Bohemian dance in triple time and fairly rapid movement; another form of the dance, the Rejdovacka, is in $\frac{3}{4}$ time.

Rée, Anton, b. Oct. 5, 1820, Aarhus (Jutland), pupil of Jacques Schmidt and K. Krebs at Hamburg; he appeared at concerts as a pianist from 1839 to 1842, and has since lived at Copenhagen as an esteemed teacher. He is a composer of pf. pieces, and contributor to musical journals.

Reed (Lat., *Lingua*; Ger., *Zunge*; Fr., *Anche*) is the name given to an elastic blade (*Blättchen*) which completely covers a small opening in a pipe, and which, by vibrating, it alternately opens and closes. In many wind-instruments the R. is the tone-producing medium. If the R. is of metal, the pitch is determined by its size (length, breadth, weight); if it is of a soft, yielding character (see ROHRBLATT) the period of its vibrations depends upon those of a column of air by which it communicates with the air outside. The former kind is to be found in organ reed-pipes, and in the harmonium and similar instruments; the latter in oboes, clarinets, and bassoons. Finally, there is a special kind of reed, the membranous, to which the vocal cords of the larynx belong, and also the lips of players of horns, trumpets, trombones, and similar instruments. The first kind always determines the pitch, whereas in the latter it depends upon the tension of the lips, combined with the length of the tube. (Cf. EMBOUCHURE.) Metal reeds are either beating or free; of the former kind are most of the organ reeds; of the latter, those of the harmonium and of soft reed stops without tubes.

Reed, Thomas German, singer and conductor, b. June 27, 1817, Bristol, d. March 21, 1888, son of the musician who became conductor at the Haymarket Theatre, and afterwards leader at the Garrick Theatre, London. R. first appeared at Bath as pianist, concert

and opera singer, and then gradually acquired a position of high esteem in London as teacher, pianist, and composer. From 1838-51 he was musical director of the Haymarket Theatre; became in 1838 chapel-master at the Bavarian Chapel, and arranged good sacred concerts. In 1855 R. started theatrical performances of a small *genre* ("Mr. and Mrs. German Reed's Entertainment") at St. Martin's Hall, London; then from 1856, at the Gallery of Illustration, and afterwards at St. George's Hall. The pieces performed were written for two or three persons, and were greatly patronised by the non-theatre-going public.—Reed's wife, Priscilla Horton, b. Jan. 1, 1818, d. March 18, 1895, was an excellent vocalist.—His brothers, Robert Hopké and William, are known as 'cellists.

Reed-flute (Ger., *Rohrflöte*; Fr., *Flûte à cheminée*), a half-covered flue-pipe stop in the organ, with a hole, or open reed in the stopper (of 8, 16, and 4 feet). The tone is clearer than that of completely covered pipes; but for the lower half of the key-board the pipes are completely covered. When of 2 feet or of 1 foot, it is known as *Rohrschelle*. A double reed-flute is a R. with double-lips (see DOUBLE-FLUTE, BIFARA); a *Rohrquinte* is a Quint stop ($2\frac{3}{4}$ feet). The R. resembles the English clarinet-flute.

Reed-pipes are wind instruments in which the production of tone takes place by means of regular alternate opening and closing of a wind-way, by means of vibrating reeds. (Cf. WIND INSTRUMENTS.) Concerning the various kinds of reeds, Cf. REED. The reed-stops of organs, not reckoning the few delicate stops with beating reeds (Aeoline and Physsharmonica), do not essentially differ from one another. The stronger the reeds, the more capable of resistance, the more wind do they require to enable them to speak, and with strength of tone in proportion to the wind. The strength of tone is also increased by tubes widened at the top (funnel-shaped), or diminished, by tubes narrowed towards the top (half-covered). Thus arise the following stops, more or less allied to one another in character: Posaune (Serpent, Bombard, Bomhart, Tuba, Ophicleide), Trumpet (Clarino), Fagott (Dulcian Bassoon), Oboe, Clarinet, Schalmey, Cornet (Zink), Bassethorn, Horn, etc. Obsolete stops are: Sordun, Rackett, Bärpfeife, Bassanelli, as well as all names compounded with *Regal*. (Cf. ORGAN and respective articles.)

Reed-work, the *Tongue* stops of the organ.

Reel, an English, Scottish, Irish, and Danish dance in even time, and in quick movement; it is danced by two or three couples.

Reeve, William, b. 1757, London, d. there June 22, 1815. In 1781 he was appointed organist at Totnes (Devonshire); in 1783 he was again in London. He composed operettas, music for pantomimes, and plays (some jointly

with Mazzinghi) for Covent Garden Theatre, and in 1802 became part proprietor of Sadler's Wells Theatre. In 1792 he was appointed organist of St. Martin's, Ludgate Hill.

Reeves, John Sims, famous tenor singer, b. Oct. 21, 1822, Shooter's Hill (Kent). At the age of 14 he became organist at North Cray (Kent); made his stage *début* at Newcastle-on-Tyne; studied under Hobbs and Cooke in London, and sang from 1841-43 at Drury Lane. After further study and good stage successes in Italy, he returned to London in 1847, and for many years was the most famous English tenor in the concert hall and on the stage.—His first wife, Emma Luccombe, d. June 10, 1895, was an excellent soprano vocalist. Their son made his *début* in 1880 as a tenor singer.

Regal (1), a small portable organ with one or few reed stops; it was formerly the instrument of the home, as is to-day the harmonium. (2) Oeneral (obsolete) term for reed-stops; for example, *Trichterregal*, *Geigenregal*, *Singendregal*, *Jungfermregal*, *Harfenregal*, *Gedächtnisregal*, *Gedämpfregal*, etc. *Bibelregal* was a R. which folded up like a book.

Regan, Anna. (See SCHIMON.)

Reger, Max, b. March 19, 1873, Brand (jurisdiction of Kemnath, Bavaria), whence his father (a teacher) moved to Weiden in 1874. R. received his first training in music from his father, and from the organist Lindner, at Weiden, studying afterwards (from Easter, 1890) under H. Riemann at Sondershausen and Wiesbaden. In his maiden works R. has shown an abundant and promising talent for composition (violin sonatas, Op. 1, 3; trio with viola, Op. 2; 'cello sonata, Op. 5; songs, Op. 4, 8, 12, 15; 3 Orgelstücke, Op. 7; four choruses with pf., Op. 6; Walzer capricen, Op. 9, and Deutsche Tänze, Op. 10 [piano duets]; Walzer, Op. 11, Lose Blätter, Op. 13, for pf. solo; Vocal Duets, Op. 14.)

Regino (Prumiensis), in 892, abbot of the monastery Prüm (near Trèves), and afterwards abbot of St. Maximin, Trèves, d. 915. He wrote: a chronicle of the period from the birth of Christ to 907 (printed at Mayence, 1521; Frankfurt, 1566; and in Pistorius's "Rerum germanicarum Scriptores," 1583); also "De disciplina ecclesiastica veterum" (published by Hildebrand, 1659; and Baluze, 1671); and, finally, "Epistola de harmonica institutione ad Rathbodum Episcopum Trevirensen, ac Tonarius sive octo toni cum suis differentis" (the autograph, in very fine neume writing, is in the Leipzig Town Library; there are copies of it at Ulm, and Brussels; the "Tonarius" is given in facsimile in Consse-maker, Script. II., and the "Epistola" is to be found in Gerbert's "Scriptores," I.).

Regis, Johannes, Belgian contrapuntist, contemporary of Okeghem, Busnois, and

Caron. Among fragments of masses published by Petrucci, in 1508, is to be found a Credo; and in the "Odhecaton," several motets, chansons, etc. Several of his Masses are preserved in the Papal Chapel.

Register, (1) (Stop), a complete set of organ-pipes, which, for each note of the key-board, contains one, or (as in mixtures) several pipes; wind is admitted to, or shut off from, these pipes by a system of mechanism called the draw-stop action. The portion of the register nearest to the player is the slider, the end of which, tapered off conveniently for the hand (the stop-handle), projects from the organ-case. The drawing out and pushing in of the stops (Registering or Registration) is generally attended to by the organist himself; but for concert-playing, by someone who understands the organ, and who follows the written-out instructions of the player. The Registration, *i.e.* the selection—an important matter—from among the stops of an organ, is an art analogous to that of scoring for orchestra.

(2) The name R. is also used in connection with the human voice, which produces very different qualities of tone, according to the mode of function of the vocal cords. The two most important registers of all human voices are the so-called "chest register" and "head register." These two terms are altogether unsuitable, for it is absurd to suppose that in the chest voice, the air vibrating in the thorax, or only in the wind-pipe below the larynx, can give greater volume to the tone. The wind-pipe, or the cavity of the thorax, has as little influence on the formation of tone as the boot of a reed-pipe on the tone of that pipe. Besides the tongue itself, the quality of tone is only determined by the tube; *i.e.* besides the various stretchings of the vocal cords, only by the hollow space between the larynx and the teeth, and the openings of the nostril. Of the functions of the vocal cords we know very little indeed; it is supposed that total and partial forms of vibration cause the difference between full, and falsetto voice; that the stretching of the cords to the fullest extent produces the chest notes, but a stretching of only their edges, on the other hand, the head notes. The special R., now distinguished by most teachers of singing as the *middle* voice (also named Falsetto), appears to be based on still more moderate vibration (more like that of the chest voice). Physiologists are not agreed on the question, and it is a matter of indifference to the singer; for after a couple of lessons he knows exactly whether he is singing chest, head, or falsetto notes. On the other hand, the usual Methods of singing attach too little value to the conditions of resonance, which are not in any way, as Helmholtz, Merkel, and others would have us think, necessarily the same for the same vowels. (*Çf.* EMBOUCHURE.) The *equalisation* of the registers consists in getting rid, so

far as is possible, of the difference of timbre between chest and head notes, *i.e.* not making the production of tone in the former too thick, heavy, and in the latter, not too sharp, pointed; this can only be accomplished by regulating the resonance according to the aim in view. Then there is the striking circumstance that intensification of sound through the cavity of the mouth is the only explanation that can be given of one note, in the training of the voice, frequently sounding dull and heavy; a note of this kind can only be improved by change of vowel formation, *i.e.* by another form of tube, which procures for the note the strengthening which it lacks by means of partial vibrations of the air in the mouth cavity. On the alternating conditions of resonance of notes of various pitch rests the difference of so many R. in singing methods. The difference required in the stretching of the vocal cords is naturally of decisive importance in the matter of facility in tone production, and, therefore, a division into various registers or voice regions must not be considered in any way irrational. In so far as a R. requires an essentially different function of the vocal cords, there can only be four kinds:—chest register, head register, falsetto, and "Strohass" register; of these the first demands the greatest, and the last the least tension of the vocal cords; the last, however, has no artistic value. *Çf.* Merkel, "Anthrophophonik" (1863), also the singing methods of Garcia, Stockhausen, etc.

Regnard (Regnard), a family of Netherland composers. Of the four brothers—Franz, Jacob, Pascasius, and Karl—Jacob (b. 1540) is the most important; of the other three we have only a few songs, preserved in a collection of 1590. Already as a boy we find Jacob in the Imperial court chapel, Vienna, first as *alumnus* and chorister, then as tenor singer (1564). About 1579 he became sub-capellmeister at the Imperial court, Prague, and about 1580 we meet with him as vice-capellmeister to the Archduke Ferdinand, at Innsbruck, and from 1588, capellmeister. After the death of the Archduke he returned to the Imperial service as vice-capellmeister, and held this post up to the time of his death, which probably happened in 1600. His widow withdrew to Munich, and published several posthumous collections of sacred songs. His numerous compositions have been fully enumerated in the *Monatsh. f. Musik. Gesch.* (xii. 97); they appeared between 1574–1611, and consist of masses, motets, canzone, villanelle, and very many German songs, which must formerly have enjoyed considerable reputation; for of many of the books we can even now count seven editions.

Rehbaum, Theobald, b. Aug. 7, 1835, Berlin, violinist, composer and writer on music. As

a boy he sang in the Cathedral choir, Berlin, and, later on, was a pupil of Hubert Ries (violin), and Friedrich Kiel (composition). He has produced a series of instructive works for violin, besides other compositions for that instrument; songs, part-songs for mixed chorus, etc.; also a number of operas, which have been performed on various stages: *Don Pablo* (Dresden, 1880), *Das steinerne Herz* (Magdeburg, 1885), *Turandot* (Berlin, 1888), *Oberst Lumpus* (Wiesbaden, 1892), *Die Konshribierten* (not performed), *Der Goldschmied von Paris* (not performed), etc. Of these, as of a number of operas by other composers, R. wrote the libretti. R. at present lives at Wiesbaden.

Rehberg, Willy, pianist, conductor, and composer, b. Sept. 2, 1863, Morges (Switzerland), was first instructed in music by his father (Friedrich R., a native of Thuringia, pupil of Moscheles, an esteemed music teacher at Morges). He attended the School of Music, Zürich (Fr. Hegar, R. Freund, Gust. Weber), and then, from 1882-85, the Leipzig Conservatorium, at which he afterwards stayed on as teacher of the pianoforte until 1890. In this year he received a call to Geneva as principal pianoforte teacher at the Conservatoire, and also undertook, in 1892, the direction of the subscription concerts at the Town Theatre there. R. had already directed, while residing at Leipzig, the subscription concerts of the Court band, and of the Singakademie at Altenburg (1888-90) with great success. His activity as a pianist, as well in his earlier, as in his present sphere, has also met with due recognition (R. is ducal Saxon court pianist). He has made his *début* as a composer with a violin sonata, etc. R. is the son-in-law of E. W. Fritzsche.

Rehearsal, trial of a musical work.

Rehfeld, Fabian, b. Jan. 23, 1842, Tüchel (West Prussia), pupil of Zimmermann and Grünwald at Berlin; in 1868 royal "Kammermusiker," in 1873 leader; he is a distinguished violinist, and also a composer for his instrument.

Reicha, Anton, important theorist and esteemed composer, b. Feb. 27, 1770, Prague, d. May 28, 1836, Paris; nephew and pupil of the leader Joseph R. (really Rejcha, b. 1746, Prague, d. 1795, Bonn, a prolific and successful composer of instrumental music: 3 'cello concertos, several duets and concertantes for 'cello and violin; leader and, finally, capellmeister at the National Theatre, Bonn). When his uncle received the post of leader at Bonn in 1788, R. joined the Electoral band as flautist, and associated with the young Beethoven, who played the tenor in the orchestra. When the orchestra was disbanded in 1794, R. went first to Hamburg, where he wrote his first opera, *Obaldi, ou les Français en Égypte*, and, in the hopes of getting it performed, to Paris in 1799. This plan

certainly failed, but two symphonies procured for him a pleasing reception as instrumental composer. From 1802-8 he lived at Vienna, where he renewed intercourse with Beethoven; he was also on friendly terms with Haydn, Albrechtsberger, and Salieri. In 1808 he hastened back to Paris, and then succeeded in bringing out the comic operas *Cagliostro* (1810), *Natalie* (1816), and *Sapho* (1822), but certainly without great success. His Italian opera, *Argina, regina di Granata*, had previously met with a similar fate in Vienna. In 1818, R. was appointed professor of composition at the Conservatoire, and in 1835 elected a member of the Académie in place of Boieldieu. Jelenzperger, Elwart, and Dancla, among others, were his pupils. R. is of importance as regards his instrumental compositions and theoretical works. Of the former are published:—2 symphonies, 1 overture, a dezet for 5 stringed and 5 wind instruments, an octet for 4 stringed and 4 wind instruments, 6 quintets and 20 quartets for strings, a quintet for clarinet and strings, a quartet for pf., flute, 'cello and bassoon, 24 quintets for flute, oboe, clarinet, horn, and bassoon, 6 quartets for flute, violin, viola, and 'cello, a quartet for 4 flutes, 6 string-trios, a trio for 3 'celli, 24 horn trios, 6 violin duets, 22 flute duets, 12 violin sonatas; finally, pf. sonatas, studies, and fugues, variations, etc., and "L'art de varier" (57 variations). His theoretical works are: "Études ou théories pour le pianoforte, dirigées d'une manière nouvelle" (1800); "Traité de mélodie, abstraction faite de ses rapports avec l'harmonie" (1814, 2nd ed. 1832); "Cours de composition musicale, ou traité complet et raisonné d'harmonie pratique" (1818); "Traité de haute composition musicale" (1824-26, 2 vols., French and German by Czerny as "Vollständiges Lehrbuch," etc., 1834, 4 vols.); "L'art du compositeur dramatique, ou cours complet de composition vocale" (1833); and "Petit traité d'harmonie pratique" (no date). R. was no inventor, but his theoretical works are of practical value, and still stand in high repute.

Reichardt (1), Johann Friedrich, composer, conductor, and writer on music, b. Nov. 25, 1752, Königsberg i. Pr., d. June 27, 1814, Giebichenstein (near Halle); he enjoyed a good training, studied philosophy at Königsberg and Leipzig, but took special pleasure in music, played the violin and pf., and received instruction in theory already at Königsberg. He spent the years 1771-74 in tours through Germany, studying cities and citizens. He gave the result of his observations in his travelling correspondence (see below, the list of his writings). In 1775 he succeeded in obtaining the post of capellmeister at the court of Frederick the Great, vacant through the death of Agricola. R. was an intelligent and liberal-minded man, and made fresh departures, as, for instance, the *concerts spirituels* (1783) for

the performance of novelties, together with short analytical programmes. In 1782 he paid a flying visit to Italy, and went in 1785, with long leave of absence, to London and Paris, and produced in both cities his Passion music (after Metastasio), also some psalms and Italian scenas. From the Grand Opéra at Paris he received the commission to write two operas—*Tamerlan* and *Panthée*—and, indeed, returned to Paris in 1786 with the completed *Tamerlan*; but he was suddenly summoned back to Berlin owing to the death of Frederick the Great, so that the production fell through. Under Friedrich Wilhelm II. musical life blossomed with fresh vigour; the orchestra was increased, and R. was sent to Italy to find new singers. But his enemies managed to make the king acquainted with his sympathy towards the French revolution, whereby his post soon became unbearable. In 1791 he was granted three years' leave; he returned again, but only to be dismissed in 1794 on account of his revolutionary tendencies, as he himself, in a printed letter, had given proofs of his liberal opinions. R. now made a long journey through Sweden, finally settling in Altona, where he published a political paper, *La France*; in 1796 he was called to Giebichenstein, near Halle, where, as inspector of the salt works, he had long possessed a house of his own. When Friedrich Wilhelm II. died (1797), R. appeared again in Berlin, and produced his funeral cantata composed for the obsequies of Friedrich II., also several operas. He continued, nevertheless, to hold his post of inspector of the salt works, and received an important increase of salary from Friedrich Wilhelm III. The French occupation of 1806 drove him away to Königsberg; Jerome Napoleon, however, threatening to confiscate his property, forced him to return, and appointed him capellmeister at Cassel. Unfortunately, he was not on good terms with the authorities there, and he was finally sent away on leave. He went to Vienna to produce his operas and vaudevilles, but nothing came of his visit, and he returned to Giebichenstein, where soon afterwards he died. As a composer, R. was especially active in the department of vocal music; he ranked among the first Sing-spiel composers (cf. HILLER), and wrote a large number of works for the stage (Italian operas, German operas, vaudevilles, incidental music to plays, etc., mostly for Berlin and Potsdam; in French, *L'heureux naufrage*, for Cassel, 1808, etc.). His other vocal works are the afore-mentioned "Passion," a series of cantatas (sacred and festival), psalms, 2 Te Deums, etc., but, more especially, a number of songs, which won for him a high place in the history of German song (Goethe's "Lyrische Gedichte," about 60 songs); for orchestra and chamber he wrote an "Ouvverture di vittoria" and a "Schlacht-symphonie" to celebrate the Leipzig victory manuscript), and 6 other symphonies, 14 pf.

concertos, 17 pf. sonatas, 11 violin sonatas, a violin concerto, 6 trios for strings, a concertante for stringed quartet and orchestra, 2 pf. quartets, a flute sonata, a quintet for pf. with two flutes and two horns, etc. R. was extremely active as a writer:—"Musikalisches Kunst-magazin" (1782-91, 2 vols., appeared in numbers); "Musikalisches Wochenblatt" (1792); "Musikalische Monatsschrift" (1792, together with the "Wochenblatt" under the title of "Studien für Tonkünstler und Musikfreunde," 1793); "Berlinische Musikalische Zeitung" (1805, 1806); "Musikalischer Almanach" (1796); "Ueber die deutsche komische Oper" (1774); "Ueber die Pflichten des Ripienviolinisten" (1776); "G. F. Händel's Jugend" (1785); "An das musikalische Publikum, seine Opere, *Tamerlan* und *Panthée* betreffend" (1787); "Briefe eines aufmerksamen Reisenden, die Musik betreffend" (1774-1776, 2 parts); "Schreiben über die berlinische Musik" (1775); "Vertraute Briefe aus Paris, geschrieben 1802-3" (1804-1805, 3 parts); "Vertraute Briefe, geschrieben auf einer Reise nach Wien, 1808-1809" (1810, 2 vols.); "Leben des berühmten Tonkünstlers H. W. Gulden" [Enrico Guglielmo Florino] (1779). He wrote his own biography in the *Berlinische Musikalische Zeitung*, 1805, Nos. 55-89; Schletterer commenced a detailed biography of R. (Vol. I. 1865).

(2) Luise, an esteemed song composer, daughter of the former, b. 1788, Berlin, d. Nov. 17, 1826, Hamburg, where she lived from 1814 as teacher of singing.

(3) Gustav, the composer of "Was ist des deutschen Vaterland?", b. Nov. 13, 1797, Schmarsow (near Demmin), d. Oct. 19, 1884, Berlin; he studied theology at Greifswald and Berlin, but soon turned to music (1819); he studied under Bernhard Klein, and afterwards lived at Berlin as teacher of music. R. possessed a fine bass voice, which secured him access to all circles. The composition of the above-named poem by Arndt falls about the year 1825. R. composed little; in all 36 works, mostly songs of a popular character. He was for several years conductor of the junior Berlin Liedertafel, founded by Berger, Klein, and Rellstab; also music master to the late Emperor Friedrich.

(4) Alexander, distinguished opera singer (tenor), b. April 17, 1825, Packs (Hungary), d. March 14, 1885, Boulogne-sur-Mer, where he had settled in 1860, becoming president of the school of music and founding a musical society. R. made his first appearance in 1843, at Lemberg, as Otello (Rossini); he was engaged at the Court Opera, Vienna, and was also celebrated as a concert vocalist (Beethoven, Schubert). He sang yearly in London, both in concert and opera, from 1851 to 1857. He also wrote some graceful songs.

Reichel, Friedrich, b. Jan. 27, 1833, Oberoderwitz (Lusatia), d. Dec. 29, 1889, Dresden;

from 1850 till 1854 he attended the Teachers' Seminary at Bautzen (pupil of Fr. Wieck, J. Otto, and J. Rietz, Dresden), was for two years elementary teacher at Dresden, and afterwards music-teacher in Poland. From 1857 he lived at Dresden as conductor of several musical societies, and in 1878 became organist and cantor of St. John's Church. R. published part-songs for male voices (Op. 4, 5, 7), motets, studies, and a "Frühlingssymphonie" (Op. 25); in all 32 works. In 1875 his operetta, *Die geängsteten Diplomaten*, was performed at Dresden. Two quartets for strings and an octet for wind-instruments remained in MS.

Reicher-Kindermann, Hedwig, highly gifted dramatic singer, b. July 15, 1853, Munich, daughter of the well-known baritone A. Kindermann (q.v.), wife of the opera-singer Reicher, d. June 2, 1883, Trieste; she sang before her marriage at the Munich Court Theatre, afterwards at the Gärtnerplatz Theater, Munich, (in operetta), then at Hamburg (meanwhile visiting Paris), from 1880-82 at Leipzig, and finally in Neumann's itinerant "Wagnertheater."

Reichert, Matthieu André, distinguished flautist, b. 1830, Maastricht, pupil of the Brussels Conservatoire, became known by extensive concert tours in Europe and America, and published solos for flute.

Reichmann, Theodor, b. March 15, 1849, Rostock, pupil of Elsler and Mantius at Berlin, Röss at Prague, and Lamperti at Milan (baritone). He sang on the stage at Magdeburg, Berlin (Nowack Theatre), Rotterdam, Strassburg, Cologne, Hamburg, and Munich (1874), and was member of the Vienna Court Opera from 1882-89. In 1882 he created the part of Amfortas at Bayreuth. He made prolonged "starring" tours; at present he is engaged at Vienna.

Reid, John, General, a wealthy Scotch musical amateur, who bequeathed his fortune to Edinburgh University on condition that a Chair of Music should be founded (R. professorship), and an annual concert given in his remembrance (R. concert). The R. professors since the foundation (1839) have been: John Thomson, Henry Bishop, H. H. Pierson, John Donaldson, Oakeley, and Fr. Niecks (1892).

Reijnvaan (Reynwaen), Jean Verschuer, Doctor of Law, afterwards organist and chimer of the principal church at Flushing (Holland), b. 1743, Middelburg, d. May 12, 1809, Flushing. He was the first compiler of a musical dictionary in the Dutch language, "*Muzikaal konstwoordenboek*" (1789). Of this first edition there only appeared one volume (A-E), and one part of the second volume; but even the second edition (carefully revised) was not complete, yet went as far as the letter M (a stout volume, 1795). The work is extremely rare, and was praised highly by Fétis. R. wrote besides: "*Catechismus der Muzijk*" (1788). He also

composed 6 violin sonatas, songs ("Mengelgedichten en gezangen op muzijk gebracht"), psalms, motets, etc.

Reimann, (1) Matthieu (Matthias Reymannus), Doctor of Law, and Imperial Councillor to Rudolf II., b. 1544, Löwenberg, d. Oct. 21, 1597; he published two works in lute tablature; "*Noctes musicae*" (1598), and "*Cithara sacra psalmodiæ Davidis ad usum testudinis*" (1603).

(2) Ignaz, b. Dec. 27, 1820, Albendorf (Glatz), d. June 17, 1885, as principal teacher and chorus master at Rengersdorf (Glatz district), pupil of the seminary at Breslau. He was an extraordinarily diligent composer of sacred music. He wrote not less than 74 Masses (18 printed), 24 Requiems (4 printed), 4 Te Deums (3 printed), 37 litanies, 4 oratorios, 83 offertories (48 printed), 50 graduals (40 printed), also many funeral songs, wedding cantatas, Salve, Ave, etc.; also 9 overtures, and other instrumental works.

(3) Heinrich, son of the former, b. March 14, 1850, Rengersdorf (Silesia), was grounded in music by his father, so that he could soon take his place on occasion; he appeared in public several times as pianist or organist. However, he was not allowed to follow his bent, but completed a course at the Glatz Gymnasium, and, by his father's desire, studied philology at Breslau (1870-74). He graduated in 1875 ("*Questiones metricæ*"), passed a brilliant public examination, 1877, and laboured as gymnasial teacher at Strehlen (already in 1876), Wohlau (1878), Berlin (1879), Ratibor (1880), Glatz (1884), and, finally (1885), as director of the Gymnasium at Gleiwitz (Upper Silesia), which post he gave up, however, in consequence of conflicts with the authorities. He went over to the Evangelical Church, and thenceforth dedicated himself entirely to music, which hitherto had always been his faithful companion. Already, as member of the Gymnasium, R. had conducted an orchestral and choral society, and composed choral and chamber music; as a student he had conducted the academical Leopoldina vocal society (he studied industriously, at the same time, under Brosig), and also as a teacher he was active in favour of musical enterprise; he founded and managed a school of singing at Ratibor, with which he performed great oratorios, etc. He made himself known, moreover, as a writer (musical critic to the *Schlesische Zeitung*, 1879-80; studies on "Nomos," 1882; "Prosodien," 1885 and 1886). Since he turned definitely to music, R. has quickly stepped into the foreground of the musical world; he has published vocal and organ compositions (sonatas, studies), and written a biography of Schumann (1887; Peters' Edition). He removed to Berlin in 1887, and there soon became one of the most distinguished musical critics (of the *Allgem. Musik. Ztg.*), received also

a post in the Royal Library; he is at present, in addition, organist of the Philharmonie, and teacher of organ and theory at the combined Scharwenka-Klindworth Conservatorium. In 1895, R. was appointed organist at the Gnadenkirche. The happy combination of thorough musical training with philological erudition gives R. superiority over most of his fellows. As an organ virtuoso he enjoys considerable repute. The following among his writings still deserve mention: "Zur Theorie und Geschichte der byzantinischen Musik" (*Vierteljahrsschr. f. Mus.-Wissensch.* 1889), and the revision of the 2nd vol. of Ambros' "Musikgeschichte" (1892); R. has also published a collection of old songs, "Das deutsche Lied," arranged for concert performance.

Reinecke, (1) Leopold Carl, b. 1774, Dessau, d. Oct. 13, 1820, Güsten, in consequence of an accident to the coach on the return journey from Quedlinburg, where he had attended the performance of Schneider's *Last Judgment*. He was a pupil of Rust and Neumann, was leader at Dessau, and a composer of operas, also orchestral and chamber music.

(2) Carl Heinrich Carsten, b. June 23, 1824, Altona, received a thorough musical training from his father, Joh. Peter Rud. R., an excellent teacher of music (d. Aug. 14, 1883, Altona; published an elementary instruction book, 1834), and gained general knowledge by private instruction at home. In 1843 he made his first concert tour, appearing as pianist with great success in Denmark and Sweden. After a prolonged stay in Leipzig, he again gave concerts in various towns of North Germany and Denmark, and in 1846 was named court pianist to King Christian VIII. of Denmark, which post he occupied up to 1848. He then lived for some time in Paris, became teacher at the Cologne Conservatorium in 1851, filled the post of musical director at Barmen from 1854-59, from 1859-60 that of academical musical director and conductor of the Singakademie at Breslau, and in 1860 became conductor of the Gewandhaus Concerts at Leipzig (from which post he retired in 1895), and, at the same time, teacher at the Conservatorium there (pianoforte, free composition). He is an excellent conductor, a composer of importance, and a distinguished pianist; as an interpreter of Mozart he is probably without a rival. The characteristics of his playing are repose, clearness, neatness; in his almost yearly concert tours he was always received with great enthusiasm, especially in England, Scandinavia, Holland, and Switzerland. R.'s piano compositions reveal in every bar the refined pianist; he has published 4 pf. concertos, a quintet, a quartet, 6 trios, 2 'cello sonatas, 4 violin sonatas, a fantasia for pf. and violin (Op. 160), a flute sonata (Op. 167), pf. sonatas for two and for four hands, and sonatinas; also many smaller pf. pieces, fantasias, caprices, etc. Of his other works

must be mentioned: the grand opera *König Manfred*, the one-act *Der vierjährige Posten*, 2 three-act comic operas, *Auf hohen Befehl* (1886) and *Der Gouverneur von Tours* (1891), the operetta *Ein Abenteuer Händels*, the oratorio *Belsazar*, 2 masses, the music to Schiller's *Tell*, the cantata *Hakon Jarl*, for male chorus, soli, and orchestra; the concert arias, "Mirjams Siegesgesang" (soprano), "Das Hindumädchen" (alto), and "Almansor" (baritone); also the "Flucht nach Aegypten," for male chorus and orchestra; "Sommertagsbilder" (choral work, 1881); the five fairy cantatas: "Schneewittchen," "Dornröschen," "Aschenbrödel," "Vom Bäumchen, das andere Blätter hat gewollt," and "Die wilden Schwäne," for female chorus, soli, and pf.; the cycle, "Von der Wiege bis zum Grabe" (for soli and pf.), 20 canons for three female voices with pf. (Op. 100 and 156); finally, 2 symphonies, the overtures: "Dame Kobold," "Aladin," "Friedensfeier," festival overture (Op. 148), "In memoriam" (introduction and fugue, with chorale for orchestra, to the manes of F. David), "Zenobia," funeral march on the death of the Emperor William I. (Op. 200), a violin concerto, a 'cello concerto, a concerto for harp (Op. 182), 4 quartets for strings. His sonatinas, children's songs, "Musical Kindergarten" (Op. 206), and other pf. pieces are published by Augener & Co., London. The works of R. show the influence of Schumann and of Mendelssohn, with both of whom he was on terms of friendship; but that of Wagner and of Brahms can also be traced. During the last twenty years R. has undoubtedly been the chief figure in the musical world of Leipzig.

Reiner, (1) Jakob, b. before 1560, Altdorf (near Weingarten, Württemberg), d. Aug. 12 1606, at the monastery of Weingarten. He attended the monastery school, Weingarten, and became a pupil of the renowned Orlando di Lasso at Munich, afterwards received the post of teacher of singing at the Weingarten Monastery, and then advanced to the post of chorus director. R. married, and never became a priest. Of his printed works there have been preserved: "Liber cantionum sacrarum" (22 motets a 5 and 6, 1579; 1872 in score by O. Dressler); "Schöne neue deutsche Lieder" (32 a 4 and 5, 1581); "Christliche Gesang, teutsche Psalmen" (15 a 3, 1589); "Selectae piaequae cantiones" (20 motets a 6, 1591); "Cantica sive Mutetae" (29 a 4 and 5, 1595); "Liber Motettarum" (32 a 6 and 8, 1600); "Liber Motettarum" (18 a 6, 1603); "Sacrarum Missarum" (5 a 6, 1604); "Gloriosissimae Virginis . . . Magnificat" (12 a 8, 1604); "Missae tres cum Litanis 8 voc." 1604; "Missae aliquot sacrae cum officio B.M.V. et Antiphonis 3-4, v.," 1608. There are still some songs in manuscript (see *Monatsh. f. Musik. Gesch.*, III. 97.).

(2) Ambrosius, son of the above, b. Dec. 7, 1604, Altdorf-Weingarten, d. July 5, 1672, as

court capellmeister at Innsbruck; he composed motets, psalms, masses, etc.

Reinhard, B. François, music printer at Strassburg at the end of the last, and beginning of this century; he was the first to use stereotype in music printing.

Reinhold, Hugo, gifted young composer, b. March 3, 1854, Vienna, chorister of the court chapel, pupil of the Conservatorium "der Musikfreunde" up to 1874. He has published pf. pieces, songs, a stringed quartet (Op. 18, a major), "Präludium, Menuett und Fuge" for orchestra, a suite for pf. and strings, etc.

Reinholdt, Theodor Christlieb, from 1722-55 cantor at the Kreuzkirche, Dresden, the teacher of Joh. Ad. Hiller, and composer of numerous motets; he died March 24, 1755.

Reinken, Johann Adam, famous organist, b. April 27, 1623, Deventer (Holland), d. Nov. 24, 1722, Hamburg, where he was assistant organist (1658) and successor (1663) to Heintz Scheidemann at St. Katherine's. He was one of the chief representatives of the art of organ-playing in North Germany, which in a somewhat one-sided manner recognised virtuosity. Bach frequently made a pilgrimage from Lüneburg to Hamburg in order to hear R. His works are: "Hortus musicus," for two violins, viola, and bass (lately published by the Dutch "Maatschappij tot bevordering van Toonkunst," Vol. XIV.), "Partite diverse" (ditto, Vol. XIII.). Two "Choralbearbeitungen" and a toccata for organ, also variations for clavier, have been preserved in manuscript.

Reinsdorf, Otto, b. May 28, 1848, Köselitz (Anhalt), d. April 15, 1890, Berlin, studied under Kullak and Wüerst at Berlin. He published, successively, the musical papers: *Tonhalle* (1872), *Musikalische Zentralzeitung* (1873), and *Allg. deutsche Musikzeitung* (1874); they were all brought out at Leipzig, but only the last (under new editorship) continued for any length of time. R. afterwards founded at Vienna an *Illustriertes Musik- und Theaterjournal* (1875-76). As a composer R. showed remarkable talent, but was not sufficiently collected.

Reinthal, Karl Martin, composer of note, b. Oct. 13, 1822, Erfurt, where his father was director of a training institution (the "Martin-Stift" in the "Luther-Haus"). R. studied theology at Berlin, but turned to music and became private pupil of A. B. Marx. A royal grant enabled him to reside in Paris for half a year (1849), and, after that, to study for three years in Rome. On his return from Italy, R. was appointed teacher at the Cologne Conservatorium in 1853, exchanged this post in 1858 for that of town musical director, cathedral organist, and conductor of the cathedral choir, and of the Singakademie (up to 1890) at Bremen; later on he also became conductor of the Liedertafel. R. was appointed royal Prussian musical director,

and in 1882 ordinary member of the Berlin Akademie, receiving in 1888 the title of royal professor. Of his compositions the best known are: the oratorio *Jephtha*, which has been performed by many large societies in his own country and abroad; the "Bismarck-Hymne," which gained a prize; also the choral works: "In der Wüste" and "Das Mädchen von Kolah," the opera *Edda* (Bremen, 1875; Hanover, 1877), a symphony (in D), psalms, songs, songs for male chorus, etc. A second opera, *Käthchen von Heilbronn*, gained a prize at Frankfurt in 1881.

Reischius (Reisch), Georg, Prior of the Carthusian monastery near Freiburg-i.-Br. He wrote "Margarita philosophica," 1503 (republished seven times up to 1534; in Italian, 1599); the fifth book of this work is especially devoted to music.

Reisenauer, Alfred, pianist, b. Nov. 1, 1863, Königsberg, pupil of Louis Köhler and Fr. Liszt, made successful concert tours as early as 1881, but then, for several years, studied law at Leipzig. In 1886 he began anew his concert career, which brought him much recognition and carried him to all parts of the world. He has only published songs ("Wanderlieder").

Reiser, (1) Heinrich, b. May 8, 1805, Gammertingen (Württemberg), lives at Rheinfelden (Aargau). He has written Masses for country choirs, also a pf. Method.

(2) Friedrich Herrmann, son of the former, b. Jan. 20, 1839, Gammertingen, d. Feb. 22, 1879, Rheinfelden, as musical director; he wrote some sacred choral pieces and a pf. Method.

(3) August Friedrich, younger brother of the former, b. Jan. 19, 1840, Gammertingen, studied with his father, from 1880-86 editor of the *Neue Musikzeitung* (Cologne: Tonger); he has composed numerous choruses for male voices (double chorus, "Barbarossa"), two symphonies, an overture, etc.

Reiset, Marie Félicie Clémence, Vicomtesse de Grandval, Mme. de R., b. Jan. 20, 1830, Cours du Bois (Sarthe); she was a pupil of Saint-Saëns, and has composed 9 operas (*Atala*, 1888), besides sacred music and symphonies (pseudonyms: Tesier, Valgrund, Jasper, Banger, etc.).

Reiss, Karl Heinrich Adolf, conductor, b. April 24, 1829, Frankfurt, pupil of Hauptmann at Leipzig, acquired routine and experience as chorus director, likewise as second capellmeister at the theatres of Mayence, Berne, Basle, Würzburg, and in 1854 became principal capellmeister at Mayence, in 1856 second capellmeister at Cassel, and, after Spohr's death, court capellmeister. From 1881-86 he occupied a similar post at the court theatre, Wiesbaden. His opera, *Otto der Schütz*, was performed at Mayence in 1856.

Reissiger, (1) Karl Gottlieb, conductor and composer, b. Jan. 31, 1798, Belzig (near

Wittenberg), d. Nov. 7, 1859, Dresden. He was the son of Christian Gottlieb R. (pupil of Türk; 3 symphonies are published), cantor of that city. In 1811, R. became foundation scholar at St. Thomas's, Leipzig, and had the benefit of instruction from Schicht, who supervised his first compositions. He soon gave up theology, the study of which he had commenced in 1818, and, under Schicht's direction, turned entirely to music. He received a grant for further study at Vienna (1821), where he wrote his first opera, *Das Rockenweibchen* (not produced), and in 1822 appeared at a concert both as singer and pianist. At Munich, where he studied dramatic composition for some time under Winter, he wrote an overture and *entr'actes* to *Nero*, which were produced with success. A fresh and larger grant from the Prussian Government enabled him in 1824 to travel to Italy for the purpose of study. In 1825 he returned to Berlin, and, under high authority, he worked out his plan of a Conservatorium, which, however, was not carried into execution. He had been for a short time teacher at the Royal Institution for Church Music, when he was called to The Hague to organise the Conservatorium (1826), at the present day in full prosperity under the direction of Nicolai. Soon afterwards he was appointed musical director of the German Opera at Dresden as successor to Marschner (q.v.), and after he had given proofs of his ability he received the post of court capellmeister, and also conducted for a time the Italian Opera as Morlacchi's deputy. R. was a prolific, but not original, composer; his works are now almost all forgotten, only the overture to the *Felsenmühle* is still occasionally to be seen on a programme. His name became most popular through a waltz, published in later editions, without his consent, under the title "Weber's Last Thought" ("Webers letzter Gedanke"). R. wrote also the operas:—*Der Ahnenschatz* (1824, not produced), *Yelva* (melodrama), *Libella*, *Die Felsenmühle von Etalieres*, *Turandot*, *Didone abbandonata*, *Adele de Foix*, *Der Schiffbruch der Medusa*, and an oratorio, *David*. For the Church he wrote 10 grand Masses, psalms, hymns, vespers, etc.; for orchestra and chamber: a symphony, an overture, a concerto for flute, a concertino for clarinet, a quintet for strings, 8 quartets for strings, a pf. quintet, 6 pf. quartets, 27 pf. trios, 2 violin sonatas, a clarinet sonata, 2 pf. sonatas for four hands and 3 for two hands, and a great number of rondos, variations, and pieces for pf. alone (Op. 62, 12 *valse brillantes*, including the "Letzter Gedanke Webers," though not marked as such); likewise a great number of songs, some of which became popular.

R.'s brother, (2) Friedrich August, b. July 26, 1809, Belzig, d. March 2, 1883, Frederikshald, also attended the St. Thomas's School under Schicht and Weinlig, began to study theology at Berlin, but, on the advice of Zelter,

made a serious study of counterpoint under Dehn, and then became conductor at the Christiania Theatre from 1840–50; and later on military bandmaster at Frederikshald (Norway). Like his brother, he attempted nearly every branch of composition, and has written, especially, a great number of songs.

Reissmann, August, a most prolific writer on music, and of music, b. Nov. 14, 1825, Frankenstein (Silesia), pupil of Cantor Jung in his native town, received further training at Breslau from Mosewius, Baumgart (theory), Ernst Leopold Richter (piano and organ), Lüstner (violin), and Kahl ('cello). He lived from 1850–52 at Weimar, where he commenced his literary activity, then for several years at Halle-a.-S., from 1863–80 at Berlin, where from 1866–74 he lectured on the history of music at the Stern Conservatorium, from 1880 at Leipzig, afterwards at Wiesbaden; he now lectures at Berlin. In 1875 he took his degree of Dr.Phil. Speaking relatively, R.'s most meritorious work is one of his earliest writings: "Das deutsche Lied in seiner historischen Entwicklung" (1861; 2nd revised edition as "Geschichte des deutschen Liedes," 1874). His other historical works consist of clever compilations or extracts from original studies by others. He wrote: "Von Bach bis Wagner; zur Geschichte der Musik" (1861); "Allgemeine Geschichte der Musik" (1863–65, 3 vols.); "Allgemeine Musiklehre" (1864, 2nd ed. 1874); "R. Schumann" (1865, 3rd ed. 1879); "Lehrbuch der musikalischen Komposition" (1866–71, 3 vols.); "Grundriss der Musikgeschichte" (1865); "Felix Mendelssohn-Bartholdy" (1867, 2nd ed. 1872, 3rd ed. 1893); "Franz Schubert" (1873); "Die Königliche Hochschule für Musik in Berlin" (1875, pamphlet); "Leichtfassliche Musikgeschichte in zwölf Vorlesungen" (1877); "Joseph Haydn" (1879); "Illustrierte Geschichte der deutschen Musik" (1880); "Die Oper in ihrer kunst- und kultur-historischen Bedeutung" (1885); "Joh. Seb. Bach" and "G. F. Händel" (both in 1881); "Gluck," "Weber" (1882). In addition, R. published (1870) Gathy's "Musikalisches Konversationslexikon," revised by W. Lackowitz, and in 1876 edited Mendel's "Musikalisches Konversationslexikon," the last five volumes of which appeared under his direction, after he had already had a large share in the first six volumes. His latest publications are the supplement to the "Konversationslexikon" (1881), and an epitome of the work in one volume, "Handlexikon der Tonkunst" (1882). The following are concerned with practical music: "Katechismus der Gesangskunst" (1853, based on Sieber); "Klavier- und Gesangsschule für den ersten Unterricht" (1876, 2 parts). The compositions of R. consist of 3 operas: *Guðrun* (Leipzig, 1871), *Das Gralspiel* (not produced), *Die Bürgermeisterin von Schornsdorf* (Leipzig, 1880), a ballet, *Der Blumen Rache* (1887), a choral work with declamation,

solí, and pf., "König Drosselbart" (1886); the dramatic scenes *Drusus* and *Lorelei*; an oratorio, *Wittekind* (1888), a violin concerto, a suite for violin and orchestra, two violin sonatas, pf. pieces, and many songs, duets, terzets, and part-songs. None of these works, however, has hitherto in any marked degree attracted the attention of the musical world.

Reiter, Ernst, b. Wertheim (Baden), 1814, d. July 14, 1875, Basle. He was professor of the violin at Würzburg Conservatorium, afterwards musical director at Strassburg, and from 1841 musical director at Basle. He wrote 2 quartets for strings, several sets of songs, an oratorio, *Das neue Paradies* (1845), and an opera, *Die Fee von Elverhoe* (Wiesbaden, 1865).

Relfe, John, theorist, b. about 1766, London. He was for many years member of the king's band, and was highly esteemed in London as a teacher of music. He published: "Guida armonica" (in parts, 1798; 2nd edition as "The Principles of Harmony," 1816); "Remarks on the Present State of Musical Instruction" (1819); and "Lucidus Ordo" (1821). The last two works contain propositions for a reform of thorough-bass figuring, by which the root chord (marked *r* = *radix*) was to be distinguished from the inversions (marked ' and "). He also published pf. sonatas for two and for four hands.

Religioso (Ital.), religious, devout.

Reilstab, (1) Johann Karl Friedrich, writer on music, b. Feb. 27, 1759, Berlin, d. there Aug. 19, 1813. He received a thorough training in music from F. Agricola and Fasch, but after his father's death was obliged to continue the printing business of the latter. He established a music printing and publishing department, also a musical lending library, and in 1787 started regular concerts for amateurs, which, however, soon came to an end. During the war of 1806 he lost all his property, so that he was compelled to give lessons in music. R. composed marches, dances, songs, also several cantatas, a Mass, a Te Deum, and an opera (not produced). For a long period he wrote critical notices for the *Vossische Zeitung*, and published "Versuch über die Vereinigung der musikalischen und oratorischen Deklamation" (1785); "Anleitung für Klavierspieler, den Gebrauch der Bachschen Fingersetzung, die Manieren und den Vortrag betreffend" (1790); also a critical pamphlet: "Ueber die Bemerkungen eines Reisenden (Reichardt), die berlinischen Kirchenmusiken, Konzerte, Opern und die königliche Kammermusik betreffend" (1789). Of his three daughters the eldest, Karoline (b. April 18, 1794, d. Feb. 17, 1813), was a highly-gifted singer; the other two were able pianists.

(2) Heinrich Friedrich Ludwig, son of the former, b. April 13, 1799, Berlin, d. there Nov. 27, 1860; the well-known novelist, who was

at first artillery officer, then teacher of mathematics and history in the Brigade School, Berlin; he retired from the army in 1821, and lived at Frankfurt-on-the-Oder, Heidelberg, Bonn, etc., until in 1823 he definitely settled in Berlin, where in 1826 he undertook the editing of the *Vossische Zeitung*, and wrote the musical criticisms. R. attracted considerable notice by his satirical account of the triumph of Sontag: "Henriette, oder die schöne Sängerin, eine Geschichte unsrer Tage von Freimund Zuschauer" (1826), also by his controversy with Spontini, "Ueber mein Verhältnis als Kritiker zu Herrn Spontini . . . nebst einem vergnüglichen Anhang" (1827). His imprudent conduct in both matters resulted in imprisonment. He published besides, "Franz Liszt" (1842), "Ludwig Berger" (1846), "Die Gestaltung der Oper seit Mozart" (1859). From 1830-41, R. edited a musical paper of his own, *Iris im Gebiet der Tonkunst*; and he contributed many biographical and critical articles to the *Berliner Musikalische Zeitung* and to the *Neue Berliner Musikzeitung*, and especially to Dehn's *Cäcilia*; these were in part republished in his "Gesammelte Werke" (1860-61, 24 vols.).

Rembt, Johann Ernst, organist at Suhl, where he was born, 1749, and died Feb. 26, 1810; he published 6 organ trios (1787), 50 fuguetas a 4 (1791): many organ pieces remain in manuscript.

Remenyi, Eduard (Hoffmann, called R.), famous violinist, b. 1830, Heves (Hungary), pupil of the Vienna Conservatorium, took part in the insurrection of 1848, and had to leave the country. In America he became an excellent violinist, and returned in 1853 to Europe, went first to Liszt at Weimar, and afterwards to London, where he was appointed solo violinist in the royal band. After 1875 he lived in Paris, whence he made concert tours as far as the Cape (1888-90).

Remi d'Auxerre (Remigius Altisiodorensis), learned monk at Auxerre, 893 at Rheims, finally at Paris. He wrote a commentary to Martinianus Capella, which Gerbert reprinted in the first volume of the "Scriptores."

Remmers, Johann, b. Jan. 12, 1805, Jever, d. Jan. 28, 1847, The Hague, an able violinist, pupil of Edward Rietz. He was imperial chamber musician at Petersburg, but was mostly on tour.

Remmert, Martha, able pianist, b. 1854, Grossschwein (near Glogau), pupil of Kullak, Tausig, and Liszt. She lives in Berlin.

Rémusat (Rémuzat), Jean, celebrated flautist (opponent of the Boehm flute), b. May 11, 1815, Bordeaux, d. Sept. 1, 1880, Shanghai. He was a pupil of Tulou, was for some time solo flautist at the Queen's Theatre, London, and composed a flute Method and a number of solo pieces, duets, etc., for flutes, flute and violin, and so forth. His brother Bernard Martin,

b. Feb. 4, 1822, Bordeaux, was also a performer on the flute.

Remy, W. A. (See MAYER, 2 [Wilhelm].)

Rénard, Marie, esteemed operatic singer (soubrette), b. Jan. 18, 1864, Graz, made her *début* there in 1882. She was engaged at first at the Prague Landestheater, from 1885-88 at the Berlin Court Opera, and since then has been member of the Vienna Court Opera.

Rendano, Alfonso, pianist, b. April 5, 1853, Carolei (near Cosenza), pupil of the Conservatorio of Naples and of Thalberg, also for a short time of the Leipzig Conservatorium. He appeared with success as concert player at Leipzig, London, and Paris. In Italy R. is looked upon as one of the best pianists.

Renner, Joseph, teacher of music, b. April 25, 1832, Schmatzhausen (near Landsbut, Bavaria), d. Aug. 11, 1895, Ratisbon; he studied under Mettenleiter and Proske, was director of an institute of music at Ratisbon, and conductor of the Madrigal Quartet established by him in that city. R. became known by his attempt to revive the German madrigals of the 16th century; he published a series of collections of them.

Repeating is the term applied to those mixed stops in the organ which do not produce the same overtones throughout the whole compass of the keyboard, but as the pitch rises, lower ones; for example, when a mixture gives on C the tones $c' g' c'' g''$ (4th, 6th, 8th, 12th overtones, but on c'' , not $c^{iv} g^{iv} c' g'$, but rather $c''' g''' c^{iv} g^{iv}$ (2nd, 3rd, 4th, 6th overtones). (Cf. MUTATION STOPS.)

Repercussa (namely, *vox*, Lat.), a repeated note: (1) Term for the *Bivirga* (*Distropha*) and *Trivirga* (*Tristropha*) of neume writing.—(2) In Gregorian Song, a term for the notes of a mode which frequently recur, and which are characteristic of that mode (in the 1st, 4th, and 6th Church Modes, *a*; in the 2nd, *f*; in the 3rd, 5th, and 8th, c' ; in the 7th, d').

Repercussion (Lat. *Repercussio*, "renewed striking"), (1) same as REPERCUSSA, (2).

(2) In fugue a term applied to the appearance of the theme successively in all the voices.

Repetition Action (double échappement). (See ERARD and PIANOFORTE.)

Repetition, Signs of. (See REPRISE.)

Reprise (Fr.), "repetition"; name of the usual sign of repetition:

The R. has a special meaning in a movement in sonata form, in which it divides the first (exposition of the themes) from the development section.

Requiem, the name of the Mass for the dead (*Missa pro defunctis*), on account of the Introit beginning "Requiem æternam dona eis, domine." The various sections of the R. are as follows: Introit, *Kyrie*, Gradual (with the tractus "Absolve" and the sequence *Dies iræ*); Offertory, *Domine Jesu Christe*; *Sanctus* and *Benedictus*; *Agnus Dei*, and Communion *Lux æterna*. The *Gloria* and *Credo*, principal sections of the ordinary Mass, are thus wanting.

Resch. (See GRAPHÜS.)

Reservoir (Ger. *Magazinbalg*) is the name given to that part of the bellows in the organ and similar instruments (harmonium, &c.) in which the wind is stored up; it is supplied by *feeders*. The upper and the under plates of the R. are in horizontal position to each other.

Resolution is the technical expression for the progression of dissonant chords. (Cf. DISSONANCE.) There is (1) the *appoggiatura-resolution*, when the note or notes forming the dissonance or dissonances—i.e. those which do not belong to the clang in whose sense the chord is conceived (see CLANG)—move to notes which do belong to that clang:

A kind of *appoggiatura-resolution* occurs also when in chords which are capable of more than one explanation, one or more notes progress so that a new meaning must be given to the chord in place of the original one, for example:

The chord of the seventh, c, e, g, b in the key of *c* major, is certainly regarded as a chord of *c* major disturbed by the dissonant note b . But the resolution into the *E* minor chord is, nevertheless, an *appoggiatura-resolution*, for c, e, g, b can, in fact, be taken as a chord of *E* minor disturbed by c . In such cases there is then no actual progression, but an ambiguity which, especially for modulation, is of great importance.—(2) A *resolution by progression* takes place when a chord, the consonance of which is disturbed by a foreign element, passes to a clang which has different meaning from the first one; or in the case of an *appoggiatura* dissonance, when the progression of the part takes place which, had the clang remained, would have removed the dissonance, but at the same time several parts progress, so that the new chord must be understood as relating to another clang:

At I, the dissonance of the *C major* chord with major seventh is resolved into the chord of *F major*; while at II, the appoggiatura fourth *f* certainly moves to the third *e*, but the other parts progress at the same time to the chord of the seventh on A. A distinction is also made between a *natural* and a *deceptive* progression; by the former an expected, by the latter, an unexpected R. is understood. The appoggiatura resolutions, for example, are natural resolutions when they take place into the consonance of the clang in which the dissonant chord was conceived; and there are many other natural resolutions by progression, as, for example, at I. above. Deceptive progressions are specially those which, in place of an expected concluding consonant chord, either give this expected chord with a dissonance (hence disturbing only so far as its cadential meaning is concerned; cf. CLOSÉ), or some other chord other than the expected consonant or dissonant chord. A *delayed* R. takes place when the part progression belonging to the natural resolution of the dissonance occurs only after the passage of the other parts through another chord. Compare also what is said under "Tonality" and "Modulation" respecting the meaning of the succession of consonant chords.

Responsorium (Lat.), one of the oldest forms of Roman Catholic Church Song, allied to the antiphon, not, however, of Eastern, but of Italian origin. (See ANTIPHON and GRADUALE.)

Rest (Ger. *Pause*, from Gk. *παύειν*, "to cease") is the name given to the occasional silence of various, or of all the parts of a composition (Lat. and Ital. *Pausa*; Fr. *Pause*, *Silence*). The importance of rests was known to Greek theorists; catalectic metres (incomplete at the end, stopping prematurely) have, in their opinion, a rest at the close, and procatlectic (incomplete at the commencement, beginning too late) have, on the other hand, a rest at the beginning. The Greek sign for a rest, for the *protos chronos* (the indivisible short) was a Lambda Λ (= *ἄημα*); for longer rests Δ (two times), Ἀ (three times), Ἀ (four times), and Ἀ (five times). Neume notation appears to have had no rest signs (?). In the primitive, older notations of the Troubadours and Minnesingers, rest signs are, for the most part, lacking, and have to be filled up according to the metre of the poem. (Cf. Riemann, "Studien zur Geschichte der Notenschrift," p. 216, etc.) On the other hand, rests were indispensable to music in several parts; in the oldest writers of mensurable music (12th to 13th century) we therefore find, for all the note values in use, corresponding rests: (a)

pausa longa recta, afterwards called *pausa longa imperfecta*, of the value of a Long (double); (b) *pausa longa perfecta*, or *pausa modi*, of the value of a perfect Long;

(c) *pausa* (simply), of the value of a Breve, our double-bar rest; (d) *semipausa*, of the value of a Semibreve, our whole-bar rest. When the Minim came into use, there was at first perplexity; but it was settled that a rest of two-thirds of a space should answer to a Semibreve, and, on the other hand, one of one-third of a space, to a Minim. Philipp de Vitry proposed a better plan, viz. to let the Minim rest (our half-bar rest) lie on the line (e). The remaining signs then became: (f) *suspirium* (the French "soupir"), answering to the Semiminim (Crotchet); (g) *semisuspirium* (*demi-soupir*), answering to the *Fusa* (Quaver). When the change to white notes sprang up in the 14th century, an unpleasant contradiction was discovered between notes and rests (quavers with single tail, quaver rests with double tail, and so on):

NB. NB. NB.

Then the tails for the smaller values were reversed, giving rise to the rest signs now in use. The modern forms are placed (in the table below) side by side with the older forms (the old form for the crotchet rest is still used in England and France):

Rests for a considerable number of bars are, as

a rule, abbreviated ; but, whenever there is a change of time or tempo, subdivided as follows:

The *aesthetic value* of the rest varies according to its position in the bar; it may be defined generally as the *negative equivalent* of the *tone-value which it represents*. A rest occurring in place of a note on the principal beat of a bar produces a deeper effect than one in place of a note on an unaccented beat. A rest in the *crescendo* section of a phrase is more intense than one in the *diminuendo* section. This is especially the case with rests which eliminate the beat (count-rests), whereas those which only abbreviate the beat, and, *a fortiori*, those which merely separate notes for staccato playing, are of only moderate effect. (Cf. Riemann, "Dynamik und Agogik," p. 137, etc.)

Restrictio (Lat.). (See STRETTO.)

Reszke. (See DE R.)

Retardatio (Lat., "delay"). (See SUSPENSION.)

Retro. (See RECTE.)

Reubke, Adolf, famous organ-builder at Hausneindorf (near Quedlinburg), b. Dec. 6, 1805, Halberstadt, d. there March 3, 1875. He built, among other organs, those of the cathedral (88 stops) and St. James's Church (53 stops) at Magdeburg, also of the Marienkirche at Kyritz.—Of his three sons, the eldest, Julius, b. March 23, 1834, Hausneindorf, d. June 3, 1858, Pillnitz, was a gifted composer and pianist; after his death there appeared in print a sonata for piano, one for organ (the 94th Psalm), pf. pieces and songs.—The second, Emil, b. 1836, d. 1885, devoted himself to organ-building, and in 1860 became associated with his father, under the title "R. u. Sohn," and after 1872, without the firm changing name, became sole proprietor. He introduced many highly ingenious improvements in organ mechanism into various new organs (Röhrenpneumatik). The present proprietor of the business is Ernst Röwer.—The youngest son of Adolf R., Otto, b. Nov. 2, 1842, is a performer on the organ and pianoforte, and lives at Halle as conductor and teacher of music, and has been since 1892 musical director at the University.

Reuling, Ludwig Wilhelm, b. Dec. 22, 1802, Darmstadt, d. April 29, 1879, Munich; he was for a long time capellmeister at the Vienna Court Opera, and from 1832–46 wrote 37 operettas, operas (*Alfred der Grosse*, 1840) and 17 ballets, which (with exception of a few not performed) were produced at the Josephstädter and Kärntnerthor theatres, Vienna.

Reuss, Heinrich XXIV., Prince of R.-Köstritz, b. Dec. 8, 1855, Trebschen (near Züllichau, Brandenburg); he studied with his father (Heinrich IV. Reuss), Witting (Dresden), Herzogenberg and Rust (Leipzig, where he graduated in 1882). R. is a talented and industrious composer (2 string quartets, 2 string quintets, in F minor [2 violas] and A major [2 'celli], a trio [E minor], a violin sonata [G minor], 2 symphonies [E7 major and C minor], and a mass [1892]).

Reuss, Eduard, b. Sept. 16, 1851, New York, studied under Ed. Krüger at Göttingen (1871–75) and Liszt. R. has been since 1880 a teacher of music at Carlsruhe.

Reutter, (1) Georg (senior), b. 1656, Vienna, d. there Aug. 29, 1738; he was theorboist in the court band from 1697–1703, from 1700 organist, later on also second capellmeister at the "Gnadenbild," in 1715 principal ("Essential") capellmeister at St. Stephen's, and in the same year, cathedral capellmeister. From 1700 he was likewise court and chamber organist.

His son—(2) **Johann Adam Karl Georg**, b. April 6, 1708, Vienna, d. there March 12, 1772; as early as 1727 he composed an oratorio (*Abel*) and, by order of the court, a festival opera (*Archidamia*), and became court composer in 1731. In 1738 he succeeded his father as "Es-

sential" capellmeister at St. Stephen's, in 1746 he became second (at the "Gnadenbild"), and in 1747, court capellmeister in addition (jointly with Fredieri, dividing the duties), and sole court capellmeister in 1757. In 1740 he was made a nobleman (Edler von R.). He composed 31 operas and serenades, 9 oratorios, several cantatas, masses, motets, etc.; they are of little artistic value. As conductor of the court band he was unfortunate, for under his direction matters sank to a very low level; it was certainly his fault only in a small degree, as the staff of singers was considerably reduced. It was he who drew the boy Haydn (q.v.) to Vienna and treated him so badly. (Cf. L. Stollbrock's study on R. in the *Vierteljahrsschrift f. Mus.-Wiss.*, 1892.)

Rey, (1) Jean Baptiste, conductor and professor of harmony, b. Dec. 18, 1734, Lauzerte (Tarn-et-Garonne), d. July 15, 1810, Paris, won distinguished fame as conductor at the theatres of Toulouse, Montpellier, Marseilles, Bordeaux, and Nantes, in 1776 became conductor of the Grand Opéra at Paris, and was highly successful there for over 30 years; he was, at first, second conductor under Francoeur, but in 1781 succeeded the latter, and also, from 1781–85, conducted the *Concerts Spirituels*. In 1779 Louis XVI. named him conductor of his chamber music, with a salary of 2,000 francs. The Revolution cost him his post; but in 1792 he was elected member of the executive committee of the Grand Opéra, and in 1794, professor of harmony at the Conservatoire. As he was a supporter of Rameau's, and an opposer of Catel's system, also an intimate friend of Le Sueur, he received a pension when the staff was reduced in 1802, but in 1804 was appointed conductor by Napoléon. R. composed several operas, and completed Sacchini's *Arvire ed Evelina*. R.'s brother, Louis Charles Joseph, was for forty years 'cellist in the orchestra of the Grand Opéra. Not to be confused with the above are—

(2) Jean Baptiste, 'cellist and theorist, b. about 1760, Tarrascon, from 1795–1822 'cellist at the Grand Opéra. He published "Cours élémentaire de musique et de pianoforte" and "Exposition élémentaire de l'harmonie: théorie générale des accords d'après la basse fondamentale" (1807).

(3) V. F. S., official Receiver, and, like the other Reys, a supporter of Rameau's system of harmony. He wrote "Système harmonique développé et traité d'après les principes du célèbre Rameau" (1795), likewise "L'art de la musique théorico-physico-pratique" (1806).

(4) See REYER.

Reyer, Louis Etienne Ernest (Rey; named R.), distinguished composer and writer on music, b. Dec. 1, 1823, Marseilles. As a child he attended the "Barsotti" free school of music there. At first he had no thoughts of a

musical career, and went at the age of sixteen as a French Government official to Algiers, but continued practising the pianoforte; he also began to compose, without, however, any previous practice in writing. It was only in 1848 that he turned definitely to music, went to Paris and became a pupil of his aunt, Mme. Farrenc (q.v.). In 1850 R. appeared before the public with his ode-symphony, "Le Selam" (libretto by Gautier), a pendant to, but by no means an imitation of, David's "Le Désert," and in 1854 with his first opera, *Maître Wolfgram* (in one act), which was produced at the Théâtre Lyrique. There followed *Sacountala* (ballet, 1858), *La Statue* (three acts, Théâtre Lyrique, 1861, his best work); *Erostrate* (two acts, Baden-Baden, 1862; Paris, 1871). His grand opera in five acts, *Sigurd*, which had long been completed, was performed for the first time at Brussels in 1884 (afterwards also in London and Paris). His most recent grand opera, *Salammbô*, also found its way only *via* Brussels (1890) to Paris (1892). Of R.'s earlier works may still be named a cantata, *Victoire* (produced at the Grand Opéra, 1859), some sacred vocal works, and numerous songs. The French regard R. as one of the most important representatives of the young French (romantic) school. R. also claims attention as an author; his *feuilletons* for the *Journal des Débats* have marked him as a worthy successor to Berlioz and D'Ortigue. A collection of his essays appeared as "Notes de Musique" (1875). He became librarian of the Grand Opéra, and in 1876 was elected at the Académie in the place of David.

Reznicek, Emil Nikolaus, b. May 4, 1861, Vienna, gifted Czechish opera composer (*Jungfrau von Orleans*, Prague, 1887; *Satanella*, ditto, 1888; *Emmerich Fortunat*, ditto, 1889).

Rf. (See RINFORZANDO.)

Rhapsodie (from *ῥάπτειν*, "to sew," "to patch," and *ῥῆμα*, "song") was the name given in ancient Greece to fragments of great epic poems, which were sung by the rhapsodes to the accompaniment of strings. Whether the rhapsode was originally the author of the rhapsodie is perhaps difficult to determine, though at present there is a tendency to answer the question in the negative. In modern music by R. is understood, for the most part, an instrumental fantasia made up of national melodies; for example, Hungarian, Spanish, Norwegian, Slavonic Rhapsodies (Liszt, Raff, Lalo, Dvorák). Brahms, departing, though quite correctly, from usual custom, named one of his finest vocal works a R. (Op. 53, "Fragment [!] from Goethe's Harzreise"); but less correctly some pf. pieces of his own creation (Op. 79).

Rhau (Rhau), Georg, composer, theorist and music printer, b. 1488, Eislefeld (Franconia), d. Aug. 6, 1548, Wittenberg. In 1519 he was cantor of the St. Thomas's School, Leipzig, where, on the occasion of the disputation be-

tween Luther and Eck, he produced a Mass a 12 (!) and a Te Deum of his own composition. In 1524 R. established a music-printing office at Wittenberg, at which were published especially compositions by Protestant composers. He wrote an "Enchiridion musices," of which the first part (concerning *Musica Choralis*) appeared in 1518, the second (concerning *Musica Mensuralis*) in 1520; both were frequently republished. That R. was also held in esteem as a composer is shown by the fact that S. Heyden has included in his "Ars canendi" one of R.'s compositions a 6. The "Bicinia Gallica, Latina et Germanica," published by R. in 1544, contains the oldest notation of the "Ranz des Vaches."

Rheinberger, Joseph Gabriel, b. March 17, 1839, Vaduz (Liechtenstein), where his father was financial agent to the Elector. He showed remarkable talent at a very early age, for at seven he played well on the organ and tried his hand at composition. After preparatory training at Feldkirch, he went to the Royal School of Music at Munich (1851-54), remaining in this city as teacher of music; in 1859 he became teacher of theory at the Royal School of Music. He was *Repetitor* of the court opera, 1865-67, and in 1867 was named royal professor and inspector of the Royal School of Music, and from 1877, royal court capellmeister (conductor of the performances of the royal chapel choir, an institution similar to that of the Berlin cathedral choir, and devoted, especially, to the practice of old vocal music). R. is one of the most distinguished living composers, both of instrumental and vocal music. The following works deserve special mention: the "Symphonische Tongemälde Wallenstein" (Op. 10), a symphonic fantasia, 2 Stabat Maters, the romantic opera *Die sieben Raben* (Op. 20), the oratorio *Christophorus*, "Montfort" (for chorus, soli, and orchestra), music to *Der wunderthätige Magus* of Calderon (Op. 30), 3 pf. sonatas, amongst them the symphony sonata (Op. 47); a grand Requiem (Op. 60), also one a *capella*, theme with 50 metamorphoses for strings (Op. 61), 3 trios, a pf. quartet, a nonet for flute, oboe, clarinet, bassoon, horn, violin, viola, 'cello, and bass (Op. 139), a string quartet (Op. 147), 17 organ sonatas, an organ concerto with strings and 3 horns (1885), pieces for organ and pf.; a comic opera, *Des Tümelers Töchterlein* (Op. 70); a vaudeville, *Das Zauberwort* (Op. 153); the choral works, "Toggenburg" (Op. 76), "Klärchen auf Eberstein" (Op. 97), "Das Thal des Espingo," for male chorus with orchestra, and "Wittkind" (Op. 102); a pf. concerto (Op. 94), several masses, among them one for two choirs (Op. 109); many hymns and other sacred vocal compositions, songs, pf. pieces, the overture to *Demetrius* (Op. 110), etc. The works of R. are stamped with a character of their own; a certain severity and sharpness give to them somewhat of a classical flavour.—His wife, Franziska (as poetess, known as F.

von Hoffnas), b. Oct. 18, 1822, d. Dec. 31, 1892, Munich.

Rhythm, the art of, is concerned with the various durations of sounds (longs and shorts) and of the artistic effects resulting therefrom. It must, therefore, be clearly distinguished from the art of *Metre*, whose object is the varied weight of sounds. Like harmony and melody, both are, indeed, inseparable. An intelligent art of melody must take into consideration the harmonic meaning of sounds, and in a similar manner, one of rhythm, without regard to the metrical position of the tone-duration values, is unprofitable, nay, inconceivable. An esthetic investigation into the effects of natural (not cultivated) melody, *i.e.* of constant, not graduated, changes of pitch, is soon exhausted; so, likewise, when inquiring into the effects of the purely rhythmical, *i.e.* the alternation of long and short, without symmetrical order. The essential point can be defined in a few words, *viz.* that the longs, as opposed to the shorts, have a calming effect; and the shorts, as opposed to the longs, an animating effect. A succession of a considerable number of shorts is restless, exciting; the succession of a number of longs, stately, dignified, even burdensome, oppressive. The ancients, who did not treat separately the theory of accented and unaccented time-values, as we have expounded the matter under *METRE, ART OF*, but only in conjunction with that of longs and shorts, established *verse feet* as elements of their metrical-rhythmical theory; this we must denominate as bar schemes (metrical formations of the value of a bar), though already filled out with a definite R.:

Trochee		(long, short)
Iambus		(short, long)
Dactyl		(long, short, short)
Amphibrach		(s. l. s.)
Anapest		(s. s. l.)
Spondee		(l. l.)
Pyrrhichius		(s. s. s.)
Ionicus		
Choriambus		
Molossus		
Antispast		
Creticus		<i>etc.</i>

Some of these, however, are practically identical, *viz.* the trochee with the iambus, the dactyl with the amphibrach and the anapest, in all of which the *ictus*, *i.e.* the point of stress always falls on the longs. And since with the ancients a trochaic or iambic verse measure did not require words each of which formed a

trochee or an iambus, trochaic and iambic series only differ at the commencement. The same holds good for the dactyl, amphibrach, and anapest, which, expressed in modern language, only differ through the absence or compass of the up-beat. But passing from the ancients, whose terminology is only introduced here because the names of the verse feet are pretty generally used now, the simplest rhythmical types are as follows:—

(a) Movement in equal values, only articulated by accentuation with its slight extension (prolongation of sound):

If the extension be double the length, we have the original form of triple time. (*See METRE, ART OF.*)

This once obtained, the following formations in equal values are possible:

mostly mixed:

All these can begin with an accented beat (*cf. PHRASING*), but then change, as a rule, into an up-beat form:

Measures containing more than three beats are only compounded of two or three duple or triple ones, and therefore present nothing new.

(b) Through subdivisions of an unaccented beat the following rhythms occur:

or with feminine ending (*cf. PHRASING*):

(often alternating with above).

somewhat more rare:

(c) Drawing together of an accented beat with the unaccented one which follows, and *duple subdivision* of the third unaccented beat (only in

triple measure):  seldom feminine:

(d) Prolongation of the accented beat into the time-value of the unaccented one which follows (by means of a dot):

(e) Drawing together of both unaccented beats in triple measure:

This unnatural prolongation of the unaccented beat as opposed to the accented gives strained meaning to it; yet on that very account it is, occasionally, of characteristic effect (similar to syncopation).

(f) Drawing together of the accented beat with the preceding unaccented one (syncopa-

tion):  and

cases a *sforzato* is required for the anticipated point of stress, i.e. for the entry before its time of the sound falling on the point of stress.

(g) Syncopated drawing together of subdivisions:

(h) Duple and triple subdivision mixed (triplets, duosets):

With these the various types are well-nigh exhausted; any other possible ones are the result of combining some of the above, also transferring them to values of higher or lower order.

But an important *role* is played by:

(i) Rests (cf. *REST*), for example:

(cf. Riemann: "Musikalische Dynamik u. Agogik," 1884.)

Rhythm (Ital. *Ritmo*). (cf. RHYTHM, ART OF.) The term R. is also applied to the larger metrical formations. *Ritmo di tre battute* (three-bar R.), for instance, means that not two or four, but three bars form a higher metrical unity, one great bar.

Rhythmical Value Signs are indispensable for music in several parts of every kind except that of note against note, since, to avoid confusion, the relations of the tone-lengths of the various parts must be clearly established. Signs of this kind sprang into existence, therefore, at the same time as the commencement of unequal counterpoint (12th century). The Greeks employed (or assumed) the R.V. S \cup , i.e. short, single time (*chronos protos*); \cup , i.e. two times (*disemos*); \cup , i.e. three times (*trisemos*); \cup , i.e. four times (*tetrasemos*); \cup , i.e. five times (*pentasemos*). Neume (q.v.) writing had no R.V. S.; or, at any rate, no knowledge of any such has been preserved. It is not yet settled whether the R.V. S. of Tablature (q.v.) preceded or followed those of mensural notation. The signs of the notation at present in use, evolved from those of mensural notation, are: \square or \square , note occupying two bars (*Brevis*, rare); \square whole bar note (Fr. *Ronde*; Ital. and Eng. *Semibreve*); \square minim (Fr. *Blanche* or *Minime*; Ital. *Bianca* or *Minima*); \square crotchet (Fr. *Noire*, *Semiminime*; Ital. *Semiminima*, *Nera*); \square quaver (Fr. *Croche*; Ital. *Croma*); \square Semiquaver (Fr. *Double Croche*; Ital. *Semicroma*); \square Demisemiquaver (Fr. *Triple*

Croche; Ital. *Bis croma*), etc. The rests (q.v.) are also R.V.S. (Cf. also NOTES.)

Ribattuta (Ital. "re-striking"), a term formerly applied to the slow but gradually hurried alternation of a sound with its upper accessory note:

Ribeca, Ribeba. (See REBEC.)

Ribs (Ger. *Zargen*; Fr. *Éclisses*), the name given to the sides connecting the back and belly of stringed instruments, guitars, etc.

Riccati, Giordano, Count, mathematician and musical theorist, b. Feb. 28, 1709, Castel Franco (near Treviso), d. July 20, 1790, Treviso. He wrote "Saggio sopra le leggi del contrappunto" (1762); "Delle corde ovvero fibre elastiche" (1777), and a series of scientific treatises on problems in acoustics, in Cologera's "Raccolta d'opuscoli scientifici," etc. (in Vol. 19), in the "Memorie di matematica e fisica della società italiana" (1782), and the "Nuovo giornale de' letterati d'Italia," 1777 to 1789, with explanations of Rameau's system of harmony (21st Vol.), Tartini's (22nd Vol.), and Vallotti's (23rd Vol.).

Ricci, (1) Luigi, one of the most celebrated modern Italian composers of operas, b. July 8, 1805, Naples, d. Dec. 31, 1859, Prague; pupil of Furno and Zingarelli at the Conservatorio di San Sebastiano, Naples; also, for a short time, private pupil of Generali. In 1823 he wrote his first opera, *L'impresario in angustie*, which was produced at the theatre of the Conservatorio, and already in 1824, with Generali's assistance, brought out at the Teatro Nuovo a new opera, *La cena frastornata*. More works now quickly followed for the Carlo theatre at Naples, for Parma, Rome, Milan, etc. In 1836 he was appointed maestro of Trieste Cathedral, and at the same time vocal director of the theatre there. From 1834 R. wrote much jointly with his brother Federico (see below); in 1844 he married the singer Lidia Stoltz, of Prague. In 1859 R. showed symptoms of brain disease, which gradually resulted in undoubted insanity; he was therefore sent to a lunatic asylum in his wife's native town, where he soon died. R. wrote altogether about 30 operas, of which *Colombo* (Parma, 1829), *L'orfanello di Ginevra* (Rome, 1829), *Chiara di Rosenberg* (Milan, 1831), *Chi dura vince* (1834), *Il birrajo di Breston* (Florence, 1847), *Crispino e la Comare* (Venice, 1850, jointly with his brother; an excellent comic opera), *La festa di Pedigrotta* (Naples, 1852), and *Il diavolo a quattro* (Trieste, 1859) were most successful. R. also wrote many sacred works, and published two albums of songs, duets, etc.

(2) Federico, brother of the former, also a celebrated opera composer, b. Oct. 22, 1809,

Naples, d. Dec. 10, 1877, Conegliano; he was trained at the Conservatorio di San Sebastiano, partly at the same time with his brother, whom he followed in 1829 to Rome, and with whom, during his whole life, he lived on terms of intimate friendship. His first work was *Il colonello* (with his brother, Naples, 1835), quickly followed by *Monsieur Deschalmieux* (Venice, 1835); he made his first great success with *La prigione d'Edimburgo* (Trieste 1837), to which were added *Un duello sotto Richelieu* (Milan, 1839), *Michel Angelo e Rolla* (Florence, 1841), and *Corrado d'Altamura* (Milan, 1841). The Paris Théâtre Italien produced in 1844 the last-named opera. R. was called to Petersburg in 1853 as inspector of the vocal classes of the theatre school. In 1866 the Théâtre Italien at Paris produced with great success *Crispino e la Comare* (see above), yet R. could not get *Una folia a Roma* performed at this theatre. But in 1869 the opera, translated into French, was brought out at the Fantaies-Parisiennes (*Une folie à Rome*). After that *Crispino e la Comare*, as *Docteur Crispin* (1869), also met with great success, and R. went, therefore, from Petersburg to Paris, and tried to obtain a firm footing on the French stage. But neither his *Docteur Rose* (Bouffes-Parisiens, 1872) nor *Une fête à Venise* (Athénée, 1872, revision of his Italian opera, *Il marito e l'amante*), nor even the translation of *Chi dura vince* (Théâtre Taitbout, 1876), met with any success. R. wrote also masses, cantatas *d'occasion*, and various books of songs, etc. For other details concerning the brothers R. see F. de Villars' "Notice sur Luigi et Federico R., suivie d'une analyse de *Crispino e la Comare*" (1866), and Leopoldo de Rada's "I fratelli R." (1878).

Riccius, (1) August Ferdinand, director and composer, b. Feb. 26, 1819, Bernstadt (near Herrnhut), d. July 5, 1886, Carlsbad; he studied theology at Leipzig, but turned to music; in 1849 he became director of the Euterpe Concerts at Leipzig, and in 1854, capellmeister of the town theatre. In 1864 he went as capellmeister to the Hamburg Theatre, where he became highly esteemed as musical critic of the *Hamburger Nachrichten*, and also as teacher of singing. Of his compositions are to be named: an overture, incidental music to plays, pf. pieces, numerous solo, and many part-songs, a psalm, etc.

(2) Carl August, director and composer, nephew of the former, b. July 26, 1830, Bernstadt, d. July 8, 1893, Dresden, pupil of Fr. Wieck, Krägen, and the leader (Konzertmeister) Schubert at Dresden, and of the Leipzig Conservatorium (1844-46), entered the court orchestra at Dresden in 1847 as violinist, became in 1858 second leader, in 1859 "Korrepetitor," and in 1863, chorus director at the Court Opera. In 1875 he received the title of royal musical director, in 1887 he became third capellmeister, and in 1889, Fürstenau's successor as librarian

of the Royal Musical Collection. R. composed a two-act opera, *Es spuket*, and music to Röder's farce, *Ella*; his setting of Schiller's *Dithyrambe* was produced in 1859 at the Schiller Festival; only songs and pf. pieces appeared in print. A brother of the same, Heinrich, b. March 17, 1831, Bernstadt, was a gifted violinist, but died already Dec. 8, 1863, Paris.

Ricercar (Ital. *Ricercare*, *Ricercata*), an ancient name for freely-composed instrumental music (for lute, clavier, organ), afterwards connected with the imitative vocal style worked more in the fugal manner. The name occurs already in vocal pieces of the 16th century. At a later period the term R. indicated a fugue developed by means of augmentations, inversions, etc. The word R. signifies "to seek (the theme) and seek again." (Cf. Walther's "Lexikon," art. R., in which an attempt is made to distinguish between R. and *Ricercata*.) Bach, in acrostic manner, described his "Musikalisches Opfer" (fugues, canons, etc., on a theme given by Frederick the Great) as R., "Regis Jussu Cantio et Reliqua Canonica Arte Resoluta."

Richafort, Jean, Belgian contrapuntist, pupil of Josquin, capellmeister of the Église de St. Gilles at Bruges (1543-47). Some of his compositions are to be found in manuscript (motets and psalms) at Brussels and Rome; also printed in the 2nd book of Petrucci's "Motetti della Corona," in the 8th book of Attaignant's motets a 4-6, and other collections of works of the first half of the 16th century.

Richards, Brinley, pianist, b. 1819, Carmarthen (Wales), d. May 1, 1885, London, scholar of the Royal Academy of Music, London, was a highly-esteemed concert-player and teacher. He composed principally light pieces for pf., but also sacred songs and part-songs; likewise the hymn, which has become popular, "God bless the Prince of Wales."

Richault, Charles Simon, the founder (1805) of one of the most distinguished Paris music-publishing houses, b. May 10, 1780, Chartres, d. Feb. 20, 1866, Paris; he first published Mozart's concertos and Beethoven's symphonies in score. His sons inherited the business: Guillaume Simon, b. Nov. 2, 1806, Paris, d. there Feb. 7, 1877, and Léon, b. Aug. 6, 1839, d. April 10, 1895, Paris. The publishing catalogue included in 1877 above 18,000 numbers; its chief ornaments are good editions of German classics, also works by A. Thomas, V. Massé, Berlioz, Reber, Gouvy, etc.

Riche, Antoine le. (See DIVITIS.)

Richée. (See LESAGE DE R.)

Richter, (1) Franz Xaver, composer, b. Dec. 1, 1709, Holleschau, Moravia, was at first, and for several years, court musician at Mannheim, but from 1747 until his death, Sept. 12, 1789, capellmeister of Strassburg Cathedral, with

Pleyel as his deputy from 1783. R. composed 26 symphonies, 6 of which appeared in print, 6 quartets for strings, 3 trios, but, above all, sacred works (7 masses, a Te Deum, hymns, motets, psalms, etc.), which have been preserved in the cathedral of St. Dié (Vosges). Fétis possessed the original manuscript of his "Harmonische Belehrung oder gründliche Anweisung zu der musikalischen Tonkunst," which work Kalkbrenner published in French translation in 1804 ("Traité d'harmonie et de composition").

(2) Johann Christian Christoph, father of the author, Jean Paul Fr. R., b. Dec. 16, 1727, Neustadt am Kulm, d. 1779, Schwarzenbach, attended the Lyceum at Wunsiedel as foundation scholar, and also the Gymnasium poeticum at Ratibon, where he became a member of the band of the Prince of Thurn and Taxis; finally, he studied theology at Jena and Erlangen. After being engaged for some years at Bayreuth in the capacity of private tutor, he became, in 1760, organist and undermaster (Tertius) at Wunsiedel, and from there went as minister to Jödlitz, near Bayreuth, and finally to Schwarzenbach-a.-d.-Saale. R. composed sacred vocal works, which, however, remained in manuscript. His son inherited from him a thoroughly musical nature.

(3) Ernst Heinrich Leopold, celebrated teacher of music and composer, b. Nov. 15, 1805, Thiergarten (near Ohlau), d. April 24, 1876, Steinau-a.-O. He studied under Hientzsch, Berner, and Siegert at Breslau, and under Klein and Zelter at the Royal Institute for Church Music, Berlin. From 1827 he was teacher of music at the Breslau Seminary, which in 1847 was moved to Steinau. R. composed a mass, motets, psalms, cantatas, part-songs for male voices, songs (Silesian folk-songs, Op. 27), organ pieces, a symphony, and a comic opera, *Contrebande*.

(4) Ernst Friedrich Eduard, composer and highly-esteemed theorist, b. Oct. 24, 1808, Grossschönau (Lausitz), d. April 9, 1879, Leipzig. He was the son of a schoolmaster, was trained at the Gymnasium, Zittau, and went in 1831 to Leipzig, where he was inscribed as *Stud. Theol.*, but soon studied by himself in order to become a musician. When the Conservatorium was established in 1843, he was appointed (jointly with Hauptmann) teacher of theory, undertook the direction of the Singakademie after the death of Pohlenz (until 1847), and in 1851 became organist of St. Peter's Church, in 1862 of the Neukirche, and, after a brief interval, occupied a similar post at the Nikolaikirche. In 1868 he became cantor of St. Thomas's and musical director of the principal churches, as M. Hauptmann's successor; and in that same year was named professor. The University bestowed on him the honorary title of "Universitätsmusikdirector." R. was not a striking composer, but a fairly good one, especially in

his motets and psalms. He also wrote masses, an oratorio, *Christus, der Erlöser* (produced in 1849), Schiller's *Dithyrambe* (performed in the Gewandhaus on the occasion of the Schiller Festival of 1859), quartets for strings, organ pieces, violin sonatas, pf. sonatas, etc. The following writings, on the other hand, are held in high consideration, and enjoy a wide circulation:—"Praktische Studien zur Theorie der Musik," the first part of which (though it only afterwards bore that title), "*Lehrbuch der Harmonie*," appeared in 1853, and up to 1884 was republished sixteen times; the third, "*Lehrbuch der Fuge*," 1859 (4th ed. 1880); and the second, "*Lehrbuch des einfachen und doppelten Kontrapunkts*," 1872 (5th ed. 1884). All three were translated into English by Franklin Taylor, 1864, 1874, and 1878. The "*Harmonielehre*" has been translated also into Swedish, Russian, Polish and Italian.

(5) Alfred, son of the former, b. April 1, 1846, Leipzig, was teacher at the Conservatorium in that city from 1872-83, published a new "*Aufgabenbuch*" (Exercise Book) to his father's "*Harmonielehre*" (1880, 4th ed. 1884), which is remarkable for the great attention paid to the figuring of given upper voices (without figured bass, but with letter-chord notation after the manner introduced by Gottfried Weber). (Cf. CLANG SUCCESSION.) In 1884 R. took up his residence in London.

(6) Hans, distinguished conductor, b. April 4, 1843, Raab (Hungary), where his father was church capellmeister. After the death of the latter (1853) he became chorister in the court chapel, Vienna, and studied the French horn, piano, and composition at the "*Conservatorium der Musikfreunde*" (1860-65). From 1866-67 he was at Lucerne with Wagner, who entrusted to him the score of the *Meistersinger* to copy for printing. Wagner recommended him as chorus-master for the Opera at Munich (1868-69). In 1870 he conducted the rehearsals and the first performance of *Lohengrin* at Brussels, was capellmeister from 1871-75 at the Pesth national theatre; and, after having given an orchestral concert at Vienna (1875) with extraordinary success, he succeeded Dessoff as capellmeister at the Hofoper, and became likewise conductor of the "*Gesellschaft der Musikfreunde*" concerts (with exception of the season 1882-83, when Jahn acted as his deputy). In 1878 he was named second, in 1893, chief, capellmeister of the "*Hofkapelle*." R. conducted the *Nibelungen* performances at Bayreuth in 1876, and, alternately with Wagner, the Wagner Concerts at the Albert Hall, London, in 1877; since then he has been chief conductor of the Bayreuth Festival. Every year (since 1879) he has given a series of concerts (named after him) in London. He succeeded Costa as conductor of the Birmingham Festival (1885). He has also conducted several of the Lower Rhenish Festivals.

Ricieri, Giovanni Antonio, teacher of Padre Martini, b. May 12, 1679, Venice, d. 1746, Bologna. He was soprano singer at San Petronio, Bologna, in 1701, and member of the Accademia Filarmonica (1704, "*Maestro compositore*"), from which, however, he was dismissed in 1716 on account of his sharp criticism of the works of his colleagues. From 1722 till 1726 he was capellmeister to a Polish noble, in 1732 for a short time a Franciscan novice, and finally, after sundry changes of residence, lived again in Bologna. He composed several oratorios (1713-*La nascita di Gesù*; 1714, *La tentazione d'incrudelità*; 1716, *Il cuore umano*; 1738, *Il sacrificio d'Isacco*); a fugue a 5 by R. is given in Martini's "*Saggio di contrappunto*" as a model.

Ricordi, Giovanni, the founder of the most famous publishing firm of Italy, and one of the greatest in the world (Stabilimento R. i.e. "firm of R."), b. 1785, Milan, d. there March 15, 1853. R. commenced his career as a poor copyist, and had his first stroke of good luck by purchasing the score of Luigi Mosca's *I pretendenti delusi*, the copies of which he sold at a high price. His heir was his son Tito R., b. Oct. 29, 1811, Milan, d. there Sept. 7, 1888, who some years before his death handed over the active management of the business to his son Giulio R., b. Dec. 19, 1840 (composed under the nom. *de plume* Burgmein). A second son, Enrico, d. Feb. 20, 1887, at Milan. The published catalogue of the house of R. contains over 50,000 numbers, among them the original editions of operas by Rossini, Generali, Bellini, Donizetti, Verdi, etc.

Riedel, (1) Karl, meritorious founder and conductor of the Riedelsche Verein, b. Oct. 6, 1827, Kronenberg (near Elberfeld), d. June 3, 1888, Leipzig. He was the son of an apothecary, and, after attending the industrial school at The Hague, learnt silk-dyeing at Krefeld, and worked as a journeyman at Zürich; but in 1848 he suddenly changed his mode of life, and, in order to devote himself entirely to music, first placed himself under the guidance of Karl Wilhelm at Leipzig, and was afterwards a pupil of the Conservatorium there. By diligence he soon became one of the best-esteemed musical personalities of Leipzig, especially after he had established, in 1854, a society for the performance of ancient church music, which from a modest quartet of male voices quickly grew to one of the most distinguished mixed choirs; and already in 1859 he was able to give a successful performance of Bach's B minor Mass. After the death of Brendel, R. became president of the Allgemeiner deutscher Musikverein, founded the Leipzig "*Zweigverein*," at the performances (gratis) of which interesting novelties were introduced (chamber-music, songs, part-songs), and also became president of the Leipzig Wagner-Verein. The works published by R. include only a few of his

own compositions (songs, part-songs); but he prepared a series of excellent new editions of old works, e.g.: Schütz's "Sieben Worte," J. W. Franck's "Geistliche Melodien," Eccard's "Preussische Festlieder," Praetorius's "Weihnachtslieder," etc. He also reduced Schütz's four Passions to one, and published the collections "Altböhmische Hussiten- und Weihnachtslieder" and "Zwölf altdeutsche Lieder." R. received from the Duke of Altenburg the title of Professor, and in 1883, on the occasion of the Luther Festival, the Leipzig University bestowed on him the title of Dr. Phil. hon. c.; in 1884 he was named Ducal Saxon Professor;

(2) Hermann, song composer, b. Jan. 2, 1847, Burg (near Magdeburg), pupil of the Vienna Conservatorium, is court capellmeister at Brunswick. R. became especially known by his setting of the songs from Scheffel's "Trompeter von Säckingen."

(3) Fürchtegott Ernst August, b. May 22, 1855, Chemnitz, attended the Teachers' Seminary at Annaberg, then (1876-78) the Leipzig Conservatorium; he became teacher of music at the Institute for the Blind, Leipzig, in 1877, and until 1888 conducted the choral society "Quartett." In 1888 he became music teacher at the seminary, Plauen-i.-V., but already in 1890 town cantor, music director and teacher of singing at the high school there; he has also conducted the Plauen "Musikverein" since 1888. As a composer R. is represented by vocal works (cantata, *Winfried*, Op. 16; *Der Sachsen Festtagssang*, Op. 17; part-songs, songs) and instructive pf. pieces (12 sonatinas, Op. 12 and 18, as second piano to Clementi's Op. 36 and Kuhlau's Op. 55, etc.).

Riedt, Friedrich Wilhelm, flautist and theorist, b. Jan. 24, 1712, Berlin, d. there Jan. 5, 1784, studied under Graun, in 1741 chamber-musician to Frederick the Great, in 1750 director of the Musical Society at Berlin. He composed concertos, solos, trios, etc., for flute, and wrote "Versuch über die musikalischen Intervalle" (1753); also a number of theoretical, critical, and polemical articles in Marpurg's "Beiträge" (1st to 3rd vols.).

Riehl, Wilhelm Heinrich, historian of general culture, b. May 6, 1823, Biebrich-a.-Rh., since 1854, professor of political economy and cameralistics at the University of Munich, also since 1885 Director of the National Museum and General Conservator of the Art Monuments of Bavaria. Besides many works on the history of civilisation ("Naturgeschichte des Volks," "Kulturhistorische Novellen," "Kulturstudien aus drei Jahrhunderten," etc.), in part highly interesting, though built up on hypotheses of a somewhat precarious character, he published "Musikalische Charakterköpfe" (1853 to 1861, two vols.; 6th ed., 1879), and "Hausmusik" (1856, 1877, two parts; songs by R. himself).

R. gives lectures on the history of music at the Royal School of Music, Munich.

Riem, Friedrich Wilhelm, organist and composer, b. Feb. 17, 1779, Köleda, Thuringia, d. April 20, 1857, Bremen, studied under J. A. Hiller at Leipzig, in 1807 organist of the New Reformed Church, in 1814 cathedral organist at Bremen and conductor of the Singakademie there. He wrote a considerable amount of chamber-music (quartets for strings, quintets, violin sonatas), pf. works, etc.; two books of his organ compositions were published by Körner of Erfurt.

Riemann, (1) Jakob, court musician at Cassel at the beginning of the last century. He published: suites for bass viol and continuo, 6 violin sonatas with continuo, and trios for violin, gamba, and continuo.

(2) August, b. Aug. 12, 1772, Blankenhain (Thuringia), d. Aug. 1826, Weimar. From 1790 he was principal violinist in the Weimar court band, became "Repetitor" at the court opera in 1806, and court musical director in 1818. His violin compositions remained in manuscript.

(3) Hugo, the compiler of this Dictionary, b. July 18, 1849, Grossmehlra (near Sondershausen), learnt the elements of music from his father, a farmer and a zealous amateur of music; several songs, choral pieces, also an opera, etc., by the latter were produced at Sondershausen. Only the obstinate opposition of his parents prevented R. from having his thoroughly musical nature properly trained. He received his first instruction in theory from Frankenberger at Sondershausen, and in pianoforte from Barthel, Ratzenberger, etc. As a boarder of several years' standing in the house of the botanist Th. Irmisch, R. was urged on to ambitious effort, and this impulse was afterwards strengthened at the Rossleben "Klosterschule" (1865-68). After passing through the Gymnasium curriculum, he studied at Berlin and Tübingen, first law, and after that, philosophy and history. Meanwhile music was always his faithful companion. That R. did not recognise earlier in life the calling which he afterwards embraced may be explained by the fact that from his ninth year he devoted all his spare time to poetry, studying the masters, and even writing verse himself. Then the charm of the student's life, especially the life of the Tübingen Corps, drew him away from serious reflection. It was first in the campaign of 1870-71, during the siege of Paris, that he matured his resolve; on his return home, he became a pupil of the Leipzig Conservatorium; and in 1873 he took his degree of Dr. Phil. at Göttingen. After several years of activity as conductor and teacher at Bielefeld, where he married in 1876, he qualified himself as lecturer on music at Leipzig University at Michaelmas of 1878; but as the hoped-for appointment at the Conservatorium

did not follow, he went in 1880 as teacher of music to Bromberg, from 1881-90 was teacher at the Hamburg Conservatorium, while in 1890 he went, after a short period of activity at Sondershausen Conservatorium, to the Conservatorium at Wiesbaden. In October, 1895, he returned to Leipzig, and commenced his lectures at the University. R. is honorary member of the Accademia Cecilia, Rome, of the Istituto Reale di Firenze, and of the Dutch "Maatschappij tot Bevordering van Toonkunst." Besides many pf. pieces, songs, a pf. sonata, 6 sonatas (Op. 43), one ditto for four hands (Op. 49), a violin sonata (1875), a quartet for strings (Op. 26), a trio (Op. 47), "Systematische Treffübungen für den Gesang," several books of pf. studies (Op. 40, 41), etc., the present "Musik Lexikon" (1st ed. 1882; 4th, 1894; English translation 1893-5, Angener & Co.), R. has published "Musikalische Logik" (dissertation for the degree of Doctor, 1873); "Musikalische Syntax" (1877); "Studien zur Geschichte der Notenschrift" (essay for academic promotion, 1878); "Skizze einer neuen Methode der Harmonielehre" (1880; 2nd ed., enlarged, as "Handbuch der Harmonielehre," 1887); "Die Entwicklung unsrer Notenschrift" (1881); "Die Natur der Harmonik" (1882); "Der Ausdruck in der Musik" (1883, these three in Waldersee's "Sammlung Musikalischer Vorträge"); "Die *Mapruplai* der byzantinischen liturgischen Notation" (1882, in the Sessions Report of the Munich "Akademie"; also separately); "Elementar-Musiklehre" (1882); "Neue Schule der Melodik" (1883); "Vergleichende Klavierschule" (1883); "Musikalische Dynamik und Agogik, Lehrbuch der musikalischen Phrasierung" (1884); "Praktische Anleitung zum Phrasieren" (with Dr. Carl Fuchs, 1886; also as "Katechismus der Phrasierung"); "Opern Handbuch" (1884-87; supplement, 1893); "Systematische Modulationslehre" (1887); translations of F. A. Gevaert's "Neue Instrumentenlehre" (1887) and "Ursprung des liturgischen Gesangs" (1891); "Ueber Phrasierung im Elementarunterricht" (in the Report of the Hamburg Conservatorium, 1887); "Lehrbuch des einfachen, doppelten und imitierenden Kontrapunkts" (1888); "Musikalische Katechismen" (1888-93: "Musikinstrumente," "Musikgeschichte" [2 parts], "Orgel," "Allgemeine Musiklehre," "Klavierspiel," "Kompositionslehre" [2 parts], "Generalbassspiel," "Musikdiktat," "Harmonielehre," "Musik-aesthetik" ["Wie hören wir Musik?"], "Fuge" [analysis of the "Wohltemperiertes Klavier," and "Kunst der Fuge," 3 parts], "Vokalmusik" [song composition], and "Musikwissenschaft" [acoustics]; a "Vereinfachte Harmonielehre" ("Lehre von den tonalen Funktionen der Harmonie," London, 1893); also since 1884 the "Phrasing editions" of classical pf. works (in the publications of Simrock, Litolf, F. Siegel, Th. Steingraber [amongst others many hitherto

unpublished works of Friedemann Bach, a complete edition of Rameau's clavier works, etc.), and Angener & Co.), "Chansons von Gilles Binchois" (1892), "Illustrationen zur Musikgeschichte" (1893), a revised edition of Marx's "Kompositionslehre" (see MARX), and so forth. Besides these, since 1870 he has furnished for musical and other journals many critical, æsthetical, theoretical, and historical papers, and has worked at the musical portion of Meyer's "Konversationslexikon" since the 3rd edition jointly with W. Langhans; but after the death of the latter, alone.

Riemenschneider, Georg, b. April 1, 1848, Stralsund, studied under Haupt and Kiel at Berlin. He was theatre capellmeister, etc., at Lübeck and Dantzig, and now lives at Breslau as conductor of the concert orchestra. The following orchestral works deserve mention: "Julinacht," "Nachtfahrt," "Donna Diana," "Totentanz," and "Festpräludien." His one-act opera, *Mondeszauber*, was produced at Dantzig in 1887.

Riepel, Joseph, important theorist, b. 1708, Horschlag (Upper Austria), about 1757 chamber musician to the Prince of Thurn and Taxis at Ratisbon, d. there Oct. 23, 1782. He published violin concertos, which, however, do not seem to have been preserved, and wrote a somewhat large number of theoretical writings, a part of which, like his symphonies, pf. concertos, sacred works, etc., remained in manuscript. The following were printed: "Anfangsgründe zur musikalischen Taktkunst . . . *De rhythmo-paia* oder von der Taktordnung" (1752; 2nd ed. 1754; very valuable); "Grundregeln zur Tonordnung" (1755); "Gründliche Erklärung der Tonordnung insbesondere, zugleich aber für die mehresten Organisten insgemein" (1757); "Erläuterung der betrüglichen Tonordnung, nämlich das versprochene 4. Kapitel," etc. (1765); "Fünftes Kapitel. Unentbehrliche Anmerkungen zum Kontrapunkt, über die durchgehend gewechselten und ausschweifenden Noten" (1768); "Bassschlüssel, das ist Anleitung für Anfänger und Liebhaber der Setzkunst, die schöne Gedanken haben und zu Papier bringen, aber nur klagen, dass sie keinen Bass recht dazu zu setzen wissen" (1786; published by his pupil, the cantor Schubarth). To these works, which form part of a whole, must be added "Harmonisches Silbenmass, Dichtern melodischer Werke gewidmet und angehenden Singkomponisten zur Einsicht" (1776, 2 parts).

Ries, (1) Franz, b. Nov. 10, 1755, Bonn, d. Nov. 1, 1846, Bremen (the "old" R.), was leader, and afterwards musical director to the Elector Max Franz of Cologne at Bonn.

(2) Ferdinand, eldest son of the former, b. Nov. 29, 1784, Bonn, d. Jan. 13, 1838, Frankfurt. From 1800-1804 he studied at Vienna under Beethoven (who, as native of Bonn,

was one of his father's friends), and became known by his compositions and by his "Biographische Notizen über L. van Beethoven" (1838). As a pianist he made many successful concert tours in France, England, Scandinavia, and Russia, lived for twelve years in England, but otherwise, for the most part, at Godesberg, near Bonn (where he inherited an estate, 1824), and after 1830 at Frankfurt. R. conducted several Lower Rhenish musical festivals, and from 1834-36 was town musical director at Aix, and during the last year of his life conductor of the Frankfurt "Caeclienverein." As a composer R. was exceedingly prolific (over 200 works). He wrote 3 operas (*Die Räuberbraut*, *Liska*, *Eine Nacht auf dem Libanon*), 2 oratorios (*Der Sieg des Glaubens*, *Die Anbetung der Könige*), 6 symphonies, 3 overtures, 9 pf. concertos, 1 violin concerto, 6 quintets with various combinations of instruments, an octet, septet, 2 sextets, a quintet, 3 quartets, 5 trios, etc., all with pianoforte; 14 quartets for strings, 20 violin sonatas, 1 'cello sonata, a trio for two pianos and harp, and many sonatas, fantasias, rondos, etc., for pf. alone.

(3) Peter Joseph, brother of the above, b. 1790, d. April, 1882, London, Royal Prussian professor.

(4) Hubert, the youngest son of Franz R., b. April 1, 1802, d. Sept. 14, 1886, at Berlin, studied under Spohr (violin) and M. Hauptmann (composition) at Cassel, in 1836 became leader of the royal band at Berlin, in 1839 member in ordinary of the Royal Academy of Arts, in 1851 teacher at the "Königl. Theater-instrumentalschule," and in 1872 received his pension. R. rendered special service to art by his excellent educational works for violin (*Violin Method*; "15 Violinstudien von mässiger Schwierigkeit," Op. 26; "50 Intonationsübungen"; "12 Violinstudien in Form von Konzertstücken," Op. 9; several sets of duets, etc.).

(5) Louis, son of the former, b. Jan. 30, 1830, Berlin, lives in London, esteemed as a teacher of the violin; also his brother—

(6) Adolf, b. Dec. 20, 1837, Berlin, lives in London as teacher of the pf., and has published chamber music, songs, and pf. pieces. The most famous of Hubert R.'s sons is, without doubt, the youngest—

(7) Franz, b. April 7, 1846, Berlin, studied with his father the violin, and composition with Kiel; was also from 1866-68, a pupil of Massart at the Paris Conservatoire. His career as violinist, so successfully commenced, had to be given up in 1873, owing to a nervous complaint, and R. then devoted himself to the publishing and selling of music (he is joint proprietor of the music business, Ries & Erler, at Berlin). His numerous compositions (orchestral and chamber music [violin suites, quartets, string quintet], songs, pf. pieces) show rare talent and sound training.

Rieter-Biedermann, J. Melchior, b. May 14, 1811, Winterthur, d. there Jan. 25, 1876, founded there in 1849 the publishing house which bears his name. The business grew rapidly, and in 1862 a branch establishment was opened at Leipzig. The catalogue of the firm contains the works of the best composers, and maintains a high standard.

Rietz, (1) Eduard, the friend of Mendelssohn in his youth, gifted violinist, b. Oct. 17, 1802, Berlin, son of the royal chamber musician (viola-player), Johann Friedrich R. (d. March 25, 1828, Berlin). In his youth R. was a member of the royal band, and from 1821 was also tenor singer in the Singakademie. In 1826 he founded the Philharmonic Society, of which he became conductor, but died already Jan. 23, 1832.

(2) Julius, brother of the former, noteworthy composer and excellent conductor, b. Dec. 28, 1812, Berlin, d. Sept. 12, 1877, Dresden. He studied the 'cello under Romberg and M. Ganz, and, at the age of sixteen, joined the orchestra of the Königsstadt Theatre, for which he wrote the music to *Lorbeerbaum und Bettelstab*. Mendelssohn, who made a friend of him in his brother's place, attracted him in 1834 to Düsseldorf, and, first of all, as second conductor at the Immerring Theatre; but when Mendelssohn withdrew from the opera R. became principal conductor, and when Mendelssohn left for Leipzig, town musical director (the opera came to an end). In 1847 R. was called to Leipzig as theatre capellmeister, undertook also the conductorship of the Singakademie, and in 1848 succeeded Mendelssohn as conductor of the Gewandhaus Concerts and as teacher of composition at the Conservatorium. He gave up the direction of the theatre in 1854, and concentrated his energy on the Gewandhaus Concerts and his teaching at the Conservatorium, until in 1860 he was called to Dresden as Reissiger's successor in the post of court capellmeister, and in that city he soon afterwards undertook the artistic direction of the Royal Conservatorium. In 1859 the University of Leipzig bestowed on him the title of Dr. on the occasion of the 450th anniversary of its foundation. The King of Saxony named him "Generalmusikdirektor" in 1874, on the occasion of his 40 years' jubilee as conductor. R. intended to retire from public life on Oct. 1, 1877, to the rest he so well deserved, but death called him away three weeks before. R.'s last labour was the editing of Breithkopf und Härtel's complete edition of Mendelssohn's works (1874-77). As a composer, R. was strongly influenced by Mendelssohn, but he wrote works of sufficient originality of invention and structure to keep his name long in remembrance. To these belong the concert overture in A (Op. 7) and the "Lustspielouverture" (Op. 18). R. wrote the operas: *Der Korsar* (1850), *Georg Neumark und die Gambe* (1859), *Fery und*

Bütsly, *Das Mädchen aus der Fremde* (1839); also incidental music to plays, overtures, symphonies, Schiller's *Dithyrambe* (for the Schiller Festival of 1859; performed in many places), masses, psalms, motets, chorales, 6 sacred duets with pf. accompaniment, songs for male chorus, many pf. songs, 2 'cello concertos, a violin concerto, a clarinet concerto, a concert-piece for oboe, capriccio for violin and orchestra, a quartet for strings, a violin sonata, a flute sonata, pf. sonatas, etc.

Riga, François, b. Jan. 21, 1831, Liège, d. Jan. 18, 1892, Schaerbeck (near Brussels), pupil of Fétis, Lemmens and Hanssens at the Brussels Conservatoire, and became church capellmeister there. He was a highly-esteemed vocal composer: sacred works *a capella* and with orchestra, cantatas, choruses for male voices (especially noteworthy), choruses for female voices with pf.; but he also wrote overtures, pieces for violin, for 'cello, for horn, pf. pieces, etc.

Rigaudon (Fr.), an old Provençal dance-form in Allabreve time, with simple or double upbeat and of lively *tempo*. It consists, for the most part, of three 8-bar periods, of which the third must form a contrast in character, and, indeed, according to Mattheson ("Kern melod. Wiss.," p. 113), be written in a lower position, so that the principal themes may stand out with greater freshness.

Righini, Vincenzo, composer, b. Jan. 22, 1756, Bologna, d. there Aug. 19, 1812. He studied under Padre Martini, and in 1775 made his *début* on the stage at Parma as singer. He appeared also at Prague in the following year, and came forward at the same time as composer, first with arias inserted into other works, but soon with operas of his own. In 1780 he was summoned to Vienna by Joseph II. as teacher of singing to the Arch-Duchess Elisabeth and as director of the Italian *Opera Buffa*. From 1788 to 1792 he resided at Mayence as electoral capellmeister, and in 1793, after the successful production of his opera, *Enea nel Lazio*, at Berlin, was named by Friedrich Wilhelm II. capellmeister of the court opera, with a salary of 4,000 Thl., which post he held until his death, although, naturally, the misfortunes of the year 1806 paralysed his activity for a considerable time. In 1793 R. married the vocalist, Henriette Kneisel (divorced 1800). He wrote in all about 20 operas, of which *Tigrane* (1799), *Gerusalemme liberata* (1802), and *La Selva incantata* (1802) appeared in piano score at Leipzig. He published besides: a serenade for two horns and two bassoons, 2 pf. trios, a flute concerto, a Mass, a Te Deum, a Requiem, etc., and a series of small vocal works (cantatas, arias, duets), also some excellent singing exercises.

Rilasciando (Ital.), slackening, becoming slower.

Rillé. (See LAURENT DE R.)

Rimbault, Edward Francis, distinguished English musical savant, b. June 13, 1816, London, d. there Sept. 26, 1876. He sprang from a French family, studied music with his father, a famous organist, and with S. Wesley, and was already organist in 1832 at the Swiss Church, Soho. During the following years he made a deep study of the history of music, and from 1838 gave lectures on that subject in England. In 1840, jointly with E. Taylor and W. Chappell, he founded the Musical Antiquarian Society, superintending its numerous publications of works by old English composers (Byrd, Morley, Dowland, Gibbons, Purcell, etc.). In 1840 he became secretary and editor of the Percy Society, which published "Relics of Ancient English Poetry," and of the Motet Society (publication of the works of Palestrina, Lasso, etc., with English words). In 1842 he was elected an F.S.A.; the University of Göttingen bestowed on him the title of Doctor; and the Stockholm Academy elected him a member. In 1848 he received the Oxford degree of LL.D. His lectures on music came more and more into repute; he refused the appointment of professor of music at Boston offered to him by the Harvard University. On the other hand, he frequently lectured at the Royal Institution of Great Britain, at Edinburgh, Liverpool, edited the *Old Cheque-Book of the Chapel Royal for the Camden Society*, etc. For composition R. found but little leisure, and the following list of his publications makes this quite intelligible, especially when the fact is taken into consideration that he attended besides to a great number of piano scores of new operas (Spohr, Macfarren, Balfe, Wallace, etc.). He composed only two small works for the stage: *The Fair Maid of Islington* and *The Castle Spectre* (both produced with success at London, 1838-39), and a number of songs to English words. R. published: Arnold's "Cathedral Music," 3 vols., with biographical notices and a written-out organ accompaniment from the figured bass; "Cathedral Music" (1 vol. ditto); "Cathedral Chants of the 16th, 17th, and 18th Centuries" (ditto); "The Full Cathedral Service of Th. Tallis" (ditto); "The Order of Daily Service, with the Musical Notation as Adapted and Composed by Th. Tallis, with historical introduction"; "Church Music: a Collection of Services and Anthems, chiefly Adapted from the Works of Palestrina, Orlando di Lasso, Vittoria, Colonna, etc." (3 vols., for the Motet Society); "A Collection of Anthems by Composers of the Madrigalian Era" (Bateson, Este, Weelkes, etc., for the Musical Antiquarian Society); "The Order of Morning and Evening Prayer" (a 4, *Cantus firmus* in tenor); "The Order of Daily Service, with the Musical Notation as used in the Abbey Church of S. Peter, Westminster"; "Edward Lowe's Order of Chanting the Cathedral Service" (a reprint of the edition 1664); "The Handbook for the Parish Choir: a Collection

of Psalm Tunes, Services, Anthems, Chants, *Sanctus*," etc. (a 4); "The Organist's Handbook: a Collection of Voluntaries for the Organ, chiefly Collected from Composers of the German School;" and "Organists' Portfolio;" "Vocal Part-music, Sacred and Secular" (anthems, motets, madrigals, part-songs, etc., with pf., also organ); Este's "The Whole Book of Psalms" (from 1592, with historical notes, etc.); J. Merbecke's "Booke of Common Prayer" of 1550 (printed in facsimile, also in modern score edition); a Mass a 5 of Byrd in score edition, with historical introduction; Th. Morley's "First Book of Ballets for 5 Voices" of 1595 (Mus. Ant. Soc.); Th. Bateson's "First Set of Madrigals for 3-5 Voices"; O. Gibbons's "Fantasies of 3 Parts for Viols;" Purcell's opera *Bonduca*, together with a history of dramatic music in England; "Parthenia, or the First Music ever printed for the Virginals"; "Nursery Rhymes, with the Tunes;" "A little book of Christmas Carols, with the Ancient Melodies"; "The Ancient Vocal Music of England" (2 vols., illustrations for his lectures); "The Rounds, Catches, and Canons of England" (examples from the 16th-18th centuries). R. also published Handel's *Samson*, *Saul*, and *Messiah* for the London Handel Society. His special works on theory and history are: a pf. Method, 2 harmonium Methods, also "Memoirs of Musick, by the Hon. Roger North, Attorney-General to James II." (1846); "The Organ, its History and Construction," an original work (not merely a copy of Don Bedos), serving as the first part of appendix to Hopkins's "History of the Organ" (1855); "The Pianoforte, its Origin, Progress, and Construction" (1860, containing also the history of the clavichord, virginal, and clavicymbal); "Bibliotheca Madrigaliana" (bibliography of English poems and compositions of the 16th and 17th centuries); and a monograph on Jack Wilson and John Wilson, showing their identity. R. was for many years contributor to and editor of *The Choir*. Grove's "Dictionary of Music and Musicians" (1879, etc.) also contains valuable posthumous articles from his pen.

Rimsky-Korsakow, Nikolaus Andrejewitsch, Russian composer, b. May 9/21st, 1844, Tichwin, first chose a military career, but was an officer of marines for several years; by self-training, however, he became so able a musician that in 1871 he was appointed professor of composition at the Petersburg Conservatoire. At the same time he was inspector of the Russian naval music, and, after the retirement of Balakirew, became director of the "Free School of Music." As a composer R. is one of the chief representatives of the young Russian school which pays homage to the Berlioz-Liszt tendencies, and hence stands in closest relationship to the New German school. A legend, "Sadko," for orchestra, was produced at Altenburg in 1876 at the

"Allg. deutscher Musikverein," and also a programme-symphony, "Antar," in 1881, at the meeting of artists of the same society at Magdeburg. At the Russian Opera, Petersburg (Marientheater), three of his operas have been performed:—*Pskowitjanka*, *Die Mainacht* (1880), and *Snegoritschka* (1882). Also several symphonies, quartets for strings, songs, etc., of his have been published.

Rinaldo da Capua, Italian opera composer, native of Capua; he wrote between 1737 and 1771, for Italian boards and for the Parls Théâtre Italien, twenty operas (only their titles are known; a few fragments alone remain). (Cf. *Vierteljahrsschrift für Musikwissenschaft*, 1887.)

Rinck, (1) Johann Christian Heinrich, famous organist and composer for the organ, b. Feb. 18, 1770, Elgersburg, Thuringia, d. Aug. 7, 1846, Darmstadt, studied under several Thuringian organists, finally under Bach's pupil, Kittel, at Erfurt (1786-89). In 1790 he became town organist at Giessen, in 1805 town organist and teacher at the Seminary, Darmstadt; in 1813 court organist, and in 1817, chamber musician there. He was looked upon as one of the best organists of his day, and he also frequently made concert tours—for instance, through Thuringia, to Trèves, etc. At his jubilee, in 1840, the University of Giessen bestowed on him the degree of Dr. Phil. M. J. Fölsing (1848) wrote a biography of Rinck. R. was a prolific composer of music for the organ. At the head stand his great "Orgelschule" (Op. 55; republished by Otto Dienel, 1881) and two "Choralbücher"; he wrote besides a great number of Choral Preludes (Op. 2, 25, 37, 47, 49, 52, 53, 58, 63, 65, 74, 93, 95, 105, 116); Postludes (Op. 48, 78, 107, 114); Varied Chorales (Op. 40, 64, 77, 78; 109); "Der Choralfreund," in seven annual issues (Op. 101, 104, 110, 115, 117, 119, 122), and two supplementary vols.; Variations for Organ, etc. (Op. 56, 57, 70, 84, 89, 108); Pieces (Op. 8, 9, 29, 33, 37, 38, 66, 72, 92, 94, 99, 100, 106); theoretical and practical hints on organ playing (Op. 124, etc.); pf. sonatas for two and four hands, trios, a Mass, motets, hymns, chorales, a *Paternoster* a 4, with organ (Op. 59), and other sacred songs.

(2) Gustave, French composer, lives at Bordeaux, highly esteemed as pianist; he has become known by a pf. concerto (1876), a pf. quartet, also a comic opera, *Mademoiselle de Kerven* (Bordeaux, 1877).

Rinforzando (Ital., "becoming stronger"), a term for a strong *crescendo*; *rinforzato*, strengthened, is almost identical with *forte assai*, an energetic forte.

Rinuccini, Ottavio, librettist of the first operas (Florence, about 1600), viz. of Peri-Caccini's *Dafne* and *Euridice*, and Monteverde's *Arianna*. (See OPERA.)

Ripa, Alberto de (also called Alberto Mantovano), *Seigneur de Carrois*, celebrated performer on the lute in the 16th century. He was a native of Mantua, court musician to François I. of France, d. about 1550. He published a great work on the lute ("Tablature de Luth"), in six books (1553-8). Pieces of his are to be found in Phalèse's lute works of 1546 and 1574, also in the "Intabolatura di liuto, etc.," of Francesco Marcolini da Forlì (1536).

Ripfel, Karl, b. 1799, Mannheim, d. March 8, 1876, Frankfurt, where he was for forty-five years 'cellist in the orchestra. R. did not become generally known, but he was prized by Bernh. Romberg as supreme in the matter of technique. He was also a worthy musician—in his youth a distinguished pianist; his compositions are of high value.

Ripieno (Ital., "full") is opposed to *Solo* or *Obbligato*, and therefore almost the same as *Tutti*. *Ripieno* parts are those of accompanying instruments executed by several performers in works with soli (concertos, etc.). But the term R. is specially used for the entry of all the strings (or, in military bands, of the clarinets, etc.) in the *Tutti*; formerly, during a solo, only a part of the ripienists used to play—a custom frequently adopted at the present day.

Rischbieter, Wilhelm Albert, b. 1834, Brunswick, studied under M. Hauptmann, since 1862, teacher of harmony and counterpoint at the Royal Conservatorium, Dresden. He has published: "Ueber Modulation, Quartsextakkord und Orgelpunkt" (1879), "Erläuterungen und Aufgaben zum Studium des Kontrapunkts" (1885), and "Die Gesetzmässigkeit der Harmonik" (1888), also theoretical articles in musical journals.

Risentito (Ital.), with warmth, energy.

Risoluto (Ital.), resolutely.

Risposta, answer. The *Comes* in a fugue, or the imitating voice in a canon. (See PROPOSTA.)

Ristori, Giovanni Alberto, b. 1692, Bologna, d. Feb. 7, 1753, Dresden. He came already to that city in 1715 with his father (actor), was composer in 1717 for the Italian Court Theatre, and director of the Polish orchestra. In 1733 he became chamber organist, in 1746, church composer, and in 1750, vice capellmeister. R. was one of the first composers of comic opera (*Calandro*, 1726; *Don Chisciotte*, 1727), but he wrote, besides, 13 operas and 3 oratorios, much sacred music, 16 cantatas, concertos, etc.

Ristretto. Same as *Stretta*.

Risvegliato (Ital.), lively, animated.

Ritardando (Ital.), becoming slower.

Ritenente (Ital.), retarding, holding back.

Ritenuto (Ital.), "held back," rather slower than the principal *tempo*.

Ritmo (Ital.). Rhythm (q.v.).

Ritornello (Ital., "return," *Refrain*) is the term applied to the preludes, interludes, and postludes in vocal compositions, especially to the arias in operas and oratorios; also to the *tutti* in concert pieces.

Ritter, (1) Georg Wenzel, bassoon player, b. April 7, 1748, Mannheim, d. June 16, 1808, Berlin; he was first engaged in the Electoral band at Mannheim, and, after its removal, at Munich; and in 1788 was engaged for the court orchestra, Berlin. R. published 2 concertos for bassoon, and 6 quartets for violin, viola, cello, and bassoon.

(2) August Gottfried, famous organist, b. Aug. 25, 1811, Erfurt, d. Aug. 26, 1885, Magdeburg, studied under Mich. Gottl. Fischer (Erfurt), Hummel (Weimar), L. Berger, A. W. Bach, and Rungenhagen (Berlin); in 1837 organist and teacher at Erfurt, in 1844 Cathedral organist at Merseburg, in 1847 (successor of Mühling) Cathedral organist at Magdeburg. His "Kunst des Orgelspiels" (2 vols., eight times republished), is well known. He wrote, besides, 4 important organ sonatas (Op. 11, 19, 23, 31), chorale preludes (Op. 4-9, 13, 25, 29, 38), variations, fugues, etc., for organ, 4 chorale books, a symphony (c minor, MS.), also a concerto for pianoforte, quartet for strings, pf. sonatas, choruses for mixed and male voices, songs, etc.; and he edited the first four annual series of the organ paper, *Urania* (see KÖRNER, 2). He also took part in the editing of the *Orgelfreund* (5 vols.), and of the *Orgelarchiv*; and published the meritorious and, especially for the oldest period, excellent "Geschichte des Orgelspiels im 14-18 Jahrhundert" (1884). Very extensive also are his collections of selected songs: "Odeon" (3 vols., for soprano), "Armonia" (for contralto), and "Arion" (for baritone).

(3) Théodore (Bennet, named R.), pianist, b. April 5, 1841, in the neighbourhood of Paris, d. April 6, 1886, Paris, studied with Liszt, made successful concert tours through Europe, and made a name by his solo pieces for pf., and large vocal works (dramatic scenes, "Le paradis perdu" and "Méphistophélès"; also an "Ave Maria" and "O Salutaris"). His attempts at opera were not successful (*Marianne*, Paris, 1861; *La dea risorta*, Florence, 1865).

(4) Frédéric Louis, b. June 22, 1834, Strassburg, d. July 22nd, 1891, Antwerp, studied under Schletterer, in Strassburg, and J. G. Kastner, in Paris. At the early age of eighteen, he became teacher of music at the Fénéstrange College, but soon went with his parents to Cincinnati, where he quickly became known as a distinguished musician, conducted societies, arranged concerts, etc. Later on, he went to New York and conducted the Harmonic Society. From 1867 he was teacher of music at Vassar

College, Poughkeepsie (State of New York). The University of New York bestowed on him the title of Doctor of Music. R. published: "History of Music" (1870; also 1875), a collection of his lectures at Vassar College. He also worked at a "History of Music in America," and at a dictionary of music. Of his compositions, 3 symphonies, an *Othello* overture, and the 46th psalm were all produced at New York.

(5) Hermann, b. Sept. 16, 1849, Wismar, teacher at the Royal School of Music, Würzburg, became known as the inventor of a large kind of viola (*Viola alta*, the old name, indeed, for the viola [alt viole]), of which the tone is fuller, and of less nasal quality. R. published: "Die Geschichte der *Viola alta* und die Grundsätze ihres Baues" (1877), "a Repetitorium der Musikgeschichte" (1880), "Populäre Elementartheorie der Musik," and "Aesthetik der Tonkunst" (1886).

(6) Alexander, b. June 15 (27), 1833, Narva (Russia), violinist and composer, held the post of leader at Meiningen, Weimar, Stettin, Würzburg, and opened a music business in the last-named town. His two operas, *Der faule Hans* (1885) and *Wem die Krone?* (1890) met with fair success at Munich and Weimar.

Rivé-King, Julie, b. Oct. 31, 1857, Cincinnati, distinguished pianist; she has also composed for the pianoforte.

Rivero (Ital. "turned," in contrary motion) has a meaning similar to *retro* or *cancrizans*. It is an indication, for a canonical part, that it is to be read backwards, and, as a rule, with the sheet of music turned round.

Rivolgimento (Ital.), inversion of the parts in double counterpoint.

Rochlitz, Johann Friedrich, novelist and writer on music, b. Feb. 12, 1769, Leipzig, d. there Dec. 16, 1842. He attended the St. Thomas's School under Doles, and began the study of theology, was private tutor for a time, and then devoted himself entirely to literary work. His "Charaktere interessanter Menschen" (4 vols.), "Kleine Romane und Erzählungen" (3 vols.), "Neue Erzählungen" (2 vols.), "Für ruhige Stunden" (2 vols.), have little to do with music. His first works more closely related to art were: "Blicke in das Gebiet der Künste und der praktischen Philosophie" (1796) and "Einige Ideen über Anwendung des guten Geschmacks" (1796). R., at one stroke, took a prominent position in the musical world when he was commissioned by Breitkopf & Härtel, in 1798, to establish and edit the *Allgemeine musikalische Zeitung*. He conducted the paper until 1818, and contributed articles to it until 1835. It should not be forgotten that this time includes the whole of Beethoven's creative period, also the appearance of Haydn's most important works. This newspaper, which

quickly influenced musical opinion in Germany and abroad, gave notices of Beethoven's first eight symphonies and other works, from the pen of R.; to him must be ascribed the honour of having, at an early period, called attention to the great importance of the master. R. took also an active share in the musical life of Leipzig, was, from 1805, member of the executive committee of the Gewandhaus Concerts, etc. The Grand Duke of Weimar named him "Hofrat." At the present day R. is best known by his work, "Für Freunde der Tonkunst" (1824-32, 4 vols.; 3rd ed. 1868), containing biographies (Ph. E. Bach, Romberg, G. E. Mara, Naumann, Faustina Hasse, Neukomm, Fesca, etc.), analyses (Handel's *Messiah*, etc.), aesthetic essays, etc. The 4th volume contains sketches for a "History of Vocal Music" ("Geschichte der Gesangsmusik"), and by way of illustrating or further developing the same, R. published from 1838-40 a "Sammlung vorzüglicher Gesangstücke" (3 vols.: 1st vol., from Dufay to J. Gabrieli and Prätorius; 2nd vol., Caccini to B. Marcello and J. J. Fux; 3rd vol., Bach and Handel to M. Haydn and Vallotti). Of R.'s own compositions, only songs for male chorus are known (in Fink's "Deutsche Liedertafel," 1850) and the 23rd Psalm ("The Lord is my Shepherd"), in Gebhardt's "Musikalischer Jugendfreund," and Fink's "Musikalischer Hausschatz." A list of his poems for cantatas, oratorios, and operas is included in the supplement of Dörffel's new edition of "Für Freunde der Tonkunst."

Rockstro, William Smyth, b. about 1830, d. July 2, 1895, studied at the Leipzig Conservatorium under Mendelssohn, Plaidy, and Hauptmann. He wrote a "Life of Handel," and, in collaboration with Canon Scott-Holland, a biography of "Jenny Lind, the Artist." R. contributed many important articles to Grove's "Dictionary of Music and Musicians."

Roda, Ferdinand von, b. March 26, 1815, Rudolstadt, d. April 26, 1876, on the Bülow Estate (near Kriwitz), pupil of Hummel. He went to Hamburg in 1842, where he founded in 1855 the Bach Society (Konzertinstitut), and in 1857 he became musical director at Rostock University. R. was a composer of some importance: cantata, *Theomela*; oratorio, *Der Sünder*; choral works, "Das Siegesfest," scenes from *Faust*, and, especially, a Passion music.

Rode, (1) Jacques Pierre Joseph, celebrated violinist, b. Feb. 16, 1774, Bordeaux, d. Nov. 25, 1830, at Château-Bourbon (near Damazon, Lot-et-Garonne). He studied under Fauvel at Bordeaux, then under Viotti at Paris, played already in 1790, at the Théâtre de Monsieur, during the entr'acte, a violin concerto by Viotti, and was appointed leader of the second violins at the Théâtre Feydeau, and went, later on, as solo violinist, to the Grand Opéra (until 1799). At the opening of the Conservatoire in 1794 he

was appointed professor of the violin; during the following, as well as during the previous years, he was, however, frequently absent on concert tours (Holland, Germany, England, Spain). In 1803 he went with Boieldieu to Petersburg, and remained there for five years as solo violinist to Alexander I. On his return to Paris he only remained there for three years; he was not received with the old enthusiasm. In 1811 he travelled through Germany and Austria (Beethoven wrote for him the Violin Romance, Op. 50), settled for a time in Berlin, where he married in 1814, and then returned to Bordeaux. He went back once to Paris (1828), but only to make the discovery that he ought to venture no more to appear in public there. Oppressed by this failure, he returned to Bordeaux and withdrew to his estate, Château-Bourbon. R.'s compositions are still held in high esteem by violinists; he wrote 13 violin concertos, 4 quartets for strings (Op. 14, 15, 16, 18), 8 *Quatuors (Sonates brillantes)* for solo violin, with accompaniment of violin, viola, and 'cello (Op. 24, 25, 28; the last two without opus number, posthumous); 24 caprices, 12 *Études*, violin duets (Op. 18), violin variations with orchestra (Op. 10, 21, 25, 26), others with stringed quartet (Op. 9, 12, 28), a fantasia with orchestra, and other pieces. A. Pougin wrote a biography of R.

(2) Johann Gottfried, b. Feb. 25, 1797, Kirchscheidungen (near Freiburg-a.-d.-Unstrut), d. Jan. 8, 1857, Potsdam. He was for many years bandmaster of the "Gardejägerbataillon," and was a distinguished performer on the French horn. He became royal musical director in 1852, composed and arranged many works for horns. R. established at Potsdam a fund for the widows and orphans of military musicians.

(3) Theodor, son of the former, b. May 30, 1821, Potsdam, d. Dec. 12, 1883, Berlin, studied with L. Berger, Elsler, and Dehn, was teacher of singing at the Werder Gymnasium, Berlin, published a "Theoretisch-praktische Schulgesangslehre," a number of detached articles on Prussian military music, on Russian "Hunting Music," etc., in the *Neue Zeitschrift für Musik* and in the *Neue Berliner Musikzeitung*. He was also a contributor to Mendel's "Musikalisches Konversationslexikon."

Röder, (1) Johann Michael, celebrated organ-builder at Berlin during the first half of the last century (until 1740). His most famous work was the grand organ of St. Maria Magdalena, Breslau (58 stops).

(2) Fructuosus, b. March 5, 1747, Simmershausen, in 1764 Benedictine conventual, in 1770 cathedral organist at Fulda, d. 1789 in the monastery of San Lorenzo at Naples, as novice master and school director; he was an able performer on the organ and church composer ("Jesu Tod").

(3) Georg Vincent, b. 1780, Rammungen (Lower Franconia), d. Dec. 30, 1848, Altötting,

from 1805-14 capellmeister and opera director at the Electoral court at Würzburg (the court chapel was dissolved), in 1830 musical director, Augsburg, about 1845 Capellmusikdirector, Altötting. He was a prolific composer of sacred works (masses, psalms, Te Deum, oratorio [*La Messiaide*], cantata [*Cäcilia*]); he wrote also a symphony and published fragments of an "Aesthetik der Tonkunst" in the *Museum f. d. elegante Welt*. His opera, *Die Schweden*, was produced at Prague in 1842.

(4) Karl Gottlieb, b. June 22, 1812, Stötteritz (near Leipzig), d. Oct. 29, 1883, Gohlis (near Leipzig), founder and head of the Röder factory for the engraving and printing of music at Leipzig (Oct. 20, 1846), the most important establishment of its kind. It was at first small and unpretending; but, after R. first introduced the steam press for music-printing, took such a rapid start that some of the most important publishing firms in the world have their engraving and printing now done by the R. firm. At the present moment the establishment employs over 300 workmen (24 steam presses). In 1872 R. took his sons-in-law, K. L. H. Wolff and K. E. M. Rentsch, as partners into the business, and on July 1, 1876, withdrew to enjoy a well-deserved rest.

(5) Martin, b. April 7, 1851, Berlin, d. June 10, 1895, Boston, U.S.A., from 1870-71 pupil of the Royal High School, Berlin, lived from 1873-80 at Milan, where, through Ricordi, he received the post of chorus director at the Teatro dal Verme. In 1875 he established the "Società del Quartetto Corale," a choral society which soon distinguished itself. In 1875 R. assisted at the rehearsals of Wagner's *Rienzi* at Venice; he was, in fact, away from Milan for several months every year, acting, now here, now there, as maestro during an opera season (Ponte del Gada, the Azores, Novara, Turin, Bologna). R.'s compositions give proof of sound gifts and solid knowledge, especially the chamber-music (above all, the trio in F minor, quintet in A, quartet in B flat minor), 2 mysteries: *Santa Maria appie della croce* (Torquato Tasso) and *Maria Magdalena* (to words of his own); 3 operas, *Pietro Candiano IV.*, and to his own libretti, *Judit* and *Vera* (the last-named was performed at Hamburg in 1881); also a symphonic poem, "Azorenfahrt," etc. From the autumn of 1880 R. lived at Berlin as teacher of singing, and from October, 1881, as teacher at Scharwenka's Conservatorium; he went, however, to Dublin in 1887 as music director, and, later on, to America, where he became director of the Conservatory of Music, Boston. In the *Sammlung musikalischer Vorträge* (Breitkopf u. Härtel) there appeared his treatise: "Ueber den Stand der öffentlichen Musikpflege in Italien" (1881). He also published "Studj critici raccolti" (Milan, 1881), and "Aus dem Tagebuch eines wandernden Kapellmeisters" (Leipzig, 1882).

Rodio, Rocco, Italian contrapuntist, b. about 1530, Calabria, published "Regole per far contrappunto solo e accompagnato nel canto fermo" (1st ed. probably 1600; 2nd ed. 1609; 3rd ed. 1626), and a volume of Masses (1580), among which one *a* 5, which can be sung also *a* 4 and *a* 3 by leaving out the Quinto and the Superius (Soprano).

Rodolphe (Rudolph), Jean Joseph, performer on the horn and composer, b. Oct. 14, 1730, Strassburg, d. Aug. 18, 1812, Paris. He at first studied the horn and violin (Paris, under Leclair), and played in the orchestras at Bordeaux, Montpellier, etc. In 1754 he went to Parma, where he had the privilege of studying under Traëtta, and afterwards at Stuttgart, under Jomelli. He produced his first operas in the latter city. In 1763 he returned to Paris, became principal horn-player at the Grand Opéra, and in 1770 royal chamber musician. When the *École royale de chant, etc.*, was established in 1784, R. was appointed professor of harmony, but through the Revolution lost his post; in 1799, however, he was created professor of Sol-fège at the Conservatoire de Musique, but lost this appointment when the teaching staff was reduced in 1802. R. wrote 4 operas for Stuttgart and 3 for Paris, 2 horn concertos, horn fanfares, violin duets, études, etc., and, according to Fétis, two wholly worthless theoretical works, "Sol-fèges" (1790, general instruction book), and "Théorie d'accompagnement et de composition" (1799); both of them were, nevertheless, at one time, much in vogue.

Roedel, Joseph Leopold, b. April 11, 1838, London (son of Joseph Augustus R., b. 1783, d. 1870, director of German Opera at Paris, then London). He studied in Germany under Eisenhofer (Würzburg) and Goetze (Weimar), afterwards settling in England, where he is well known as an excellent teacher and composer. His songs and some of his pf. pieces are very popular, and he has also produced several cantatas with success: *Fair Rosamund* (1871), *The Ten Virgins*, *Ruth*, *The Sea Maidens*, *Westward Ho*, *Mary Stuart*, etc.

Rogel, José, b. Dec. 24, 1829, Orihuela (Alicante), very prolific Spanish composer of operettas (65 Zarzuelas produced between 1854 and 1880).

Roger, Gustave Hyppolyte, celebrated operatic tenor, b. Dec. 17, 1815, La Chapelle St. Denis (near Paris), d. Sept. 12, 1879, Paris. He was son of a notary, was intended for a lawyer, but in 1836 joined the Conservatoire and became a pupil of Martin and Morin. Already in 1838 he made his *début* at the Opéra Comique in Halévy's *Éclair* with decided success, was engaged, and created many principal rôles of new operas. In 1848 he went over to the Grand Opéra, where, among other parts, he created the rôle of the Prophète (1849); but,

considering the size of the building and the heavier demands of the more pathetic style of music, he could only give complete satisfaction by forcing his voice to an unnatural extent. From 1850 he paid many professional visits to Hamburg, Frankfurt, and Berlin. Through a hunting accident in 1859 he had to have an arm amputated, and from that time was not at his ease on the stage. He returned to the Opéra Comique, but soon gave this up, and after singing for some time in Germany he was appointed professor of singing at the Paris Conservatoire in 1868.

Rogers, Roland, organist and church composer, b. Nov. 17, 1847, West Bromwich (Staffordshire); when only eleven years old he became organist of St. Peter's Church there, and is now organist of Bangor Cathedral; he took his Mus. Doc. degree in 1875 (Oxford).

Rognone, (1) Riccardo, violinist at Milan, published: "Canzonette alla Napolitana" *a* 3-4 (1586); "Libro di passaggi per voci ed istromenti" (1592), and "Pavane e balli . . . canzoni . . . brandi" *a* 4-5 (1603). His sons were—

(2) **Giovanni Domenico**, organist, maestro to the Duke of Milan about 1620, published canzonette *a* 3-5 (1614), madrigals *a* 8 for double choir (1619), and a "Messa per defonti all' Ambrosiana" (1624).

(3) **Francesco**, ducal maestro at Sant' Ambrogio, published Masses *a* 5, psalms, faux-bourbons, and motets with organ bass (1610), Masses and motets *a* 4-5 (1624), madrigals with continuo *a* 5 (1613), "Correnti e Gagliarde" *a* 4 (*a* 5, *ad lib.*, 1624), "Aggiunta dello scolaro di violino" (1614), and "Selva di varii passaggi secondo l'uso moderno" (on ornaments both in playing and in singing, 1620).

Rohde, Eduard, b. 1828, Halle-a.-S., d. March 25, 1883, Berlin, as choirmaster of St. George's Church and teacher of singing at the Sophien-Gymnasium, royal musical director, author of an elementary pianoforte instruction book, cantata (*Schildhorn*), etc.

Rohleder, (1) Johann, pastor at Friedland-Pomerania. He published a *Te Deum*, and also proposals for the reform of the keyboard and for a system of notes, similar to the one suggested by the "Chroma" Society of the present day: "Erleichterung des Klavierspiels vermöge einer neuen Einrichtung der Klaviatur und eines neuen Notensystems" (1792).

(2) **Friedrich Traugott**, pastor at Lähn (Silesia). He wrote: "Die musikalische Liturgie in der evangelisch-protestantischen Kirche" (1831); "Vermischte Aufsätze zur Beförderung wahrer Kirchenmusik" (1833), and, before that, articles of similar contents in the *Eutonia* (1829, etc.).

Rohrblatt (Ger.), name given to the reeds of the oboe and bassoon (double reeds), and to the

reed of the clarinet (single reed). (Cf. WIND INSTRUMENTS.)

Rohrflöte. (See REED-FLUTE.)

Roitssch, F. August, b. Dec. 10, 1805, Gruma (near Görlitz), d. Feb. 4, 1889, Leipzig, a well-known editor of classical works (especially for the Peters' Edition).

Rolandt, Hedwig, coloratura vocalist, b. Sept. 2, 1858, Graz. Her real name is Hedwig Wachutta (her professional name, R.). She studied with Frau Weinlich-Tipka at Graz, made her *début* at Wiesbaden in 1877, and, having achieved extraordinary success, was at once engaged. She afterwards sang, among other places, at the Gewandhaus, Leipzig. R. has a clear soprano voice of great compass (up to *f*^m) and of remarkable flexibility. In 1883 she married the merchant, Charles Schaaf.

Roll (Ger. *Wirbel*), a mode of striking kettle-drums and drums, consisting of a quick alternation between the two drumsticks. It is marked

as a shake or tremolo  or  The continued reverberation of cymbals, triangles, etc., is marked in the same manner.

Rolla, Alessandro, distinguished violinist, teacher of Paganini, b. April 22, 1757, Pavia, d. Sept. 15, 1841, Milan. He studied with Renzi and Conti, went to Vienna as principal violinist of the Italian Opera, devoted his attention, later on, to the viola, lived for several years at Milan, and in 1782 was called to the court at Parma as solo violist and chamber virtuoso. Later on he became violinist and leader there. In 1802 he was appointed maestro at La Scala, Milan, in 1805 solo violinist to the Viceroy Eugène Beauharnais, and, after the establishment of the Conservatorio, teacher of the violin at that institution. R. composed 3 violin concertos, 4 viola concertos, 6 quartets for strings, a quintet concertante for two violins, two violas, and 'cello, trios for violin, viola, and 'cello, the same for two violins and 'cello, duets for violin and viola, violin duets, a serenade (sextet), a divertissement, variations for violin with orchestra, etc.—His son, Antonio, b. 1798, Parma, d. May 19, 1837, as first violinist at Dresden, published a violin concerto and solo pieces for the same instrument.

Rolle, Johann Heinrich, prolific composer, b. Dec. 23, 1718, Quedlinburg, d. Dec. 29, 1785, Magdeburg. He studied jurisprudence and philosophy from 1736–40 at Leipzig, but turned to music, and entered the court band at Berlin in 1741 as viola-player. In 1746 he became organist of St. John's, Magdeburg, and when his father died, in 1752, succeeded him as town musical director. R. composed several complete yearly series of church services, 4 Passions, 20 sacred and secular dramas (oratorios), and set the odes of Anacreon for one voice with clavier accompaniment, etc.

Röllig, Karl Leopold, performer on the harmonica, inventor of the "Orphika" and "Xänorphika," two long-forgotten instruments (Cf. BOGENFLÜGEL), b. 1761, Vienna, travelled for a long time with his instruments, but in 1797 accepted a post at the Vienna court library, and d. March 4, 1804, Vienna. R. composed a comic opera, *Clarissa*, for Hamburg (1782), likewise pieces for harmonica and orphika, and wrote: "Ueber die Harmonika" (1787); "Orphika" (1795); "Versuch einer musikalischen Intervallentabelle" (1789), and some articles for the *Allg. Mus. Ztg.* (1802–1804).

Romance (Fr.) is a word derived from "roman," which simply meant a poem in the Provençal dialect, as opposed to one in Latin verse. Both were narrative in character, and gallant adventures formed their subject-matter. A *Roman* such as those handed down to us from the 12th and 13th centuries, is nothing more than a R. developed at length—a cycle of romances. By R., in the art of poetry at the present day, is meant an epico-lyric poem, similar to the ballad; but while in the ballad itself nature, or one of the powers of nature personified, is, as a rule, opposed to man, in the R. the subject is chosen by preference from among the deeds of chivalry. The French *romance* now stands for a sentimental love-song, while the *chanson* has a more pointed meaning, and frequently, a touch of humour in it. As an instrumental form R. is as indefinite and expansible as the ballad; yet a preponderance of the melodic element is peculiar to all Rs., from the small ones for pf. solo (Schumann) to the large ones for violin and orchestra (Beethoven).

Romanesca. (See GALLIARD.)

Romanina. (See ALBERTINI, 2.)

Romano, (1) Alessandro. (See ALESSANDRO R.)

(2) Giulio. (See CACCINI.)

(3) Carlo Joseffo, maestro of the "Passion" Church, Milan. He published three books of motets for several voices ("Cigno sacro," 1668; and "Armonia sacra," 1680), "Sirenea sacra" (motets a 5, a Mass, vesper psalms, 1674), and a book of motets for solo voices (1670).

Roman School is the name given to the series of teachers and pupils, beginning with Claude Goudimel (q.v.), which lasted up to the present century, and whose original characteristic feature was the subordination of the arts of counterpoint to beautiful effects of sound and to truth of expression. Later on, when the reform effected by Palestrina in polyphonic music had been surpassed by the radical revolution of the Florentines, the R. S. appeared as the guardian of good tradition, as the representative of classical style (*Stilo osservato*), i.e. of a *cappella* style as opposed to monody and concertante sacred song. (Cf. PALESTRINA STYLE.) A characteristic feature of

the R. S. since the 17th century was the mode of writing in eight and more parts, adopted from the Venetians. (See GABRIELI.)

Romantic, a term opposed to classical, an independent striving after novelty, a predominance of the subjective, over the formal element. From an historical point of view, the classicism of poetry arose from deep study of the (classical) master-works of the Greeks and the Romans, whose finished form our poets sought to appropriate; and, in similar manner, romanticism arose from the enthusiasm for the Middle Ages, regarded from their fantastic, adventurous, extravagant side. Anyhow, in the adoration, full of religious mystery, shown towards the Virgin Mary and the homage paid to the knights of the Holy Grail on the one hand, and towards the minnesingers on the other hand; in the fusion of old heathenish ideas with those introduced by Christianity, rare stimulus was given to the imagination; and only the sober historian and politician recognise in these creations of the fancy, seen as through a mist, the bad, dark side of a former age. All romanticism is therefore tinged with indistinctness and uncertainty. It is a conscious plunge beneath the surface of clear intellectual activity and of orderly, set forms; a yielding of the imagination to elementary powers of formation, without the discipline of conventional laws. Thus it happens that romanticists introduce that which is new, enrich art, intensify the means of expression. In this sense every artist is a *romanticist* who ignores existing art forms and art laws, and who freely evolves the new from himself; but he is a *classicist* who inquires into the laws which govern art, and who follows or improves them (a "classic" is one whose art works set time at defiance). At the present day the term R. is specially applied to composers since Beethoven, who did not simply follow in his footsteps, but who acted, and with rich results, on hints which he gave towards the extension of the means of musical expression (Weber, Schubert, Spohr, Marschner, Schumann). Distinguished from these again (whether rightly is doubtful) is the so-called *new romantic school*: Berlioz, Liszt, Wagner. Liszt was an out-and-out pupil of Schubert's, and Wagner sprang from Weber; but Berlioz, even judged by the period at which he wrote, belonged, in unqualified manner, to the old romanticists. The breaking up of symphonic form in the department of instrumental music, and of the aria form in the opera, are marks by which the new romantic school may be recognised.

Romanus, *Letters of* (*Litteræ significativæ*) are the single Latin or Greek letters, such as *m*, *c*, *i*, and abbreviated words, such as *ten.*, *sep.*, *moll.*, frequently written over old neume notations, the meaning of which has not, hitherto, been

satisfactorily explained. They are said to have been first introduced by Romanus, the bearer of the Antiphony of St. Gregory to St. Gallen. (See SINGING, ART OF, and NOTKER.)

Romberg, (1) Andreas Jakob, violinist and composer, b. April 27, 1767, Vechta (near Münster), d. Nov. 10, 1821, Gotha, son of the musical director, Gerhard Heinrich R. (b. Aug. 8, 1745, Münster, d. there Nov. 14, 1819, celebrated as a performer on the clarinet). R. undertook, when little more than a boy, a concert tour with his cousin Bernhard R. (see below) through Holland and France, and went in 1784 to Paris, where he so pleased that he was engaged as solo-violinist for the *Concerts spirituels* of the season. From 1790-93 he was engaged with his cousin in the Electoral orchestra at Bonn, travelled again with Bernhard R., and both appeared with great success at a concert in the Capitol at Rome. During the following years he lived at Vienna and Hamburg, but in 1800 followed his cousin to Paris, and sought to obtain a position as composer, in which, however, he did not succeed. In 1801 he returned to Hamburg, and remained there until, in 1815, he was appointed court capellmeister at Gotha as Spohr's successor. Shortly before, he obtained from the University of Kiel the degree of Dr. Phil. R.'s compositions, with exception of the "Song of the Bell," are nearly all forgotten. He wrote 8 operas, of which *Scipio* and the *Ruinen von Paluzzi* appeared in pf. score; the overtures of both, and also that of *Don Mendoza*, written for the Paris Opéra Comique by the two Rombergs, appeared in score. To these must be added the choral works with orchestra: "Die Glocke" (Schiller), "Die Harmonie der Sphären" (Kosegarten), "Ode" (Kosegarten), and the vocal soli with orchestra, "Die Kindesmörderin," "Die Macht des Gesanges," "Monolog der Jungfrau von Orleans," "Der Graf von Habsburg," "Sehnsucht" (all by Schiller), a Mass with orchestra, a Te Deum, a prize-crowned "Dixit dominus" (a 4 with orchestra), written for Hamburg, "Psalmodie" (5 psalms, together with a Magnificat and Halleluja in German, after the translation of M. Mendelssohn, a 4-16, a *capella*), Pater Noster a 3 with orchestra, songs a 3 with pf. accompaniment, "Selmar und Selma" (elegy for two voices with quartet of strings), several Masonic cantatas. Still greater is the number of his instrumental works: 10 symphonies (4 printed), 23 concertos for violin (4 printed), 33 quartets for strings (25 printed), 2 movements of a double quartet, 8 quintets with flute, 1 with clarinet, 3 sonatas for violin, a pf. quartet, 2 quintets for strings, 11 rondos and caprices for violin, a concertante for violin and 'cello with orchestra, etc. A biographical sketch of Andr. R. is to be found in Rochlitz' "Für Freunde der Tonkunst" (vol. i.).

(2) Bernhard, son of Anton R. (b. March 6, 1742, Münster, d. there Dec. 14, 1814, famed

as a performer on the bassoon), b. Nov. 12, 1767, Dincklage (Oldenburg), d. Aug. 13, 1841, Hamburg, was a 'cello-player of note. For many years he worked and lived with his cousin Andreas (their fathers were brothers; see above). In 1799 he undertook a concert tour alone to England and Spain, arriving in Paris in 1800, and there met with such success that he was appointed professor of the 'cello at the Conservatoire. He resigned, however, this post in 1803, and returned to Hamburg, whence he was called in 1805 to Berlin as solo 'cellist in the court band. As there was no music in Berlin during the year 1806, he undertook several grand concert tours through Austria, Russia, Sweden, etc., was court capellmeister at Berlin from 1815-19, and then retired from public life and went to live at Hamburg. In 1839 R. made a last concert tour to London and Paris, when, indeed, as a virtuoso, he was but a shadow of his former self. He wrote 9 concertos for 'cello (still held in high esteem), 3 concertinos and a fantasia with orchestra, 4 sets of Russian melodies for 'cello and orchestra, caprices and fantasias on Swedish, Spanish, and Roumanian melodies, polonaises, 11 quartets for strings, a trio for violin, viola, and 'cello, one for viola, 'cello, and bass, 'cello duets, 'cello sonatas with bass, a concertante for two horns with orchestra, 3 operas, and incidental music to several plays.

(3) Cyprian, son of Andreas R. (1), 'cellist, pupil of his uncle, b. Oct. 28, 1807, Hamburg, d. there Oct. 14, 1865 (drowned while bathing). After extended concert tours he became 'cellist in the court band at Petersburg, and also published some concert pieces for 'cello.

Rome, *Grand Prix de*, the name of the great state prize offered to the pupils, for composition, of the Paris Conservatoire; it is thus named because a stipend is guaranteed to the fortunate winner, in order that he should reside for four years in Italy for the purposes of study. The competition takes place every year in the month of July, and the candidates are isolated. The decision is announced in November, and the victor, after the performance of his work at the Opéra, is proclaimed "laureate," and in stately fashion crowned with laurel. Almost all celebrated modern French composers have been laureates of the Académie (Institut de France): Hérold, 1812; Benoist, 1815; Halévy, 1819; Leborne, 1820; Berlioz, 1830; A. Thomas, 1832; Elwart, 1834; Gounod, 1839; Bazin, 1840; Massé, 1843; Gastinel, 1845; Bizet, 1857; Paladilhe, 1860; Massenet, 1863. The second prize (*Second Prix de Rome*) is a gold medal. The prize for composition given every two years by the Brussels Conservatoire (since 1840) is also named *Prix de Rome*, but the residence in Rome is not insisted on. (Holders of this prize: Soubre, Ledent, Samuel, Gevaert, Lemmens, Al. Stadtfeld, Ed. Lassen, P. Benoit, Radoux, Huberti, Edg. Tinel, etc.)

Ronchetti-Monteviti, Stefano, b. Sept. 18, 1814, Asti, d. in Oct., 1882, Casale Monferrato. He went as a youth to Milan, where he received musical training, became professor of composition in 1850, and, after the death of Mazzucato (1877), director of the Milan Conservatoire. As a dramatic composer he only made one attempt, and that an unsuccessful one (*Pergolesi*, 1857, at Milan); but, on the other hand, his sacred compositions and small vocal pieces (three cantatas after Ossian, a national hymn, 1849, etc.) are held in high esteem.

Ronconi, Domenico, tenor singer and famed teacher of singing, b. July 11, 1772, Lendinara di Pollesine (Lombardy), d. April 13, 1839, Milan. He sang at Venice, Petersburg (1801-1805), at the best theatres of Upper and Middle Italy, was director of Italian opera at Vienna in 1809, sang at Paris in 1810, then again in Italy, and from 1819-29 at Munich, where, at the same time, he was teacher of singing to the princesses. In 1829 he established a school of singing at Milan. He published some instructive vocal pieces.—His son Giorgio, b. 1810, Milan, d. Jan. 8, 1890, was a celebrated baritone singer.

Rondellus, probably the oldest form of strict imitation, mentioned already by Franco of Cologne. Walter Odington (q.v.) describes it thus:—"Si, quod unus cantat, omnes per ordinem recitent." From the example, however, which he has given, the R. was certainly not a canon; but the voices frequently exchanged phrases, so that it must be looked upon as a kind of double counterpoint. The scheme (each letter representing a phrase of four bars, or, according to the terminology of the theoretical writers on mensural music, four perfections, each of which answers in value to a perfect long) is as follows:—

1st voice :	a	b	c	d	e	f	etc.
2nd "	b	c	a	e	f	d	etc.
3rd "	c	a	b	f	d	e	etc.

On the other hand, some specimens of veritable canons are preserved under the name of *Rota* or *Rotula* (Ger. *Radel*), the earliest one dating from 1226 ("Sumer is icumen in"), the oldest monument of English counterpoint.

Rondeña. (See FANDANGO.)

Rondo (Ital.; Fr. *Rondeau*, *Rondel*), probably originally identical with *Rondellus* (q.v.); but either the form must have been freely developed at a very early period, or, conversely, the mensural writers must have spoilt it by too much strict imitation. The latter is the more probable. The poetical form of the R. is similar to that of the sonnet, and consists of 13 four-feet (iambic) lines, with only two different kinds of rhyme; the beginning is repeated at the 5th, 8th, and 13th verse (refrain), with skilful change of meaning. It will naturally be understood that this form is a refined evolution by the

chivalric poets of the 12th and 13th centuries from one originally of a much simpler kind. The characteristic feature of all rondos, rondels, *Rondelli*, and "Radels" is the repetition of some pregnant thought, a feature to be found in the R. of instrumental music of the present day. It is absurd to set up one scheme of R. as standard; one has only to remember that in the R. the principal theme returns several times, and that more than one accessory theme is opposed to it. For further details of FORM. The R. is always of cheerful character, and demands a well-articulated rendering, which, indeed, may be distinguished as a *Rondo-rendering*; this term, however, can only be justified if taken in a very wide sense, so as to include also the Scherzo, Capriccio, dances, and humorous songs. A humoristic rendering demands occasionally a heavily-marked touch, quickly alternating dynamic contrasts, as of *tempo*, etc., while one of a more serious kind should be smooth.

Rong, Wilhelm Ferdinand, chamber musician to Prince Henry of Prussia, and, after the death of the latter, teacher of music at Berlin. Already in 1800 he was about 80 years old, but is said to have been alive in 1821 (100 years of age). He composed many patriotic songs for special occasions (for the death of the Queen Luise, for the battle of the Belle Alliance, etc.), romances, hymns, etc., and wrote: "Elementarlehre am Klavier" (1786), *Modulation Tables* (48 tables, etc., 1800), a "Theoretisch-praktisches Handbuch der Tonartenkenntnis" (1805), and musical society games, etc.

Ronger, Florimond. (See HERVÉ.)

Rönisch, Karl, noted pianoforte manufacturer at Dresden (since 1845), b. 1814, Goldberg (Silesia), d. July 21, 1894, Blasewitz, near Dresden; Royal Saxon Councillor of Commerce.

Röntgen, (1) Engelbert, violinist, b. Sept. 30, 1829, Deventer (Holland), at first studied painting and music both at the same time, but in 1848 became a pupil of David at the Leipzig Conservatorium, joined the Gewandhaus orchestra as violinist, and in 1869 was named leader, which post he still occupies; he is famed for his beautiful soft tone. For many years R. was teacher of the violin at the Conservatorium.

(2) Julius, son of the former, b. May 9, 1855, Leipzig, pupil of the Leipzig Conservatorium (Hauptmann, Richter, Reinecke), excellent pianist. He has displayed his gifts as a composer in a number of chamber works (violin sonata, cello sonata, pf. sonatas, pieces, etc.; in manuscript a pf. concerto, a symphony, etc.). After occupying for several years the post of teacher at the Amsterdam Conservatoire, he succeeded Verhulst in 1886 as conductor of the concert society "Felix meritis," and of the "Maatschappij tot Bevordering van Toonkunst" in that city.

Root, the fundamental note of a chord.

Roquet. (See THOINAN.)

Rore, Cipriano de (most probably Van R.), important composer of the 16th century, b. 1516, Antwerp, studied under Willaert at Venice, chapel singer at St. Mark's, then for some time maestro at the court of Hercules II. of Ferrara. In the year 1557 or 1558 he obtained leave of absence and went to Antwerp, but did not return; and his later attempts (about 1559) to regain his post failed. He therefore took the post of vice-maestro of St. Mark's, Venice, succeeded Willaert, after the death of the latter in 1563, but already in 1565 went as maestro to Parma, where he died in the same year. R. published: 2 books of madrigals *a 4* (1542 and 1543; often reprinted, 1577 a nearly complete joint edition of both vols.), "Madrigali cromatici," 5 books (*a 5*, 1542-66, many times reprinted); "Le vive Fiamme" (madrigals *a 4-5*, 1565); "Motetta" (*a 4-5*, 1545); "Cipriani de R. et aliorum auctorum motetta 4 voc. . . cum 3 lectionibus pro mortuis Josepho Zarlino auctore" (1563); "Sacrae Cantiones seu motetta" (*a 4-6*, 1573); a book of Masses *a 4-6* (1566, only known by the enumeration in Draudius' "Bibl. Class."); a book of psalms (1554); a Passion according to St. John (1557); "Fantasie e ricercari a 3 voci . . . da cantare e sonare . . . composti da lo eccellentissimo Adriano Willaert e Cipriano R. suo discepolo" (1549). Many collections by Susato, Phalèse, etc., contain madrigals and motets by R. In the Munich Library there are 3 unprinted Masses, "Vivat Felix Hercules" (*a 5*), "Praeter rerum seriem" (*a 7*); and the "Missa a note nere" (*a 5*) mentioned by Fétis; likewise a considerable number of motets and madrigals in the handsome vol. "Mus. Ms. B.," with miniatures by Hans Müllich, p. 304; photograph of a bust of R. is in Maldeghem's "Trésor," 5th annual issue.

Rorich, Carl, b. Feb. 27, 1869, Nürnberg, studied at the Royal School of Music, Würzburg; since 1892 he has been a teacher at the Grand Ducal School of Music, Weimar. He is a talented composer: "Märchen" overture, "Waldleben" suite, and "Weihnachtsbilder," choruses, pf. pieces, songs.

Rosa, Carlo (Carl Rose), violinist and impresario, b. March 21, 1842, Hamburg, d. April 30, 1889, Paris, pupil of the Leipzig Conservatorium and of the Paris Conservatoire, in 1863 leader at Hamburg, in 1865 made a concert tour to London, and afterwards went to America with the vocalist Euphrosyne Parepa (q.v.), whom he married in 1867. From that time R. was opera manager both in London and New York.

Rosalia (Ger. *Schustervfleck*), the term applied to the successive repetition of a motive on various degrees of the scale. It is not only a

very convenient, but an absolutely indispensable means of intensification in music. The nickname *Schusterfleck* (cobblers' patch) is only appropriate when the repetition results in monotony.

Rose is the name given to the hole in the middle of the soundboard of the lute, cut out in the shape of a rosette.

Rosé, Arnold Josef, distinguished violinist (first violin in the well-known R. Quartet), b. Oct. 24, 1863, Jassy; he was a pupil of Heissler at the Vienna Conservatorium. Since 1881 he has been leader and solo violinist in the court orchestra, Vienna, and also leader at the Bayreuth Festivals since 1888.

Rossingrave, Thomas, organist of St. George's, Hanover Square, London, 1725-37, d. there 1750; studied counterpoint at Rome. He published: "Voluntaries and Fugues . . . for the Organ or Harpsichord."

Rosellen, Henri, pianist and favourite salon-composer, b. Oct. 13, 1811, Paris, d. there March 18, 1876; pupil of the Conservatoire, wrote over 200 works, mostly pf. pieces, fantasias, etc.; but also a trio concertante for pf., violin, and 'cello (Op. 82), a pf. school, and a technical instructive work, "Manuel des Pianistes."

Rosenhain, (1) Jakob, pianist and noteworthy composer, b. Dec. 2, 1813, Mannheim, d. March 21, 1894, Baden-Baden, pupil of Jakob Schmitt at Mannheim and of Schnyder v. Wartensee at Frankfurt, made many concert tours, and lived first for some time in Frankfurt, in 1849 in Paris, and then Baden-Baden. R. composed four operas: *Der Besuch im Irrenhaus* (produced at Frankfurt, 1834), *Liswenna* (not produced), *Le démon de la nuit* (at the Grand Opéra, Paris, 1851), and *Village et jaloux* (Baden-Baden, 1863); also 3 symphonies, 4 pf. trios, 3 stringed quartets, a pf. concerto, études, and pf. pieces, and a large number of songs.

(2) Eduard, brother of the former, b. Nov. 18, 1818, Mannheim, d. Sept. 6, 1861, Frankfurt, was an excellent pianist and pf. teacher, and published a serenade for 'cello and pf., also a number of pf. pieces.

Rosenmüller, Johann, b. 1615, in 1648 musical director of St. Thomas's, Leipzig, was imprisoned in 1655 for misdemeanour, escaped to Hamburg, afterwards to Italy; obtained pardon and permission to return in 1667, and died in 1682 as capellmeister at Wolfenbüttel. He published: "Kernsprüche mehrtheils aus heiliger Schrift" (a 3-7 with continuo, 1648); "Studentenmusik von 3 und 5 Instrumenten" (dance pieces, 1654); and "12 sonate da camera a 5 stromenti" (1671).

Rosenthal, Moritz, b. 1862, Lemberg, pupil of Mikuli, Raphael Joseffy (1875), and Liszt (1877), a pianist of stupendous technique and exceptional refinement. He has made concert tours since 1876, but first attracted attention

in 1890, after travelling a long time in America. He paid his first visit to London in 1895.

Roser von Reiter, Franz de Paula, b. 1779, Naarn (Upper Austria), d. 1830; he wrote in Pesth and Vienna a great number (over 50) of operas, operettas, farces, pantomimes, etc., up to 1828.

Rosetti, (1) Steffano (Roseti), b. Nice, maestro at Novara. He published books of madrigals a 3, a 4, and a 6 (1567, 1560, 1566 [1573]), and a book of motets a 5-6 (1573, reprint?).

(2) Francesco Antonio (Franz Anton Rössler), b. 1750, Leitmeritz (Bohemia), d. June 30, 1792, Ludwigslust. He attended the priests' college at Prague, received the tonsure in 1769, but obtained a dispensation from the Pope and became a musician. He was first of all capellmeister to Prince Wallerstein, and in 1789 court capellmeister at Schwerin. R. composed a requiem, 2 oratorios: *Der sterbende Jesus* (published) and *Jesus in Gethsemane* (1792, produced at the Berlin court in his presence, shortly before his death), 19 symphonies, 9 quartets for strings, 4 flute concertos, 4 clarinet concertos, 3 horn concertos, 2 concertante for two horns, a sextet for flute, two horns, and strings, a pf. concerto, 12 pf. trios, etc.

Rösler, Gustav, b. Sept. 2, 1819, d. Feb. 24, 1882, Dessau. He studied under Friedr. Schneider, was composer and teacher of music. He is known by his pf. scores of the Bach cantatas in the Peters Edition. His opera, *Hermann und Dorothea*, has been repeatedly performed at Dessau.

Rossaro, Carlo, b. 1828, Crescentino (near Vercelli), d. Feb. 7, 1878, Turin, distinguished pianist and industrious composer: pf. sonata (Op. 23), 4 character-studies (Op. 10, 11, 15, 16), pieces (Op. 12, 13, 14), fantasia for pf. and contrabass (of great merit).

Rossi, the name of an immense number of Italian musicians, of whom the following deserve special mention: (1) Giovanni Battista, monk at Genoa, who published "Organo de cantori per intendere da so stesso ogni passo difficile che si trova nella musica," etc. (1618), a book which solves certain problems of mensural notation.

(2) Salomon, rabbi at Mantua, published: 2 books of Canzonette a 3 (1589, 1592), 4 books of madrigals a 5 (1596 [1598, 1607], 1599, 1609, 1613), symphonies and Gagliarde a 3-5 (1607), "Sonate, gagliarde, brandi e correnti a due viole col basso per il cembalo" (1623), and cantica a 3-8, psalms, hymns, and laudes (1620). In 1617 Gardano printed a music drama, *Maddalena*, composed by R. Monteverde, Muzzio Effrem, and Alessandro Guinizzani.

(3) Luigi Felice, b. July 27, 1805, Brandizzo (Piedmont), d. June 20, 1863, Turin. He studied under Raimondi and Zingarelli at Naples, failed with an opera at Turin, and therefore

devoted himself to sacred compositions, winning for himself a respectable name (Masses, Requiem, Te Deum, etc.). R. wrote articles for Tomaseo's "Gran dizionario della lingua italiana" and for Pombo's "Enciclopedia popolare;" he was a diligent contributor to the Milan *Gazzetta musicale*, and translated Reicha's "Theory of Composition," Cherubini's "Counterpoint," etc., into Italian.

(4) Lauro, one of the most celebrated modern composers of Italian opera, b. Feb. 20, 1812, Macerata, d. May 6, 1885, Cremona. He studied at Naples under Crescentini, Furno, and Zingarelli, was maestro at the Theatre della Valle, Rome, in 1832, celebrated his first genuine triumph at La Scala in 1834 with his tenth opera, *La casa disabitata* (*I falsi Monetari*), which was given all through Italy, at Paris, etc. *Amelia* (Naples, 1834), however, did not prove a success, and, probably on that account, R. accepted an engagement at Mexico in 1835 as conductor of a company, which, after two years, failed; but R. then undertook the direction and made a tour through Mexico to Havana, New Orleans, Madras, etc. In 1844 he returned to Italy, and in 1850 became director of the Milan Conservatorio, succeeding Mercadante in 1870 as director of the Naples Conservatorio. In 1880 he withdrew to Cremona. Of the 29 operas written by R., *La Contessa di Mons*, next to *I falsi Monetari*, met with the most success. He also wrote an oratorio, *Saul*; elegies on the death of Bellini and of Mercadante, cantatas, a Mass, choruses to Plautus *Captivi*, 6 fugues for strings, 8 vocalises for soprano, 12 exercises for soprano, songs, etc.

(5) Giovanni Gaetano, b. Aug. 5, 1828, Borgo San Donnino (near Parma), d. March 30, 1886, Parma, studied under Raj, Frasi, and Angeleri at the Milan Conservatorio, was leader at the theatre from 1852 till 1873, and organist of the court chapel; also from 1864-73 director of the Parma Conservatorio, and afterwards, up to 1879, town maestro at Genoa (at the Carlo Felice Theatre). R. composed four operas: *Elena di Taranto* (Parma, 1852), *Giovanni Giscala* (Parma, 1855; Milan, 1856), *Niccolò de' Lapi* (Ancona, 1865; Parma, 1866), and *La Contessa d'Altemberg* (Borgo San Donnino, 1872); a prize symphony, *Saul* (Paris, 1878), 3 Masses, a Requiem, an oratorio, etc.

(6) Carlo, excellent pianist, b. April 4, 1839, Lemberg (his father was of Italian, his mother of Polish birth). He went at an early age to Vienna, where he studied the violin under Jos. Wenzel, and has lived at Venice since 1851. He at first attended the Academy of Arts in that city, but soon turned definitely to music, becoming a pupil of Vonassi for counterpoint. R. wrote pieces for voice, pianoforte, violin; also 2 quartets for strings, symphonies, a comic opera, etc.

(7) Marcello, gifted violinist, b. Oct. 16, 1862, Vienna, pupil of the Leipzig Conserva-

torium, and studied afterwards under Lauterbach at Dresden and Massart at Paris. He has appeared since 1877 with great success in various towns of Germany and Austria, and now lives in Vienna ("k. k. Kammervirtuos").

Rossini, Gioacchino Antonio, the master who was the embodiment of genuine national Italian Opera with all its luxuriant charm and wealth of melody, b. Feb. 29, 1792, Pesaro, Romagna (hence called "The Swan of Pesaro"), d. Nov. 13, 1868, Ruelle (near Paris). His father was a horn-player, and his mother sang; he therefore grew up amid musical surroundings, and as soon as he showed signs of musical talent, was sent to Bologna to have his voice trained by Angelo Tesei. In 1807 he entered the Liceo Filarmonico as pupil, for composition, of Padre Mattei; but, when he had been through simple counterpoint, soon broke off his studies, as Mattei was of opinion that he had learnt sufficient for the writing of operas. He made his stage *début* with the one-act opera *La cambiale di matrimonio* (1810, San Mosè Theatre, Venice), which did not attract attention, neither did the second, *L'equivoco stravagante* (Bologna, 1811); but both so far pleased that R. received plenty of commissions, and already in 1812 wrote five operas. In the following year, after the production of his *Tancredi* at the Fenice, Venice, the Italians already felt that R. was the greatest living opera composer of Italy, and this opinion was confirmed by *L'Italiana in Algeri*. He celebrated, however, his greatest triumph in 1816 at the Argentina, Rome, with *Il Barbiere di Siviglia*, which is not only an immortal work, but perhaps the crown of all Italian buffo operas. The Romans approached the work with mistrust, considering it a piece of audacity for anyone to set the same subject to music after Paiesiello. It failed, indeed, at the first performance; but at the second, which R., out of humour, did not himself conduct, the success was dazzling, and at the end there was a torch-light procession. There followed, in the same year, at Naples, *Otello*, in which R. was the first to do away entirely with *secco* recitative; *Cenerentola*, given at Rome, and *La gazza ladra* (1817, Milan). From 1815-23 R. received a commission from Barbaja, at a salary of 12,000 lire, to write two new operas every year; at that time Barbaja had not only the Neapolitan theatres in hand, but also La Scala at Milan and the Italian Opera at Vienna. The cool reception given to R.'s *Semiramide*, a work of broader and nobler dimensions than his earlier operas, made him decide to visit London in 1823, where in five months, by concerts and private lessons, etc., he amassed £10,000. In October of the same year he went to Paris, where he remained for a long time, and undertook the direction of the Théâtre Italien. R. was not in any way gifted as an organiser, and within two years the financial state of the

theatre was so bad that, with his own consent, he was removed from the post by Vicomte de Larocheoucauld, and was named "Premier Compositeur du Roi" and "Inspecteur Général du Chant en France," a sinecure which produced an annual income of 20,000 francs. By the July Revolution he lost these posts, but, after a wearisome lawsuit, retained a pension of 6,000 francs. In Paris R. became quite a Frenchman, and in 1829 wrote *Tell*, his masterpiece in the department of grand opera, and, at the same time, his last work for the stage. During the long period from 1829 until his death (38 years) R. only took pen in hand to write his famous *Stabat Mater* (1832; in the well-known extended form, 1841) and a few sacred pieces and cantatas. After 1836 he withdrew to Italy, first to Milan, then to a villa near Bologna; he became sickly and suffered from *ennui*. His *Stabat* by its enormous success somewhat roused him; on the other hand, the insurrection of 1848 troubled him, and he had to escape from the insurgents to Florence. In 1853 he at last decided to return to Paris, where he soon recovered, and, esteemed by all, continued to live for 15 years.

R.'s operas are: *La cambiale di matrimonio* (1810), *L'equivoco stravagante* (1811), *Demetrio e Polifio* (1811), *L'inganno felice* (1812), *Ciro in Babilonia* (1812), *La scala di seta* (1812), *La pietra del paragone* (1812), *L'occasione fa il ladro* (1812), *Il figlio per azzardo* (1813), *Tancrède* (1813), *L'italiana in Algeri* (1813), *Aureliano in Palmira* (1814), *Il Turco in Italia* (1814), *Elisabetta* (1815, Naples, San Carlo), *Sigismondo* (1815, Venice), *Torvaldo e Dorliska* (1816, Rome, della Valle), *Il barbiere di Siviglia* (1816, Rome, Argentina), *La gazetta* (1816, Naples), *Otello* (1816, Naples, del Fondo), *Cenerentola* (1817, Rome, della Valle), *La gazza ladra* (1817, Milan, Scala), *Armida* (1817, Naples, San Carlo), *Adelaide di Borgogna* (1818, Rome, Argentina), *Adina o il califfo di Bagdad* (1818, Lisbon), *Mosè in Egitto* (1818, Naples, San Carlo), *Ricciardo e Zoraida* (1818, ditto), *Ermione* (1819, ditto), *Eduardo e Cristina* (1819, Venice, San Benedetto), *La donna del lago* (1819, Naples, San Carlo), *Bianca e Faliero* (1820, Milan, Scala), *Maometto II.* (1820, Scala), *Matilda di Ciabrano* (1821, Rome, Apollo), *Zelmira* (1822, Naples, San Carlo), *Semiramide* (1823, Venice, Fenice), *Il viaggio a Reims* (1825, Théâtre Italien), *Le siège de Corinthe* (1826, Grand Opéra, new version of *Maometto*), *Moïse*, (1827, ditto, revision of *Mosè in Egitto*), *Le Comte Ory* (1828, ditto), *Guillaume Tell* (1829, ditto). Besides, there are the dramatic cantatas, *Il pianto d'armonia* (1808), *Didone abbandonata* (1811), *Egle ed Irene* (1814), *Teti e Peleo* (1816), *Igea* (1819), *Partenope* (1819), *La ricognoscenza* (1821), *Il vero omaggio* (1822), *L'augurio felice* (1823), *La sacra alleanza* (1823), *Il bardo* (1823), *Il ritorno* (1823), *Il pianto delle muse* (1823, London), *I pastori* (1825, Naples), *Il serto votivo* (1829, Bologna). Of works not for the stage there are:

the *Stabat Mater* (soli, chorus, and orchestra), a small *Mass* (soli, chorus, and orchestra), "Tantum ergo," for three male voices and orchestra; hymn for Pius IX., "Quoniam" for baritone and orchestra, "Chant des Titans" for four basses and orchestra, 3 part-songs for three female voices with pf. ("La foi," "L'espérance," "La charité"), some arias, canzonets ("Se il vuol la molinara," R.'s first composition), cantatas *d'occasion*, military marches, and some instructive vocal pieces ("Soirées musicales" [8 ariettes and 4 duets] and "Gorgheggi e solfeggi per soprano per rendere la voce agile"). Of the numerous writings on R.'s life and works may be specially mentioned: Carpani's "Le Rossiniane" (1824); D'Ortigue's "De la guerre des dilettanti ou de la révolution opérée par M. R. dans l'opéra français" (1829); Azepedo's "R., sa vie et ses œuvres" (1865); Pougin's "R., Notes, Impressions, Souvenirs, Commentaires" (1870); and J. Sittard's "Rossini" (1882). An exhaustive biography is still wanting.

Rössler, Fr. A. (See ROSETTI, 2.)

Rost, (1) Nicolas, about 1580 at the Electoral Palatinate Court at Heidelberg, afterwards pastor at Kosmenz, Altenburg. He published: "30 geistliche und weltliche deutsche Lieder von 4-6 Stimmen" (1583); "30 neue liebliche Galliariden" (a 4, 1594), and "Cantiones selectissimæ" (1614, motets a 6-8), and also wrote a *Passion* a 11.

(2) Friedrich Wilhelm Ehrenfried, b. April 11, 1768, Bautzen, was rector at Plauen, afterwards of St. Thomas's School, Leipzig, where he died, Feb. 12, 1835. He published: "De insigni utilitate ex artis musicæ studio in puerorum educatione redundante" (1800); "Oratio ad renovandam Sethi Calvisii memoriam" (1805); "De necessitudine, quæ literarum studiis cum arte musica intercedit" (1817, speech for the installation of Schicht); and "Was hat die Leipziger Thomasschule für die Reformation gethan?" (1817, with a biography of Rhaw).

Rota, Rotula (Ger. Radel), formerly the designation of canonic part-songs. (Cf. RONDELLUS.)

Roth, (1) Philipp, 'cellist, b. Oct. 25, 1853, Tarnowitz (Upper Silesia), pupil of Wilh. Müller, and from 1876-78 of Rob. Hausmann at the Royal High School, Berlin. He lives in Berlin, whence he has undertaken many concert tours. R. has brought out a violoncello Method, also a "Führer durch die Violoncell Literatur." In 1890 he founded the "Freie musikalische Vereinigung," Berlin.

(2) Bertrand, pianist, b. Feb. 12, 1855, Degersheim (St. Gallen), studied at the Leipzig Conservatorium and under Liszt. He was teacher of pf. at Dr. Hoch's Conservatorium, Frankfurt, founded the Raff Conservatorium there jointly with Schwarz and Fleisch in 1882,

but went, however, to the Dresden Conservatorium in 1885, and in 1890 opened a music school of his own at Dresden.

Rotta (Ger. *Rotte*), a stringed instrument of the early Middle Ages; its strings were plucked, likewise played with the plectrum. Already (in 868) Otfried mentions the R. ("Ev." V., 23, 397), and in the year 1000, Notker writes: "Daz Psalterium, saltirsanch, heizet nu in diutscun rotta." It is not improbable that the R. and the Chrotta (q.v.) were originally identical; the picture of an instrument (*Chitarra teutonica*) given by Gerbert ("De cantu, etc.", III.) has the bend, the characteristic feature of the chrotta. Compare for the rest Wewertem, "Zwei veraltete Musikinstrumente" (*Monatshefte für Musikgeschichte*, 1881).

Rotter, Ludwig, organist and composer, b. Sept. 6, 1810, Vienna, d. there April 5, 1895, filled various posts as organist at Vienna, and from 1867 succeeded Sechter as chief court organist, with the title "K. K. Vizekapellmeister." He composed many sacred vocal works (graduals, offertories, Masses, Te Deum, Requiem), also pieces for organ and piano, and a Method of thorough-bass.

Rottmanner, Eduard, composer of church music, b. Sept. 2, 1809, Munich, pupil of Ett (composition) and Löhle (singing). At an early age he was appointed tenor singer in the court chapel, and organist of the Bürger-Congregation, and in 1839 became cathedral organist at Speier, where he died, May 4, 1843. His principal works—carefully preserved in the library of the court chapel, and still frequently performed—are: 2 Masses *a 4* with organ (not printed, scored by Ett), a Mass *a 6*, 2 Grand Vespers (in *b* and *b*), a Requiem, a Litany, a Stabat *a 4*, a ditto with organ and strings, a Salve regina, Magnificat, Ave Maria *a 4* with strings, organ, and two horns *ad lib.* (printed), the hymns "Alma redemptoris mater," "Veni sancti spiritus," and several motets, besides national melodies of the modern Greeks (printed), etc.

Rouget de l'Isle, Claude Joseph, the composer of the "Marseillaise," b. May 10, 1760, Lons-le-Saulnier, d. June 27, 1836, Chbisy le Roi (near Paris). He was a military engineer at Strassburg when he wrote the "Marseillaise." He went afterwards to Paris, and composed "Hymne dithyrambique sur la conjuration de Robespierre et la révolution du 9 thermidor" (1794); "Chant des vengeances" (1798), "Chant du combat" (1800, for the Egyptian army); 25 romances for one voice with pf. and violin obligato, and 50 "Chants français." He also wrote the libretto of the comic opera, *Jaquot, ou l'école des mères* (composed by Della Maria, 1798), and of the grand opera *Macbeth* (music by Chélaré, 1827).

Roulade (Fr., "roller"), running, showy vocal passage.

Round, (1) a canon at the unison or octave for three or more voices.—(2) A circular dance. (See CATCH.)

Rousseau, (1) Jean, violinist at Paris during the last quarter of the 17th century. He published two books of pieces for viola, together with exercises and indications for various modes of tuning the viola (without date); a "Traité de la viole" (1687, with a history of the viola), and "Méthode claire, certaine et facile pour apprendre à chanter la musique sur les tons naturels et transposés" (1678 and frequently, with a guide as to the manner of playing ornaments).

(2) Jean Jacques, the famous French philosopher and writer, b. June 28, 1712, Geneva, d. July 3, 1778, Ermenonville (near Paris). He received no technical training as a musician, but had scarcely reached manhood when he took a special interest in music, and was afterwards both composer and writer on music. In the dispute between the Buffonists and Anti-Buffonists he was, with Grimm (q.v. 1), one of the first, the most zealous, and the most steadfast partisans of the Italians. His writings relating to the matter are: "Lettre à M. Grimm au sujet des remarques ajoutées à sa lettre sur Omphale" (1752); "Lettre sur la musique française" (1753); "Lettre d'un symphoniste de l'académie royale de musique à ses camarades de l'orchestre" (1753). His attempt to replace our system of notation by figures (in which Souhaitty was his predecessor and Natorp his successor) did not lead to any positive results; in 1742 he expounded his scheme to the Académie, and published it in the pamphlet "Dissertation sur la musique moderne" (1743). R. edited the important musical articles for the "Encyclopédies" of Diderot and d'Alembert, etc.; and his own "Dictionnaire de musique" (1767, frequently republished). All R.'s works relating to music are, moreover, to be found in complete editions of his works (oldest ed. 1782, etc.). As a composer R. achieved enormous success with *Le Devin du Village* (Grand Opéra, 1752), and the work was the starting-point of French light opera; it formed part of the Opéra répertoire for more than 60 years. He was equally fortunate with his melodrama (he was the inventor of this art form, which, later on, became so popular) *Pygmalion* (1773); on the other hand, his ballet opera, *Les Muses galantes* (1747), was altogether a failure (unpublished). Fragments of an opera, *Daphnis et Chloé*, appeared after his death (1780); likewise 6 new arias for *Le Devin du Village* (1780), and a book of romances etc., "Les consolations des misères de ma vie" (1781). (Cf. Albert Jansen's comprehensive monograph, "J. J. Rousseau als Musiker," 1884.)

Roussier, Pierre Joseph, Abbé, b. 1716, Marseilles, d. about 1790, as canon at Ecouis (Normandy). He published: "Sentiment d'un

harmoniphile sur différents ouvrages de musique" (1756, contains projects for a new system of figuring for thorough-bass); "Traité des accords et de leur succession" (1764, on Rameau lines); "Observations sur différents points de l'harmonie" (1765); "Mémoire sur la musique des anciens" (1770); "L'harmonie pratique, ou exemples pour le traité des accords" (1775); "Notes et observations sur le mémoire du P. Amiot concernant la musique des Chinois" (1779); "Mémoire sur la nouvelle harpe de M. Cousineau" (1782); "Mémoire sur le clavecin chromatique" (1782); "Lettre sur l'acceptation des mots basse fondamentale" (in the *Journal Encyclopédique*, 1783). R. is the author of a part of the third volume of Laborde's "Essai sur la musique."

Rovelli, Pietro, violinist, b. Feb. 6, 1793, Bergamo, d. there Sept. 8, 1838. He was a pupil of Rod. Kreutzer, and in his turn teacher of Molique, wrote excellent études, which Singer republished. From 1817-19, R. was leader at Munich.

Rovetta, Giovanni, composer, pupil of Monteverde as bass-singer at San Marco, Venice, afterwards priest at San Fantino there, in 1627 successor of Grandi as vice-maestro at San Marco, and in 1644 successor of Monteverde as principal maestro, d. in Aug., 1668 (his successor was Cavalli). R. wrote an opera, *Ercole in Lidia* (Venice, 1645); a second, *Argiope*, was completed by Leardini (produced in 1649). There appeared in print: "Salmi concertati per vesperi a 5 e 6 voci ed altri con 2 violini e Motetti a 2 e 3 voci con alcuni canzoni per sonare a 3 e 4 voci" (1626); "Madrigali concertati a 2, 3, 4 ed uno a 6 voci e 2 violini, con un dialogo nel fine ed una cantata a voce sola" (1627); "Motetti concertati a 3, 4 e 6 voci con la litania della B.V. ed una messa concertata a voci pari" (1635); "Madrigali concertati a 2, 3, ed altri a 5, 6, e 8 voci con due versi ed una cantata a 4 voci" (1640); "Salmi a 1, 2, 3 e 4 voci con una messa a 3 voci concertati con due violini ed altri stromenti" (1642); "Salmi a 5 e 6 voci con 2 violini"; "Motetti concertati a 2 e 3 voci con violini se piace"; "Salmi a 8 voci" (1644); "Madrigali concertati a 2, 3 e 4 voci" (1645); "Motetti concertati a 2 e 3 voci con litania a 4 voci" (1647); "Salmi per i vesperi e completa a 8 voci" (1662).

Royal Academy of Music. This institution was founded by Lord Westmorland and other gentlemen in 1822, under royal patronage, and opened in the following year at premises in Tenterden Street, Hanover Square. A charter of incorporation was granted in 1830. The first Principal was Dr. Crotch (1823-32), followed by Cipriani Potter (1832-59), Charles Lucas (1859-66), Sterndale Bennett (1866-75), Sir George Macfarren (1875-87), and Sir Alexander Mackenzie (1888), the present head. There are several valuable scholarships in connection with

the R.A.M., and the number of students annually is about 400.

Royal College of Music, at Kensington Gore, was founded at the proposal of the Prince of Wales (1882), in continuation of the National Training School (q.v.); opened and incorporated by Royal Charter in 1883. The new building, generously given by Mr. Samson Fox, was formally opened May, 1894. The R.C.M. has a large number of endowed scholarships. The first Director was Sir George Grove; on his retirement at the close of 1894, Dr. Hubert Parry succeeded to the post.

Roze, Nicolas, Abbé, b. Jan. 17, 1745, Bourg-Neuf (near Chalons), d. Sept. 30, 1819, St. Mandé (near Paris). In 1769 he went to Paris, and in 1775 became maître de chapelle of the Église des Innocents; but from 1779 he confined himself to the teaching of harmony and thorough-bass, and in 1807 succeeded Langlé as librarian of the Conservatoire. Some of his sacred pieces and a "Méthode de plain-chant" appeared in print.

Rozkošny, Joseph Richard, pianist and composer, b. Sept. 21, 1833, Prague, pupil of Jiranek and Tomacek; after completing the course at the Gymnasium, R. entered the Technical Institute, and also diligently attended the Academy of Painting. In 1855 he made a successful concert tour through Austria and Roumania, and settled definitely in Prague, where he produced several operas (*Nikolaus*, 1870; *St. Johannis-Stromschnelle*, *Závis von Falkenstein*, *Der Wilddäber*, *Popelka* [*Cinderella*], 1885, and *Rübezahl*, 1889); he also wrote Masses, overtures, pf. pieces, songs, part-songs, etc.

Rubato (Ital. "robbed"). *Tempo rubato* is the free treatment of passages of marked expression and passion, which forcibly brings out the *stringendo-calandro* in the shading of phrases, a feature which, as a rule, remains unnoticed. (Cf. AGOGICS.)

Rubeba, Rubella. (See REBEC.)

Rubini, Giovanni Battista, tenor singer of great fame, b. April 7, 1795, Romano (near Bergamo), d. March 2, 1854, at his castle near Romano. He at first led a wretched life as chorus singer and impersonator of subordinate rôles in itinerant Italian operatic companies, until he attracted notice at Pavia in 1814; after that he quickly made a name, and, already in 1816, Barbaja engaged him, at a high salary, for Naples. In the winter of 1825-26 he sang with enormous success at the Théâtre Italien at Paris, but was compelled to return to Barbaja, who retained him until 1831, paying him, finally, a salary of 60,000 francs. From 1832-43 he sang alternately at Paris and London. In 1843 he travelled with Liszt to Berlin, then went to Petersburg, which city he visited again in 1844, and returned a millionaire to Italy in 1845, where he bought a small duchy.

Rubinstein, (1) Anton (von), one of the most eminent pianoforte virtuosi, and, at the same time, one of the most prolific of modern composers, b. Nov. 28, 1830, Wechwotynez, near Balta (Podolia), d. Nov. 20, 1894, Peterhof, near Petersburg. His parents, soon after his birth, settled in Moscow, where his father established a pencil factory. R. received his first musical instruction from his mother, who was very musical, but after his seventh year, from Villoing, who was his only teacher. In 1840 R. played at Paris, whither he had followed Villoing, before the highest authorities (Liszt among others), and his talent was fully recognised and admired. Liszt advised him to complete his studies in Germany. Villoing and R. now travelled through Holland, England, Scandinavia, and Germany, everywhere giving concerts; and they returned to Moscow in 1843. Meanwhile, R.'s brother Nicolas (see below) had reached the age of eight, and showed talent for composition. This decided the parents to take both their sons to Berlin in 1844, where, by the advice of Meyerbeer, they made a serious study of theory under Dehn. Their mother remained with them until the father's illness (1846) called her back to Moscow. She took Nicolas with her, while Anton remained in Berlin; he paid a brief visit to Vienna, whence he made a tour through Hungary with the flautist Heindl. The insurrection of 1848 drove him homewards. He now settled in Petersburg, won the generous patronage of the Grand Duchess Hélène, and wrote several Russian operas, of which *Dimitri Donskoi* was produced in 1852, and *Toms, der Narr* in 1853. *Die Rache* and *Die sibirischen Jäger*, on the other hand, were not performed. In 1854, on the advice and with the assistance of the Grand Duchess and of Count Wielhorski, R. journeyed afresh for the purpose of study, and to make himself better known abroad. He went first to Germany, where he found publishers for a number of works, gave concerts at Paris and London (of his own compositions), and only returned to Petersburg in 1858, where he was first appointed court pianist and afterwards concert director. In 1859 he undertook the direction of the Russian Musical Society at Petersburg, founded the Conservatoire in that city in 1862, and became its director until 1867, when he started concert tours again, and made a triumphal progress through the whole of Europe (1867-70). From 1872-73 he also visited America. From 1867 he accepted no public appointment, but disposed of his time according to his inclination. After having obtained the greatest possible success as pianist, he devoted himself principally to composition. In 1887, after the departure of Davidoff, he resumed the direction of the Petersburg Conservatoire, but relinquished it at the end of 1890. R. was Imperial Russian Councillor of State (created a noble) and Knight of the Prussian Order of Merit (1891). From 1892 he lived at Dresden

R. was a pianist of the grand school, which aims, not after absolute neatness and correctness, but after full, spiritual interpretation. His playing was imposing, fascinating, exciting. As a composer R. manifests the same qualities. He is grand in intention; his ideal is not so much beautiful effects of sound as passionate strength—not so much roundness of form as mighty fullness of contents; at times he shows a preference for what is peculiar. Still it cannot be denied that in many of his works there are moments of great inner tenderness and delicate grace. With the exception of genuine sacred composition, R. produced much that is worthy of note in every branch, and some works of real importance. Schumann is, perhaps, the master to whom R. is most akin; but with this qualification, that the former makes a gentler appeal to the heart.

Besides the already-named small operas, R. has written: *Die Kinder der Heide* (Vienna, 1861); *Feramors (Lalla Rookh*, first performed at Dresden, 1863, since then in many places; a charming lyrical opera); *The Demon* (Petersburg, 1875, and freq.); *The Maccabees* (Berlin, Aug. 17, 1875, and freq.); *Nevo* (Hamburg, 1879; Berlin, 1880); *Kalashnikoff, der Kaufmann von Moskau* (Petersburg, 1880); *Sulamith* (Biblical stage-play, Hamburg, 1883, a most charming idyll of glowing Eastern colour); *Unter Räubern* (a one-act comic opera, Hamburg, 1883); and *Gorjuschka* (1889); a ballet, *The Vine* (1882); the oratorios (sacred operas), *The Tower of Babel* (Düsseldorf, 1872), *Paradise Lost* (Op. 54), *Moses* (1887), and *Christus* (produced at Bremen, 1895); 6 symphonies, Op. 40, 42 (Ocean symp., seven movements), 56, 95 (dramatic), 107 (in memory of the Grand Duchess Hélène), and A minor, Op. 111; a fantasia ("Erica") for orchestra; the musical portraits, "Faust" (Op. 68), "Ivan IV." (Op. 79), and "Don Quixote" (Op. 87); 3 concert overtures ("Overture triomphale," Op. 43, and Op. 60, and "Antony and Cleopatra," Op. 116); 3 violin sonatas (Op. 13, 19, 98); romance and caprice for pf. and violin (Op. 86); a viola sonata (Op. 49, arranged for violin by David), 2 'cello sonatas (Op. 18, 39), 5 pf. trios (Op. 15 [1-2], 52, 85, 108), a pf. quartet (Op. 66), a pf. quintet (Op. 99), 10 quartets for strings (Op. 17 [1-3], 47 [1-3], 90 [1-2], and 106 [1-2]), a pf. quintet with wind instruments (Op. 55), a quintet for strings (Op. 59), a sextet for strings (Op. 97), an octet (Op. 9), 4 pf. sonatas (Op. 12, 20, 41, 100), a theme with variations (Op. 88), 6 *Préludes* (Op. 24), études (Op. 23, 81), 5 barcarolles (the first in a minor and fourth in G major appeared separately; the others are F minor, Op. 30, No. 1; G minor, Op. 50, No. 3; and a minor, Op. 93, 4th Book), "Soirées de St. Pétersbourg" (Op. 44, 3 books), "Miscellanées" (Op. 93, 9 books), "Le Bal" (Op. 14), "Album de danses populaires" (Op. 82), tarantella (Op. 6), caprices (Op. 21), serenades (Op. 22), and other pièces

(Op. 2, 3, 4, 5, 7, 10 [Kamenoi Ostrow], 16, 29, 38 [Suite], 37, 69, 71, 104, 114 ["Akrostichon"], etc.). For four hands: Op. 50, 89, and 103 (*Bal costumé*); a fantasia for two pfs. (Op. 73); 5 pf. concertos (Op. 25, in \mathbb{E} minor; Op. 35, in \mathbb{F} ; Op. 45, in \mathbb{G} ; Op. 70, in \mathbb{D} minor; Op. 94, in \mathbb{E} flat); a concert piece (Op. 113); a violin concerto (Op. 46); 2 'cello concertos (Op. 65, 96). Some of R.'s many songs are highly popular: Op. 1, 8, 27, 32 (No. 6, "Asra"), 33, 34 (poems of Mirza Schaffy, among which "Gelb rollt mir zu Füßen der brausende Kur"), 36, 57, 64 (5 fables), 72 (among which "Es blinkt der Tau"), 76, 78, 83, 91 (from "Wilhelm Meisters Lehrjahre"), 101, 105, and 115; duets (Op. 48, 67); choruses for male voices (Op. 31, 61, and 74, the last with orchestra); 6 for mixed voices (Op. 62); scenas with orchestra, "He-cuba" and "Hagar in the Wilderness" (Op. 92, 1 and 2). R. showed himself an author of biting sarcasm in his "Music and its Masters," 1892. There is a life of R. by MacArthur (London, 1889).

(2) Nicolas, brother of the former, b. 1835, Moscow, d. March 23, 1881, Paris. During his stay of two years at Berlin, from 1844-46, he studied the pianoforte with Kullak, and composition with Dehn. In 1859 he established the musical society at Moscow, and in 1864 the Moscow Conservatoire, which he directed with distinguished zeal until his death. According to the testimony of his countrymen, he was as great a pianist as Anton R. and gave concerts with great success every year at Petersburg. Although of the two brothers he was the first to compose (see above), only a few of his works are known. Not related to the former is—

(3) Joseph, pianist, b. Feb. 8, 1847, Staro Constantinow (Russia); committed suicide Sept. 15, 1884, Lucerne. He studied under Hellmesberger and Dachs at Vienna, lived from 1872 near Wagner, and by pianoforte transcriptions of his music did much towards their popularisation.

Rühner, Cornelius, b. Oct. 26, 1853, Copenhagen, famous pianist, pupil of Gade and Reinecke, lived at Baden-Baden, and in 1892 became conductor of the Philharmonic Society at Carlsruhe. R. has written a pf. trio, songs, pf. pieces, a festival overture, and a symphonic poem, etc.

Ruckers, the famous family of clavier-makers during the 16th and 17th centuries at Antwerp, of which the most important representatives are: Hans (the elder), member of the Guild of St. Luke from 1579, d. about 1640; and his four sons: Franz, b. 1576; Hans (the younger), b. 1578; Andreas (the elder), b. 1579; and Anton, b. 1581; also the son of Andreas R., likewise called Andreas (the younger), who worked from about 1636 to 1667.

Rudersdorff, Hermine (Küchenmeister R.), famous singer (soprano), b. Dec. 12, 1822,

Iwanowsky (Ukraine), d. Feb. 26, 1882, Boston, daughter of the well-known violinist, Joseph R. (b. 1788, d. March, 1866, as leader at Königsberg), pupil of Bordogni at Paris and of De Mîcherout at Milan. She first appeared at the Gewandhaus Concerts, Leipzig, in Mendelssohn's *Lobgesang* (1840), and was afterwards engaged as stage singer at Carlsruhe, Frankfurt (where she married Dr. Küchenmeister in 1844), Berlin (1852, Friedrich-Wilhelmstadt Theatre), London (1854-65), and settled in 1871 in Boston, where she distinguished herself as teacher of singing (Emma Thursby was her pupil). Frau R. was especially eminent as an opera singer.

Rudorff, Ernst Fr. K., b. Jan. 18, 1840, son of the privy councillor of justice and University professor, A. F. R., at Berlin; from 1852 to 1857 a pupil of Bargiel for pianoforte-playing, in 1859 passed the "departing" examination ("Abiturientenexamen"), had his name inscribed on the University books, but still in the same year, became a pupil of the Leipzig Conservatorium, where Moscheles and Plaidy taught him the pianoforte and Rietz, composition. Afterwards he was still for a time a private pupil of Moritz Hauptmann (composition) and Carl Reinecke (pf.), and in 1865 became teacher at Cologne Conservatorium, and in 1869, principal teacher of the pf. branch (now director) of the Royal High School at Berlin. In 1880, in place of Max Bruch, he undertook the direction of the Stern Choral Society, but relinquished it in 1890. R. has also been active and successful as a composer: a symphony (Op. 31, 87), 2 overtures (to Tieck's *Märchen vom blonden Eckert* and to Otto der Schütz), besides a "Ballade" in three movements, a serenade and variations (both for orchestra), choral works with orchestra ("Gesang an die Sterne"), part-songs, pf. pieces, songs, etc.

Rüfer, Philippe Bartholomé, pianist and composer, b. June 7, 1844, Liège, son of a German musician, native of Aix (Philipp R., organist, b. May 3, 1810, Rumpenheim in Hesse, d. Jan. 30, 1891, Liège), pupil of the Liège Conservatoire, in 1869 musical director at Essen, has lived since 1871 at Berlin, where from 1871-72 he was pf. teacher at Stern's, and then for a longer period at Kullak's Conservatorium (up to 1875). Since October, 1881, he has been teacher of the pianoforte and of playing from score at Scharwenka's Conservatorium. R. has composed a symphony (\mathbb{F} major, Op. 23), 3 overtures, stringed quartets (Op. 20 and 31 [\mathbb{B} major]), a violin sonata (Op. 1), a trio, 2 suites for pf. and 'cello (Op. 8, 13), an organ sonata (Op. 16), songs, pf. pieces, etc. As an opera composer he made a fairly successful *début* in 1887 at Berlin with *Merlin* (libretto by Hoffmann).

Ruff, Heinrich, b. 1818, d. Feb. 20, 1888, Vienna, esteemed teacher of singing, formerly an operatic singer.

Ruffo, Vincenzo, maestro of Milan Cathedral, afterwards, in like capacity, of the cathedral of his native town, Verona. He published: motets *a* 5 (1551, 2nd ed. 1558), Masses *a* 5 (1557; republished 1565, 1580), motets *a* 6 (1555, 2nd ed. 1583), 4 books of madrigals *a* 5 (1550-1560, several times republished), "Madrigali cromatici *a* 6, 7 e 8 voci con la gionta di cinque canzoni" (1554), 4 books of chromatic madrigals *a* 5 (1555-60, cf. RORE), psalms *a* 5 (1555; new ed. 1579, 1588), magnificats *a* 5 (1578).

Rufinatscha, Johann, b. 1812, in the Tyrol, d. May 25, 1893, Vienna, a highly-esteemed teacher (J. Brüll was one of his pupils); he composed, *inter alia*, 5 symphonies, 4 overtures, a pf. concerto, also songs.

Ruggeri, Giovanni Martino, Venetian composer, wrote ten operas (1696-1712), and published "Scherzi geniali ridotti a regola armonica in 10 sonate da camera a 3, cioè 2 violini e violone o cembalo" (1690); "Suonate da chiesa a 2 violini e violone o tiorbo con il suo basso continuo per l'organo" (1693); a book of the same with 'cello instead of double-bass (1697); and "12 cantate con e senza violini" (1706).

Ruggi, Francesco, composer and theorist, b. Oct. 21, 1767, Naples, d. there Jan. 23, 1845; he was a pupil of Fenaroli at the Conservatorio di San Loreto, and was named already in 1795, town maestro extraordinary of Naples. In 1825 he succeeded Tritto as professor of counterpoint and composition at the Royal Conservatorio. Bellini and Carafa were his pupils. R. wrote 3 operas and a large number of sacred works, which enjoyed a certain fame.

Rühl, Friedrich Wilhelm, b. Feb. 7, 1817, Hanau, d. Nov. 6, 1874, Frankfurt, studied with Schelble and André, founder of the Rühl vocal society named after him.

Rühlmann, Adolf Julius, b. Feb. 28, 1816, Dresden, d. there Oct. 27, 1877; in 1841 trombone-player in the royal band, in 1873 royal inspector of instruments; one of the founders, (1844), and from 1855 president, of the Dresden "Tonkünstlerverein"; since 1856, teacher of the piano-forte and history of music at the Conservatorium in the latter city. He wrote for the *Neue Zeitschrift für Musik* a series of historical articles. His son, Dr. Richard R., published a work of much importance (unfortunately disfigured by many misprints), which he had left ready for press: "Geschichte der Bogeninstrumente" (1882, with illustrations).

Rummel, (1) Christian, b. Nov. 27, 1787, Brichsenstadt (Bavaria), d. Feb. 13, 1849, Wiesbaden, from 1815-41 capellmeister at Wiesbaden. He was an excellent pianist, violinist, and clarinet-player, and published various works for wind instruments (clarinet concerto, 2 quintets, etc.).

(2) Joseph, son of the former, b. 1818, Wiesbaden, d. March 25, 1880, London. He was court pianist to the Duke of Nassau, and a distinguished performer and composer of numerous pf. pieces.

(3) August, brother of the preceding, b. Jan. 14, 1824, Wiesbaden, d. Dec. 14, 1886, London, was an able pianist.

(4) Franz, son of Joseph R., b. Jan. 11, 1853, London, also a distinguished pianist and composer for his instrument, is now teacher at the Stern Conservatorium, Berlin.

Rundnagel, Karl, b. April 4, 1835, Hersfeld, pupil of Spohr, member of the theatre orchestra, and from 1866 court organist at Cassel. He is known by his numerous arrangements of Spohr's works; he has also published some organ compositions of his own.

Rung, Henrik, Danish composer, b. March 3, 1807, Copenhagen, where he d. Dec. 13, 1871, as chorus master at the opera and conductor of the Cecilian Society for Old Church Music, which he founded. He composed songs of a popular cast and incidental music to many plays, etc.

Runge, Paul, b. Jan. 2, 1848, Heinrichsfeld (Posen), pupil of the Royal Institute for Church Music at Berlin, also of Julius Schneider, lived from 1873 as teacher of music at Colmar, where he conducted various societies. He composed choral works of various degrees of importance, with and without accompaniment.

Rungenhagen, Karl Friedrich, b. Sept. 27, 1778, Berlin, d. there Dec. 21, 1851, one of the many meritorious musicians who have written "good" music. At an early age he supported his family, deprived of its head, by teaching music, became in 1815 second conductor of the Singakademie, in 1833 succeeded Zelter as principal, and soon afterwards became member of the Akademie and teacher at the School of Composition, and in 1843 was named professor. R. wrote 4 operas, 3 oratorios, a Mass, cantatas, a large number of motets, and other sacred songs; also over 1,000 songs, likewise symphonies, quartets, etc.

Rust, (1) Friedrich Wilhelm, b. July 6, 1739, Wörlitz (near Dessau), d. Feb. 28, 1796, Dessau; he studied jurisprudence at Leipzig until 1762, but then turned his attention entirely to music. Prince Leopold III. of Anhalt-Dessau had him trained at Zerbst by the formerly well-known violin-player, K. Höckh, and then at Berlin, in 1763, under Franz Benda; the prince took him also (1765-66) to Italy, and in 1775 appointed him his court musical director. R. was a distinguished violinist and an excellent composer for his instrument. Ferd. David republished a violin sonata of his, and Singer, another for violin alone (b \flat). W. Rust lately republished 4 of his pf. sonatas (b \flat minor, f \sharp minor, d minor, d \flat), and a violin sonata

(B minor). R. astonished the Italians by the dexterity with which he played the lute. Willh. Hosäus wrote a monograph on R. and musical life in Dessau from 1766-99, with catalogue of R.'s works (1882).

(2) Giacomo (Rusti), b. 1741, Rome, d. 1786, Barcelona, pupil of the Conservatorio della Pietà at Naples, from 1767 cathedral maestro at Barcelona. He produced about a dozen Italian operas, partly before his appointment in Spain, partly during journeys thence to Venice, Milan, etc. Of his church compositions nothing is known.

(3) Wilhelm Karl, son of Fr. W. R., b. April 29, 1787, was (1819-27) organist at Vienna, then lived as a teacher of music in Dessau, published pf. and organ pieces, and d. April 18, 1855.

(4) Wilhelm, b. Aug. 15, 1822, Dessau, d. May 2, 1892, Leipzig, grandson of Fr. W. R., nephew of W. K. R., also his pupil, afterwards (1843-46) of Friedrich Schneider. R. lived first for several years as private teacher in the house of a Hungarian magnate, and accidentally made there some important historical discoveries (Ph. E. Bach's "Klavierschule" and the catalogue of the works which he left unpublished). The Hungarian Revolution of 1848 drove him away, and led him back to Dessau. In 1849 he went to Berlin as teacher of music, became member of the Berlin Singakademie, in 1850 member of the Leipzig Bach Society, in 1861 organist of St. Luke's, in 1862 conductor of the Berlin Bach Society, in 1864 royal musical director, and in 1868 received the honorary degree of Dr. Phil. at Marburg. In 1870 he became teacher of theory and composition at the Stern Conservatorium, in 1878 he received a call to Leipzig as organist of St. Thomas's and teacher at the Conservatorium, and finally, in 1880, succeeded E. Fr. Richter as cantor of St. Thomas's School. The great services which R. rendered in editing the works of Bach published

by the Bach Society, to which labour he devoted nearly ten years, working all alone with the utmost care, and displaying wonderful judgment in the difficult corrections of the manuscripts, won for him fame, and also the great honour of being counted among the distinguished men who for nearly two centuries had occupied the post of cantor of St. Thomas's School. As a composer, R. devoted himself principally to sacred vocal music.

Ruthardt, (1) Friedrich, oboe-player in the court band, Stuttgart, b. 1800, d. 1862. He composed various works for oboe, also for zither, and published 2 books of chorales. The two following are his sons:—

(2) Julius, b. Dec. 13, 1841, Stuttgart, in 1855 violinist in the court band there, in 1871 capellmeister at the town theatre, Riga, in 1882 in a like post at Leipzig, at present (since 1885) at Bremen: he has published songs and written incidental music to Björnson's *Hulda*.

(3) Adolf, b. Feb. 9, 1849, Stuttgart, studied at the Conservatorium there, went in 1868 to Geneva, where he occupied a prominent position as music-teacher. In 1885 he returned to Germany, and in the following year became pianoforte teacher at the Leipzig Conservatorium. R. wrote: "Das Klavier; ein geschichtlicher Abriss," "Chormeisterbüchlein" (short biographies), and brought out the 3rd and 4th editions of Eschmann's "Wegweiser." He has shown himself a talented composer by his pf. pieces (a sonata for two pianos, Op. 31) and a *Trio pastorale* for pf., oboe, and viola (Op. 34).

Ryba, Jakob Johann, b. Oct. 26, 1765, Přezstiez, Bohemia, d. 1815, Rocznitz, as college director; he was a very prolific composer of Masses, motets, and other church music, operas, melodramas, serenades, symphonies, concertos, and chamber music of every kind; but, nevertheless, he was unable to make any lasting impression.

S.

S., abbr. for *segno* (sign); *dal S.*, from the sign; *al S.*, to the sign. **S.**—s is placed before many Italian words without essentially changing their meaning (*sforzato*, *smorendo*, *slargando*, etc.).

Sabbatini, (1) Galeazzo, maestro to the Duke of Mirandola, b. Pesaro. He published: 2 books of madrigals a 2-5 (1627, 1636); 2 books a 2-5, "Sacrae laudes" (1637-41); one of a similar kind with organ (1642); 3 books, "Madrigali concertati" a 2-5 with instruments (1630-36); *Litanies* a 3-6, "de B.M.V." (1638); and "Sacri laudi e motetti a voce sola" (1639).

(2) Luigi Antonio, theorist, b. 1739, Albano (near Rome), d. Jan. 29, 1809, Padua; he entered at Rome into the order of the Fran-

ciscans, was sent from there to the Franciscan monastery at Bologna, where Padre Martini became his teacher, and he completed his musical training (1763) at Padua under Vallotti, whose theoretical system he adopted; he then became maestro of the Church of the Twelve Apostles, Rome, until the death of Vallotti, whom he succeeded at the Antonius Basilica at Padua (1780). Of his compositions, which, for the most part, remain in manuscript, copies of a Requiem for three tenors and bass are to be found in many a library. S. wrote "Gli elementi teorici della musica colla pratica de' medesimi in duetti e terzetti a canone" (1789 [1795, 1805], a part of which was translated

into French by Choron); "La vera idea delle musicali numeriche signature" (1799. Cf. VALLOTTI); "Trattato sopra le fughe musicali," etc. (1802, with many excellent examples by Vallotti); "Notizie sopra la vita e le opere del R. P. Fr. A. Vallotti" (1780).

Sabino, Ippolito, excellent composer, of whose life nothing is known. He published at Venice: 7 books of madrigals a 5-6 (1570-89) and a book of Magnificats a 4 (1583, 2nd ed. 1584). Separate pieces of his are to be found in Phalèse's "Harmonia celeste" (1592), in Waelrant's "Symphonia angelica," in the "Trionfo di Dori" (1596, and frequently), in Phalèse's "Ghirlanda de' madrigali" (1601), and other collections.

Sacchi, Giovenale, learned Barnabite and writer on music, b. 1726, Milan, d. there Sept. 27, 1789. He wrote: "Del numero e delle misure delle corde musichi e loro corrispondenza" (1761), "Della divisione del tempo nella musica, nel ballo e nella poesia" (1770), "Della natura e perfezione dell' antica musica de' Greci" (1778), "Delle quinte successive nel contrappunto e delle regole degli accompagnamenti" (1780), "Don Placido, dialogo dove cercasi se lo studio della musica al religioso convenga o disconvenga" (1786), "Vita di Benedetto Marcello" (1789); also several critical and controversial treatises in letter form.

Sacchini, Antonio Maria Gasparo, one of the most important opera composers of the Neapolitan School, b. July 23, 1734, Pozzuoli (near Naples), d. Oct. 8, 1786, Paris; was the son of a fisherman, discovered by Durante, and received into the Conservatorio di Sant' Onofrio; after studying the violin with Fiorenza and singing with Manna, he received, jointly with Piccinni and Guglielmi, lessons in composition from Durante. His first dramatic attempt was an intermezzo, *Fra Donato*, produced at the Conservatorio a year after Durante's death (1756). During the next few years he wrote several small operas for minor theatres at Naples, but in 1762 obtained such success at the Argentina, Rome, with his *Semiramide*, that he took up his residence in that city. *Alessandro nell' India* (Venice, 1768) procured him the post of director of the "Ospedaletto" (Conservatorio for girls) at Venice. Already in 1770 the number of his dramatic works amounted to 50. He left Italy at the end of 1771, went first to Munich and Stuttgart, where he wrote two operas, and came in 1772 to London, where he remained ten years. He obtained brilliant successes with *Il gran Cid*, *Tamerlano*, *Lucio Vero*, *Nitetti*, *Perseo*, etc., but through extravagant living fell heavily into debt; he escaped from his creditors by going to Paris (1782). There several of his older works, translated into French, were added to the *répertoire* of the Grand Opéra (*Rinaldo ed Armida* as *Renaud*; *Cid*

as *Chimène*), and he wrote two new works: *Dardanus* (1784) and *Oedipe à Colone*, his most important work, which was produced Jan. 4, 1786. A third, *Arvir et Evelina*, he left unfinished; but it was completed by Rey and successfully produced in 1787. Besides his many operas, which are not only melodious, but, in fact, of almost classic simplicity, S. wrote a great number of sacred works (Masses, psalms, etc.), oratorios (*Ester*, *San Filippo*, *I Maccabei*, *Jefte*, *Le nozze di Ruth*, *L'umiltà esaltata*), and some chamber-music (6 trios for two violins and cello, 6 stringed quartets, and 12 violin sonatas).

Sachs, (1) Hans, b. Nov. 5, 1494, Nüremberg, d. there Jan. 19, 1576; the well-known chief representative of the Nüremberg Mastersingers, to whom Wagner has erected an imperishable monument in his *Meistersinger*. S. was a shoemaker by trade, but at the same time so prolific a poet, that already in 1567 his "Meisterschulgedichte" numbered 4,275, his tales, etc. 1,700, and his dramatic poems 208. Concerning the "tones" which he himself invented, see Genée, "H. S. und seine Zeit," p. 397 f.

(2) Melchior Ernst, b. Feb. 28, 1843, Mittelsinn, Lower Franconia; he studied at the training college at Altdorf, was afterwards village schoolmaster for two years, attended the Royal school of music at Munich 1863-65, and again from 1867-69, specially as the pupil of Rheinberger. In 1871 he was appointed teacher of harmony at the same institution, established, and still directs the Tonkünstlerverein there; he conducted also the male choral society at Munich from 1869-73. In 1876 S. produced at a concert of his own a symphony, a choral ballad with orchestra (*Das Thal des Esplingo*) and a "Paternoster;" and in 1886 his opera, *Palestrina*, came out at Ratisbon. He has only published pf. pieces and songs. S. is a chief representative of the "Chroma" Society. (Cf. CHROMA, 2.)

Sachs-Hofmeister, Anna (*née* Hofmeister), distinguished opera singer, b. July 26, 1852, Gumpoldskirchen (near Vienna), sang as a child in the church, and was afterwards a pupil of Frau Passy-Cornet at the Vienna Conservatorium, also private pupil of Proch; she made her *début* in 1870, at Würzburg, as Valentine in *Les Huguenots*, and sang from 1872-76 at Frankfurt. S.-H. went for a time to Berlin, and after her marriage (1878) with the tenor singer Sachse (afterwards librarian, now professor, at Berlin), to Dresden. After a short artistic tour, she was engaged at Leipzig from 1880 to 1882, and at the latter date was appointed *prima donna* of the Berlin Opera.

Sackbut, (1) an obsolete name of the trombone or bass trumpet.—(2) The sackbut of the Bible is a translation of *Sabeca*, the name of a stringed instrument.

Sackpfeife (Ger.). (See BAGPIPE.)

Ságh, Joseph, b. March 13, 1852, Pesth, pupil of Abranyi; in 1885 he founded the musical journal *Zenelap*, and wrote a singing Method (1873), also a Hungarian dictionary of musicians (1877).

Sagittarius. (See SCHÜTZ.)

Sahla, Richard, b. Sept. 17, 1855, Graz, studied under Caspar, W. Remy (Dr. Meyer), and Kuno Hess, from 1868-72 at the Leipzig Conservatorium under David. He made his *début* as violinist in 1873 at a Gewandhaus Concert, was leader of the Gothenburg Musical Society (1876-77), royal "Concertmeister" in Hanover (1882-88), and since 1888 has been court capellmeister at Bückeburg, where he reorganised the band and started an oratorio society. S. is not only an excellent violinist and an able conductor, but also a composer of taste (violin concert-pieces, Roumanian Rhapsodie, songs).

Saint-Amans, Louis Joseph, b. June 26, 1749, Marseilles, d. 1820, Paris, was intended for the bar, but joined a company of players going to Italy, and emerged as a dramatic composer in Paris (1769), producing many comic operas with success. He conducted the opera at Brussels (1778-79), returned to Paris, and in 1784 received an appointment in the royal school of music, from which sprang the Conservatoire. When the staff of teachers was reduced in 1802 he was dismissed, and settled at Brest, writing during his last years principally oratorios, cantatas, and chamber music. The number of his operas and ballets amounts to 24. S.-A. wrote also an elementary work on harmony (1802).

Saint-Georges, . . . Chevalier de, b. Dec. 25, 1745, Guadeloupe (son of the French Fermier-Général and of a negress), d. June 12, 1799, Paris, in needy circumstances, pupil of Leclair, extraordinary but very extravagant violin virtuoso. He published smoothly-written violin sonatas with bass (Op. 1), 2 books of trio sonatas for two violins and bass, 5 violin concertos and 6 concertantes for two violins and orchestra. (Cf. JARNOVIC.)

Saint-Huberty, Antoinette Cécile (née Clavel), famous singer of the Paris Grand Opéra, b. 1756, Toul, was the daughter of a former officer who became theatre director (at Mannheim, Warsaw, etc.); she sang first at Warsaw, Berlin, and Strassburg, and from 1777 at Paris, first as Melissa in Gluck's *Armide*, but with only moderate success; she was not handsome, and had a faulty style of singing. Gluck, however, recognised her high dramatic gifts, and patronised her. She was then for several years *coryphée* at the Grand Opéra, until in 1790 she married Count d'Entrègues, with whom she went to Vienna and Graz, afterwards to Petersburg, and lastly to London.

The Count is said to have been privy to certain secret matters concerning the Peace of Tilsit, and to have communicated them to the London Foreign Office; this probably led to the murder of himself and his wife by one of their servants, July 22, 1812.

Saint-Lambert, Michel de, harpsichord teacher at Paris, published "Traité de l'accompagnement du clavecin, de l'orgue," etc. (1680 [1707]), and "Principes du clavecin" (1697 [1702]).

Saint-Lubin, Léon de, violinist and composer, b. July 5, 1805, Turin (son of a French teacher of languages, who afterwards went to Hamburg), d. Feb. 13, 1850, Berlin; he played in public at Berlin and Dresden as early as 1817; studied further under Polledro (Dresden) and Spohr (Frankfort), and became in 1827 leader at the Josephstadt Theatre, Vienna. After hearing Paganini, he made further studies, and became leader at the Königstadt Theatre, Berlin, 1830. S.-L. wrote 5 violin concertos, 19 string quartets, an octet, also some operas (*König Branors Schwert*, Berlin, 1830), incidental music to plays, etc.

Sainton, Prosper Philippe Catherine, distinguished violinist, b. June 5, 1813, Toulouse, d. Oct. 17, 1890, London. He studied under Habeneck at the Paris Conservatoire, played for several years in the orchestra of the Grand Opéra and at the Conservatoire concerts; made extensive concert tours, then became teacher of the violin at the Toulouse Conservatoire (1840-44), and lived afterwards in London as professor of the violin at the Royal Academy of Music and leader of the orchestra at the Royal Italian Opera. From 1844 to 1856 he filled the post of solo violinist and conductor of the State band. S. married a distinguished vocalist, Charlotté S.-Dolby (b. 1821, d. Feb. 18, 1885). His compositions are concertos, solo pieces, romances, fantasias, etc. for violin.

Saint-Saëns, Charles Camille, gifted French composer, b. Oct. 9, 1835, Paris, trained by Stamaty (piano), Maleden (theory), Benoist (organ), also in composition by Halévy, Reber, and Gounod at the Conservatoire. In 1855 he became organist at St. Merry, which post he exchanged in 1858 for that of the great organ of the Madeleine; at the same time he gave instruction at the Nadermann Institute of Music. Since 1870, S. has occupied no public post, but devotes himself to composition; in his annual concert tours he produces his works in the most important cities of Europe, and shows himself excellent alike as conductor and brilliant pianist. S. has original talent, and is, without doubt, the most important of modern French composers. He quickly made a name with his symphonic poems: "Phaëton," "Le rouet d'Omphale," "La jeunesse d'Hercule," and, above all, with

the "Danse macabre"; yet these works do not form the culminating point of his creative power. He cultivates classical forms with zest and earnestness, only does not despise modern means. Of the purely instrumental are to be mentioned: 4 symphonies, two suites (No. 1: Suite algérienne), 5 pf. concertos, 1 cello concerto, 3 violin concertos (No. 2, c major, Op. 58; No. 3, B minor, Op. 61), violin sonata in D minor, pf. quartet with wind instruments (Op. 79), septet for trumpet, pf., and strings (Op. 65), Havanaise for pf. and violin, marches for four hands, etc., variations and tarantelle for two pfs., organ works, etc. Of vocal: 2 Masses, a "Christmas" oratorio, *Le Déluge* (Biblical opera); a Requiem, several motets, the 18th Psalm for chorals, solo, and orchestra; "La lyre et la harpe" (ode by Victor Hugo); finally, the operas, which place him in the first rank among living French composers for the stage: *Le timbre d'argent*, *La princesse jaune*, *Samson et Dalila*, *Étienne Marcel*, *Henri VIII.*, *Proserpine* (1887), *Ascanio* (*Benvvenuto Cellini*, 1890), *Phryné* (1893), and several cantatas.

Saiten. (See STRINGS.)

Saiteninstrumente ("string-instruments"), a generic term used in Germany, including stringed instruments (Streichinstrumente; Fr. *Instruments à cordes frottées*) and Harp instruments (Harfeninstrumente, Fr. *Instruments à cordes pincées*). In the former the string is set in vibration for any length of time and degree of intensity by the friction of a bow rubbed with rosin (cf. STRINGED INSTRUMENTS), or (as in the Hurdy-gurdy, or Heyden's "Nürnbergisches Geigenwerk," etc.) by means of rollers rubbed with rosin. In the latter (i.e. harp-instruments), by means of a plectrum, or by plucking with the fingers, or by the blow of a small hammer, the string is powerfully deflected, and a short and rapidly-diminishing sound is produced. Harp-instruments, in their turn, are divided into two chief groups: those, each of whose strings gives only one note (all the S. of the ancient Greeks, the harp, psaltery, rotta, dulcimer [Pantaleon], pianoforte); and those whose strings by being shortened on a finger-board give notes of various pitch (lute, guitar, mandoline, etc.). There is a combination of both kinds in the larger lute instruments (theorbo, chitarrone, etc.), and in the modern zither. The clavicord occupied a peculiar position between the two; for in it the strings were shortened by means of tangents, and the production of tone was allied to that of stringed instruments. (Cf. PIANO-FORTE.)

Sala, Nicola, renowned theorist and composer of the Neapolitan School, b. 1701, in a village near Benevento, d. 1800, Naples. He was teacher, it is said, for over 60 years at the Conservatorio de' Turchini; in 1787 he became director (successor of Cafaro). According to

those who place his birth in 1701, his teacher was Alessandro Scarlatti; others state that he was born in 1732, and studied under Fago and Abos. The idea that there may have been two masters of the same name, perhaps father and son, who held successively the same post, is all the more probable, since an opera, *Vologeso*, which was produced at Rome 1737, is known under the name of Sala, whilst other works of that name date from 1760. Operas: *Zenobia* (1761), *Merope* (1760), three prologues *d'occasion* (1761 and 1763), an oratorio, *Giuditta* (1780), and a work on counterpoint, "Regole del contrapunto pratico" (1794).

Salaman, Charles Kensington, pianist, b. March 3, 1814, London, gifted teacher of music there, has published pf. compositions and songs, and given lectures on musical esthetics and the history of music.

Salbinger (Salminger), Sigismund, went as monk in 1527 from Bavaria to Augsburg, joined the Anabaptists, but recanted, and remained as schoolmaster in Augsburg. His merit consists in the publication of some collections, in which are preserved works of composers otherwise difficult to find, viz., "Selectissimæ nec non familiarissimæ cantiones altra centum" (also in German, Augsburg, Kriesstein, 1540); "Concentus 8, 6, 5, et 4 vocum" (Augsburg, Ulhard, 1545); "Cantiones 7, 6, et 5 vocum longe gravissimæ" (1545, Kriesstein); and "Cantiones selectissimæ 4 vocum" (1548-49, 2 books).

Saldoni, Don Baltasar, one of the most important of modern Spanish composers, and a highly-esteemed teacher of singing, also a musical historian, b. Jan. 4, 1807, Barcelona, d. 1890, pupil of Andreu as chorister at Santa Maria del Mar; he was further trained at the School of Music of the Monserrat monastery. His first appointment was that of organist of Santa Maria del Mar; in 1829 he went to Madrid, and in 1830 became teacher of elementary singing at the newly-established Conservatorio. In 1839 he proceeded to Paris, and studied the method of teaching singing at the Conservatoire, and in 1840 became principal professor of singing at the Madrid Conservatorio. S. wrote a history of the music school at Monserrat: "Resena historica de la escolania o colegio de musica de la Virgen de Monserrat in Cataluna desde 1456 hasta nuestros dias" (1856), and published miscellaneous biographical sketches of Spanish artists: "Effermerides de musicos espagnoles" (1860). His compositions consist of several Italian operas, Spanish Zarzuelas (operettas), Masses, Stabats, Misereres, many motets, hymns, Cantica, organ preludes, fugues, interludes, etc., a grand symphony, "A mi patria," for orchestra, military band, and organ; characteristic pieces for orchestra, "Hymn to the God of Arts," national hymn, military marches, part-songs of various kinds,

songs, and pf. pieces. He expounded his system of teaching singing in a great Vocal Method with 24 vocalises.

Sale, François, Belgian contrapuntist of the 16th century, in 1589 *maître de chapelle* (chori magister) to an Austrian princess (Magdalena) at Hall-on-the-Inn, in 1593 singer at the imperial court of Prague (under Philipp de Monte). He published a volume of Masses (printed at the expense of the Elector of Bavaria, as Vol. I. of the magnificently got-up "Patrocinium musices" 1589); a book of motets (1593), 3 books of Introits, a Halleluja and Communions a 5-6 (1594-96), a Christmas motet a 5, and a Mass composed to the same tenor (also in "Patrocinium musices," 1598), and a book of prayers (1598) to the patron saints of Hungary and Bohemia (SS. Maria, Wenzel, Adalbert, Veit, Sigismund, Prokop, Stephan).

Salicional (*Salcional*, *Salicet*, *Weidenpfeife*) is an open lip-pipe organ stop of narrow measure and weak intonation (like the Dulciana), mostly of 8 ft. and 4 ft., also of 2 ft. and 16 ft. (pedal); it is made of tin, and often has beads. S. is frequently found as echo-stop of the gamba on the third manual.

Salieri, Antonio, prolific and gifted composer, excellent conductor, b. Aug. 19, 1750, Legnano, d. May 7, 1825, Vienna. He was the son of a well-to-do merchant, who, however, lost his fortune and died early. S. was first trained by his brother, Francesco, who was an able violinist and a pupil of Tartini, also by the organist Simoni at Legnano. At the age of fifteen the talented and vocally-gifted boy obtained free admission to the school connected with St. Mark's, Venice, where he received further training from the second maestro, Pescetti, and the tenor singer Pacini. Thus was he found by Gassmann, to whom he had been recommended; the latter took him in 1766 to Vienna, instructed him personally in composition, and provided also for his training generally. In 1770 S. brought out his first comic opera, *Le donne letterate*, which, first of all, met with the approval of Gluck (privately), and soon afterwards of the public and the Emperor. His reputation was now made; he wrote opera after opera, and, when Gassmann died, in 1774, he was named chamber composer and conductor of the Italian Opera. When, meanwhile, the star of Gluck casting forth its most brilliant rays, threw him more and more into the shade, the wise Italian understood the right course to take, went for lessons to Gluck, whose style he mastered, and made up for what he lacked in grandeur of conception by simplicity of melody. Gluck himself patronised him, and gave him indeed an opportunity of being heard by the Parisian public, whose standard of taste, already at that time, was authoritative. S.'s opera *Les Danaïdes* (the libretto was actually written for Gluck;

the work has recently been published by Breitkopf & Härtel) was produced (1784) through Gluck's influence, as the joint work of Gluck and S.; only after the twelfth performance, when its success was no longer in doubt, was the truth announced on the bills. S. wrote also for Paris *Les Hovaces* (1786) and *Tavare* (1787). After his return to Vienna (1788) he took Bonno's place as court capellmeister, and held this post until 1824, when he retired from active life. Of his 40 and odd operas the following deserve mention: *Armida* (1771), *Semiramide* (1784), and the three named Paris operas (*Tavare*, afterwards celebrated under the title *Axur, re d'Ormus*, *Les Danaïdes* [*Danao*], and *Les Hovaces*). Apart from the stage, S. was scarcely less productive; he wrote 5 Masses, a Requiem, 4 Te Deums, vespers, graduals, offertories, motets, etc., a Passion, several oratorios (*Gesù al limbo*, *Saul*, *Das jüngste Gericht*), cantatas, arias, duets, choruses, 28 "Divertimenti vocali" with pf., "Scherzi armonici" (55 vocal canons a 2-4), also 30 canons a 2-4 (and, in addition, 150 in manuscript), a symphony, an organ concerto, 2 pf. concertos, concertantes for flute and oboe, and for violin, oboe, and cello; variations on "Folies d'Espagne," serenades, ballet music, etc. The memory of S. is darkened by his intrigues against Mozart. J. v. Mosel wrote his biography (1827). From among his pupils Fr. Schubert stands out prominently.

Salimbeni, Felix, famous sopranist (evirato), b. about 1712, Milan, d. the end of August, 1751, Laibach. He sang first on Italian stages, and from 1733 to 1737 at the Vienna court chapel, then again in Italy, from 1743 to 1750 at the Italian Opera, Berlin; and from about 1750 to 1751 at Dresden. He then desired to revisit Italy to restore his voice, which showed signs of decline, but he died unexpectedly at Laibach.

Salinas, Francisco, Spanish musical savant, b. about 1512, Burgos, Abbot of San Pancrazio at Rocca Scalegna (Naples), afterwards Professor of music at the University of Salamanca, where he died, Feb., 1590; he published "De musica libri VII., in quibus ejus doctrinæ veritas tam quæ ad harmoniam quam quæ ad rhythmum pertinet, juxta sensus ac rationis judicium ostenditur," etc. (1577).

Sallantin, Antoine, celebrated oboist, b. 1754, Paris; from 1773-1813 he was in the orchestra of the Grand Opéra (went, however, 1790-92, to London for further study under Fischer), and from 1794-1813 was teacher of the oboe at the Conservatoire. He published a flute concerto.

Salmo (Ital.), psalm.

Salmon, Thomas, *Magister Artium*, Oxford, afterwards rector of Mepsal (Bedford). His knowledge of the history of notation appears to have been small, for in his "Essay to the

Advancement of Music" (1672; also in Latin as "De augenda musica," 1667) he proposed, as something new, to write the letter names instead of notes on the lines, which, in fact, had been done, as is well known, by Guido, at the commencement of the 11th century, before he had finally established the modern system of notation. "A Vindication of an Essay," etc. (1673), was a reply to an attack by M. Lock. S. pleaded also for just intonation in "A Proposal to Perform Music in Perfect and Mathematical Proportions" (1688), and "The Theory of Music Reduced to Arithmetical and Geometrical Proportions" ("Philosophical Transactions," 1705).

Salo, Gasparo da. (See GASPARO.)

Saloman, Siegfried, b. 1818, Tondern (Schleswig), pupil of Siboni (Copenhagen) and Fr. Schneider (Dessau) for composition, and finally, in 1841, of Lipinski for violin-playing (Dresden). He made successful concert tours as violinist, from 1850 jointly with his wife, the famous singer, Henriette Nissen-S. (q.v.), and has lived in Petersburg since 1859, when his wife received an appointment in that city. S. has written a few operas, which were performed several times (especially *Das Diamanth Kreuz*), also overtures, violin pieces, songs, etc.; only small pieces of his have appeared in print.

Salomon, (1) Johann Peter, celebrated violinist, b. the end of January, 1745, Bonn, d. Nov. 25, 1815, London. He was first of all member of the Electoral orchestra at Bonn, then, after a successful concert tour (1765), leader of the band of Prince Henry of Prussia at Rheinsberg; and when this orchestra was disbanded, S. went first to Paris, and soon afterwards to London (1781), where he quickly made a good position for himself, and where he was held in very high esteem as a quartet-player. For a short time he was leader at the Professional Concerts, but afterwards entered upon an independent concert scheme of his own. (Cf. HAYDN.)

(2) Moritz, musical director at Wernigerode (Harz), wrote an excellent criticism on Natorp's system of figures for the teaching of singing in primary schools; in it he showed that the figure system increased the difficulty of afterwards learning the notes ("Ueber Natorps Anleitung zur Unterweisung im Singen," 1820). He also wrote a musical novel, "Eduards letzte Jahre" (1826, 2 vols.).

(3) M. . . . performer on the guitar at Besançon, b. there 1786, d. Feb. 19, 1831. He invented a large-sized guitar, which he named *Harpolyre*, with three necks, the middle one of which had a fingerboard, and had a set of strings like the ordinary guitar, while the others were attached a number of strings only to be used as open ones (resembling, therefore, the theorbo); also a cleverly-made tuning-machine with steel rods, set into vibration by means of a toothed wheel. He had no success

with either. He also published compositions for guitar.

(4) Hector, composer, b. May 29, 1838, Strassburg, studied under Jonas and Marmontel (pianoforte), Bazin (harmony), and Halévy (composition). He was, at first, accompanist at the Bouffes-Parisiens, for which he wrote a ballet, *Fascination*, was engaged in a similar capacity in 1860 at the Théâtre Lyrique, where his one-act operas, *Les dragées de Suzette* (1866) and *L'aumônier du régiment* (1877), and a cantata, *Le génie de la France* (1866), were produced. In 1870 he became second chorus-master at the Grand Opéra, of which he is at present *Chef du chant*. S. has published many songs, pieces for pf. alone, and with violin or 'cello, and has several operas in manuscript.

Salon-music, i.e. music written with a view to outward entertainment, a mere jingling of sounds. It is with regret that a definition of this kind has to be given, for S. has rendered superficial the taste of amateurs, and caused the creative faculty of many a composer to grow rusty. S. is a sorry substitute for that which was formerly named "home music" ("Hausmusik").

Salpinx, a Greek military instrument (trumpet) used for signalling.

Saltarello, an Italian and Spanish dance of quick springing movement in $\frac{3}{8}$ or $\frac{3}{4}$ time with the motive formation—

The name is old, and signified in the 16th century the regular quick After-dance (Nachttanz) in triple time, following the Pavane.—Also a piece of the toccata or tarantella kind, in which this rhythm strongly prevails, is termed a S.

Saltato (Ital.), hopping, a peculiar kind of staccato on stringed instruments (with springing bow).

Salterio, Salteire, in Notker (about 1000) *Saltirsanch*, same as Psaltery (q.v.). S. *tedesco* (See DULCIMER).

Salvayre, Gervais Bernard, b. June 24, 1847, Toulouse, studied at the Paris Conservatoire (A. Thomas, Bazin, Benoist), and gained in 1872, after repeated attempts, the *Prix de Rome*. In 1877 he became chorusmaster at the Opéra Populaire (Châtelet), and soon made himself known by several operas—*Le bravo* (1877), *Riccardo III.* (1883, Petersburg), *Egmont* (1886, Paris), *La dame de Monsoreau* (1887), a symphonic overture, a *Stabat Mater*, the Biblical symphony, *La Résurrection* (1876), the 113th Psalm for soli, chorus, and orchestra, etc.

Salve (Lat.), beginning of the Antiphon to the Virgin Mary, *S. regina mater misericordia*, which is sung from Whitsuntide to Advent; the three others are: *Alma redemptoris mater* (in Advent up to the Purification of Mary), *Ave*

regina celorum (up to Maundy Thursday), and *Regina celi latere* (Easter).

Samara, Spiro, b. Nov. 29, 1861, Corfu (his father was a Greek, his mother English), was trained at Athens by Enrico Stancampiano, a pupil of Mercadante, and later on at the Paris Conservatoire. After some operas and songs had been produced at Paris, he was brought into notice by a three-act opera, performed at Milan, 1886, *Flora mirabilis* (published by Sonzogno). An earlier composed opera, *Madgé*, followed in 1888, Rome; and more recently *Lionella* (1891), Milan.

Sambuca is one of the most confused terms for instruments of the Middle Ages, and mostly used in the sense of the Greek *σαμβύκη*, Latin *S.*, for a kind of pointed harp (psalter); but it is also derived from the Latin *sambucus* (elder-tree) meaning a kind of pipe. Finally, as a corrupted form of *symphonia* (*samponia*, *zampogna*), it stands for the bagpipe and hurdy-gurdy (*S. rotata*); it is also used in place of *sagueboute* for instruments of the trombone species. *Sambut*, *Sambuit* are the German forms for *S.* in the sense of psalterium.

Sammartini, (1) Pietro, musician at the court of Florence; he published "Motetti a voce sola" (1635; 2nd ed. 1638), motets *a 2-5*, and litanies *a 6* (1642), motets *a 1-5* (1643), "Salmi concertati" *a 8* (1643), and "Salmi brevi concertati" *a 4* (1644).

(2) Giovanni Battista, organist of several churches in Milan and maestro at the Convent Santa Maria Maddalena, from about 1730 to 1770. He is to be noted as one of the first predecessors of Haydn in the department of modern orchestral and chamber music; he was also the teacher of Gluck. His first symphony for orchestra was produced at Milan, 1734. His printed works are: 12 trios for two violins and bass (London and Amsterdam), 24 symphonies (Paris), and some nocturnes for flute and violin (Paris). The number of his works, however, is said to amount to several thousand (symphonies, stringed quartets, trios, violin concertos, Masses, psalms, etc.).

(3) Giuseppe, brother of the former, was an oboe-player, and went in 1727 to London, where he died in 1740 as chamber musician to the Prince of Wales. He published three trios for two oboes and bass, 8 overtures and 6 *Concerti grossi*.

Samponia. (See SAMBUCA and CHIFONIE.)

Samuel, Adolphe, composer and theorist, b. July 11, 1824, Liège, first attended the Conservatoire there, and then that of Brussels, in which he gained the *Grand Prix de Rome* (1845). In 1860 he became professor of harmony at the Brussels Conservatoire, and since 1871 has been director of the Conservatoire at Ghent. *S.* has composed several operas, many cantatas, choruses to Racine's *Esther*, part-songs for equal voices, motets, 5 symphonies, "Roland à

Roncevaux" (symphonic pieces), 2 stringed quartets, etc. He has also written a "Cours d'harmonie pratique et d'accompagnement de la basse chiffrée," the report on the musical instruments at the Paris Exhibition of 1878, for "La Belgique à l'exposition universelle de 1878," and has contributed musical articles to newspapers. His "Christus" symphony was produced at Ghent in 1895.

Sanctis, Cesare de, Italian composer, b. 1830, Albano (near Rome), received his musical training at Rome (amongst others from Baini); already in 1860 he was appointed member of the committee of examiners of the Academy of St. Cecilia, and soon after, maestro of the churches della Minerva and S. Giovanni de' Fiorentini; he was also theatre conductor at Rome, Verona, etc. In 1877 he was appointed professor of counterpoint at the Liceo musicale, Rome, and from that time devoted himself only to teaching and composition; he is looked upon as one of the most meritorious, most cultured, teachers in Rome. The following of his works deserve mention: a Requiem *a 4* (Turin, 1872, for King Charles Albert), Masses, fugues, canons, a concert overture, and a theoretical work, "Trattato d'armonia."

Sanctus. (See MASS.)

Sandberger, Adolf, b. Dec. 19, 1864, Würzburg, son of the Professor of Geology at the University there. He attended the Gymnasium of his native town, studied composition from 1881-87 at the Royal School of Music there, and at Munich; and the science of music from 1883 to 1887 at the Universities of Würzburg and Berlin (under Spitta). In 1887 he took the degree of Dr.Phil., and then spent two years abroad (Austria, Italy, France, England, Russia). He was appointed, in 1889 provisionally, in 1892 definitely, custodian of the musical portion of the Munich royal court and state library. In 1893 he undertook the duties of private lecturer on the science of music at Munich University. *S.* has shown himself a gifted composer:—songs (Op. 1, 6, 11), pf. pieces (Op. 2, 7), choruses for mixed voices (Op. 3), a chorus with orchestra (Op. 5), a trio sonata (Op. 4), violin sonata (Op. 10, performed at the "Tonkünstlerversammlung," Munich, 1892), overture to a play (Op. 8). A three-act opera, *Ludwig der Springer* (libretto by *S.* himself), remains in manuscript. As a writer on music, *S.* has produced "Leben und Werke des Dichtermusikers Peter Cornelius" (1887), "E. Chabriès Gwendoline" (1892), "Peter Cornelius' Cid" (1893), "Beiträge zur Geschichte der bayr. Hofkapelle unter Orlando di Lasso" (Vol. I. 1893). Besides many articles in the *Musikalisches Wochenblatt* and the *Neue Zeitschrift für Musik*, etc., *S.* is preparing a monumental complete edition of the works of Orlando Lasso (Breitkopf & Härtel).

Sander, Constantin. (See LEUCKART.)

Sanderson, Lillian, celebrated concert singer (soprano), b. Oct. 13, 1867, Milwaukee, pupil of Stockhausen.

Sandoni. (See CUZZONI.)

Sandt, Max van de, b. Oct. 18, 1863, Rotterdam, pianist, pupil of Liszt; in 1889 he succeeded Bischoff as teacher at the Stern Conservatorium, Berlin.

Sängerbund, Deutscher. (See SOCIETIES.)

Sanglot (Fr.), "sob," an old ornament in singing, consisting of an "accent" or a Chute (q.v.) on an interjection (O! ah! alas!), etc.

Santini, Fortunato, Abbate, b. Jan. 5, 1778, Rome (date of death not known), studied under Jannaconi, and, by indefatigable zeal in collecting, brought together one of the most magnificent musical libraries which ever existed. Already in 1820 he published a catalogue of the same: "Catalogo della musica esistente presso F. S. in Roma," while a Russian amateur, Vladimir Stassow, described the state of the library in 1854: "L'abbé S. et sa collection musicale à Rome" (1854). About this time S. was living in retirement in a Roman monastery.

Santley, Charles, popular baritone vocalist, b. Feb. 28, 1834, Liverpool, pupil of Nava, Milan, from 1855-57, and afterwards of Manuel Garcia, London. He first appeared in public (1857) as an oratorio singer, was engaged in English opera 1859, Italian Opera 1862, sang at the principal musical festivals, and was for a time member of Carl Rosa's Opera Company (1876), but he is chiefly famed as an oratorio and ballad singer. He has made artistic tours in America (1871) and Australia (1889), has composed a few songs, and written a Vocal Method.

Santucci, Marco, maestro and canon of Lucca Cathedral, b. July 4, 1762, Camajore (Tuscany), pupil of Fenaroli, d. 1843, Lucca. He composed numerous sacred vocal works (masses, motets, psalms, etc., also settings for four voices of the old melodies of the Stabat Mater and the Dies iræ, with orchestra), canons up to seven parts, also symphonies, organ sonatas, etc. He achieved peculiar fame by receiving a prize from the Accademia Napoleone, 1806, for his motet *a 16* (for four choirs), as something special and novel. Baini, however, wrote a learned letter, in which he drew attention to the many Masses, motets, and psalms, etc., of Abbadini, Agostini, Ballabene, Benevoli, Giansetti, Mazzocchi, Pacelli, Savetta, etc., for four and more choirs. S. wrote also "Sulla melodia, sull' armonia e sul metro" (1828), a book, according to Fétis's assertion, of no value.

Saqueboute (Fr.), same as Trombone.

Sarabande (*Sarabanda*), an old Spanish dance in triple time, and of stately movement (few short notes, but many ornaments); it consisted originally of two 8-bar periods repeated. The S. begins on the first beat of the bar, and there is generally prolongation of the second beat by a dot, or by amalgamation with the third:

In the suite of the 17-18 centuries, it has its regular place between the Courante and Gigue.

Saran, August Friedrich, b. Feb. 28, 1836, Altenplathow (near Genthin, Saxony), studied theology at Halle (in music he was a pupil of Rob. Franz), and became teacher at the Lyck Gymnasium (E. Prussia) 1861, army chaplain at Königsberg 1863-73, superintendent at Zehdenick (Brandenburg) 1873, and since 1885 at Bromberg. Above all, wherever he was, S. proved a stimulating element in musical circles (conductor of the Church Choral Society, Bromberg), and himself composed songs, pf. pieces, etc., besides writing a pamphlet on "Robert Franz."

Sarasate, Pablo de (Pablo Martin Meliton S. y Navascues), famous violin virtuoso, b. March 10, 1844, Pamplona. S. was an infant prodigy; at the early age of ten he played at the court of Madrid, and received from Queen Isabella a present of a very valuable Stradivarius violin. From 1856-59 he was a pupil of the Paris Conservatoire. Alard had the good fortune to become his teacher, and in 1857 the young artist gained the first prize of the violin class. After he had first established his fame in his native country, he extended the circle of his tours as a virtuoso to the East and to America, visited England in 1874, and, finally, Germany in 1876, where he celebrated triumphs equally great. Lalo wrote for S. his first violin concerto and a *Symphonie Espagnole*; Bruch, his second concerto, and the *Scotch fantasia*, and Mackenzie, a "Pibroch" suite. This violinist has all the best qualities of a virtuoso: perfect intonation, marvellous *technique*, and captivating charm of tone. As a composer he has produced some unimportant pieces for violin solo.

Saro, J. Heinrich, b. Jan. 4, 1827, Jessen (province of Saxony), d. Nov. 27, 1891, Berlin; he studied under K. Böhmer and A. B. Marx, Berlin, became bandmaster, in 1856, of the 11th infantry regiment, and in 1859, of the "Franz" regiment in Berlin. In 1867 he was victorious in the musical contest of European military bands at the Paris Exhibition; in 1872 he was called to the Boston Musical Festival, where he received a gold medal. S. received the title of "Königlicher Musikdirector." He published "Lehre vom musikalischen Wohlklang und Tonsatz" (1st part).

Sarrette, Bernard, founder of the Paris Conservatoire, b. Nov. 27, 1765, Bordeaux, d. April 13, 1858, Paris, Captain of the National Guard, Paris; in 1789 he gathered together forty-five able military bandsmen, and from them evolved the band of the National Guard, which, from 1790, was kept up at the expense of the city, and increased to seventy members. In 1792, for reasons of economy the Commune ordered the band of the Guards to be dissolved; S., however, kept them together, and managed in the same year to establish a free music school, in which the members of the band were all appointed teachers. The institution provided the necessary bandsmen for all the fourteen *corps d'armée* of France, and soon received the name of *Institut national de musique*, and in 1795, that of Conservatoire. S., now that he had accomplished his aim, wished to return to his regiment, but was recalled and appointed government commissioner, and afterwards director. S. rendered good service by introducing carefully prepared Methods for the several departments, by the establishment of a school of declamation, foundation schools of singing, branches, library, concert hall, and the Concerts du Conservatoire. At the Restoration, in 1814, he lost his post. It was intended to reinstate him in 1830, but this he declined, in order not to oust his friend Cherubini from his post.

Sarri, Domenico, opera composer, b. 1678, Trani (Naples), pupil of the Conservatorio della Pietà; in 1713 second, and in 1741 principal court maestro at Naples. He wrote oratorios (*Il fonte delle grazie*, *Andata di Gesù al Calvario*, *Ester reparatrice*, etc.), likewise a number of operas, cantatas, serenades, etc., almost exclusively for Naples.

Sarrusophon, a brass instrument with double reed, allied, on the one hand, to the oboe and bassoon, but in the matter of timbre, to the trumpet, trombone, etc. It was invented by Sarrus, bandmaster of the 32nd French regiment of the line, and from 1863 was constructed by the instrument-maker Gautrot in all sizes, from a high treble to a double-bass instrument. Like wood-wind instruments, it has round holes closed by keys. (Cf. SAXOPHONE.)

Sarti, Giuseppe, eminent opera composer and master of counterpoint, the teacher of Cherubini, b. Dec. 1, 1729, Faenza, d. July 28, 1802, Berlin; he was trained by Padre Martini at Bologna, and in 1752 wrote his first successful opera for Faenza, *Pompeo in Armenia*. After further successes, he became, in 1756, court capellmeister and teacher of singing to the Crown Prince at Copenhagen, where he remained until 1765. Ill-success with his operas put him out of tune with his office; and even in Italy, where he had been long forgotten, his new works did not draw. Also in London, whither he went in 1769, he was not able to bring out a single work on the stage,

and was obliged to maintain himself by giving private lessons. He published there 6 excellent pf. sonatas. In 1770 he went to Venice, and undertook the direction of the Ospedaletto (Conservatorio for girls), in place of Sacchini, who probably proposed him; this post he held up to 1779, and then until 1784 became cathedral maestro at Milan. At this time he was very prolific as an opera composer, and celebrated lasting triumphs with *Le gelosie villane* (1776), *Giulio Sabino* (1781), and *Le nozze di Dorina* (1782; 1803, Paris). In 1784 Catharine II. appointed him court *maître de chapelle* at Petersburg; he remained there till 1802, fell into disgrace through the intrigues of the prima donna Todi, and for a time conducted a school of singing in a village of the Ukraine; he was, however, restored to favour and raised to the rank of a nobleman, and founded at Jekaterinoslaw a Conservatoire on Italian lines. He only left Petersburg, when his health was in a very critical condition, to seek a milder climate; while on the journey homewards death overtook him at Berlin. Besides 40 operas, S. wrote many Masses, motets, psalms, misereres, Te Deums, etc., a 4-12, at Petersburg a Russian psalm with orchestra, a piece for Russian hunting-horns (see MARES), and a Russian Te Deum. S. also constructed an apparatus for counting the vibrations of organ pipes, and fixed the Petersburg chamber pitch at 436 vibrations for *a'*.

Sass, Marie Constance (also Sax, or Saxe), famous French opera singer, b. Jan. 26, 1838, Ghent, daughter of a military bandmaster. Mme. Ugalde discovered her as a chansonette-singer in a Paris café, trained her free of expense, and recommended her to Carvalho, who engaged her, and she appeared as the Countess in *Figaro* at the Théâtre Lyrique (1859). Already in 1860 she appeared at the Grand Opéra, and, owing to her noble voice and dramatic talent, won great triumphs. In 1864 she married a subordinate singer, Castan (called Castelnary), but was divorced from him in 1867. The Franco-German War drove her from Paris, and she sang in the principal Italian theatres. She was prohibited from using the name Sax, under which she first appeared, by a judicial decision obtained, after a protracted lawsuit by Ad. Sax (q.v.); she first took the name Saxe, but finally adopted her real family name.

Satter, Gustav, pianist and composer, b. Feb. 12, 1832, Vienna, developed into a virtuoso and composer at an early age, but afterwards ignored the printed works of his youth, and published others with the same opus numbers. He received his musical training in Vienna; from Paris, where he was to have continued his studies, he went suddenly to America, and obtained there his first important successes, returned to Europe in 1862, and received the

warmest praise from Berlioz for his compositions. After long and frequently renewed concert tours through Europe, he took up his abode in Vienna, afterwards in Dresden, Hanover, Götting, and finally in Stockholm. Of his compositions may be mentioned: an opera, *Olanthe*; the overtures "Lorelei," "Julius Caesar," "An die Freude," 2 symphonies, a symphonic tone-picture, "Washington;" pf. quartets, trios, etc.

Sattler, Heinrich, b. April 3, 1811, Quedlinburg, d. Oct. 17, 1891, Brunswick, pupil of W. Liebau (Quedlinburg) and Hummel (Weimar). In 1838 he became organist at Blankenburg, in 1861 music teacher at Oldenburg Seminary. He was a musical theorist and composer: *Organ Method*, a book "Die Orgel" (5th ed.), *Harmony Method*, *School singing Method*, compositions and instructive works for organ, oratorio (*Die Sachsentaufe*), cantata (*Triumph des Glaubens*), choral work, "Der Taucher" (Schiller), Mass for three female voices, chamber music, part-songs, etc.

Sauer, (1) Wilhelm, one of the most renowned German organ-builders. b. March 23, 1831, Friedland (Mecklenburg), pupil of his father, made journeys for the purpose of study through Germany, Switzerland, France, and England, and established himself, in 1857, at Frankfurt on the Oder. Already in 1882 S. had completed 370 organs, among them many large ones with three and four manuals for Berlin, Magdeburg, Petersburg, Altona, Marienwerder, Bromberg, Fulda, Bochum, Mannheim, Ludwigshafen, etc.

(2) Emil, pianist of wonderful technique, b. Oct. 8, 1862, Hamburg, pupil of Nicolas Rubinstein (Moscow); he has made concert tours since 1882.

Saurel, Emma, excellent stage-singer, b. 1850, Palermo, of French parents, appeared first at Pisa, and with immediate and brilliant success. She then sang on the best Italian stages, travelled with Tamberlik through South America and Mexico, appeared in New York with Nilsson, and also sang afterwards in Portugal, Russia, and Germany (1878 and 1879 at Berlin).

Sauret, Émile, distinguished performer on the violin, b. May 22, 1852, Dun le Roi (Cher), attended the Paris, and afterwards, the Brussels Conservatoire, where De Bériot was his teacher. S. ranks among the best living violinists; he appeared at concerts in 1866, first in England, France, and Italy, 1870-74 in America, and finally in 1877 also in Germany; and by his refined taste proved a worthy rival of the more brilliant, dazzling virtuoso Sarasate. From 1880-81 S. was teacher at Kullak's Akademie in Berlin. In 1890 S. was appointed professor of the violin at the London Royal Academy of Music in place of Sainton. He has composed a violin concerto (G minor), likewise a number of solo pieces for violin with and without

orchestra. S. was for some years married to Mme. Carreño (q.v.).—A brother of S.'s, Auguste, b. 1849, pianist, d. Oct., 1890.

Sauveur, Joseph, clever mathematician and acoustician, b. March 24, 1653, La Flèche, d. July 9, 1716, Paris. He was deaf, and up to his seventh year dumb, but developed such a remarkable gift for mathematics that, finally, he made investigations of an epoch-making character in the branch connected with the phenomena of hearing, from which personally he was altogether excluded; in 1696 he was elected member of the Académie. S. was the first who found means to calculate the absolute vibration number of a sound (by means of beats); for example, if two sounds stand to one another in the diatonic semitone relationship 15 : 16, and produce ten beats per second, they make $[15 : 16] \times 10$, i.e. 150 and 160 vibrations per second. S., too, first expounded in a scientific manner the phenomena of overtones. S.'s writings relating to this matter are all printed in the *Mémoires de la Paris Académie*: "Principes d'acoustique et de musique" (1700-1701), "Application des sons harmoniques à la composition des jeux d'orgue" (1702); "Méthode générale pour former des systèmes tempérés de musique, et du choix de celui qu'on doit suivre" (1707); "Table générale des systèmes tempérés de musique" (1711); "Rapports des sons des cordes d'instruments de musique aux flèches des cordes et nouvelles déterminations des sons fixes" (1713).

Sauzay, Eugène, violinist, b. July 14, 1809, Paris, pupil, and afterwards son-in-law, of Baillot, in whose quartet party he at first played second violin, and afterwards viola in place of Urhan (up to 1840); he himself arranged chamber music *soirées* with Norblin (later on with Franchomme) as 'cellist, and with his wife and eldest son as pianists. In 1840 S. became solo violinist to Louis Philippe, afterwards leader of the second violins in the band of Napoleon III., and in 1860 succeeded Girard as professor of violin at the Conservatoire. S. published: fantasias, rondos, etc., for violin and pf., a stringed trio (with viola), pieces for pf., violin, and 'cello, several pf. pieces, "Études harmoniques pour violon" (Op. 13), and a "study" of the quartets of Haydn, Mozart, and Beethoven, together with a catalogue of the same (1861).

Savard, Marie Gabriel Augustin, professor at the Paris Conservatoire, b. Aug. 21, 1814, Paris, d. there June, 1881, pupil of Bazin and Leborne, in 1843 professor of the teaching of elementary music (Solfège), afterwards of harmony and thorough-bass. He published: "Cours complet d'harmonie théorique et pratique" (1853); "Manuel d'harmonie;" "Principes de la musique" (1861; 4th ed. 1875); "Recueil de plain chant d'église" (harmonised a 3-4); "Premières notions de musique" (1866;

5th ed. 1868); and "Études d'harmonie pratique" (2 vols.).

Savart, Félix, famous writer on acoustics, b. June 30, 1791, Mézières, d. March, 1841, Paris; keeper of the cabinet of natural science, etc., and professor of acoustics at the Collège de France (Paris University), in 1827 member of the Académie. S. investigated matters concerning the reinforcement of the tone of strings through the sound-board; also the influence of the material of organ-pipes, etc., on pitch, the results of which are printed in the "Annales de physique et de chimie;" "Mémoire sur la construction des instruments à cordes et à archet" (1819; also separately); "Sur la communication des mouvements vibratoires entre les corps solides" (1820); "Sur les vibrations de l'air" (1823); "Sur la voix humaine" (1825); "Sur la communication des mouvements vibratoires par les liquides" (1826); "Sur la voix des oiseaux" (1826), etc.

Sax, (1) Charles Joseph (senior), intelligent and praiseworthy instrument-maker, b. Feb. 1, 1791, Dinant-on-the-Maas, d. April 26, 1865, Paris. He established himself at Brussels in 1815, and soon made a name, especially in the manufacture of brass instruments; he constructed, however, also flutes, clarinets, etc., even violins, pianofortes, harps, guitars, etc. By deep investigations he discovered the proportions for the scale of wind instruments necessary to enable them to produce the fullest, roundest tone. Without doubt he had a large share in the inventions of his son Adolphe (q.v.), whom he joined in Paris in 1853.

(2) Adolphe (really Antoine Joseph), the famous son of the former, b. Nov. 6, 1814, Dinant-on-the-Maas, d. Feb. 8, 1894, Paris, attended the Brussels Conservatoire, and learnt to play the flute and clarinet. His first independent work was the perfecting of the clarinet and bass-clarinet (1840). Without means (his father spent much money on his own experiments, and on several occasions received a subvention from the government), he went to Paris in 1842, having as sole recommendation, a sample of the completely new instrument invented by him, viz. a brass instrument with single reed like the clarinet. (See SAXOPHONE.) He soon attracted the attention of various notabilities among Paris musicians (Halévy, Auber, etc.), found in Berlioz a powerful literary supporter, and quickly received pecuniary aid. His experiences, likewise those of his father, concerning the best resonance of tubes, he availed himself of in the construction of brass instruments of various sizes, etc., and gave to them in their new forms the names: Saxhorn (cf. BUGLE-HORN and TUBA), Saxotromba, etc. S. took out a patent for his improvements, and soon made a great reputation; his instruments were specially introduced into French military bands. The jealousy of com-

petitors whom he distanced naturally led to the originality of his inventions being called in question; but legal decisions were always in his favour. Certainly it was a great piece of vanity and self-glorification for S. to give his own name to all his instruments; but, on the other hand, his merit is beyond all question; and it is perverse patriotism to depreciate the services of S. because among those with whom he came into conflict there were also Germans. (See WIEPRECHT.) In 1857 S. was appointed teacher of the saxophone at the Paris Conservatoire, and he published a Method for that instrument.

(3) Marie. (See SASS.)

Saxhorn was the name given by Ad. Sax (q.v.) to the family of instruments evolved from the old bugle-horn, likewise the ophicleide, by the employment of valve mechanism instead of keys. Sax constructed them in seven sizes: sopranino, soprano, alto (tenor), bass, low-bass, and contra-bass. (Cf. BUGLE-HORN.)

Saxophone was the name given by Adolphe Sax (q.v.) to a new wind-instrument made by him in 1840, which belongs, on the one hand, to brass wind-instruments, but, as regards production of tone, to the clarinet class (single reed mouthpiece). The system of fingering the instrument is somewhat similar to that of the clarinet; but a great difference results from the fact that in the S. over-blowing does not, as in the clarinet, produce the 12th, but the octave, as in the flute, oboe, etc. The S. is made in eight different sizes: piccolo (*Saxophone aigu en mi bémol*), soprano (in c' or b \flat), alto (in f or e \flat), tenor (in c or b \flat), baritone (in f or e \flat), bass (in c or b \flat), and double-bass (in f or e \flat).

Saxotromba, name given by Ad. Sax to an entirely new family of instruments of his own invention, which as regards the scale of the sounding tube stands midway between the bugle-horn (likewise the saxhorn [q.v.] evolved from it) and the horn. The tone of the S. is consequently less soft than that of the horn, but, on the other hand, not so rough as that of the bugle instruments. Sax made S. of seven sizes, answering pretty well to the family of saxhorns. The S. has not as yet found its way into the orchestra.

Saynete, Spanish name for farces with music.

Scacchi, Marco, contrapuntist of the Roman school, b. about the end of the 16th century at Rome, pupil of Felice Anerio; from 1618-48 royal Polish capellmeister at Warsaw; he withdrew afterwards to Gallese, near Rome, where he died at an advanced age (before 1685). He published three books of Madrigals a 5 (1634-37); a book of Masses a 4-6 (1638); a funeral ode for Johann Stobäus (1647); a Mass a 12, of which the manuscript is in the Berlin library. S. fell into dispute with the Danzig organist, Paul Syfert, whose settings of psalms he attacked in "Cribrum musicum ad triticum

Syfertinum," etc. (1643; the book contains besides: Masses, motets, canons, etc., by musicians of the Polish chapel). Another work by S. is "Breve discorso sopra la musica moderna" (1647).

Scalds, the name given (9th-13th century) by the Scandinavians to the poets and singers of their national hero-sagas.

Scale (Ger. *Tonleiter*; Fr. *Gamme*), a term in old theories of music identical with Key (q.v.); but now that modern theory has recognised the third-relationship of notes and clangs (see **TONE-RELATIONSHIP**), it appears arbitrary not to consider the chord of \mathbb{E} major and the chord of \mathbb{A} major as belonging to the \mathbb{C} major clang. The conception of Key has therefore been extended to that of Tonality (q.v.), whereas the S. appears as chord of the tonic with passing notes.

Major Scale.

But, like that of the tonic, any other chord of the tonal harmony can be used with passing notes; and if the tonality is to be sharply marked, the passing notes must be chosen so that the notes belonging to the tonic are taken by preference. The scales thus formed are, first of all the old Church Modes (or Greek octave species), *i.e.* the scale of the dominant:

With \mathbb{F} , Mixolydian; or with $\mathbb{F}\sharp$, G major.

The scale of the subdominant:

With \mathbb{B} , Lydian; or with $\mathbb{B}\flat$, F major.

In minor, the scale of the parallel key:

Aeolian; with $\mathbb{F}\sharp$ $\mathbb{C}\sharp$ = A minor.

The scale of the (minor) dominant:

Phrygian.

The scale of the (minor) subdominant:

Dorian; with \mathbb{B} $\mathbb{C}\sharp$ = D minor.

(The notes belonging to the tonic are marked * in both sets of scales.)

In these scales it is of course possible to proceed from third to third or fifth to fifth. The

meaning is not determined by the compass, but by the clang in the sense of which the scale is conceived, and which bears the harmony of the scale. Viewed thus, the Church Modes may still be of great importance in the science of counterpoint. The Editor of this Dictionary has made an attempt to develop this idea in his "Neue Schule der Melodik" (1883) and "Vereinfachte Harmonielehre" (1893, Augener & Co.). As a rule, teachers who adhere to the Church Modes do not recognise the modern conception of keys, although, as is shown, both are well capable of amalgamation.

Scaletta, Orazio, composer and theorist, b. Cremona, church maestro at Salo, Lake Garda, occupied a similar post at Cremona in 1607, afterwards at Bergamo; finally at the basilica of St. Antonius, Padua, where he died of the plague in 1630. He published: "Villanelle alla Romana" a 3 (1590), madrigals a 6, and a short requiem a 4; also two small theoretical works—"Scala della musica" (frequently republished; the oldest known, but not the first, edition is dated 1598; the seventh also is unknown; the sixth is of 1626), and "Primo scalino della scala di contrappunto" (1622).

Scandelli, Antonio, Electoral Saxon "Hof-musiker" in Dresden (already before 1553, the year in which Duke Moritz fell, for whom S. composed a requiem), b. 1517, Brescia, d. Jan. 18, 1580, Dresden. In addition to his activity as a composer, he was distinguished as a performer on the cornet. From 1566 he was vice, and in 1568 became chief capellmeister. He published "Il I° libro delle Canzoni Napolitane" (24 Nos. a 4, 1566; also 1572 and 1583, Nuremberg); "Neue teutsche geistl. Liedlein mit 4 und 5 Stimmen" (12 Nos. 1568); "Nawe u. lustige weltl. deutsche Liedlein" (20 Nos. a 4-6, 1570; also published 1578 and 1579 under title, "Schöne weltl. und geistl. nawe deutsche Liedlein"); "Nawe schöne ausserlesene geistliche deutsche Lieder" (23 Nos. a 5-6, 1575); "Il II° lib. delle Canzoni Napolitane" (24 Nos. a 4-5, 1577). There are some motets in collections, and many other pieces in manuscript in public libraries, among which, of special importance, several Passions (at Grimma), afterwards arranged and published by other composers. In Zwickau there is also the motet "Christus vere languores," said to have been his last work; on it there is the note: "Ultima cantio Anthonii Scandelli qui 18 Januarii die vesperi hora 7, Anno 80, ætatis suæ 63 obiit." Cf. "Die Instrumentisten und Maler Brüder de Tola und der Kapellmeister Antonius Scandellus" ("Archiv für die sächsische Geschichte," 1866).

Scaria, Emil, b. Sept. 18, 1840, Graz, d. July 22, 1886, Blasewitz (near Dresden), first studied jurisprudence, was afterwards trained for an opera singer (bass) by Netzer at Graz,

then by Gentiluomo and Lewy at Vienna, and made his *début* with great success as Saint-Bris in *Les Huguenots* (1860) at Pesth. In 1862 he went to London, and completed his studies under García. In the same year he was engaged at Dessau, in 1863 at Leipzig, in 1864 at Dresden, and finally in 1872 at the Court Opera, Vienna, where he acted for some years as opera manager. S. was one of the most remarkable basses of our time, and distinguished as an interpreter of Wagner (Wotan, Hans Sachs, Holländer, etc.).

Scarlatti, (1) **Alessandro**, the famous founder of the Neapolitan School, b. 1659, Trapani (Sicily), d. Oct. 24, 1725, Naples; he received his first training, according to the statement of Quanz, at Rome from Carissimi. His first known opera, *L'onesta nell' amore*, was performed in 1680, in the palace of Queen Christina of Sweden (who resided at Rome after her abdication), and, still about 1684, S. is found bearing the title of her court maestro. In 1694 we find him court maestro at Naples; in 1703 deputy, and in 1707 successor to Foggia at Santa Maria Maggiore, Rome. In 1708 he resigned this post, again became court maestro at Naples, and undertook at the same time the direction of the Conservatorio di Sant' Onofrio. (Cf. HANDEL.) He also appears to have taught at the Conservatorio dei Poveri and at that of the Loreto. Among his own pupils were: Logroscino, Durante, and Hasse. S. was a wonderfully prolific writer. According to his own statement on the libretto of the opera *Tigrane*, by 1715 he had already written 106 operas. The number of his other works is almost incredible; his Masses (up to ten parts) are said to amount to 200, while the number of cantatas for solo voice with continuo or violin (of which the Paris Conservatoire possesses 8 volumes) is legion. In addition, there are the oratorios (*I dolori di Maria*, *Il sacrificio d' Abramo*, *Il martirio di S. Teodosia*, *La concezione della Beata Vergine*, *La sposa de' sacri cantici*, *S. Filippo Neri*, *La Vergine addolorata*), several Stabats, a "St. John" Passion (for alto, chorus, violin, viola, and organ), many psalms, motets, miseres, many madrigals, serenades (for voice), 14 chamber duets as vocal exercises, toccatas for organ or clavier, etc. Only a very few of S.'s works have been printed ("Concerti sacri," motets a 1-4 with strings and organ bass as Op. 1 and 2). Of S.'s operas the following specially deserve mention: *La Rosaura* (about 1690; it is reprinted in the 14th year of the publications of the *Ges. f. Musikforsch.*, revised by Eitner); *Teodora* (Rome, 1693; the opera in which S. first introduced the *da capo* of the grand aria, and replaced *secco recitativo* by *recitativo accompagnato*); *Pirro e Demetrio* (Naples, 1694); *Il prigioniero fortunato* (1698), *Laodicea e Berenice* (1701), *Tigrane* (1715; score: violins, violas, 'celli, double-basses, two oboes, two bassoons, and two horns), and *Griselda* (1721). Among modern editions of the works

of S. should be named: detached pieces edited by Choron, Rochlitz, Dehn, the Prince of Moskowa, Proske, Commer ("Tu es Petrus" a 8), a complete Mass, edited by Proske, and a Requiem by Choron. J. J. Maier published an aria and a duet from *Laodicea e Berenice*, and a terzet and quartet from *Griselda*, with German translation of the words by A. v. Wolzogen.

(2) **Domenico**, son of the former, and scarcely less celebrated, only as clavier-player and clavier-composer, b. 1685 (according to others, 1683), Naples, d. 1757, there, or in Madrid. He studied with his father and Gasparini at Rome, first made his name known by some operas written for Rome (the only way in which a composer could make a *début* at that time in Italy). He was, at the same time, highly esteemed as harpsichord-player, and when Handel went to Rome in 1709, S. was put forward by Cardinal Ottoboni as the best rival representative of Italian organ and harpsichord playing. The contest ended most honourably for both; yet in organ-playing (we do not say Handel to S., but) the German proved himself superior to the Italian. In 1715 S. succeeded Baj as maestro at St. Peter's, a proof of the high esteem in which he was held. He remained, however, in that office only until 1719, when he went as *Maestro al cembalo* to the Italian Opera in London, where his opera *Narciso* was put upon the stage. In 1721 the King of Portugal attracted him to Lisbon as court cembalist and music master to the princesses; in 1725 he returned to Naples, and when in 1729 the Princess Magdalene Theresia married the heir to the Spanish throne (1746; Ferdinand VI.), S. followed her to Madrid, where he remained until 1754, in which year he went back again to Naples. According to another version, his death is said to have taken place in Madrid. Abbé Santini had in his possession 349 of S.'s compositions for harpsichord and organ, yet his collection was not complete. C. F. Pohl collected 304 MS. copies (making with Czerny's edition 377, of which 37 are found in Czerny only). S. himself published: "Pièces pour le clavecin, composées par D. S., maître de clavecin du prince des Asturies" (2 books, containing 32 pieces, and a fugue by Alessandro S.), and "Esercizi per gravicembalo di Don D. S., cavaliere di S. Giacomo e maestro de' serenissimi principi e principessa delle Asturie." Of the numerous modern editions of S.'s compositions for harpsichord may be mentioned: the great collection of Czerny (200 pieces), 60 sonatas published by Breitkopf, 50 Harpsichord Lessons by Pauer (Augener), 12 sonatas and fugues by Köhler, 3 sonatas by Tausig, 18 pieces, grouped in suite form, by Bülow, 18 by Schletterer, 28 by André of Offenbach, a rich selection (over 100) in Farrenc's "Trésor des pianistes," and some pieces in both of Pauer's collections, "Alte Meister" and "Alte Klaviermusik," also in his "Old Italian

Composers" and "Merry Musicians" (Augener), and in Peters' "Alte Klaviermusik." The sonatas of S. are in one movement, and in the *Lied* form; the writing is homophonic and full of tasteful ornaments, so that it may be regarded as the point of departure for the modern clavier music of P. E. Bach, Haydn, etc.

(3) Giuseppe, opera composer, grandson of Alessandro S., but not son of Domenico S., b. 1712, Naples, d. Aug. 17, 1777, Vienna, first produced operas on Italian stages, settled, about 1757, in Vienna, where a great number of his Italian operas were produced (*De gustibus non est disputandum, Il mercato di Malmankile, L'isola disabitata*, etc.).

Scemando (Ital.), diminishing.

Scena, an accompanied recitative with *arioso* passages, generally followed by an *aria*. Sometimes the term S. comprehends the *aria*, oftener the words *scena ed aria* are used.

Scenario of an opera, etc., libretto with complete dialogue and directions for staging.

Schaab, Robert, b. Feb. 28, 1817, Rütba (near Leipzig), d. March 18, 1887, pupil of C. F. Becker and Mendelssohn. From 1853 he was a teacher in Leipzig, from 1878 also organist of St. John's Church. He published sterling compositions for organ.

Schachner, Rudolf Joseph, pianist and composer, b. Dec. 31, 1821, Munich, pupil of Henselt and J. B. Cramer, appeared at Munich, Leipzig, Paris, etc., with distinction, and in 1853 settled in London as teacher of the piano-forte, where for a long time he occupied a high position; later on he settled in Vienna. Of his compositions the following deserve mention: 2 pf. concertos, a number of other pf. pieces, and an oratorio, *Israels Rückkehr von Babylon*.

Schacht, Matthias Heinrich, b. April 29, 1660, Viborg (Jutland), in 1683 cantor and teacher at Ottensen, in 1686 rector at Kierteminde, d. there Aug. 8, 1700. He wrote a musical dictionary, "Bibliotheca musica sive authorum musicorum catalogus" (not printed, dated Kierteminde, 1687); Gerber used a copy of portions of the manuscript for his dictionary.

Schack (Cziak), Benedikt, tenor singer and composer of operas, b. 1758, Mirowitz (Bohemia), d. Dec. 11, 1826, Munich; in 1780 capellmeister to Prince Karolath. He then sang at Prague, Salzburg, Vienna, Graz, and finally at Munich, and from 1805 received a pension. He wrote several operas, of which one, *Die beiden Antone* (= *Die dummen Gärtner*, 1789, jointly with Górl) appeared in pf. score; also a Mass and some smaller vocal pieces were printed. S. was on friendly terms with M. Haydn and L. Mozart in Salzburg, and with J. Haydn and W. A. Mozart in Vienna; the latter wrote for S. the *role* of Tamino (S. belonged to Schikaneder's company in both cities).

Schad, Joseph, pianist, b. March 6, 1812, Steinach (Bavaria), pupil of the school of music there, and afterwards of that of Aloys Schmidt at Frankfurt, made concert tours in Switzerland, became in 1834 organist and musical director at Morges (canton of Waadt), afterwards teacher at the Geneva Conservatoire; he settled in 1847 at Bordeaux, where he lived highly esteemed as a teacher of music until his death (July 4, 1879). S. composed a large number of fantasias, transcriptions, waltzes, mazurkas, etc., also for pf. a ballet, *Frantzia* (Bordeaux, 1864), and songs.

Schade, (1) Abraham (Schadäus), native of Senftenburg, studied in 1564 at Leipzig, and from 1617 occupied in quick succession various posts as rector at Meissen, Schneeberg, Bautzen, etc.; he is also noteworthy as the editor of a large collection: "Promptuarium musicum" (1611-13, 1616, 4 parts), of 384 motets a 5-8, for the most part by German composers of the 16th and 17th centuries; like Bodenschatz's "Florilegium Portense," it is a work of the highest value for the study of the musical history of that time.

(2) Karl, teacher of singing at the municipal school at Halberstadt, published "Darstellung einer Reihenfolge melodischer, rhythmischer und dynamischer Uebungen als Beiträge zur Förderung des Gesangs in Volksschulen" (1828); "Singebuch für deutsche Volksschulen" (1828), "Singebuch für Schulen" a 2-4 (1829); "Kurze und gründliche Elementar-Gesangsbildungslehre" (1831); "Wie der Lehrer N. seine Schule, die erste Klasse einer Dorfschule, für den Gesang ausbildete" (1831), and "Ueber den Zweck des Gesangunterrichts in Schulen" (1831).

Schäffer, (1) Karl Friedrich Ludwig, b. Sept. 12, 1746, Oppeln, d. April 6, 1817, Breslau, as lawyer and notary; he was an able and early-developed musician, and left a Mass, 2 operas (*Walmir und Gertraud* and *Der Orkan*), 6 piano concertos, serenades, etc.

(2) Heinrich, b. Feb. 20, 1808, Cassel, d. Nov. 28, 1874, Hamburg, in his time a highly-esteemed tenor at the theatres of Magdeburg, Brunswick, and Hamburg; he married in 1840, left the stage, and devoted himself entirely to composition, published part-songs a 5-6 for male voices, and left symphonies, quartets, etc., in manuscript.

(3) August, b. Aug. 25, 1814, Rheinsberg, d. Aug. 7, 1879, Berlin, where he spent the greater part of his life; he became known by his humorous songs, duets, and part-songs. An opera, *Emma von Falkenstein*, was produced in 1839 at the Königsstadt theatre, Berlin.

(4) Julius, b. Sept. 28, 1823, Krevese (near Osterburg in the Altmark), where his father was cantor, attended the Stendal Gymnasium and studied, first theology at Halle (1844-47), then philosophy, and in the latter town became

intimate with Robert Franz, and through him came into contact with Schumann, Mendelssohn, Gade, etc.; through intercourse with these he gave himself up entirely to music, but only carried out this intention after he had been for two years at Jassy (Moldavia) as private tutor. In 1850 he went to Berlin, and became a pupil of Dehn, and in 1855 was appointed musical director to the Grand Duke at Schwerin, where he founded the "Schlosskirchenchor." In 1860 he became musical director at the University and conductor at the Singakademie, Breslau, in place of Reinecke, was named royal musical director in 1861, and in 1878, Professor. In 1872 the University bestowed on him the title of *Doc. hon. causa*. S. wrote some sets of songs and pamphlets in answer to the attacks of Chrystander on Robert Franz's re-scoring of Bach and Handel: "Zwei Beurteiler von Dr. R. Franz," "Fr. Chrystander in seinen Klavierauszügen zur deutschen Händel-Ausgabe," "R. Franz in seinen Bearbeitungen älterer Vokalwerke."

Schafhäutl, Karl Franz Emil (von), distinguished professor of geognosy, science of mining, and metallurgy, keeper of the state geological collections, member of the Royal Bavarian Academy, etc., b. Feb. 16, 1803, Ingolstadt; d. Feb. 25, 1890, Munich. He was as learned in the science of acoustics as in that of geognosy, and took the most active part in the invention, and even in the construction, of the instruments of Theobald Boehm (q.v.), with whom he was intimate. S. made, amongst other things, investigations into the cause of the various clang-colours, the result of which was to shake the Helmholtz theory of clang colours (See *Allg. Mus. Ztg.* 1879). While still a student he wrote under the transparent pseudonym of *Pellisov* (*pellis ovis*) for the *Neue Annalen der Chemie*: "Theorie gedackter cylindrischer und konischer Pfeifen und der Querflöten" (1833); "Ueber Schall, Ton, Knall, und einige andre Gegenstände der Akustik" (1834; both also separately); also "Ueber die Kirchenmusik des katholischen Kultus" (*Allg. Mus. Ztg.* 1833); an excellent and permanent report of the musical instruments at the Munich Industrial Exhibition (1854); "Ueber Phonometrie" (Measurement of the intensity of sound, 1854), and "Der echte Gregorianische Choral in seiner Entwicklung" (1869); "Ein Spaziergang durch die liturgische Musikgeschichte der katholischen Kirche" (1887, continuation of the preceding), also a detailed biography of Abbé Vogler (1888).

Schalmei (Fr. *Chalumeau*, from Latin *calamus*, a "blade"), (1) an obsolete wind-instrument, with double reed inserted into a mouthpiece. It was the predecessor of the oboe, which orig-

inated from it, in that the mouthpiece was done away with, and the reed itself placed in the player's mouth. The S. was the smallest, and at the same time the oldest, kind of Bombardino (q.v.), hence also named later on Bombardino.—(2) A register of the clarinet (q.v.), viz. the deepest notes from *e*—*e'*.—(3) The chanter of the bagpipe, which is indeed a S. of old construction.—(4) An organ-stop, now rare (identical with musette), a reed-stop of 4 or 8 ft., which is said to imitate the tone of the S., for which purpose its tubes are of different shape.

Schanzone. (See CHANSON.)

Schapler, Julius, 'cellist, b. 1820, in the Harz, teacher of music in Thorn, wrote chamber works, of which a quartet for strings, a pf. trio, and pf. quintet received prizes.

Scharfe, Gustav, esteemed teacher of singing, b. Sept. 11, 1835, Grimma (Saxony), d. June 25, 1892, Dresden, was for eleven years vocalist (baritone) at the Dresden Court Opera, was appointed teacher of singing at the Conservatorium 1874, and "Professor" in 1880. Emil Götze is his most distinguished pupil. S. published an excellent singing school, "Die methodische Entwicklung der Stimme."

Schärnack, Luise, excellent stage and concert-singer (mezzo-soprano), b. about 1860, Oldenburg, was trained at the Hamburg Conservatorium (v. Bernuth), made her *début* at Weimar as Ortrud in *Lohengrin*, and was at once engaged. In 1883 she sang with great success in London in Stanford's *Savonarola*.

Scharwenka, (1) Ludwig Philipp, b. Feb. 16, 1847, Samter (Posen), where his father, was architect, attended the gymnasium at Posen, where his parents settled in 1859; and when, in 1865, they moved to Berlin, he became a pupil of the Kullak "Neue Akademie der Tonkunst," especially of Wüerst, and also studied privately under H. Dorn. In 1870 he became teacher of theory and composition at Kullak's Academy, in 1881 teacher of composition at his brother's Conservatorium, the co-direction (with Hugo Goldschmidt) of which he undertook on Xaver's departure to America. S. has made a good name for himself by a series of interesting compositions for orchestra, pianoforte, violin, 'cello, and voice (choral works: "Herbstfeier," Op. 44, and "Sakuntala," both with soli and orchestra, 2 symphonies, "Arkadische Suite," serenade for orchestra, festival overture, "Dörper-Tanzweise," for chorus and pianoforte, etc.). In 1880 he married the violinist Marianne Stresow, who is likewise teacher at the above-named Conservatorium.

(2) Franz Xaver, brother of the former, distinguished pianist and composer of note, b. Jan. 6, 1850, Samter, and, until the completion of his course at the Kullak Academy, led the same life and had the same general training as his brother. Previously he had received only a little

instruction in music, and private lessons in pianoforte-playing. His special teachers in Berlin were Th. Kullak (pianoforte) and R. Wüerst (composition). At the conclusion of the school period of three years he was appointed teacher (1868) at Kullak's Academy, appeared in public as pianist (1869) for the first time, and with great success, at a concert of the Singakademie, and speedily made a name by concerts in Berlin and other great cities. In 1874 he resigned his post as teacher, and since then has travelled through nearly the whole of Europe as a concert performer. On Oct. 1, 1881, he opened at Berlin a Conservatorium of his own, with a staff of distinguished teachers (Philipp S., Frau S.-Stresow, Albert Becker, Ph. Rüfer, J. Kotek, O. Lessmann, W. Langhans, M. Röder, W. Jähns, A. Hennes, etc.); but in 1891 he accepted a call to New York as director of a Conservatorium bearing his name. The Berlin S.-Conservatorium was amalgamated with that of Klindworth in 1893 (Directors: Ph. S., H. Goldschmidt, and H. Genss). As a composer, S. occupies an honourable position. His first pf. concerto (B^b minor) is rightly prized, and the following works also deserve mention: the second pf. concerto (c minor), two pf. trios, a pf. quartet, a 'cello sonata, a violin sonata, two pf. sonatas, and many small pf. pieces. Op. 34 to 62 were partly written in England, and first published there by Angener & Co., who also publish the only complete edition of his popular Polish dances. S.'s compositions have stamina, stirring rhythm, and interesting harmonies. There are frequently to be found in them traces of national Polish colouring.

Schauensee, Franz Joseph Leonti Meyer von, composer, b. Aug. 10, 1720, Lucerne; in 1738 he entered the Cistercian monastery of St. Urban, but in 1741 joined the Swiss regiment at Sardinia under Keller, and rose to the rank of officer. He was taken prisoner at Nice, but released on his word of honour not to take up arms again. In 1752 he took holy orders, became organist at the Lindgard Collegiate School, and was still living there in 1790. S. composed several operas, but especially many sacred vocal works, of which the following were printed: 7 Masses, 4 motets for soprano and alto, "Obeliscus musicus" (offertories), "Ecclesia triumphans in canto" ("Te Deum," "Tantum ergo," etc.), "Cantica doctoris" (antiphons to the Virgin Mary); also, "Pantheon musicum" (organ concertos), concerto for organ, pf., and accompanying instruments, etc. Many other works, also a Mass for three choirs (a 26), remained in manuscript.

Schebek, Edmund, Dr. juris, secretary of the Chamber of Commerce at Prague, imperial councillor, b. Oct. 22, 1819, Petersdorf (Moravia), d. Feb. 11, 1895, Prague; he wrote the official Austrian report on the musical in-

struments at the Paris exhibition of 1855 (also separately in 1858), further, "Der Geigenbau in Italien und sein deutscher Ursprung" (1874), and "Zwei Briefe über J. J. Froberger" (1874).

Schebest, Agnes, excellent stage singer, b. Feb. 15, 1813, Vienna, d. Dec. 22, 1869, Stuttgart; she sang at Dresden (until 1833), Pesth (until 1836), and appeared with great success on various stages until, in 1841, she married D. F. Strauss, the author of the "Leben Jesu," and retired from the stage. She wrote "Aus dem Leben einer Künstlerin" (autobiographical, 1857).

Schechner-Waagen, Nanette, b. 1806, Munich, d. there April 30, 1860; from 1825-35 she was a highly-prized member of the German opera companies in Vienna, Berlin, and Munich; in 1832 she married the painter Waagen, and in 1835, owing to illness, she withdrew from the stage.

Scheibe, Johann Adolf, famous writer on music, b. 1708, Leipzig, d. April, 1776, Copenhagen. He was the son of an excellent organ-builder, Johann S. (d. Sept. 3, 1748; builder, amongst others, of the organs belonging to the Paulinerkirche [1716], and the Johanniskirche [1744], the latter of which J. S. Bach considered faultless); he studied from 1725 at Leipzig University, and at the same time formed himself into an able musician. As he was defeated by Görner in 1729 in the competition for the post of organist at St. Thomas's Church (Bach was one of the judges), he commenced a wandering life—went to Prague, Gotha, Sondershausen, and in 1736 to Hamburg, where he drew on himself the attention of the musical world by his attacks on Bach in the sixth number of the musical paper *Der kritische Musikus* (1737 to 1740). In 1740 he became court capellmeister to the Margrave of Brandenburg-Kulmbach, and in 1744, royal Danish capellmeister at Copenhagen. In this post he published, in 1745, the *Kritischer Musicus* in a larger edition, and already in 1758 received his pension. He also wrote "Abhandlung vom Ursprung und Alter der Musik, insonderheit der Vokalmusik" (1754); "Beantwortung der unparteiischen Anmerkungen (Birnbauts), etc., über eine Stelle des *Kritischen Musikus*," i.e. the attack on Bach (1758); "Abhandlung über das Recitativ" ("Bibliothek der Künste und Wissenschaften," 2nd and 3rd vols.). Of a proposed Method of Composition in four vols. ("Ueber die Musikalische Composition") he only completed the first volume (1773); a "Compendium musices theoricopracticum" remained in manuscript. Of the many compositions of S. (200 sacred works, 150 flute concertos, 30 violin concertos, 70 quatuors [symphonies], trios, sonatas, a *Resurrection*, and an *Ascension* oratorio, etc.) there only appeared in print 3 sonatas for flute and clavier,

6 sonatas for flute and continuo ("Musikalische Erquickstunden"), some Freemasons' songs, tragic cantatas (a 2 with clavier, and with an esthetic introduction), children's songs (with preface), and a Danish opera, *Thusnelda* (with esthetic introduction). S. was the first to point out that part-music was a discovery of the peoples of the North.

Scheibler, (1) Johann Heinrich, the inventor of the "Scheiblersche Stimmethode," b. Nov. 11, 1777, Montjoie (near Aix-la-Chapelle), d. Nov. 20, 1838, Crefeld. He was a silk manufacturer at Crefeld, and unfortunately had not received a sufficiently sound scientific training to be able to express his thoughts in a clear manner. His writings are: "Der physikalische und musikalische Tonmesser" (1834); "Anleitung, die Orgel vermittelt der Stösse (*vulgo* Schwebungen) und des Metronoms korrekt gleichschwebend zu stimmen" (1834); "Ueber mathematische Stimmung, Temperaturen und Orgelbaustimmung nach Vibrationsdifferenzen oder Stößen" (1835); "Mitteilung über das Wesentliche des musikalischen und physikalischen Tonmessers" (1835)—all published together as "Schriften über musikalische und physikalische Tonmessung," etc. (1838). A clear and simple description of S.'s method of tuning was given by Töpfer (1842), and the French writers Vincent (1849) and Lecomte ("Mémoire explicatif de l'invention de S.," etc., 1856). The S. apparatus, sold by S. to a mechanic in Crefeld, consists of fifty-six tuning forks for *a*—*a'*, each set of two always giving four beats per second (the fork for *a* makes 220 double vibrations; *a'*, i.e. $220 + 4.55 = 440$).

(2) Ludwig, b. June 7, 1848, Montjoie (near Aix-la-Chapelle), where his father possessed a cloth factory, attended the high school there, and entered his father's factory as apprentice, in which he worked, after the interruption of the year of military service and the war of 1870–71, until 1874. Then, however, he turned to the study of the history of art (Universities of Bonn, Munich, Berlin, Vienna), made extensive journeys for the purposes of study through the Netherlands, Germany, to Paris, Madrid, London, etc., making the old German and old Netherlandish artists the special object of his study, with the aim of a post as curator of an art collection. This aim he, unfortunately, did not achieve, but was appointed to the superintendence of the Berlin picture gallery from 1880–84, commissioned to draw up a new catalogue, and attained the reputation of an authoritative judge. He married in 1883, again took up pianoforte playing—formerly eagerly pursued, but for a long time neglected—withdrew from his post at the gallery, and became absorbed in the study of the history of pianoforte music, to which end he gathered together a special collection (18th century), which has already grown to large dimensions. This Dictionary is indebted to S. (who has become also in

his new sphere a connoisseur of the first rank) for many valuable contributions. S. took his degree as Dr. Phil. in 1880 with an essay on the Cologne artists of the period 1460–1510.

Scheidemann, Heinrich, famous organist, b. about 1596, d. the beginning of 1663, the predecessor of J. A. Reinken at the Katharinenkirche, Hamburg, succeeded his father, Hans S. (1625); perhaps a nephew of David S., who was organist in 1585 at St. Michael's Church, Hamburg (composer of "Wie schön leuchtet uns der Morgenstern"), and published, jointly with Hier. and Jakob Praetorius, and Joachim Decker, a "Choralbuch" (1604). S., after receiving sufficient preparatory training from his father, was sent to Amsterdam about 1614 to Jan Pieter Sweelinck, the most eminent master of the organ of his time. It appears that nothing more of S.'s was printed except "Fünfter und letzter Teil der Ristischen Lieder, in Melodien gebracht" (1662) and "Die verschmähte Eitelkeit; 24 Gespräche" (1658): 18 organ and clavier pieces are still preserved in MS. (*Cf. Vierteljahrsschrift für Musik-Wissenschaft*, 1891.)

Scheidemantel, Karl, eminent stage and concert singer (baritone), b. Jan. 21, 1859, Weimar, attended the Teachers' Seminary there (private pupil of Bodo Borchers), then held an appointment at the Court Theatre there from 1878–86 (in 1885 already "Kammersänger"), and studied under J. Stockhausen during the summer months, 1881–83. In 1886 he sang the part of Amfortas at Bayreuth, and has been since then an ornament of the Bayreuth performances. He joined the company of the Dresden Court Opera, 1886, to which he still belongs.

Scheidt, Samuel, one of the three famous Middle German masters, whose names of one syllable begin with the letter S: Schütz, S., Schein, b. 1587, Halle-a.-S., pupil of Sweelinck at Amsterdam, in 1609 organist of the Moritzkirche and capellmeister to the Margrave Christian Wilhelm of Brandenburg at Halle, d. there March 24, 1654. In the Protestant school of organ-playing, S. is of importance as the first who worked out the Chorale in an artistic manner, and in one suitable to the organ. His chief work is: "Tabulatura nova" (1624, 3 vols.; psalms, toccatas, figured chorales, fantasias, *passamezzi*, a Mass, hymns, and Magnificats, the organ pieces, written in German tablature; reprinted in 1892 as Vol. I. of "Denkmäler deutscher Tonkunst"); also "Tabulaturbuch" (100 psalms a 4, and numerous songs, 1650); "Cantiones sacræ 8 voc." (1620); "Concerti sacri 2–12 voc., adjectis symphonis et choris instrumentalibus" (1621 and 1622); "Ludi musici" (Paduanas, Gagliards, etc., 1st part 4–5 voc., 1621; 2nd part, 4–7 voc., 1622); "Liebliche Krafftblümlein" (with thorough-bass, 1625); "Neue geistliche Konzerte" a 2 and 3, together with figured bass (1631); "Geistlicher Konzerten," part 2 (1634),

part 3 (a 2, 3, etc., with figured bass, 1635), part 4 (1640); "70 Symphonien auf Konzertenmanier" a 3, with figured bass (1644). From the fact that his works appeared up to 1624 in Hamburg, Fétis concludes that S. lived then in that city.

Schein, Johann Hermann, one of the worthy predecessors of Bach as cantor of St. Thomas's, Leipzig, b. Jan. 20, 1586, Grünhain (Saxony), d. Nov. 19, 1630, Leipzig. He went in 1599 as soprano singer to the Dresden court chapel, became in 1603 foundation scholar at the monastery school, Pforta (Schulpforta), in 1607 attended the University of Leipzig as *Stud. jwr.*, and then took the post of "Praeceptor" and "Hausmusikmeister" to Hauptmann von Wolfersdorf at Weissenfels; on May 21, 1615, he became capellmeister at the court of Weimar, and in 1616 received the post of cantor then vacant at St. Thomas's, Leipzig. His compositions which have been preserved are: "Venus-Kränzlein oder neue weltliche Lieder zu 5 Stimmen" (1609); "Cymbalum Sionium sive cantion. sacr. 5-12 voc." (1615); "*Banchetto musico* newer anmutiger Padoanen, Gagliarden" (a 5, 1617; a very important monument of the oldest German music for strings, containing 20 Partitas each of 5 movements, i.e. Padonana, Gagliarda, Courante, Allemanda, *Tripla* varying the same theme); "Das Tedeum mit 24 Stimmen" (1618); "Balletto pastorale 3 voc." (1620); "Musica divina 8-24 voc." (1620); "Musica boscareccia, Waldliederlein, 3 Stimmen in 3 Teilen" (1621, 1626, 1628; later editions 1632-44, 1651); "*Fontana d'Israel*, Israels Brunnlein, Kraftsprüche" (1623; other editions, 1651-52); "Madrigali 5 voc." (1623); "*Diletti pastorali*, Hirten Lust" (a 5, 1624 and 1650); "Villanella 3 voc." (1625 and 1627); "*Opella nova*, geistliche Konzerte mit 3-5 Stimmen, 1. und 2. Teil" (1618 and 1627 [1628]); "Studenten-Schmauss" (a 5, 1626 and 1634); "*Cantional* oder Gesangbuch Augsburg. Konfession zu 4-6 Stimmen" (1627, a second edition of the same year contains 27 new numbers—in all 313 German and Latin songs, reprinted also 1645; this is S.'s most important work); he also composed a large number of songs *d'occasion* for weddings and other festivities. Cf. A. Pruefer, "F.H.S." (1895, biographic and bibliographic).

Scheitholt (Ger.). (See TRUMSCHEIT.)

Schelle, Johann Nepomuk, the founder, and for many years conductor, of the "Caecilienverein" at Frankfurt, b. May 16, 1789, Hüfingen (in the Black Forest), d. Aug. 7, 1837, Frankfurt; he grew up in humble circumstances, was received as chorister in Marchtal Monastery in 1800, and, on its suppression, went to the school at Donaueschingen, where Weisse, a pupil of Anton Raaff, gave him a thorough musical training, especially in singing. In 1807 he set out to find Abbé Vogler at Darmstadt,

but remained in Stuttgart, where he met with a friendly reception, and was engaged as court singer; soon after that he was appointed teacher at the music school founded by the King of Württemberg. In 1813 he went on to Vienna, and now made many appearances as opera singer (Vienna, Pressburg, Berlin); but he was not very successful, for his style of acting was faulty. In 1816 S. went to Frankfurt, first as tenor-singer at the opera, became conductor of the *Akademie* in 1817, but resigned in 1818, and founded the "Caecilienverein," which, however, only received this name in 1821, at which time by means of a committee, the society was placed on a sound financial basis. When the committee withdrew, in 1831, S. carried on the society at his own risk. Of special merit was S.'s method of teaching the elements of music, one which is still carried on with abundant good results by his pupils: it consisted in centralising absolute hearing, and training it in an infallible manner, by prolonged exercises on a few notes,

in order to grasp their meaning and trace the difference between them. (Cf. MUSICAL DICTATION.)

Schelle, (1) Johann, b. Sept. 6, 1648, Geisingen (Saxony), cantor at Eilenburg, succeeded Knüpfer in 1696 as cantor at St. Thomas's, Leipzig, where he died, March 10, 1701. S. wrote sacred works, which, however, remained in manuscript. Only melodies to Feller's "Andächtige Studenten" are mentioned as having been printed. (Ahle, Wintergespräche, p. 39.)

(2) Karl Eduard, writer on music, b. May 31, 1816, Biesenthal (near Berlin), d. Nov. 16, 1882, Vienna; he studied philology and theology, and was made Dr. Phil., but devoted ever-increasing attention to music. After a long residence in Paris, Rome, and Florence, in 1864 he succeeded Hanslick as musical critic of the *Presse* at Vienna, which post he filled till the end of his life with great impartiality; he also frequently gave lectures on the history of music at the Conservatorium, and at Horak's Pianoforte School. His book, "Die päpstliche Sängerschule in Rom, genannt die Sixtinische Kapelle" (1872) is a special study of great value.

Schellenbaum (Ger.). (See CRESCENT.)

Scheller, Jakob, gifted violinist, but unfortunate during his last years, b. May 16, 1759, Schettal (near Raknitz, Bohemia), studied under Abbé Vogler at Mannheim, where he was engaged in the orchestra, and was afterwards leader to the Duke of Württemberg at Montbéliard. He was specially famous for his virtuosity in harmonics and double stopping.

Schelper, Otto, b. April 10, 1844, excellent stage singer (haritone), from 1872-76 at the Cologne, since then at the Leipzig, theatre.

Schemelli, Georg Christian, b. 1676, cantor at Zeitz Castle, in 1736 published a song-book (954 "geistreiche, sowohl alte als neue Lieder und Arien;" the musical part of which J. S. Bach edited).

Schenck, Johann, performer on the gamba at the court of the Elector Palatine, afterwards at Amsterdam, where from about 1685-95 he published a series of works for *Basse de viole* (Gamba) and continuo, viz. 15 sonatas (Suites): "Konstoeffeningen," Op. 2; "Scherzi musicali," Op. 6; 12 sonatas (Suites), Op. 8 ("La ninfa del Reno"); ditto Op. 9 ("L'écho du Danube"); ditto, Op. 10 ("Les bizarreries de la goutte"); also chamber sonatas for two violins, Gamba, and continuo, Op. 3 ("Il giardino armonico"); 18 sonatas for violin and continuo, Op. 7, and "Sang-Airen van d'Opera van Ceres en Bachus," Op. 1.

Schenk, Johann, the composer of the *Dorfbarbier* and the secret harmony teacher of Beethoven (q.v.), b. Nov. 30, 1753, Wiener-Neustadt (near Vienna), d. Dec. 29, 1836, Vienna. S. studied under Wagenseil, held no public appointment, but lived by private teaching and by composition, and died in needy circumstances. His first work of importance was a Mass, produced at the Magdalen Chapel in 1778, which soon spread his reputation; this was followed by several sacred works (a Stabat, a Mass), several harp concertos, 6 symphonies, and, finally, the vaudevilles which for decades made him popular: *Die Weinlese* (1785), *Die Weihnacht auf dem Land* (1786, both anonymous), *Im Finstern ist nicht tappen* (1787), *Das unvermutete Seefest* (1788), *Das Singspiel ohne Titel* (1789), *Der Erntekranz* (1790), *Achmet und Almazine* (1795), *Der Dorfbarbier* (1796), *Der Bettelstudent* (1796), *Die Jagd* (1797), and *Der Fassbinder* (1802). His last compositions were two cantatas, *Die Huldigung* und *Der Mai* (1819). The ambitious scheme of writing an opera in the Gluck style, for a time disturbed his mind, and ended in his entire abandonment of all composition. *Der Dorfbarbier*, on account of its healthy comic style, both as regards libretto and music, was for a long time a successful "draw" at all German theatres.

Scherer, Sebastian Anton, in 1664 second organist at Ulm Cathedral; he published: "Musica sacra" (1655; Masses a 3-5, psalms and motets with instruments); "Tabulatura in cymbalo et organo intonationum brevium per octo tonos" (1664, 2 books; also in a complete edition); "Sonaten für 2 Violinen und Gambe" (1680), and "Suiten für die Laute" (without date).

Scherzando, **Scherzoso** (Ital.), in light, playful movement.

Scherzer, Otto, a composer of expressive songs and an excellent organist, b. March 24, 1821, Ansbach, d. Feb. 23, 1886, Stuttgart; he studied the violin under Molique there (1837),

and from 1838-54 became violinist in the court orchestra at Stuttgart, but at that time zealously studied organ-playing under Faisst, and became professor of organ-playing and leader of the ensemble practice at the Munich Conservatorium in 1854. In 1860 he received a call to the University of Tübingen as musical director, where he was pensioned in 1877, a privilege which he claimed on the ground of bad health. When he left, the Tübingen University named him Dr. Phil. *hon. causa*. From 1877, S. lived in Stuttgart. His compositions which have appeared in print have not attracted all the notice which they deserve; they are as follows: 3 books of 6 songs each (Op. 1, 3, 4), a "Liederbuch" (Op. 2, 25 songs), figured chorales (Op. 5), and pf. pieces in vol. 4 of Lebert and Stark's pf. Method. Several organ compositions remained in manuscript.

Scherzo (Ital. "jest") is the term for a capricious movement, for the most part in quick tempo, rhythmically and harmonically piquant, of fine articulation, and hence requiring a delicate rendering. It occurs between the slow movement and the finale (Rondo), or (frequently of late) between the first and the slow movement of a sonata, symphony, etc., in place of the minuet formerly usual (Haydn and Mozart). The term S. is, however, much older, and, like *Capriccio*, occurs as name for secular songs as early as the 16th century, and also for instrumental music (17th century). (See, for instance, in SCHENCK.)

Schetky, Christoph, distinguished 'cellist, b. 1740, Darmstadt, studied under Filtz at Mannheim, held an appointment in the court orchestra at Darmstadt, but travelled much in Germany; in 1768 he settled in Hamburg, in 1770 came to London, and died at Edinburgh 1773. S. published: 6 trios and 6 quartets for strings, 6 duets for 'cello and violin, 6 'cello sonatas with bass, 6 duets for flute, 6 duets for 'cello, 6 easy ditto, 6 sonatas for violin and 'cello, and left 'cello concertos, symphonies, etc., in manuscript.

Schgraffer, Jakob, d. 1859 as preacher and organist at Botzen. He was a gifted church composer (Benedictions, offertories, "Fronleichnamsmusik;" oratorio, *Jesus Leiden und Tod*). S. received his musical training in Milan.

Schicht, Johann Gottfried, one of the able musicians who filled the office of cantor of St. Thomas's, Leipzig, after Bach, b. Sept. 29, 1753, Reichenau (near Zittau), d. Feb. 16, 1823, Leipzig. When he had been thoroughly trained in pianoforte and organ-playing, he went to Leipzig in 1776 to study jurisprudence, but soon became a concert player (accompanist) at the "Drei-Schwanen" concerts (from which sprang later the Gewandhaus concerts), and kept his post when J. A. Hiller revived the concerts in the "Opel" house, and from 1781-85 also in the Gewandhaus. In 1785 S.

succeeded Hiller as conductor of the Gewandhaus concerts, and also, in 1810, A. E. Müller as cantor of St. Thomas's. The wife of S. (née Valdesturla, from Pisa), was an excellent concert singer. S. composed the oratorios: *Die Feiër des Christen auf Golgotha*, *Moses auf Sinai*, *Das Ende des Gerechten*, several Masses, the 100th Psalm (after M. Mendelssohn), 4 Te Deums, motets, cantatas, nine settings of Leo's *Miserere* a 4-8, also a pf. concerto, sonatas, caprices, etc. He wrote a theoretical work, "Grundregeln der Harmonie" (without date), and translated into German the singing Method of A. M. Pellegrini-Celoni and the pianoforte Methods of Pleyel and of Clementi. His great "Choralbuch" (1819) is a work of lasting historical worth; out of the 1,285 melodies 306 are by S. himself.

Schick, Margarete Luise (Hamel, wife of S.), famous singer, b. April 26, 1773, Mayence, d. April 29, 1809, Berlin, daughter of an able bassoon player. She made her *début* in 1792 at Mayence, went in 1794 to Hamburg, and soon afterwards to Berlin, where she was appointed "Kammersängerin," and remained there until her death, which occurred through the bursting of one of the arteries of the neck shortly after the performance of Righini's *Te Deum* in the Berlin Cathedral. S. was held by the artists of her day in high esteem, and was considered only second to Mara, especially as an interpreter of Gluck. In 1791 she married the violinist Ernst S. (b. 1756, The Hague, d. Dec. 10, 1813, as leader at the Berlin court), six of whose violin concertos appeared in print. Cf. Lewezow, "Leben und Kunst der Frau M. S." (1809).

Schiedermayer, Joseph Bernhard, cathedral organist at Linz, d. Jan. 8, 1840. He was a prolific composer of sacred music (16 Masses, offertories, graduals, hymns, litanies, etc.), and also wrote 2 symphonies, trios for strings, pf. sonatas, organ pieces, etc., a "Theoretisch-praktische Chorallehre zum Gebrauch beim katholischen Kirchenritus" (1828), and published Leopold Mozart's *Violin School* in abridged form.

Schiedmayer und Söhne, important pianoforte manufactory at Stuttgart, especially famed for its pianinos. It was established in 1806 by Lorenz S., whose father, David S., was maker of musical instruments at Erlangen. Two sons of Lorenz S.—Adolf (d. Oct. 16, 1890, Stuttgart) and Hermann—took over their father's business, while two others—Julius (b. Feb. 17, 1822, Stuttgart, d. Feb., 1878) and Paul (d. June 18, 1890, Kissingen)—established a harmonium factory in 1853, trading under the title "J. u. P. Schiedmayer," which likewise greatly prospered.

Schiffederdecker, Johann Christian, b. Weissenfels, d. April, 1732, Lübeck; in 1702 accompanist at the Hamburg Opera, in 1707

organist at the Marienkirche, Lübeck. He wrote four operas for Hamburg, and composed a series of "Serenades" for Lübeck. (Cf. BUXTEHUDE.)

Schietto (Ital.), unadorned.

Schikaneder, Emanuel Johann, theatre manager, librettist of the *Zauberflöte*, b. 1751, Ratisbon, d. Sept. 21, 1812; he was at first actor and singer, etc., in a company of itinerant players, then became son-in-law of the director (Artim), and finally director himself. His company played in all towns of importance in Austro-Hungary. Mozart's setting of his insipid text for the *Zauberflöte* rescued him from bankruptcy, and made him for a time a well-to-do man, as Mozart had reserved to himself no rights; S., however, died at last in poverty. He wrote several other libretti (*Der Zauberflöte zweiter Teil*, *Die beiden Antone*, etc., for Winter, Schenk, etc.), and himself set to music *Die Lyranter*.

Schildt, Melchior, b. 1592, probably at Hanover, d. there May 22, 1667. He was a pupil of Sweelinck, was (1623-26) organist of the principal church, Wolfenbüttel, and from 1629 until his death, organist of the Marktkirche, Hanover. Of his very meritorious compositions there remain only two books of chorale settings for organ and two sets of variations for clavier. (Cf. *Vierteljahrsschrift für Mus.-Wiss.*, 1891.)

Schilling, Gustav, writer on music, b. Nov. 3, 1803, Schwiegerhausen (near Hanover), d. March, 1881, Nebraska. He studied theology at Göttingen and Halle, was made Dr. Phil., undertook in 1830 the direction of the Stöpel School of Music at Stuttgart, and was active there as writer of music, and was also named "Fürstl. hohenzollerischer Hofrat." Threatening conflicts with the authorities induced him, in 1857, to emigrate to America, but he was obliged to leave New York to escape from justice, and he lived, forgotten by the world, at Montreal, Canada, finally in Nebraska. His publications are: "Musikalisches Handwörterbuch . . . insbesondere für Klavierspieler" (1830); "Beleuchtung des Hoftheaters in Stuttgart" (1832); "Encyclopädie der gesamten musikalischen Wissenschaften oder Universallexikon der Tonkunst" (1835-40, 7 vols.); "Versuch einer Philosophie des Schönen in der Musik oder Aesthetik der Tonkunst" (1838); "Polyphonomos" (1839; a treatise on harmony in 36 lessons, a shameless plagiarism of Logier's "Musikwissenschaft"); "Allgemeine Generalbasslehre" (1839); "Lehrbuch der allgemeinen Musikwissenschaft" (1840); "Das musikalische Europa" (biographical, 1840); "Geschichte der heutigen oder modernen Musik" (1841); "Akustik oder die Lehre vom Klang" (1842); "Musikalische Dynamik oder die Lehre vom Vortrag in der Musik" (1843, unimportant); "Franz Liszt" (1844); "Sicherer

Schlüssel zur Klaviervirtuosität" (1844); "Für Freunde der Tonkunst" (1845); "Der Musikalische Autodidakt" (treatise on harmony, 1846); "Die schöne Kunst der Töne" (1847); "Musikalische Didaktik oder die Kunst des Unterrichts in der Musik" (1851); "Allgemeine Volksmusiklehre" (1852); "Der Pianist" (1854); and a revised edition of K. Ph. E. Bach's "Versuch über die wahre Art, das Klavier zu spielen" (1857).

Schimon, Adolf, distinguished teacher of singing, pianist, and composer, b. Feb. 29, 1820, Vienna, d. June 21, 1887, Leipzig, son of the painter Ferdinand S., well known by his portraits of Beethoven, Weber, and Spohr, also engaged at Munich in 1821 as an opera singer. As a boy, S. displayed sound musical gifts, and at the age of sixteen entered the Paris Conservatoire (especially under Berton and Halévy). As accompanist at the private classes of Bordogni and Banderelli he gained an intimate knowledge of the Italian method of teaching singing, and by his acquaintance with Rubini, Lablache, Mario, Nourrit, Ponchard, Roger, Duprez, also with the ladies Grisi, Damoreau, Pauline Garcia, etc., his interest in the matter of singing continued to increase; and it did not diminish when he became *Maestro al cembalo* at Her Majesty's Theatre, London (1850-52), and at the Paris Italian Opera (1852, etc.). Meanwhile he had also achieved success as a composer. Already in 1846 his opera *Sivadella* had been given at La Pergola, Florence, whither he had betaken himself for the purpose of studying Italian singing. Flotow, whose *Martha* he had helped to translate into Italian, produced (1858) S.'s *List um List* at Schwerin, a pleasing comic opera, also given at Dresden, Berlin, etc. S. published, besides, at Paris, many Italian and French vocal compositions, several quartets for strings, a pf. trio, a violin sonata, pf. sonatas, pf. pieces for two and four hands, and some German Lieder at Vienna. In 1872 he married Anna Regan, a vocalist of great fame, with whom he made various artistic tours. In 1874 he was appointed teacher of singing at the Leipzig Conservatorium, and in 1877 was engaged in like capacity at the Royal School of Music at Munich. But in 1886 he returned to his post at the Leipzig Conservatorium, his wife receiving, at the same time, an appointment at that institution. After his death she returned to Munich, where she is held in high esteem as teacher of singing at the Royal School of Music.

Schindelmesser, Ludwig, b. Dec. 8, 1811, Königsberg-i.-Pr., d. March 30, 1864, Darmstadt, a younger step-brother of Heinrich Dorn, was capellmeister at the theatres of Salzburg, Innsbruck, Graz, Berlin ("Königstadt Theater"), Pesth (German theatre), Hamburg (1847), and Frankfort (1848), became in 1851 court capellmeister at Wiesbaden, and in 1853 at

Darmstadt. S. composed 7 operas (*Melusina*, 1861), a ballet (*Diavolina*), an oratorio (*Bonifacius*), overtures, a clarinet concerto in c minor, a quadruple concerto for four clarinets and orchestra (Op. 2), and many pf. pieces (3 sonatas, impromptus, etc.).

Schindler, Anton, the faithful companion of Beethoven during the composer's last years, and afterwards his biographer, b. 1796, Medl (near Neustadt, Moravia), d. Jan. 16, 1864, Bockenheim (near Frankfurt). He studied the violin, was for some time capellmeister at the German Opera, Vienna, and lived for ten years in the same house with Beethoven, devoting to the composer all the time he could spare, and, especially, offering to him a helping hand during his last illness. In 1831 S. became cathedral capellmeister and musical director of the *Akademie* at Münster, and in 1835, cathedral capellmeister at Aix-la-Chapelle, which post, however, he resigned after a few years. In 1842 he returned to Münster, and went later on to Bockenheim. S.'s fame rests entirely on his relations with Beethoven. He related all he knew concerning the universally-honoured master in the "Biographie Ludwig van Beethovens" (1840). He wrote besides: "Beethoven in Paris" (1842; account of the reception given to Beethoven's works at the *Concerts spirituels*, Paris); it is given as an appendix in the later editions of the Biography.

Schindlöcker, (1) Philipp, excellent 'cellist, b. Oct. 25, 1753, Mons (Hainault), went when young to Vienna, where he became principal 'cellist at the Court Opera and at St. Stephen's, and died April 16, 1827, as "Kaiserlicher Kammervirtuose." Of his compositions only a serenade for 'cello and guitar is printed.

(2) Wolfgang, nephew of the former, b. 1789, 'cellist and oboist, published chamber music of various kinds for wind instruments, also 'cello duets.

Schira, Francesco, b. Sept. 19, 1815, Malta, d. Oct., 1883, London, pupil of the Milan Conservatorio (Basilj); in 1832 he brought out his first opera, *Elena e Malvina* at La Scala, and was at once engaged for the Italian Opera at Lisbon as conductor and composer. In 1842 he went to Paris, where he was engaged by Maddox for London at the English Opera (Princess's Theatre); in 1847 he went to Drury Lane, under Bunn, who in 1848 took Covent Garden. In 1852 S. returned to Drury Lane, where he remained, however, only a short time, as he gave himself up entirely to the teaching of singing. S. wrote for Lisbon the operas *Il fanatico per la musica* and *I cavalieri di Valenza*; for London the English *Mina* and *Theresa*, the *Orphan of Geneva* (a third, *Kenilworth*, not produced), and the Italian *Niccolo de' Lapi*; for Venice *La Salvaggia* (1875) and *Lia* (1876). Also an operetta (*The Ear-ring*), a cantata (*The Lord of Burleigh*) for the Birmingham Musical

Festival, 1873, and several small pieces. As teacher of singing S. was highly esteemed.

Schirmacher, Dora, talented pianist, b. Sept. 1, 1857, Liverpool, daughter of a highly-esteemed teacher of music. From 1872-77 she was pupil of the Leipzig Conservatorium, made her *début* in 1877 at the Monday Popular Concerts, London, and still maintains her reputation as a concert performer.

Schisma (Gk.) is the name of the smallest of the mathematical determinations of tone, that of the interval $c : b\sharp$ (cf. TONE, DETERMINATION OF), i.e. the difference between the third of the 8th fifth and the octave note $= 3^8.5 : 2^n$, in which n represents a whole number and 2^n is smaller than $3^8.5$, i.e. 32805 : 32768 ($= 2^{10}$), in logarithms on the basis $2 = 0.0010924$, i.e. the eleventh part of the *comma syntonum*, a hundredth part of a whole tone, a difference not perceptible by

the ear. The diaschisma $c : d\flat$ is already ten times as great; it is the difference between the second under-third of the fourth under-fifth ($\frac{1}{3^4.5^2}$) and an octave tone ($\frac{1}{2^n}$) viz. 2025 : 2048, log. 0.019998, which cannot be ignored in any system of temperament in use. The S. answers exactly to the difference between the diaschisma and *comma syntonum*, and almost exactly to the difference between the pure fifth and the fifth of the 12th degree in equal temperament (log. $= 0.001630$), likewise named S.

Schladebach, Julius, Dr. Med., is known as the editor of the first book of a "Neues Universallexikon der Tonkunst" (1854), which Ed. Bernsdorf completed. S.—who in his younger days published a number of sacred compositions—appears, after giving up the editorship of the dictionary, to have turned from music and to have lived as editor of political papers at Liegnitz, Posen, and other places; he died in 1872 at Kiel. His last publication was "Die Bildung der menschlichen Stimme zum Gesang" (1860).

Schläger, Hans, b. Dec. 5, 1820, Filskirchen (Upper Austria), d. May 17, 1885, Salzburg, pupil of Preyer, in 1854 choirmaster of the Vienna male choral society, in 1861 capellmeister of the cathedral and director of the Mozarteum, Salzburg. His operas *Heinrich und Ilse* (1869) and *Hans Haidekukuk* (1873) were performed at Salzburg. In 1867 S. married a Countess Zichy and resigned these latter posts. Of his remaining compositions should also be mentioned a quartet (gained a prize at Milan), a symphonic tone-picture ("Waldmeisters Braut-fahrt"), songs, also masses and symphonies.

Schlagzither. (See ZITHER.)

Schlecht, Raimund, priest, b. March 11, 1811, Eichstädt, d. there March 24, 1891; in 1836 prefect and principal teacher, in 1838 inspector and president of the seminary there, afterwards ecclesiastical councillor. He pub-

lished: "Officium in nativitate Domini" (1843); "Vesperæ breviarii romani" (1852); an "Auswahl deutscher Kirchengesänge," "Gradualia et offertoria de communi sanctorum," and a "Geschichte der Kirchenmusik" (1871), which, however, contains little original research. S. also sent many contributions of interest to the *Monatshefte für Musikgeschichte*, and wrote several articles for Mendel's "Konversationslexikon," etc.

Schleifer (Fr. *Coulé*), the German name of an ornament which consists of two or more appoggiatura notes moving by degrees, and as a rule ascending ones; it is now always written out in small notes:

played

The sliding third was formerly much in vogue, thus:

A sign for the S. now obsolete, but frequent in Bach, is:

played

Schleiflade (Ger.). (See WIND-CHEST.)

Schleinitz, Heinrich Konrad, for many years director of the Leipzig Conservatorium (1847-81), b. Oct. 1, 1802, Zechanitz (near Döbeln, in Saxony), d. May 13, 1881, Leipzig. He was the son of a schoolmaster, studied law and practised in Leipzig. He was already a member of the committee of management of the Gewandhaus concerts when that body induced Mendelssohn to go to Leipzig. S. entered into very friendly relations with the composer, and, after Mendelssohn's death, gave up his legal practice and undertook the direction of the Conservatorium, which post he held until the time of his death, being only too scrupulous in adhering to the Mendelssohn traditions.

Schlesinger, the name of two famous music-publishing firms. (1) "Schlesingersche Buch- und Musikalienhandlung" in Berlin, founded in 1810 by Adolf Martin S., from 1858 continued by his son, Heinrich S. (d. Dec. 14, 1879, in Berlin; founder of the musical paper *Echo*), in 1864 transferred to R. Lienau (q.v.).—(2) "M. A. S." at Paris, founded in 1834 by Moritz Adolf S., the eldest son of Martin S.

and founder of the *Gazette musicale*. The title was enlarged in 1835 to *Revue et gazette musicale*. The business passed over by sale to Louis Brandus in 1846.

Schletterer, Hans Michel, b. May 29, 1824, Ansbach, d. June 4, 1893, Augsburg, received his first instruction in music there from Ott, Dürner, and Meyer, from 1840-42 attended the Teachers' Seminary at Kaiserslautern, but after that time made still further musical studies under Spohr and Kraushaar in Cassel, and under David and Richter in Leipzig. His first appointments were from 1845-47 as teacher at the Finstingen seminary (Lorraine), from 1847-53 as musical director at Zweibrücken, and from 1854-58 in a similar capacity at Heidelberg University. In 1858 he was appointed capellmeister at the Protestant church, Augsburg, and teacher of singing at v. Stetten's institution; from 1865 he was conductor of the Oratorio Society, founded by himself, and director of the Augsburg School of Music, which he founded. In 1878 he was named Dr.Phil. (*honoris causa*) by the University of Tübingen. S. published a long series of compositions, especially vocal works: psalms, cantatas (*Lasset die Kindlein*, etc., and *Jephthas Tochter*), male choruses with orchestra ("Ostermorgen," "Türmerlied"), 17 books of songs *a-cappella* for male, female, and mixed chorus, 18 books of pf. songs (some with 'cello), "Die kirchlichen Festzeiten" (Op. 28), and four operettas—(*Dornröschen* [Op. 45], *Phaëas Tochter* [Op. 49], *Der erfüllte Traum* [Op. 52], and *Vater Beatus*). Of educational works he published a Method for part-singing in schools (Op. 29 and 30), also another for male voices (Op. 20), and a violin Method (Op. 7). He edited a great number of pianoforte editions of classical works, arrangements, revisions, etc. S. wrote "Geschichte der geistlichen Dichtung und kirchlichen Tonkunst" (1st vol., 1869); "Uebersichtliche Darstellung der Geschichte der geistlichen Dichtung und kirchlichen Musik;" "Zur Geschichte der dramatischen Musik und Poesie in Deutschland" (1st vol., "Das deutsche Singspiel," 1863); "J. Fr. Reichardt, sein Leben und seine Werke" (1865); "Studien zur Geschichte der französischen Musik" (1884-85, 3 vols.); also in Count Waldersee's collection (Breitkopf und Härtel) the articles: "G. B. Pergolese," "J. J. Rousseau," "L. Spohr," and "Der Ursprung der Oper;" also many small treatises in detached form in musical papers (*Allgemeine Musikalische Zeitung*, etc.). S.'s wife, Hortensia Zirges, formerly known as an able violinist, b. March 19, 1830, trained in Paris, married S. in 1857. In consequence of paralysis of both her arms she was forced to abandon her art in 1870.

Schlichtegroll, Adolf Heinrich Friedrich von, professor at the Gymnasium and librarian to the Duke of Gotha, b. Dec. 8, 1764,

Gotha, d. Dec. 4, 1822, Munich. He published: "Nekrolog der Deutschen" (1790-1806), a large general German biography in 34 vols.

Schlick, (1) Arnold, court organist to the Elector Palatine; he published: "Spiegel der Orgelmacher und Organisten" (1511) and "Tabulaturen etlicher Lobgesang und Liedlein uff die Orgeln und Lauten" (1512; a collection of songs arranged for the organ, in part for lute with and without voice, in tablature). These small works are amongst the oldest musical publications of Peter Schöffler the younger, and are extremely rare (they have been reprinted by Breitkopf und Härtel). S. wrote the latter for his son, who bore the same name as himself, and whom Kiesewetter mentions as the writer of the treatise "De musica poetica" (written 1533-40), to be found in the Berlin library (*Cf. Allgemeine Musikalische Zeitung*, 1831; in it there is a curious attempt to note down the several voice parts on one stave [the notes of the different parts differing in colour and form], considered by Kiesewetter and others as the ordinary method at that time of writing scores).

(2) Johann Konrad, distinguished 'cellist, first at Münster (1776), afterwards at Gotha, where he died in 1825. He published 3 quintets (with flute), a concertante for violin and 'cello, 3 pf. trios, 6 quartets for strings, 3 'cello sonatas with bass, a 'cello concerto, etc. Many works remained in manuscript.—His wife, Regina, née Strina-Sacchi, was an excellent violinist; their son, Johann Friedrich Wilhelm, 'cellist, b. Jan. 24, 1801, Gotha, d. April 24, 1874, Dresden, was for a long time deputy in the royal band of Dresden, and, finally, chamber musician; he carried on at the same time, and with success, the construction of violins and 'cellos according to the best Italian models.

Schlimbach, Georg Christian Friedrich, excellent connoisseur of organs, b. 1760, Ohrdruf (Thuringia), in 1782 organist at Prenzlau, afterwards proprietor of a school of music in Berlin. He published: "Ueber die Struktur, Erhaltung, Stimmung und Prüfung der Orgel" (1801), and wrote several important articles for the *Berlinische Musikalische Zeitung* (1805-1806).

Schlösser, (1) Louis, composer and musical critic, b. Nov. 17, 1800, Darmstadt, d. there Nov. 17, 1886, pupil of Rinck in that town, of Seyfried, Mayseder, and Salieri in Vienna, and of Le Sueur, and Kreutzer in Paris. When his studies were completed, he became at first leader, and later on court capellmeister, at Darmstadt. S. composed operas: *Das Leben ein Traum* (1839), *Die Braut des Herzogs* (1847), a melodrama, *Die Jahreszeiten*; music to *Faust*, entr'actes, ballets, symphonies, overtures, quartets for strings, concertos, pf. works, songs, etc., of which about 70 Opus Nos. have been published.

(2) Adolf, son and pupil of the former, pianist, b. Feb. 1, 1830, Darmstadt. From 1847

he gave concerts frequently in Germany, and settled in London in 1853 as teacher of music, and there occupies an important position. He has published a pf. quartet and pf. trio; also a series of educational works.

Schlottmann, Louis, an excellent pianist, b. Nov. 12, 1826, Berlin, pupil of W. Taubert and S. Dehn. He gave successful concerts in London and other places, and lives at Berlin, a valued teacher. In 1875 he received the title of royal musical director. S. has composed orchestral and chamber works, pleasing songs, and pieces for the pianoforte.

Schlüsselfiedel, a stringed instrument in use from the 15th to the 17th century. The strings were not stopped with the fingers, but, as in the hurdy-gurdy, shortened by means of a key-board; an instrument, therefore, for vagrant musicians, for the keys proved naturally a still greater asses' bridge than the lute frets. (See STRINGED INSTRUMENTS.)

Schmell, teacher at Magdeburg, inventor of the *Notograph*, an apparatus to be applied to the pianoforte so that what is played on the keyboard appears written down in notes on a blackened strip of paper passing over a roller. Concerning all contrivances of this kind, see article MELOGRAPH.

Schmelzer, Johann Heinrich, chamber musician at the court of Vienna, afterwards (1655) at Prague, in 1678 court capellmeister to Ferdinand III., d. after 1695. He published: "Sacro-profanus concentus musicus" (1662, sonatas for violin with viols and trombones), "Arie per il balletto a cavallo," for the marriage of the Emperor Leopold I. with Margareta of Spain (1667), and "Duodena selectarum sonatarum" (a 4, Nuremberg, 1669).

Schmid, (1) (Schmidt), Bernhhard, name of two organists at Strassburg, the elder of whom (the father), b. 1520, Strassburg, was organist of St. Thomas's in 1560, and in 1564-92 of the Cathedral, while the son succeeded him in both posts. The elder was the author of the tablature work, "Eines neuen und künstlichen auff Orgel und Instrument Tablatur Buch" (1577; fantasias on motets by Lasso, Crecquillon, Richafort, Clemens *non papa*, Arcadelt, etc., and dance pieces); the son published: "Tabulaturbuch von allerhand auserlesenen schönen Prä-ludis, Tokkaten, Motteten, Kanzonetten, Madrigalen und Fugen von 4-6 Stimmen" (1607).

(2) Anton, keeper of the musical section of the Vienna Library, b. Jan. 30, 1787, Pihl (near Leipa, Bohemia), d. July 3, 1857, Vienna. He wrote several monographs of the highest importance, "Ottaviano dei Petrucci da Fossombrone, der Erfinder des Musiknotendrucks mit beweglichen Metalltypen, und seine Nachfolger im 16. Jahrhundert" (1845); "Joseph Haydn und Niccolò Zingarelli" (1847, in which it is proved that Haydn composed "Gott erhalte Franz den Kaiser"); "Christoph Willibald,

Ritter v. Gluck" (1854, detailed biography). In addition to these, mention must be made of his "Beiträge zur Litteratur und Geschichte der Tonkunst" (in Dehn's "Cäcilia" 1842-46).

Schmidt, (1) Johann Philipp Samuel, councillor, and manager of the "Seehandlung" in Berlin, b. Sept. 8, 1779, Königsberg-i.-Pr., d. May 9, 1853, Berlin; he wrote a number of operas for Berlin and Königsberg, also cantatas, hymns, masses, symphonies, quartets, etc., many of which appeared in print. S. edited many pf. arrangements of movements from the symphonies and quartets of Haydn and Mozart, of Radziwill's *Faust*, etc.

(2) Joseph, violinist, b. Sept. 26, 1795, Bückeburg, d. there March 15, 1865, as court capellmeister; he composed songs, psalms, an oratorio (*Die Geburt Christi*), etc. Of his 22 children one son, Julius Caesar, b. 1818, became an able 'cellist; another, Viktor, b. July 6, 1833, a violinist.

(3) Hermann, royal court composer and conductor of the ballet at Berlin, b. there March 5, 1810, d. Oct. 19, 1845, a pupil of Gabrielski (flute) and of Böhmer; he wrote several operettas, ballets, entr'actes, also orchestral and chamber music.

(4) Gustav, distinguished conductor, b. Sept. 1, 1816, Weimar, d. Feb. 11, 1882, Darmstadt, was theatre capellmeister at Brünn (1841), Würzburg, Frankfurt, Wiesbaden, Mayence, Leipzig (1864 to 1876), and then court capellmeister at Darmstadt. His opera *Prinz Eugen* formerly met with great success; it was followed by the operas *Weibertreue* (*Kaiser Konrad vor Weinsberg*), *La Reole, Alibi*; also some part-songs for male voices, written in the genuine "Volk" strain ("Heute scheid' ich, morgen wandr' ich").

Schmitt, (1) Joseph, composer, monk at Eberbach, renounced his religious vocation in 1780, and became a music-seller at Amsterdam, and in 1800, capellmeister at Frankfurt, where he died in 1808. He published a number of his own compositions (symphonies, quartets, and trios for strings, also with flute, concertantes, a violin Method, etc.).

(2) Nikolaus, German by birth, in 1779 *chef* of the *Paris Musique des Gardes*, afterwards principal bassoon-player of the Italian Opera, published quartets, quintets, etc., for wind-instruments, duos for clarinets, 3 concertos for bassoon, 3 quartets for bassoon and strings, variations for bassoon, etc.

(3) Aloys, pianist and famous teacher of the pianoforte, b. Aug. 26, 1788, Erlenbach-on-Main (Bavaria), d. July 25, 1866, Frankfurt. He was trained by his father, who was cantor, and afterwards by J. A. André of Offenbach, lived from 1816 up to the time of his death highly esteemed as a teacher of the pianoforte at Frankfurt, with exception of a residence of several years in Berlin (about 1820), and in

Hanover as court pianist to the Duke of Cambridge (1825-29). S.'s instructive works for pianoforte form thoroughly sound teaching material (Studies, Op. 16, 55, 62 [Rhapsodies], Op. 67 [Studies], Op. 115; Pianoforte School, Op. 114, sonatas, Op. 10 and 11, rondos, Op. 3). He wrote, besides, 4 pf. concertos, several concert pieces, variations and rondos for pf. and orchestra, ditto with quartet of strings, many sonatas, rondos, variations, etc., for pf. alone; also several overtures, quartets for strings, oratorios (*Moses, Ruth*), Masses, operas (*Das Osterfest zu Paderborn, Die Tochter der Wüste, Valeria, Der Doppelprozess*), etc.

(4) Jakob (Jacques), younger brother and pupil of the former, b. Nov. 2, 1803, Oberrnburg (Bavaria), whither his father had removed; he lived in Hamburg highly esteemed as a pianoforte teacher, and died there June, 1853. S. published a Pianoforte School (Op. 301), studies (Op. 37, 271, 330), violin sonatas, many pf. sonatas, sets of variations, partly with accompaniment of strings, and much drawing-room music; he also wrote an opera (*Alfred der Grosse*).

(5) Friedrich, renowned teacher of singing, b. Sept. 18, 1812, Frankfort, d. Jan. 17, 1884, Vienna.

(6) Georg Aloys, son and pupil of S. (3), b. Feb. 2, 1827, Hanover, studied theory under Vollweiler in Heidelberg. A youthful work, the opera *Tribby*, was produced with success at Frankfort. After he had been trained as a concert-player (pianist), S. made artistic tours for several years through Germany, Belgium, France, to England, Algiers, etc., and then became theatre capellmeister at Aix-la-Chapelle, Würzburg, etc., until he was called in 1857 as court capellmeister to Schwerin, where he laboured until pensioned (1892), and where he did much to raise music, especially the opera. In 1893 S. undertook the direction of the teachers' choral society, Dresden. From among his numerous private pupils may be named the pianist Emma Brandes. S. has composed several operas, much incidental music to plays, overtures, and other orchestral works; pf. pieces, a trio, and small vocal pieces appeared in print.

(7) Hans, meritorious and esteemed pianoforte teacher, b. Jan. 14, 1835, Koblen (Bohemia), was at first, as oboist, a pupil of the Prague Conservatorium (1846-50), and then, up to 1855, principal oboist at the Bucharest Opera; he went from there to the "Hofburg-theater," Vienna, and finally joined the court band; an obstinate throat-complaint at last compelled him to entirely give up the wind-instrument. S. now entered, at 25 years of age, the Vienna Conservatorium as pianoforte pupil of Dach, received the silver medal in 1862, and, at the same time, was appointed teacher at the Conservatorium. Since 1875 he has conducted the pianoforte training classes. Among his (certainly very pedantic) instructive works for

the pianoforte should be mentioned: "300 Etüden ohne Octavenspannung," "Vademecum," "Fundament der Klaviertechnik," "Zirkelübungen in Skalen und Akkorden" (Op. 9), 120 small pieces for performance, an instructive edition of Clementi's "Gradus ad Parnassum;" "Repertoirestudien" (teaching material in progressive order), and "Schule des Gehörs" (elementary vocal Method with introduction to theory); also songs, pf. characteristic pieces, a "Konzertstück" for violin. He also wrote, (after L. Köhler), "Das Pedal des Klaviers" (1875). An opera, *Bruma* (libretto by the composer, after Baumbach's *Zlataarog*), is still in manuscript.

Schmölzer, Jacob Ed., b. March 9, 1812, Graz, d. there Jan. 9, 1886, song composer, received the first prize from the "Thüringer Sängerbund" for the chorus "Allen Deutschen," etc.

Schnabel (Ger. "beak"), a term used for the mouthpiece of the clarinet; also for the now obsolete straight flute. (See FLUTE.)

Schnabel, (1) Joseph Ignaz, composer of sacred music, b. May 24, 1767, Naumburg-on-Queiss (Silesia), d. June 16, 1831, Breslau. He was the son of a cantor, and his musical studies had to be interrupted for several years on account of deafness; later on, however, he recovered his hearing and resumed his studies. After contending for a short time against the difficulties of a provincial life, and studying Haydn's symphonies by means of an orchestra composed of peasant boys, he went in 1797 to Breslau, and obtained there an appointment as violinist at the "Vicentinerstift," and as organist of St. Clara, likewise, soon afterwards, as violinist in the theatre orchestra, where he frequently acted as deputy conductor. In 1804 he became cathedral capellmeister, in 1806 conductor of the Richter Winter Concerts, in 1810 also of the Monday and Friday Society, and in 1812, musical director of the University, teacher of music at the Roman Catholic Seminary, and director of the Royal Institute for Church Music. S.'s music is "good music," but only made its mark within narrow circles. A great number of works, however, appeared in print (5 masses, 4 graduals, 2 offertories, antiphons, hymns, vespers, quartets for male voices, songs, military marches and other pieces for brass instruments, a clarinet concerto and quintet for guitar and strings). Many other sacred works remained in manuscript.

(2) Michael, brother of the former, b. Sept. 23, 1775, Naumburg, d. Nov. 6, 1842, Breslau. He is principally known as the founder of a pianoforte manufactory at Breslau (1814), which was afterwards carried on by his son.

(3) Karl, son of the former, b. Nov. 2, 1809, Breslau, d. there May 12, 1881; he at first worked in his father's factory, but was trained by

his uncle (*see above*), and became an accomplished musician. After playing in public a pianoforte concerto of his own composition on a grand pianoforte of his own make, he retired from business and devoted himself entirely to composition. His compositions (pianoforte works, songs, cantatas, operas, masses, orchestral works), however, did not attract much attention.

Schnarrtöne, Klirröne (Ger. "jarring tones"), is the term applied to a peculiar phenomenon in acoustics, in which a series of under-tones, in a direction opposite to that of the overtones, becomes audible. For example, if a vibrating tuning-fork be placed loosely on a sound-board, or box of some kind, instead of the real note of the tuning-fork, one of its nearest harmonic under-tones (q.v.) will be heard, *i.e.* the under-octave or the under-twelfth. The compiler of this Dictionary has, however, succeeded in producing still lower under-tones. (*Cf.* also the communications of O. Lessmann in the *Allgem. Mus. Ztg.*, 1886, and H. Schroeder and W. Schell in *Klavier Lehrer*, 1887, and *Musikalisches Wochenblatt*, 1888, on *Klirröne* on the violin.)

Schnarrwerk, a German term for a regal, *i.e.* small organ with reed-stops; also for a single reed-stop of an organ.

Schneegass (Snegassius), Cyriak, b. Oct. 5, 1546, Buschleben (near Gotha), from 1573 until his death (Oct. 23, 1597), pastor at Friedrichroda, Thuringia. He published several theoretical treatises: "Nova et exquisita monochordi dimensio" (1590); "Isagoge musicæ libri II. tam theoricæ quam practicæ" (1591, 2nd ed. 1596); "Deutsche Musica für die Kinder und andre, so nicht sonderlich Latein verstehen" (1592, 2nd ed. 1594). Of his compositions, 15 graduals, a book of psalms, and a book of Christmas and New Year motets have been preserved (1595).

Schneider, (1) Johann, organist (specially celebrated as improviser), b. July 17, 1702, Lauder (near Coburg), pupil of J. S. Bach at Cöthen, 1721 court organist at Saalfeld, 1726-29 chamber musician (violin), Weimar, 1730 organist of St. Nicholas' Church, Leipzig, in which city S. died about 1775.

(2) Georg Abraham, horn-player and composer, b. April 19, 1770, Darmstadt, d. Jan. 19, 1839, Berlin, pupil and son-in-law of Portmann (q.v.), was at first a player in a Hessian regiment, then court musician at Schwerin, Rheinsberg (in the service of Prince Heinrich), and, after the death of the latter, in the royal band, Berlin, in which city, at his own risk, he established subscription concerts. In 1814 S. went to Reval as theatre capellmeister, but already in 1816 returned to his post at Berlin, and in 1820 became capellmeister of the Court Opera, and bandmaster of the regiments of the Guards. S. wrote vaudevilles (*Der Orakelspruch, Aucassin und Nicolette, Die Verschwornen, Der*

Traum, Der Werwolf), many ballets, incidental music to plays, melodramas, entr'actes, oratorios, cantatas, symphonies, overtures, a large number of compositions for wind-instruments (quartet, trios, duets for flute; concertos for flute, oboe, English horn, bassoon, horn, etc.); over a hundred works appeared in print. His son was Louis S. (*see 8*), his daughter, Maschinka Schubert (q.v.). His wife, Caroline (Portmann), was an excellent singer.

(3) Johann Georg Wilhelm, pianist and composer, b. Oct. 5, 1781, Rathenow, d. Oct. 17, 1811, as music teacher at Berlin. He published many works for the pianoforte (variations, fantasias, marches, dances, a fantasia with orchestra), a "Kommersbuch" (1802), a melodrama (*Ilse*), and two yearly series of a "Musikalisches Taschenbuch" (1803, 1805, under the pseudonym "Werder"). After his death there appeared a collection of his songs.

(4) Wilhelm, organist and musical director at Merseburg, b. July 21, 1783, Neudorf (Saxony), d. Oct. 9, 1843, Merseburg. He published: "Was hat der Orgelspieler beim Gottesdienst zu beobachten?" (1823); "Lehrbuch, das Orgelwerk kennen, erhalten, beurteilen und verbessern zu lernen" (1823); "Gesanglehre für Land- und Bürgerschulen" (1825); "Musikalisches Hilfsbuch beim Kirchendienst" (1826); "Ausführliche Beschreibung der Domorgel zu Merseburg" (1829); "Anweisung zu Choralvorspielen" (1829, with 50 preludes); "Choralkenntnis nebst Regeln und Beispielen zu richtigem Vortrag des Altargesangs" (1833); "Musikalische Grammatik oder Handbuch zum Selbststudium musikalischer Theorie" (1834); "Historisch-technische Beschreibung der musikalischen Instrumente" (1834); "Die Orgelregister, deren Entstehung, Namen, Behandlung, Benutzung und Mischung" (1835); and "Musikalischer Führer für diejenigen, welche den Weg zum Schulfach betreten, etc." (1835). (*Cf.* also *Allg. Mus. Ztg.*, 1832 ["Bemerkenswerte Erfindung im Orgelbau"]).

(5) Johann Christian Friedrich, a highly-esteemed teacher, also an able composer and theorist, b. Jan. 3, 1786, Altwaltersdorf (near Zittau), d. Nov. 23, 1853, Dessau. His father, Johann Gottlob S. (b. Aug. 1, 1753, Altwaltersdorf, d. May 3, 1840, as organist at Gersdorf), was first a weaver, but by indefatigable perseverance was enabled to adopt music as a profession. His greatest merit was, however, the training of his sons—Friedrich, Johann, and Gottlieb. Friedrich S. attended the Zittau Gymnasium in 1798, and in 1805, Leipzig University; but for many years he had been a diligent composer, and as early as 1803 had published three pf. sonatas. In 1807 he became organist of St. Paul's, in 1810 capellmeister of the Seconda opera troupe, in 1813 organist of St. Thomas' Church, Leipzig, and in 1817, music director at the town theatre. S. was active and successful here as a

teacher, but displayed still higher ability when he was appointed court capellmeister at Dessau in 1821. He trained the court orchestra in a wonderful manner, formed an excellent church choir from amongst the pupils of the Gymnasium and the Teachers' Seminary, founded a Liedertafel, and brought the Singakademie into high repute. In 1829 he opened a School of Music, which achieved splendid results, and received pupils from near and far, until the establishment of the Leipzig Conservatorium caused its lustre to diminish. S. directed a large number of great musical festivals (Cologne, 1824; Magdeburg, 1825; Nuremberg, 1828; Strassburg, 1830; Halle, 1830 and 1835; Halberstadt, 1830; Potsdam, 1834; Dessau, 1834; Wittenberg, 1835; Cöthen, 1838 and 1846; Coblenz, 1840; Hamburg, 1840; Meissen, 1841; Zerbst, 1844; Lübeck, 1847). Of S.'s works the following oratorios—formerly held in high esteem and repeatedly performed at musical festivals—deserve to be named first:—*Das Weigericht, Die Sündflut, Das verlorne Paradies, Pharaos, Jesus' Geburt, Christus das Kind, Christus der Meister, Gideon, Gethsemane und Golgatha, Absalom* (all published); *Das befreite Jerusalem, Salomonis Tempelbau, Bonifacius, Christus der Erlöser, Die Höllenfahrt des Messias* (not printed); *Totenfeier*. S. also composed 25 cantatas, 5 hymns, 13 psalms, 7 operas, 23 symphonies, many overtures (on "God Save the King," on the Dessau March, etc.), pf. quartets (Op. 24, 34, 36), trios, violin (flute) sonatas, pf. sonatas for two and four hands, and 400 part-songs and 200 songs with pf. accompaniment. A complete edition of his pf. works appeared at Halberstadt. S.'s theoretical works are: "Elementarbuch der Harmonie und Tonsetzkunst" (1820, and frequently; English, 1828); "Vorschule der Musik" (1827); "Handbuch des Organisten" (1829-30, 4 pts.). S., on the occasion of the musical festival at Halle (1830), was created Doctor by the philosophical faculty of the University in that city. F. Kempe wrote his biography: "F. S. als Mensch und Künstler" (1859).

(6) Johann Gottlob, brother of the former, especially esteemed as an organist, b. Oct. 28, 1789, Altgersdorf, d. April 13, 1864, Dresden; he also attended the Zittau Gymnasium, and, owing to his rich voice (extending upwards to *f*), was at first soprano, and afterwards (as tenor) *regens chori*, there. In 1810 he went to Leipzig to study law, but in 1811 succeeded his brother as organist at the University and teacher of singing at the Public Free School; went in 1812 as organist to the Church of St. Peter and Paul at Görlitz, and developed great activity as conductor of the "Verein" in that town. He also made several concert tours as organ virtuoso, playing at Liegnitz, Leipzig, Dresden, etc., became in 1825 organist of the Evangelical Court Church at Dresden, and in 1830 undertook the direction of the Dreyssig

"Singakademie." His reputation as a performer on the organ was ever on the increase, and, among other places, he gave concerts in London in 1833. As a teacher he was esteemed almost as highly as his brother Friedrich; among his pupils are to be mentioned G. Merkel, Berthold (his successor), Jansen (Delft), Nicolai (Hague), van Eyken (Utrecht), etc. As a composer S. was not very productive; his few published compositions (fugues, fantasias, and preludes for organ, songs with organ obbligato) deserve honourable mention.

(7) Johann Gottlieb, brother of both the former, b. July 19, 1797, Altgersdorf, d. Aug. 4, 1856, as organist of the Kreuz Church, Hirschberg; was also an excellent performer on the organ.

(8) Louis, a son of Georg Abraham S. (see above), royal court councillor and lecturer to Friedrich Wilhelm IV. of Prussia, b. April 29, 1805, Berlin, d. Dec. 16, 1878, Potsdam; he was for a long time an esteemed member of the play-house, Berlin, and here deserves special mention as the author of "Geschichte der Oper und des königlichen Opernhauses zu Berlin" (1852, published in a folio *édition de luxe*, and also in octavo).

(9) Johann Julius, related to none of the above, esteemed pianist, organist, and teacher, b. July 6, 1805, Berlin, d. there April 3, 1885; he was the son of Johann S., the pianoforte manufacturer there, received his musical training from A. W. Bach, Türschmidt, and L. Berger (piano), Hausmann (organ), and Klein (composition); in 1829 he became organist and cantor of the Friedrichswerder Church, 1835 (until 1858), teacher of singing at the Municipal Industrial School, 1837 royal musical director, 1839 member of the commission of experts, 1849 member of the Akademie, 1854 teacher of the organ, singing, and composition at the Royal Institute for Church Music, 1869 royal organ inspector, and in 1875 member of the senate of the Akademie. He founded in 1829 a Liedertafel, in 1836 a choral society for mixed voices, in 1852 a liturgical choir at the Friedrichswerder Church, over which he presided with great zeal and much success. He acted, besides, as musical director from 1836 of the Royal York Grand Lodge, and from 1844-1847 conducted a society for classical chamber music at Potsdam. Of his compositions only a few appeared in print; yet S. composed a great number of sacred vocal works (a Te Deum, a Paternoster a 12, a Mass a 6, cantatas, psalms, etc.), also 2 operas, 2 oratorios, 200 quartets for male voices, Freemason songs, several organ pieces, a pf. concerto, chamber music, pf. sonatas, etc.

(10) Karl, tenor singer, b. 1822, Strehlen, d. Jan. 3, 1882, Cologne; at first he studied theology, but afterwards turned to music, and became an opera singer (lyric tenor) at Leipzig, Frankfurt, Wiesbaden, Rotterdam, and in 1872

teacher of singing at the Cologne Conservatorium. S. was for many years the indispensable representative of the difficult rôle of the Evangelist in Bach's St. Matthew Passion.

(11) **Theodor**, the fourth son of Friedrich S., b. May 14, 1827, Dessau, studied under his father, and for 'cello-playing, under Drechsler; in 1845 he became 'cellist in the court orchestra at Dessau, in 1854 cantor and chorus conductor of the castle and the town church there. Since 1859 he has been cantor and musical director of St. James' at Chemnitz (a church which has a paid choir of forty members), also conductor of the "Singakademie," which assists at important church festivals, and of a male choral society which he established in 1870; for a time (1886-89) he conducted the Teachers' Choral Society.

(12) **Karl Ernst**, b. Dec. 29, 1819, Aschersleben, d. Oct. 25, 1893, Dresden; studied theology at Halle in 1840, was teacher at the orphan asylum there, in 1850 director of the High School for girls at Bielefeld, from 1859 teacher at a Dresden institute. He wrote: "Das musikalische Lied in geschichtlicher Entwicklung" (1863-67, in 3 parts); "Zur Periodisierung der Musikgeschichte" (1863), and "Musik, Klavier und Klavierspiel" (1872).

Schnitzger (Schnitker), **Arp**, excellent organ-builder, b. July 2, 1648, Godswarden (Oldenburg), d. about 1720, Neuenfelde; among other organs, he built those of the St. Nicholas, James and Gertrude churches at Hamburg, of Bremen Cathedral, and of the Stephanskirche in that city, of the church of St. John at Magdeburg, the church of St. Nicholas at Berlin, and the church of the Holy Virgin at Frankfort-on-the-Oder.—His son, **Franz Kaspar S.**, rendered him active assistance, but after his father's death withdrew to Zwolle, in Holland, and joined an elder brother who lived there. They built the organs at Zwolle (63 stops) and Alkmar (56 stops). **Franz Kaspar S.** died in 1729.

Schnorr von Carolsfeld, **Ludwig**, important dramatic singer (tenor), son of the well-known painter, b. July 2, 1836, Munich, d. June 21, 1865, Dresden; he received his musical training from J. Otto in that city, and at the Leipzig Conservatorium, and then studied for the stage under Eduard Devrient at Carlsruhe, where he made his *début*, and received an engagement in 1858. In 1860 he went to Dresden as principal dramatic tenor. His early death was owing to a chill which he took on the occasion of his creating the rôle of Tristan at Munich. S. was one of the best interpreters of Wagner, and an especially good Tannhäuser. He married the singer Malwina Garrigues.

Schnyder von Wartensee, **Xaver**, esteemed teacher, b. April 16, 1786, Lucerne, d. Aug. 27, 1868, Frankfort. He sprang from a wealthy family, and was originally intended for some office of importance, but he followed his musical

inclination, and went to Vienna in the hope of receiving lessons from Beethoven; as the latter took no pupils, he put himself under J. Ch. Kienlen. After going through the campaign of 1815, he was for a time teacher of music at the Pestalozzian Institution at Yverdon, and in 1817 settled as teacher of music in Frankfort, where he soon won high esteem. S. wrote principally vocal works, viz. a magic opera, *Fortunat* (1829); an oratorio, *Zeit und Ewigkeit*; cantatas, secular and sacred songs, Swiss songs for male chorus, and 2 symphonies, a pf. sonata, etc. He also contributed critical articles to the Mayence *Caecilia* and to the Leipzig *Allg. Mus. Zeitung*. **B. Widmann** has published his "System der Rhythmik." (Cf. "Lebenserinnerungen von S. v. W. nebst musikalischen Beilagen und einem Gesamtverzeichnis seiner Werke," Zürich, 1888.)

Schober, **Franz von**, the friend of Franz Schubert (q.v.), b. May 17, 1798, Malmö (Sweden), d. Sept. 13, 1883, Dresden, surviving his friend full 55 years. S. lived about 1843 at the Weimar court, in 1856 at Dresden, afterwards at Pesth, Munich, and Graz. His poems appeared in 1842 and 1865.

Schoberlechner, **Franz**, pianist and composer, b. July 21, 1797, Vienna, d. Jan. 7, 1843, Berlin; he studied under Hummel and Förster in Vienna, gave concerts when ten years of age, playing a concerto written for him by Hummel. S. led a restless, exciting life as virtuoso, went first to Italy in 1814, played in several of the great cities, and produced a requiem and an opera at Florence, became maestro to the Duchess of Lucca in 1815, when he produced a second opera. In 1820 he returned to Vienna, but as soon as 1823 went to Petersburg, where he married, in 1824, the singer Sophie dall'Occa (b. 1807, Petersburg, d. 1863, Florence), whose stage career rendered his life still more unsettled. The two divided their life principally between Petersburg, Vienna, and Upper Italy (Bologna, Florence, Milan). In 1831 S. purchased a villa at Florence, to which he afterwards retired. Death overtook him while on a journey through Germany. The published compositions of S. are principally variations, fantasias, rondos, and some sonatas for pf. solo, also some variations with orchestra (Op. 46, 47), and quartets for strings, a pf. trio, a violin (flute) sonata, a rondo for four hands, and an overture.

Schöberlein, **Ludwig**, b. Sept. 6, 1813, Kolmburg (near Ansbach), d. July 8, 1881, Göttingen, Protestant theologian, studied at Munich and Erlangen, became "Stadtvikar" at Munich, in 1841 undermaster at Erlangen University, in 1849 private lecturer there, 1850 occasional professor at Heidelberg, 1855 professor in ordinary at Göttingen, also in 1862 consistorial councillor, and 1878 Abbot at Bursfeld. He published (with Fr. Riegel), besides

theological works: "Schatz des liturgischen Chor- und Gemeindegesangs" (3 vols., 1865-72), a valuable work.

Schobert. (See SCHUBART, 2.)

Schofar, an old Hebrew wind-instrument with cone-shaped mouthpiece, similar to our horn.

Schöffner, Peter (the younger), son of the similarly-named companion of Gutenberg and Faust, was one of the oldest German music-printers. (Cf. OEGLIN.) He printed first (1511) at Mayence (see SCHLICK), afterwards (1530) at Strassburg (see WALTHER), where he entered into partnership with Matthias Apiarius. In 1539, however, he was again printing alone, and appears to have died shortly afterwards. He published, among other things, the collections: "XX. cantunculæ gallicæ 4 voc." (1530); "Motetorum 4 voc. a diversis musicis lib. I." (1535), and "Cantiones 5 voc. selectissimæ" (1539).

Schölcher, Victor, French statesman, b. July 21, 1804, d. Dec. 26, 1893, Paris, member of the Senate, etc., in 1848 Under-Secretary of State on the Marine Board, lived in England during the Second Empire, since at the *coup d'état* (1851) he was in favour of the constitution; he returned to Paris after 1870. S. was an enthusiastic admirer of Handel, and in 1857 wrote "The Life of Handel." He presented his costly collection of works by Handel, and books relating to the composer, also a rich collection of instruments, to the Paris Conservatoire.

Scholtz, (1) Adolf, b. 1823, in a village on the borderland between Upper Silesia and Poland, where his father was Prussian surveyor of the boundary, d. Aug. 13, 1884, Breslau. In his younger days he was a first-rate performer on the trumpet; at first he entered the 11th infantry regiment at Breslau, but soon received an appointment in the theatre orchestra. His pupil, H. Eichborn, wrote an enthusiastic biographical sketch of him in the *Zeitschrift für Instrumentenbau* (1886, No. 35 and following).

(2) Herrmann, refined pianist and composer, b. June 9, 1845, Breslau, where he studied under Brosig, went in 1865 to Leipzig, and in 1867, on Liszt's advice, to Munich, where he received instruction from v. Bülow and Rheinberger at the Royal School of Music; after that he taught for six years at this institution. Since 1875 he has lived at Dresden, where in 1880 he was appointed "kgl. sächsischer Kammervirtuos." Of important works, besides a pf. concerto (manuscript) and a trio in F minor (Op. 51), may be mentioned: sonata Op. 44; five sets of variations, "Stimmungsbilder," Op. 60; Ballade, Op. 66; Passacaglia, Op. 73, and a series of charming lyrical pieces ("Albumblätter," Op. 20; "Mädchenlieder," Op. 37; "Lyrische Blätter, Op. 40). The edition of Chopin's works edited by S. is remarkable for its excellent fingering and careful revision; there should also be mentioned S.'s

excellent arrangements of the middle movements in both Chopin's concertos for pf. solo.

Scholz, Bernhard E., important composer, conductor, and theorist, b. March 30, 1835, Mayence, studied the pianoforte with Ernst Pauer (at that time conductor of the choral societies at Mayence), and theory in 1855 with S. W. Dehn (whose treatise on counterpoint, canon, and fugue left in manuscript was published by S. in 1859 [2nd ed. 1883]). In 1856 he became teacher of theory at the Royal School of Music at Munich, from 1859-65 court theatre capellmeister at Hanover, then lived in Berlin, until in 1871 he was called to Breslau as conductor of the Orchestral Society's Concerts. On April 1, 1883, he succeeded Raff as director of Dr. Hoch's Conservatorium at Frankfurt. When S. left Breslau (cf. BRUCH) he was named Dr. Phil. hon. c. by the University there, and soon afterwards royal Prussian Professor. In spite of violent intrigues, which resulted in the withdrawal of a portion of the older members of the teaching staff, S. quickly succeeded in establishing himself in his new position, and in preparing for the Conservatorium a prosperous future. Since 1884 S. has also been conductor of the Rühl "Gesangverein." S. has published songs, chamber music (quartets for strings, Op. 46 and 57; quintet, Op. 47), symphony in B \flat , Op. 60; "Malinconia" (for orchestra), "Das Siegesfest" (for soli, chorus, and orchestra), "Das Lied von der Glocke" (ditto), overtures (to Goethe's *Iphigenia* and *Im Freien*), a requiem, and produced the operas *Carlo Rosa* (Munich, 1858), *Zigeunische Husaren* (Breslau, 1869), *Morgiane* (Munich, 1870), *Golo* (= *Genoveffa*, Nürnberg, 1875), *Der Trompeter von Säckingen* (Wiesbaden, 1877), and *Die vornehmen Wirte* (Leipzig, 1883).

Schön, Moritz, violinist, b. 1808, Krönau (Moravia), d. April 8, 1885, Breslau, studied under Hubert Ries and Spohr, lived at Breslau as teacher of the violin, with title "Königlicher Musikdirector." S. wrote a number of educational works for the violin: "Praktischer Lehrgang für den Violinunterricht" (12 parts), violin duets (studies), 12 Lessons for Beginners (Op. 26), "Der Opernfreund," "Der Sonntagsgeiger," "Erholungsstunden," etc.

Schondorf, Johannes, b. 1833, Rabel (Mecklenburg), attended the school at Rostock, where he received instruction in music from A. H. Sponholtz, became (1850) private pupil of Th. Kullak and Wüerst at Berlin, was from 1850-54 pupil of the Stern-Kullak Conservatorium, in 1855 conductor of the "Liederkrantz" at Neubrandenburg, afterwards organist of both churches there; since 1864 organist of the "Pfarrkirche" at Güstrow, also teacher of singing at the Cathedral School, and conductor of the Gesangverein. An excellent musician, whose "Vaterländische Gesänge" (Op. 18, 19, 20, for mixed choir; Op. 21 for male chorus)

deserve the warmest commendation; also various compositions for pf., school songs, a "Kaiserhymne," etc.

Schönfeld, Hermann, b. Jan. 31, 1829, Breslau, studied composition with Jul. Seidel, lives at Breslau as royal musical director and cantor of the St. Maria Magdalenenkirche. He has written: 4 church cantatas, motets, psalms for mixed choir, also a symphony, 3 concert overtures, a pf. trio, a violin sonata, all of which have been frequently performed. Organ pieces, collections of school songs, 42 chorales a 4, for school use, have been printed.

Schönstein, Karl, Freiherr von, b. June 26, 1797, Ofen, d. July 16, 1876, Vienna; held office under the Austrian Government, received his pension in 1856 as "k. k. Kämmerer und Ministerialrat." In his younger days he was highly esteemed as a singer, and was one of the first who interpreted Schubert's songs in a masterly manner. The composer dedicated to him the "Müllerlieder."

Schools of Music. (See CONSERVATORIUM.)

Schott, (1) The name of one of the largest music-publishing firms in the world (B. Schott und Söhne, at Mayence), with over 25,000 works amongst which are the later compositions of Beethoven (the 9th symphony, quartet, and Missa Sollemnis), nearly all the operas of Donizetti, Rossini, Auber, Adam, and more recently, Richard Wagner's *Meistersinger*, *Ring des Nibelungen*, and *Parsifal*. The firm was established 1773 by Bernhard S. (d. 1817), and carried on by his sons Andreas (b. 1781, d. 1840) and Johann Josef (b. 1782, d. 1855). As early as the beginning of this century these men established a branch business at Antwerp, which afterwards attained large dimensions. Through the application of lithography to music-printing they occasioned an epoch-making change in the technic, and turned the hard-earned profits to account in founding a London branch (by Adam S.); a further one in Paris soon followed, after the Antwerp firm had been transferred to Brussels. What the fathers began the sons extended. Of these, Franz Philipp (b. 1811, d. May 8, 1874, Milan, while on a journey) managed the business in Mayence, having been active in the concern since 1825, at first jointly with his uncle, Johann Josef, and after the death of the latter in 1855, alone; whilst his younger brother, Peter (d. 1894), busied himself in Brussels and Paris propagating the editions produced at Mayence. The Brussels house (S. frères) has published, *inter alia*, since 1854, the *Guide musical*, an important musical paper (which recently became the property of M. Kufferath [q.v.]). In London, after the death of Adam S., J. B. Wolf managed the firm from 1849-81 (now represented by Carl Volkert). Especial mention must still be made of Franz S. and his wife Betty (*née* v. Braunrasch, an excellent pianist, d. April 5,

1875), who bequeathed to the town of Mayence a fund by means of which a permanent town orchestra is maintained. After the death of these last proprietors, the business passed over to Peter S., Franz v. Landwehr (two nephews of the house), and Dr. L. Strecker, in such a way that the chief establishment in Mayence and the branch in London became the property of the two last-named, while the Brussels and Paris branches passed over to Peter S., son of the founder of the firm. Peter S. latterly further disposed of the branches, whereby, however, the joint relations between the various houses is in no way disturbed.

(2) Anton, a well-known and famous stage and concert singer (tenor) b. 1846, Castle Staufeneck (Swabian Alp); from 1865 artillery officer in a Württemberg regiment. After the campaign of 1871 he became a pupil of Frau Agnes Schebest-Strauss, and at the end of 1871 was engaged at the Munich Court Opera; from 1872-75 he was at the Berlin Court Opera as lyric tenor, then at Schwerin as principal tenor, and afterwards at Hanover, whence he undertook many concert tours. In 1882 he went with Angelo Neumann's "Wagner Company" to Italy. He now holds no appointment, and only sings at concerts.

Schottisch (dance). (See ÉCOSSAISE.)

Shradieck, Henry, excellent violinist, b. April 29, 1846, Hamburg. He was the son of a musician, who also undertook his first training; from 1857-58 he studied under Léonard at Brussels, and from 1859-61 under David at Leipzig. In 1863 S. became leader of the "Privatkonzerte," Bremen, from 1864-68 was teacher at the Moscow Conservatoire, then leader of the Philharmonic concerts at Hamburg, and from 1874-82 leader, jointly with Röntgen, in the Gewandhaus and theatre orchestras at Leipzig; then, but only for a short time, he was teacher at the Conservatorium, until in 1883 he received a call to the Conservatoire at Cincinnati. In 1889 S. again settled in Hamburg, and became leader of the Philharmonic Society, returning, however, to America at the end of 1894. S. has hitherto only published a few educational works for violin: "Tonleiterstudien," "Anleitung zum Studium der Akkorde," "Technische Studien," "25 grosse Studien für Geige allein."

Schramm, Melchior, German contrapuntist, in 1574 member of the band of Count Hohenzollern, in 1595 organist at Münsterberg, afterwards at Offenburg. He published: 2 books of motets a 5-6 (*Cantiones sacrae*, 1572, and *Sacra cantiones*, 1576); 2 books of motets a 5-8 (*Cantiones selectae*, 1606, 1614); and "Neue auserlesene deutsche Gesänge mit 4 Stimmen" (1579).

Schreck, Gustav, b. Sept. 8, 1849, Zeulendorf; he received his first musical instruction from the cantor there (Stolle), attended the Lyceum and the Seminary at Greiz (pupil, for

music, of Dietel and Urban). He was for a time active as teacher and conductor of a choral society, then became a student at the Leipzig Conservatorium (1868-70; Papperitz, Plaidy, Jadassohn). With exception of an interval of three years spent as teacher of music in Finland, he remained always in Leipzig, and became known as a talented composer (choral works: *König Fjalay, Der Falken-Reiner, Begrüssung des Meeres*, an oboe concerto, etc.). He became teacher of theory at the Conservatorium, 1887, and in 1892 succeeded W. Rust as cantor of St. Thomas's School.

Schreiber, Friedrich, b. Sept. 6, 1824, the last proprietor (1872-76; see CRANZ) of the important Vienna publishing firm, which, with each change of proprietor, has changed its name. It was originally founded by Mollo (1801), passed into the hands of Diabelli (1818), then of Spina (1852). The publications of the firm number about 30,000.

Schreierpfeife. (See SCHRYARI.)

Schrems, Joseph, b. Oct. 5, 1815, Warmensteinach (Upper Palatinate), d. Oct. 25, 1872, Ratisbon, son of a teacher. He studied at Amberg, and Ratisbon, was ordained priest in 1838, was for one year pastor at Hahnbach, and in 1839 became Cathedral Capellmeister and inspector of the cathedral prebend, Ratisbon (until 1871). S. was a distinguished conductor, and made himself specially useful by the revival of the older Church music, thus proving himself a worthy associate of Proske and Mettenleiter; the music archives of Ratisbon Cathedral through his exertions have become one of the richest collections of old Church music. The most important of S.'s numerous pupils are M. Haller, G. V. Weber (Mayence), Dr. Fr. Witt, and Fr. Könen. After Proske's death S. continued the publication of "*Musica Divina*."

Schreyer, Johannes, b. June 20, 1856, Posendorf (near Dresden), studied at the Leipzig Conservatorium and the Royal Academy of Arts, Berlin, a highly cultured musician to whom the compiler of this Dictionary is indebted for valuable contributions; since 1881 he has lived in Dresden esteemed as a teacher of music. S. published a selection of Bach's organ compositions with phrase marks.

Schröder, (1) Hermann, b. July 28, 1843, Quedlinburg, pupil of A. Ritter at Magdeburg, in 1873 established a musical institution which he also carried on after his appointment as violin teacher at the Royal Institute for Church Music, 1885. S. composed orchestral and chamber music, also wrote a Violin School and "*Die Kunst des Violinspiels*," etc.

(2) Carl, distinguished cellist and excellent conductor, b. Dec. 18, 1848, Quedlinburg, son of the musical director, Carl S. (b. May 1, 1823, Endorf, Hartz, d. 1889, Berlin, composer of the operas *Pizarro* and *Walburgisnacht*, Berlin, 1847), pupil of Drechsler, Dessau,

and of Fr. Kiel, Berlin. At the age of fourteen he became a member of the court band at Sondershausen. He afterwards formed, together with his three brothers, Hermann, Franz, and Alwin, a travelling quartet party (1871), which was broken up when in 1873 he received an appointment as principal 'cellist in the court band at Brunswick. In 1874 he was called to Leipzig in Hegar's place as solo 'cellist of the Gewandhaus and theatre orchestras, and as teacher at the Conservatorium. In 1881 he went to Sondershausen as court capellmeister in the place of Erdmannsdörffer, founded there a Conservatorium which quickly prospered, and which in 1886 he sold to his successor, Ad. Schultze. After he had been capellmeister for one season of the German Opera at Rotterdam, he was called by Count Hochberg to the Berlin Opera as principal capellmeister, but resigned this post in 1888 in order to become Sucher's successor at Hamburg. In 1890 he returned to Sondershausen under improved terms of engagement as court capellmeister and director of the "Fürstliches Conservatorium." S. has published some works for 'cello (concerto, Op. 32; caprices, Op. 26; 'cello Method, Op. 34 [4 parts], études, etc.), and appeared recently as an opera composer: *Aspasia* (1892) and *Der Asket* (Leipzig, 1893). He has also published catechisms on conducting, on violoncello playing (English translation, 1894, Augener & Co.), and on violin playing (English translation, 1895, Augener & Co.), also arrangements of old masters for 'cello and pf. ("*Classische Violoncell Musik*," "*Vortragsstudien*").

His brother (3) Alwin, b. June 15, 1855, Neuholdensleben, was at first pianist, and studied with his father and his brother Hermann, afterwards with J. B. André at Ballenstedt (where the S. quartet had been engaged), but also violinist, and, as such, pupil for a time of De Ahna at the Berlin Royal High School. He studied theory with W. Tappert, studied the 'cello all by himself, and with such success that in 1875 he was able to enter Liebig's "Konzertorchester" as principal 'cellist. Thence he went in a similar capacity to Fliege, Laube (Hamburg), and in 1880 to the Leipzig Gewandhaus orchestra, first as deputy, then as the definite successor, of his brother Carl, whose place he also took at the Conservatorium as teacher of the 'cello. S. was likewise 'cellist in Petri's quartet party. He is a first-rate master of the instrument to which he so late devoted his attention.

Schröder-Devrient, Wilhelmine, remarkable dramatic singer, b. Dec. 6, 1804, Hamburg, d. Jan. 26, 1860, Coburg. She was the daughter of the baritone singer Friedrich S. and of the famous actress Sophie S., and grew up, so to speak, on the stage. She appeared first in children's parts, and up to her seventeenth year was an actress. Joseph Mozatti at Vienna

undertook to train her as a singer; her mother was engaged there at the Hofburg Theatre (her father died 1818). In 1821 she made her *début* as a vocalist at Vienna in the rôle of Pamina, appeared in the same year at Prague and Dresden, and at once, by her impressive impersonation of Fidelio in 1822, became one of the most notable stage singers of Europe. In 1823 S. was engaged at Dresden, and remained faithful to this stage until 1847, when she withdrew from public life. In the year 1823 she married the actor Karl Devrient, but the marriage was dissolved already in 1828. She married twice afterwards—in 1847 Herr v. Döring (divorced in 1848), and in 1850 Baron v. Bock of Livonia. Owing to the sympathy which she showed towards the May Revolution of 1849, she was forced to quit Dresden, and was also forbidden by the authorities to enter Russian territory; this prohibition was, however, withdrawn. A severe illness confined Madame S. to her bed in 1859, and her sister, Madame Anguste Schlönbach, of Coburg, tended her faithfully until her death. Madame S. was by no means irreproachable as a vocalist; yet the dramatic passion which she threw into her rôles made one forget all technical shortcomings. A. v. Wolzogen wrote her biography (1863).

Schröder-Hanfständgl. (See HANFSTÄNGL.)

Schröter, (1) Leonhard, one of the best German contrapuntists of the 16th century, b. about 1540, Torgau, died at Magdeburg as cantor of the Altstadt school. There have been preserved motets a 4–8, written between the years 1576–87, 55 songs for German Protestants a 4–7 (1562), also a Te Deum (1571, printed 1576, reprinted by Otto Kade in the 5th vol. of Ambros' music history).

(2) Christoph Gottlieb, able organist, renowned theorist and prolific composer, b. Aug. 10, 1699, Hohenstein (in Saxony), d. Nov., 1782, Nordhausen. He went, when young, as chorister to Dresden, became "Ratsdiskantist" and foundation scholar at the Kreuzschule; he afterwards attended Leipzig University as a divinity student, but soon devoted his whole attention to music. It so happened that he was engaged to copy music for Lotti while the latter was in Dresden (1717–19), and this strongly impelled him to composition. From 1720 to 1724 he travelled with a German baron, an amateur musician, through Germany, Holland, and England, and after his return he gave lectures on music at Jena, and in 1726 was called to Minden as organist. From 1732 up to his death he was organist at Nordhausen. The catalogue, drawn up by himself, of his compositions shows a seven years' series of church cantatas, a Passion, *Die sieben Worte* (to a poem of his own), a number of *pièces d'occasion*, also to words written by him, secular cantatas and serenades, concertos, overtures, sonatas, and ensemble works, likewise preludes

and fugues for organ. His theoretical writings are: "Epistola gratulatoria de musica Davidica et Salomonica" (1716); "Deutliche Anweisung zum Generalbass in beständiger Veränderung des uns angeborenen harmonischen Dreiklangs" (1772; an interesting book in which, for the first time, the thought was clearly expressed that only major and minor chords are fundamental harmonies; also that all kinds of chords of the seventh, etc., are only derived from the same by addition and substitution); "Letzte Beschäftigung mit musikalischen Dingen; nebst sechs Temperaturplänen und einer Notentafel" (1782), and a number of polemical and critical articles, for the most part extremely interesting; these articles, in which he attacked Scheibe, Sorge, etc., appeared in Mizler's *Bibliothek* and Marburg's *Kritische Briefe*. The name of S. plays an important part in the history of the Hammerklavier (cf. PIANOFORTE); the "Umständliche Beschreibung eines neu erfundenen Klavierinstruments, auf welchem man in unterschiedenen Graden stark und schwach spielen kann" (1763) is to be found in the second volume of the *Kritische Briefe*.

(3) Corona Elisabeth Wilhelmine, celebrated vocalist, b. Jan. 14, 1751, Guben, d. Aug. 23, 1802, Ilmenau. She first appeared at the age of sixteen at a concert in Leipzig, and from 1778 was engaged at Weimar. She excelled especially in sustained singing. Twenty-five songs composed by her appeared in 1786 in two books.

(4) Johann Samuel, brother of the former, pianist and composer, b. 1750, Warsaw, d. Nov. 2, 1788, London, as pianist to the Prince of Wales and music-master to the Queen. He published in London 15 pf. concertos, 8 pf. trios, 3 pf. quintets, and 6 pf. sonatas.—Another brother of Corona S., Johann Heinrich, b. 1762, Warsaw, was an able violinist. S. went (1782) likewise to London, and, later on, to Paris. He published pieces for two violins and flute, and for violin and 'cello.

Schryari (*Schreierpfeife*), (1) an obsolete wind-instrument, which, however, was never of much importance in connection with art. Sound-holes in the side walls of the same were for the purpose of facilitating overblowing in the octave, likewise double octave. M. Prätorius describes it in the "Syntagma."—(2) A mixture-stop in the organ, the smallest (highest) of all, sharper than the *Acuta*. It has generally only octaves, but also sometimes a fifth, and is, for the most part, of three ranks, as a rule beginning with one foot, i.e. for the note C it gives the sounds $c^2 c^3 c^4$. It is of somewhat narrow dimensions.

Schubart, (1) Christian Friedrich Daniel, the poet, b. April 13, 1739, Sontheim (Swabia), d. Oct. 10, 1791, Stuttgart. He is noted for his ten years' imprisonment at Hohenasperg (1777–87); he was also a musician,

and, indeed, after his imprisonment, theatre poet, manager, and musical director. While in prison he not only wrote about music, but composed, viz. pf. pieces ("Klagegesang," variations), a melodrama, *Evas Klage bei des Messias Tod*; an operetta, *Die glücklichen Reisenden*, etc. His "Musikalische Rhapsodien" (1786) contain, in the first book, a vocal piece, "Päpus und Arria" (poem by Anfossi, translated with additions by S.), a cantata (*Die Henne*), and a pastoral song; in the second book, an article on organ-playing (addressed to Abbé Vogler); in the third book, an epistle to Beecke, a catalogue, a comic song, 10 songs, a menuet, a rondo, some pf. pieces, and a cantata, *Die Macht der Tonkunst*. Of special musical interest is also his "Ideen zu einer Aesthetik der Tonkunst," which his son, Ludwig S., published in 1806, and which contributed materially to the esthetic extravagances which subsequently prevailed in matters relating to music. G. Hauff wrote a biography of S., which, as regards musical matters, was inadequate.

(2) (Schobert), pianist and gifted composer, a relation of the above (his Christian name unknown), b. 1720, Strassburg, d. 1768, Paris, through eating poisonous mushrooms. In character he resembled Daniel S., and led an unruly life. He lost a post which he held as organist as Versailles; on the other hand, in 1760, he became chamber musician to Prince Conti. He published music in Paris, Amsterdam, and London: several pf. sonatas, violin sonatas, trios, quartets, concertos (all for or with pianoforte), and 6 "Symphonies" for piano, violin, and two horns.

Schubert, (1) Joseph, prolific composer, b. 1757, Warnsdorf (Bohemia), d. 1812, as violinist of the court orchestra at Dresden; he composed several operas, and published pf. sonatas, violin sonatas with *basso continuo*, violin duets, a 'cello concerto, etc., and left behind in manuscript an immense number of instrumental works of all kinds.

(2) Johann Friedrich, musical director of various theatrical companies (at Stettin, Glogau, Ballenstedt, etc.), b. Dec. 17, 1770, Rudolstadt, d. Oct., 1811, Cologne; he published a violin concerto, a concertante for oboe and bassoon, violin duets, pf. pieces, etc.; also a "Neue Singschule oder gründliche und vollständige Anweisung zur Singkunst" (1804). He also produced an opera at Stettin.

(3) Ferdinand, elder brother of the famous song composer, b. Oct. 18, 1794, Lichtenthal (near Vienna), d. Feb. 26, 1859, Vienna; already in 1809 he became assistant teacher at the Orphan Asylum, 1820 choirmaster at Altlerchenfeld, 1824 teacher at the Normal School of St. Anna, Vienna, of which he became director in 1851. He published a number of sacred compositions ("Tantum ergo," "Regina coeli," a 4-part German Requiem with organ, part-songs, etc.); a Requiem for his brother Franz, 2

children's operas, and other works remained in manuscript. He inherited the rich artistic treasures left by Franz Schubert.

(4) Franz Peter, one of the most noted composers whom Germany has brought forth, the great master of the *Lied*, but also worthy to be reckoned among the best composers of instrumental music, b. Jan. 31, 1797, Lichtenthal (near Vienna), d. Nov. 19, 1828, Vienna. His father was schoolmaster in the Lichtenthal parish, was twice married, and had no less than nineteen children, of whom nine died in early infancy. The extraordinary musical gifts of the boy were displayed at a very early age, and were first cultivated by the father (violin-playing); a fresh soprano voice and facility in reading music procured for him an entrance into the court chapel at Vienna and to the *Convict* school, also regular instruction in thoroughbass (from Rucziszka, Salieri). His teachers had nothing more to do than to enlighten him as to that which lay, in a state of semi-consciousness, within him as law; already his first compositions excited their just astonishment. When his voice broke (1813) S. left the *Convict*, although a foundation scholarship entitled him to remain longer. It appears that he lacked the inclination for serious study, and preferred, as his father's assistant, to follow the vocation of schoolmaster; and for a period of three years he was teacher of the lowest class of the Lichtenthal parish primary school. Yet he found time to write 8 operas, 4 Masses, and other sacred works, also a great number of songs (among them "Erk König," "Der Wanderer," "An Schwager Kronos," etc.). A truly selfless friend, Franz v. Schöber, enabled S. at length, in 1817, to throw off the fetters of his position, and to devote himself exclusively to music. Schöber frequently shared his rooms with him, and helped him also with money. Through Schöber, S. made the acquaintance of the tenor singer Michael Vogl (q.v.), who became one of the first and one of the best singers of S.'s *Lieder*. Like Mozart, S. was unable, during the even shorter span of life meted out to him, to gain a position providing for his material wants. During the summer months of 1818 and 1824 he went as teacher of music to the family of Count Esterhazy at their country seat at Zélessz in Hungary; for the rest, he only left Vienna a few times for pleasure excursions. He refused the post of organist at the court chapel offered to him in 1822; his endeavours to obtain that of vice-Hofcapellmeister (1825), vacant through the death of Salieri and the promotion of Eybler, were unsuccessful, as it was given to Weigl. S. also tried in vain to obtain the post of capellmeister at the Kärntnerthor theatre (1827). So he was, and remained, content with the honoraria from his compositions, which, unfortunately, he did not understand how to match

with his successes. Only once (1827) did he arrange a concert of his own compositions, and it met with great approval (E♭ trio, a movement from the D minor quartet, songs, etc.). Of S.'s friends there are still to be named the poet Mayrhofer, with whom he lived from 1819–21; Baron v. Schönstein, whose acquaintance he had made through the Esterhazy family (the Baron was the first distinguished singer of S.'s more lyrical songs, especially the "Müllerlieder"); Leopold v. Sonnleithner, through whose suggestion the first Lieder were published; Anselm Hüttenbrenner, M. Schwind, and, in the last years, Franz Lachner. S. did not enter into close relationship with Beethoven, although their dwellings were not far apart; yet Beethoven spoke in terms of high praise of the songs of S., with which he made closer acquaintance during his last illness. S.'s grave, in the Währing cemetery, was only two graves distant from that of Beethoven. The cemetery was closed a few years ago, and the remains of Beethoven and S. were transferred to the new cemetery. S., like Mozart and Mendelssohn, was one of those artistic natures which could not sufficiently revel in the element of beautiful sounds; and for this he has frequently been accused of undue length. His harmonies are most striking; and in all their works Schumann and Liszt show how strongly they were influenced by S. He was the real creator of the modern *Lied*; his importance in the history of music is analogous to that of Goethe as lyricist in the history of poetry. He first understood how to bring into harmony with Goethe the Lied-form based on the architectural structure of the poem—as modelled by Reichardt and Zelter—by filling it with warm feeling, breathing into it real life. His melodies flowed from an inexhaustible source; his songs sprang quickly into existence, without effort; poets could scarcely write down their verses quicker than S. could set them to music. Epoch-making was his transfer of the Lied-form to the pianoforte: his "Moments musicaux" and Impromptus form the starting-point of the miniatures (Mendelssohn's "Songs without Words," Schumann's "Phantasiestücke," etc., down to pieces of a similar kind by Kirchner) since produced in such great number. Without having gone through a serious course of counterpoint (it is said that in 1828 he requested Sechter to give him instruction in the art of fugue), S. was a master of composition; and if he did not devote himself to forms involving imitations of a strict kind, this is as little to be accounted a loss to musical literature as was the similar mode of procedure adopted by Beethoven.

Among S.'s works the pf. sonatas take high rank, especially the highly poetic one in A minor (Op. 42), and the plaintive posthumous one in B♭; of his pieces for four hands, the F minor Fantasia and the "Divertissement à l'Honorable" are of great beauty. From among the

series of his chamber-works the E♭ pf. trio and (posthumous) quartet in D minor stand out prominently. His Symphony in C and the Unfinished in B minor belong to the most remarkable creations in the department of orchestral music next to Beethoven. If the shortness of S.'s life be considered, the number of works written by him is almost incredible. For the stage he wrote operas, operettas, etc.: *Des Teufels Lustschloss* (1814), *Der vierjährige Posten*, *Fernando*, *Claudine von Villabella* (fragment), *Die Freunde von Salamanca*, *Adrast* (fragment), *Der Minnesänger*, *Der Spiegelritter* (with the exception of the last but one, all written in 1815; the greater part lost, none performed), *Sakuntala* (1820, not finished), *Die Zwillingsbrüder* (farce, produced 1820), *Die Zauberharfe* (melodrama, produced 1820; overture afterwards used for *Rosamunde*), *Alfonso und Estrella* (written 1821–22, first produced in 1854 by Liszt at Weimar; rearranged by Fuchs for Vienna, 1880), incidental music to *Rosamunde*, libretto by Helmina von Chézy (produced 1823), *Fierabras* (1823, first produced in 1861 at Vienna), *Die Verschworenen*, or *Der häusliche Krieg* (first produced in 1861), *Der Graf von Gleichen*, *Die Salzbergwerke*, and *Die Bürgschaft* (1827, at Pesth under Lachner); of all these compositions not one has gained lasting importance. Among his church works the most important are: "Miriams Siegesgesang" (soprano solo, chorus, and orchestra), "Gebet" ("Vor der Schlacht," for mixed chorus, soli, and pf.), "Gesang der Geister über den Wassern" (8-part song for male voices, with accompaniment for strings), choruses for male voices with four horns: "Nachtelle" and "Nachtgesang im Walde," "Hymne an den Heiligen Geist" (8-part song for male chorus with orchestra), "Glaube, Hoffnung und Liebe" (mixed chorus and wind-band), "Schlachtgesang" (8-part male chorus), several hymns, cantatas *d'occasion*, etc.; there are, besides, a number of sacred works: 6 Masses (published by Peters in pf. score), "Deutsche Messe," an unfinished oratorio, *Lazarus* (Peters), 92nd Psalm for baritone and mixed chorus; *Tantum ergo* for mixed chorus, orchestra, and organ; 2 *Salve regina*, 2 *Stabat mater*, etc. Of S.'s symphonies, besides those in C and B minor, 6 have been preserved (for the most part youthful works). He also wrote two overtures for orchestra in Italian style. The chamber music works are: 20 stringed quartets (A minor, Op. 29; G, Op. 161; B♭, Op. 168; D minor, etc.); 2 pf. trios (B♭, Op. 99; E♭, Op. 100); and a nocturne for pf. trio (Op. 148), a pf. quintet with double bass (Op. 114, "Forellenquintett," so called from the theme of the song "Die Forelle" being used for the slow movement), a quintet with two 'celli (Op. 163), an octet for strings, horn, bassoon, and clarinet (Op. 166). For pf. and violin: a fantasia (Op. 159), a duet (Op. 162, in A), Rondo brilliant (Op. 70, B minor), and 3 sonatinas (Op. 137); for pf.,

4 hands ♯ marches (Op. 27, 40, 51, 55, 63, 66, 121), variations (Op. 10, 35, 82), polonaises (Op. 61, 75), rondos (Op. 107, 138), andantino and rondo (Op. 84), allegro, (Op. 144), fugue (Op. 152), 2 sonatas (Op. 30, b♭; Op. 140, c), and a Divertissement (Op. 63, in E minor); fantasia, F minor (Op. 103); *Divertissement à l'Hongroise* (Op. 54). For pianoforte, 2 hands: 20 sonatas (A minor, Op. 42; D, Op. 53; G, Op. 78; A, Op. 120; E♭, Op. 122; A minor, Op. 143; B, Op. 147; A minor, Op. 164; the three "grand" posthumous ones in c minor, A and b♭); 2 fantasias (Op. 15, c; Op. 78, e); adagio and rondo (Op. 145); 8 impromptus (Op. 90 and 142); *Moments musicaux* (Op. 94); waltzes, Ländler, Ecossaises, etc. (Op. 9, 18, 33, 49, 50 [*Valses sentimentales*], 67 [*Hommage aux belles Viennoises*], 77 [*Valses nobles*], 91, 127, and some posthumous ones), variations and pieces (posthumous), etc. The rich treasury of songs (457) includes about 100 settings of Goethe, among which "Erlkönig" (Op. 1), "Gretchen am Spinnrade" (Op. 2), "Heidenröslein" (in Op. 3), "Der du von dem Himmel bist" (in Op. 4), "Ueber allen Gipfeln ist Ruh'" (in Op. 96), "Der Fischer," "Erster Verlust," "Der König in Thule" (in Op. 5), the Harper's songs from *Wilhelm Meister* (Op. 12), Mignon's songs (Op. 62), the two "Suleika" songs, "An Schwager Kronos," etc.; of Schiller: "Des Mädchens Klage," "Gruppe aus dem Tartarus," etc.; of Heine: "Am Meer," "Das Fischermädchen," "Der Atlas," "Die Stadt," etc.; of Uhland: "Frühlingsglaube," of Rückert: "Du bist die Ruh'"; of Claudius: "Der Tod und das Mädchen" (used for the theme of the variations in the D minor quartet); all these are precious pearls of song literature. Specially worthy of mention are also the cycles "Die schöne Müllerin" (Op. 25), "Die Winterreise" (Op. 89, the poems of both sets by Wilhelm Müller), songs from Scott's "Lady of the Lake" (Op. 52), "Ossian's Gesänge," "8 geistliche Lieder" (among which the *Pax vobiscum* sung at S.'s funeral), and the "Schwanengesang" (collected shortly after S.'s death from 14 posthumous songs, among which the above-named Heine songs). Nottebohm published a thematic catalogue of S.'s printed works; Grove's "Dictionary" contains a very complete list. S.'s life was written by Kreissle v. Hellborn, first in a sketch (1861), then in detail (1865; English translation by A. D. Coleridge, M.A.), also by Reissmann (1873). A. Nigghi published an attractive sketch of S.'s life (1880). Max Friedländer (q.v.) is preparing a comprehensive biography. A critical edition of the works of S. is issued by Breitkopf u. Härtel.

(5) Franz, violinist, b. July 22, 1808, Dresden, d. there April 12, 1878, son of the musical director of the Italian Opera, afterwards "königlicher Konzertmeister," Franz Anton S. (b. July 20, 1768, Dresden, d. there March 5, 1824), and nephew of the double-bass player in the

Dresden band, Anton S. (d. 1853). S. studied with his father, with A. Rottmeier, and L. Haase, also, at the king's expense, under Lafont in Paris, was vice-leader in 1837, second leader in 1847, and in 1861, as successor to Lipinski, principal leader at Dresden. On the occasion of his jubilee (he entered the orchestra in 1823), he retired from active life (1873). S. published, among other things: violin études (Op. 3), fantasia for violin with orchestra, duet for pf. and violin (Op. 8), and 2 concertante for violin and 'cello (jointly with Kummer).

(6) Maschinka (*née* Schneider), wife of the former, daughter of Georg Abraham Schneider (q.v., 2), excellent coloratura singer, b. Aug. 25, 1815, Reval, d. Sept. 20, 1882, Dresden; studied with her mother and with Bordogni in Paris, made her *début* in London in the German Opera (1832), and, after further study under Bianchi in Milan, was engaged at Dresden, where she married the violinist Franz S. She was a member of the court theatre until 1860, when she received a pension. During her last years S. only appeared as an actress.

(7) Georgine, daughter of the two above-mentioned, b. Oct. 28, 1840, Dresden, d. Dec. 26, 1878, Potsdam. She studied with her mother and with Jenny Lind, and from 1857-59 with Manuel Garcia in London, made a successful *début* Nov. 20, 1859 at Hamburg in *Sonnambula*; she then appeared at Prague, Florence, Berlin, Frankfurt, and was engaged at the Théâtre Lyrique, Paris. In 1865 S. received an engagement at Hanover, and in 1868 at Strelitz, whence she repeatedly paid visits to other theatres, and achieved specially a great triumph in 1875 at a Mozart concert, London.

(8) Louis, violinist, composer, and esteemed teacher of singing, b. Jan. 27, 1828, Dessau, d. Sept. 17, 1884, Dresden, went at the age of seventeen as violinist to Petersburg, but soon moved from there to Königsberg as leader of the orchestra at the town theatre; after giving up this post he remained for some time as teacher of music at Königsberg. In 1862 he went to Dresden, where he was highly esteemed as a teacher of singing. S. published a "Gesangsschule in Liedern," and, besides, some sets of songs, also violin duets (transcriptions from Bach's clavier works), also a violin school. Four of his operettas (*Aus Sibirien*, *Die Rosenmädchen*, *Der Wahrsager*, and *Die beiden Geizigen*) were frequently performed.—His son Johannes, b. Oct. 27, 1859, Königsberg, d. March 4, 1892, Davos, lived in Dresden as a teacher of the pianoforte.

Schuberth, (1) Gottlob, father of the founders of the publishing firm at Leipzig and Hamburg, etc., also of the famous 'cellist Karl S., b. Aug. 11, 1778, Karsdorf. S. lived at Magdeburg as a performer on the oboe and clarinet, and as teacher, in 1833 settled in Hamburg, where he d. Feb. 18, 1846. He published some pf. pieces.

(2) Julius Ferdinand Georg, the eldest son of the former, b. July 14, 1804, Magdeburg, d. June 9, 1875, Leipzig. He was the real founder of the publishing business of the family; he was apprenticed to Heinrichshofen at Magdeburg, and in 1826 established a book and music business, together with a publishing department at Hamburg; in 1832 he opened a branch in Leipzig, and in 1850, one in New York. In 1853 S. handed over the Hamburg business to his brother, Friedrich Wilhelm August (b. Oct. 27, 1817, Magdeburg), who from that time traded under his own name (Fritz S.), while S. attended to the Leipzig and New York branches, which he brought into a state of high prosperity. He also published several musical papers (*Kleine Hamburger Musikzeitung*, 1840-50; *New Yorker Musikzeitung*, from 1867; *Schubert's kleine Musikzeitung*, 1871-72), none of which, however, attained to more than local fame. After his death the business was carried on by his widow, assisted by a nephew—H. A. Ruppel. In 1891 the firm of J. S. & Co. was transferred by purchase to Felix Siegel, founder of the *Musikalische Universalsbibliothek* (son-in-law of Ph. Reclam).

(3) Karl, distinguished 'cellist and composer for his instrument, b. Feb. 25, 1811, Magdeburg, d. July 22, 1863, Zürich. He studied under Hesse in Magdeburg, and Dotzauer in Dessau (1825-28). He was for some time 'cellist at the town theatre, Magdeburg, but (after having given many successful concerts) in 1833 commenced extensive tours for art purposes, his brother Julius, the publisher, providing the necessary funds. S. first went to Hamburg, then along the Rhine, to Holland and Belgium, Paris and London (where in 1835, at a court concert, he proved a successful rival to Knoop and Servais), and finally to Petersburg, where immediately after his first appearance he received brilliant engagements as musical director at the University, conductor of the court band, and musical inspector of the teaching institution in connection with the court theatre. He occupied these posts with distinction for over twenty years. He died while on a tour for the sake of his health. S. wrote and published: 2 cello concertos, a sonata (Op. 42), a number of fantasias, variations, etc., for cello and orchestra, an octet, 3 quintets and 4 quartets for strings.

Schuhiger, Anselm, meritorious investigator in connection with the history of music in the Middle Ages, b. March 5, 1815, Uznach (St. Gallen), d. March 14, 1888, at Einsiedeln Monastery. He was trained at the Benedictine Monastery, Einsiedeln, where, in 1835, he took holy orders. S. published: "Die Sängerschule von St. Gallen" (1858); "Die Pflege des Kirchengesangs und der Kirchenmusik in der deutschen katholischen Schweiz" (1873); "Musikalische Spicilegien" (1876; miscellaneous articles: "Das liturgische Drama des

Mittelalters," "Orgelbau und Orgelspiel im Mittelalter," "Die ausserliturgischen Lieder," "Zur mittelalterlichen Instrumentalmusik"). He was also a contributor to the *Monatshefte f. Musikgeschichte*.

Schuch, Ernst, violinist and conductor, b. Nov. 23, 1847, Graz (Styria), devoted himself first to law, but then turned to music and studied under E. Stoltz, and for a short time under O. Dessoff, and began from 1867 his practical career as musical director at Lobe's Theatre, Breslau, and this he continued afterwards at Würzburg, Graz, and Basle (1871). In 1872 he conducted Pollini's Italian Opera for some time, and was engaged at the Dresden Court Opera, and in 1873 was named court capellmeister; he was afterwards honoured with the title of "Kgl. Hofrat" and general music director. S. married in 1875 the excellent operatic singer Klementine Proska (really Procházka, b. Feb. 12, 1853, Vienna, pupil of the Vienna Conservatorium; in 1873 she received a professional engagement at the court theatre at Dresden as coloratura singer, and there she is held in high esteem).

Schucht, Jean F., b. Nov. 17, 1832, Holzthal-eben (Thuringia), of poor parents, d. March 30, 1894, Leipzig, pupil of Kraushaar, Hauptmann, and Spohr in Cassel, of Schnyder von Wartensee, at Frankfurt; he lived at first as music teacher and writer, Berlin, and from 1868 resided in Leipzig, where he was active as critic of the *Neue Zeitschrift für Musik*. S. published several theoretical works of a popular character: "Wegweiser in der Tonkunst" (1859); "Partiturenkenntnis"; "Kleines Lexikon der Tonkunst"; "Grundriss einer praktischen Harmonielehre" (1876); also biographies of Meyerbeer (1869) and Chopin (1880), besides popular works not relating in any way to music. Of his compositions, pf. pieces and songs have appeared in print.

Schulhoff, Julius, distinguished pianist and favourite composer, b. Aug. 2, 1825, Prague, received instruction in pianoforte playing from Kisch, teacher of music in that city, and for some time from Tedesco, while Tomacek imparted to him a knowledge of theory. At the age of eighteen he appeared for the first time in public at Dresden, then at the Gewandhaus, Leipzig, and went to Paris, where he lived for some years, and became acquainted with Chopin, who encouraged him to appear in public. The great success of his Paris concerts soon made for him a name, and he started on a tour, visiting London, Spain, Russia, etc. He has, however, for many years, given up concert playing. He lived at first at Paris, diligently teaching and composing, but in 1870 went to reside with his aged mother at Dresden. He married there in 1878. He now lives in Berlin, visiting the south at times. S.'s published compositions, all for pianoforte, belong to the

better class of salon music, *i.e.* they combine exterior brilliancy and show with good writing. Besides a grand sonata (F minor) and 12 études, there are, especially, impromptus, caprices, waltzes, mazurkas, etc. The compositions which appeared at Pesth under the name of J. Schulhof were not written by S.

Schultesius, Johann Paul, preacher to the Germano-Dutch community at Livorno, b. Sept. 14, 1748, Feckheim (Coburg), d. 1816, Livorno. From his youth he was devoted to music, and in the latter city received a solid grounding in counterpoint from Cecchi. He published several books of variations, and sonatas for pf. and violin, pf. quartets, variations for pf. trio and pf. quartet, also variations for pf. alone. He was the author of a pamphlet: "Memoria sopra la musica di chiesa" (1810).

Schultheise, Benedikt, organist of the Aegidienkirche, Nürnberg, d. March 1, 1693. He published a collection of clavier pieces: "Mut und Geist ermunternde Klavierlust" (1679, 2 parts).

Schultz, Edwin, concert singer and teacher of singing, b. April 30, 1827, Danzig; he served his apprenticeship to a merchant, and then (1851) devoted himself to the training of his fine baritone voice under Brandstätter at Berlin, where he has since resided as a teacher of singing. Of his publications are to be mentioned: many male quartets (7 gained prizes), songs, duets, and a collection of "Meisterstücke für Pianoforte." In 1880 he received the commission from the Prussian Ministry of War to compile a book of soldiers' songs. S. conducted several choral societies ("Melodia"), also in 1864, 1866, and from 1870-71, with Wieprecht, the "Monstre" Concerts for the benefit of the wounded.

Schultze, (1) Johann, organist at Dannenberg (Brunswick), published: "40 Neue auserlesene schöne Intraden und Gagliarden mit 4 Stimmen" (1612), and "Musikalische Jugendlust" (1627, motets).

(2) Christoph, cantor at Delitzsch. He published "Collegium musicum delicii (I) charitativum" (1647; 10 Bible sentences *a 5*, with continuo, written in madrigal style); "Denarius musicus" (for 1-3 voices, with symphonies and figured bass); and melodies to Benjamin Prätorius' "Jauchzender Libanon" (1659 and 1668).

(3) Adolf, b. Nov. 3, 1853, Schwerin, pupil of Kullak's Akademie, Berlin (1872-75). After the conclusion of his studies, he remained as teacher in the latter institution (for pianoforte playing), and from 1886 to 1890 was successor, also predecessor, of Carl Schröder as court capellmeister and director of Sondershausen Conservatorium; he is now living in Berlin. S. has composed pf. pieces, a pf. concerto, likewise orchestral works which display solid musician-ship.

Schulz, (1) Gottschalk, Hieronymus,

Jakob, Bartholomäus and Michael. (See PRÄTORIUS.)

(2) Johann Abraham Peter, important composer and theorist, b. March 31, 1747, Lüneburg, d. June 10, 1800, Schwedt; at Berlin he was a pupil of Kirmberger, on whose recommendation he became for five years private teacher of music in Poland, was again (1773) in Berlin as a teacher, where he was much sought after; from 1776-78 musical director at the French Theatre, from 1780-87 capellmeister to Prince Heinrich of Prussia at Rheinsberg, from 1787 to 1794 court capellmeister at Copenhagen; but the very weak state of his health, aggravated by terror and excitement, caused by the great conflagration of 1794, forced him to return to Germany. The attempt to seek relief from his chest complaint in a milder climate was frustrated by the elements; on the journey to Lisbon the ship was driven by a storm on to the northern coast, whereupon he first accepted the post of musical director to the Seconda Theatrical Company (1795), and went afterwards to Rheinsberg, and finally to Schwedt. The importance of S. lies in his vocal compositions, especially in song. In folk-song he was indeed epoch-making: there are the "Lieder im Volkston," of which the first part appeared in 1779 as "Gesänge am Klavier," the second in 1782 as "Lieder im Volkston"—both appeared together (under the same title) in an augmented edition in 1785, and a third part in 1790; also "Uzens Iyrische Gedichte religiösen Inhalts" (1784), and "Religiöse Oden und Lieder aus den besten deutschen Dichtern." His pf. works are: 6 pieces (1776); a sonata (1782); "Musikalische Belustigung" (1792); "Musikalische Badinage"; "Musikalischer Luftball." Much esteemed in their day were his stage works: *Klarisse* (Das unbekannte Dienstmädchen, 1775, operetta); choruses and songs to Racine's *Athalie* (printed in 1785); *Minona* (Die Angelsachsen, tragic melodrama, printed in 1786); *Le Barbier de Séville* (Rheinsberg, 1786); *Aline, Königin von Golkonda* (opera, printed in 1789); *La fée Urgèle* (operetta; also in German as *Was den Damen gefällt*); music to *Götz von Berlichingen*, *The Entry* (Integed, Danish), *The Harvest Festival* (Høstgildet, Danish opera), *The Sacrifice of the Nymphs* (Danish); besides these should be named his oratorios: *Johannes und Marie* (score printed in the tablature notation described below; but also in vocal score), and *Christi Tod*, a Passion cantata (1789), *Te Deum* (manuscript), *Hymne an Gott* (printed in 1793), *Lobgesang zur Feier des Geburtstags des Königs* (1793); also 4 *Lieder* for pf., "Rundgesang" for 2 sopranos, tenor and bass, "Chansons italiennes" (1782), and some Danish songs not printed. Gerber says (1792): "Unter den jetzt lebenden Meistern erster Grösse sind meine Götzen S. und Haydn" ("Among the now living masters of the first rank my idols are S. and Haydn"). As regards S.'s activity as a writer, it is

important to mention that he contributed the musical articles from S to Z to Sulzer's "Theorie der schönen Künste" (among which the oft-copied article on "Vortrag" [Rendering]); and, according to his (S.'s) statement, he wrote Kirnberger's "Wahre Grundsätze zum Gebrauch der Harmonie" (1773). He wrote besides: "Entwurf einer neuen und leichtverständlichen Musiktabulatur deren man sich in Ermangelung der Notentypen in kritischen und theoretischen Schriften bedienen kann" (1786, merely the old organ tablature), and "Gedanken über den Einfluss der Musik auf die Bildung eines Volks" (1790).

(3) Johann Philipp Christian, composer and conductor, b. Sept. 1, 1773, Langensalza, Thuringia, d. Jan. 30, 1827, Leipzig; he attended St. Thomas's School and the University at Leipzig, but turned his attention to music, and became a pupil of Engler and Schicht. From 1800 he conducted the opera performances of the Seconda Company at Leipzig, for which he wrote incidental music of all kinds (marches, ballets, overtures, choruses); in 1810 he became conductor of the Gewandhaus Concerts, and carried them on up to his death. There appeared in print: overtures to *Faust* and *Jungfrau von Orléans*, dances introduced into *Faust* (arranged for pf.), marches, etc., a *Salvum fac regem* (a 4, with brass instruments), and a number of songs for one and more voices, with pf. accompaniment.

(4) Karl, teacher at the training-college of Neuenzelle, afterwards co-rector at Fürstenwalde. He published: "Leitfaden bei der Gesanglehre nach der Elementarmethode" (1812, and frequently), and a "Schulgesangbuch" (1816, and frequently).

(5) Otto Karl Friedrich Wilhelm, b. March 25, 1805, Gortz, pupil of Klein and Zelter at Berlin, organist at Prenzlau, royal musical director. He published: "Theoretisch-praktische Gesangsschule" (for schools, 1831), and "Darstellung einer leichten Methode des Pianoforte" (1839), and also composed sacred and secular vocal works of all kinds, and pf. pieces.

(6) Adolf, composer, b. July 7, 1817, Berlin, d. there March 16, 1884, pupil of Böhmer and Neithardt, in 1846 violinist in the Berlin court Opera orchestra, composed music to Euripides' *Hippolytos*, a symphony, etc. A pf. sonata appeared in print.

(7) Ferdinand, singer and composer of songs for male voices, b. Oct. 21, 1821, Kossar (near Krossen), pupil of A. W. Bach, Grell, Killitschgy, and Dehn at Berlin; entered the Berlin Cathedral choir in 1843, in 1856 directed the Cecilian Society, and in 1858 became musical director at St. Mark's. From that time he developed great activity as a teacher of singing, and composed numerous quartets for male voices, but also motets for equal voices, the 68th Psalm for double chorus, and other sacred works, songs, and many pf. pieces.

(8) August, violinist and composer of songs for male voices, b. June 15, 1837, Brunswick, pupil of Zinkeisen, Leibrock, and Meves, was also placed by the managers of the Brunswick Court Theatre under Joachim in Hanover. S. was for some time leader at Detmold, but returned to Brunswick, where he is leader and symphony director of the ducal orchestra. His quartets for male voices are favourites.

(9) Heinrich (S.-Beuthen), composer, b. June 19, 1838, Beuthen (Upper Silesia), devoted himself, by the wish of his parents, to mining, but at an early age wrote orchestral and pf. works, songs, etc.; and by the success of an operetta (*Friedolin*, 1862), for an acadeimical festival, he was induced to devote himself entirely to music, attended the Leipzig Conservatorium, and in addition studied privately under Riedel (Psalm 29 for three choirs and organ). In 1867 S. settled at Zürich, where he attained a distinguished position as composer and teacher; he wrote (*inter alia*) five symphonies, and had the opera *Aschenbrödel* performed (1879). A severe nervous complaint then put a stop to his activity as a composer for a long time. In 1881 he took up his residence in Dresden. S. belongs to the most noteworthy composers of the present time, his tendency being modern (programme music). There should be mentioned: 6 symphonies (1, in memoriam, Haydn; 2, "Frühlingsfeier"; 3, 27; 4, "Schön Elizabeth"; 5, "Reformations-Symphonie," with organ; 6, "König Lear"); symphonic poem, *Die Toteninsel*; overtures: "Kriemhildens Leid u. Rache," "Bacchantenzug des Dionysos," "Pan und die Waldnymphen"; also for orchestra: "Ballfestepisoden," "Mittelalterliche Volksszene," "Am Rabenstein," "Indianischer Kriegstanz"; a comic opera, *Es ist nicht gut, dass der Mensch allein sei*; Psalm 13 a *capella*, Psalm 125 (soli, chorus, and orchestra), Psalms 42 and 43 (ditto, printed); "Befreiungsgesang der Verbannten Israels" (ditto, printed), "Harald" (baritone, male chorus and orchestra), Requiem (soli, chorus, and orchestra); besides many pf. pieces (symphonic pf. concerto, "Heroische Sonate," printed; "Alhambra Sonate," "Ungarisches Ständchen," "Stimmungsbild"), songs, part songs for male voices, melodies, etc.

(10) Karl (S.-Schwerin), pianist and composer, b. Jan. 3, 1845, Schwerin; he was trained from 1862-65 at the Stern Conservatorium under Bülow, Willmers, Stern, Geyer, Weitzmann, etc., and has made many successful concert tours. S. received the title of court pianist to the Grand Duke of Mecklenburg, lived for several years as a pianoforte teacher at the Stettin Conservatorium, then became conductor of the Stargard Musical Society, and in 1885 settled in Berlin. Of his compositions may be named: a symphony (in D minor), 3 overtures (*Tasso*, *Brant von Messina*, and *Ouverture triomphale*), some sacred vocal works (Sanctus, Osanna, Benedictus, Ave Maria), pf. pieces, orchestral

transcriptions of some pf. compositions (among others of the "Rondo capriccioso" by Mendelssohn), etc.

Schulze, (1) Johann Friedrich, distinguished organ-builder, founded the firm S. und Sohn in Paulinzelle (Thuringia), b. Jan. 27, 1793, Milbitz (Thuringia), d. Jan. 9, 1858, Paulinzelle, son of an organ-builder. He established himself at first in Mühlhausen (Thuringia), but afterwards transferred the business to Paulinzelle. Among his most important works must be reckoned the rebuilding (1851-54) of the organ of the Marienkirche at Lübeck, built in 1518 by Berthold Hering, which has 81 stops, 4 manuals, and double pedal; also the building of the new organ at the Marienkirche and St. Blasienkirche at Mühlhausen, etc.

(2) Adolf, excellent singer and teacher of singing, b. April 13, 1835, Mannheim (near Möln), was at first a schoolmaster, had his voice trained under Garcia in London, and lived as teacher of singing at Hamburg until he was appointed principal professor of singing at the royal Hochschule, Berlin.

Schumann, (1) Robert, one of the most poetic natures which musical history has to offer, and one in whose works romanticism put forth its richest blossoms, b. June 8, 1810, Zwickau (Saxony), d. July 29, 1856, Enderich (near Bonn). His father, a bookseller, favoured his son's musical disposition, and wrote, indeed, to C. M. von Weber with the intention of placing the boy under him. Weber, it is said, was favourably disposed, but nothing came of the matter, and S., in conformity with his mother's wish (his father died in 1826), attended the Gymnasium at Zwickau, also the University of Leipzig as *Studiosus juris* in 1828. His gifts and tastes here received new nourishment, while regular pianoforte instruction from Friedrich Wieck led him more and more towards art. After he had spent, in addition, a merry year at Heidelberg (the "Triennium" had passed without S. troubling himself much about jurisprudence), he obtained his mother's permission to devote himself entirely to music, and returned in the autumn of 1830 to Leipzig to study music seriously under Wieck (with whom he lived), also under Heinrich Dorn. S. was on the road to becoming an excellent pianist, but ruined the second finger of his right hand by a foolish experiment made for the purpose of obtaining, by quick means, complete independence of the fingers (he suspended the third finger in a sling, and only practised with the other four). The sad result was the forced abandonment of the career of a virtuoso; this, however, turned out for the good of art, for S. now devoted himself exclusively to composition. In 1834 he founded, jointly with J. Knorr, Ludwig Schunke, and his teacher Friedrich Wieck, the *Neue Zeitschrift für Musik*, intended as an organ of musical progress, both to free

art from the fetters of antiquated rules and to oppose weak, shallow works of Italian opera composers and of French and German pianoforte composers (Czerny, Herz, Hünten, etc.). S. thus became the leader of a party, and the striking individuality displayed in his first published pianoforte works was confirmed and intensified by conscious tendency. From 1835-44 S. was sole editor of the paper, and wrote for it a great number of highly-attractive articles, in one of the first of which Chopin's genius was recognised. At a later period (from Düsseldorf) he drew attention, in a similar manner, to the rising star of Brahms. S. wrote criticisms in a manner (which unfortunately has gone quite out of vogue) calculated to produce a stirring and fruitful effect. S.'s compositions (from Op. 1-23 exclusively for the pianoforte) were only recognised at first by a small circle; the difficulties of reading and of technique were too great for them to meet with general approval. S.'s fondness for the gifted young pianist, Clara Wieck, the daughter of his teacher, developed gradually as she ripened into girlhood. Already, in 1837, S. begged for her hand, but the prudent father, perceiving the young man's future existence by no means assured, refused his offer. The attempt, in 1838, to improve his pecuniary circumstances by transferring the *Neue Zeitschrift für Musik* to Vienna, failed, and S. returned to Leipzig in 1839. In 1840 the degree of Dr. Phil. was bestowed on him by the University of Jena, and, in the same year, in spite of the father's opposition, he married the loved one of his heart. Love awakened in S. a desire to write songs, and he now wrote many sets in quick succession, in which lie hidden the finest pearls of musical lyrics. He gradually attempted larger forms, wrote his first symphony in 1841, and soon afterwards his quintet and quartet, and his first and finest choral work (*Paradise and the Peri*). A new turning-point in his life was brought about by Mendelssohn's establishment of the Leipzig Conservatorium (1843). S. was appointed teacher of playing from score; it was he who introduced the pedal piano into the institution as a preparation to organ-playing (the Conservatorium existed for ten years without an organ). S., naturally, had known Mendelssohn for a long time, and was one of his warm admirers, as may be seen by many passages of his writings and letters; unfortunately, Mendelssohn appears not to have understood S.'s art tendencies, for one seeks in vain in his letters for any recognition of them. S. did not remain long at the Conservatorium; it is difficult to believe that he resigned his post by reason of a wish to settle in Dresden; the very reverse would seem to be probable, as there was no guarantee of a settled means of livelihood when he changed his place of residence (1844). Before he moved (beginning of 1844) he made a concert

tour to Russia in company with his wife. S. lived in Dresden, composing diligently, and giving some private lessons. In 1847 he undertook the direction of the Liedertafel, and in 1848 established the Choral Society. In 1850 he was called to Düsseldorf as town musical director, as successor to Ferdinand Hiller, who went to Cologne. Unfortunately, a disease of the brain, signs of which had already manifested themselves in 1833, and which had become threatening in 1845, became more intense. In its early stages it took the form of fear for his life (he was afraid to live above the ground floor lest in a moment of melancholy he might throw himself out of the window). Later on, however, his mental powers became actually enfeebled so that he could no longer bear to hear music performed in quick *tempo*, and hence declared that the metronome marks to his own earlier works were wrong. Under such circumstances his post as conductor soon became untenable, and after Tausch had assisted him for a certain length of time, it became necessary, in the autumn of 1853, to remove him from his post. But his insanity declared itself in a decided manner on Feb. 6, 1854, when S. suddenly left the room, in which several friends were assembled, and threw himself into the Rhine. He was indeed saved, but with his intellect so disordered, that he had to be taken to Dr. Richartz's asylum at Endenich, where for two long years he led a sad life only rarely lit up by moments of lucidity. A worthy monument of the now so universally-honoured master, executed by Professor Donndorf, of Stuttgart, was placed over his grave in the Bonn churchyard, and unveiled on May 2, 1880. S.'s works offer the rare example of the blending together of the most fiery passion, the most inward feeling, the tenderest conception, with structure most carefully shaped down to the smallest detail. In pianoforte writing he has created quite a new branch of musical literature, or, rather, developed it to an undreamt-of state of perfection; as, for instance, in the miniature work of the small characteristic pieces, which is not fully displayed in Schubert, or even in Mendelssohn, although Schubert in some of his shorter pieces comes very near to S. In this department it is correct to speak of a S. school. In his innermost nature S. is lyrical, his characteristic feature a rare fullness of *nuances*; his thoughts are mostly highly concentrated and not suitable for long development, and are, therefore, most effective within narrow compass. His deep feeling reveals itself in all its fullness in his songs, in which he proves himself the equal of Schubert, and even at times appeals with greater power to one's soul. His greater works often betray the fact that smaller forms were his special province. The development sections, especially of his symphonies, appear somewhat abrupt; they lack the Beethoven nobility and breadth; though, on the other

hand, the G minor pf. sonata (Fétis' unfavourable verdict notwithstanding) is a work of almost unexampled *verve* and passion. It is as impossible to speak of a real development in S. as it is in the case of Chopin. With his Papillons and Paganini études S. burst on the world a finished artist; his transition to ensemble, choral, and orchestral works was only a transference of his style of writing to these particular forms of art. His last works show traces of decline both in imagination and strength of artistic formation.

S.'s compositions are: A. Orchestral works: 4 symphonies (E♭, Op. 38; C, Op. 61; E♭, Op. 97; D minor, Op. 120); Overture, Scherzo, and Finale (Op. 52); four concert overtures (*Brant von Messina*, Op. 100; *Festouvertüre*, Op. 123; *Julius Cæsar*, Op. 128; *Hermann und Dorothea*, Op. 136; there are, besides, the important works, *Genoveva*, *Manfred*, *Faust*); fantasia for violin and orchestra (Op. 131); concerto for 'cello and orchestra (Op. 129); Concertstück for four horns (Op. 86; most effective but difficult); concerto for pf. (Op. 54, the finest written since Beethoven); Concertstück for pf. and orchestra, Op. 92 (Introduction and Allegro appassionato); Concert-Allegro, with introduction, for pf. and orchestra, D minor, Op. 134.

B. Vocal works, with orchestra: *Paradise and the Peri* (Op. 50); "Adventlied" (Op. 71, for soprano, chorus, and orchestra); opera, *Genoveva*, Op. 81 (given in 1848 with moderate success at Leipzig; lately revived with great success); "A parting song" (Op. 84, chorus with wood-wind or pf.); "Requiem für Mignon" (Op. 98b); "Nachtlied," for chorus and orchestra (Op. 108); "The Pilgrimage of the Rose" (Op. 112, a fellow piece to Op. 50); music to Byron's "Manfred" (Op. 115); "Der Königssohn" (Op. 116, ballad for soli, chorus, and orchestra); "Des Sängers Fluch" (Op. 139, ditto); "Vom Pagen und der Königstochter" (Op. 140, four ballads, ditto); "Das Glück von Edenhall" (Op. 143, ballad, ditto); "New Year's song" (Op. 144, chorus and orchestra); *Missa sacra*, with orchestra (Op. 147); scenes from *Faust* (a work which, in certain moments, attains to the grandeur of Goethe's conception).

C. Choruses *a capella*; 5 songs for mixed chorus (Op. 55); 4 songs, ditto (Op. 59); "Romanzen und Balladen" (4 sets, Op. 67, 75, 145, 146); 4 songs for double chorus (Op. 141); 6 four-part songs for men's voices (Op. 33); 3 songs, ditto (Op. 62); "Ritornelle" in canon form, ditto (Op. 65); "Verzweifelte nicht im Schmerzenssthal" (Op. 93, for men's double chorus, organ accompaniment *ad lib.*; 5 songs from Lanhe's "Jagdbrevier," for 4-part male chorus, with an *ad lib.* accompaniment for 4 horns (Op. 137); "Romanzen," for female voices, with pf. *ad lib.* (2 sets, Op. 69, 91).

D. Songs with piano: 3 poems by Geibel for mixed chorus (Op. 29); 3 songs for three

female voices (Op. 114); "Spanisches Liederspiel," for one or several voices (Op. 74); "Spanische Liebeslieder," ditto, with four-hand pf. accompaniment (Op. 138); "Minnespiel," from Rückert's "Liebesfrühling," for one or several voices (Op. 101); patriotic songs for one voice and chorus (without Op. No.); 4 duets for soprano and tenor (Op. 34); 3 songs for two voices (Op. 43); 4 duets for soprano and tenor (Op. 78); "Mädchenlieder," for two female voices (Op. 103); "Belsazar" (Op. 57, ballad for low voice); "Der Handschuh" (Op. 87, ballad); "Schön Hedwig" (Op. 106, ditto); "Zwei Balladen," for declamation with pf. (Op. 122); "Liederkreis" (Op. 24, cycle of songs, words by Heine, see Op. 39); "Myrten" (Op. 25); "Lieder und Gesänge" (5 sets: Op. 27, 51, 77, 96, 127); 3 poems by Geibel (Op. 30); 3 songs (Op. 31); 12 poems by Justinus Kerner (Op. 35); 6 poems by Rückert (Op. 36); 12 poems by Rückert, composed by Robert and Clara S. (Op. 37) (see CLARA S.); "Liederkreis" (Op. 39, 12 poems by Eichendorff, see Op. 24); 5 songs for a low voice (Op. 40); "Frauenliebe und Leben" (Op. 42); "Dichterliebe" (Op. 48); "Romanzen und Balladen," for one voice (4 sets: Op. 45, 49, 53, 64); "Liederalbum" for the young (Op. 79); 3 songs (Op. 83); 6 songs by W. v. d. Neun (Op. 89); 6 poems by Lenau, and Requiem (Op. 90); 3 songs from Byron's "Hebrew melodies" (Op. 95, with harp or pf. accompaniment); songs of Mignon, the harper, and Philina, from Goethe's "Wilhelm Meister" (Op. 98a, see above); 7 songs (Op. 104); 6 songs (Op. 107); 4 "Husarenlieder" (Op. 117, baritone); 3 "Waldlieder" of Pfarrius (Op. 119); "5 heitere Gesänge" (Op. 125); "Gedichte der Königin Maria Stuart" (Op. 135); 4 songs, (Op. 142).

E. Chamber music: 3 quartets for strings (Op. 41, A minor, F, A); pf. quintet (Op. 44); pf. quartet (Op. 47); 3 pf. trios (b minor, Op. 63; F, Op. 80; G minor, Op. 110); Phantasiestücke for pf., violin, and cello (Op. 88); "Märchenerzählungen," for pf., clarinet (violin) and tenor (Op. 132); Adagio and Allegro for pf. and horn (or violin and cello, Op. 70); "Fantasiestücke," for pf. and clarinet (or violin or cello, Op. 73); 2 violin sonatas (A minor, Op. 105; D minor, Op. 121); "Märchenbilder" for pf. and viola or violin (Op. 113, arranged for orchestra by Erdmannsdorff); 3 Romances for pf. and oboe, clarinet or violin (Op. 94); 5 "Stücke im Volkston" for pf. and cello or violin (Op. 102).

F. Organ and piano music: 6 fugues on the name "BACH," for organ or pedal piano (Op. 60); Andante and Variations for 2 pianos (Op. 46); "Bilder aus Osten" (Op. 66, after Rückert's "Makamen des Hariri," four hands; arranged for orchestra by Reinecke); "12 vierhändige Clavierstücke für kleine und grosse Kinder" (Op. 85); "9 charak-

teristische Tonstücke" (Ballscenen, Op. 109, four hands); "Kinderball" (Op. 130, four hands); for two hands: Variations on the name "ABEGG" (Op. 1); "Papillons" (Op. 2); "Studies after Paganini's caprices" (Op. 3); "Intermezzi" (Op. 4); "Impromptu on a theme by Clara Wieck" (Op. 5); "Die Davidsbündler" (Op. 6); "Toccata" (Op. 7); "Allegro" (Op. 8); "Carnaval" (Op. 9, pieces on "ASCH"); 6 studies after Paganini's caprices (Op. 10); Sonata in F# minor (Op. 11); Fantasiestücke (Op. 12); Studies in the form of variations ("Études symphoniques," Op. 13); Sonata in F minor, "Concert sans orchestre" (Op. 14); "Kinderscenen" (Op. 15); "Kreisleriana" (Op. 16); Fantasie (Op. 17); "Arabeske" (Op. 18); "Blumenstück" (Op. 19); "Humoreske" (Op. 20); "Novelletten" (Op. 21); Sonata in G minor (Op. 22); "Nachtstücke" (Op. 23); "Faschingsschwank aus Wien" (Op. 26); 3 Romances (Op. 28); Scherzo, Gigue, Romance, and Fughetta (Op. 32); Studies for the pedal pf. (Op. 56, in canon form); Sketches for pedal pianoforte (Op. 58); Album for the Young (Op. 68, two parts); 4 fugues (Op. 72); 4 Marches (Op. 76); "Waldscenen" (Op. 82); "Bunte Blätter" (Op. 99); 3 Fantasiestücke (Op. 111); 3 pf. Sonatas for the Young (Op. 118); "Albumblätter" (Op. 124); 7 pieces in fughetta form (Op. 126); "Gesänge in der Frühe" (Op. 133); and a canon on "An Alexis."—The firm of Breitkopf und Härtel has issued a complete edition of S.'s works (under the auspices of Clara S.).—The "Davidsbündler," which play an important rôle both in S.'s pianoforte works and in his writings, are in fact the composer himself and his friends of like feeling: the founders, in fact, of the *Neue Zeitschrift für Musik*. After the manner of Plato, S. was fond of expressing judgment on a work from various points of view and various moods, in dialogue form; and then these were represented by the enthusiastic, stormy Florestan, the gentle Eusebius, and the reflective Meister Raro. The letters Abegg and Asch (the latter at the same time contains also the musical letters in S.'s name) betray the name and birthplace of a youthful flame of S.'s. Of great influence on his forms were the poems of Jean Paul (Arabeske, Blumenstück, etc.) and E. T. A. Hoffmann (Phantasiestücke, Kreisleriana, Nachtstücke). The articles written by S. for the *Neue Zeitschrift für Musik* were published separately as "Gesammelte Schriften über Musik und Musiker" (1854, 4 vols.; 3rd edition, 1875, 2 vols.; 4th edition, 1891, revised by G. Jansen; also in English, by F. Raymond Ritter). Clara S. published "Robert Schumann's Jugendbriefe" (1885); Fr. G. Jansen, "R. S.'s Briefe; nene Folge" (1886). J. v. Wasielewski wrote a biography of S. (1858, 3rd edition, 1880); also H. Reimann (1887), A. Reissmann (3rd edition, 1879), and H. Erler ("R. S.'s Leben aus seinen Briefen,"

2 vols., 1887). Of monographs on S. there are yet to mention: "R. S. und seine Faust-Szenen" (1879), by S. Bagge; "Ueber Schumann's Manfred" (1880), by P. Graf Waldersee, both in the last edition of "Sammlung Musikalischer Vorträge"; F. G. Jansen's "Die Davidsbündler" (1883); J. v. Wasielewski's "Schumanniana" (1884, with rectification of errors in last-named pamphlet); and "Robert Schumann's Klaviertonpoesie," by B. Vogel (1887).

(2) Clara Josephine, first known under her maiden name, Clara Wieck, one of the most excellent of lady pianists of modern times, b. Sept. 13, 1819, Leipzig. Mme. S. was the daughter of Friedrich Wieck (q.v.), and under his training became an accomplished performer. At the early age of ten she made her appearance in public, and three years later undertook important concert tours; yet, undeniably, the gifted intelligence of her husband developed and ripened her artistic gifts. The epoch of her lasting success—the establishment of a great name distinguishing her from the crowd of pianoforte players—first dates from the time of her betrothal with S. (1837); though at Berlin, Vienna, Paris she had already attracted considerable notice before she became his wife (1840). She excelled at first as an interpreter of Beethoven's works, which even now she plays in a model manner; but later on she added to her *répertoire*, especially Chopin and her husband's compositions; and of the latter she is, naturally, the interpreter *par excellence*. After the death of S., whom she tended to the last, she lived for some years with her children in Berlin, at the house of her mother (who had been divorced from Fr. Wieck and married the teacher of music, Bargiel; and Woldemar Bargiel was the issue of that union), but in 1863 she settled in Wiesbaden. Mme. S. was forced to resume the career of a public player in order to support her family. From 1878-92 she was active as teacher of the pianoforte at the Hoch Conservatorium at Frankfurt. Mme. S. is not only a distinguished pianist, but well schooled in the art of composition, and she has published a number of creditable works, among which the following: songs (Op. 12 [12 poems by Rückert, set to music by Robert and Clara S.; Nos. 2, 4, 11 by the latter], Op. 13 and Op. 23); a pf. concerto (Op. 7); a trio (Op. 17); 3 violin romances (Op. 22), preludes and fugues (Op. 16); variations on a theme by Robert S. (Op. 20). She also revised the complete edition of the works of Schumann (Breitkopf und Härtel), published the finger exercises from Czerny's Piano School (Op. 500), etc., and S.'s early letters (see *above*; translated into English by M. Herbert), etc.

(3) Georg Alfred, b. Oct. 25, 1866, Königstein-i.-S., studied at Leipzig Conservatorium; since 1891 musical director at Danzig, a gifted composer: "Amor und Psyche," for soli, chorus, and orchestra; symphony in B

minor (gained a prize); pf. quartet, trio, pf. concert pieces, pf. pieces, songs, etc.

Schunke, (1) Karl, b. 1801, Magdeburg, studied with his father, the horn-player, Michael S. (1780-1821, a brother of Gottfried S.), and Ries, with whom he went to London. In 1828 he settled in Paris, and met with great success as a concert-player and teacher; he was appointed court pianist to the queen, etc. Bereft of speech through an attack of apoplexy, he threw himself from a window, Dec. 16, 1839. Besides many shallow pieces *à la mode*, he published some good pf. works.

(2) Ludwig, the intimate friend of R. Schumann, b. Dec. 21, 1810, Cassel, cousin of the former; he studied under his father, the highly-esteemed horn-player, Gottfried S. (1777 to 1840), also under Kalkbrenner and Reicha in Paris, appeared with success in that city, and at Vienna, etc., and settled in 1833 in Leipzig, where he became one of the founders of the *Neue Zeitschrift für Musik*. Death broke the bonds of friendship only too quickly, for S. died Dec. 7, 1834. The few compositions of the artist so soon called away, display sound talent (a pf. sonata, variations on Schubert's "Valse funèbre," caprices, a divertissement, a rondo, etc.).

Schuppanzigh, Ignaz, violinist, b. 1776, Vienna, d. there March 2, 1830; he was the noted leader of the quartet party (S., Mayseder, Linke, Weiss) which first interpreted the Beethoven quartets, and also gave excellent performances of those of Haydn and Mozart. This quartet party was maintained for a time by Count Rasumowski (q.v.), but they afterwards kept together and gave concerts in Germany and Russia. In his younger days S. conducted the "Augarten" concerts, in 1824 he became a member of the court orchestra, and in 1828 undertook the post of musical director of the German Opera. Of his compositions, a violin solo with accompaniment of strings, and two sets of variations appeared in print.

Schuppert, Karl, composer of songs for male voices, b. July 29, 1823, Cassel; d. Dec. 6, 1865, as court organist there ("Das deutsche Schwert").

Schürer, Johann Georg, was appointed in 1748 court composer at Dresden, where he d. Feb. 16, 1786. He was an extremely prolific composer, as is shown by the enormous number of manuscripts preserved at Dresden, consisting especially of sacred works (40 Masses, 3 requiems, 140 psalms, etc.); also oratorios, 4 Italian operas: *Asvra* (1746), *Galatea* (1746), *Ercole* (1747), and *Calandro* (1748), likewise a German operetta, *Doris* (1747).

Schurig, Volkmar Julius Wilhelm, b. March 24, 1822, Aur (Saxon Metal Mountains); as seminarist at Dresden he was pupil of Joh. Schneider, Jul. Otto, and Th. Uhlig. From 1842-

52 he became choir director at the Synagogue, also from 1844-56 organist of the Anglican community at Dresden, 1856-61 cantor and organist of the evangelical community at Pesth, where he established a vocal society; since then he has lived in Dresden, from 1871 as teacher of singing at the Institution for the Blind, from 1873 to 1893, as cantor of St. Anne's Church, and since 1876, as teacher of theory at the Rollfuss Akademie. S. as a composer displays an agreeable, smooth style. He has published organ fantasias, Op. 1, 31 (preparatory to Bach's six-part "Ricercar"); organ preludes, Op. 46; English sacred four-part songs; sacred choruses and motets, Op. 8, 9, 10, 16, 17, 18, 20, 21, 22, 24, 27, 30, 34, 44; sacred songs for one voice, Op. 14, 33; sacred duets, Op. 19, 28, 38, and 15; likewise songs for boys' (or female) voices, patriotic songs, etc. His songs for children (with pf.), Op. 48, are worthy of commendation.

Schuster, Joseph, prolific composer, b. Aug. 11, 1748, Dresden, d. there July 24, 1812; he was the son of a chamber-musician and singer, from whom he received his first training; also from capellmeister Schürer. In 1765 he went with Seydelmann (q.v.) to Italy, where he remained for three years and wrote several operas. Some years after his return he was appointed chamber composer to the elector, but as early as 1774 he returned to Italy, and studied further under Padre Martini at Bologna, wrote operas for Venice and Naples, and received the honorary title of maestro to the King of Naples. He visited Italy for the third and last time between 1778-81, after which he resided in Dresden, where he conducted at church and theatre alternately with Naumann, Schürer, and Seydelmann, and in 1787 was appointed capellmeister simultaneously with Seydelmann. S. wrote about 25 operas (some of which Fétis has erroneously ascribed to a Joseph Schirer), mostly Italian, but also some German (*Der gleichgültige Ehemann*, *Doktor Murner*, *Sieg der Liebe über die Zauberei*, *Das Laternenfest*), which, owing to their pleasing, melodic style, were favourites. For the church he wrote a Mass, a Passion, a Te Deum, the 74th Psalm, etc.; he also composed several oratorios, cantatas (*Das Lob der Musik*, considered his best work), pf. pieces for two and four hands, divertissements for pf. and violin, etc. A concerto for two pfs. and 1 for one pf., 6 quartets for strings, symphonies, etc., remained in manuscript.

Schütt, Eduard, pianist and composer, b. Oct. 22, 1856, Petersburg; he studied under Petersen and Stein at the Conservatoire there, and from 1876-78 at the Leipzig Conservatorium; he now lives in Vienna as conductor of the Akademischer Wagnerverein, and is on friendly terms with Leschetitzky. In 1882 S. played his pianoforte concerto in G minor (Op. 7) at Petersburg, and with great success. He has

published a serenade for strings (Op. 6), variations for two pianofortes (Op. 6), songs, pf. pieces, etc.

Schütz (Sagittarius), Heinrich, the distinguished master, who first brought about in Germany the thorough reform in musical art which had been accomplished in Italy about 1600, and who personally helped in the creation of new forms. In the department of sacred composition he therefore appears in the 17th century as Bach's greatest predecessor. He was b. Oct. 8, 1585, Köstritz, near Gera, d. Nov. 6, 1672, Dresden. His parents went to Weissenfels in 1591, and took possession of his grandfather's estate. S.'s beautiful soprano voice procured for him an appointment in 1599 in the court chapel at Cassel, where he attended the Gymnasium. In spite of musical gifts manifesting themselves in an evident manner, he yielded to the wish of his parents, and went to Marburg University in 1609 to study jurisprudence, and worked zealously in his calling of a lawyer; but when, in the same year, the Landgrave Moritz of Hesse offered S. a yearly stipend of two hundred florins on condition that he would go to Italy for training as a musician, he could not resist; and even his parents consented that he should devote himself entirely to art. Thus, in 1609, S. became a pupil of Giovanni Gabrieli—that noble master who represents the most splendid period of the Venetian School—and remained with him until his death in 1612. Works for double choir had come into vogue at Venice owing chiefly to the two Gabrielis; and that the development of monody and of dramatic style (in Florence) had not been idly watched, that, on the contrary, Monteverde was also well known in Venice, is evident from the fact that S. was soon appointed maestro at St. Mark's (1613). Hence, it is reasonable to suppose that S., standing in the midst of the fermentation and building up of new forms, was impressed by the movement, and returned home full of new ideas. As a first fruit of the conscientious use made of his stipend, S. had already in 1611 sent to the Landgrave a book of madrigals *a 5*, printed at Venice (preserved in the Cassel library). After Gabrieli's death he returned, and became court organist at Cassel. His reputation began to spread, and in 1614 the elector of Saxony begged that S. might conduct his band on the occasion of the christening of a prince (Duke August), and S. gave such satisfaction that already, in 1615, the elector made request to have the benefit of his services for two years, and indeed would not let him return, although the Landgrave would willingly have retained him. In 1617 S. was definitely appointed court capellmeister. He received repeated leave of absence for long journeys to Italy (1628-29), in order to study the progress of the new style at its source; he also went three times to Copenhagen (1633-35, when he organised an orchestra; 1637-39, when

he was detained on the return journey, 1638, some time in Brunswick; and 1642-45). Circumstances at Dresden, through the events of war, were extremely unfavourable to the fostering of art (the band was entirely broken up during 1633-39, and then was re-constituted with only ten instrumentalists and singers); hence S. found the sphere of his activity outside Dresden. In Copenhagen he had really been capellmeister since 1633, became in 1656, on the accession of Georg II., partly exonerated from his Dresden duties, but could not obtain the frequently solicited pension. Of the works of S. the chief one to name is *Dafne*, the first German opera, composed to a libretto by Rinuccini (translated by Opitz), produced at Schloss Hartenfels, near Torgau, in 1627 for the marriage of the Princess Sophie of Saxony with Georg II. of Hesse-Darmstadt. Unfortunately, only the libretto of the opera has been preserved; the music probably perished in the fire of 1760. S. also wrote the music to a ballet, *Orpheus und Euridice* (1638, for the wedding festivities of Joh. Georg II. of Saxony); the music has not been preserved. Of the highest interest in the history of musical art are his Passions, principally the "7 Worte Christi am Kreuz" (autograph in the Cassel Library), and "Die Historia des Leidens und Sterbens unsers Heylandes Jesu Christi" (four Passions according to St. Matthew, St. Mark, St. Luke, and St. John, preserved in the Dresden Library). In 1870, Karl Riedel (q.v.) collected together movements from these four works, forming them into one Passion, and also published the "7 Worte." This most meritorious man also caused works of S. to be performed by his society, and thus gained for S. proper recognition of his merits. Also the "Historia der fröhlichen und siegreichen Auferstehung unsers einigen Erlösers und Seligmachers Jesu Christi" (printed in 1623) resembles the Passions both in form and treatment. (Cf. PASSION.) The other published works of S., of which the motets frequently have almost a dramatic or oratorio-like form (with chorales cleverly inserted, and alternate vocal music for one and several voices) are: "Il primo libro dei Madrigali" (1611; 18 Madrigals a 5 and a Dialogue a 8); "Psalmen Davids sampt etlichen Motetten und Konzerten mit 8 und mehr Stimmen nebenst andern zweien Kapellen, dass dero etliche auf 3 und 4 Chor nach Belieben gebracht werden können," with continuo (1619; 13 part-books); the 133rd Psalm, "Siehe wie fein" a 8 (1619); "Syncharma musicum, tribus choris" (1621); "Kláglicher Abschied von der churfürstlichen Grufft" (1623); "Cantiones sacrae 4 voc. c. basso ad org." (1625); "De vitæ fugacitate aria 5 voc." (1625); "Psalmen Davids deutsch durch Cornelium Beckern in vier Stimmen gestellt" (1628, 1640, 1661, 1676, and 1712); "Cantiones sacrae 4 voc. c. bass. ad org." (Freiberg, 1625); "Symphonie sacrae 3-6 voc." (1629); "Das ist gewiss-

lich wahr," motets a 6 (1631); "Kleine geistliche Konzerte mit 1-5 Stimmen" (1636 and 1639; 2 parts in *stilo oratorio*); "Symphonarium sacrum II. pars," a 3-5, with two instruments (1647); 3rd part of the same a 5-8 (1650); "Musicalia ad chorum sacrum, das ist geistliche Chormusik mit 5-7 Stimmen, beides instrumentaler und vocaliter, wobei der Bassus generalis" (1648); "Canticum B. Simeonis: Herr nun lässt du," a 6 (1657); and "12 geistliche Gesänge mit 4 Stimmen für kleinere Kantoreien," with continuo (1657); "En novus Elysiis succedit," motet for three choirs (without date); and besides these, numerous vocal *pièces d'occasion*, etc., in manuscript to be found in various libraries. In addition to Riedel's publications, detached compositions are to be found in modern publications by Winterfeld: "Der evangelische Kirchengesang" and "Joh. Gabrieli"; in Commer's "Musica sacra," Reissmann's "Musikgeschichte," etc. A complete edition in 16 vols. (Breitkopf und Härtel) has been brought out; the first 14 volumes were edited by the late Ph. Spitta, the last two by his brother Friedrich. Cf. Ph. Spitta's biography of S. in the *Allgemeine deutsche Biographie*, also Fr. Spitta's memorial discourse on S. (1886), and "Die Passionen nach den 4 Evangelien von H. S." (1886).

Schwab, François Marie Louis, critic and composer, b. April 18, 1829, Strassburg, from 1871-74 conductor of the Musical Union there; he is now editor of a Strassburg paper. S. has written 3 comic operas, a Grand Mass, which was performed at Strassburg, Madrid, and Paris, several cantatas, instrumental soli, etc.

Schwägel. (See SCHWEGEL.)

Schwalm, (1) Oskar, b. Sept. 11, 1856, Erfurt, from 1879-82 pupil of Leipzig Conservatorium (Wenzel, Paul, Reinecke, Jadassohn), composer (pf. pieces, preludes and fugues, songs, waltzes, overture to Fitger's *König Drosselbart*, books of school songs, etc.), was also musical critic for the Leipzig *Tageblatt* and several musical papers. In 1886 he purchased the publishing business of C. F. Kahnt, but already in 1888 sold it to Dr. P. Simon. S. is the son-in-law of Julius Blüthner, whose Berlin branch he now manages.

(2) Robert, composer, brother of the former, b. Dec. 6, 1845, Erfurt, pupil of R. Pflughaupt, and of the Leipzig Conservatorium, from 1870-75 conductor of several societies at Elbing; he is now living in a similar capacity at Königsberg. S. has written, besides many choruses for male voices (with orchestra: "Der Gothen Todesgesang," "Abendstille am Meere") and pf. pieces (also études), an orchestral serenade (Op. 50), an opera, *Frauenlob* (Leipzig, 1885); an oratorio, *Der Jüngling von Nain*; a string quartet (A minor), concert-piece for 'cello, etc.

Schwanberg, Johann Gottfried, b. Dec. 28, 1740, Wolfenbüttel, d. April 5, 1804, Bruns-

wick, was trained in Italy at the cost of the Duke of Brunswick, especially by Hasse. He was for a long time court capellmeister at Brunswick, and wrote for the court theatre 12 serious Italian operas in the style of Händel, a dramatic prologue, *Der Ausspruch des Apollo* (1794), and 3 sonatas for violin and 'cello.

Schwantzer, Hugo, director of the musical institution at Berlin known under his name, b. April 21, 1829, Oberglogau, d. Sept. 15, 1886, Berlin. He attended the Royal Institution for Church Music there, became in 1852 organist of the Reformed Synagogue, and in 1866, of the new synagogue, and from 1856-69 was teacher of the organ and pianoforte at the Stern Conservatorium. S. published some pf., organ, and vocal compositions, also a piano Method.

Schwarz, (1) Andreas Gottlob, celebrated performer on the bassoon, b. 1743, Leipzig, d. Dec. 26, 1804, Berlin; during the Seven Years' War he was in a military band, and from 1770 played in the court orchestras of Stuttgart and Ansbach, at Lord Abingdon's concerts in London, and from 1787 in the Berlin court orchestra.

His son (2) Christoph Gottlob, b. Sept. 12, 1768, Ludwigsburg, was likewise an excellent performer on the bassoon, chamber musician to the Prince of Wales, and from 1788-1826 a member of the Berlin court orchestra. There was a second son, an able violinist at Berlin.

(3) Wilhelm, celebrated teacher of singing, b. May 11, 1825, Stuttgart, d. Jan. 4, 1878, Berlin. He studied theology and philology, and was for some time principal of the High School for Girls, and, finally, vicar at the Lyceum in Ulm; he then devoted himself entirely to singing, and, after appearing on the stage for a short time, settled as teacher of singing in Hanover, and later on in Berlin. His new method failed, and he took a clerkship in Strousberg's bank. S. wrote "System der Gesangkunst nach physiologischen Grundsätzen" (1857), and "Die Musik als Gefühls-sprache im Verhältnis zur Stimme und Gesangs-bildung" (1860).

(4) Wenzel, b. Feb. 3, 1830, Brunnersdorf (Bohemia), studied at the Prague Conservatorium, proprietor of a musical institute at Eger, since 1864 at Vienna. He writes educational pf. works.

(5) Max, pianist, son of Wilhelm S. (3), b. Dec. 1, 1856, Hanover, studied under Bendel, Bülow, and Liszt, was teacher at Dr. Hoch's Conservatorium in Frankfurt from 1880-83, and when they changed the directorship at Raff's death, he founded, together with a few members of the staff who were leaving, the "Raff Conservatorium," Frankfurt.

(6) Bianca. (See BIANCHI, 3.)

Schwegel (Schwigel, Schwägel) is an old German word (*suegala*) which merely means pipe; it was used generally for all wind-instru-

ments, and more particularly for lip-pipes ("Kernpfeife"). Hence Notker (about 1000) named organ-pipes *suegalun*; and still to-day a S. stop (Schwegelpfeife, 8 and 4 ft.) is to be found in old organs; it has an open lip-pipe somewhat narrowed towards the top.

Schweinskopf (Ger. "pig's head"), old name for a grand pianoforte.

Schweitzer, Anton, capellmeister at Gotha, b. 1737, Coburg, d. Nov. 23, 1787, Gotha; he wrote about 20 vaudevilles and incidental music to plays. *Elysium* (1774), *Alceste* (1774, 1786; text by Wieland), and *Die Dorf-gala* (1777) were published in pf. score.

Schweizerflöte, (1) same as cross-flute. (See FLÜTE.)—(2) In the organ an open flute stop of small scale, of 8-ft. pipes of metal, mostly with beards; and as the pipes are easily *over-blown*, the stop is generally used in combination with other 8-ft. stops. Its tone is penetrating. As a 4-ft. stop it is usually called Schweizer-pfeife; as a pedal-stop, Schweizerflötenbass.

Schwencke, esteemed musical family, of which the ancestor was (1) Johann Gottlieb, b. 1744, Breitenau (Saxony), d. Dec. 7, 1823, as "Ratsmusik" at Hamburg; he was a distinguished performer on the bassoon.

His son (2) Christian Friedrich Gottlieb, the successor of Ph. E. Bach as town cantor at Hamburg, b. Aug. 30, 1767, Wachenhausen (Harz), pupil of Marburg and Kirnberger, became already at the age of 23 cantor and musical director of St. Catherine's, Hamburg, and died holding this post, Oct. 27, 1822. Of S.'s compositions there are to be mentioned: 3 violin sonatas, 6 grand fugues, pf. sonatas, many sacred compositions, a psalm, a Pater Noster, and a Klopstock Ode (as supplement to the *Allgemeine Musikalische Zeitung*, 1799); also the re-scoring of Handel's *Messiah* and Bach's B minor Mass; he also contributed various articles to the *Allg. M. Z.*

(3) Johann Friedrich, son and pupil of the former, b. April 30, 1792, Hamburg, d. there Sept. 28, 1852, was an able organ, 'cello, and clarinet player, and in 1829 became organist of St. Nicholas' Church, Hamburg. He composed diligently, in spite of his bad health (cantatas with organ accompaniment; "Hamburgisches Choralbuch," an excellent work, many times republished; over 500 preludes and postludes, harmonisation of about 1,000 chorales, and 73 Russian folk songs; septet for 5 'cellos, double-bass, and kettle-drums; orchestral accompaniment to Beethoven's *Adelaide* and *Wachtel-schlag*; also many arrangements of works by Spohr, etc.).

(4) Karl, brother of the preceding, b. March 7, 1797, Hamburg, was a gifted composer and a brilliant pianoforte-player, who in his youth made extensive concert-tours as far as Petersburg, Stockholm, and Paris. He published some good pf. works (3 pf. sonatas for four hands, a

violin sonata), also a symphony (produced in 1843 at the Paris Conservatoire, and at Hamburg; it was published in pf. score). Many other pieces (chamber music, a Mass, etc.) remained in manuscript. He lived finally at Nussdorf (near Vienna); after 1870 no more was heard of him. A portion of his memoirs appeared from 1884-85 in the *Hamburg Korrespondent*.

(5) Friedr. Gottlieb, son and pupil of Joh. Friedr. S., b. Dec. 15, 1823, Hamburg, from 1852 successor of his father at the beautiful new Gothic church of St. Nicholas, appeared at concerts while still young, as pianoforte and organ player, and was heard on various organs in Paris in 1855, at concerts of his own. He wrote many songs and chorale preludes, 3 fantasias for organ, trumpet, trombone, and drums, sacred songs for female chorus with organ, etc.; he also prepared for the press his father's chorale books, issuing revised and augmented editions of them, likewise a new edition (with additions of his own) of his father's chorale preludes (1886).

Schwiegel. (See SCHWEGEL.)

Sciolto (Ital.), free in performance.

Scottrino, Antonio, b. 1851, Trappani, opera composer (*Matilda*, 1879; *Il Progettista*, 1882; *Il Sortilegio*, 1882; *Gringoire*, 1890), also wrote virtuoso pieces for contra-bass.

Scordatura (Ital.), a deviation from the usual tuning of a stringed instrument to produce effects otherwise impossible. For instance, Paganini frequently changed the fourth string from g to b \flat ; and there exist many compositions for violin by Tartini, Biber, Nardini, Campagnoli, etc., in which a special S. is prescribed.

Score (Ital. *Partitura*; Fr. *Partition*; Ger. *Partitur*), the writing down of separate parts (placed one over the other) was originally a term opposed to tablature (*Intavolatura*), table notation. The oldest known score of a vocal work is that of Cipriano de Rore's Madrigal *a 4* of 1577 (Venice, Ang. Gardano). On the other hand, organ and clavier pieces had formerly to be noted in a manner similar to the one in present use, i.e. notes played together were written over one another (*Intavolatura da cembalo*). Already in 1530 and 1531 examples of the kind by Peter Attaignant appeared in print. Before that, and indeed long after, the so-called German tablature (cf. **TABLATURE**) was used in Germany. Already in 1586 (Simon Verovio, cf. **MUSIC-PRINTING**) the Italians began engraving on copper their lute, clavier, and even vocal scores, as with the earlier types it was very difficult to note more than one part on a stave. About this time figured bass was invented, with which motives of economy may have had something to do. Undoubtedly the old contrapuntists sketched their complicated music with the parts written one over the other (this has been proved by certain examples, among which one which distinguished the four parts written on one

stave by the form of the note-heads and by colour), but these sketches were regarded as a technical secret, and destroyed. Vocal works in the time of the Netherland School were published in the following two forms: as a chorus-book or in separate part-books. In either case it was impossible, as it is at the present day, to read off all the parts at once. Only when the artificialities of imitation and enigmatical notation fell into discredit did it become gradually a necessity to set out musical works in a readable form.

A modern S. consists of all the instrumental and vocal parts of a composition, written for several instruments or voices, or both, printed one over the other *in rows*, so that the notes sounded at the same time shall be placed over one another. The arrangement of a S. is not entirely arbitrary, but is subject to certain conventional laws, framed so as to enable a conductor to read a S. with facility. Above all, it is customary to place together instruments of like species and tone-colour, and, within the separate groups, to place the higher part above the lower. So, for example, the general arrangement of the S. of a symphony at present is as follows:—

At the top: Wood-wind instruments.

In the middle: Brass and instruments of percussion.

Below: Orchestra of strings.

The vocal parts (in masses, operas, oratorios, cantatas, etc.) are, as a rule, placed below; yet the instrumental basses ('cello and double bass and organ), the solid foundation of the harmony, keep their place as lowest parts. The group of wood-wind is arranged thus:

(Piccolo Flute.)
Flutes.
Oboes.
(English Horn.)
Clarinets.
(Bass Clarinet.)
Bassoons.
(Double Bassoon.)

In the brass orchestra, the horns, which frequently (to the number of four) form a family by themselves, or are used in conjunction with the bassoons, are placed highest, i.e. next to the bassoons:

Horns.
Trumpets.
Trombones.
(Tubas.)
Kettledrums.
(Triangles, cymbals, gongs.)
(Large and small drums.)

Finally, the strings enclosing the vocal parts are arranged thus:

First } Violins.
Second }
Violas.
Solo Voices { Soprano.
 { Alto.
 { Tenor.
 { Bass.
Chorus ditto { 1st Chorus.
 { 2nd Chorus.
Violoncellos.
Double Basses.
(Organ.)

If an organ part is added, it is placed under the double bass, where formerly stood the continuo (figured bass); also a pianoforte score, which may perchance be affixed, is affixed here. The most suitable place for the *harp* is between the instruments of percussion and the first violins. There are frequent deviations from this arrangement; it is only the customary one of modern times (from about the time of Weber). A plan which in many respects may be recommended in scores with vocal parts, in which, anyhow, the strings are divided, is to place violins and violas above the wood-wind, so that the strings may, as it were, form the framework of the whole. On the other hand, it is not unpractical to place the brass, which, as a rule, has the least to do, as far as possible from the strings—a method adopted, for the most part, by our classical symphonists:

Kettledrums.
Trumpets and Trombones.
Horns.
Wood-wind.
Strings.

The reverse order would be unpractical, because the S. reader always looks first for the bass. In works with vocal parts no objection can be made to their being placed above the violins. In violin concertos, etc., the solo part is placed over the strings; in pf. concertos the piano part is best undermost. In a corresponding manner, chamber music is scored thus:

Wind or Strings.
Pianoforte.

If there are strings and wind-instruments, either the latter are placed as a special group above the former, or they are mixed according to their compass:

I.
Flute (Oboe, Clarinet).
Strings.
Pianoforte.)

II.
Violin.
Viola.
Horn (Bassoon).
'Cello.
(Pianoforte.)

and so on, according to the particular combination.

Score-reading and Score-playing (on the pianoforte) are accomplishments indispensable to a good conductor and essential to every good musician. They can, of course, only be acquired by constant practice; and in the quickest and surest manner by proceeding from easy, to more difficult scores. A beginning should be made with a *cappella* music in four parts, and especially that in which the tenor part is written out (an octave higher) in the treble clef; and then on to easy movements for quartet of strings. Divertissements in which transposing instru-

ments are employed (horns, clarinets) form a fitting transition to the easiest orchestral scores. Practice in ordinary transposition (playing from the music on the pianoforte) is of immense advantage. Divided score-playing on several pianofortes is to be highly recommended (one performer for the strings, another for the wood-wind, and a third for brass and drums). In H. Riemann's "Handbuch der Harmonielehre," and "Vereinfachte Harmonielehre" ("Harmony Simplified") facility in reading from score is methodically developed through practical writing.

Scotto (Scoto), famous family of music printers at Venice, viz.: (1) Ottaviano, from about 1536-39 (his oldest known publication consisted of madrigals by Verdelot for one voice with lute, arranged by Willaert).

(2) Girolamo, probably son of the former, printed from 1539-73. In 1551 he published a book of madrigals *a 2* of his own composition. For a long time after his death his heirs continued the printing and publishing business.

Scudo, Paolo, writer on music, b. June 8, 1806, Venice, d. Oct. 14, 1864, Blois; he wrote: "Critique et littérature musicale" (1850 and 1859, 2 parts); "L'art ancien et moderne; nouveaux mélanges," etc. (1854); "L'année musicale, ou Revue annuelle des théâtres lyriques et des concerts" (1860 until 1862, 3 vols.); "La musique en 1862" (1863); "Le chevalier Sarti" (1857; German by O. Kade, 1858), a musical novel, of which the sequel ("Frédérique") appeared in the *Revue des Deux Mondes*. S. was also a contributor to various musical and other papers, and wrote musical articles for general encyclopedias.

Sebastiani, Johann, German composer of sacred music, b. 1622, Weimar. In 1661 he became capellmeister to the Brandenburg Elector at Königsberg, and is specially worthy of notice on account of his Passion, "Das Leiden und Sterben unsers Herrn und Heilands Jesu Christi" (1672), which resembles the Bach Passions, inasmuch as it contains the contemplative element of interspersed chorales (to arouse a feeling of devotion), and at the close, a "Danksagungsliedchen für das bittere Leiden Jesu Christi" (a song of thanksgiving for the bitter suffering of Jesus Christ). These chorales were sung as arias by one voice with violin accompaniment. There further appeared: "Geistliche und weltliche Lieder in Melodien gesetzt" (1675).

Sébastien, Claude, organist at Metz, published a peculiar allegorical work: "Bellum musicale inter plani et mensurabilis cantus reges de principatu musicæ," etc. (1553; also 1563, 1568).

Sebor, Karl, Bohemian composer, b. Aug. 13, 1843, Brandeis on Elbe, pupil of the Prague Conservatorium, and private pupil of Kittl. He was at first teacher of music in Poland,

then theatre capellmeister at Erfurt, and at the Bohemian theatre at Prague; since 1871 he has been military bandmaster in Vienna. S. has written chamber music (quartet and quintet for strings), pf. pieces, songs, part-songs, and several Bohemian operas (*Die Templer in Mähren* [1865], *Drahomira*, *Die Hussitenbraut*, *Blanka*, *Die vereitelte Hochzeit* [1878]).

Secco (Ital.). (See RECITATIVE.)

Sechter, Simon, celebrated teacher of counterpoint, b. Oct. 11, 1788, Friedberg (Bohemia), d. Sept. 10, 1867, Vienna; he was a pupil of Kozeluch and Hartmann in Vienna. In 1811 he became teacher of music at the Institution for the Blind; later on, member of the court orchestra, court organist, and in 1851 teacher of harmony and composition at the "Conservatorium der Musikfreunde." S.'s principal work is "Die Grundsätze der musikalischen Composition" (1853-54, 3 vols.); in this treatise he principally follows Rameau's theory of the *Basse fondamentale*, but it differs from the latter inasmuch as harmonic progressions are considered normal which are only good in sequence. S. composed much church music (masses, graduales, offertories, in part written in old church modes, a *Te Deum*, etc.) of which, however, only a few appeared in print. On the other hand, he published many fugues, preludes, and other pieces for the organ (Op. 1-5, 8, 9, 12-15, 17, 20-22, 48, 50, 52, 55, 56, 61), also 2 quartets for strings (the second "Die vier Temperamente," Op. 6), pf. variations, etc. A burlesque opera, *Ali-hitsch-hatsch*, was produced in 1844.

Second, the "second" degree in diatonic progression. It can be either major, minor, or augmented (cf. INTERVAL); the diminished S. would produce enharmonically identical sounds.

Secondary Chords of the Seventh, in the ordinary terminology of harmony systems, are all chords of the seventh with exception of the dominant chord of the seventh (in c major, *g b d f*; in a minor, *e g b d*), which is named principal chord of the seventh. (cf. DISSONANCE.)

Secondary Keys are the keys nearest related to the principal key of a piece of music, especially the parallel and the dominant keys.

Secondary Theme (Ger. *Nebenthema*) is a thematic formation opposed to the principal theme of a piece of music, alternating with it. Also in figure the countersubject (counterpoint to the Comes) from which, as a rule, the andamenti are evolved.

Secondo (Ital.), the second; *seconda volta* (abbr. II da), the second time. (cf. PRIMO.)

Sedlatzek, Johann, flautist, b. Dec. 6, 1789, Oberglogau, d. April 11, 1866, Vienna; from 1826-50 he lived in London, afterwards in Vienna, whence he made extensive and successful concert-tours.

Seeher, Christian Friedrich, the inventor of the "Fingerbildner" (see CHIROPLOAST), b. June 10, 1846, Weida, d. 1883 in Weimar as cellist of the court orchestra.

Seeling, Hans, pianist and composer of brilliant pf. pieces, b. 1828, Prague; he visited the East, Italy, etc., and d. May 26, 1862, Prague.

Segert, Joseph, important organist, b. March 21, 1716, Repin, near Melnick (Bohemia), d. April 22, 1782, Prague, pupil of Czernohorsky and Felix Benda at Prague, where he attended the University (*magister phil.*), organist of St. Martin's Church, afterwards of the Teinerkirche, Prague. He died shortly before the news of his appointment as organist of the court chapel, Vienna, reached him. S. wrote many masses, psalms, litanies, etc.; but only 8 toccatas and fugues for organ appeared in print. His pupils were: Kozeluch, Mysliweczek, Maschek, etc.

Seghers, François Jean Baptiste, violinist and excellent conductor, b. Jan. 17, 1801, Brussels, d. Feb. 2, 1881, Margency (near Paris). He was a pupil of Gensse (leader of the concerts there), also of Baillot at the Paris Conservatoire. S. founded in 1848 the Société Ste. Cécile, which he conducted until 1854 (after which it quickly fell to pieces), and with which he organised excellent performances of orchestral and choral works. From that time he lived in retirement.

Segni, Giulio (called Giulio da Modena), b. 1498, Modena, in 1530 elected organist of the first organ of St. Mark's, Venice, called in 1533 by Cardinal Santa Fiora to Rome, where he died, 1561. It is said that he was a remarkable organ- and clavier-player. Doni mentions a work of his which was printed: "Ricercati, intabolutura di organi e di liuto."

Segno (Ital.), sign. (cf. S.)

Second, L. A., Dr. Med. and sub-librarian of the medical faculty at Paris, occupied himself specially with the anatomy of the larynx, studied singing under Mannel Garcia, and published: "Hygiène du chanteur. Influence du chant sur l'économie animale. Causes principales de l'affaiblissement de la voix et du développement de certaines maladies chez les chanteurs. Moyens de prévenir ces maladies" (1846); and "Mémoires pour servir à l'histoire anatomique et physiologique de la phonation" (1859; collection of lectures delivered by S. at the Académie).

Segue (*Segue*, Ital.), there follows; *seguenta* (*segunte*), following.

Seguidilla, a Spanish dance of quick movement and in triple time, similar to the Bolero. The castanet rhythm—

is played during four bars, and after each line of the song there are four similar ones; this castanet rhythm ceases during the singing.

Seibert, Louis, b. May 22, 1833, Cleeberg (near Wiesbaden), lives at Wiesbaden as a teacher of the pianoforte (at the Conservatorium) and composer (orchestral and chamber music, songs, choruses for male voices, etc.).

Seidel, (1), Friedrich Ludwig, b. June 1, 1765, Treuenbrietzen, d. May 5, 1831, Charlottenburg, pupil of Benda at Berlin, organist of the Marienkirche there, in 1801 assistant conductor at the national theatre, in 1808 musical director of the royal orchestra, and in 1822 court capellmeister. S. composed several operas (*Der Dorfbarbier*, *Lila*), incidental music to plays, an oratorio (*Die Unsterblichkeit*), a Mass, motets, psalms, etc., pf. works and songs.

(2) Johann Julius, organist, b. July 14, 1810, Breslau, d. there Feb. 13, 1856, in 1837 organist of St. Christopher's Church, Breslau. He wrote: "Die Orgel und ihr Bau" (1843), a handy and clearly drawn-up little work, published in new editions by K. Kuntze (1875) and B. Kothe (1887).

Seidl, (1) Anton, distinguished conductor, b. May 7, 1850, Pesth; from 1870-72 pupil of the Leipzig Conservatorium. He then went to Wagner at Bayreuth, and was one of the fortunate young musicians who helped to prepare the master's last scores and parts; and in 1875, on Wagner's recommendation, was invited by Angelo Neumann, as capellmeister, to Leipzig. He remained then with Neumann at his Wagner Theatre, and followed him to Bremen; but when Neumann left for Prague, he accepted a call to New York as conductor of the new German Opera (1885), which through the death of Damrosch had lost its chief; he quickly brought the concert orchestra (S.'s orchestra) into repute. In 1886 S. was one of the conductors of the Bayreuth performances.

(2) Arthur, intelligent writer on music, b. June 8, 1863, Munich, attended the Gymnasium there and at Ratisbon (at the same time free scholar of the Royal School of Music). He studied philosophy and the history of literature at Munich, Tübingen, Berlin, and Leipzig, also music, industriously, under Paul, Fr. Stade, Spitta, and Bellermann, and in 1887 took his degree at Leipzig as Dr. Phil., with the extremely valuable treatise "Vom Musikalisch-Erhabenen. Prolegomena zur Aesthetik der Tonkunst." Since then he has also written "Zur Geschichte des Erhabenenbegriffs seit Kant" (1889). S. was at Weimar for some time, but now lives at Dresden. His works, as well as his journalistic writings, have already made for him a name.

Seifert, Uso, b. Feb. 9, 1852, Römhild (Thuringia), pupil of the Dresden Conservatorium under Wüllner, Blassmann, Merkel, Nicodé, and Rischbieter, now teacher in the

same institution and organist of the Reformed Church. S. made himself known by a widely-circulated pianoforte Method (1893), and by pf. and vocal compositions; he has also published instructive works of old masters.

Seifriz, Max, violinist and conductor, b. Oct. 9, 1827, Rottweil, d. Dec. 20, 1885, Stuttgart, pupil of Täglichsbeck. In 1841 he was violinist to Prince Hohenzollern at Hechingen, and in 1849 at the town theatre, Zürich; in 1854 court capellmeister to Prince Hohenzollern at Löwenberg, who had taken up his residence there; after the death of the Prince (in 1869) he lived in Stuttgart, and from 1871 as musical director. S. wrote a symphony, overture, and incidental music to *Jungfrau von Orleans*, choruses for male voices, etc.

Seiler, Joseph, b. Jan. 15, 1823, Lügde (near Pyrmon), d. May 29, 1877, Münster; pupil of Johann Schneider and Reissiger in Dresden, was at first organist at Lügde, in 1859 organist at the "Moritzkirche," Münster. He composed Masses, etc., which remained in manuscript; he was also a diligent contributor of critical articles to several musical papers.

Seiss, Isidor Wilhelm, b. Dec. 23, 1840, Dresden, where his father was chamber musician, received instruction from Fr. Wieck in pianoforte-playing, and was well grounded in theory by Julius Otto. He then worked from 1858-60 in Leipzig with M. Hauptmann. About this time his first compositions appeared, and he frequently undertook concert tours as pianist. He was so successful at Cologne that Hiller at once persuaded him to become a teacher at the Conservatorium; he has worked with excellent results in this post during the last 20 years, and since 1878 has enjoyed the title of Professor, and also conducted the concerts of the "Musikalisches Gesellschaft" in a most disinterested manner. S. is a composer of taste, an acute critic, and a masterly writer for the pianoforte; his intelligent transcriptions of movements from the quartets of Haydn, his interesting arrangements (*Bearbeitungen*) of dances by Beethoven (3 contredances and the "Dances allemandes"), and his new edition of Weber's *op. 9* concerto, show reverence and skill. His own compositions are, for the most part, educational:—the sonatas, Op. 8; "Bravourstudien," Op. 10; toccata, Op. 11; preludes, Op. 12. He has also published "Feierliche Szene und Marsch" for orchestra, adagio for 'cello, pf. pieces, etc.

Seitz, (1) Robert, b. April 8, 1837, Leipzig, d. there Sept. 26, 1889, founded in 1866 a music business, to which he added a publishing department; and by the works of Raff and other composers he brought a certain prosperity to the firm. In 1878, however, he sold his publishing business and established a pianoforte manufactory. He failed in 1884, and, at the same time, the *Musikalisches Centralblatt*, published by

him since 1880, came to an end; it contained valuable articles by writers of note.

(2) Fritz, able violinist, b. June 12, 1848, Günthersleben (near Gotha), pupil and son-in-law of Uhlrich, in 1874 under Lauterbach in Dresden, then vice-capellmeister at Sondershausen. Later on leader at Magdeburg, and since 1884 court leader at Dessau.

Séjan, Nicolas, famous organist, b. March 19, 1745, Paris, d. there March 16, 1819, became in 1760 organist of St. André des Arts, in 1772 of Notre Dame (with Daquin, Couperin, and Balbâtre), in 1789 royal chapel organist and teacher at the "Ecole royale de chant et de déclamation"; he lost his post through the Revolution, became organist in 1807 at the Invalides, and in 1814 again chapel organist. S. published 6 violin sonatas, 3 pf. trios, and some pf. and organ pieces.

Seligmann, Hippolyte Prosper, 'cello virtuoso, b. July 28, 1817, Paris, d. Feb. 5, 1882, Monte Carlo (near Monaco), studied under Norblin at the Conservatoire, made extensive concert tours, and published a number of divertissements, fantasias, characteristic pieces, etc., for 'cello and piano.

Selle, Thomas, able contrapuntist, b. March 23, 1599, Zörbig (Saxony), d. July 2, 1663, Hamburg. He was at first rector at Wesselburen (Schleswig-Holstein), in 1624 at Heide, in 1630 cantor at Itzehoe, and in 1637 cantor of the Johanneum and musical director of the five principal churches at Hamburg; in 1641, in addition, cathedral cantor. His compositions bear the flowery titles of his time: "Concertatio Castalidum" (1624, church concertos *a* 3); "Deliciae pastorum Arcadiae" (1624, secular songs *a* 3); "Hagiodemelydria" (1631, 10 "geistliche Konzertlein" *a* 1-4); "Monophonia harmonica latina" (1633, 15 *a* 2-3, "Concentus ecclesiastici"); "Concentus 2 voc. ad bassum continuum" (1634); "Decas prima amorum musicalium" (1635, *a* 3); "Concentuum trivocalium germanico-sacrorum pentas" (1635); "Concentuum latino-sacrorum, 2, 4 et 5 vocibus ad bassum continuum, etc." (1646 and 1651, 2 books); also melodies to Rist's "Sabbatische Seelenlust" (1651, 1658). S. left in manuscript, concertos, madrigals, and motets *a* 3-16.

Sellner, Joseph, distinguished oboist, b. March 13, 1787, Landau, d. May 17, 1843, Vienna; he went, when young, with his parents to Anstria, passed through the campaign of 1805 as player in an Austrian cavalry regiment, was for some time conductor of a private wind band in Hungary, then principal oboist at the theatre, Pesth. In 1811 he was under C. M. von Weber in Prague, where he still studied composition with Tomacek; in 1817, at the Court Opera, Vienna; in 1822 also at the Court band; and in 1821 teacher of the oboe, and conductor of the pupils' concerts at the Conservatorium (until 1838). S. wrote an excellent

"Oboeschule," which was also translated into French, and still ranks as the best Method for oboe; also several compositions for guitar, an Introduction and Polonaise brillante for clarinet and orchestra, etc.

Sembrich, Marcella (really Praxede Marcelline Kochanska; S. was the family name of her mother), a marvellous singer (coloratura-soprano), b. Feb. 15, 1858, Wisnewczyk (Galicia), where her father, Kasimir Kochanski, lived as music teacher (violinist). In her fourth year Marcella began to play the piano, and in her sixth year, the violin. When twelve years of age she entered the Lemberg Conservatorium, where she became the pupil of the pianist Wilhelm Stengel (b. Aug. 7, 1846), afterwards her husband, who, at the end of five years, took her to Vienna for further training under Epstein. In September, 1875, she began to study singing under Victor Rokitansky, and after one year repaired to Milan, where she studied for eight months under G. B. Lamperti, jun. In May, 1877, S. made her *début* in *I Puritani* on the Italian stage at Athens, returned in July following to Vienna, where she studied the German repertoire with the horn-player Richard Lewy, and in 1878 was engaged at Dresden, belonging to the court theatre there for one and a half years. In June, 1880, she went to London, where she was engaged for five seasons. After concert tours which she made to nearly all the large towns on the Continent, and to America (1883-84), S. studied under Francesco Lamperti, sen., during the summer of 1884. From 1878-89 her residence was in Dresden; in 1889 she removed to Berlin, whence she undertook her long concert tours, and enjoyed increasing success. Madame S. is not only a singer and pianist, but also an excellent violinist.

Semeiography (Greek, "writing by signs"). (See NOTATION.)

Semet, Théophile Aimé Emile, composer, b. Sept. 6, 1824, Lille, d. April 15, 1888, Corbeil, near Paris, pupil of the Paris Conservatoire under Halévy, for many years drummer at the Grand Opéra. He wrote several operas: *Les nuits d'Espagne* (1857), *La demoiselle d'honneur* (1857), *Gil Blas* (1860), *Ondine* (1863), *La petite Fadette* (1869), which, for the most part, were favourably received.

Semibreve (◊), the greatest, with exception of the somewhat antiquated Brevis (q.v.), of the species of notes handed down to us from mensurable music notation; it is our whole bar note, yet was the smallest (!) in the 13th century. It had the value of $\frac{1}{2}$ or $\frac{1}{4}$ Brevis, according to the prescribed measure (q.v.). (Concerning the semibreve of the *Ligatura cum opposita proprietate*, see LIGATURE and PROPRIETAS.)

Semidiapente, Latin term for the diminished 5th.

Semiditas (Lat. "halving"), a term used in the theory of mensurable music for Diminution (q.v.); it was indicated by a vertical stroke through the time sign (C) C (also called *per medium*); the meaning is indicated by the word itself.

Semiditonus, Lat. term for the minor third.

Semifusa (Lat.), semiquaver.

Semiquaver. (Cf. **QUAVER**.)

Semiserio (Ital. "half serious"), term for a serious opera which includes some comic scenes (*Opera semiseria*).

Semitone (Ger. *Halbton*), The smallest interval which is employed in our system of music, occurring either as successive, or simultaneous notes; for the enharmonic related notes become identified, and the enharmonic change has practically the meaning of the ligature, of the sustained note. A distinction is made between the diatonic and chromatic S. The *diatonic* S. occurs between notes situated on neighbouring degrees of the fundamental scale, for example:

Notes which are derived from the same note of the fundamental scale stand to each other in the relation of a *chromatic* semitone, for example:

A third kind of S., for example:

must be called the enharmonic S. (double diminished third; its occurrence presupposes an (omitted) enharmonic change, for example:

On the acoustical pitch definition of the different sorts of S. see table under "TONE, DETERMINATION OF."

Semitonium, Lat. name for the semitone, the minor second;—S. *majus*, the major (diatonic) semitone (c: d \sharp); S. *minus*, the minor (chromatic) semitone (c: c \sharp). (Cf. **APOTOME**.)

Semplice (Ital.), simple.

Sempre (Ital.), always, continually; for example, S. *legato* (*staccato*), S. *forte* (*piano*), S. *crescendo* (*diminuendo*).

Senesino. (See **BERNARDI**, 2.)

Senff, Bartholf, the founder of the important music-publishing business of like name at Leipzig, b. Sept. 2, 1818, Friedrichshall

(near Coburg); in 1843 he founded the musical paper *Signale für die musikalische Welt*, which he himself has edited up to the present. The firm publishes important works of Anton Rubinstein.

Senfft von Pilsach, Gottfried Arnold, Dr. jur., esteemed concert vocalist, b. March 15, 1834, Grumenz (Pomerania), d. March 7, 1889, Marburg, pupil of Teschner, Sieber, and Jul. Stockhausen. He lived in Berlin as director of the life insurance society.

Send (Senff, Senfel), Ludwig, one of the most distinguished, if not the most important German contrapuntist of the 16th century, b. 1492, Basel-Augst (near Basle), d. about 1555, Munich. He went as a boy to the Imperial Court Chapel, Vienna, and received instruction from Heinrich Isaak, and at the death of the latter, succeeded him. When Maximilian I. died S. received a small benefice, but sought a post in Bavaria, and received that of court capellmeister at Munich. It is, unfortunately, impossible to fix the dates of events in his life. His compositions have been preserved in great number. The following have been printed: "5 Salutationes Domini nostri Ihesu Christi" (1526, motets a 4); "Magnificat 8 tonorum 4-5 voc." (1532); "Varia carminum genera, quibus tum Horatius tum alii" (a 4, 1534). In Paul Hofhaimer's "Harmoniae poeticae" (1539) are to be found 9 odes, which were probably taken from the collection of 1534. Many detached compositions are, besides, to be found in collections of the period. (Cf. Eitner's "Bibliographie," and the 4th vol. of the publications of the *Ges. f. Musikforsch.*). A great number of S.'s compositions, not printed, are in the Munich Library (7 masses, offertories, motets, hymns, sequences, and songs).

Senkrah, Arma Leoretta (really Harknes), violinist of taste, b. June 6, 1864, New York, pupil of Arno Hilf at Leipzig, Wieniawski at Brussels, and Massart at Paris (1881 at the Conservatoire, where she gained the *Premier prix*); she has travelled since 1882, and with great success. In 1888 she married a barrister (Hoffmann) at Weimar.

Sentimento (Ital.), feeling.

Senza (Ital.), without; S. *passione*, without passion, i.e. performed in a simple manner, without pathetic accents, accelerandos, etc. S. *piatti*, in the part usually common both to big drum and cymbals, indicates big drum only.

Septet (*Septuor*; Ital. *Setteto*, rarely *Settimetto*), a composition of seven parts. A vocal composition is called S. if it is written for seven voices, even though instruments take part in it.

Septuor. (See **SEPTET**.)

Sequence, (1) (*Prosa*), a church poem, closely related to the hymn species; it sprang up somewhere about the middle of the 9th century, and was already firmly established by Pope Nicolas I. (d. 867). The melodies of the sequences (at

least their beginnings) are old Gregorian, viz. the extended jubilations of the Hallelujahs; the necessity of placing words under them, so that each syllable had one, or at most two notes, shows that already in the 9th century the jubilation was taken in considerably slower time, also that the inconveniently long appendage (*sequentia* = tail) was no longer understood. Notker Balbulus was the most diligent composer of sequences. In 1568, with exception of a few still in use, sequences were abolished by Pius V.; they had inconveniently increased in number, so that in many missals each Mass had its S. The only sequences in general use are: the Easter S., "Victimæ paschali laudes"; the one for Whitsuntide, "Veni Sancte Spiritus"; the one for the festival of Corpus Christi, "Lauda Sion salvatorem"; the "Sequentia de septem doloribus Mariæ Virginis" ("Stabat mater dolorosa"); and the Requiem S., "Dies iræ."—(2) In harmony and composition, the pushing forward of a motive, long or short as the case may be, through a scale, so that it rises or falls by degrees; if a S. in several parts is strictly carried out in all the voices, certain formations, which otherwise are decidedly reprehensible, become endurable, nay, indispensable (for example, the doubling of the leading note and of dissonances, etc.). For a long time the S. proved misleading to theorists, until at last Fétis discovered its true nature, and insisted that it is not really an harmonic, but a melodic formation, and that so long, therefore, as the S. lasts, the harmonic development is suspended. A S. is of ordinary occurrence, but as a means of breaking rhythmical symmetry, i.e. of considerably lengthening phrases (generally the second half of a period), must be used with caution; for so long as a S. lasts no effect of a close is possible. (Cf. CLOSE.)

Serafi, Giuseppe, famous organ builder, b. Nov., 1750, Bergamo, d. there 1817; he sprang from a family for many years connected with organ building, and transmitted his art to his sons, of whom Carlo (b. 1786) especially distinguished himself. Giuseppe S. himself published the description of the organs which he built in 1808 for Como (Aunnnziata) and Milan (Crocifisso); also another pamphlet, "Sugli organi" (1816).

Serafin, Santo and Georgio (uncle and nephew), esteemed violin-makers at Venice about 1710-50, whose instruments, in imitation of those of Stainer, and afterwards of Amati, are highly prized.

Serena (Ital. "Evening"), term for the evening songs of the Troubadours, just as their morning songs are called *Alba* ("dawn").

Serenade (*Serenata*, "evening music"), for voice or only instruments. The latter form has of late become the more usual, although the former has not entirely disappeared. A definite form of instrumental S. has been evolved, not

in any way connected with the original meaning of the term. In the older serenades (Haydn, Mozart) wind-instruments (oboes, bassoons, horns, clarinets) were freely introduced, as was indeed suitable for open-air music; but the more the S. became familiar to the concert-hall, the more the strings gained the upper hand. Then it was characteristic of the earlier S. that all instruments were concertante, no *ripieno* parts; even this distinction is no longer applicable to the most modern serenades. The only thing retained from the past in serenades, is that they have more movements than is usual in a sonata or symphony, and that these movements are less developed, altogether lighter, and of freer structure than those of the symphony and the suite. As a rule, the S. has several movements of the minuet kind, and, as more solid substance, one or two slow movements. Originally the opening and closing movements were march-like in form. (Cf. SERENATA.)

Serenata, a favourite form of vocal composition during the last century; it stands in close relationship to the opera, especially to the *Pastorale*; but, as a rule, it is not intended for representation on the stage, and, finally, can scarcely be distinguished from the cantata. Pieces of this kind, for which Pasquini, Metastasio, and others wrote so many poems for the court at Vienna, and which were set to music in so many different ways by composers, have generally parts for only a few characters.

Serinda. (See RAVANASTRON.)

Serinet (Fr.), a small barrel-organ, used for training greenfinches (*serin*).

Sering, Friedrich Wilhelm, composer, b. Nov. 26, 1822, Finsterwalde (Niederlausitz), teacher at the seminaries at Köpenick and Franzburg, in 1855 teacher of music at the seminary at Barby, in 1871 principal teacher at the college at Strassburg, where he founded a German "Gesangverein." S. composed and published an oratorio, *Christi Einzug in Jerusalem*, an "Adventskantate," the 72nd Psalm with pf., motets, choruses for male voices (Hohenzollernlied), etc.; he also wrote a "Gesang-lehre für Volksschulen," "Die Choralfiguration, theoretisch-praktisch," and an "Elementar Violinschule."

Serio (*serioso*), serious; *opera seria*, the serious, grand, tragic, heroic opera, in contradistinction to comic opera (*opera buffa*). (See SEMISERIO.)

Sermisy, Claude de (generally shortened to Claudin; he must not be confounded with Claudin Lejeune, whose name is always given in full), French contrapuntist, royal chapel singer, and afterwards maître de chapelle to François I. and Henri II. of France, from about 1530-60. Pieces (Masses, motets, chansons) of

his are to be found in many French collections of the first half of the 16th century (Attaignant, Duchemin); also in German (Berg and Neuber's "Thesaurus musicus," etc.), and Italian (Gardane's "Motetti del frutto" and "Canzoni francesi"). Only "Missæ III. quatuor voc." (1583) appears to have been published separately.

Serow, Alexander Nikolai, b. May 11, 1820, Petersburg, d. there Jan. 20, 1871. He received early instruction in pianoforte, and from the age of 15, in 'cello-playing from Karl Schubert. Under the superintendence of Jos. K. Hunke, teacher at the royal chapel, he made attempts in arranging, scoring, etc., but only turned entirely to music when he was 30 years old, abandoning in 1850 the career of a lawyer, in which he had risen to the rank of state councillor. At first S. became known by his keen pen as musical critic; he subjected Ulibischew's judgment concerning Beethoven to a severe examination (cf. F. Liszt's "Kritik der Kritik, oder Ulibischew und S."), and waged war against Fétis; he always made allowances for the present, and paid homage to progress. He wrote in various papers respecting Wagner's music-drama ideas and attempts at reform, and tried on two occasions to establish a paper of his own (1860, *Die Künste*; 1867, *Musik und Theater*). He published valuable studies on the Russian Volkslied in the *Moskwa* and *Musik-Saison*. Only in 1863 did he make his *début* as a composer, and brought out two grand operas, *Judith* (May 16), *Rogneda* (Oct. 27), both with decided success. In 1866 he began to compose an opera, *Taras Bulba*, and in 1867, a ballet, *Wakula, der Schmied* (both after novels of Gogol's), but he gave them up, and devoted his whole strength to the composition of a third opera, *Wrazia Sila* (*The Power of the Enemy*), after a drama of Ostrowski's. S. was a faithful disciple of Wagner, and always prepared his own libretti; in *Wrazia Sila* he had to contend against such great difficulties that in 1870 he had only finished the fourth act; he left a sketch of the fifth. His score was completed by N. Solowiew, and on April 19, 1871, the opera was produced; it afterwards became very popular. S. also wrote an Ave Maria for Adelina Patti in 1868, a Stabat Mater, and music to Schiller's *Glocke*.

Serpent (Ital. *Serpentone*), (1) an instrument invented in 1590 by Canon Guillaume, of Auxerre, which has now gone completely out of use. It was akin to the old zinken, and, like horns and trumpets, was blown by means of a bowl-shaped mouthpiece without reed, therefore quite erroneously classed with wood-wind instruments (bassoon, etc.). The tube of the S. was curled after the manner of a snake, or folded after the manner of a bassoon, and made of wood (as in the crooked zinken, composed of two flat pieces partly hollowed out and glued

together, and covered over with leather); it had nine sound-holes, was in B \flat , and had a compass of

The tone of the instrument was rough and coarse.—(2) In the organ an obsolete pedal reed-stop of 16 ft.; its tone was less powerful than that of the trombone.

Serpette, Gaston, b. Nov. 4, 1846, Nantes: he studied under Ambroise Thomas at the Paris Conservatoire (*Prix de Rome*, 1871); a dramatic composer of somewhat light style. He has hitherto produced 8 operettas for Paris and Brussels (*La branche cassée*, 1874; *Le manoir de Pic Tordu*, *Le moulin du Vert Galant*, *La petite muette*, *La nuit de Saint-Germain*, *Madame le diable*, *Fanfreluche*, and *Le château de Tire-Larigot*, 1884).

Serre, Jean Adam, painter, chemist, and musical theorist, b. 1704, Geneva, lived in Paris, and wrote: "Réflexions sur la supposition d'un troisième mode en musique" (in the *Mercur de France* of Jan., 1742; an attack on Blainville's theory of "pure minor"); "Essais sur les principes de l'harmonie" (1753); "Observations sur les principes de l'harmonie" (1763; criticism of the theories of Rameau [d'Alembert], Tartini, and Geminiani).

Servais, (1) Adrien François, one of the most distinguished 'cellists of modern times, b. June 6, 1807, Hal (near Brussels), d. there Nov. 26, 1877. He was the son of a musician, and received from his father his first musical training, afterwards attended the Brussels Conservatoire, and, under the guidance of Platel, became a master of his instrument. On the advice of Fétis, he decided to make his *début* as concert-player at Paris, where his success was brilliant. He then (1834-48) undertook a series of extensive concert tours through England, Scandinavia, Germany, Russia, etc. In 1848 he was appointed professor of the 'cello at the Brussels Conservatoire, where he trained many pupils, and distinguished himself by his activity up to the time of his death. He was also solo 'cellist to King Léopold. His published compositions are 3 concertos and 16 fantasias for 'cello and orchestra, also some caprices for 'cello and pf., duets on opera themes for 'cello and pf. (jointly with J. Grégoire), for violin and 'cello (jointly with Vieuxtemps and Léonard).

(2) Joseph, son of the former, likewise an excellent 'cellist, b. Nov. 23, 1850, Hal, d. there Aug. 29, 1885, was trained by his father, made concert-tours, and in 1869 was appointed member of the court band at Weimar, which post he resigned in 1870; finally he was professor of his instrument at the Brussels Conservatoire.—His

brother, François Matthieu (Franz S.), is a talented composer.

Service, Church, morning and evening. The usual elements of which an English S. is composed are: (1) *Venite exultemus*, (2) *Te Deum*, (3) *Benedicite*, (4) *Benedictus*, (5) *Fubilate*, (6) *Kyrie*, (7) the *Credo*, (8) *Sanctus*, (9) *Gloria in excelsis*, (10) *Magnificat*, (11) *Cantate domine*, (12) *Nunc dimittis*, (13) *Deus miseretur*, set for choir and solo voices with or without organ and orchestra. The writing may be plain, or fugal, or of a dramatic character.

Sesquialtera (Lat. "one and a half"), the ratio 3 : 2, hence (1) the Latin term for the interval of a fifth.—(2) As an organ stop (Sesquialtera), really a combination of an octave and fifth, *i.e.* of the second and third overtones, but now misused for the combination of a Quint and Tierce stop, *i.e.* the third and fifth overtones, often, indeed, with the addition of the fourth; so that, for example, on the key c the S. gives the notes *g : e' or g : e' : e'*.—(3) In measurable music a proportion (q.v.) indicated by $\frac{3}{2}$, which must, indeed, be distinguished from *Hemiolia* and from *Prolatio major* (cf. *PROLATION*). The S. indicates that three minims are worth as much as two previous ones, *i.e.* that the semibreve, which *Prolatio major* prolongs by a half, remains equal to itself. *Proportio hemiolia*, on the other hand, is outwardly distinguished from both by the employment of the black note (see *COLOR*), but is indeed so far related to the S. that it always shortened the value of the note by a third.

Set (Ger. *Bezug*), the totality of strings stretched on a stringed instrument, or those required for it. A complete S. for violin means a string for *g*, one for *d'*, one for *a'*, and one for *e'*. For a pianoforte S. a large number of strings of varying thickness (about twenty) is required. It is of the utmost importance when a string breaks to replace it by one of exactly the same thickness, because otherwise the tone contrasts disagreeably with the others.

Seventeenth (Lat. *Septima decima*), the seventeenth degree of the scale; also called the roth or 3rd. (See *INTERVAL*.)

Seventh (Lat. *Septima*; Ger. *Septime*), the seventh degree of the scale. The S. is either major, minor, or diminished. (Cf. *INTERVAL*.)

A natural S. is the seventh overtone, which answers to the minor S. (Cf. *CLANG, DISSONANCE, CHORD*.)

Seventh, Chord of the, is the term, in ordinary thorough-bass terminology, applied to the formation consisting of the 3rd, 5th, and 7th, together with its inversions: the chord of

six-five. (-three), chord of (six-) four-three, chord of (six-four-) two. (Cf. *GENERAL-BASS, DISSONANCE, and PROGRESSION OF PARTS*.) Concerning the treatment of the 7th in writing, cf. *PROGRESSION OF PARTS*.

Sextet (Sextuor), a composition of 6 obbligato parts. A vocal piece is called a S. if there are six voice parts; the instruments are not taken into consideration.

Sextolet, Sextuplet (Ger. *Sextole*), a group of six notes which is equal in value to four ordinary notes of the same kind. The real S. is a subdivided triplet (*e.g.* six semiquavers for a quaver triplet). Where the S. is intended as a double triplet it is indicated correctly and clearly as such:

Sextuor, same as *SEXTET*.

Sextus, Sexta, the sixth voice. (Cf. *QUINTUS*.)

Seydelmann, Franz, composer, b. Oct. 8, 1748, Dresden, d. there Oct. 23, 1806. He was the son of a musician of the Dresden orchestra, of which he himself, when young, became a member, and from 1765-70 was sent (together with Schuster) by the Elector to Italy to be trained. In 1772 both father and son were appointed composers of sacred music to the Elector, and afterwards conductors at the Hofkirche alternately with Naumann and Schürer, and accompanists at the Italian Opera. In 1787 they were both advanced to the rank of capellmeister. S. was a prolific composer. The royal collection of music at Dresden contains: 7 Italian operas (for Dresden, 1779 to 1782), 36 masses, a Requiem, 40 psalms, a Stabat Mater, 37 offertories, etc., several cantatas, many duets, songs, etc. The following have been published: a pf. edition of the opera *Die schöne Arsene*, some numbers from the operas *Il capriccioso corsetto* and *La villanella di Misnia*, 6 pf. sonatas for four, and 3 for two, hands, 3 flute sonatas and 3 violin sonatas.

Seyffardt, Ernst Hermann, b. May 6, 1859, Krefeld, pupil of the Cologne Conservatorium and of the Berlin Royal High School (Fr. Kiel), was for some years conductor of the female choir and of the Liedertafel at Freiburg-i.-B., and in 1892 undertook the direction of the "Neuer Singverein," Stuttgart. S. is a talented composer (dramatic scena *Thusnelda, Trauerfeier beim Tode einer Jungfrau*, violin sonata in a minor, symphony in D, variations for orchestra, etc.).

Seyfried, Ignaz Xavier, Ritter von, composer and theorist, b. Aug. 15, 1776, Vienna, d. there Aug. 27, 1841, pupil of Mozart and Kozeluch for pianoforte-playing, and of Albrechtsberger and P. v. Winter for composition; for many years he was capellmeister at Schikaneder's Theatre (1797-1828). S. was a prolific but by no means original composer. He wrote about 60 works for the stage (operas,

ballets, melodramas, etc.), also many masses, requiems, motets, psalms, offertories, graduals, hymns, also oratorios, detached arias, overtures, symphonies, quartets, sonatas, rondos, etc., many of which appeared in print. S. was also a contributor to the Leipzig *Allgemeine Musikalische Zeitung* and the Mayence *Cécilia*. He brought out Albrechtsberger's theoretical writings in a complete edition; published Beethoven's studies in general-bass, counterpoint, and composition (1832), and edited Preindl's theoretical writings under the title "Wiener Tonschule oder Anweisung zum Generalbass, zur Harmonie, zum Kontrapunkt und zur Fugenlehre" (1827). The editor of the Vienna *Allgemeine Musikzeitung* (1819-20) was not Ignaz, but his brother, Joseph v. S.

Sforzato (Ital.), rarely *sforzando* (abbr. *sf.*, *sfz.*, also *fz.* [*sforzato*], or for stronger accents, *ffz.*, *fffz.*), forced, *i.e.* brought into strong prominence—a term which always affects only the note or chord against which it is placed; and for this reason (marking more exactly the place of the accent) it appears almost always in abbreviated form. If a great number of sharp accents follow one another directly, in place of the repetition of the *sf.*, etc., it is more convenient to prescribe *sempre sforzato*. The *sf.* has only a relative strength-meaning, *i.e.* in *piano* it means something like *poco forte* or *mezzo forte*. Cf. RINFORZANDO, the abbreviation of which, *rf.* (*fffz.*), in older printing, is easily mistaken for *sf.*

Sgambati, Giovanni, distinguished Italian pianist and noted composer, b. May 18, 1843, Rome; he was the son of a lawyer (his mother was an Englishwoman), and became a virtuoso at an astonishingly early age (his first teachers were Barbieri, Natalucci, and Aldega), so that Liszt took an interest in him and superintended his further training. Also as a composer he was active at an early age, and already in 1866 produced a pf. quartet with great success, and conducted in the same year at Rome, and for the first time, Liszt's Dante-Symphony and Beethoven's *Eroica*. After S. had become known by giving many concerts, not only in Italy but also in Germany, he was appointed in 1877 principal professor of the pianoforte at the newly-established music-school of the Academy of St. Cecilia, Rome. On the recommendation of Wagner, the firm of Schott in Mayence published works by S. (2 quintets [F minor, Op. 4; B7, Op. 5], a pf. concerto [G minor, Op. 15], 2 symphonies, a quartet for strings [Op. 17], and many pf. pieces).

Sguarcialupi, Antonio, famous Italian master of the organ about 1430-70 at Florence; a few of his organ pieces are preserved.

Shake, (Ger. *Triller*, Ital. *trillo*, Fr. *trille*, formerly *cadence*), the chief and most frequent of all ornaments (q.v.), expressed by *tr.* or a simple *tr.*, formerly also by + (a *t* in unrecog-

nisable shape) or , consists of a repeated and rapid alternation of the principal note with the neighbouring upper note, according to the signature, during the whole value of the note bearing the ornament. A shake, however, should never be made in the interval of an augmented second. In the following, the auxiliary note *tr* and not *tr*, must be used, even without a *tr* being written above.  The shake begins regularly with the auxiliary note (which really is nothing more than an appoggiatura constantly repeated); it is best to begin it in slow time, and gradually to increase the speed. A long appoggiatura note before the shake was formerly specially indicated by the sign of the *Cadence appuyée* (Rameau, etc.). For the rate, and, indeed, the rhythmical structure of the S., there are no definite rules. It should be performed at the quickest speed possible (except when it occurs in the bass; for there, if executed very rapidly, it would become indistinct); no more than this need be said. Accents within the shake are faulty. Hummel's attempt (in his Pianoforte School) to commence with the principal, in place of the auxiliary note has, unfortunately, found many followers; but it is arbitrary, and can never claim retrospective power—*i.e.* before Hummel's time (Pf. School, 1828), shakes began with the auxiliary note. Only in cases in which the S., by way as it were of addition, is evolved from the principal note—*i.e.* when the note, as such, has first to play a rôle before anything further takes place—is it permissible to begin with it (in a similar manner a distinction can be made between a fore- and after-beating turn). The S. for short notes is frequently only a *Pralltriller*, or triplet, or at most a quintuplet.

To decide when a so-called *Nachschlag* (after-beat) should be added by way of close to the S., is the only problem which presents itself with regard to the latter. It is now customary to write the *Nachschlag*, when required, in small notes (almost without exception in the case of long S's). Even in modern editions of old works, the after-beats are frequently added. If the under-second is indicated as fore-beat, then we have a S. introduced by a fore-slide (*Vorschleife*), thus:

marked in old music thus: , to which sign corresponds the one for the S., with upper fore-slide:

The after-beat could also be indicated by a similar slide at the end of the S. sign; S.'s also are to be found with both slides:

The simple  is the old sign for the S., but the latter was frequently played so as to occupy only a portion of the value of the note, which was afterwards held on. (See PRALL-TRILLER.) When the sign of the S. occurs on the first note of a dotted rhythm  or  the S. must not take up the whole value of the note, but only up to the dot, and without after-beat, so that, even abbreviated, the rhythm may be preserved.

Shakes, Chain of (Ger. *Kettentriller*) is a series of connected shakes, or, more correctly, a continued shake which only has the after-beat at the end of the chain. (See NACHSCHLAG.)

Shakespeare, William, a talented English composer, b. June 16, 1849, Croydon, was, already at the early age of 13, organist of the church where formerly, as choir boy, he had attracted attention. Molière first superintended his studies in composition (1862-65), and S. then gained the King's Scholarship at the Royal Academy of Music, where Bennett became his teacher in composition. In 1871, after various chamber music works and a pf. concerto had given evidence of his gifts, he became Mendelssohn Scholar, and as such studied under Reinecke at the Leipzig Conservatorium (1871-72), and from 1872-75 made a special study of singing under Lamperti at Milan. On his return to England S. soon won a high position as composer, concert singer, pianist, and conductor. In 1878 he was appointed teacher of singing and concert conductor at the Royal Academy of Music. The compositions of S. (symphonies, overtures, etc.) show skill in the management of form, and belong to the Schumann-Mendelssohn school.

Sharp, the sign for the chromatic raising of a note (.

Shelley, Harry Rowe, b. June 8, 1858, New Haven, Connecticut, pupil of Gustav H. Stöckel and Dudley Buck, an able organist now living in Brooklyn (composer of organ and vocal pieces).

Sherwood, (1) William Hall, esteemed American pianist, b. Jan. 31, 1854, Lyons (New York), in 1871 studied under Kullak and Weitzmann at Berlin; he travelled through Germany for the purpose of study, returned to America 1876, and settled in Boston, whence he makes concert tours every year.

(2) Percy, composer and pianist, b. May 23, 1866, pupil of the Dresden Conservatorium

(Dräseke, B. Roth), received in 1889 the composition prize of the Mendelssohn Scholarship, and is now teacher at Dresden Conservatorium.

Shield, William, composer, b. 1754, Smallwell (Durham), d. Jan. 27, 1829, London. He first desired to become a shipbuilder, but at the end of his apprenticeship turned his attention to music, and studied under Avison. After some years' activity as theatre and concert conductor in Scarborough, Durham, and Newcastle, S. became a member of the orchestra of the London Italian Opera, musical director at the Haymarket Theatre, and from 1782-91 wrote a series of operas for Covent Garden Theatre. Differences with the management in relation to money matters led him to resign his post, and to undertake a long tour through France and Italy for the purpose of study. On his return he became musical director at Covent Garden (1792-1807). During the last 20 years of his life S. lived in retirement. He wrote about 30 works for the stage (operas, pantomimes, musical farces, etc.), detached numbers of which appeared in print. He published besides: 6 trios for two violins and cello, 6 violin duets, songs, and two theoretical works: "An Introduction to Harmony" (1794), and "Rudiments of Thorough-bass" (without date).

Shift, change of position of the left hand in playing on a stringed instrument like the violin, violoncello, etc. The *half shift* is synonymous with the second position, the *whole shift* with the third position, the *double shift* with the fourth position. (See POSITION.)

Short Octave, a term applied to the usual arrangement for the lowest octave, in the key- or pedal-board of old organs (from the 16th to the middle of the 18th century). There were no notes for $C\sharp$, $D\sharp$, $F\sharp$, and $G\sharp$, but the keys were so drawn in that the lowest note (c) seems to be an E :

i.e. C, F, G, A, B, are lower keys, D, E, and B \flat upper keys, or—

with C and D as upper keys.

This quite peculiar arrangement is easily explained by the fact that in the organs of the 15th and 16th centuries F was generally the lowest note, and, with the exception of $B\flat$, chromatic notes were not represented. In order to obtain the low E , D , c (mi-re-ut) without, however, widening the manual, which was

not convenient, one key was placed to the left and the others inserted as shown above. This arrangement, simply named the "Mi-re-ut," for example, by Diruta in his *Transylvano*, may possibly have been carried out also in more recent organs, since organists had become accustomed to the S. O.

Shudi. (See BROADWOOD.)

Shutting-off Valve (Ger. *Sperrventil*) is a valve in the principal wind-trunk of the organ, which completely shuts off the wind from the wind-chest, and it is regulated by means of a stop-handle. The S. does away with the whistling of the wind at the close of a performance; and when each keyboard has its special S., puts an end to the ciphering which sometimes occurs, by shutting off the wind from the keyboard in question; for the time being, the keyboard, naturally, cannot be used.

Si (Ital.; Fr. *on*), one; *si replica*, one repeats, same as *da capo*.

Si, the term applied to the sound *b*, when solmisation was done away with, and the meaning of the solmisation syllables limited to one sound. (Cf. BOBISATION.)

Siboni, Erik Anton Waldemar, b. Aug. 26, 1828, Copenhagen, d. there Feb. 22, 1892, son of the tenor singer, Giuseppe S. (b. Jan. 27, 1780, Forlì, d. March 29, 1839, Copenhagen, as opera director and principal of the Conservatorium; and from 1806-18 made a name in London, Vienna, Prague, Naples, and Petersburg), distinguished pianist, studied under J. P. Hartmann, and at Leipzig, in 1847, under Moscheles and Hauptmann; he went through the Schleswig-Holstein campaign in 1848, studied 1851-53 under S. Sechter in Vienna, and then settled in Copenhagen. In 1864 he became organist and professor of the piano-forte at the Royal Academy of Music at Sorø. As a composer S. made a name with a "Tragic Overture" (c minor, Op. 14), a pf. quartet, organ preludes, pf. pieces for two and for four hands. Of 2 operas, one (*Karl's II. Flucht*) was produced at Copenhagen in 1861. The following still remain in manuscript: 2 symphonies, a concert-overture, a pf. concerto, quartets for strings, sonatas for violin and for cello, duos for two pianofortes, grand choral works (111th Psalm, *Stabat Mater*, "Murtenschlacht," "Erstürmung von Kopenhagen"); and of these many were produced at Copenhagen.

Sicherer, Pia von, excellent concert vocalist (high soprano), b. Bayreuth, pupil of Fr. Emilie Kaula and Jul. Stockhausen; she lives in Munich.

Siciliano (*Alla Siciliano*), an old dance of quiet movement in $\frac{3}{4}$ or $\frac{1}{2}$ time, and of pastoral character, formerly common as an *andante* movement in sonatas, etc.

Sieb (Ger.; "sieve"; Lat. *cribrum*), same as fundamental board, pipe-board, *i.e.* the cover of

the wind-chest in which the holes are cut for the pipes.

Sieber, Ferdinand, renowned teacher of singing, b. Dec. 5, 1822, Vienna, d. Feb. 19, 1895, Berlin, studied under J. Miksch, and after having been for some time opera singer, still under Ronconi (junior), settled in Dresden in 1848 as teacher of singing, but went to Berlin in 1854, where in 1864 he received the title of professor. The number of his publications exceeds 100, consisting chiefly of songs and educational works, well known and frequently republished: "100 Vokalsen und Solfeegien in 6 Heften" (Op. 30-35, for each kind of voice [soprano, mezzo-soprano, alto, tenor, baritone; bass] a special work); "Die Schule der Geläufigkeit für Sänger und Sängerninnen jeder Stimmklasse" (Op. 42-43); "60 leichte Vokalsen und Solfeegien in 6 Heften" (Op. 44-49, for each kind of voice); 60 zwei-, drei-, und vierstimmige Vokalsen" (Op. 52, for two sopranos; Op. 53, soprano and alto; Op. 54, soprano and tenor; Op. 55, tenor and bass; Op. 56, soprano, mezzo-soprano, and alto; Op. 57, soprano, alto, tenor, and bass); "60 Vokalsen für vorge-rücktere Gesangsschüler zur höhern Ausbildung der Technik" (Op. 78-83); "24 sechzehntaktige Vokalsen in allen Dur- und Molltonarten" (Op. 85); "Achttaktige Vokalsen für den ersten Gesangunterricht in Schule und Haus nebst Anleitung zum Studium derselben" (Op. 92-97); "Die Kunst des Gesangs. Vollständige theoretisch-praktische Gesangsschule" (Op. 110: "Theoretische Prinzipien," Op. 111: "Praktische Studien"); "60 Vokalsen und Solfeegien im Anschluss an die theoretisch-praktische Gesangsschule" (Op. 112 to 117); "60 Vocalises" (10 for each species of voice), Op. 129-134; "Vorschule des Gesangs für das jugendliche Alter vor dem Stimmwechsel" (Op. 112); "Vollständiges Lehrbuch der Gesangkunst für Lehrer und Schüler" (1858; 3rd ed. 1878); "Katechismus der Gesangkunst" (1862; many times reprinted); "Die Aussprache des Italienischen im Gesang" (1860; 2nd ed., 1880); "Aphorismen aus dem Gesangsleben" (1865); "Kurze Anleitung zum gründlichen Studium des Gesangs" (1852; 2nd ed. 1865); "Handbuch des deutschen Liederschatzes. Ein Katalog von 10,000 nach dem Stimmumfang geordneten Liedern, nebst einer reichen Auswahl von Duetten und Terzetten" (1875).

Siegel, (1) E. F. W., the founder (1846) of the important musical firm of like name at Leipzig, d. March 29, 1869. The present proprietor is Richard Linnemann.

(2) Felix. (See SCHUBERTH, 2.)

Siface, Giovanni Francesco (Grossi, named S.), highly-esteemed *evirato*, about 1675 member of the Papal chapel, afterwards at Venice and London; about 1699, robbed and slain by his postilion while on a journey through Upper Italy.

Sifföl (Sufflöt, Subflöt), from Fr. *siffler*, "to hiss," is an open metal flute stop of wide measure, of 1 and 2 feet only (also named "Weitpfeife").

Sighicelli, name of a family of excellent violinists: (1) Filippo, b. 1686, San Cesario (Modena), d. April 14, 1773, Modena; he was at first violinist at the court of the hereditary Prince Hercules of Este.

(2) Giuseppe, son of the former, b. 1737, Modena, d. there Nov. 8, 1826; solo violinist and maestro to Hercules of Este until the latter was driven away by Napoleon.

(3) Carlo, son of the last-named, b. 1772, Modena, d. there April 7, 1806; he also held an appointment at the court of Modena.

(4) Antonio, his son, b. July 1, 1802, Modena, where he still lives, since 1835 maestro of the opera there, renowned conductor; he was at one time *chef d'orchestre* at Cento and Ferrara.

(5) Vincenzo, his son, b. July 30, 1830, Cento, pupil of Sechter, Hellmesberger and Mayseder in Vienna, in 1849 solo violinist and vice-maestro at Modena; he has lived since 1855 in Paris, and has published compositions for violin.

Sigismondi, Giuseppe, teacher of singing, b. Nov. 13, 1739, Naples, d. there May 10, 1826; wrote operas for Neapolitan theatres, lived in Naples as teacher of singing, and in 1808 became librarian at the reorganised Conservatorio. His cantatas, vocal exercises, pianoforte and organ pieces remained, for the most part, in manuscript.

Signature (Ger. *Vorzeichnung*), (1) Time S. (q.v.).—(2) Key S., the sharps or flats which are placed at the beginning of each stave of a piece between the clef and the time S., and which determine that in place of the notes of the fundamental scale (*c d e f g a b*) the prescribed raised or lowered ones are to be taken, without any further sign (accidentals) in each case. The S. now gives a clue to the key (q.v.), although it leaves undetermined whether the major or the parallel minor key is meant. Double flats or double sharps are of very rare occurrence in signatures, yet they are not impossible; for example: $\text{G}\sharp$ major would be indicated by $6\sharp$ and one \times (before F), or $\text{D}\sharp$ minor by $6\flat$ and one \flat (before B). So long as the Church Modes were in actual use (i.e. until far into the 17th century), a very limited use was made of signatures—e.g. C minor was often signed with only $2\flat$ (Dorian), but also B major with only $4\sharp$. In the 16th century only the S. of a single flat or of a single sharp was really known; the latter indicated the transposition of the fundamental scale into the upper fifth (*Cantus durus*), the former, the transposition into the lower fifth (*Cantus mollis*). But as at the present day, with a sharp or a flat, the key can be major or minor, so formerly it could equally well be Dorian as Phrygian, or Lydian,

or Mixolydian, or Eolian, etc. (Cf. CHURCH MODES.) Without signature, the Church Modes preserve their natural position (*Cantus naturalis*). A signature with two flats (the so-called transposition of the transposition) occurs very rarely in the 16th century; the twice-repeated flat before two B's on the same stave must not be taken as two different flats, for example: Also, in the treble clef, a flat frequently occurred before F, which must not be

mistaken for an $\text{E}\flat$:  (Cf. CHIAVETTE.)

Signaturen (Ger.), a term for the figures and signs ($\sharp, \flat, \natural, \text{O}, \text{t}, \text{s}$, etc.) of figured bass.

Signs (Ger. *Zeichen*). Notation is a language of signs, which can be understood directly, intuitively, without reflection. The signs used in it are, it is true, conventional, but only to a certain extent arbitrary; and new S., of which the meaning can be directly perceived, always supplant older ones, however familiar, less easy to grasp; whereas, on the other hand, simplifications, however intelligible they may seem to be, but which demand reflection—i.e. which are less easily perceptible—can never gain a footing. The older mensural notation (q.v.) expressed the duration of a note roughly by the extent in space of the body of the note $\blacksquare \blacksquare \blacklozenge$. The descending stem of the Maxima and Longa gives to them a loaded, dragged-down appearance. On the other hand, for the still smaller note values (introduced about 1300), the ascending stem, appealing directly to one's perception, indicated a lighter movement; the smallest values with their fluttering little flags (tails)

appeared especially light-winged, . In most instruction books and dictionaries, far too little importance is attached to this strict distinction with regard to the direction of the stem; and this has only been given up since the invention of music-printing (q.v.), and since the huddling together in tablature fashion of several parts on one stave. (See SCORE.) When, about 1400, white notes were introduced, it was again thoroughly sensible to give the empty, hollow bodies to the notes of greatest value, and, on the other hand, to leave to those of least value, which had to be read quickly, the black points.

Further, the direct perception of the rhythmic values was essentially helped by the cross-stroke common to a number of the smallest note-values belonging to one another:

, and by the bar-line, both of which were first used in the notation for instruments (see TABLATURE), and in the 17th century were transferred to the notation of vocal music (mensural notation).

Our notation shows changes of pitch by the higher or lower position of the bodies of the notes on the five-line stave, and by b , \sharp , \natural , \flat , and x . It remains to be seen whether the latter signs, which are not directly self-evident, will ever be supplanted by others more so; meanwhile, the idea is not an improbable one. The German tablature, obsolete for about two centuries, demanded considerable reflection, since it did not employ points placed in an evidently clear manner, but letters standing on one line to indicate notes of various pitch. On the other hand, the clear distinguishing of the various octaves by strokes or figures— $C \underline{C} c \bar{c} \bar{c} \bar{c}$ or $C C c c^1 c^2 c^3$, etc. (see A), which sprang from it, is still in use.

The following signs, specially self-evident, still require mention:—

Repetition signs:

— Legato Slur, Tie (see LEGATO).

..... } Staccato points (see STACCATO).

△ becoming stronger (see CRESCENDO).

▽ becoming weaker (see DIMINUENDO).

^ > with special emphasis (*Sforzato*); but compare the bowing marks ($\square \wedge \sqcup \vee$).

} broken chord (*Arpeggio*).

A number of ways of abbreviating notation sprang from the neumes, viz. the ornaments:

(turn, inverted turn, Pralltriller, mordent, shake).

The following signs are obsolete:

Arpeggio

Pincé

Chute, Port de Voix

Coulé

Bebung (Balancement), a mode of playing

Shake

Custos (pointing to the first note of the following line).

Concerning the meaning of the signs:

also the fractions: $\frac{2}{2}$, $\frac{2}{4}$, $\frac{2}{8}$; $\frac{3}{2}$, $\frac{3}{4}$, $\frac{3}{8}$; $\frac{6}{4}$, $\frac{6}{8}$, $\frac{6}{16}$; $\frac{9}{8}$, $\frac{9}{16}$; $\frac{12}{8}$, $\frac{12}{16}$; etc., and the numbers 2, 3 as time-signatures, see TIME-SIGNATURES, TEMPO, and PROPORTION.

The older forms of the clefs: $\frac{7}{4}$, $\frac{3}{4}$, and $\frac{11}{8}$

are to be found under G, F, and C. Γ , see GAMMA; $\delta\delta$, see article "D."

◆ | ♪ ♫ etc. and } See TABLATURE.
◆ | ♪ ♫ etc.

A small stroke near the figure, suggesting the size of an organ stop, 8', 16', etc., means "foot." See FOOT-TONE.

Signum (Lat.), sign. *S. divisionis*, same as *Punctum divisionis* (see POINT NEAR A NOTE). *S. augmentationis*, see AUGMENTATION. *S. diminutionis*, see DIMINUTION. *Signa externa* (*indicialia*) are the measure determinations placed in front near the clefs in mensurable music, indicated principally by figures and signs (O, C, P, etc.). *Signa interna, intrinseca, implicita*, on the other hand, are the changes of measure (or MODE) evident from the notation itself without special signs. Concerning other signs generally used in music, see SIGNS.

Silas, Eduard, noteworthy Dutch pianist, organist, and composer, b. Aug. 22, 1827, Amsterdam, was a youthful prodigy, played concerted music at the age of seven, and three years later appeared in public at Mannheim, where he became a pupil of the court musician Neher. In 1842 he entered the Paris Conservatoire (Kalkbrenner, Benoist, Halévy), and, in competition with St.-Saëns and Cohen (1849), received the first organ prize. In the same year he played at a concert at Amsterdam a pf. concerto of his own and other pf. pieces, improvised on a given theme, and conducted an overture also written by him. In 1850 S. settled in London, where he received a post as organist, and, in spite of the opposition which he received at first from the critics, managed to create an excellent position for himself. S. has successfully attempted all branches of composition, but is perhaps most important as a writer for the pianoforte. A *Mass* a 4 gained the prize at the International competition at Brussels in 1866; an oratorio, *Joash*, was produced at the Norwich Festival of 1863; an opera, *Nitocris*, still awaits performance. Of his other works may be mentioned several cantatas, an Ave verum, O salutaris, Magnificat with organ and orchestra, English and German songs, a symphony (in A), a *Symphonie burlesque*, also a third symphony, 3 overtures, 3 pf. concertos, Scotch fantasia for pf. and orchestra, nonet for string and wind, 3 pf. trios, pf. pieces, pieces for 'cello, organ, etc.

Silbermann, celebrated family of organ and clavier makers, of which the representatives are: (1) Andreas, b. May 16, 1678, Klein-Bobritzsch (near Frauenstein, in the Saxon Metal Mountains), d. May 16, 1734, Strassburg, where he had established himself at the beginning of the 18th century. He built 30 organs, for Strassburg, Basle, Offenburg, Kolmar, etc., and was looked upon as one of the most important organ-builders of his time.

(2) Gottfried, brother of the former, b. Jan. 14, 1683, Klein-Bobritzsch (near Frauenstein), d. Aug. 4, 1753, Dresden; the most famous of those who bore this name. His father, a master carpenter, intended him for the calling of a bookbinder, but S., owing to some mischievous youthful pranks, had to leave, and became apprentice to his brother Andreas at Strassburg. He returned home in 1712, and in 1714 produced his masterpiece, the great organ (45 stops) for the cathedral at Freiberg, which city he chose as a settled place of residence. S. built 47 organs, of which 25 with two manuals, and 4 with three (cathedral at Freiberg, Catholic Schlosskirche, Frauenkirche, and Sophienkirche at Dresden). But S. is important in another way; he certainly was not the inventor of the Hammerklavier (*see* CRISTOFORI), but probably thought of it independently at the same time as Cristofori, or even afterwards; at any rate, he is the first who constructed that instrument with great success, and brought it into general notice. (*See* PIANOFORTE). There is still to mention his invention, the *Cembal d'amour*, a clavichord with strings of double length, which were struck in the middle by the tangents, and as no part of them was damped by strips of cloth, they always gave the reduplicated octave of the note of the whole string (with slight beats).

(3) Johann Andreas, the eldest son of Andreas S., b. June 26, 1712, Strassburg, d. there Feb. 11, 1783; he built 44 organs for Strassburg, Kolmar, Basle, etc., enjoyed great fame, and wrote also a "Geschichte der Stadt Strassburg" (1775). Of his sons, Johann Josias (d. June 3, 1786) became a worthy successor to his father. A grandson, Friedrich Theodor (d. June 5, 1816), became an able cellist.

(4) Johann Daniel, the second son of Andreas S., b. March 31, 1717, Strassburg, d. May 6, 1766, Leipzig; he betook himself in 1748 to his uncle Gottfried at Freiberg, and, after the death of the latter, continued to make pianofortes with success.

(5) Johann Heinrich, the youngest son of Andreas S., b. Sept. 24, 1727, d. Jan. 15, 1799, Strassburg, constructed pianofortes according to the system of his uncle Gottfried, and introduced them into France. He was himself an able organist and pianist, also composer.

His son (6) Johann Friedrich, b. June 21, 1762, d. March 8, 1817, Strassburg, was a skilful organ-builder, but at the same time a good performer on the organ. He was organist of the Thomaskirche, Strassburg, and also composer ("Hymne à la paix," German songs, etc.).

Silcher, Friedrich, well-known and meritorious composer of popular songs, b. June 27, 1789, Schnaith (near Schorndorf, Würtemberg), d. Aug. 26, 1860, Tübingen, where, in 1817, he had been appointed musical director of the University; he held the post until within a few months of his death, and in 1852 was named

Dr. Phil. hon. causa. Previous to that he had lived as teacher of music at Stuttgart. S. greatly encouraged German "Volk" singing, especially by his "Sammlung deutscher Volkslieder" (12 parts), including many melodies of his own, which since then have become popular ("Aennchen von Tharau," "Morgen muss ich fort von hier," "Ich weiss nicht, was soll es bedeuten," "Zu Strassburg auf der Schanz," etc.); the songs appeared simultaneously a 1 and 2 with pf. accompaniment and a 4 for male voices. The following also deserve mention: a "Choralbuch" a 3, 3 books of hymns a 4 for Sundays and festivals, "Tübinger Liedertafel" (choruses for male voices), etc. For further details, *see* A. Köstlin's "Friedrich S." (1877). S. also published a "Harmonie- und Kompositionslehre" (1851).

Siloti, Alexander, gifted pianist, b. Oct. 10, 1863, on his father's estate near Charkow (South Russia), pupil of the Moscow Conservatoire (Swereff, Nik. Rubinstein [1875-81], Tschalkowsky, and Hubert), also from 1883-86 of Liszt. Already in 1880 he made a successful appearance at the Imperial Musical Society, Moscow, and also in 1883 won laurels at the Leipzig Tonkünstlerversammlung; since then he has played often in public. He has lived in Paris since 1890. S. is an imposing pianist, and is considered one of Liszt's most remarkable pupils.

Silva, (1) Andreas de, contrapuntist of the 16th century, was on friendly terms with Viridung, hence, perhaps, German or Swiss. He is only known by his compositions, specially to be found in collections between 1514 (Petrucchi's "Motetti della corona") and 1540 (Kriesstein's "Selectissimæ cantiones").

(2) Poll de, composer, b. March 28, 1834, St. Esprit (near Bayonne), d. May 9, 1875, Clermont; in 1854 he went to Paris, and was recommended by Halévy to enter the Conservatoire, but renounced the idea, as he was almost blind; later on he completely lost his sight, and his mother took down his compositions from dictation. S. composed and published many brilliant pf. pieces, sacred and secular part-songs, and songs, duets, etc.; also chamber music, and a Stabat Mater, which gained a prize at Bordeaux in 1871, and was praised as a work of importance. Symphonies, oratorios, operas, etc., remained in manuscript.

Simandl, Franz, principal contrabassist in the Vienna court orchestra, and since 1869 teacher at the Conservatorium. He has published: "Neueste Methode des Kontrabassspiels" (3 vols.: I. Preparation for orchestral-playing, with 30 studies; II. Preparation for concert-playing, with studies and sonatas by Kreutzer, Romberg, and others; III. The advanced school, in 10 parts).

Simão. (*See* PORTUGAL.)

Simile, **Simili** (Ital.), similar, in the same manner.

Simon (†), Johann Kaspar, organist and cantor at Nördlingen, published organ preludes and fugues (1750); "Gemütsvergnügende musikalische Nebenstunden in Galanteriestücken auf dem Klavier"; "Musikalisches A B C in kleinen Fughetten für die Orgel, nebst einigen Versetten" (1754), and "Erster Versuch einiger variirten und fugierten Choräle."

(2) Jean Henri, violinist and composer, b. April, 1783, Antwerp, d. there 1861; he studied under Laboussaye, Rode, Gossec, and Catel in Paris, lived at Antwerp as teacher of the violin and concert performer, and trained, among others, Meerts, Janssens, and Vieuxtemps. He wrote 7 violin concertos and other works for violin, several oratorios, also motets, etc.

(3) Christian, eminent contrabassist, b. April 3, 1809, Schernberg (near Sondershausen), d. May 29, 1872, Sondershausen, where he remained ever faithful to the court orchestra in spite of tempting calls to other parts; he was a pupil of A. Müller at Darmstadt.

(4) Paul. (See KAHNT.)

Simons-Candeille. (See CANDEILLE.)

Simplikationssystem der Orgel. (See VOGLER.)

Simpson (Symphon), Christopher, English performer on the viola da Gamba, d. before 1670. He published: "The Division Violist; or, an Introduction to the Playing upon a Ground" (1659; in Latin by William Murth as "Chelys minutionum artificio exornata . . . or the division-viol" (1667): "A Compendium, or Introduction to Practical Music" (1665 and frequently), and comments on Campion's system of composition: "Art of Discant; or, Composing Music in Parts, by Dr. Thom. Campion, with Annotations thereon by Mr. C. S." (1655).

Simrock, Nikolaus, b. 1755, Bonn, was horn-player there in the Electoral band, but in 1790 founded a music business, which since then has become one of the most important of German publishing houses (it has recently brought out especially the works of Brahms). The present proprietor, Fritz S., transferred the business in 1870 to Berlin.

Sinding, Christian, b. Jan. 11, 1856, Kongberg (Norway), studied 1874-77 at Leipzig Conservatorium, also again in 1880 with the royal scholarship in Leipzig, Munich, and especially Berlin; he is a gifted composer (pf. quintet, quartet for strings, pf. quartet, 2 violin sonatas, a pf. concerto, etc.).

Sinfonia. (See SYMPHONY and OVERTURE.)

Singelée, Jean Baptiste, excellent violinist, b. Sept. 25, 1812, Brussels, d. Sept. 29, 1875, Ostend; he wrote many violin pieces, especially fantasias on operatic airs, also several concertos (in all 144 published works). His daughter Louise, b. Dec. 5, 1844, Brussels, d. Dec. 8, 1886, Paris, was a distinguished dramatic

vocalist. His brother Charles, b. 1809, d. Aug., 1867, Brussels, was also a violinist held in high esteem.

Singer, (1) Hans, "Magister" at Nürnberg, wrote "Ein kurzer Auszug der Musik, den jungen, die singen und auff den Instrumenten lernen wollen, ganz nützlich" (1531).

(2) Peter, Franciscan monk at Salzburg, b. July 18, 1810, Häfelgehr in the Lechthal, d. Jan. 26, 1882, Salzburg; he constructed in 1839 a musical mechanism with reeds, a kind of orchestration which he named "Pansymphonikon," and published: "Metaphysische Blicke in die Tonwelt, nebst einem dadurch veranlassten neuen System der Tonwissenschaft" (1847). Peter S. was also a distinguished organist and pianist, and an especially prolific composer; he wrote not less than 101 masses, 600 offertories, about 30 great litanies, many "Marienlieder," also pf. works. The following appeared in print: "Cantus choralis in provincia Tirolensi consuetus" (Salzburg, 1862), 2 "Marienlieder," 2 "Tantum ergo," etc. In 1883 a monument was erected to him in Salzburg.

(3) Edmund, celebrated violinist, b. Oct. 14, 1831, Totis (in Hungary), was first trained by Ridley Kohne, a pupil of Boehm's, then—after he had made concert tours when eleven years of age—studied for a year with Boehm himself in Vienna, gave concerts with great success in Paris, and in 1846 became solo violinist at the Pesth theatre. After fresh concert tours and triumphs (1851, at the Gewandhaus, Leipzig), he became leader at Weimar (1854-61), and since then has occupied a similar post at Stuttgart; he is professor of the violin at the Conservatorium there, and enjoys the highest reputation as a teacher.

(4) Otto, pianist, b. July 26, 1833, Sora (near Meissen), d. Jan., 1894, New York; he attended the Kreuzschule, Dresden, and received artistic training at Leipzig Conservatorium 1851-55, and also under Liszt. In 1860 he settled in Dresden as teacher of music, but in 1867 went to New York, and afterwards became teacher at the Conservatoire, Cincinnati. The following of his compositions deserve mention: a violin sonata, a pf. sonata, and a pf. concerto.

(5) Otto, jun., b. Sept. 14, 1863, Dresden, was trained in Paris and became an able violinist, studied later under Fr. Kiel in Berlin and Jos. Rheinberger in Munich. He undertook the direction of the Heidelberg Liederkranz in 1888, became Heinrich Zöllner's successor as teacher at the Conservatorium and conductor of the male choral society at Cologne (1890), whence he removed to Leipzig in 1892. Besides various choruses for male voices, he has published a concert piece for violin and orchestra worthy of notice.

Singing is intensified speech. The slighter the impression produced by S., the nearer does it approach to actual speech, as in *parlando*, in

recitative, especially in the rendering of a plain narrative or description. On the other hand, the intensified effect of melody is to give freedom to greater or less extent from word and its rhythm, and to produce musical forms of expression, as in the jubilations of the Alleluia singing of the most ancient Christian Church, in the wordless yodling of natural song, in coloratura singing, especially in the opera. It is not possible to say exactly to what length one dare go in intensifying the musical elements of speech (of vocalisation, the bearer of cadence and of rhythm). It is arbitrary and unjust to banish coloratura; on the other hand, its exaggerated use must, from an æsthetic point of view, be regarded as reprehensible. Coloratura is the highest intensification of accent, and must be treated as such (in this matter also Wagner felt what was right; when he employs *melisma*, they mark the highest point of the situation). The question whether the new foundation for expressive rendering, as indicated under EXPRESSION, AGOGICS, PHRASING (ART OF), and expounded by the compiler of this Dictionary in his "Musikalische Dynamik u. Agogik" (1884), shows practical results with regard to the method of teaching singing, likewise the practice of singing, must be decidedly answered in the affirmative. It would be altogether perverse merely to transfer to vocal melodies the laws established for motive and phrase formation, likewise for the limitation of motive and phrase in the department of absolute music. On the contrary, it should not be forgotten that the distinctions of section, phrase, motives, and subdivision motives in a purely musical sense are, to a certain extent, analogous to the articulations of speech: sentence, half-sentence, words, and syllables, *i.e.* in singing, two kinds of articulation agreeing the one with the other, and *two means of articulation differing the one from the other*, are found combined. Up to a certain point the two can be made to agree with each other; the well-known fault of "false declamation" could not possibly be perpetrated by composers unless both factors agreed in certain main points. The chief law is the coinciding of *points of stress*, both on a small and a large scale. It is true that the poet produces many of his effects by the conflict between the word-meaning, hence word-emphasis, and the metrical scheme. Where the verse lines just answer to half sentences, and the word forming the point of stress of the meaning falls with its principal syllable on the accented member of the accented foot, the vocal rendering permits of, or rather demands the same dynamic-agogic arrangement as, an instrumental melody of similar construction. On the other hand, word-emphasis at moments which in the metrical scheme are unaccented (whether it be unaccented foot-member, or unaccented foot), plays the same rôle, as, in the department of absolute music, all formations

(syncopation, dissonance, modulating notes) requiring accent—*i.e.* they either bring about strong emphasis within the natural principal shading, or, in so far as they come into direct contiguity with the point of stress, an anticipation or retardation of the latter itself. For the limitation of phrases and motives, the word-sense and period-sense are in music altogether binding; but eventually, in strongest conflict with the limitations which result from purely musical considerations. For a discussion of this question between Julius Stockhausen and the compiler of this Dictionary, see the Vienna *Deutsche Kunst- und Musik-zig.*, 1893; cf. Riemann, "Katechismus der Gesangskomposition (Vokalmusik)," 1891.

Singing, The art of. The human voice is the most complete and the best of musical instruments. The highest praise which can be given to any other instrument is to say that it sings; and the *vox humana* is always the aim which organ-builders have in view in making experiments. But of those gifted with a voice, only few have received at the same time from nature the true art of singing; and further, the very best voice is of no use if badly managed. Singing is an art, which, besides natural gifts, presupposes method. Up to the 17th century, *i.e.* up to the period when secular music burst forth (opera), the art of singing was cultivated almost exclusively in the church. (Cf., however, MINNESÄNGER, TROUBADOURS, also MEISTERSÄNGER.) Already in the early Middle Ages the church provided good training for singers; and, indeed, Pope Hilary (5th century) is said to have established a school of singing at Rome. Old church music was rich in ornaments and colorature, in which the Franconian singers were not skilful. Charlemagne, therefore, frequently sent singers to Rome to be trained, and had teachers of singing sent to him by the Pope; thus the first schools of singing were established at St. Gallen and Metz on the Roman model. The number of schools of singing afterwards increased at a wonderful rate, and, finally, a school of singing was attached to every church which maintained a choir. The rendering of church song, when counterpoint was at its prime, demanded so much knowledge on the part of the singers, that for its acquisition many years were necessary, *i.e.* the boys' voices broke before they could take part in the singing. Thus it happened that boys soon disappeared from the choirs, and their place was taken either by *falsetti* (*tenorini*) or by *castrati*; the singing of women was forbidden by the church. For the rest, the difficulties connected with singing during the 15th and 16th centuries lay not so much in the demands made by composers on throat volubility as in the complicated relationships of mensural notation. Yet, with compositions of that period before one's eyes, it is impossible to believe that a mere rounding

off of the angular note heads and the introduction of bar lines gives a true picture of them in modern notes. It seems, rather, as if the values of the notes ought at the same time to be reduced to one-half or one-fourth; and then there were plenty of melisma, *i.e.* volubility was, after all, a necessity. Only Gregorian Song was taken in slow time and without rhythm. The singers had better opportunity of showing their artistic skill in the so-called *Contrapunto alla mente* (*Chant sur le livre*, extemporised counterpoint on the tenor of the chorale), which continued from the 13th to the 16th century, and, towards the end of the 16th century, resulted in an ornamental execution unsuitable to the contrapuntal pieces of the masters of the imitative vocal style; and thus came about a had after-blossom. (Cf. H. Goldschmidt, "Die italienische Gesangsmethode des 17. Jahrhunderts," 1890.) The opera opened up a new field to the song-loving Italians; with the introduction of the new style the old mensural determinations made way for the simplified mode of notation of the present day, and the singers, therefore, had an easier task. Hence the real blossoming forth of vocal virtuosity (*bel canto*) dates from the first blossoming of Italian opera (middle of the 17th century). The oldest guide to singing is Caccini's preface to his "Nuove musiche" (1602); *trilli*, *gruppî*, and *giri* already play in it an important rôle. Another work, still at the present day standing in high consideration, is Tosi's "Opinioni de' cantori antichi e moderni" (1723; in German by Agricola, 1757). Like virtuoso singing itself, so did the schooling for the same find its place outside the church; and it was partly celebrated singers themselves, partly famous opera-composers, who established the schools of singing. Of such a kind were the following schools: that of Pistocchi at Bologna (continued by his pupil Bernacchi, the most famous of all), that of Porpora (who lived and taught at Venice, Vienna, Dresden, London, and, finally, Naples), those of Leo, Feo (Naples), Peli (Milan), Tosi (London), Mancini (Vienna), etc. Among the famous singers of the last century were the *evirati*: Ferri, Pasi, Senesino, Cusanino, Nicolini, Farinelli, Gizziello, Caffarelli, Salimbeni, Momoletto; the tenors: Raaff, Paita, Rauzzini. Of female vocalists the following were distinguished: Faustina Hasse, Cuzzoni, Strada, Agujari, Todi, Mara, Corona Schröter, M. Pirker, Mingotti. In our century complaints are certainly made respecting the degeneration of *bel canto*, yet it can show a host of distinguished teachers who have transmitted, or still transmit, the traditions of the old Italian School: Aprile, Minoja, Vaccaj, Bordogni, Ronconi, Concione, Pastou, Panseron, Duprez, Mme. Marchesi, Lamperti, Panofka. Of German teachers of singing of the immediate past and of the present the following may be singled out: Hauser, Engel, Götze, Schimon, Stock-

hausen, Sieber, Hey, etc. From the long series of famous male and female vocalists of our century the following ladies may be mentioned: Catalani, Schröder-Devrient, Sontag, Milder-Hauptmann, Lind, Ungher-Sabatier, Pisaroni, Alboni, Zerr, Viardot-Garcia, Malibran, Pasta, Nau, Nissen-Saloman, Tietjens, Persiani, Artôt, A. and C. Patti, Alhani, Trebelli, Cruvelli, Nilsson, Monbelli, Lucca, Mallinger, Peschka-Leutner, Wilt, Materna, Saurel, Gerster, Sembrich, etc.; the male soprano Velluti (the last *evirato*, 1825-1826, London); the tenors: Tacchinardi, Crivelli, Ponchard, Braham, Franz Wild, Audran, Reeves, Rubini, Duprez, Nourrit, Tammerlik, Schnorr v. Carolsfeld, Tichatschek, Roger, Martini, Mario, Capoul, Achard, Vogl, Niemann, Wachtel, Em. Götze, Van Dyck; the baritones: Pischek, Marchesi, Kindermann, J. H. Beck, Betz, Mitterwurzer, Stägemann, Stockhausen, Faure, Gura, Scheidemantel; and the basses: Agnesi, Battaille, L. Fischer, Lablache, Tamburini, Staudigl, Levasseur, Bletzacher, Scaria, Krolop, Reichmann, Wiegand, E. de Reszke. Of educational works for the study of singing, those of Panofka, Panseron, Marchesi, Sieber, Hauser, J. Stockhausen, J. Hey, may be especially recommended, with the extra assistance of the *Solfège* and *Vocalises* of Vaccaj, Concione, Bordogni, etc. (Cf. VOICE FORMATION.)

Singspiel. (See OPERA.)

Sinico, Francesco, composer and educational teacher of singing, b. Dec. 12, 1810, Trieste, d. there Aug. 18, 1865; in 1843 he became maestro at the Jesuit College and gave singing courses on Wilhem's Method (see WILHEM); in a short time he achieved such brilliant success with his choirs of children and working men, that he was able to perform oratorios and masses. S. wrote many sacred songs for his choirs.

Sino (Ital.), up to; *sin' al segno*, up to the sign.

Siren is an instrument by means of which the number of vibrations which a note makes in a certain given time can be calculated to a nicety. The principle of the S. is simple enough: a stream of condensed air is alternately opened and closed by a disc with holes arranged in a circle which exactly coincide with the opening of the windpipe, or wind-chest, in front of which the disc rotates. The number of revolutions is marked by means of clockwork. The puffs of air following in quick succession produce a tone of constant pitch. If now the number of revolutions which the disc makes in a given time be multiplied by the number of holes, the quotient will be the number of puffs of condensed air which have escaped, *i.e.* sound waves, vibrations of the tone heard. The simplest form of S. was constructed by Seebeck, and a more perfect one by Cagniard de

la Tour (q.v.), which, recently, has been still further improved by Dove (double-siren).

Sirventes, certain songs of the Troubadours, not addressed to the beloved one of their heart, but to their princely patrons and sovereigns; in these they either sang the praise of the latter or poured forth lamentations over misfortune ("Rügelieder").

Sister (Fr. *cistre*), a kind of guitar, 16-17 century. (See ZITHER.)

Sistrum, an old Egyptian instrument of percussion which in the temple service played a rôle similar to that of the sacristan's bell in the Catholic ritual.

Sitt, Hans, b. Sept. 21, 1850, Prague, son of the violin maker, Anton Sitt, pupil of the Conservatorium there (Bennewitz, Mildner, Kittl, and Krejci), in 1867 leader at Breslau, from 1870-73 capellmeister at the Breslau and Prague theatres, from 1873-80 town capellmeister at Chemnitz, and afterwards conductor of the private band of Baron P. von Dervies in Nice until its dissolution. S. then started the "Popular Concerts" at the Crystal Palace, Leipzig; in 1883, teacher at the royal Conservatorium, Leipzig, member of the Brodsky Quartet Party (viola), in 1885 he succeeded Herzogenberg as conductor of the Bach Society. S. has published songs, pf. pieces, and 2 concertos for violins.

Sittard, Josef, writer on music, b. June 4, 1846, Aix-la-Chapelle; from 1868-72 pupil of the Conservatorium at Stuttgart, soon after which he was appointed teacher of singing and piano-forte at that institution. From 1883-84 he gave lectures on the history of music, and in 1885 succeeded Ludw. Meinardus as musical critic of the *Hamburg Korrespondent*. In 1891 the Duke of Coburg bestowed on him the title of Professor. S. published, besides many articles, some of them of an elaborate kind, for special papers, others for the *Korrespondent* (of these a selection was published in 1889, as "Studien und Charakteristiken"), "Kompendium der Geschichte der Kirchenmusik" (1881); "Zur Einführung in die Geschichte und Aesthetik der Musik" (1885); "Eine kritische Rückschau auf das erste Stuttgarter Musikfest" (1885); "Jongleurs und Menestreis" (1885); also sketches of the lives of Mendelssohn and Rossini for Waldersee's "Vortragssammlung"; a "Geschichte des Musik- und Konzertwesens in Hamburg" (1890), and a "Geschichte der Oper am Hofe zu Stuttgart" (1st vol. 1890, 2nd vol. 1891). Some of his songs and sacred choruses have appeared in print.

Sivori, Ernesto Camillo, famous performer on the violin, b. Oct. 25, 1815, Genoa, d. there Feb. 18, 1894. He was a musical infant prodigy at the age of six; and Paganini himself condescended to give him instruction, and wrote for him a concertino and 6 violin sonatas with guitar, viola, and

'cello. At the age of ten S. began his concert tours, and continued them all his life. The unfortunate loss of his savings prevented him from retiring betimes from active life, for which, however, he had little inclination. S. published 2 violin concertos, a fantasia caprice for violin and orchestra, 2 duos concertants for pf. and violin.

Six-five, chord of, an abbreviation in thorough-bass for the chord of six-five-three, *i.e.* a chord consisting of a third, fifth, and sixth, together

with the fundamental note; for instance, $\overset{6}{5} = \overset{B}{B}$

B, d, f, g. According to the system of inversion of chords, the six-five chord is the second position of the chord of the seventh (see SEVENTH, CHORD OF THE).

Six-four, chord of, a term used in thorough-bass figuring, which, quite generally, means that over a bass note marked \sharp , its fourth and sixth must be taken (according to the signature of the key). Thus, in the key of c major,

means $f : b : d$. As a rule, when reference is made to the chord of \sharp , to the careful manner in which it must be introduced, and to its characteristic meaning, the major or the minor chord in that inversion which has the 5th as bass note (3rd position) is meant. If this position is arrived at by the bass moving by degrees, and if it occurs on an unaccented part of the bar, there is nothing special to note about it; but if, on the other hand, the bass leaps to the note, then—especially if this takes place on an accented beat—the chord can receive a different interpretation: it can appear as dissonance, and, indeed, as a double dissonance of suspension (4th and 6th before 3rd and 5th), and demands corresponding treatment. (Cf. DISSONANCE.)

Sixth (Lat. *sexta*; Ger. *Sexte*), the sixth diatonic degree. The S. is either major, minor, or augmented. (Cf. INTERVAL.) Special terms in harmony are the Neapolitan S. (q.v.) and the Dorian S. (See DORIAN; cf. also FRENCH SIXTH and GERMAN SIXTH.)

Skroup (Skraup), (1) Franz, composer, b. June 3, 1801, Wositz (near Pardubitz), d. Feb. 7, 1862, Rotterdam; he attended the Gymnasium at Königgrätz, and studied jurisprudence at Prague; but at the same time he so developed his musical talents that instead of pursuing the career of a lawyer, he became in 1827 second capellmeister at the subsidised theatre at Prague; in 1860 he became capellmeister at the Opera in Rotterdam. S. wrote a number of Bohemian operas, also incidental music to plays, overtures, etc., and Bohemian songs which became popular.

(2) **Johann Nepomuk**, brother of the former, b. Sept. 15, 1811, d. May 5, 1892, Prague; in 1838 choirmaster at the Kreuzherrenkirche, and afterwards second capellmeister, at the subsidised theatre at Prague; in 1845 director of the choir of the cathedral of St. Veit's, and in 1846 teacher at the theological college. He wrote several operas, many sacred works (masses, requiem, Te Deum, offertories, etc.), and published a singing Method, a "Manuale pro sacris functionibus," "Musica sacra pro populo," etc.

Skuhersky, Franz Zdenko, Bohemian composer and theorist, b. July 31, 1830, Opotčno (Bohemia), d. Aug. 19, 1892, Budweis; he attended the Gymnasium and studied medicine at Prague and Vienna, but at the same time was a pupil of the organ school at Prague (under Pitsch and Kittl), and finally gave himself up entirely to music. In 1854 he wrote his first opera, *Samo* (not produced), and in the same year went as theatre capellmeister to Innsbruck, where he wrote the operas *Vladimir* and *Lora*, but soon gave up his post, and was for a long time conductor of the musical society and director of the choir at the University Church, Innsbruck. In 1866 S. succeeded Krejčis as director of the Prague organ school; and in 1868 became also town chorus director and "Hofkapelldirector." From 1874-89 he was examiner for middle-class schools, from 1879 also lecturer on music at the University. The operas *Vladimir* and *Lora*, and a new one, *General*, were produced and met with much success at the Bohemian theatre. S. also wrote several masses and the following works on theory: "Treatise on Musical Form" (1879; also in German); "Treatise on Composition" (1881); "The Organ and its Structure" (1882); "Theoretical and Practical Organ School" (1882); and "Method of Harmony on a Scientific Basis" (1885; also in German).

Slargando (Ital. = *allargando*), broadening; generally combined with *cresc.*

Slätinn, Ilja Ilitsch, b. July 7, 1845, Belgorod (Russia); he studied at the Petersburg Conservatoire (Dreyschock and Zarembo), also under Th. Kullak and Wüerst at Berlin. S. is now director of the Charkow division of the Imperial Russian Musical Society.

Slavik, Joseph, highly-gifted performer on the violin, b. March 26, 1806, Jince (near Pribram, Bohemia), d. May 30, 1833, Pesth; pupil of the Prague Conservatorium (Pixis), in 1823 violinist of the Prague theatre orchestra. In 1825 he went to Vienna, where, in 1829, he became member of the Court Opera band. He also gave successful concerts in Paris. S. wrote two violin concertos (F# minor and B minor), a double concerto for two violins (F#), a quartet and other pieces for strings.

Slentando (Ital. = *lento*), becoming slower.

Slide-trumpet, a trumpet still used in Eng-

land, with a slide-action (Ital. *Tromba a tirarsi*) similar to that of the trombone.

Slur (Ger. *Bogen*), a sign in notation for *legato* performance, the same one which is used to tie (bind) together (hence the German term *Bindobogen*) two notes of the same pitch, so that the first note is held on and not repeated. The sign is not a clear one; there is often doubt as to which of the two meanings is the correct one. It were much to be desired that each kind had its own name and sign. The slur indicating legato-playing might, once for all, be called *Legato slur* (*Legatobogen*), and the other, *Holding slur* (*Haltebogen*). The latter should always extend exactly from note-head to note-head; L. Meinardus uses for it the following sign: . (Cf. PHRASING.)

Small Octave, *i.e.* *c-b*. (Cf. Synopsis of Notes, p. 1.)

Smanioso (Ital.), furious.

Smart, (1) Sir George Thomas, distinguished English conductor, organist, and composer, b. May 10, 1776, London, d. there, Feb. 23, 1867. He was one of the original members, and for many years conductor (1813-44), of the Philharmonic Society, organist and composer of the Chapel Royal, and a musician of great merit, who first made known Beethoven's works, and also those of Schumann, in England. From 1813-25 he conducted the Lenten oratorio performances, and from 1823-42 many musical festivals at which Sontag, Lind, Malibran, etc. sang; the last-named, at the musical festival of Manchester, 1836, which proved fatal to her. S. conducted the music at the coronation of William IV. (1820) and of Queen Victoria (1837). He published Orl. Gibbons' madrigals and Handel's Dettingen Te Deum, also a number of his own anthems, glees, and canons. His brother Henry, b. 1778, d. Nov. 23, 1823, Dublin, the father of the following (2), was an excellent violinist, but finally became a pianoforte maker in London.

(2) Henry, nephew of George S., a highly-esteemed organist and noteworthy composer, b. Oct. 26, 1813, London, d. there July 6, 1879. S. wrote cantatas, songs, duets, terzets, part-songs (especially for female voices), organ pieces in great number; also in later years, and when he was perfectly blind, an opera, *Bertha*, and several cantatas (*The Bride of Dunhervon*, *King René's Daughter*, and *The Fishermidens*); also a sacred cantata (*Jacob*), anthems, etc. For some time he held the post of organist at St. Pancras.

Smetana, Friedrich, Bohemian composer and distinguished pianist, b. March 2, 1824, Leitomischl, d. May 12, 1884, after a brief confinement in the lunatic asylum at Prague; he studied under Proksch in Prague, and afterwards for a short time with Liszt. He opened a music school in Prague, married the pianist Catharina Kolár, and in 1856 undertook the post of conductor of the Philharmonic Concerts at Gothenburg. The harsh climate caused

the death of his wife in 1860. In 1861 he made a concert tour through Sweden, and returned to Prague, where in 1866 he became capellmeister at the national theatre. In 1874 he was compelled to resign this post on account of deafness. S. was a thoroughly national Czechish composer, and as such takes high rank. He wrote many Bohemian operas (*Die verkaufte Braut* [1866], *Die Brandenburger in Böhmen* [1866], *Dalibor* [1868], *Zwei Witwen* [1874], *Der Kuss* [1876], *Das Geheimnis* [1878], *Libussa* [1881], *Die Teufelswand* [1882]); also symphonic poems (S. was an enthusiastic follower of the Berlioz-Liszt-Wagner party): *Wallensteins Lager*, *Richard III.*, *Hakon Jarl*, *Mein Vaterland* (*Vlast*, including *Moldau*, *Visehrad*, *Sarka*, *Aus Böhmens Hain und Flur*, *Tabor*, and *Blaník*), "Triumphsymphonie" (1853); "Prager Karneval" for orchestra, quartets for strings (æ minor and c major), pf. trio, Bohemian national dances for pf., part-songs, festival march for the 300th anniversary of Shakespeare's birth, many pf. pieces, etc.

Sminuendo (Ital.), decreasing; same as *diminuendo*.

Smit, Johann, violinist, b. May 23, 1862, Utrecht, pupil of the Royal School of Music at The Hague and of Léonard in Paris; was from 1882-83 leader under Bilse at Berlin, and, after long concert tours, settled in Ghent in 1889 as teacher at the Conservatoire.

Smith, (1) Robert, professor of physics, natural philosophy, and astronomy at Cambridge, b. 1689, d. 1768. He published an excellent work: "Harmonics; or, the Philosophy of Musical Sounds" (1749, also 1759 and 1762).

(2) John Christopher (really Johann Christoph Schmid), composer, b. 1712, Ansbach, d. Oct. 3, 1795, Bath; he was the son of a friend of Handel in his younger days who followed the composer to London; young S. then became Handel's pupil. S. brought out in 1732 his first opera, *Teraminta* (London). When Handel became blind, it was S. to whom he dictated his compositions, and who represented him at the organ and the cembalo. After Handel's death, S. continued the oratorio performances for some time, and also himself wrote oratorios. Of his works the best are the operas, *The Fairies* and *The Tempest* (printed); his oratorio *Paradise Lost*, and his pf. pieces. He wrote 4 English and 3 Italian operas, 7 oratorios, some cantatas, pastorals, etc. Some fragments of important unpublished works are to be found in "Anecdotes of G. F. Handel and J. Ch. S." (1799).

(3) John Stafford, b. about 1750, Gloucester, d. 1836, as organist of the Chapel Royal, London; he published many glees, also "A Collection of Songs of Various Kinds for Different Voices" (1785), and a valuable collection, "Musica Antiqua," a Selection of Music from the XII. to the XVIII. Century (1812).

(4) John Spencer, b. Sept. 11, 1769,

London, d. June 5, 1845, Caen (Normandy), Dr. jur. He wrote: "Mémoire sur la culture de la musique dans la ville de Caen et dans l'ancienne Basse-Normandie" (1828).

(5) Sydney, distinguished pianist, b. July 14, 1839, Dorchester, d. March 3, 1889, London, pupil of the Leipzig Conservatorium; he lived in London from 1858, highly esteemed as a teacher of music. He published a large number of drawing-room pieces for pf., which became popular, also a pf. Method, etc.

Smolian, Arthur, b. Dec. 3, 1856, Riga, pupil of Rheinberger, Wüllner, and Carl Bärmann at the Munich Conservatorium, was during the years 1879-82 at various theatres, amongst them Berlin (under Kroll), Basle, and Stettin, as *regens chori* and capellmeister. He then settled in Leipzig, where he conducted until autumn, 1884, the male vocal society as Langer's successor; he was at the same time active as teacher and critic. Afterwards S. lived in Wiesbaden, up to the end of 1890, as teacher of pianoforte and of singing, and since then he has been active at Carlsruhe as teacher at the Conservatorium; also as musical critic of the *Karlsruher Zeitung*. As a composer S. has up to now appeared in public only with pleasing songs for one or more voices. His activity as critic, also in the *Musikalisches Wochenblatt* (amongst others), is distinguished by thoroughness and freedom from prejudice. In the year 1889 S. was also assistant at the Bayreuth Festival, for which he has repeatedly pleaded both by word of mouth and by writing; in 1891 he wrote an "Einführung in die Musik des Tannhäuser," commissioned by the central management of the "Allgem. Rich. Wagner-Verein."

Smorzando (Ital.), dying away; same as *morendo*.

Snel, Joseph François, violinist and distinguished conductor, b. July 30, 1793, Brussels, d. March 10, 1861, Koekelberg (near Brussels); he studied at the Paris Conservatoire (1811-13), then became violinist, afterwards solo violinist, at the Grand Théâtre, Brussels; in 1830, *chef d'orchestre* there, which post he resigned several times when new directors wished to reduce the expenses of the orchestra. He was also solo violinist in the royal private band, in 1835 *maitre de chapelle* at SS. Michael and Gudula, in 1837 bandmaster of the National Guard, also from 1831 conductor of the *Grande Harmonie*; but with increasing age he resigned several of these posts. S. was an excellent teacher, and rendered good service by introducing the methods of Galin and Wilhem for teaching music to the people; with these methods he obtained excellent results, and in 1828 became director of the normal school for military bandmasters of the Netherlands army, and in 1829 inspector-general of the music schools founded for the various army corps. In addition to this many-sided activity, S. composed operas, symphonies;

cantatas, masses, motets, military marches, concertos for clarinet, violin, horns, cornet, etc.

Snuff-box, Musical, a mechanical invention which has achieved great popularity. The "Snuff-box Waltz," composed about 1830 for that instrument, is well known.

Soares, João. (See REBELLO.)

Soave (Ital.), soft.

Societies, Musical (Ger. *Vereine*). The important S. in Germany for the benefit of music and musicians are:—

(1) *Allgemeiner deutscher Musikverein*, founded in 1859 by Fr. Brendel, L. Köhler, etc., on the occasion of the 25th anniversary of the *Neue Zeitschrift für Musik*, which for a long time was the organ of the society. It is spread over the whole of Germany, and even beyond, and has a very large number of members. The aim of the S. is to produce new (also unpublished) compositions of importance, also older but seldom-heard compositions of note; and for this purpose a yearly musical festival (*Tonkünstlerversammlung*) is held, with change of place—Weimar, Carlsruhe, Dessau, Meiningen, Altenburg, Leipzig, Erfurt, Wiesbaden, Baden-Baden (1881), Magdeburg, Sondershausen, Cologne (1887), etc. The headquarters of the S. are at Leipzig (Brendel, Riedel, both deceased), the patron is the Grand Duke of Weimar; for many years Franz Liszt was honorary president. The S. specially favours the so-called new German tendency, and the parallel movements abroad (Berlioz, Saint-Saëns, Tschaiowsky, Borodin, etc.). The yearly subscription for members is 6 Marks (ladies also are admitted), and this admits them to the performances. The S. performs, at its own expense, works of members which the management thinks worthy of publication. The so-called "Deutsche Musikertage" are meetings for the discussion of matters of interest to music and musicians, and are held occasionally during the "Tonkünstlerversammlungen." The "Allgemeiner deutscher Musikverein" has branches in various towns, which arrange performances of chamber music for members of the S. and free of charge.

(2) *Allgemeiner deutscher Musikerverband*, established, 1872, in the interest of practical musicians, by H. Thadewaldt, who is still the president. The organ of the S. is the *Deutsche Musikerzeitung*, and its headquarters are at Berlin. A pension fund, a widows' fund, etc., and a Central Employment Bureau are connected with it (Berlin). For special reasons, the greater number of Berlin and Hamburg musicians withdrew from the union (Verband) and established an independent one with an organ of their own (*Neue Musikerzeitung*), also a fund for the sick, etc.

(3) *Allgemeiner Richard Wagner-Verein* sprang in 1883 from the Bayreuth Patronatverein, the continuation of the "Patronatverein zur Pflege und Erhaltung der Festspiele in Bayreuth,"

founded to provide means for the first Bayreuth Festival of 1876. The aim of the "Patronatverein" was, first of all, to provide means for the performance of *Parsifal* (summer of 1882), and especially to carry out Wagner's idea of regular festivals and the establishment of a "Dramatisch-musikalische Stilbildungsschule." The board of directors of the society is the "Verwaltungsrat der Festspiele" (administrative council of the festivals), and the organ of the society, the *Bayreuther Blätter*. In every important German town there is a branch society, with official representatives of the central society. The subscription to the "Patronatverein" was 15 Marks per annum (after 1878, new subscribers paid in full from that year); the "Allg. R.-W.-Verein" has a subscription of only 4 Marks per head (but it accepts donations), and distributes a great number of free tickets among its members for the performances. There are, besides, in many cities Wagner Societies whose only purpose is to further the understanding of Wagner's ideas and works.

(4) *Catholicverein* (see CECILIA), for all German-speaking countries; a society for the raising and advancement of Roman Catholic church music, founded by Franz Witt in 1867, organised in 1868 at Bamberg. The organ of the society is the *Fliegende Blätter für katholische Kirchenmusik*. The society has a great number of members at home and abroad, especially in America.

(5) *Deutsche Genossenschaft dramatischer Autoren und Komponisten*, to secure to authors and composers their stage rights (founded 1871), president, R. Gottschall, Leipzig; musical director, C. Reinecke; managing director, Dr. Br. Winckler, Leipzig.

(6) *Deutscher Sängerbund* (founded 1862), a union composed of 57 separate societies (1880), in all about 50,000 singers. The object of the society is to encourage male choral singing, and to arrange great choral festivals. At the head there is a general committee, the members of which are scattered through all the provinces of Germany (Dr. Langer at Dresden [deceased], Professor Faisst at Stuttgart, etc.); the executive committee is not a permanent one. (Cf. LIEDERTAFEL.) In 1877 the society established a fund for honorary gifts and in aid of composers of male choral songs; likewise, in the event of death, of their families. The capital has already reached a sum of 50,000 Marks.

(7) *Genossenschaft deutscher Bühnengehöriger*, a noble institution for actors and singers of the German theatres, with a capital of 2,000,000 Marks; by a yearly payment the membership secures to them the right of a good pension. Berlin is the centre, the actual president (1887) is Franz Betz, the general secretary J. Barth; its treasury is at Weimar. The institution publishes a paper of its own. Associated with it there is a pension fund for widows and orphans, with a capital of 90,000 Marks.

(8) *Deutscher Musiklehrerverband* (established in 1886, by the amalgamation of the music teachers' societies in the various towns of Germany), established through the special influence of Prof. Emil Breslaur. The society was founded on the model of the one at Berlin (1879), and its object is the material welfare of music teachers. A special feature of the society is a common sick fund. Prof. Alsleben is the president, and the organ of the society the *Klavierlehrer*.

Of English societies we may name:—The *Society of British Musicians*, founded in 1834 to aid native talent in composition and performance; the *Society of British and Foreign Musicians*, a benevolent society, providing for the relief of its members during sickness, and, in event of death, of their wives and families; the *Musical Artists' Society*, founded in 1874, to encourage living musicians by giving performances of their compositions; the *Incorporated Society of Musicians*, recently established to provide opportunities for personal and friendly intercourse between its members, and for the discussion of all matters relating to music or musicians; the *Musical Antiquarian Society*, for the publication of scarce and valuable works by English composers, established 1840, but lasted only seven years; also the *Musical Association*, established in 1874, for the investigation and discussion of subjects connected with the science and art of music. The *Royal Society of Musicians of Great Britain*, a benevolent institution, founded in 1738. Among the first members were Handel, Boyce, and Arne (for further details, see Grove's "Dictionary of Music and Musicians").

Södermann, August Johann, Swedish composer, b. July 17, 1832, Stockholm, d. there Feb. 10, 1876; pupil of the Leipzig Conservatorium; from 1862 until his death he was theatre capellmeister in Stockholm. Best known in Germany is his "Bröllop" ("Wedding") for four female voices, which was admirably performed by the first itinerant Swedish quartet of ladies. S. composed, among other things, an overture and incidental music to "Jungfrau von Orleans," an operetta, a mass, and small vocal pieces.

Sol, solmisation name of *g*. (Cf. SOLMISATION and MUTATION.)

Soldat, Marie, eminent violinist, b. March 25, 1864, Graz, pupil of Pleiner and Pott there, and of Joachim in Berlin, married (1889) the "Rechtskonzipient" Röger of Vienna (since then Frau S.-Röger).

Solfa. (See TONIC SOLFA ASSOCIATION.)

Solfeggio (Fr. *Solfège*), vocal exercises for training the ear, exercises for reading music. It is the preparatory elementary course for all pupils at the Paris Conservatoire; a system, unfortunately, neglected in many other institutions. The vocal exercises named S. are, as a rule, sung to the note names, *ut* (*do*), *re*, *mi*, *fa*,

sol, *la*, *si*, and are therefore also exercises in vocalisation. (See VOCALISE.)

Solié, Jean Pierre (really Soulier), dramatic singer and composer, b. 1755, Nîmes, d. Aug. 6, 1812, Paris. He was at first a tenor, and sang at Nîmes, and then at the Opéra Comique (Comédie Italienne) at Paris, but without any particular success, until his voice turned into a sonorous baritone, a kind of voice quite unknown up to that time at the Opéra Comique. Composers wrote rôles expressly for him, and he became the hero of the day. In 1790 he also appeared as a dramatic composer, and up to 1811 wrote 34 comic operas, for the most part in one act; these, however, were not all successful. The following operas appeared in print: *Le Jockey*, *Le secret*, *Le chapitre second*, *Le diable à quatre*, and *Mademoiselle de Guise*.—His son Emile wrote historical pamphlets on the Paris opera theatres.

Solle, Friedrich, b. 1806, Zeulenroda (Thuringia), d. there Dec. 5, 1884, as cantor. Of his numerous compositions there appeared in print, among other things, a violin Method, which has already passed through eight editions.

Solmisation, a peculiar method of imparting a knowledge of intervals and scales, and one which was in force for centuries; it is ascribed to Guido d'Arezzo (about 1030), and it is certain that it was already much in vogue about the year 1100. S. was evidently closely connected with *Musica ficta*, which sprang up at that period, i.e. the use of chromatic notes, foreign to the fundamental scale, it discloses a presentiment of the inmost essence of modulation, i.e. by the transition to scales answering to our *G* and *F*, etc., which are nothing more than scales after the model of *c* major, on other degrees. The six notes, *c d e f g a* (*Hexachordum naturale*), received the names *ut*, *re*, *mi*, *fa*, *sol*, *la* (from the initial syllables of a Hymn to St John: "*Ut queant laxis Resonare fibris Mira gestorum Famuli tuorum Solve polluti Labii reatum Sancte Johannes*"). These same syllables could also be employed starting from *f* or *g*, so that *f* or *g* became *Ut*; *g* or *a*, *Re*, etc. Hence it followed when *a* was *Mi*, the next step (*Mi*, *Fa*) arrived on a different note from the *Mi* of the Hexachord beginning with *g* as *Ut*, i.e. the difference between *b̃* and *b̃̃* (*B rotundum* or *molle* [*b̃*] and *B quadratum* or *durum* [*b̃̃*]) was clearly established. (Cf. ACCIDENTALS.) A passing upwards from *u*, whether to *b̃* or to *b̃̃*, would necessitate a transition from the *Hexachordum naturale*, either to the one beginning with *f* (with *B molle* [*b̃*], hence *Hexachordum molle*), or to the one beginning with *g* (with *B durum* [*b̃̃*], hence *Hexachordum durum*); in the former case the passage from *g* to *a* appeared as *Sol-Mi*; in the other, as *Sol-Re*. The term S. is derived from the first of these. Every similar change of hexachord was called a *Mutation*

(q.v.). The so-called Guidonian Hand (q.v.) was used to explain S. more conveniently. In Germany S. was never much in vogue; but, on the other hand, in Italy and in France the solmisation names entirely superseded the letter names, especially after that the introduction of a seventh syllable (Si) for the note *b \sharp* , which in S. had no name, did away with mutation. (Cf. BOBISATION.) In Italy and in France the compound names *C solfaut*, *G solrent*, etc., were used for a long time, for, in fact, *c* was *Ut* in the *Hexachordum naturale*, *Fa* in the *Hexachordum molle*, and *Sol* in the *Hexachordum durum*, etc. The Italian names *Solfia*, for scale, and *solfeggiare*, to sing the scales, are naturally derived from solmisation. For the modern system of transposed scales S. is impracticable; its funeral dirge was sung by Mattheson (1717).

Solo (Ital.), alone; *tasto solo* (t. s.) indicates in thorough-bass figuring that the other voices cease, and that only the bass part itself has to be played. S. is also a term used for an instrumental piece which is to be played alone, not accompanied by any other instrument (solo pieces, for pf., violin, flute, etc.). In works written for orchestra, S. indicates some striking, prominent passage to be performed in an expressive manner by a single instrument, but, as a rule, other instruments play at the same time (accompanying instruments); it is, therefore, the same in a score, whether a passage for clarinet, horn, etc., is marked S., or *con espressione* (c. *espr.*), *- espressivo* (*espr.*). There is another shade in the meaning of the term when in instruments of which there are several, it indicates the reverse of *Tutti*. S. marked in the part of the violins (violas, 'celli, basses) indicates that only one violinist (the solo violin, leader) is to play the passage; the re-entry of the other players is indicated by *Tutti*. In the same sense in choral works S. indicates the opposite of "Chorus." (Cf. RUPINEN.)

Solowjów, Nicolái Feopométowitsch, b. April 27, 1847, Petersburg, professor at the Conservatoire there, composer, author, and clever critic (opera *Cordelia*, 1885).

Somis, Giovanni Battista, famous violinist, b. 1676, Piedmont, d. Aug. 14, 1763, as royal maestro at Turin; teacher of Giardini and Chabran. He published "Opera prima di sonate a violino e violoncello o cembalo" (1722). His brother Lorenzo was likewise an excellent violinist.

Sommer, Hans (really Hans Friedrich August Zincke, named S.), b. July 20, 1837, Brunswick, studied and graduated at Göttingen; he became also Professor of Physics there, subsequently director of the Technical High School, Brunswick. S. resigned the latter post, 1884, in the following year married a daughter of Karl Hill and went to Berlin, and in 1888 to Weimar. He owes his musical training to J. O. Grimm and Meves, Bruns-

wick. S. has become known in wider circles as a song composer of taste through Eugen Gura, and has also brought out successfully an opera, *Loreley*, in Brunswick, 1891.

Sonata (Ital. *Sonata*, *Suonata*, "sounding piece") was originally, when the development of instrumental music (q.v.) was in its earliest stage, quite a general term for instrumental pieces (just as *Toccata* was the special one for keyed instruments), and opposed to *Cantata* ("vocal piece"). The oldest composer who used the term *Sonata* was Andrea Gabrieli, whose "Sonate a 5 istromenti" (1568) unfortunately no longer exist. On the other hand, some sonatas by his nephew, Giovanni Gabrieli, have been preserved (1597 and 1615). These oldest sonatas are pieces for several instruments (violins, violas, "Zinken," and trombones); their characteristic feature does not, as in the *Canzone*, consist of free imitations, but in the evolution of harmonic fullness. They were practically intended as an introduction to a sacred vocal work. The S. (or *Symphonia*) appeared later on also as an introduction to the cantata. About the middle of the 17th century (Biagio Marini, 1655) a difference began to be established between the *Sonata da chiesa* (church sonata) and the *Sonata da camera* (chamber sonata). The former remained true to the principle of its origin, preserved its connection with sacred vocal music, and excluded, in name at least, the dance movements, which were annexed to the fully-developed suite form first used for lute and clavier, and which gradually became chief elements in it; in the former, also, the organ, in place of the cembalo, was used for the rendering of the figured bass. For the rest, wind-instruments rapidly disappeared from the sonatas *u* 1-3 with continuo, now cultivated with special preference; these, indeed, became the prerogatives of stringed instruments (Vitali, Torelli, Corelli). At the same time, the sonata written for many, and especially wind-instruments, was used for festival processions, banquets, and similar secular occasions. (Cf. PEZEL.) Already in 1677 Vitali wrote his sonatas *a* 3, 4, and 5, alternating between *Allegro* (*Presto*, *Vivace*) and *Grave* (*Largo*, *Adagio*). The church sonata became more and more emancipated from the tendency to vocal style, and developed rich figuration, the true characteristic of instrumental music, a process materially hastened by the inroad of the elements of the suite (*Balletto*). The name S. was actually transferred to clavier works formed after the model of the *Sonata da chiesa* thus developed, by Johann Kuhnau (q.v.). The amalgamation of both kinds of S. was gradually brought about in clavier music by Domenico Scarlatti, J. S. Bach and his sons Friedemann, Philipp Emanuel, and Johann Christian, and by Joseph Haydn; and by Locatelli, Veracini, Tartini in violin music. These gradually introduced the contrasting second

subject into the characteristic principal movement (1st movement) of the S., also a new method of development of thematic material (resolution of its elements in place of mere repetition in other keys). (Cf. FORM, INSTRUMENTAL MUSIC, ACCOMPANYING PARTS, GALANT STYLE, etc.) After the definite establishment of the form of the S. by Haydn, Mozart, and Beethoven, it became the standard for all kinds of instrumental *ensemble* (violin and pianoforte; piano, violin, and 'cello [pianoforte trio]; quartet for strings, etc.) and for orchestral (symphony). The opening *allegro* movements of these cyclical forms are always in mature sonata form.

Sonatina, small sonata, easy to understand and easy to play. The first movement of the S. has either no development section or only a short one; and the number of movements is rarely four (for the most part two or three).

Sonnleithner, (1) Christoph, Dr. jur., writer on jurisprudence, dean of the faculty of jurisprudence in Vienna, b. May 28, 1734, Szegedin (Hungary), d. Dec. 25, 1786, Vienna. He was a zealous musical amateur, and also composed; but of his many orchestral and chamber works only four stringed quartets were published.

(2) Joseph, son of the former, b. 1765, Vienna, d. there Dec. 25, 1835. He was at first district commissioner and secretary of the court theatre, afterwards government councillor and one of the founders of the Gesellschaft der Musikfreunde and of the Conservatorium, and was secretary of both institutions up to his death. He bequeathed his library and collection of musical instruments to the Gesellschaft der Musikfreunde. In 1794, 1795, and 1796 he published a "Wiener Theater Almanach," which contains interesting notices. He had the idea of publishing on a large scale (60 volumes) works of old and modern composers, but did not accomplish his purpose. S. discovered in 1827 the famous Antiphony of St. Gallen with neume notation, dating from the 9th century, probably a copy of the Antiphony sent through Romanus, in the year 790, by desire of Charlemagne. (Cf. LAMBILLOTTE.)

(3) Leopold von, Dr. jur., b. Nov. 15, 1797, Vienna, d. there March 4, 1873, grandson of Christoph v. S. and nephew of Joseph v. S. He deserves honourable mention in every musical dictionary, for to him must be ascribed the merit of having brought about the publication of Schubert's first work (*Erködnig*), since in 1821 he induced some of his friends who were lovers of art (amongst whom was his father, Dr. jur. Ignaz von S.) to bear the costs of publication. S. was on very intimate terms with Schubert; this composer's *Prometheus*, "Gesang der Geister über den Wassern," and the 23rd Psalm, etc., were performed from manuscript in his father's house.

Sontag, Henriette Gertrude Walpurgis, celebrated singer, b. Jan. 3, 1804,

Coblentz, d. June 17, 1854, Mexico. As her parents were actors, she was destined at an early age for the stage, and first appeared in children's parts. When, in 1814, her father died, her mother went to Prague, and at the age of eleven she was received as a pupil of the Prague Conservatorium (the normal age for admission was twelve), where Triebensee, Pixis, Bayer, Frau Czezka were her teachers. In 1820 she sang alternately at the Italian and German Opera, Vienna, without creating any special sensation. Her reputation dates from the time of her engagement at Leipzig in 1824, where she celebrated her first and lasting triumph in *Freischütz* and in *Euryanthe*; but she only remained there a short time, as she was persuaded to accept a call to the Königsstädter Theater, Berlin (1824). In 1826 S. obtained leave of absence, and went for the first time to Paris, and made a great sensation in *Il Barbiere di Siviglia* as Rosina, especially in the inserted variations by Rode, in which she showed herself a superior coloratura singer to Catalani. In 1827 she broke her contract with Berlin and accepted an engagement at the Italian Opera, Paris. In 1828 she married secretly in London the Sardinian ambassador at The Hague, Count Rossi, whom she had already known in Berlin, he having occupied the position of secretary to the embassy there; and in 1830 she bade farewell to the stage. Before that S. was ennobled by the King of Prussia, Fräul. von Clarenstein. She appeared as a concert singer for a long time afterwards, and was always received with enthusiasm. From 1837-48 she lived in Petersburg, where her husband was ambassador. Unfortunately, changes of fortune forced her to resume her artistic career; she sang again in concerts at Brussels, Paris, London, and went to America in 1852. In 1854 she accepted a brilliant engagement at the Italian Opera in Mexico, but died shortly afterwards of cholera. The work "Henriette S." (1861, 2 vols.), by Gundling, is a novel, which gives a more or less imaginative description of her youthful career. (Cf. also RELLSTAB.) The actor Karl S. is her brother.

Sontheim, Heinrich, opera singer (dramatic tenor), b. 1820, Bebenhausen (near Stuttgart). From 1840-43 he was at Zurich, then at Carlsruhe, and since 1856 has been engaged at the Court Theatre, Stuttgart; and by occasional performances at Vienna, Munich, Berlin, he has made his name known to advantage. In 1872, on account of an affection of the throat, he withdrew from public life.

Sopra (Ital.), above; *come s.*, as above (similar to a previous passage).

Soprano (Lat. *Supremus*, *Discantus*, *Cantus*; Ger. *Sopran*; Fr. *Dessus*), the highest kind of voice, differing from alto in that it lies chiefly, not in the so-called chest, but in the head register. The S. voice is either that of women,

boys, or *evirati*; castration (q.v.), which was cruel and unnatural, produced soprano voices, in which were united the timbre of boys' voices with the strong lung-power of a man. In the Papal Chapel and elsewhere (15th-17th centuries) the soprano parts were given to the so-called Falsettists (*Tenorini*, *Alli naturali*) instead of *evirati*, who were only occasionally allowed, and in place of boys, who on account of the difficulty of the theory of mensurable music, could not learn with sufficient rapidity. For this reason the soprano parts were written low, so as not to ruin the voice too quickly. The normal compass of the soprano is: The chest register extends from *f'* or *f#* downwards, the head-voice almost throughout the whole compass (occasionally *c'* and *d'*).

is, then, common to both registers, i.e. these sounds can be produced either way. Every fairly normal soprano voice extends to *a'*, but high sopranos sing up to *c''*, and phenomenal voices to *f''*, *g''*, and even *c'''* (Agujari). (Cf. MEZZO SOPRANO.)

Soprano Clef (Ger. *Diskantschlüssel*) is the name given to the C-clef on the lowest line of the stave—

Sor, Ferdinand (really Sors), famous performer on the guitar, b. Feb. 14, 1778, Madrid, d. July 8, 1839, Paris. He published a sonata, études, variations, divertissements, etc., for guitar; also a guitar Method. In 1798 he brought out at Barcelona an opera, *Telemach*, and in London, Paris, and Moscow, where he occasionally resided, he produced other operas, fairy pieces, and ballets.

Sordini (Ital. *Sordini*; Ger. *Dämpfer*) are contrivances by means of which the intensity of the tone of stringed and wind instruments, also those of percussion, can be diminished. The old "table" pianofortes, and also our pianinos, have two kinds of damping contrivances, namely, the one common to all pianofortes, even grands, which when the key is left, at once smothers the sound, and a second kind, which acts by means of a special pedal; this only prevents extensive vibration of strings, but permits of small ones (the damper proper). The latter kind of damper replaces the "shift" of the grand pianoforte, but produces quite a different effect, so that it is astonishing that our pianoforte-makers do not make use of the damper as well as the shift; and this would be more sensible than all the toy inventions, such as prolongation pedal, etc. The S. (or "mutes") of stringed instruments are small metal indented combs, similar in shape to the bridge on which they are firmly fixed. These, it is true, cannot prevent a strong

vibratory motion of the strings, dependent upon the attack of the bow, yet, to a considerable extent, they modify the transference of the vibrations through the bridge to the sounding-board. The timbre of the muffled ("muted") sound of stringed instruments is quite different from that of the open one; it is of slightly nasal quality, recalling oboe tone; in *piano* passages it has a veiled and ethereal, and in *mezzoforte*, a strangely oppressed effect, as if with longing desire it were struggling to free itself from fetters. For *brass wind-instruments*, cone-shaped pieces of wood hollowed at both ends are used as dampers (or "mutes"); they are inserted into the bell, and change the timbre considerably by arresting the molecular vibrations of the brass body itself; but they serve, at the same time, as a half stopping, i.e. they change the pitch somewhat; their use is, on that account, somewhat precarious; recently, indeed, more complicated methods of damping have been invented. The stopping of horn and trumpet tone with the hand is also damping, with corresponding change of timbre. The sound of drums is muffled by the insertion of a band of cloth, or something similar, between the snares and the skin; the tone of kettledrums, by touching the skin with the hand.

Sordino (Ital.), damper (see SORDINI); *con s.*, *con sordini*, with dampers; in pianoforte music the direction *senza s.* requires the performance with raised dampers, i.e. *con pedale* (see PEDALS).

Sordo (Ital.), muffled.

Sordun, (1) an obsolete wood-wind instrument (perhaps stopped, cf. CORNAMUSA), in use during the 17th century, blown, like the bormhart, by means of a double reed placed in a mouthpiece; it had twelve holes (which, however, can scarcely have been finger-holes) and two keys, and it was constructed after the manner of a bassoon. The S., like all instruments of that period, was made in different sizes, the lowest from contra-F to d, the highest (fifth) from B \flat to g'.

(2) An obsolete stopped reed-stop in the organ of 16, 8, and 4 ft., with holes in the tube and a small tube in the stopper. The name S. refers to the muffled sound. (See SORDINI.) The construction of the organ stop, perhaps, points to that of the old wind-instrument.

Sorge, Georg Andreas, famous organist and theorist, b. March 21, 1703, Mellenbach (Schwarzburg), d. April 4, 1778, Lobenstein, as court and town organist, which posts he received at the age of nineteen. S. was by no means an unimportant composer, especially in the department of instrumental music. He published: 6 clavier sonatas (1738), "24 Präludien mit untermischten Doppelfugen"; "Klavierung in 6 nach italienischem gusto gesetzten Sonatinen"; "Wohlgewürzte Klangspeisen in 6 Partien"; "Kleine Orgelsonaten"; "24

kurze Präludia"; "Neue Orgelsonaten"; "6 Symphonien fürs Klavier"; 12 Menuette fürs Klavier mit einer Violine"; "*Toccata per omnem circulum XXIV. modorum* fürs Klavier"; "2 Partien für 2 Querflöten." There remain in manuscript: a series of church cantatas for a whole year, and motets for four voices and six instruments, cantatas *d'occasion*, and many organ and clavier pieces. But S. is best known by his theoretical writings; he was, as is known, one of the original discoverers of combination tones (q.v.), and announced his discovery (in the *Vorgemach*) sooner than Tartini (q.v.). His writings are: "*Generalogia allegorica intervallo- rum octava diatonico-chromatica*, d. h. Geschlechts- register der Intervallen nach Anleitung der Klänge des grossen Waldhorn" (1741); "Anweisung zur Stimmung und Temperatur in einem Gespräch" (1744); "Vorgemach der musikalischen Komposition" (1745-47, 3 parts; his most important work); "Gespräch von der Prätorianischen, Printzischen, Werkmeisterischen, Neidhardtischen, Niedtischen und Silbermannischen Temperatur, wie auch vom neuen System Telemanns" (1748); "Ausführliche und deutliche Anweisung zur Rational-Rechnung" (1749); "Gründliche Untersuchung, ob die Schröterischen Klaviertemperaturen vor gleichschwebend passieren können oder nicht" (1754); "Zuverlässige Anweisung, Klaviere und Orgeln gehörig zu temperieren und zu stimmen" (1758); "Verbesserter musikalischer Zirkel" (no date); "*Compendium harmonicum*, oder kurzer Begriff der Lehre von der Harmonie" (1760); "Kurze Erklärung des *Canonis harmonici*" (1763); "Die Natur des Orgelklangs" (1771); "Der in der Rechen- und Messkunst wohlverfahrene Orgelbaumeister" (1773); "Anmerkungen über Quanzens *Dis- und Es-Klappe*" (in Marpurg's "Beiträge"); "Anmerkungen über Hillers Intervallensystem" (in Hillers's "Nachrichten"); and "Anleitung zur Fantasie" (no date). A pamphlet on the unity of melody and harmony remained in manuscript.

Sörgel, Friedrich Wilhelm, musical director at Nordhausen from about 1819 to 1840; he published a symphony, an overture, 3 quartets for strings, a pf. quartet, violin duets, duets for pf. and violin, also for pf. and cello, pf. études in sonata form, and variations for pf.

Soriano, Francesco. (See **SURIANO**.)

Soriano-Fuertes, Mariano, composer and writer on music, b. 1817, Murcia, d. April, 1880, Madrid; he studied with his father, the director of the royal chamber music, Indalecio S. Though musically inclined and musically gifted, his father placed him in a cavalry regiment, from which, however, S. soon retired, and devoted himself to music. In 1841 he founded a musical paper: *Iberia musical y litteraria*, which, however, he was soon forced to give up. He wrote several operettas (Zarzuelas), and in 1843 was appointed teacher at the Madrid Conservatorio.

In 1844 he became director of the Lyceum at Cordova, and then occupied a similar post at Seville, Cadiz, and became opera maestro at Seville, also at Cadiz, and in 1852 opera maestro at Barcelona, where he founded the *Gaceta musical Barcelonesa* (1860). S.'s highest merit is shown in his "Musica Arabo-Española" (1853); "Historia de la musica Española desde la venda de los Fenicios hasta de anno de 1850" (1855-59, 4 vols.); "Memoria sobre las sociedades corales en España"; and "España artística y industrial en la exposicion de 1867."

Sormann, Alfred Richard Gotthilf, pianist, b. May 16, 1861, Danzig; pupil of Mehrkens, Hamburg, and of the Royal High School, Berlin; also court pianist.

Sortita (Ital.), entrance aria of the prima donna in opera, to which great importance was attached; and with good reason, since success very frequently depends upon the first impression.

Sospirante (Ital.), sighing.

Sospiro (Ital.), a half-bar's rest.

Sostenuto, sustained; an indication of tempo which agrees fairly with *Andante*. S. frequently appears as an addition to *Andante* or *Adagio*.

Sotto (Ital.), under; *sottovoce* (in one word), in an undertone, with veiled voice.

Soubre, Etienne Joseph, composer, b. Dec. 30, 1813, Liège, d. there Sept. 8, 1871; pupil of the Liège Conservatoire; in 1838 conductor of a male choral society in the latter city, in 1844 conductor of the Philharmonic Society and of the Réunion Lyrique at Brussels, and from 1862 until his death, director of the Liège Conservatoire. S. composed an opera (*Isoline*), a symphony which gained a prize (1834), a Requiem, a Stabat, an Ave verum, hymns, female choruses, etc. Two of his daughters are singers.

Souhaitty, Jean Jacques, Franciscan monk at Paris, was the first who introduced the figure notation for popular instruction in singing which has acquired a certain importance. (Cf. **ROUSSEAU, NATORP**.) His works relating to this subject are: "Nouvelle méthode pour apprendre le plain-chant et la musique" (1665; 2nd ed., as "Nouveaux éléments du chant, ou l'essai d'une nouvelle découverte," etc., 1667); and "Essai du chant de l'église par la nouvelle méthode des chiffres" (1679).

Soulier. (See **SOLÉ**.)

Soundboard (Ger. *Resonanzboden*; Fr. *Table d'harmonie*) is the name given to the broad plate of wood which intensifies the tone of the strings in stringed instruments. It is now known that a S. neither makes transverse vibrations, nor simply reinforces the tone according to the law of sympathetic vibration (Cf. **SYMPATHETIC TONES**); and further, that it ought to make no transverse vibrations, and for this purpose the ribs crossing the fibres of the

wood are underlaid at right angles and glued. The vibrations of the S. are molecular vibrations, the intensity of which depends upon the force used in producing them; while their duration is altogether independent of the string. As, however, every vibration of the string gives new impulse to molecular vibrations, the changes of intensity of the latter present the same periods as the vibrations of the string; and the S., therefore, throughout its whole surface, communicates periodical shocks to the air, which answer to the sounds producing them. Only thus can it be explained why a good S. reinforces all sounds equally; whereas, if it vibrated according to the law of sound by sympathy, it could only strengthen particular tones. A sound not reinforced by a S. is far too weak, and for this reason, that the surface from which the vibrations are communicated to the air is too small. (Cf. SOUNDHOLES.) From what has been said, it is easy to perceive the importance of the bells of wind-instruments.

Soundholes are (1) the perforations of the soundboard of stringed instruments (French,

Ouïes), which have the form , probably since 1500; before that, however, the form was)(. The openings render the most central portion of the soundboard (round the so-called "sound-point") on both sides movable, whereby an after-sounding of the tones is rendered impossible; but, on the other hand, a more powerful vibration is effected.

(2) In instruments with plucked strings (lute, theorbo, guitar, etc.) the most central portion of the soundboard, on the contrary, is cut out in the form of a circle (the so-called "rose"), because in these instruments prolongation of the sound is required. Hence the dulcimer had also this "rose," or, in its oblong form, several of them, and the same were transferred to the clavier; through marked improvements in the soundboards they have, however, become superfluous.

Sound-waves. (See VIBRATIONS.)

Soupir (Fr.), a minim rest; *demi-s.*, a crotchet rest.

Sowinski, Albert, a Polish composer, pianist, and writer on music, b. 1803, Ladyzyn (in the Ukraine), d. March 5, 1880, Paris. When young, he went to Vienna, where he became a pupil of Czerny, Leidersdorf, J. v. Seyfried, and made friends with Hummel, Moscheles, Schubert, Abt Stadler, etc. After a long journey through Italy, he settled in Paris in 1830, gave some successful concerts, and became one of the best-known pianoforte teachers. He wrote and published several orchestral and chamber-music works, also songs and pf. pieces, besides a Polish-Slavonic dictionary of musicians: "Les musiciens polonais et slaves anciens et modernes, dictionnaire, etc., précédé d'un résumé de l'histoire de la musique" (1857).

Spadarius (Spadaro). (See SPATARO.)

Spangenberg, (1) Johann, master of arts, b. 1484, Hardeisen (near Göttingen). He was minister at Stolberg, afterwards at Nordhausen, and finally superintendent at Eisleben, where he died, June 13, 1550. He published Lutheran sacred songs (1545; also in Latin, 1550) and a theoretical pamphlet, "Quæstiones musicæ in usum scholæ Northusianæ" (1536, and frequently).

(2) Cyriak, son of the former, b. Jan. 17, 1528, Nordhausen, d. Feb. 10, 1604, Strassburg. He wrote: "Von der edlen und hochberühmten Kunst der Musika . . . auch wie die Meistersinger aufgekomen, vollkommener Bericht" (1598, manuscript; it has recently been published by Prof. A. Keuer under title, "Cyriakus S. von der Musika und den Meistersängern," 1861).

Spark, William, b. Oct. 28, 1825, Exeter, studied under S. S. Wesley, was successively organist of various London churches, now of St. George's, Leeds, and since 1859 town organist. He founded in that city a madrigal and motet society, also popular concerts. In 1861 he graduated Mus. Doc. at Dublin. Since 1869 he has edited *The Organists' Quarterly Journal*, also the *Practical Choir-Master*, and in 1881 he wrote a biography of Henry Smart. S. has published glees, anthems, services, cantatas, etc., and has edited organ pieces by Batiste.

Spartire (Ital.), to set out in score; *spartito* = score. *Spartire* means nowadays the re-writing in modern score of old compositions written or printed in parts.

Spataro, Giovanni (Spadaro, Spatarus, Spadarius), learned musical theorist, b. about 1460, Bologna, d. there 1541 as maestro of the Church of San Petronio, which post he had held since 1512. He studied under Ramos de Pareja (q.v.), took his part against Nikolaus Burtius and Gafuri in the pamphlets "Honesta defensio in Nicolai Burtii Parmensis opusculum" (1491), and "Errori di Franchino Gafurio" (1521). He also wrote "Tractato di musica, nel quale si tracta de la perfectione de la sesquialtera," etc. (1531).

Spatium (Lat.), the space between every two lines of the staff. For example, the note *c* with a previously indicated treble clef falls on the S. above the middle line:

Spazier, Johann Gottlieb Karl, composer of songs and writer on music (also under the pseudonym Karl Pilger), b. April 20, 1761, Berlin, d. Jan. 19, 1805, Leipzig. He studied philosophy at Halle and Göttingen, was a professor for some time in Giessen, then travelled for a long time with a Westphalian count, and afterwards settled at Neuwied, with the title of court councillor. Later on he moved to Berlin, and in 1800 to Leipzig. S. composed many

songs, some of which became widely known; edited for a year a musical paper of his own (*Berlinische Musikalische Zeitung*, 1793), and published the pamphlet "Freie Gedanken über die Gottesverehrung der Protestanten" (1788); "Einige Gedanken, Wünsche und Vorschläge zur Einführung eines neuen Gesangbuchs" (1790); "Etwas über Gluckische Musik und die Oper *Iphigenia in Tauris* auf dem berlinischen National-theater" (1795); "Karl Pilgers Roman seines Lebens" (1792-96, 3 vols.); "Rechtfertigung Marpurgs und Erinnerung an seine Verdienste" (*Allg. Mus. Zeit.*, 1800); "Ueber Volksgesang" (in the same). He translated the first part of Grétry's *Mémoires*: "Grétry's Versuche über die Musik" (1800), and published the autobiography of Dittersdorf.

Speech, to speak, are expressions relating to the prompt sounding of a note when one attempts to produce it from an instrument. A note does not speak, either when it does not sound at all (e.g. on the pianoforte or organ when the mechanism is out of order), or breaks (in wind instruments), or makes a disturbing noise (in singing; on stringed instruments if the string is not "pure"; on the organ when, through an escape of wind, a buzzing or whistling arises, etc.). By accurate S., with reference to the organ, is meant that the mechanism works so accurately, that no perceptible space of time elapses between the pressing down of the key and the sounding of the note. (Cf. ELECTRICITY and PNEUMATIC ACTION.)

Speer, Daniel, town-piper at Breslau, and later (1680) cantor at Göppingen (Württemberg), in 1692 in the same capacity at Waiblingen. He published: "Evangelische Seelengedanken" (1681; sacred songs a 5 with violins and continuo); "Jubilum coeleste" (1692; arias for two soprano voices and five instruments); "Philomele angelica" (1693; motets, do.); a Choralbuch (1692), and a book of secular songs with instrumental accompaniment: "*Recens fabricatus labor* oder die lustige Tafelmusik mit 3 Vokal- und 4 Instrumentalstimmen" (1686). Of still greater importance is his pamphlet, "Grundrichtiger, kurz, leicht und nötiger Unterricht der musikalischen Kunst" (1687, which appeared in augmented form in 1697).

Speidel, Wilhelm, b. Sept. 3, 1826, Ulm, received his first musical training from his father, Konrad S., who was an excellent singer, music teacher, and conductor of the Ulm "Liederkranz" (d. Jan. 29, 1880); he then obtained further instruction in Munich from Ignaz Lachner (composition), also from Wanner and W. Kuhe (pianoforte). After he had been active as music teacher for two years at Thann in Alsace, he lived for a long time in Munich. From 1854-57 S. settled in Ulm as musical director; in 1857 he went to Stuttgart as conductor

of the Liederkranz (choir of male, also mixed voices), was one of the founders of the Conservatorium there, and worked in that institution, famed as a pianoforte teacher, until 1874, when he established a "Künstler und Dilettantenschule für Klavier." At the same time he became director of the so-called popular concerts. When S. Lebert died (end of 1884), S. returned as teacher to the Conservatorium, with which he amalgamated his school. From among his compositions should be noticed: a 'cello sonata (Op. 10), a violin sonata (Op. 61), 2 pf. sonatas, a trio (Op. 36), overture, and intermezzo, to "König Helge," chorus of spirits from *Faust* (chorus for male voices with orchestra), "Wlkinger Ausfahrt" (tenor solo with chorus for male voices and orchestra), "Volkers Schwanenlied" (male chorus with orchestra), pf. pieces, songs, part-songs, especially for male voices, etc. The well-known feuilleton writer of the *Neue Freie Presse* in Vienna, Ludwig S., is his brother.

Spengel, Julius Heinrich, b. June 12, 1853, Hamburg; he studied under K. Voigt (pianoforte and theory) and H. E. Kayser (violin), was from 1867-68 at the Cologne Conservatorium (Rudorff, v. KönigsLöw), from 1868-72 at the Royal High School, Berlin (Rudorff, Joachim, Kiel, and Ad. Schulze [singing]). He lived afterwards in Hamburg as teacher of music, and made further studies in counterpoint under Grädener, also of the organ under K. F. Armbrust. In 1878 S. became conductor of the Cecilian Society, in 1884, teacher of singing at the college for female teachers of the convent school, and in 1886, organist of the Gertrudenkirche. Among his compositions which have appeared in print are a pf. quintet (Op. 2), part-songs, and songs; a symphony (D minor), a 'cello sonata, etc., have been performed in public. S. is a master in the art of practising a *capella* singing.

Speyer, Wilhelm, b. June 21, 1790, Frankfort, d. there April 5, 1878. He was intended for a mercantile career, and divided his life between art and trade. He studied theory under Vollweiler and André, and violin-playing under Ferd. Fränzel; also in the course of many journeys, he came into friendly relations with the best musicians, especially with L. Spohr. S. published quartets for strings, violin duets, choruses for male voices, and songs (rendered popular by Pischek).

Spianato (Ital.), even, smooth; somewhat in the sense of *senza passione*, without pathos.

Spiccato (Ital.), distinctly detached; a special kind of staccato (with springing bow) on stringed instruments (the genuine virtuoso staccato; Fr. *piqué*). (Cf. STACCATO.)

Spielleute (Ger.) (1), musicians of the Middle Ages. (See GUILDS.)—(2) Name used for the drummers and fife-players of military bands, in contradistinction to the Hautboists.

Spies, Hermine, distinguished concert singer (contralto), b. Feb. 25, 1857, at the Löhnberger

f foundry, near Weilburg (daughter of the director), d. Feb. 26, 1893, Wiesbaden. She attended school and the Conservatorium at Wiesbaden, then became pupil of Sieber and Stockhausen; she appeared in public from 1882 with ever-increasing success, and was especially unrivalled in the rendering of Brahms's compositions (*Rhapsodie*, Op. 53). In 1892 she married the Dr. jur. W. A. Fr. Hardtmuth, Wiesbaden.

Spieß, (1) Johann Martin, teacher of music and organist at Heidelberg, afterwards at Berlin. He published choral-melodies: "Davids Harfenspiel in 150 Psalmen auf 342 Liedermelodien" (1745; also as "Geistliche Liebespossaunen in 342 Liedermelodien"), and "26 geistliche Arien" (1761).

(2) Meinrad, b. Aug. 24, 1683, Honsolgen (Swabia), d. July 12, 1761, as Prior of Yrsee Monastery, in Bavarian Swabia. He entered the Benedictine monastery, Yrsee, took the vows in 1702, and was ordained priest in 1708. In 1710 his abbot sent him to Munich in order to complete his musical training under Gius. Ant. Bernabei. S. was then, from about 1712 to 1749 or 1750, musical director of the Yrsee College (about 1750 P. Anselm Schwink, who performed the duties of this office for 25 years, is mentioned). In 1743 S. became member of the Mitzler Musical Society in Germany. He published: "Antiphonarium Marianum," for soprano or alto with two violins and organ (1713); "Cithara Davidis" (1717; vesper psalms a 4 with strings and organ); "Philomele ecclesiastica" (1718; motets for solo voices, two violins, and organ); "Cultus latreutico-musicus" (1719; 6 masses and 2 requiems a 4 with strings and organ); "Laus Dei in Sanctis ejus" (1723; offertory, for same); "Hyperdulia musica" (1726; Litanies to the Virgin, for same); 12 sonatas for two violins, double-bass (violone), and organ (1734); and "Tractus musicus compositio practicus d. h. Musikalische Traktat" (1745, German).

Spillflöte. (See SPITZFLÖTE.)

Spina (music publishing house). (See SCHREIBER and CRANZ.)

Spindler, Fritz, pianist and composer, b. Nov. 24, 1817, Würzburg (near Lobenstein), studied under Fr. Schneider in Dessau, and settled in Dresden (1841) as teacher of music, where he still lives. S. has published over 300 works, mostly brilliant *salon* pieces; but amongst them there are some more serious ones, such as: 2 symphonies (a third is still in manuscript), a pf. concerto, many sonatinas for teaching purposes, and some chamber music (quartet for strings, pf. quartet, trios).

Spinett (Ital. *Spineta*). (See PIANOFORTE. The name S. is traced by Adr. Bianchieri ("Conclusioni," etc., 1608) to the clavier-maker, Joh. Spinetus, who flourished in Venice about 1503.

Spiridio, Berthold, famous organist, Carmelite monk in the monastery of St. Theodor, near Bamberg. He published: "Neue und bis dato unbekannte Unterweisung, wie man in kurzer Zeit nicht allein zu vollkommenem Orgel und Instrumente schlagen, sondern auch zu der Kunst der Composition gänzlich gelangen mag" (1670); parts 2-4 under the title "Nova instructio pro pulsandis organis, spinettis, manuchordiis," etc. (1671-79); part 5 as "Musikalische Erzgruben in 10 neu erfundenen Tabellen mit 5 Stimmen" (1683); further, a selection from the same: "Toccate, ricercari e canzoni francesi intavolati da B. S." (1691); "Musica Romana D. D. Foggiae, Carissimi, Gratiani aliorumque, etc." (a 3 with two violins, 1665); and "Musica Theoliturgica" (a 5 with two violins, 1668).

Spirito (Ital.), spirit.

Spitta, (1) J. Aug. Philipp, b. Dec. 27, 1841, Wechold (near Hoya, in Hanover), d. April 13, 1894, Berlin, son of the well-known poet, author of "Psalter und Harfe." He studied philology at Göttingen, and filled the post of teacher at the Ritter- and Domschule, Reval (1864-66), at the Gymnasium, Sondershausen (until 1874), and at the Nikolai-gymnasium, Leipzig, where he took part in founding the "Bachverein" (1874). In 1875 S. was appointed professor at the University for the history of music, and permanent secretary of the Royal Academy of Arts, Berlin; besides these appointments, he filled the post of teacher at the Royal High School for Music, of which he was deputy-director. In 1891 he was appointed Government Privy Councillor. His musical reputation and his rapid career date from the appearance of the first volume of his biography of Johann Sebastian Bach (1873-80, 2 vols.), which, besides the biography, carried out with all manner of learned historical research, also gives intelligent appreciations of the separate works of Bach. S. himself, in his prominent post at Berlin, trained a goodly staff of young men of promise, who undertaking systematically the different fields of labour still lying fallow, investigated music history. Besides the Bach biography, S. published a critical edition of the organ works of Dietrich Buxtehude (1875 and 1876, 2 folio volumes), which contains important historical notices; undertook a complete edition of the works of Heinrich Schütz (16 vols.; complete, 1896); and wrote a short sketch of the life of Bach in Waldersee's "Vorträge" (1880); "Zur Musik," collected articles (1892), etc. S. was formerly one of the contributors to the *Allgemeine Musikalische Zeitung*, to the *Monatshefte für Musik-Gesch.*, etc., and from 1884 published, jointly with Chrysander and G. Adler, a *Vierteljahrsschrift für Musikwissenschaft*, which contains special and unusually valuable historical studies. A vast undertaking, prompted by S., was the

publication of the "Denkmäler deutscher Tonkunst," of which, up to the present (1892), the 1st vol. (Scheidt's "Tabulatura nova," of the year 1624) has appeared.

(2) Friedrich, brother of the preceding, b. Jan. 10, 1852, Wittingen (Hanover); from 1881-87 pastor at Ober-Cassel (near Bonn), since then professor of theology in Strassburg. He has written "Liturgische Andacht zum Luther-Jubiläum" (1883); "Händel und Bach," two festival orations (1885); "H. Schütz," festival oration (1886); "Die Passionen von H. Schütz," and "Ueber Chorgesang im evangelischen Gottesdienste" (1889).

Spitzflöte (Spillflöte, Spindelflöte, *Tibia cuspidata*) is an open lip-pipe organ stop of 8, 4, 2, and 1 foot, which, like the Gemshorn, has pipes tapering upwards; it is less rough, softer than the Gemshorn. The pipes are made of tin or other metal, rarely of wood. As a Quint stop it is called *Spitzquint*.

Spitzharfe (*Harfenett, Flügelharfe, Zwischharfe*; Ital. *Arpanetiu*) was a kind of small, three-cornered harp, which was placed on a table; it had an upright soundboard, with strings on each side: on the one, the lower; on the other, the higher. The S. never became popular.

Spohr, Ludwig, one of the principal violinists of modern times, also a distinguished composer and excellent conductor, b. April 5, 1784, Brunswick, d. Oct. 22, 1859, Cassel, was the son of a physician who settled at Seesen in 1786. The musical talent of the boy was awakened at an early age; for his mother sang and played the pianoforte, while his father played the flute. He was in his fifth or sixth year when he received his first violin lessons from Rector Riemenschneider, and was soon able to take part in the home concerts. Dufour, a French teacher of languages at Seesen, an excellent performer on the violin and 'cello, recognised the boy's gift, and caused him to be sent to Brunswick to be trained as a musician; and there he had the organist Hartung, a peevish pedant, for theory, but the excellent player Maucourt, leader of the band, for the violin. S. made such progress, that in 1799 the duke appointed him "chamber musician," and offered to defray the expenses of further training, with a view to his attaining perfection in his art. In 1802 S. was put under Franz Eck, who played at Brunswick *en route* for Russia. S. travelled with his master for a year and a half, studying diligently and hearing much music. He undertook his first artistic tour in 1804, and he made an immense sensation, among other places, at Leipzig (Dec. 10 and 17), both as virtuoso and as composer. At Gotha he was at once appointed (1805) leader of the band in place of Ernst, lately deceased; but he did not occupy this post for long. In 1806 he married the harp-player Dorette Scheidler, and undertook new concert tours in 1807 and 1809; in 1812 he

went to Vienna, where, after an honourable contest with Rode, who happened to be in that city, he accepted the post of leader at the Theater-an-der-Wien offered to him by Count Palffy. Disagreements with the latter, however, caused him to leave Vienna in 1816, and after a tour through Italy, where he became the rival of Paganini (both played together at Milan, 1817, in a *concertante* by S.), he accepted the post of opera conductor at Frankfort (1817). In 1820 his fame extended to England: he appeared several times at the Philharmonic Society, and, together with his wife, was received with distinction at court. Shortly before, he had appeared in Paris, but with less success: both as player and composer he was received somewhat coolly by the press; the French did not understand either the characteristic of S.'s nature, or the romanticism of his playing and of his creative art. Already in 1821 S. changed his residence and migrated to Dresden, so that his daughters might be trained in singing by Miksch. In 1822 he was offered the post of Hofkapellmeister at Cassel, and there the active artist found a lifelong, and a last resting-place. On the occasion of the 25th anniversary of his capellmeistership at Cassel, he was named general musical director, together with the privilege of appearing at court. Unfortunately, the last years of his life were embittered by his uncomfortable attitude towards his prince. Much against his wish, S. was pensioned in 1857, with reduction of his salary, although the same had been guaranteed in full to him until his death. Soon after he received a fresh and still harder misfortune, for in ascending the steps of the "Museum," he fell and broke his left arm; in spite, however, of his age, the arm fortunately healed, but the accident left behind a weakness which compelled him entirely to give up violin-playing. After the death of his first wife in 1834, S. married (1836) Marianne Pfeiffer, an excellent pianist, who survived him (d. Jan. 4, 1892, Cassel). S. died, without serious illness, of old age.

It must be admitted that S.'s compositions are not altogether free from a certain effeminacy, principally to be seen in the frequent employment of chromatic progressions. The works in which these detract least from the good effect—nay, rather increase it—are his compositions for violin, in which, as a further characteristic, appears the little "Spohr" shake. These are but externals, yet in music otherwise nobly conceived, these gain an importance by no means to be underrated. S. is justly ranked among the romantic composers; a nature overflowing with feeling entitled him to a place in the school in which sentiment outweighs reflection. He stands, however, nearer to Schubert and Mendelssohn than to Weber, Marschner, and Schumann.

In all, S. wrote over 150 works, among which 10 operas: *Faust* (first performed at

Frankfort, 1818) and *Fessonda* (Cassel, 1823), the once scarcely less famous *Zemire und Azor* (Frankfort, 1819); further, *Die Prüfung* (1806, not given), *Abruna* (written 1808, only the overture was performed, and it has been preserved), *Der Zweikampf mit der Geliebten* (Hamburg, Nov., 1811), *Der Berggeist* (Cassel, 1825), *Pietro von Abano* (1827), *Der Alchymist* (1830), *Die Kreuzfahrer* (Cassel, 1845; written between Sept., 1843, and May, 1844). His oratorios are: *Das befreite Deutschland* (for the stage), *Das jüngste Gericht* (1812; text by Aug. Apel), *Die letzten Dinge* (*The Last Judgment*, Düsseldorf, 1826), *Des Heilands letzte Stunden* (*Calvary*), and *Der Fall Babylons* (*The Fall of Babylon*), produced at Norwich, 1842. Nine symphonies: 1, E^{\flat} (Op. 20); 2, D minor (Op. 49); 3, c minor (Op. 78); 4, F (Op. 86, "Die Weihe der Töne," "The Consecration of Sound"); 5, c minor (Op. 102); 6, G (Op. 116, "Historical," dedicated to the London Philharmonic Society); 7, C (Op. 121, "Irdisches und Göttliches im Menschenleben," for double orchestra); 8, g minor (Op. 137, dedicated to the London Philharmonic Society); and 9, B minor (Op. 143, "Die Jahreszeiten"); three concert overtures, an overture to the tragedy of *Macbeth*, masses, hymns, psalms, cantatas, choruses for male voices, songs, etc. Spohr's concertos for violin are still held in high esteem; he wrote in all 15, of which especially No. 8, A (in the form of a "Scena cantante"), and No. 9, D minor (Op. 55), are much admired. His concertos have been edited by his pupil, Ferd. David. The remaining instrumental works are as follows: his great "Violin School," in three parts (1831), 33 quartets for strings, and 4 double quartets; a sextet for strings, 7 quintets for strings, and 1 for pf. and strings; 4 potpourris for violin and orchestra, sonatas and rondos for harp and violin, 3 sonatas for violin and pf. , 5 pf. trios, a quintet for pf. , flute, clarinet, horn, and bassoon; an octet for violin, two violas, 'cello, clarinet, two horns, and bass; a nonet for violin, viola, 'cello, bass, wood-wind, and horn; 4 concertos for clarinet; fantasia for harp, and pieces for pf.

Of S.'s orders, the Prussian one, *pour le mérite*, may be mentioned. He was member of the Academies of Vienna and of Brussels. He conducted the musical festivals at Düsseldorf (1826), Norwich (1839), Aix (1840), etc. For further details concerning his life, see his Autobiography (Cassel, 1860 to 1861, 2 vols.), as well as Malibran's "L. S." (1860). *Cf. also* H. M. Schletterer's "Louis S." (1881, in Waldersee's "Sammlung musikalischer Vorträge"). Of S.'s 190 pupils may be named: F. David, Henry Blagrove, Böhm, Bott, Pott, St. Lubin, the two Bargheers, Kömpel, and Moritz Hauptmann.

Spontini, Gasparo Luigi Pacifico (created Count of St. Andrea by the Pope), one of the most distinguished opera composers of

Italy, b. Nov. 14, 1774, Majolati (Ancona), d. there Jan. 24, 1851, was the son of simple peasants, and little favour was shown to his musical inclinations. He ran away from an uncle, priest at Jesi, who was training him for the priesthood, and went to another relation at San Vito, who procured for him his first regular instruction in music. A reconciliation having been effected, he returned to Jesi, and now received permission to devote himself entirely to music. He obtained instruction at first from the best musicians in the town, and in 1791 was admitted into the Conservatorio della Pietà at Naples, where he had the benefit of lessons from Sala and Tritto. He left the Conservatorio secretly in 1796, in order, at the proposal of the director (Sigismondi) of the Teatro Argentina at Rome, to write an opera; and the good success of *I puntigli delle donne* induced Piccini, on the return of S., to take him as pupil, and under his direction several operas were written for Rome, Florence, and Naples. In 1800 S. accepted a call to Palermo to the Neapolitan court, which had taken refuge there from the French army, and, after a short stay in Rome, Venice, Palermo, and Marseilles, he went to Paris in 1803. Here at first he gave instruction in music, and already in 1804 produced at the Théâtre Italien *Finta filosofia*, which had originally been produced at Naples. It met with only moderate success; a second, *Julie* (score engraved), was coolly received, while a third, a coarse opera, *La petite maison*, was hissed off the stage (1804). In the same year, however, his fortune changed, for he became acquainted with the poet Jouy, who handed over to him the libretto of *La Vestale*, which had been rejected by Cherubini. But before setting it to music he had smoothed the way by a smaller work written by the same poet; this was *Milton*, which was well received at the Théâtre Feydeau. Meanwhile he had profited by the criticisms of his opponents, and put more depth into his style, which, originally, leaned towards that of Guglielmi and Cimarosa. The patronage of the Empress Josephine, whose musical director S. had become, afforded him powerful protection against the intrigues which barred the way to his success. His cantata *Eccelsa gara*, written for the festivities in connection with Napoleon's victory at Austerlitz obtained for him greater favour at court. But the composition of *La Vestale* lasted longer than S. had expected; the totally different style in which he was working, one more expressive, more truthful, more serious, more noble, gave him considerable trouble, and only by Dec. 15, 1807, could the first performance take place; it resulted, however, in a brilliant triumph for S. In spite of all disparaging remarks made by professional musicians before the work came out, the enthusiasm of the public increased right up to the last moment, and at one stroke S. became famous. By the unanimous judgment

of Méhul, Gossec, and Grétry, the work received the prize established by Napoleon, and offered every ten years; it won, indeed, the victory over Le Sueur's *Les Bardes*. His next grand opera, *Ferdinand Cortez*, met with equal success (Nov. 28, 1809). In matters relating to opera S. had now become an authority. Soon afterwards he married a niece of Sébastien Erard, daughter of Jean Baptiste Erard, with whom he lived happily. In 1810 he became director of the Italian Opera (Théâtre de l'Impératrice), and produced, among other operas, Mozart's *Don Giovanni* in its original form, for the first time in Paris. Irregularities in money matters, which were laid to his charge, caused his dismissal from office in 1812. It is true that in 1814 (after the restoration of Louis XVIII.) he was to have been reinstated, but he withdrew in favour of Catalani, who had applied for the post, and who paid him a sum of money by way of compensation. Louis XVIII. named him court composer, with a pension of 2,000 francs. S. wrote several operas *d'occasion* for festivities connected with the restoration (*Plage, ou le roi et la paix*, 1814; *Les deux rivaux*, jointly with Persuis, Berton, and Kreutzer, 1816), added some numbers to Salieri's *Les Danaïdes*, which helped that work to fresh success in 1817, and in 1819 produced *Olympie* (Dec., 1819, Paris; revised edition 1821, Berlin), the third of his celebrated operas. The work only met with a *succès d'estime*. Shortly before, S. had accepted the offer of the King, Friedrich Wilhelm III., to take the lead of musical matters in Berlin, and in the spring of 1820 he entered on his appointments of court composer and general musical director. S. was already known in Berlin as a composer: his *Julie, Milton, La Vestale*, and *Ferdinand Cortez* had already been produced there. Of his qualities as a conductor he gave brilliant proof at the rehearsals of *Cortez*, the work with which he made his *début*. There followed a festival piece, *Lalla Rookh* (1821), soon after transformed into the opera *Nurmahal, oder das Rosenfest von Kaschmir* (in which was a Bacchanale composed for Salieri's *Les Danaïdes*), and further, after a lengthy journey to Italy, *Alcindor* (1823) and *Agnes von Hohenstaufen* (1829). Meanwhile unpleasant sides of his character had come to the fore. Measureless ambition and great self-conceit often led him to misuse the power he possessed by virtue of his office, and thus increased the number of his enemies; also with the general Intendant, to whom, according to his contract, S. was not subordinate, fierce conflicts arose, and impetuosity and indiscretion nearly led to prolonged confinement in a fortress. His career ended at Berlin in the sorriest manner, for the excited and hostile public forced him by continued clamour to withdraw from the conductor's desk during a performance of *Don Juan*. He obtained leave to retire in 1841, retaining, however, his title

and his pay. S. left Berlin in 1842, and lived afterwards, for the most part, in Paris; but he wrote no more, and he never could shake off the feeling caused by the humiliation which he had received. During the last years of his life S. was deaf and suffered from weakness of memory. In the hopes of regaining health, he went to Italy, and, finally, to his native place, Majolati, where he expired in the arms of his wife. The degree of Doctor was conferred on S. by Halle University. He was elected member of the Berlin Akademie in 1833, of the French Académie in 1839; he was knight of the Prussian order *pour le mérite*, and of many other high orders. Loménie (under title "Un homme de rien," 1841), Oettinger (1843), Montanari (1851), Raoul-Rochette (1852), have written biographical notices of S.

Saffieddin Abdolmumin, Ben Fachir el Ormewi el Bagdadi, the greatest Arabic-Persian musical theorist from the 13th to the 14th century, the "Zarlino of the East," Arabian by birth, but the founder of the Persian School. He wrote for the son of the Mongolian Vizier Schemseddin, Sherefeddin Harun, a great musical theoretical work, the "Schereffije," which is quoted as an authority by all succeeding Arabic-Persian theorists (Mahmud Schirasi, Abdolkadir, etc.).

Stabat Mater, one of the few *sequences* (q.v.) still in use in the Catholic Church. The poem, written by Jacoponus (d. 1306), has been set to music during the last four centuries an innumerable number of times, and by composers differing altogether from one another in style. The most celebrated S. are those of Palestrina, Astorga, and Pergolese.

Stabile, Annibale, composer of the Roman School, pupil of Palestrina, in 1575 maestro of the Lateran, in 1576 of the German Collegiate and Appollinaris churches, in 1592 of Santa Maria Maggiore; d. about 1595. S. published 3 books of motets a 5-8 (1584, 1585, 1589), 3 books of madrigals a 5 (1572 and frequently, 1584, 1585), 2 books of "Sacrae modulationes" (a 5-8; 2nd book, 1586), and litanies a 4 (1592). There are also some single numbers to be found in collections of the time (Gardane's "Dolci affetti," 1568, and "Trionfo di Dori," 1596; Phalese's "Harmonia celeste," 1593; "Laureo verde," 1591; and "Paradiso musicale," 1596).

Stabreim.—The verse formation with continual employment of consonants of like sound, peculiar to old High German poetry; also of vowels of like sound (Assonance) lately revived by Wagner in the *Nibelungen*.

Staccato (Ital.), abbr. *stacc.*, detached, is a sign which demands that the notes be not closely connected the one with the other, but separated in a clear manner the one from the other, so that there may be a break, however short, between them. For the different kinds of S. in

pianoforte-playing, *see* Touch. On stringed instruments S. is obtained by alternately pressing and quitting the string with a jerky stroke of the bow in upward and downward direction (the most ordinary S., employed especially in orchestral playing), or by springing bow; or, finally, by light movements of the wrist, with the bow moving in one direction (the real virtuosissimo staccato, spiccato, *piqué*). In singing, S. is obtained by closing the glottis after each note; S. is exceedingly difficult to perform in a masterly manner.

Stade, (1) Heinrich Bernhard, excellent organist, b. May 2, 1816, Ettischleben (near Arnstadt), d. May 29, 1882, Arnstadt, where he was organist, and to him belongs the merit of having restored in a worthy manner the organ of the Bonifacius church at Arnstadt, formerly played upon by J. S. Bach. S. published "Der wohl vorbereitete Organist, ein Präludien-, Choral- und Postludienbuch" (2 parts), and other organ pieces.

(2) Friedrich Wilhelm, also a distinguished organist, b. Aug. 25, 1817, Halle, where he attended the Orphanage College; but he soon turned his attention to music, and became a pupil of Fr. Schneider at Dessau. He was for some time capellmeister of the Beethmann troupe, and then became musical director of the University at Jena, which appointment, however, he exchanged for that of court organist, also capellmeister at Altenburg, which posts he still holds. The Jena University named him Dr. Phil. *hon. c.* S. published some sacred vocal works (psalms), organ and pf. pieces, edited several reprints of compositions by Bach and Handel, and songs from the 14th to the 16th century. S. conducted Berlioz' Requiem, "Symphonie fantastique," and *Roméo et Juliette*, for the first time in Germany (Altenburg).

(3) Fritz Ludwig Rudolf, writer on music, Dr. Phil., teacher at a music school in Leipzig, b. Jan. 8, 1844, Sondershausen; he studied philology at Leipzig, afterwards turned to music, and became a pupil of Riedel and Richter, and a contributor to the *Neue Zeitschrift für Musik*. He published "Vom Musikalisch-Schönen" (against Hanslick), and the 6th edition of Brendel's "Geschichte der Musik" (1879).

Staden, (1) Johann (not Johann Gottlieb), b. about 1579, Nürnberg; he was at first court organist at Bayreuth to the Brandenburg court, and lived up to 1610 in Kulmbach, afterwards in Bayreuth itself. About 1616 he returned to his native town, seeking a post, which he soon found, as organist at the St. Lorenz Church, whence in 1620 he moved to the better-paid one of St. Sebald. He died in 1634, and was buried Nov. 15. S. was an unusually prolific composer, as well of secular as of sacred music; his works (motets, Magnificats,

dance pieces, etc.), appeared from 1606-43. (*See Monatsk. f. Musik-Gesch.*, XV., 104, etc.)

(2) Sigismund Gottlieb, son and successor of the former; he published in Harsdörffer's "Gesprächsspielen" (play dialogues), 1644, the first known German opera, *Seelwig* (new score edition in the *Monatsk. f. Musik-Gesch.*, XIII., 53, etc.); then "Seelen-Musik, trostreicher Lieder" (1644); "Der 7 Tugenden Planeten-Töne oder Stimmen. Ein Aufzug" (in Harsdörffer, part 5, 1645, p. 599), and some melodies in Rist's "Neue himmlische Lieder," 1651. He published in 1637 H. L. Hassler's "Kirchengesänge: Psalmen und geistliche Lieder auf die gemeinen Melodeyen," with addition of 18 songs by Joh. Staden, S. G. Staden, and two unknown composers.

Stadler, Maximilian, Abbot, composer and writer on music, b. Aug. 7, 1748, Melk (Lower Austria), d. Nov. 8, 1833, Vienna. He was the son of a baker, and received his musical training at the Jesuit College in Vienna: in 1772 he took holy orders at the Benedictine Monastery of Melk, and, after he had for some time fulfilled parish duties, became in 1786 Abbot of Lilienfeld, and in 1789, vicar of Kremsmünster. S. lived afterwards for several years in Vienna, was on friendly terms with Haydn and Mozart, officiated once more in 1806 as priest at Altlerchenfeld (near Vienna), and afterwards at Böhmisch-Kraut. In 1815 he settled definitely in Vienna. S. was an industrious sacred composer, and many of his works appeared in print (masses, requiems, psalms, etc.), also songs with pf., organ fugues, and pf. sonatas. S. took active part in the dispute concerning Mozart's Requiem, maintaining its genuineness: "Verteidigung der Echtheit des Mozartschen Requiems" (1826; and also a supplement, 1827).

Stadlmayer, Johann, b. 1560, Freising (Bavaria). He was at first at the court of the Archduke Maximilian at Graz, next capellmeister to the Emperor Rudolf at Prague, then capellmeister to the Archduchess Claudia at Innsbruck, where he still lived in 1646. He published masses *a* 8 (1593, 1596), Magnificats *a* 5-8 (1603, 1614), masses *a* 8 with continuo (1610), masses *a* 6 with continuo (1612), masses with double chorus *a* 10-12 (1616), "Hymni vespertini *5* vocum cum instrumentis" (1617); "Apparatus musicus" (motets with instruments *a* 6-24, 1619); *Misereres* with instruments *ad lib.* (1621); "Ode sacræ" (Christmas and Easter cantatas *a* 5 with instruments *ad lib.* (1638), psalms *a* 2-3 with two violins and cornets *ad lib.* (1640), "Missæ breves" *a* 4, a requiem, and a mass *a* 5 (1641), psalms *a* 4 *ad lib.*, or *a* 8 with two violins and cornets (1641), and psalms *a* 4-8 *ad lib.* for double choir with instruments (1646).

Stadtfeldt, Alexander, b. April 27, 1826, Wiesbaden, son of a military bandmaster, d. Nov. 4, 1853, Brussels; as pupil of the Brussels Conservatoire (Fétis), he highly distinguished

himself (*Prix de Rome*, 1849). He wrote, besides 4 symphonies, overtures, a mass, a Te Deum, cantatas, etc., the operas *Hamlet* (1882; produced at Weimar), *L'illusion*, *Abu Hassan*, and *La Pedrina*.

Stadtpeifer, Stadtzinkenisten, Kunstpeifer, etc. (Ger. "town-pipers"), a term applied since somewhere about the 15th century to the privileged musicians banded together somewhat in guild fashion in the various towns. They were under the direction of a *Stadtmusikus* (town-musician), and on all official municipal occasions it was their duty to perform the necessary music.

Stägemann, Max, excellent stage singer (baritone), b. May 10, 1843, Freienwalde a. O.; he attended the Kreuzschule and the Conservatorium at Dresden. S. was at first actor at Bremen in 1862, then, in 1865, he was engaged as second baritone in Hanover, where he was soon advanced to first rôles, and became royal chamber singer, etc.; and in 1877 he undertook the direction of the town theatre in Königsberg. In 1879 S. settled in Berlin, where he was highly esteemed as concert singer and teacher of singing; in 1882 he undertook the direction of the Leipzig town theatre.

Stagione (Ital.), season; in especial, the operatic season.

Stahlknecht, Adolf, violinist, b. June 18, 1813, Warsaw, d. June, 1887, Berlin; chamber musician at Berlin. He made concert tours with his brother Julius (b. March 17, 1817, Posen, d. Jan. 16, 1892, Berlin), who was an excellent 'cellist (principal) in the royal band at Berlin. In 1844 the two brothers established trio soirées there. Adolf S. composed symphonies, masses, quartets, *entr'actes*, songs, etc., most of which remain in manuscript. Julius S. published solo pieces for 'cello.

Stahlspiel. (See LYRA, 3.)

Stahmer-Andriessen, Pelagie, stage singer (dramatic soprano), b. June 20, 1862, Vienna; pupil of the Conservatorium there and of Frau Dreyschock at Berlin; she sang first in Neumann's touring Wagner company, from 1884-90 at the Leipzig town theatre, and after that was partially engaged at Cologne and Vienna. In 1890 she married the architect Ende, at Wannsee, near Berlin.

Stainer, (1) Jacob (Steiner), famous violin-maker, b. July 14, 1621, Absom (Tyrol), d. there 1683, in poverty and disordered in intellect. He received, it is true, the title of violin-maker to the imperial court (1658), but was miserably paid (6 gulden) for his now highly-prized instruments. He must have worked under the best masters at Cremona. S. Ruf (Innsbruck, 1872) published a sketch of his life, based on old documents. His brother Mark us was a viola maker, whose instruments are much prized.

(2) Sir John, important English organist, b. June 4, 1840, London; he was at first chorister of St. Paul's Cathedral, and at the early age of fourteen became organist and choirmaster of a London church. He studied theory under Bayley and Steggall, and was further trained in organ-playing by George Cooper. In 1860 he became organist of Magdalen College, Oxford, and soon afterwards also organist of the University, in 1865 Doctor of Music, and in 1866 was appointed one of the examiners for musical degrees. In 1872 he became organist of St. Paul's Cathedral, and from that time filled a large number of honorary posts. He was professor of the organ and harmony at the National Training School for Music, and from 1881 Principal of the same, and after its development into the Royal College of Music (1883), professor there, and succeeded Mr. Hullah as Inspector of Music in the Elementary Schools of England for the Privy Council. In 1888, owing to his failing sight, he resigned the post of organist of St. Paul's, and was knighted in the same year. Since then he has lived at Oxford as Professor of Music to the University. Of his compositions are to be mentioned: 2 oratorios, *Gideon* and *The Crucifixion* (1887); the cantatas *The Daughter of Jairus* and *St. Mary Magdalen* (1883); for the Musical Festival at Gloucester, 2 complete cathedral services, and anthems. He has written 3 primers (harmony, composition, and organ), and was co-editor with Barrett of a "Dictionary of Musical Terms" (1876).

Stamaty, Camille Marie, pianist and composer, b. March 23, 1811, Rome, d. April 19, 1870, Paris, son of a Greek, but afterwards a naturalised Frenchman, French consul at Civita Vecchia. S. had been for a time an official in the Préfecture of the Seine when, in 1831, he became a pupil of Kalkbrenner's. In 1835 he made a successful *début* as pianist, and became one of the most highly esteemed teachers in Paris. Saint-Saëns was his pupil. S. published a pf. concerto (Op. 2), 2 pf. sonatas (Op. 8, 14), a pf. trio (Op. 12), many studies (Op. 11, 33, 37, 38, 39); "Études concertantes" (special studies, Op. 46, 47), variations (Op. 5, 19), and several fantasias, paraphrases, etc., for pianoforte.

Stamentienpfeife, same as SCHWEGEL.

Stamitz, (1) Joh. Karl, famous violinist and noteworthy composer, b. June 19, 1717, Deutsch-Brod (Bohemia), d. 1761, Mannheim, as principal leader and chamber musical director to the Electoral band, to which he belonged from 1745, and which then stood at the zenith of its fame; he was entirely self-taught. His printed compositions are: 6 sonatas for pf. and violin (Op. 1), 12 sonatas for violin and bass (Op. 2, 6), 12 symphonies a 8 (Op. 3, 8), 6 violin concertos, 6 trios for two violins and bass (Op. 5), and études in the form of duets for two

violins (worked out in two real parts); many other works remained in manuscript.

(2) Anton Thaddäus, brother of the former, b. 1721, Deutsch-Brod, d. Aug. 23, 1768, as archiepiscopal vicar and canon at Alt-bunzlau. He was an excellent 'cellist, and belonged for some time to the Mannheim band; he afterwards became priest.

(3) Karl, the eldest son of Johann Karl S., likewise a famous violinist and composer, b. May 7, 1746, Mannheim, d. 1801, Jena. After his father's death, he became a pupil of Cannabich; in 1767 he joined the Mannheim band, and in 1770 undertook a concert journey to Paris, where he attracted attention as a virtuoso on the viola and viola d'amour, and up to 1785 remained as leader of the Duke of Noailles' band. Afterwards he made concert tours through Germany and Austria, and settled for some time in Nuremberg. In 1787 he was for a short time leader of Prince Hohenlohe-Schillingsfürst's band, conducted from 1789-90 the amateur concerts at Cassel, then travelled through Russia, and, in 1800, became conductor of the academical concerts at Jena. His published compositions are: symphonies, 3 a 8 and 6 a 10 ("La chasse" ["Die Jagd"], symphonies for strings, flute, two oboes, two bassoons, two horns, and two trumpets), 4 concertantes for two violins, 7 violin concertos, quartets for strings (Op. 4, 7, 10, 13, 15), 6 trios for two violins and bass, duets for two violins, for violin and 'cello, and for viola and 'cello, a concerto for viola, a concerto for pianoforte, etc. He also wrote 2 operas, *Der verliebte Vormund* (Frankfort) and *Dardanus* (Petersburg).

(4) Anton, younger brother of the former, excellent violinist and composer, b. 1753, Mannheim. He went with his brother, in 1770, to Paris, where he appears to have remained, as in 1782 he published compositions there; yet nothing is known with regard either to his position or the year of his death. His printed works are: 12 quartets for strings, 6 trios for two violins and bass, a concerto for violin, duets for violin and 'cello, 6 sonatas for violin, flute, and bass, nocturnes (variations) for violin and 'cello, 6 duets for violin and flute, 3 pf. concertos, and other concertos for 'cello, bassoon, etc.

Ständchen (Ger.), a serenade, yet not, like this term, associated with a particular time of day, since there are *Ständchen* both for morning and evening. There is no particular form for the S.; it may consist of a song which a lover sings beneath his mistress's window, or of a chorus, or even of an orchestral piece.

Standke, Otto, b. Feb. 10, 1832, Lippstadt; he attended Soest Seminary, then devoted himself wholly to music, and became music teacher in M.-Gladbach, Lennep, and Bonn, in the last-named of which he died, 1885. S. was a distinguished teacher, and composed music of

various kinds, particularly instructive pf. pieces and songs.

Stanford, Charles Villiers, famous English composer and conductor, b. Sept. 30, 1852, Dublin; he was pupil for composition of O'Leary and Stewart, choral scholar at Queen's College, Cambridge; in 1873 became organist of Trinity College, and in 1874, conductor of the University Musical Society. From 1874-76 he continued his studies in composition under Reinecke in Leipzig and Kiel in Berlin, and afterwards resumed the conductorship of his society, which, under his training, gained proficiency and reputation. In 1877 he took his M.A. degree. In 1884 he became one of the conductors of the Philharmonic Society, and in 1885 succeeded Otto Goldschmidt as conductor of the Bach Choir in London; in 1887 he succeeded Macfarren as Professor at the University of Cambridge; he is teacher of composition and conductor of the orchestra at the Royal College of Music. A goodly series of great works bears witness to S.'s creative power. He wrote for the stage, the opera *The Veiled Prophet of Khorassan* (1881, produced at Hanover, with German libretto by Frank); *Savonarola* (Hamburg, 1884); *The Canterbury Pilgrims* (London, 1884); *Shamus O'Brien* (1896). In 1876 S. composed the overture and incidental music to Tennyson's *Queen Mary*; in 1885, the music to the *Eumenides*. For the orchestra he has published a festival overture, 4 symphonies (b flat and d minor, F and F minor); also an oratorio, *The Three Holy Children* (Birmingham Festival, 1885); "The Revenge," choral ballad; "Voyage of Maeldune," ballad (Leeds Festivals, 1886 and 1889); a serenade; chamber music: a violin sonata (Op. 11) and a 'cello sonata (Op. 9), a quartet for strings (Op. 15), pf. pieces, songs, and pieces for clarinet and pf.; also the incidental music to the *Edipus Tyrannus* (Cambridge, 1887); sacred vocal works (services and hymns), etc.

Stange, Hermann H. M., b. Dec. 19, 1835, Kiel. After he had attended the College, and, for a time, the University of his native town, he became pupil of the Leipzig Conservatorium; then he was for several years tutor in the house of Count Bernstorff (Hanover), and in that of the Prince of Wied (Neuwied). From 1860-64 S. was organist at Rossal College (England), in 1866 cathedral organist at Schleswig, from 1876 organist at Kiel and conductor of the Kiel Choral Society; from 1878 musical director of the University, and in 1887 professor.

Stanhope, Charles, Lord, b. Aug. 3, 1753, d. Sept. 13, 1816, London. He wrote, amongst other works, "Principles of Tuning Instruments with Fixed Tones" (1806).

Stanley, John, composer, b. 1713, London, d. there May 19, 1786; he became blind at three years of age, studied with Greene, and already at the age of eleven was organist of a small

London church, which post he exchanged for that of St. Andrew's, Holborn, and afterwards for that of the Temple. In 1782 he became organist of the Chapel Royal, and obtained the degree of Bachelor of Music. S. was held in high esteem by Handel, and inherited a portion of the musical relics of the latter. After Handel's death, he joined Smith in conducting the oratorio performances. *Jephtha* and *Zimri*, two oratorios of his own composition, were performed in 1757 and 1760; 6 concertos for six, and 6 for seven instruments, 8 sonatas for flute and continuo, and 6 solos for flute appeared in print.

Starck, Ingeborg. (See BRONSART.)

Stark, Ludwig, b. June 19, 1831, Munich, d. March 22, 1884, Stuttgart. He studied philosophy at the University of his native town and composition with the brothers Ignaz and Franz Lachner. After a short stay in Paris (1856), he founded, jointly with Faisst, Lebert, Brachmann, etc., the Stuttgart Conservatorium, in which he was active as a teacher of singing, harmony, score playing, and history of music. In 1861 he stayed for some time in Weimar, and enjoyed stimulating intercourse with Franz Liszt. In 1873 he made a tour through Italy for the purpose of study. S. was an especially remarkable teacher of music, published (jointly with Faisst) an elementary and choral singing Method, a "Liederschule," a solfège album, and an instructive vocal album, and, jointly with S. Lebert, a "Grosse Klavierschule," various collections of classical transcriptions (Hausschatz, Feierstunden, Nachklänge, Philharmonische Bibliothek, etc.); also instrumental and pf. pieces, songs, part-songs, etc. S. was Dr.Phil. and had the title of Professor.

Starke, Friedr., b. 1774, Elsterwerda, d. Dec. 18, 1835, Döbling (near Vienna), as a pensioned-off military bandmaster. He published: *Journal für Militärmusik* (300 parts), *Journal für Trompeterchöre* (50 Nos.), etc.; also sacred music (masses, *Tantum ergo*, etc.) and a pf. Method.

Stasny, Ludwig, b. Feb. 26, 1823, Prague, d. Oct. 30, 1883, Frankfurt. He wrote the operas *Liane* (Mayence, 1851) and *Die beiden Grenadiere* (ditto, 1879), but he is especially known by his popular national dances and no less by his orchestral transcriptions of Wagner's later music dramas. S. was pupil of the Prague Conservatorium, 1846-68 bandmaster of an Austrian regiment, and from 1871 capellmeister at the Palmengarten, Frankfurt. (Cf. STIASNY.)

Standigl, (1) Joseph, famous singer (bass), b. April 14, 1807, Wöllersdorf (Lower Austria), d. March 28, 1861, in the lunatic asylum at Michaelbeuerngrund. After attending the Gymnasium at Wiener-Neustadt, he entered the Melk Monastery, from which, however, he soon withdrew in order to study medicine at Vienna; shortly afterwards, however, he joined

the chorus of the Court Opera, becoming in time a serviceable soloist, when he was advanced to the rank of *basso primo*. In 1831 he was appointed Hofkapellmeister. S. was distinguished both as a stage and concert singer. His intellectual powers began first to give way in 1855, and in 1856 it became absolutely necessary to place him under confinement. His youngest son,

(2) Joseph, b. March 18, 1850, Vienna; an excellent baritone singer, pupil of Rokitsky at the Vienna Conservatorium. He is engaged at Carlsruhe as chamber-singer to the Grand Duke.

Stave (Ger. *Linien-system*, *Fünfliniensystem*) is the term applied to the five parallel lines on which the notes are placed. The sound-meaning of the lines and spaces is determined by means of a *clef* placed at the commencement. The inventor of lines for notation was (Pseudo-) Huchald (q.v.); their present use was fixed by Guido d'Arezzo (q.v.). Gregorian Song is noted on a stave with only four lines. In organ pieces of the 16th and 17th centuries the bass part is frequently written on a stave consisting of more than five lines.

Stavenhagen, Bernhard, distinguished pianist, b. 1862, Greiz (Reuss); pupil of Kiel, Rudorff, and Liszt, received the Mendelssohn prize in 1880 for proficiency as an executant; in 1890 he became grand-ducal court pianist at Weimar, and there married the singer Fr. Denis.

Stecker, Carl, writer on music, b. Jan. 22, 1861, Kosmanos (Bohemia); he studied philosophy at Prague, then devoted himself to music, attended the Prague Organ School, and became in 1885 choir director of the St. Ursula monastic church and teacher of singing at the girls' school there. From 1885-89 he was teacher of organ-playing at the Organ School, 1889 professor of music history and counterpoint at the Conservatorium, and in 1888 also lecturer on the science of music at the University. S. has written: "Kritische Beiträge zu einigen Streitfragen in der Musikwissenschaft" (Bohemian, in the official records of the Royal Bohemian Society of Sciences, 1889; German as an advertisement in the *Vierteljahrsschrift für Musikwissenschaft*, 1890). He is also a contributor to the Bohemian musical paper *Dalibor*. As a composer he has produced an organ sonata, "Missa solemniss" (for soli, chorus, and organ), motets a 4-12, songs, an "Ave," etc.

Steffani, Agostino, Abbate, famous composer, whose chamber duets occupy an important place in the history of music. He was born 1655, Castelfranco (Venetia), d. 1730, Frankfurt; he received his first musical training as soprano singer at St. Mark's, Venice, and then, by the Elector's aid, studied under J. C. Kerl at Munich (1667). S. now remained in Munich, became, as early as 1670, chamber

musician, studied in Rome 1672-74, in 1675 became court organist, and about 1681, director of the Elector's chamber music (with Bernabei). In 1681 he wrote his first opera: *Marco Aurelio*, followed by *Solone, Audacia e rispetto*, *Servio Tullio* (which procured for him the post of capellmeister at the Hanoverian court), *Alarico*, *Niobe*. For Brunswick he wrote the operas *Henrico detto il Leone* (1689), *La lotta d'Hercole con Acheloo* (1689), *Le rivali concordi*, *La superbia d'Alessandro* (1690), *Orlando generoso*, (1691), *Alcibiade, Atalanie*, and *Il trionfo del fato* (= *Lavinia e Dido*, 1699). But soon high diplomacy engaged his chief attention (he was ordained priest already in 1680). S. became ambassador extraordinary at the German courts, in order to remove the difficulties which had been raised against the Emperor's plan of creating a ninth Elector in the House of Brunswick-Hanover. He succeeded in the most brilliant manner (1692), and received as reward the appointment of Papal Pronotarins, and was also named Bishop of Spiga (*in partibus*), with a pension of 1,500 thalers. From this time S. was more of a courtier than a musician, and greeted Handel (q.v.) with joy, finding him a man in whose favour he could, with a good conscience, resign his post as capellmeister (1710). He lived, however, after that in Hanover, visited Italy in 1729, and frequented especially the society of Cardinal Ottoboni in Rome. Death overtook him at Frankfurt while on a journey. The very titles of many of S.'s compositions have been lost. From the time when he became a diplomatist he had a fancy for letting his works circulate under other names (among which, that of his copyist, Piva). He published: "Psalmodia vespertina 8 plenius vocibus concinenda" (1674); "Janus quadrifons 3 vocibus vel 2 qualibet prætermisssa modulandus" (1685); motets with continuo a 3, from which either voice can be omitted at pleasure); "Sonate da camera a 2 violini, alto e continuo" (1709); "Duetti da camera a soprano e contralto con il basso continuo" (1683; of special note); and a small pamphlet, "Quanta certezza habbia da suoi principj la musica" (1695; in German by Werkmeister, 1699; also by Albrecht, 1760). Cf. "Aus den Papieren des kurpfälzischen Ministers A. St.," and "Franz W. Woker" (1885).

Steffens, Julius (son of Friedrich S., d. April 5, 1869, as director of the music school of the military orphan asylum at Potsdam), b. July 12, 1831, Stargard (Pomerania), d. March 4, 1882, Wiesbaden, a highly-esteemed cellist. He studied under Mor. Ganz at Berlin and Karl Schuberth at Petersburg; he was for some time in the imperial band in that city, and undertook tours with Jaell and Vieuxtemps. Of his compositions there appeared 2 concertos for 'cello and a number of small pieces.

Steggall, Charles, b. June 3, 1826, London,

studied under Bennett at the Royal Academy of Music, became organist in 1847 at Maida Hill, and in 1851 was appointed teacher at the above named Academy. In 1852 S. took his degree of Bachelor and also that of Dr. of Music (Cambridge); in 1855 he became organist of Christ Church, Paddington; and in 1864 of Lincoln's Inn Chapel. He has composed many anthems, hymns, etc., and has given lectures on music.

Stegmann, Karl David, composer, b. 1751, Dresden, d. May 27, 1826, Bonn. He attended the Krenzschule at Dresden (under Homilius), and studied the violin under Weisse. He made his *début* in 1772 as tenor at Breslau, and was also engaged as singer at Königsberg, but became there the leader of the band of the Prince-Bishop of Ermeland. After passing visits to Danzig and Gotha, he became, in 1778, capellmeister, and in 1798, one of the directors of the opera in Hamburg. S. wrote a number of operas, symphonies, etc.; there appeared in print pf. compositions and some songs.

Stegmayer, Ferdinand, conductor and teacher of singing, b. 1803, Vienna, d. there May 6, 1863; he was the son of the actor and poet, S. ("Rochus Pumpernickel"), and was trained by him. S. was at first chorus director in Vienna, then (1825) at the Königstadt Theatre, Berlin; from 1829-30 conductor of the Röckel German Opera Company in Paris; afterwards at Leipzig, Bremen, and Vienna. In the last-named city he taught dramatic singing and singing to male students at the Conservatorium from 1853-54, and from 1853-57 choral singing. S. published two graduales and an offertory for male voices, pf. pieces, songs, etc.

Stehle, Gustav Eduard, b. Feb. 17, 1839, Steinhäusen (Württemberg); cathedral capellmeister at St. Gallen, organ virtuoso, and able contrapuntist ("Saul," symphonic tone-picture for organ).

Steibelt, Daniel, in his time a celebrated pianoforte virtuoso and fashionable composer, who shared with Pleyel the favour of the public and of the publishers, b. 1765, Berlin, d. Sept. 20, 1823, Petersburg. His father was a pianoforte manufacturer in Berlin; his teacher for pianoforte-playing and theory was Kirnberger. S. led a restless life, partly through his own fault, as he could not behave like a cultured man in society, but was flighty in his behaviour, and offended his patrons; he also lived extravagantly, and hence was always much in debt. He was in the habit of selling his compositions twice over. In 1789 S. began concert tours, appeared in Paris in 1790; his merits as a pianist were recognised, and he found an active publisher (Boyer), so that he became quickly known as a fashionable teacher. He also produced an opera, *Roméo et Juliette*, at the Théâtre Feydeau. Soon, however, he

became impossible in Paris also, and was forced once more to travel. Renewed attempts to gain a firm footing in Paris and London came to nothing, although he produced with success *La Fête de Mars*, in celebration of the battle of Austerlitz in 1806. In 1808 he was compelled to escape from his creditors without waiting for the production of his opera *La Princesse de Babylone*. This time he went to Petersburg, and had the good fortune to be appointed, for life, maitre de chapelle of the French Opera in place of Boieldieu, who had just left for Paris. He further wrote there the operas *Cendrillon* and *Sargines*, and produced those which he had written for Paris. The number of the published works of S. is very great; but as they were only of passing importance, it would not be worth while to give a complete catalogue of them. There are overtures, 7 pf. concertos, among which the far-famed "L'orage" (No. 3, in E major); quintets, quartets, trios with pf., over 60 violin sonatas, over 40 for harp and pf., numerous works for pf. alone (divertissements, fantasias, variations, marches, dances, etc.). At the present day S. is almost forgotten; and yet he once ventured to compete with Beethoven in a public contest, and was acknowledged by the dazzled public as not far inferior to the great composer.

Stein, (1) Georg Andreas, famous pianoforte and organ builder at Augsburg, the inventor of the "deutsche Mechanik" (see **PIANOFORTE**), b. 1728, Hildesheim (in the Palatinate), d. Feb. 29, 1792, Augsburg. S. studied under Andreas Silbermann in Strassburg, and built many excellent organs and about 700 pianofortes, also a double grand with two keyboards on different sides of the instrument (Diplasion, *Vis-à-vis*). His business was inherited by his daughter Nanette (Streicher) and his son Andreas.

(2) Eduard, distinguished capellmeister, b. 1818, Kleinschirma (near Freiberg, Saxony), d. March 16, 1864, Sondershausen; he studied under Weinlig and Mendelssohn in Leipzig, and from 1853 was court capellmeister at Sondershausen. S. was a friend of Liszt, Raff, etc., and the chief establisher of the fame of the Sondershausen band. Of his compositions, the concerto, Op. 9, written for the double-bass player Simon, is very well known.

(3) Theodor, pianist, b. 1819, Altona. At the early age of twelve years he gave concerts with his father, lived for a time at Stockholm, Helsingfors, and Reval, and since 1872 has been one of the most highly-esteemed professors of the pianoforte at the Petersburg Conservatoire. S. was formerly distinguished for his improvisations on the pianoforte.

Steinbach, (1) Emil, b. Nov. 14, 1849, Lengrieden (Baden). From 1867-69 pupil of the Leipzig Conservatorium, since 1877 conductor of the municipal band at Mayence; composer

of chamber music and orchestral works, songs, etc.

(2) Fritz, brother of the former, b. June 17, 1855, Grünsfeld (Baden); pupil of his brother and of the Leipzig Conservatorium (1873), won the Mozart Scholarship, from 1880-86 second capellmeister at Mayence, in 1886 court capellmeister at Meiningen. He is a gifted composer (septet, Op. 7; 'cello sonata, songs, etc.).

Steiner. (See **STAINER**.)

Steingraber, Theodor, b. Jan. 25, 1830, Neustadt a. Orla, son of the pianoforte maker, Joh. Gottlieb S., there, founder and principal of the publishing firm S. in Hanover, since 1890 in Leipzig, and, under the pseudonym Gustav Damm, author of a pianoforte Method (publisher of new editions of classical works, revised by Fr. Kullak, H. Bischoff, E. Mertke, H. Riemann, etc.). A cousin of his, Eduard S., b. 1823, has a pianoforte manufactory at Bayreuth.

Steinway and Sons (Steinweg und Söhne), one of the most important pianoforte manufactories of the present day (New York). The founder was Heinrich Steinweg, b. Feb. 15, 1797, Seesen, d. Feb. 7, 1871, New York. He commenced in Brunswick with the manufacture of guitars and zithers, and from that passed to the construction of pianofortes. At Goslar he had only learnt cabinet-making and organ-building. In 1850 he banded over the Brunswick business to his son Theodor, and went with four other sons to New York, where at first they worked at various piano manufactories. But in 1853 they established themselves independently under the above-named firm title. The business prospered enormously and rapidly after it had received the first prize for its cross-strung pianofortes at the New York Industrial Exhibition of 1855. At the present day the warehouse of the firm is one of the finest buildings in New York, and the "Steinway Hall" one of the greatest concert halls in that city. There are branches both in London and Hamburg. Of the founders of the New York firm only Wilhelm is still living. The fourth son, Karl Friedrich Theodor, b. 1825, Seesen, d. March 26, 1889, Brunswick, gave up the Brunswick business in 1865 (now Theodor Steinweg's successors, Helferich, Grotzian and Co.), and went to New York on the death of his brothers Heinrich (March 11, 1865, New York) and Karl (March 31, 1865, Brunswick). Albert died in New York, 1876.

Steinweg. (See **STEINWAY**.)

Stelzner, Alfred, Dr. Phil. in Wiesbaden; since 1891 he has drawn on himself the attention of the musical world by the production of stringed instruments (violin, violotta [q.v.], and violoncello) made on a new system. S. alleges that he has solved the acoustic problem of the best resonance, so that what the best Italian instruments produce accidentally must be ac-

complished as well, and still better, by the new instruments on the principle of exact measurement calculations. His instruments, made by Weidemann, of Wiesbaden, are not bad, but fall sadly short, however, of such promises. In external appearance they are clumsier than the old instruments, especially the ungainly violotta, whose strength of tone does not correspond to its bulk. Details of the new construction, e.g. the formation of the vibrating wooden tongues in both *f* holes can, scientifically, easily be proved as errors.

Stendhal, pseudonym of Marie Henri Beyle, b. Jan. 23, 1783, Grenoble, d. March 23, 1842, Paris; military administrative officer under Napoleon in Germany and Russia, afterwards in Milan, Paris, and, finally, Civita Vecchia. He wrote about Haydn (plagiarised from Carpani's "Le Haydine," under the *nom de plume* of Bombat, also in English, 1817 as "Vies de Haydn, Mozart et Metastasio") and Rossini (plagiarised from Carpani's "Le Rossiniæ": "Vie de Rossini," 1823, as Stendhal). He wrote other books not concerned with music (history of Italian art, etc.).

Stentato (Ital.), held back; somewhat the same as *ritenuto*, but with accessory meaning *pesante*.

Stephens, (1) Katherine, famous opera singer (soprano), b. Sept. 18, 1794, London, d. Feb. 22, 1882, as Countess of Essex. From 1814 to 1835 she appeared on the principal London stages, and also at musical festivals and at concerts.

Her nephew (2), Charles Edward, b. March 18, 1821, d. July 13, 1892, was a gifted pianist and composer of good instrumental and vocal works.

Sterkel, Johann Franz Xaver, composer, b. Dec. 3, 1750, Würzburg, d. Oct. 12, 1817, Mayence. He studied theology, became in 1778 court chaplain and organist at Mayence, made a journey to Italy at the Elector's expense, where he gave successful concerts as pianist, and on his return (1793) received the post of capellmeister and a canonry. In 1807 he followed the Prince-Primate to Ratisbon, where he founded a school of singing. The events of 1814 forced him to leave, and he returned to Mayence, where he died. S. was a prolific, though not original composer, yet he achieved great successes. He published over 100 works, and many, especially sacred ones, remained in manuscript. The following, among others, were printed: 10 symphonies, 2 overtures, a quintet for strings, 6 trios for two violins and cello, 6 duets for violin and viola, 6 concertos for pf., violin sonatas, pf. sonatas for four and two hands, rondos, fantasias, etc., for pf., 10 books of songs, 3 books of Italian canzonettas, 2 sets of Italian duets for two sopranos, arias, etc.

Sterling, Antoinette, famous concert singer (contralto), b. Jan. 23, 1850, Sterlingville, New York. She commenced her studies there, and then took finishing lessons with Madame Marchesi at Cologne, Mme. Viardot-Garcia at Baden-Baden, and Manuel Garcia in London. She made her *début* in the last-named city in 1873, remained there, and in 1875 married Mr. MacKinlay.

Stern, (1) George Friedrich Theophile, organist and composer, b. July 24, 1803, Strassburg. He was at first organist at St. Peter's Church there, also for a short time teacher of music at Carlsruhe; and from 1841, organist of the New Temple (Protestant church). He published 7 collections of organ pieces (with pedal *ad libitum*), which gained for him the reputation of an able composer.

(2) Julius, b. Aug. 8, 1820, Breslau, d. Feb. 27, 1883, Berlin; he studied the violin under Peter Lüstner, and, when his parents moved to Berlin (1832), under Maurer, Ganz, and Saint-Lubin. In 1834 he joined the Singakademie as alto, and soon afterwards became a pupil for composition of the Akademie, especially of Rungenhagen. From 1843 to 1846, with the help of a royal stipend, S. studied first in Dresden, and then zealously in Paris, successfully commencing his career in the latter city as conductor of the German Choral Society. On his return to Berlin, he founded in 1847 the Stern Gesangverein, of which he remained conductor until 1874 (his successors were J. Stockhausen until 1878, M. Bruch until 1880, E. Rudorff until 1890, Fr. Gernsheim); the society speedily became one of the most famous in Germany. Three years later (1850), S. founded, jointly with Th. Kullak and A. B. Marx, the (Stern) Conservatorium of Music at Berlin. Kullak withdrew in 1855, and founded his Neue Akademie der Tonkunst. In 1857 Marx also withdrew; but, under S.'s sole direction, and with the assistance of many excellent teachers (see MEYER, 3), the institution prospered greatly. From 1869-71 S. also conducted the Berlin "Symphoniekapelle," and from 1873-74 the concerts in the Reichshalle; finally he devoted his whole strength and time to the Conservatorium. In 1849 he became royal musical director, and in 1860 was named Professor. He published some small vocal pieces. (Cf. "Erinnerungsblätter an J. Stern," by Richard Stern, 1886.)

(3) Margarethe (née Herr, married S.), refined pianist, b. Nov. 25, 1857, Dresden, where her father was royal chamber musician (bassoon player). She studied in Dresden under Karl Krägen and in Weimar under Liszt, and also for some time under Clara Schumann. In 1881 she married the poet and historian of literature, Dr. Adolf Stern, professor at the Technical High School, Dresden.

Stevens, Richard John Samuel, b. 1757,

London, d. there Sept. 23, 1837, organist of the Temple Church and of the Charterhouse; in 1801 Professor of Music at Gresham College. He was a highly-esteemed composer of glees and catches.

Stewart, Sir Robert Prescott, Irish organist and composer, b. Dec. 16, 1825, Dublin, d. there March 24, 1894. He was choir-boy at Christ Church Cathedral, Dublin, of which, at eighteen years of age, he became organist. In 1846 S. became conductor of the University Choral Society, in 1851 Dr. of Music, in 1852 Vicar-choral of St. Patrick's, in 1861 Professor of Music of Dublin University, in 1872 represented Ireland at the Peace Festival at Boston, and was knighted shortly afterwards. In 1873 he was appointed conductor of the Dublin Philharmonic. The following are the most important of his compositions: a fantasia on Irish themes for soli, chorus, and orchestra (1872, for Boston), and some cantatas and odes. S. was especially renowned as an organist.

Stiasny (Stiasny, Stasny), (1) Bernhard Wenzel, b. 1760, Prague, d. there, 1835, son of Johann S. (d. 1788), player in a military band; was 'cellist in the theatre orchestra, and from 1810-22 professor at Prague Conservatorium. He wrote sonatas and fugal pieces for two 'celli; also a 'cello school. His brother—

(2) Franz Johann, b. 1764, Prague, d. circa 1820, likewise a 'cellist, and still more of a virtuoso than the former, laboured in Prague, Nüremberg, and Mannheim, and published several 'cello duets, a concertino for 'cello, sonatas for 'cello and bass, a divertissement for 'cello, viola, and bass, etc. (Cf. STASNY.)

Stich, Johann Wenzel (Italianised Giovanni Punto), famous horn-player, b. 1748 Zchuzicz (near Tschaslau, Bohemia), d. Feb. 16, 1803, Prague. He led an exciting life as virtuoso, travelling through all countries of Europe. In 1781 he accepted a post at the episcopal court of Würzburg, but already in 1782 exchanged the same for that of chamber musician to Count Artois (afterwards Charles X.) at Paris, and during the Reign of Terror was conductor of a small vaudeville theatre in that city. In 1799 he returned to Germany, and enchanted, amongst others, Beethoven, so that the latter wrote a sonata for him (Op. 17). He lived finally in Prague, whence he intended to return to Paris with Dussek, but death put an end to his plans. S. published 14 concertos for horn, a sextet for horn, clarinet, bassoon, violin, viola, and double bass; a quintet for horn, flute and trio of strings, 24 quartets for horn and strings, 20 trios for three horns, many duets for two horns, duets for horn and double bass, studies for horn, a Method for horn (1798, revision of a Method by his teacher, Hampel), "Hymne à la liberté" with orchestra, trios for strings, and duets for violins.

Stiehl, (1) Heinrich Frauz Daniel, organist, b. Aug. 5, 1829, Lübeck, d. May 1, 1886, Reval; studied under Lobe and at the Leipzig Conservatorium. From 1853-66 he was organist of St. Peter's Church and conductor of the Singakademie at Petersburg. He made concert tours in Germany, Italy, and England, and from 1874-78 was conductor of the Cecilia Society at Belfast. He lived for some years at Hastings as teacher of the pianoforte, and in 1880 became organist of St. Olai and conductor of the Singakademie at Reval, by the help of which he produced, among other things, Bach's St. Matthew Passion, in 1883, at Petersburg. S. published many compositions for orchestra (Triumphal overture), for chorus ("Elfenkönigin"), chamber music (3 trios, quartet for strings, Op. 172; 'cello sonata, sonatas and pieces for violin and pf.), pf. pieces, songs ("Psalter und Harfe"); also 2 operas (*Der Schatzgräber*, *Fery und Bätely*). His brother—

(2) Karl Joh. Christ., b. July 12, 1826, Lübeck; studied with his father, the organist of St. James's, at Lübeck, Joh. Dietrich S. (b. July 9, 1800, Lübeck, d. there June 27, 1873). From 1848 to 1858 he was organist at Jever, and from 1858-77 organist and musical director to the Grand Duke at Eutin; since 1878 conductor of the Musical Society and of the Singakademie at Lübeck. He is musical critic of the *Lübecker Zeitung* and Custos of the musical section of the Lübeck town library. He wrote: "Zur Geschichte der Instrumentalmusik in Lübeck" (1885), "Lübeckisches Tonkünstlerlexikon" (1887), and "Musikgeschichte der Stadt Lübeck" (1891).

Stiehle, Ludwig Maxim. Adolf, violinist, b. Aug. 19, 1850, Frankfurt; son of an able violinist, pupil of Vieuxtemps (from 1861-63, at Vieuxtemps' estate, Dreieichenhain), Hermann, Joachim (Hanover, 1867, and Berlin, 1869-71). In 1872 S. became member of Alard's quartet party at Paris, in 1873 of the quartet party of Baron de Dervies at Nice, 1875 of the Hochberg quartet party; he then lived at Mühlhausen, and now gives quartet soirées at Basle, jointly with Hans Huber.

Stile, style; S. *osservato*, the "traditional" strict style, especially the pure vocal style (see STYLE); a *cappella* S., Palestrina style (q.v.); S. *rappresentativo*, the dramatic style (accompanied monody, invented about 1600 at Florence; see OPERA), suitable for scenic representation.

Stiracchiato (Ital.), "strained," retarding.

Stirling, Elizabeth, distinguished English organist and composer, b. Feb. 26, 1819, Greenwich, d. April 2, 1895; she studied organ and pianoforte under W. B. Wilson and E. Holmes, and theory under Hamilton and Macfarren. In 1839 S. became organist of All Saints', Poplar; in 1858, of St. Andrew's Undershaft, but resigned in 1880. In 1856

she passed the Mus.Doc. exam., Oxon., but did not receive the title, as it was then not decided whether it could be bestowed on a woman. In 1863 S. married Mr. J. A. Bridge. She published excellent organ pieces and songs.

Stobäus, Johann, one of the most important Protestant Church composers of the first half of the 17th century, b. July 6, 1580, Graudenz, d. Sept. 11, 1646, Königsberg. He went in 1595 to Königsberg in order to attend the Grammar school, and (in 1600) the University. In 1599 he became a pupil of J. Eccard, in 1601 entered the electoral chapel as bass singer, became in 1602 cantor of the cathedral school, in 1627 electoral capellmeister. S. entered into friendly intercourse with his teacher Eccard, and contributed to the latter's "Preussische Festlieder auf das ganze Jahr für 5, 6, 7, und 8 Stimmen" (2 parts, 1642 and 1644; republished by Teschner in 1858), and "Geistliche Lieder auf gewöhnliche Preussische Kirchen-Melodeyen mit 5 Stimmen" (1634). He wrote, besides, "Cantiones sacre 5-19 v. item Magnificat" (1624), also a very great number of songs for special occasions, many of them based on church melodies.

Stockfagott. (See RACKETT.)

Stockflöte, a walking stick formerly much in vogue; by unscrewing the handle and the tip it could be changed into a flute.

Stockhausen, (1) Franz (senior), performer on the harp, b. 1792, Cologne, d. 1868, Colmar. He made frequent concert tours with his wife, Margarete (née Schmuck), who was a distinguished singer (d. Oct. 6, 1877). He published many compositions for harp.

(2) Julius, son of the former, distinguished singer and highly esteemed teacher of singing, b. July 22, 1826, Paris, pupil of the Paris Conservatoire, and of Manuel Garcia in London. As a concert singer he soon became famous. From 1862-67 S. conducted the Philharmonic Concerts and the "Singakademie" at Hamburg, during 1869-70 was engaged as chamber singer at Stuttgart; he undertook, in 1874, the direction of the Stern Vocal Society, which he conducted in a most successful manner until called to the Hoch Conservatorium at Frankfurt as teacher of singing (1878). Discussions as to his competency led already in 1879 to his withdrawal from this post. Since then he has been director of a vocal school of his own in Frankfurt. Between 1886-87 he published a Method of teaching singing (2 vols.).

(3) Franz (junior), brother of the former, b. Jan. 30, 1839, Gebweiler; he received his first training in music from his parents, then studied under Alkan in Paris, and from 1860-62 at the Leipzig Conservatorium (Moscheles, Richter, Hauptmann). From 1863-66 he was musical director at Thann (Alsace), lived from 1866-68 with his brother in Hamburg, and in 1868 was appointed conductor of the Société de chant

sacré and musical director of the cathedral at Strasburg. In 1871 S. became the director of the Strasburg Conservatorium, also of the town concerts; in 1879 he resigned the direction of the Church Choral Society. Under S. the Strasburg Conservatorium prospered materially. In 1892 he was named "Kgl. Professor."

Stoltz, Rosine (really Victorine Nöb, best known under the above name, but she sang also under those of Mme. Ternaux and Mlle. Héloïse), distinguished singer (mezzo-soprano), b. Feb. 13, 1815, Paris, trained at Choron's school of music, sang first at Brussels, and from 1837-47 at the Paris Grand Opéra. After that she appeared on various stages, and sang at concerts, but soon withdrew altogether from public life. She has published some songs.

Stoltzer, Thomas, German contrapuntist of the 16th century, b. about 1490, Silesia, d. Aug. 29, 1526, Ofen, as royal Hungarian capellmeister. His compositions are scattered in collections (Graphæus' "Novum et insigne opus," 1537; Petrejus' Collection of psalms from 1538-39; Rhaw's "Bicinia," 1543, etc.).

Stölzel, Gottfried Heinrich, composer and theorist, b. Jan. 30, 1690, Grünstadt, in the Saxon Metal Mountains, d. Nov. 27, 1749, Gotha. He was the son of an organist, from whom he received his musical training; also from cantor Umlauf in Schneeberg, and from the musical director Hofmann in Leipzig. He lived first as teacher of music at Breslau; wrote there, in 1711, his first opera, *Narcissus*, which was followed by several for Naumburg (*Valeria, Artemisia, Orion*, all three in 1712). He then went to Italy, where he remained for several years, and, on his return, after a long stay in Prague (operas: *Venus und Adonis*, 1714; *Acis und Galathea*, 1715; *Das durch die Liebe besiegte Glück*, 1716), and a short one in Bayreuth (opera, *Diomedes*, 1717) and Gera, was appointed court capellmeister at Gotha. S. composed many sacred works (8 double annual series of cantatas and motets, 14 oratorios [for Prague, 1714-17: *Maria Magdalena, Jesus patiens, and Caino*], masses, etc.), 22 operas (among which the *Musenburg*, Gotha, 1723; the pastoral "Rosen und Dornen," etc.); also symphonies, serenades, "Tafel-musik," etc., all of which works remained in manuscript. A few copies were printed of a small treatise on elaborate counterpoints ("Praktischer Beweis, etc.") in 1725.

Stölzl, Heinrich, French horn player in the Berlin royal band, b. 1780, Pless, Silesia, d. 1844, Berlin. He replaced the key mechanism for trumpet and horn, invented by Kälbel (1770), by the valve mechanism invented by Blühmel in 1813, for which he obtained (in 1818) a patent for Prussia.

Stolzenberg, Benno, excellent stage singer (tenor), b. Feb. 25, 1829, Königsberg. He was the son of the Jewish leader of the prayers, but seceded and in 1855 joined the Evangelical Church.

He studied under Mantius and Heinrich Dorn, made his *début* at Königsberg in 1852 as Alma-viva, and then sang with great success on various stages, especially for many years at Carlsruhe, where he was appointed chamber singer, at Leipzig, etc. From 1878-82 he was director of the town theatre at Danzig, then settled in Berlin as teacher of singing, and in 1885 became teacher of solo singing at the Cologne Conservatorium. S. has an extraordinarily extensive *répertoire* (lyric, comic, and dramatic rôles), and is also prized as a concert singer; he has published some sets of songs of his own.

Stöpel, (1) Franz David Christoph, writer on music and teacher, b. Nov. 14, 1794, Oberheldrungen (Saxony), d. Dec. 19, 1836, Paris. He was for some time school teacher at Frankenberg, then private tutor in the house of Baron von Dankelmann; he came to London in 1821, commissioned by the Prussian Government, to draw up a report on Logier's Method, and in 1822 himself established in Berlin a school of music on Logier's system; but when Logier was summoned to Berlin by the Prussian Government, S. left, and established schools of music on Logier's system at Potsdam, Erfurt, Frankfurt, and other places; finally, one at Paris. Yet nowhere did he meet with the success which he anticipated, and he died somewhat discouraged. Besides the plagiarism from Logier, "System der Harmonielehre," (1825), he published several musical newspapers of brief duration (*Allg. Musik Anzeiger*, *Allg. Musikzeitung* [both at Frankfurt], and the *Münchener Musikzeitung*); also "Grundzüge der Geschichte der modernen Musik" (1821); "Beiträge zur Würdigung der neuen Methode des gleichzeitigen Unterrichts einer Mehrzahl Schüler im Pianofortespiel und der Theorie der Harmonie" (1823); "Ueber J. B. Logiers System der Musikwissenschaft" (1827); also several sets of songs and pf. pieces appeared in print.

(2) Robert August, composer, b. 1821, Berlin, d. Oct. 1, 1887, New York. Received his training in Paris, but in 1850 went to New York (operas: *Indiana* and *Charlemagne*; New York, *Aldershot*).

Stopfen, Stopftöne. (See HORN.)

Stops, Mutation, in the organ, are the simple Quint and Tierce, and the (rare) Seventh stops, also the compound (mixed) stops: Mixture, Cornet, Tertian, Rauschquinte, Sesquialtera, Scharf, etc.; these cannot be used alone, but only in combination with foundation stops.

Stör, Karl, b. June 29, 1814, Stolberg (Harz), d. Jan. 17, 1889, Weimar; studied under J. N. K. Götzke and J. Chr. Lobe in Weimar. In 1827 he became court musician; in 1857, after Liszt's departure, court capellmeister, which latter post, however, on account of an affection of the eyes, he was compelled to resign. The

best known of his compositions is the music to Schiller's "Glocke" (symphonic tone-pictures).

Storace, (1) Ann Selina, famous coloratura singer, b. 1766, London, d. Aug. 24, 1817, Herne Hill Cottage (near Dulwich), daughter of the Italian double-bass player, Stefano S. She studied under Sacchini in Venice, and shone from 1780-1808 at Florence, Milan, Vienna, London.

(2) Stephen, brother of the former, b. 1763, London, d. there March 19, 1796. He was a pupil of his father's and of the Conservatorio S. Onofrio at Naples. He went with his sister to Vienna, where he produced his first Italian comic opera, returned with her to London, and there composed many vaudevilles and operas. In all, S. wrote 18 works for the stage, including some adaptations (for example, of Dittersdorff's *Doktor und Apotheker* and Salieri's *Grotta di Trofonio*). His last opera, *Mahmoud*, completed by Kelly and Ann S., was produced after his death.

Storch, Anton M., composer of male choruses, b. Dec. 22, 1815, Vienna, where he died Dec. 31, 1887, as a retired choirmaster (choruses: "Letzte Treue," "Grün"; also music to burlesques, etc.).

Stöwe, Gustav, b. July 4, 1835, Potsdam, d. there April 30, 1891; he attended the Stern-Marx Conservatorium at Berlin, and then studied privately with A. B. Marx (composition) and Zech (pianoforte). In 1875 he founded the Potsdam School of Music, of which he was director until his death. S. wrote: "Die Klaviertechnik, dargestellt als musikalisch-physiologische Bewegungslehre" (1886), a work in which the subject is thoroughly discussed in all its details (analysis of the functions of muscles and ligaments in connection with the various modes of touch). Several of S.'s choral works received prizes from the Berlin "Tonkünstlerverein"; pf. pieces and songs appeared in print. S. was a contributor to Breslaur's *Klavierlehrer*.

Str., abbreviation (in pianoforte scores, etc.) for the strings of the orchestra.

Stradella, Alessandro, celebrated composer and singer, b. about 1645, Naples, murdered, through jealousy, Genoa, 1681, having escaped a first attempt at murder in Rome, after the manner "true to life," described in Flotow's opera (with exception of the reconciliation of the duped Venetian), and having been dangerously wounded in a second one at Turin. Nothing further is known of his life, except the love affair on which the opera is based. S. was engaged to write an opera for Venice, made the acquaintance of the mistress of a noble Venetian, and ran away with her before the production of his work. The injured lover would not rest until he had taken the life of S. The story is related by Bourdelot ("Histoire de la musique et de ses effets").

The concluding sentence, "Ainsi périt le plus excellent musicien de toute l'Italie, environ l'an 1670," was probably added by Bourdelot's nephew, who published the work in 1715; for when Bourdelot died, in 1685, it is to be supposed that as he was so well acquainted with the details, he must also have known the exact year. The more correct date for S.'s death is about 1681 or 1682. The following of his compositions have been preserved: his oratorio, written for Rome, *San Giovanni Battista* (a 5, with instruments; Burney possessed a copy, dated 1676); the libretto for his opera composed for Genoa, *La forza del amor paterno* (printed 1678; both these works are connected with S.'s love adventure); also an oratorio, *Susanna* (dedicated to Duke Francesco of Modena, with date April 16, 1681, excluding, therefore, the supposition that he was murdered in 1670); finally, several operas and other works, which are in the Modena Library; a volume of cantatas, in the Library of the Naples Conservatorio; 21 cantatas, in the Library of St. Mark's, Venice (10 of which were published by Léon Escudier, with pf. accompaniment by Halévy), others in the Paris Bibliothèque Nationale and the Conservatoire library, in London, Oxford, Cambridge, and in private hands (Santini, Fétis). The arias "O del mio dolce" ("Pietà signore") and "Se i miei sospiri" (see NIEDERMEYER), circulated under his name, were not written by S. Monographs on S. have been written by A. Catelani ("Delle opere di A.S. esistenti nell'archivio musicale della R. Bibliotheca Palatina di Modena," 1866) and P. Richard, *conservateur* of the Paris Bibliothèque Nationale ("A.S.," 1866).

Stradivari, Antonio, the greatest maker of violins, b. 1644, Cremona, of an old patrician Cremonese family, d. there Dec. 18, 1737. He was a pupil of Niccolò Amati, signed the first violins which he made for Amati with Amati's name; he married in 1667, and, probably, about this time began to work under his own name, *i.e.* on his own account. S. married twice, and had eleven children, of whom, however, only two sons became violin-makers, viz., Francesco, b. Feb. 1, 1671, d. May 11, 1743, and Omobono, b. Nov. 14, 1679, d. July 8, 1742. Both worked in partnership with their father, and were almost old men (58 and 66 years of age) when the former died. A comprehensive monograph, "Cenni sulla celebre scuola Cremonese degli stromenti ad arco . . . e sulla famiglia del sommo A. S." [1872], written by Paolo Lombardini, gives the genealogy of the S. family from the 13th century down to their representatives living at the present day; but among them is no violin-maker other than those mentioned. S. made a great number of instruments, 'celli as remarkable as his violins, violas, and viols of the older kind (gambas, etc.), lutes, guitars, mandolines, etc. He worked for about 70 years;

his last known violin has the date 1736, in his own handwriting. His son Francesco signed from 1725 under his own name. Omobono made some instruments jointly with him, "Sotto la disciplina d'A. S.," and appears to have been more occupied with the material and with sales than with the making of the instruments. The father and the two sons repose in one grave. Fétis, also, wrote a monograph on A. S. (1856). (Cf. WASIELEWSKI and VIDAL.)

Straeten, Van der. (See VANDERSTRAETEN.)

Strakosch, Moritz, well-known pianist and impresario, brother-in-law and teacher of Adelina Patti, b. 1825, Lemberg, d. Oct. 9, 1887, Paris. S. wrote several pf. pieces, besides 2 operas.

Strascinando (Ital.), dragging, becoming slower.

Strathspey, a Scotch dance in C time and dotted quaver movement; it resembles the Reel, but is not taken so rapidly.

Straus, Ludwig, an excellent violinist, b. March 28, 1835, Pressburg; pupil of Hellmesberger and Boehm in Vienna. In 1859 he became leader at Frankfurt (Museum up to 1864, town theatre up to 1862). From 1864 he lived in England as solo violinist in the court band, leader at the Philharmonic, and for some time member of Hallé's orchestra at Manchester; also esteemed as a quartet player (also violist) at the Saturday and Monday Popular Concerts, and teacher at the London Academy of Music.

Strauss, (1) Joseph, violinist and composer, b. 1793, Brünn, d. Dec. 2, 1866, Carlsruhe; he was the son of an able violinist, studied with his father, Blumenthal, Urbani, and Schuppanzigh at Vienna; also theory under Teyber and Albrechtsberger. At the age of twelve he joined the orchestra of the Vienna Hofoper, was next engaged at the Pesth theatre, 1813 became musical director at Temeswar, later on at Hermannstadt, Brünn, etc., and in 1822 was called to Strasburg to direct a German opera company. In 1823 S. became musical director at the Mannheim court theatre, and in 1824 court capellmeister at Carlsruhe. In 1863 he retired. S. wrote several operas (*Berthold der Zähringer*, *Armiodan*, *Die Schützenfahrt nach Nowgorod*, and others), incidental music to plays, an oratorio (*Judith*), etc. There appeared in print a quartet for strings, several variations for violin, and songs.

(2) Johann (sen.), one of the most favourite German dance composers, but who of late has been surpassed by his son, of like name (q.v.), in the favour of the public, b. March 14, 1804, Vienna, d. there Sept. 25, 1849. He was the son of a proprietor of a beer and dancing hall, and only received an erratic musical training, yet already in 1819 was able to take a post as violist in Lanner's (q.v.) Quartet.

When the dance band of the latter was increased he became assistant conductor, and in 1825 founded a quadrille band of his own. He also now appeared with his first waltzes, and was soon the hero of the day. He became so noted, that he was able to maintain a well-trained orchestra, and of considerable size, with which, from 1833, he made concert tours, first in Austria, but as early as 1837 to Paris, London, etc. Already in 1834 he was bandmaster of a militia regiment, and in 1835 he was entrusted with the musical direction of the court balls. Among his many waltzes the following are the most important: "Gabrielen-Walzer," "Tagliani-Walzer," "Victoria-Walzer," "Caecilien-Walzer," "Electrische Funken," "Mephistos Höllenrufe," "Bajaderenwalzer." The number of his publications is about 250, among which also many marches, potpourris, etc. A selection of his works, in 7 vols., was edited by his son Johann (1889, Breitkopf und Härtel).

(3) JOHANN (jun.), b. Oct. 25, 1825, Vienna; he founded in 1844, in addition to his father's orchestra, one of his own; but after his father's death he undertook the conductorship of the former, and made what was good, better. He greatly extended his concert tours, and though a frequent, was always a welcome guest at Petersburg, Berlin, London, Paris, and even in America. In 1863 he married the vocalist Jetty Treffz, and handed over the band to his brothers Joseph and Eduard. As a composer, he followed from the commencement in the footsteps of his father. Of his waltzes, "An der schönen blauen Donau," on an Austrian, but especially Viennese folk-melody, also "Künstlerleben," "Geschichten aus dem Wiener Wald," "Wiener Blut," and "Bei uns zu Haus," etc., obtained enormous popularity. Of late S. has become a composer of operettas, and has proved a worthy rival to Offenbach and Lecocq; but he still remains a composer of waltzes and quadrilles, and his operettas include many taking waltzes, which are included, in detached form, in the *répertoires* of open-air bands. His operettas are: *Indigo* (1871), *Der Karneval in Rom* (1873), *Die Fledermaus* (1874; revised as *La tzigane*, Paris, 1877), *Cagliostro* (1875), *Methusalem* (1877), *Blindekuh* (1878), *Das Spitzentuch der Königin* (1880), *Der lustige Krieg* (1881), *Eine Nacht in Venedig* (1883), *Der Zigeunerbaron* (1885), *Simplicius* (1887), and *Ritter Pasman* (1892). The waltzes of S., in intention, certainly belong to those works calculated to please the million, and even his operettas do not aim at the highest ideals of art; yet the rhythm and melody of the dances, and especially the refined instrumentation, deserve recognition on the part of musicians.

(4) JOSEPH, brother of the former, b. 1827, d. July 22, 1870, Warsaw: conductor of his brother's band. He also cultivated dance composition, though not with the skill and *finesse* of

his brother. The present leader of the band is his youngest brother—Eduard, also a diligent dance composer.

(5) RICHARD, highly talented composer, b. June 11, 1864, Munich, where his father, Franz S., was royal chamber musician (performer on the French horn). He studied under capellmeister W. Meyer there, and first drew attention to himself by his symphony in F minor (produced under Levi, 1881); further by his serenade for 13 wind instruments (Op. 7), which H. v. Bülow performed everywhere with the Meiningen orchestra. In 1885 H. v. Bülow attracted him to Meiningen as ducal court musical director, but as early as 1886 he was appointed third capellmeister at Munich, and went in 1889 to Weimar as court capellmeister (with Lassen). He has produced up to now: a pf. sonata (Op. 5), "Stimmungsbilder" for pf. (Op. 9), a 'cello sonata (Op. 6), a violin concerto (Op. 8), French horn concerto (Op. 11), "Wanderers Sturmlied" (a 6, mixed chorus and orchestra), a pf. quartet (c minor, Op. 13), a symphony (F minor, Op. 12), the symphonic poems "Aus Italien" (Op. 16), "Don Juan" (1889), "Macbeth" (1891), "Tod und Verklärung" (1890); also songs rich in colouring, etc. In his recent works S. is entirely influenced by the Berlioz-Liszt-Wagner tendency, and shows special mastery of colouring and instrumentation.

Stravagante (Ital.), extravagant, unrestrained, *i.e.* with boldness of execution.

Streabbog. (See GOBBAERTS.)

Streicher, Johann Andreas, pianist and pianoforte manufacturer, b. Dec. 13, 1761, Stuttgart, d. May 25, 1833, Vienna; he was a fellow-student of Schiller's at the Karlsschule, from which they both escaped together. In 1793 he married Nanette Stein (b. Jan. 2, 1760, Augsburg, d. Jan. 16, 1833, Vienna), the daughter of Georg Andreas Stein (q.v.), and removed the pianoforte manufactory of the latter to Vienna, devoting himself more and more to the study of the construction of the instrument. His invention was the mechanism with blow of the hammer from above, which Pape imitated in Paris.

Streichzither. (See ZITHER.)

Strepitoso (Ital.), noisy.

Stretto is generally applied to the rapidly following (canonic) voice entries, shortly before the close of a fugue, in which the Dux and Comes do not come one *after* the other, but, partly, the one with the other. It is also applied to a lively closing passage such as is frequently to be met with at the end of concerto movements, arias, etc.

Striggio, Alessandro, one of the first composers of Intermezzi, b. about 1535, Mantua; he lived first at the court of Cosimo de' Medici, and was afterwards court maestro at Mantua. He was a renowned lute-player and organist.

His Intermezzi are: "L'amico fido" (1565), "Pysche" (for the betrothal of Francesco de' Medici with Johanna of Austria). He also composed festival music of similar contents for the Florentine court, 1569, on the occasion of the presence of an Austrian Arch-Duke (the music is printed), and 1579, for the marriage of Francesco de' Medici and Bianca Capello (jointly with Strozzi, Caccini, and Merulo). Of his works the following appeared in print: 3 books of madrigals *u* 6 (1566-68), a book of madrigals *a* 5 (1560, and frequently), "Il cicalamento delle donne al buccato, e la caccia," etc. (1567 and 1584; S. was also a composer of programme music); "Di Hettore Vidue e d'Alessandro S. e d'altri . . . madrigali a 5 e 6 voci" (1566). Some madrigals are also to be found in various collections.

Strinasacchi, Regina, distinguished lady violinist, b. 1764, Ostiglia (near Mantua), d. 1839, Dresden, where, after brilliant concert tours, she married the 'cellist, J. C. Schlick. S. was a pupil of the Conservatorio della Pietà at Venice (Mozart wrote for her his *B*7 sonata with violin *ad lib.*)

Stringed Instruments. The only S.I. in use in European high-class music: the violin, viola, 'cello, and double-bass, are the final result of a slow development of perhaps a thousand years. They are all constructed on the same principle, as the merest glance at them will show. This mode of construction, most favourable to the formation of a noble, full tone, was invented somewhere about the end of the 15th century, especially for the violin, and was gradually transferred to the larger kinds of S. I.; so that 'cello, viola, and double-bass supplanted at a much later period the older S.I., which were called viols (*Viola da braccio, Viola da gamba, and Violone*), as is shown under the article "VIOLIN." The origin of S. I. has, hitherto, not been established, but there are no kinds of proofs to hand justifying us in dating them from antiquity. No monument of the pre-Christian age exists giving a representation of a bowed instrument. According to general acceptance, the East is the cradle of S.I. This generally-received statement rests, however, on a very poor foundation, for in the 14th century the Arabian writers on music (see ARABIANS) used the Rebab, or Erbeb, and Kemantsche. Although nothing really points to an earlier existence of S.I. among them, still one has come to the conclusion that the West may have received them from the Arabians after the conquest of Spain; while, on the other hand, many proofs exist showing that since the 9th century, if not for a longer period, the West was familiar with instruments of this kind. This is not the place to discuss the matter in detail; it must suffice to point to the fact that the oldest representations of a stringed instrument (in Gerbert, "De

musica sacra" II., reproduced), a one-stringed "Lyra," belonging to the 8th or 9th century, shows very great similarity to the later "Gigue." Again, we have mention of the *Chrotta* (*Crenth*) as far back as the 7th century, and already in the 11th and the 12th centuries many varied forms of S. I. existed side by side. If the *Rubeba*, *Rubella*, likewise the still older *Rebeca*, may be derived from the Arabian Rebab (which, at any rate, cannot be denied), why should not just the reverse mode of reasoning be possible, especially if there is testimony in its favour? The *Chrotta* of the Celts, if the crook be taken away; is a viol with angular sound-chest, such as we find them in the 12th century. Two principal, but different, forms of S. I. existed side by side for centuries: from the one (probably less old) with flat sound-chest sprang the *Chrotta*; while the other, with arched belly of mandoline form (the old German *Fidula*), is, probably, of German origin. It is also possible that the *Trumscheit* (q.v.), a peculiar instrument, probably of German origin, which existed almost up to the present, preserved the prototype of the S. I. The accounts of this one, it is true, only reach back as far as the 15th century. Also the early occurrence of the (*Drehleier*) Hurdy-Gurdy points to a Western origin of S. I. The oldest S. I. had no frets (see REBEC and VIELLA); the frets first appeared at a time in which the Lute, which it can be proved was imported from the Arabians, first began to be spread about in the West, i.e. the 14th century; and, about the same time, there appeared all kinds of transformations in the outward shape of S. I., which betray the influence of the Lute (great number of strings, the rose); and in the development of S. I. these show a decidedly backward step; the rose at least was altogether a hindrance to powerful tone. (Cf. SOUNDHOLES.) From the 15th to the 16th centuries we find, side by side, a great number of various kinds of the great and the small *Gigue*, for which no long lease of life could be expected, and which were all supplanted by instruments of the violin kind. For the explanation of the very varied outlines of the S. I. of olden times, it may, in addition, be pointed out that the side bouts were necessary for those S. I. which had a considerable number of strings (above three), and, consequently, a higher arched bridge. Matters went so far in the enlargement of the side bouts, that, finally, instruments were made whose sound-body had almost the form of an *x*. For the instruments with, at most, three strings (the *Rubebe*, in fact, had only two, and a *Bordun*) no side bouts were necessary; and, for a long time, indeed, they preserved their pear-shaped sound-chest. (See GIGUE.)

Stringed Orchestra. (See ORCHESTRA.)

Stringed Quartet is the name given to the ensemble of two violins, viola, and 'cello;

likewise to a composition for these instruments. (See QUARTET.) Less correctly, the expression S. Q. is brought into the modern orchestra in the sense of the collective body of strings (including double-bass).

Stringed Quintet, generally two violins, two violas, and 'cello, or two violins, viola, and two 'celli, and even two violins, viola, 'cello, and double-bass; rarely, three violins, viola, and 'cello, or other combinations. In a similar manner, stringed sextet, septet, etc., consist of combinations of various kinds.

Stringendo (Ital.), drawing together, *i.e.* becoming faster, gradually faster. Concerning the natural laws of S. on a small scale, as means of expression, see AGOGICS.

Strings. The S. of our musical instruments are either *gut* strings, those made from intestines (especially of lambs), or *metal* strings (formerly of brass or copper wire, and even iron, now of cast steel). Both kinds, in order to obtain deeper tones without the necessary length, have been artificially loaded by the so-called process of over-spinning. Steel strings are thickly covered with copper wire, gut strings with silver wire. Also strings of silk spun over with silver are used (in the guitar and zither).

Strohfiedel (Straw-fiddle), an instrument made of wood and straw (Xylophon, *Holzharmonika*, *Gigelyra*; Lat., also *Psalterium ligneum*), the well-known instrument of percussion popular amongst the Tyrolean singers; it consists of variously-tuned bars of wood, struck with sticks; the bars lie on straw. The S. is characteristically employed, e.g. in Saint-Saëns' *Danse Macabre*. How the same acquired the name of "Fiedel" and "Gigelyra" has not been yet investigated.

Stromento, Instrument; *S. da fiato*, wind inst.; *S. da penna*, Clavier (the early "Kiel-flügel," clavicembalo, spinett).

Strophe (Gk. from *στρεφειν*, to turn), identical so far as the word sense is concerned with the Latin *versus* (from *vertere*, to turn); in poetry, however, it is sharply distinguished from verse. By verse is understood a line of a poem; by S., on the other hand, several lines of a lyrical poem, which, by metre and by contents (and in modern poetry also by rhyme) are connected so as to form a higher unity. Among the Greeks, who, as is known, had a highly developed art of metre, the S. was further divided into Kola (members) and Metra (verses). On the other hand, in the choruses of Greek tragedy and in the odes of Pindar several strophes again combined to form a higher unity (S., Antistrophe, and Epode), answering exactly to the two *Stollen* and to the *Abgesang* of German poetry of the late Middle Ages, especially of the Meistersingers, which formed together a so-called *Bar*. S. formation is of typical importance in the matter of musical form. R. West-

phal, in his "Theorie der musikalischen Rhythmik" (1881), has given a detailed description of the Greek art of metre.

Strozzi, (1) Pietro, one of the Florentine musicians from whose circle proceeded the invention of the *Stilovappresentativo*. (Cf. FLORENTINE REFORMATION OF MUSIC.) S. composed, with Striggio, Caccini, and Merulo, the festival play for the marriage of Francesco de' Medici and Bianca Capello, and also set to music Rinuccini's *Mascarada degli accecati* in 1595.

(2) Bernardo, Franciscan monk at Rome, published from 1618-30 motets *a 5*, also masses, psalms, concertos, magnificats, etc.

(3) Barbara, noble Venetian lady, published from 1644 to 1658 madrigals, cantatas, ariettas, and duets.

(4) Gregorio, Abbate, apostolic proto-notary at Naples; he published: "Elementarum musicæ praxis" (1683, vocal exercises in canon form *a 2*), and "Capricci da sonare sopra cembali e organi" (1687).

Struck, Batistin (known generally only as Batistin), b. about 1680, Florence, d. Dec. 9, 1755, Paris; one of the first who established the 'cello in the opera orchestra there. He wrote 3 grand operas for Paris (*Méléagre* [1705], *Manto la fée* [1711], *Polydore* [1720]) and a large number of ballets for the court festivals at Versailles; also a number of cantatas and arias.

Strungk (Strunck), Nikolaus Adam, distinguished violinist and prolific opera composer, b. 1640, Celle, d. Sept. 23, 1700, Dresden. At the early age of twelve he assisted his father in his post as organist at Celle, and at the age of twenty became principal violinist in the band at Brunswick; later on at Celle, and after that at Hanover. In 1678 he undertook the post of musical director at a Hamburg church. When the Elector Friedrich Wilhelm of Brandenburg wished to engage him as capellmeister, Duke Ernst August of Hanover exercised his right as sovereign, named him his chamber organist, made him a canon, and took him on a journey to Italy; there S. gained the respect of Corelli. He also played several times with success before the Emperor at Vienna. About 1685 he was called to Dresden as vice-capellmeister, and in 1694 succeeded Bernhardt as court capellmeister. From Dresden he went to Leipzig to conduct the opera during the fair. In 1696 he gave up his post of capellmeister and settled in Leipzig, in order to devote himself to the direction of the opera. S. composed several pieces for the first German Opera in Hamburg (*Sejanus* [2 parts, 1678], *Doris*, *Esther*, *Die drei Töchter des Kekrops*, *Theseus*, *Semiramis*, *Floretto*, 1683), also 16 other operas for Leipzig (1693-1700 (Cf. Riemann, "Opernhandbuch"). Of his compositions the only one printed is: "Musikalische Uebung auf der Violine oder Viola da Gamba in etlichen Sonaten über die

Festgesänge in gleichen etlichen Ciaconen mit 2 Violinen bestehend" (1691).

Struss, Fritz, distinguished violinist, b. Nov. 28, 1847, Hamburg; pupil of Unruh, Auer (1865), and Joachim (1866). He was for a short time member of the Schwerin court orchestra (1866), since 1870 in the Berlin ditto, 1885 "Kammervirtuos," 1887 royal concertmeister, also teacher at the Scharwenka-Klindworth Conservatorium.

Stumpf, Johann Christian, famous bassoon-player, about 1785 in Paris, afterwards in Altona; from 1798 up to his death, in 1801, *Repetitor* at the Frankfurt town theatre. He published: *Entr'actes* for orchestra, pieces for clarinets, horns, and bassoons, a flute concerto, 4 bassoon concertos, a quartet for stringed trio and bassoon, clarinet duets, violin sonatas with 'cello, 'cello duets, etc.

Stumpff, Karl, b. April 21, 1848, Wiesenheid (Lower Franconia), son of a physician; he studied from 1865-70 at Würzburg and Göttingen, first jurisprudence, afterwards physics, philosophy, and theology, took his degree at Göttingen, and qualified himself there in 1870 as private lecturer on philosophy; he became professor in ordinary at Würzburg in 1873, was called to Prague in 1879, to Halle-a.-S. in 1884, and to Munich in 1889, where he now resides. From youth upwards S. was a zealous lover of music, and often hesitated as to whether he ought not to devote himself entirely to the art. To this inclination we owe his important work "Tonpsychologie" (1st and 2nd vols. 1883, 1890), which followed up a path first trodden by Th. Lotze and G. Th. Fechner; this work must be looked upon as the natural consequence, and healthy continuation, of Helmholtz's "Lehre von den Tonempfindungen." S. also wrote "Ueber Tonpsychologie in England" (in the *Vierteljahrsschrift für Musikwissenschaft*), and "Ueber den psychologischen Ursprung der Raumvorstellung," etc.

Stuntz, Joseph Hartmann, composer and conductor, b. July 25, 1793, Arlesheim (near Basle), d. June 18, 1859, Munich, pupil of Peter v. Winter. He had already written several operas for Italian towns (Milan, Venice), when in 1824 he became chorus-master of the Munich Court Opera. In 1826 he succeeded his teacher as court capellmeister. S. composed for Munich several German operas, many sacred works (masses, Stabat, etc.), and published: 2 overtures, a quartet for strings, nocturnes for two voices, and some male choruses.

Style (from Lat. *stilus*, "pointed"), mode of writing, peculiarity of structure, whether subjective, as the S. of a certain master (Beethoven's, Mozart's, Schumann's, Chopin's S.), or objective, as the mode of writing required for a species of composition, or for certain instruments (instrumental S., vocal S., church S., orchestral S.,

operatic S., chamber S., quartet S., pianoforte S., organ S., etc.). One speaks further of a *strict* S., by which is meant a mode of writing in real parts or voices, with due observance of the laws in force for vocal style (see VOCAL MUSIC); and of a *free* S., which is not one confined to a definite number of parts or voices, but one in which these are increased or diminished at pleasure, etc. Other distinctions more of an esthetic nature are those of a pathetic, naïve, sentimental, romantic, classic style. (Cf. CLASSICAL, ROMANTIC.)

Su (Ital.), on; *sul* = *su il* (*sul* G, on the G string); *sui* = *su i*, *sullo* = *su lo*, *sugli* = *su gli*.

Sub- (diapente, etc.). (Cf. HYPO.) Subdominant, i.e. underdominant.

Sub-bass, in the organ, a 16-foot Gedaktstimme, mostly in the pedal.

Subdominant. (See DOMINANT.)

Subito (Ital.), suddenly, immediately.

Subject is the name given to the theme of a fugue (q.v.). There are fugues with two subjects (double fugue), three subjects (triple fugue), in which the themes are independently developed. If the second S. is only the counterpoint to the first, it is called counter-subject.

Submediant, the third below the key-note, the sixth degree of the scale.

Subsemitonium modi, the under semitone of the key, the leading note; that is, from below to the tonic, which is an essential element in all modern scales; e.g. in c major = b-c, in a minor = g \sharp -a, etc. (Cf. MINOR KEY and CHURCH, MODES.)

Succo, Reinhold, b. Nov. 23, 1844, Görlitz, studied at the Berlin Akademie, became in 1863 organist of St. Thomas's, Berlin, in 1874 teacher of theory at the Royal High School, and in 1888, member of the Akademie. S. has composed organ pieces, also sacred and secular vocal works.

Sucher, Joseph, excellent conductor, b. Nov. 23, 1843, Döbör (Eisenberg district), Hungary; he studied first law at Vienna, but turned entirely to music, studied theory under S. Sechter, and then first became conductor of the academical vocal society and "Repetitor" of the Court Opera, afterwards capellmeister at the Comic Opera, but went in 1876 as capellmeister to the Leipzig town theatre. He married the distinguished dramatic singer Rosa Hasselbeck (b. Velburg, in the Upper Palatinate), and was engaged with her from 1878 by Pollini for Hamburg. In 1888 S. became court capellmeister at Berlin as C. Schroeder's successor, when Frau S. was likewise engaged as prima donna. Both are excellent interpreters of Wagner, and Frau S. has won triumphs in the rôles of Isolde (Bayreuth, 1886) and Sieglinde.

Suegala. (See SCHWEGEL.)

Suffocato (Ital.), deadened (muffled).

Suite (*Partie, Partita*), one of the oldest forms (cyclical), consisting of several movements, a succession (*suite*) of several dance movements written in the same key, and offering contrast of character. The oldest combinations of this kind are the obvious ones of the Paduana and Gaillarde (q.v.) in the lute books of the first half of the 16th century. At the beginning of the 17th century the Corrente and Allemande (for example, in Scheidt, 1621) are also found, but not arranged in S. order. The more ancient name of the genuine S. was *Sonata da camera*, in the form which it assumed in the second half of the 17th century (for stringed instruments). The term *Balletto* is also identical with it. The name S. first sprang up at the end of the 17th century among French composers for the lute; and for clavier, the name *Partie* (*Partita*); Couperin, however, uses the term *Ordre*. The four characteristic sections of the S. are: *Allemande*, *Courante*, *Sarabande*, and *Gigue*; when more movements were intercalated (Intermezzi: *Gavotte*, *Passepied*, *Branle*, *Menuet*, *Bourrée*, and *Doubles* on a dance piece), this took place, as a rule, between the *Sarabande* and the *Gigue*. (Cf. the respective articles.) A movement is seldom inserted before the *Sarabande*, but more frequently, a *Preludium*, before the *Allemande*. The chamber S. attained to its highest stage of development through J. S. Bach. Within recent times the S. has been transferred to the orchestra, and greatly extended in compass, especially by Franz Lachner, who in his suites has displayed great contrapuntal skill. A degenerate form of S., likewise for orchestra (but especially for strings), is of quite recent date. It does not confine itself to the principal types of the movements of the older S., but rather resembles the old *Diverissement*, i.e. it consists of a series of light movements, somewhat in the style *galant*, without any use being made of the higher artifices of counterpoint.

Sullivan, (Sir) Arthur Seymour, one of the most important living musicians, b. May 13, 1842, London, pupil of the Royal Academy of Music, and also of the Leipzig Conservatorium (1858-61). In 1876 S. became director of the National Training School for Music (until 1881), afterwards member of the Council of the Royal College of Music. Of his compositions the following deserve mention:—Overture and incidental music to Shakespeare's *Tempest* (written at Leipzig; the overture was performed at a students' concert before he left that city), *Mercant of Venice*, *Merry Wives of Windsor*, *Henry VIII.*, and *Macbeth* (1888); ballet, *L'île enchantée* (1864); symphony in E; overtures: "Sapphire Necklace" and "Marmion," "Overture di Ballo," "In Memoriam"; oratorios: *The Prodigal Son*, *The Light of the World*, *The Martyr of Antioch* (1880); cantatas: *Kenilworth*, *The Golden Legend* (1887), and *On Shore and Sea*;

concerto for 'cello, *Duo concertante* for pf. and 'cello, pf. compositions ("Thoughts," "Twilight," "Day-Dreams"), and songs. Great success attended his operettas in England and America, while the attempt to acclimatise them in Germany has not as yet proved much of a success: *The Contrabandista*, *Cox and Box*, *Thespis*, *The Zoo*, *Trial by Jury*, *The Sorcerer*, *H.M.S. Pinafore*, *The Pirates of Penzance*, *Patience* (*Bunthorne's Bride*), *Iolanthe* (*The Peer and the Peri*), *Princess Ida* (1884), *The Mikado* (1885), *Ruddigore* (1887), *The Yeoman of the Guard* (1888), *The Gondoliers* (1890). His latest works are the grand opera *Ivanhoe* (1891), besides a re-casting of the operetta *Contrabandista* (1867) as *The Chieftain* (1894), and incidental music to *King Arthur* (1894).

Sulzer, (1) Johann Georg, writer on esthetics, b. 1719, Winterthur, d. Feb. 25, 1779, Berlin. He was at first preacher in a village near Zürich, then private tutor at Magdeburg; he went as professor to the Joachimsthal Gymnasium, Berlin; and, when he had lived for some time in Switzerland (after the death of his wife), received a post at the Berlin "Ritterakademie," which, on account of illness, he was forced to resign in 1773. His works, for their time of great merit, are: "Pensées sur l'origine et les différents emplois des sciences et des beaux-arts" (in the reports of the sittings of the Berlin "Akademie," 1757; also separately, in a new German revision, 1772, under the title, "Die schönen Künste in ihrem Ursprung," etc.; "Allgemeine Theorie der schönen Künste" (1772, 4 vols.; 2nd ed. 1792-94, 4 vols.; in addition, 3 vols. "Litterarische Zusätze" by Blankenburg, 1796-98, and 8 vols. of supplements by Dyck and Schatz, 1792-1806; the musical articles are, for the most part, by J. A. P. Schulz). Also a report on Hohlfeld's music-writing machine (see MELOGRAPH) for the Berlin "Akademie" is by S. (1771).

(2) Salomon, reformer of the Jewish service of song, b. March 30, 1804, Hohenems (Vorarlberg), d. Jan. 18, 1890, Vienna; chief cantor of the Jewish community in Vienna (from 1825). He published "Schir Zion" (Jewish song-book), Hebrew hymns and other songs. By new compositions, and by the formation of an excellent synagogue choir, he was able to regenerate the Jewish temple service of song.

Superfluous, i.e. augmented (Ger. *Uebermässig*) are intervals which are greater than major or perfect by a chromatic semitone. The inversion of superfluous intervals gives diminished. Chords are called augmented when they are limited (in a thoroughbass sense) by an augmented interval; namely, the augmented Triad (with augmented fifth) and the various kinds of augmented chords of the

sixth (♭ 4 5 6 with augmented sixth).

Suppé, Franz von, operetta composer, b. April 18, 1820, Spalato (Dalmatia), d. May 21, 1895, Vienna. He sprang from a family of Belgian origin, displayed musical talent at an early age, and the flute was the first instrument which he learnt. After his father's death his mother went to Vienna, and he entered the Conservatorium, having Sechter and Seyfried for his masters. When Donizetti stayed in Vienna for the preparation of his *Linda di Chamounix*, S. seized the opportunity to get advice from him. His first post was that of capellmeister at the Josephstadt theatre; after that he was, for a short time, theatre capellmeister at Pressburg, and until 1862 at the Theater an der Wien. From 1865 he was again at the Leopoldstadt theatre. S. composed not only operettas, but also a mass, a requiem, a symphony, overtures, quartets, etc., which bear witness to his musical training; he owes his fame, however, to his light works à la Offenbach: *Der Apfel* (1834, Zara, privately), *Das Mädchen vom Lande* (Vienna, 1847), *Paragraph 3* (1858), *Das Pensionat* (1860), *Die Kartenschlägerin*, *Zehn Mädchen und kein Mann* (1862), *Flotte Bursche* (1863), *Das Corps der Rache* (1863), *Pique Dame*, *Die schöne Galathea* (1865), *Leichte Kavallerie* (1866), *Freigeister*, *Franz Schubert*, *Cannebas*, *Frau Meisterin*, *Banditenstreiche*, *Tantalusqualen* (1868), *Isabella*, *Die Prinzessin v. Dragant*, *Fatinizza* (1876), *Tricoche und Cacolet*, *Boccaccio* (1879; produced in London 1882), *Donna Juanita* (1880), *Der Gascogner* (1881), *Herzblättchen* (1882), *Die Afrikareise* (1883), *Des Matrosen Heimkehr* (1885), *Bellmann* (1887), and *Die Jagd nach dem Glücke* (1888).

Suriāno, (Soriano), Francesco, famous composer of the Roman School, b. 1549, Rome, d. there Jan., 1620. He was chapel boy of St. John's, Lateran, studied under Zoilo and Roy, and afterwards became a pupil of G. M. Nanini and Palestrina. He acted first as maestro at the French church of St. Louis, in 1587 at Santa Maria Maggiore; 1588, again at the St. Louis Church; 1599 at the Lateran, and in 1600 again at Santa Maria Maggiore. His printed works are 2 books of madrigals a 5 (1581, 1592), 2 books of madrigals a 4 (1601, 1602), motets a 8 (1597), a book of masses u 4-8 (1609; among which the arrangement a 8 of Palestrina's "Missa Papæ Marcelli"), "Canoni e obblighi di CX sorti sopra l' Ave Maris Stella a 3-8 voci" (1610), 2 books of psalms and motets a 8-16 (1614-1616), villanelle a 3 (1617), and Magnificat a 4, together with a Passion (1619).

Susato. (See TYLMAN SUSATO.)

Suspension (Ger. *Vorhalt*) is the substitution of a neighbouring (dissonant) note (major or minor upper or under-second) in place of the note belonging to the chord, to which the suspended note afterwards proceeds. The S. is either prepared (when the dissonant note is tied

from the previous harmony [a]), or it appears free (b; cf. CHANGING NOTE):

S. was formerly (about 1700) also the name of a manner of playing—namely, of the somewhat delayed placing of a melody note (after a short "breath pause"), indicated by \circ over the note, e.g.:

For further information respecting the S., see DISSONANCE; concerning the S. written as appoggiatura, see APPOGGIATURA; compare also ANTICIPATION.

Suspirium (*Pausae minima*), old name for the half-bar rest.

Süssmayer, Franz Xaver, known through his connection with Mozart, b. 1766, Steyr, d. Sept. 17, 1803, Vienna. He was a pupil of Mozart's, and scored, among other things, some arias of that composer's *Titus*. In 1792 S. became capellmeister at the "Nationaltheater," and in 1794 second capellmeister at the "Hofopertheater"; he also wrote a series of operas, of which *Soliman II.* and *Der Wildfang* appeared in print.

Svelto (Ital.), lively, free.

Svendsen, (1) Oluf, flautist, b. April 19, 1832, Christiania, d. May 15, 1888, London; pupil of the Brussels Conservatoire. From 1855 he held a prominent position in London, and in 1867 became teacher at the Royal Academy of Music.

(2) Johann Severin, Norwegian violinist and a fresh, sound, and clever composer, b. Sept. 30, 1840, Christiania; he was first trained by his father, the teacher of music Guldbrand S., attended from 1863-67 the Conservatorium at Leipzig, and studied under David, Hauptmann, Richter; and Reinecke; he then travelled through Denmark, Scotland, the Faroe Islands, Iceland, and England, stayed in Paris from 1868-69, and from 1871-72 became leader of the Leipzig "Euterpe" concerts, after marrying an American lady at New York in the summer of 1871. From 1872-77 he conducted the concerts of the Christiania Musical Association, passed the winter of 1877 in Rome, the summer of 1878 in London, and the next year and a half again in Paris. In 1880 he returned to his post at Christiania, and in 1883 was appointed court conductor at Copenhagen. The compositions of S. are natural and flowing, and, at the same time, original and interesting; he is strongly influenced by national peculiarities, which only

colour his music, and never appear extravagant or sought after. Here is the catalogue of his works which have appeared in print:—Quartet for strings (Op. 1), part-songs for men's voices (Op. 2), octet for strings (Op. 3), 1st symphony (Op. 4), quintet for strings (Op. 5), violin concerto (Op. 6), 'cello concerto (Op. 7), overture to Björnson's *Sigurd Slemba* (Op. 8), "Carnaval à Paris" for orchestra (Op. 9), Funeral March for Charles XV. (Op. 10), "Zorahayde," legend for orchestra (Op. 11); festival polonaise for orchestra (Op. 12), Coronation March for Oscar II. (Op. 13), "Hochzeitsfest" for orchestra (Op. 14), 2nd symphony (Op. 15), humorous march (Op. 16), 4 Norwegian Rhapsodies (Op. 17, 19, 21, 22), overture to *Romeo and Juliet* (Op. 18), quartet for strings (Op. 20), 2 books of songs (Op. 23, 24), romance for violin in G with orchestra (Op. 26). In addition there are transcriptions for orchestra of pianoforte works by Bach, Schubert, and Schumann; also arrangements of Norwegian, Swedish, and Icelandic popular melodies for small orchestra.

Sweelinck, Jan Pieters, b., according to the most recent investigations, not at Deventer, but at Amsterdam, between April and October, 1562, d. Oct. 16, 1621, at Amsterdam. He was probably a pupil of Zarlino in Venice, was already in 1580 organist of the old church at Amsterdam, as successor to his father, who died in 1573. S. was chiefly of importance as the originator of the organ fugue evolved from one theme, with which, gradually, several counter-themes associate, pressing forward ever in more complicated fashion, until at the highest point the piece comes to an end. No one of his pupils and successors ever came within measurable distance of him. It was the great Bach to whom was assigned the task of bringing the embryonic form to highest completion. A series of organ pieces from a MS. in the library of the Greyfriars' monastery, Berlin, was published by Eitner (Berlin, Simrock); others are at the Berlin Royal Library, MSS. 191; some pieces in Fitz-William Book, Cambridge; others, in the Brussels Royal Library, the library of Christ Church, Oxford, and the British Museum. His vocal works for several voices are: Cantiones, psalms, and chansons, of which score copies are in the possession of the Netherlands Association for the History of Music at Amsterdam. They follow popular lines, and are distinguished by free melodic formation, and thus point to the future. Up to now are known: "Livre 1-4, des Pseaumes de David, 4-8 parties" (Amsterdam and Haarlem, 1613-23); these psalms are published with German text by Martinus Martinus, by Cothus in Berlin, 1616 and 1618; "Rimes françaises et italiennes à 2-3 part. avec chansons à 4 p." (Leyden, 1612); "Cantiones sacræ cum basso cont. ad organum 5 voc." (Antwerp, 1619); besides some wedding songs and chansons in collections. The works of S. are now being

published by the N.-Nederl. Musikgesch. Ver-eeniging.

Swell organ. (See MANUALS.)

Swert, Jules de. (See DESWERT.)

Swieten, Gottfried (Baron) van, b. 1734, Leiden, d. March 29, 1803, Vienna. He took his degree at Leiden, 1773, with "Dissertatio sistens musicæ in medicinam influxum et utilitatem," and was afterwards Director of the imperial court library, Vienna. S. translated the text of *The Creation* and *The Seasons* into German for Haydn.

Swinnerton-Heap, Charles, b. 1847, Birmingham; Mendelssohn scholar, from 1865-67 was a pupil of the Leipzig Conservatorium (Moscheles, Reinecke); in 1867 he became pupil of Best, for organ, in Liverpool. Since 1868 he has been an esteemed pianist and conductor at Birmingham; in 1870 he took his degree of Mus.Doc. (Cambridge). S. has written several chamber works, overtures, cantatas, anthems, organ pieces, songs, etc.

Swoboda, August, teacher of music at Vienna; he has published "Allgemeine Theorie der Tonkunst" (1826), "Harmonielehre" (1828-29, 2 vols.), and "Instrumentierungslehre" (1832).

Syfert, Paul. (See SCACCHI.)

Sympathetic tones (Ger. *Mittönen*). This is one of the most important of acoustical phenomena in music. It consists in this: that bodies capable of giving out sound, vibrate through sympathy when their fundamental tone is made to sound; for example, a string tuned to *a'* trembles violently, and sounds so long as *a'* is given out by any instrument or voice. But strings, resonators, etc., are also brought into sympathetic sounding if one of the harmonic over-tones of their clang be made to sound. This sympathetic vibration is at first not total, but partial, so that the strings, resonators, etc., only strengthen the note given; the bodies sounding by sympathy make in this case not only strong partial vibrations, but weaker total vibrations, which latter, if the tone-exciting body be suddenly damped, can be quite well perceived. Thus the so-called under-tones acquire real existence, which explains the consonance of the minor chord, as the upper-toné series does that of the major chord. (Cf. CLANG.)

Symphoneta, an expression frequently occurring in writers of the 16th century, and one which has repeatedly been misunderstood (for example, Fétis). Glarean gives the key to the meaning in his "Dodekachordon," p. 174, where he ventilates the question which of the two ought to be the more highly esteemed—the composer of a beautiful melody (Phonascus), or the master of writing in many parts (S.).

Symphonic poem; Ger. *Symphonische Dichtung*. (See SYMPHONY and PROGRAMME MUSIC.)

Symphony (Gk. *Symphonia*; Ital. *Sinfonia*, "a sounding together") was the term used by the ancient Greeks for what we now call the consonance of intervals. In 1995 Joh. Gabrieli used the name *Symphonia sacra* collectively for his polyphonic (!) movements, partly for voices with instruments, partly for instruments alone (called separately canzone and sonate). At the commencement of the development of the opera at Florence in the 17th century, the (very short) instrumental introduction received the name of S. The S. first of all developed itself as a prelude to opera (cf. OVERTURE), but still more significantly in the works of several movements, named church sonatas or concertos, for strings or for strings and wind (with continuo). The concertos of Handel and Bach for orchestra are the really final forerunners of the true S. The name S. for such works appeared about the middle of last century: Grétry, Gossec, Sammartini, Stamitz, Cannabich, Haydn. The last-named inserted between the second and third of the three movements customary until then (Allegro, Adagio, Allegro) a menuet. But Haydn rendered still higher service by characterisation of the orchestral instruments according to their *timbre*; and he was the first to make the S. what it is at the present day. The only features added to it by Mozart and Beethoven were those belonging to their different natures. Beethoven, besides, considerably increased the orchestra. (cf. ORCHESTRA.) A novelty introduced by him was the Scherzo in place of the Menuet; likewise in the 9th Symphony, the introduction of voices, and the transposed order of the Adagio and Scherzo, which has since frequently been imitated. Beethoven rendered the contents of the S. altogether of greater importance, stirring the soul to its lowest depths; and he developed the separate movements at greater length than his predecessors; also, instead of a Finale of the Rondo kind, produced one more in keeping with the form and character of the first movement. S. writers since Beethoven have not been able further to extend the form; nevertheless it would be a grievous error to regard it as antiquated: the symphonies of Schumann, Brahms, Raff, Rubinstein, show that it is still possible to fill it with new contents. The symphonic poems of modern times (Berlioz, Liszt, Saint-Saëns, R. Strauss) are not further developments of the S. form; that notion is already excluded, in that they have not generally a really definite form. They belong to the category of so-called Programme Music (q.v.), whose most essential representatives they are. Programme music is, however, a mixed art-form, whose principles of formation are not of a purely musical nature: music certainly takes a dominant position in it, but similar to that in opera and in the modern Lied. (cf. ABSOLUTE MUSIC, ESTHETICS, DRAMATIC MUSIC, etc.)

Syncope (Gk., really means "intersec-

tion"). This is a term in music applied to the connecting of an unaccented with the next accented beat, e.g.:

by which the plain course of the metre is contradicted, and by which deviations from the plain dynamic shading can be made (anticipation of the tone strength of the next accented beat). Harmonically, S. is either a prolongation of the note of a chord into the next chord, or an anticipation.

Synemmenon. (cf. GREEK MUSIC, I.) In the musical treatises of the Middle Ages, S. stood for *ḃ*, especially in the pre-Odo letter notation, in which *A* was equal to our *C* ($G = b$, *g minus*, or *G synemmenon* = *ḃ*).

Syrinx (Ger. *Panföte*), one of the ancestors of the organ, namely, the shepherd's pipe of the ancients. It consists of several reed pipes stuck together with wax, and blown with the mouth (Papageno's instrument in the *Magic Flute*).

System, (1) by *tonal system* is understood the theoretical definition of the tone relationships which serve for practical music making. The modern tonal system differs essentially from those of earlier times; and, though modern science may flatter itself with the delusion that the true relationships of nature have been discovered, still it is by no means impossible that future generations may look upon our tonal system as a standpoint that has been passed. The practical exercise of music is not the result of an established system, although, naturally, one that has been handed down from a distant period may exert a powerful influence over it; theory is never the mother, but practice. And it is owing to this, that all tonal systems agree in certain fundamental principles; that they do not appear to contradict, but rather to be related to one another. The oldest tonal systems are those so-called of five degrees (five sounds within the octave), in which the scale has no semitone progressions, but leaves gaps, which at a later period were filled up. Such were the old Chinese and Celtic (Gaelic, Scottish), i.e. a major scale without 4th or 7th, or a minor scale without 2nd or 6th (a pure descending minor scale without under-third and under-seventh);

a . . c . d . e . . g . a . . c . d . e

Many melodies of Gregorian chant avoid in similar manner the semitone progression. (cf. The Psalm Intonations, the "Hymnus Ambrosianus," etc.) The enharmonic (q.v.) of Olympus was perhaps a similar employment of scales of 5 degrees, afterwards differently explained by the theorists; the leaving out of the lichanos, likewise paranete, turned the Phrygian

and the Lydian scale into one without semitone progression:—

Phrygian: d . e . . . g . a . b . . d ,

Lydian: c . d . . . f . g . a . . . c ,

By a similar proceeding the Dorian scale led to the later form of the enharmonic genus;—

ef . . . a . bc . . . e

For a long period systems of seven degrees (the absolute diatonic system of ancient Greek music, Church Modes, the fundamental Indian, Chinese scale) were most in use. The later enharmonic-chromatic S. of the Greeks contained 21 degrees (*see* GREEK MUSIC); the Arabic-Persian tonal system of ancient times had 17 degrees. (*See* ARABIANS AND PERSIANS.) The modern tonal system, as it first of all became fixed in practice, like the later Chinese and Indian, had 12 degrees (in German Tablature there were only c . c \sharp . d . d \sharp . e . f . f \sharp . g . g \sharp . a . b \flat . b \sharp . c' , and not the tones e \flat . d \flat , etc.); the one represented by our present notation (if we accept as possible b \flat before c and f, and x before b and e) consists of 28 degrees, and is the one used for our present theory of acoustics; yet it has no definite limits, for the sound values given under "Tone, determination of," are not all which the theory of acoustics recognises within the octave. The conflict—since this vast development—between theory and practice led to the necessity of reconciliation by means of *temperament* (q.v.), of which, up to now, the one has been preferred which answers to ancient practice, viz. equal temperament with 12 degrees.

(2) Again, one speaks of a *system of harmony*, of a Rameau, Tartini, Valotti, Abbé Vogler, Kirnberger, Hauptmann, etc., S. Systems of this kind seek to establish simple explanations for the wealth of possible harmonies; such, indeed, as will reduce the great number of possible formations to the fewest possible types, from which the rest can be derived. The results of these reductions are: (a) Similar formations (identification), which, starting from various notes, show the same relationships, so that one appears only a transposition of the other: for example, c : e : g = f : a : c , c : f : a = f : b \flat : d , etc. This has been probably recognised since the existence of polyphonic music, and the rules for discant are based on it already in the 12th century. (b) The inter-relation of formations containing (according to modern views) the same notes, but placed one above the other in different order, i.e. partly in a fresh octave position; according to this, e : g : c' is related to c : e : g , i.e. is an inversion of the same. This system of inversions (*Sistema dei rivolti*) is generally referred to Valotti or to Abbé Vogler, but it is much older; Rameau already gave it practical shape in his "Basse fondamentale." But even Zarlino knew the identity of harmonies formed by

similar notes in different octave positions; and he conceived harmony as based on the dual principle of the major and the minor chord. (c) The conception of chords changed in their physical, likewise musical clang effect by the alteration of a note, or by suspension of a note, or by addition of a note, in the sense of harmonies which have undergone change. The recognition of this is quite modern. The assertion that *each compound clang must be conceived in the sense either of a major or of a minor chord* was first expressed in this form by the compiler of this Dictionary; it is, however, not quite new, but only a more precise *exposé* of the idea on which Fétis' "Traité de l'harmonie" is based. (d) The view that a major or minor chord must allow of being classified as tonic, under- or over-dominant, and that there are no other functions in harmony, is the latest acquisition to theory (likewise brought forward by the compiler). If this simplification of harmonic apparatus be compared with the triads, chords of the 7th and 9th, even 11th and 13th, with which the systems of the theorists of the last century were crammed, one may acknowledge that Fétis was right when he thought he could explain the science of harmony in a couple of hours to a clever pupil. Many details with which our treatises on harmony are filled are unnecessary ballast; while others do not concern harmony, but musical composition and counterpoint.

(3) Same as STAVE (q.v.).

Systema, system. S. *participatum* (*see* TEMPERAMENT). In the musical theory of the ancient Greeks, S. was an interval of a certain size filled in with intermediate sounds; for example, a tetrachord, octachord (scale up to the octave), etc.; hence in the later Middle Ages the various kinds of hexachords were called systems (S. *naturale* or *regulare*, S. *transpositum*, S. *durum*, S. *molle*). Concerning S. *metabolon*, *teleion* (*perfectum*), and *ametabolon*, *see* GREEK MUSIC, I.

Szarvady, Wilhelmine. (*See* CLAUSS-SZARVADY.)

Szekely, Imre, pianist and composer, b. May 8, 1823, Matyfalva (Hungary). He gave many successful concerts in London (where he frequently remained for some time), Paris, Hamburg, etc., and settled definitely in Pesth in 1852, where he is highly esteemed as a teacher. He has published many pianoforte works (concertos, fantasias, ensembles), also orchestral works and ensembles for strings.

Szymanowska, Maria (*née* Wolowski), excellent pianist, b. 1790, Poland, d. 1831, Petersburg, studied under Field; she made successful concert tours in Germany, and published some brilliant pf. pieces.

T.

T. on part-books stands for tenor.—*t.* usual abbreviation for *tempo*; a *t.* = *a tempo* (in the first *tempo* = *tempo primo*). On the other hand, *t. s.* is an abbreviation for *tasto solo* (see GENERAL-BASS); *t. c.* = *tutte corde* (see CORDA).

Tablature (Ger. *Tabulatur*), (1) the rules for singing of the *Meistersingers*, which did not, however, concern music only, but extended to poetry, both in the matter of form and contents. The most rapid and vivid idea of them is to be gained from Richard Wagner's music drama, *Die Meistersinger von Nürnberg*.—(2) A method of notation, obsolete since the beginning of the last century; in it staves and note-heads were not used, but the notes were indicated by letters or figures. As our notation on lines is only an abbreviated letter notation (the bass clef is an *f* become unrecognisable, the alto clef a *c*, the treble clef a *g*), it is by no means surprising that the letter notation with A–G is older than our system of notes. Its origin is to be found at least as far back as the 10th century, but certainly cannot be traced back, as was formerly supposed, to Gregory the Great. (Cf. LETTER NOTATION.) This so-called German; or Organ Tablature, in general use during the 15th and 16th centuries was specially intended for organ and clavier. For other instruments, especially the lute (q.v.), there was a special letter or figure T., which had reference to the fingering, and which, according to the tuning of the instruments, had different meaning.

(1) ORGAN TABLATURE.
(Upper Voices written on Lines.)

(2) GERMAN LUTE TABLATURE.

3) FRENCH LUTE TABLATURE.

(4) ITALIAN LUTE TABLATURE.

(Isaak: "Innsbruck ich muss dich lassen.")

The feature common to all tablatures is the peculiar mode of indicating the rhythmical values of the notes by marks placed over the letters, likewise figures: A point \bullet for the breve, a stroke $|$ for the semibreve, a flag ∇ for the minim, a double flag for the crotchet, a triple flag for the quaver, and a quadruple flag for the semiquaver. The same signs over a line, \bullet , ∇ , etc., served as rests. As the tablatures, already in the 16th century, used cross-bars, in place of flags, for several minims in succession (a method first adopted in mensural notation at the beginning of the 18th century), thus: $\overline{d e f g}$, and employed the bar-line throughout, those tablatures are in many respects more like the notation of the present day than mensural notation, especially as the melody part was sometimes written on a staff of five lines with black note-heads, and as with these were associated the rhythmical value signs. (Cf. Ex. 1.) Numerous publications in organ tablature have been handed down to us by Virdung, Agricola, Luscinius, Hans Gerle, Arnold Schlick, Jakob Paix, Amerbach, Bernh. Schmid, Woltz; further, the lute tablature works of Hans Judenkünig, Georg Neusiedler, W. Heckel, Ochsenkuhn, etc. Cf. Kieseewetter, "Die Tabulaturen der alten Praktiker," and v. Wasielewski, "Geschichte der Instrumental Musik im 16. Jahrhundert" (1878), also Bacon and O. Fleischer. The examples of the tablatures quoted here may serve by way of illustration.

Tableau. (See ACT.)

Tabourot, Jean. (See ARBEAU.)

Tacchinardi, (1) Niccolò, famous singer (tenor), b. Sept. 3, 1772, Florence, d. there March 14, 1859. He was very short-necked, so that he appeared deformed; but by his noble singing overcame the repulsive impression

caused by his appearance, and sang, first on Italian stages, then from 1811-14 at Paris with Crivelli at the Italian Opera. He was, later on, court singer at Florence, and appeared on various Italian stages up to 1831. T. also published vocal exercises and the pamphlet "Dell' opera in musica sul teatro italiano e de suoi difetti."

(2) Fanny, daughter of the former. (See PERSIANI.)

Tacet (Lat., also Ital. *tace* or *taci*, abbr. *tac.*). In an orchestral or vocal part this word signifies that during the movement in question the part is silent.

Tadolini, Giovanni, b. 1793, Bologna, d. there Nov. 29, 1872; pupil of Mattei (composition) and Babinì (singing), from 1811-14 accompanist and chorus director of the Paris Italian Opera, and from 1830-39 again in the same capacity; for the rest, he occupied himself with composition at Bologna. He wrote 8 operas (*La fata Alcina*, Venice, 1815; *La principessa di Navarra*, Bologna, 1816; *Il credulo deluso*, Rome, 1817; *Tamerlano*, Bologna, 1818; *Il finto molinaro*, Rome, 1820; *Moctur*, Bologna, 1824; *Mitridate*, Venice, 1826; and *Almanzor*, Trieste, 1827); also canzonets, etc.

Taffanel, Claude Paul, b. Sept. 16, 1844, Bordeaux, distinguished flute virtuoso, pupil of Dorus, and for composition, of Reber; at present professor of the flute at the Paris Conservatoire. Since 1892 he has been musical director of the Grand Opéra and conductor of the Conservatoire Concerts, Paris, as successor to Jules Garcin.

Tag, Christian Gotthilf, cantor at Hohenstein, Saxony, b. 1735, Bayerfeld, Saxony, d. July 19, 1811. He published: "6 Choralvorspiele nebst einem Trio und Allabreve" (1783); 12 preludes and a symphony for organ (1795), several books of songs (1783, 1785, 1793, 1798), among which a dramatic scena and a hymn *a 4*; "Urians Reise um die Welt" and "Urians Nachricht von der Aufklärung" (1797); "Naumann, ein Totenopfer" (1803, voice with pf.); "Melodie zum Vater unser und den Einsetzungsworten," with organ (1803); "Wörlitz" (1803, voice with pf.). T. also left a large number of sacred vocal works (72 cantatas, 11 masses, many motets, sacred arias, etc.), and instrumental works.

Tagelied. (See AUBADE.)

Tagliana, Emilia, opera singer (coloratura soprano), b. 1854, Milan, pupil of the Conservatorio there, also a private pupil of Lamperti. T. sang first at Naples, Florence, Rome, Paris, and Odessa, from 1873-77 at Vienna, where she studied diligently under Hans Richter's direction, and from 1881-82 at Berlin, where she was appointed royal "Kammersängerin." Her voice is not a powerful one, but sweet and flexible; and she is graceful in appearance.

Täglichsbeck, Thomas, violinist, composer, and conductor, b. Dec. 31, 1799, Ansbach, d. Oct. 5, 1867, Baden-Baden. He was a pupil of Rovelli at Munich, and in 1817 became violinist in the Munich theatre orchestra, where he was for some time deputy-conductor. He afterwards undertook extensive concert tours, and in 1827 became capellmeister to the Prince of Hohenzollern-Hechingen until 1848. After that he lived at Strassburg, Löwenberg (Silesia), and Dresden. T. wrote numerous divertissements, fantasias, variations, etc., for violin and pf., also violin and orchestra; a "Concert militaire" (Op. 8) for violin, a concertino, several violin sonatas, a pf. trio, 2 symphonies, a mass with orchestra, part-songs for male chorus and mixed chorus, pf. songs, etc. His two symphonies were produced at Paris with success at the *Concerts du Conservatoire* (1835, 1837).

Taglioni, Ferdinando, son of the famous ballet master, Salvatore T., b. Sept. 14, 1810, Naples; from 1842-49 church maestro and conductor of the town orchestra at Lanciano, then from 1852 leader at the San Carlo Theatre, Naples. After he had suffered imprisonment for a political offence, he became editor of the Neapolitan *Gazzetta Musicale*, gave historical concerts with analytical programmes, and founded a school for choral singing. T. wrote at Lanciano many sacred works, but few were printed. He published, however, a large number of small musical treatises, among which: "Proposta di un regolamento per l'insegnamento obbligatorio della musica nelle scuole primarie e normali" (1865); "Metodo razionale per l'insegnamento del canto corale nelle scuole infantile e popolari" (1871); "Manuale per l'insegnamento pratico de' canti per udizione" (1870); "Manuale di rudimenti elementari per l'insegnamento teorico del canto corale nelle scuole popolari" (1870); "Disegno di un corso di estetica musicale" (1873), etc.

Taille (Fr.), tenor; *Basse-t.*, second (lower) tenor. T. also stands for a tenor viol and violin. (See VIOLA.)

Tail-piece, that part of the instruments of the violin class to which the lower ends of the strings are fastened.

Taktstock (Ger.), conducting-baton. (See CONDUCTING, ART OF.)

Talex, Adrien, b. 1821, d. Feb., 1881, Paris; a well-known composer of *salon* pieces, also of 7 one-act operettas (1872-78, for Paris).

Tallis (Tallys), Thomas, famous English composer, court organist (together with his pupil Byrd) to Henry VIII., Edward VI., also to the Queens Mary and Elizabeth, d. Nov. 23, 1585. In 1575 he received, with Byrd, the privilege of printing music, and published: "Cantiones quæ ab argumento sacræ vocantur, 5 et 6 partium" (1575). Some of his compositions are to be found in J. Day's

"Morning and Evening Prayer" (1560), Boyce's "Cathedral Music," Barnard's "Church Music," also in the historical works of Hawkins and Burney. Novello, in his collection of services, anthems, and hymns, reprinted a large number of T.'s works; his "Full Cathedral Service" appeared in two new editions by Oliphant and Rimbault, and the latter also republished his "Order of Daily Service, with the Musical Notation."

Talon (Fr.), heel (*i.e.* part near the nut) of a violin bow.

Tamberlick, Enrico, famous tenor singer, b. March 16, 1820, Rome, d. March 15, 1889, Paris, son of an officer of the Treasury Department. He was to have studied law at Bologna, but went on to the stage, and distinguished himself first at Naples, but afterwards at Lisbon, Madrid, Barcelona, Paris, London, Petersburg, etc. He also visited North and South America. Later on, T. sang again at Madrid, but for many years before his death he altogether withdrew from public life.

Tambor (Fr.), (1) drummer; (2) the drum itself (Ital. *Tamburo*, from the Spanish-Arabic *Tambor*).

Tambourin, an old Provençal dance in duple time and moderate movement, accompanied by the tambourine. In France, on the other hand, by T. is understood a kind of long, narrow drum, used in Provence, which is played together with the Galoubet (a kind of flageolet); both instruments by the same player.

Tambourine (Fr. *Tambur de Basque*), an instrument used in Spain, Lower Italy (also in the East), to accompany the tarantella and other dances (in the hand of the dancers themselves).

Tambur (*Tanbur*), an Arabic-Persian stringed instrument of the lute kind, which, like the mandoline, was played with a plectrum. (*Cf.* ARABIANS.)

Tamburini, Antonio, famous bass singer, b. March 28, 1800, Faenza, d. Nov. 9, 1876, Nice. He was son of a teacher of music, began life as a chorister at Faenza, and then was singer of small parts in an itinerant opera company (Bologna, Cento, etc.); by 1824, however, he had made for himself a brilliant reputation, and won triumphs at Milan, Rome, Venice, Naples (at the "Teatro Nuovo"). From 1824-32 he was in the service of Barbaja, who had the theatres at Naples, Milan, and Vienna in his own hands; but from 1832-41 T. distinguished himself at the Théâtre Italien, Paris, by the side of Rubini, Lablache, and Persiani, Grisi, Viardot, etc. Afterwards he still sang at London, also in Italy and Russia, etc., up to 1855, when he withdrew to his estate near Sèvres. In 1822 T. married the singer Marietta Goja.

Tamburo (Ital.), drum (q.v.).

Tamtam. (*See* GONG.)

Tanaka, Shohé, a young Japanese musical theorist, pupil of Spitta in Berlin, who became known through his experiments in the domain of just intonation (his harmonium with just intonation was christened by H. von Bülow "Enharmonium"). *Cf.* *Vierteljahrsschrift f. Musikwiss.*, 1890.

Tanbur. (*See* TAMBUR.)

Tanéjeff, S. J., b. Nov. 13, 1856, pupil of Nic. Rubinstein and Tschaikowsky; he teaches at the Moscow Conservatoire, and is an esteemed pianist.

Tangents, the name of the metal tongues or pins situated at the back of the keys on the old clavichord; they did not pluck the strings, like the quills of the harpsichord (*cembalo*), but only grazed, "touched" them, and hence produced tone in a manner similar to that produced by bows of stringed instruments. The T. likewise formed the boundary of the sounding portion of the string, which would have always produced two sounds but for the damper, the interwoven strip of cloth situated to the left of the player. As soon as the tangents left the strings this damper acted on the whole string (these strips of cloth were not in G. Silbermann's [q.v.] *Cembal d'amour*). The "Bebung" (q.v.) was a mode of playing on the clavichord only rendered possible by this peculiar method of tone production.

Tansur, William, English composer and theorist, b. 1700, Dunchurch, d. Oct. 7, 1783, St. Neots, occupied a post as organist at Barnes; from 1739 he filled similar posts at Ewell, Leicester, and St. Neots. He published: "A Compleat Melody, or the Harmony of Sion" (1735 and 1738); "The Melody of the Heart" (1737); "Heaven on Earth" (1738); "The Royal Melody Compleat" ("New Harmony of Zion," 1754 and 1755); "The Royal Psalmist Compleat" (no date); "The Psalm-Singer's Jewel" (1760); "Melodia sacra" (1772); also a theoretical work: "A New Musical Grammar" (1746; several editions, the later ones with the title: "A New Musical Grammar and Dictionary," 1767, and frequently), which also appeared in epitome form as "Elements of Musick Displayed, or its Grammar made Easy" (1772).

Tapada (*Tapadillo*, Sp.), Gedackt (organ stop). Like the *Baxoncello* (q.v.), it is of 13 and 26 feet.

Tappert, Wilhelm, writer on music, b. Feb. 19, 1830, Ober-Thomaswaldau (near Bunzlau); he was trained at the Seminary at Bunzlau for a schoolmaster, and followed that profession for some years, but in 1856 turned his attention to music, attended Kullak's Conservatorium, and studied theory privately under Dehn. From that time T. made his home in Berlin; he gives

instruction in music, but is especially active as a writer on music. From 1876-80 he edited the *Allg. Deutsche Mus. Ztg.*, and was for some years one of the most diligent contributors to the *Musikalisches Wochenblatt, Klavierlehrer*, and other papers, etc. He published in pamphlet form: "Musik und musikalische Erziehung" (1866); "Musikalische Studien" (1868); "Das Verbot der Quintenparallelen" (1869); "Wagner Lexikon. Wörterbuch der Unhöflichkeit, enthaltend grobe, höhrende, gehässige und verleumderische Ausdrücke, welche gegen den Meister Richard Wagner, seine Werke und seine Anhänger von den Feinden und Spöttern gebraucht worden sind" (1877). T. is a zealous collector of old tablatures (lute tablatures, etc.), and possesses many a rare, puzzling specimen. The result of his investigations and experience should certainly be made known. T. has composed songs, arrangements of Old German songs, and études for pianoforte.

Tarantella, a Neapolitan dance, but apparently of Tarentine origin, unless, as stated, it received its name from the Tarantula, the bird-catching spider, whose bite, according to popular report, excites a rage for dancing; and, on the other hand, the results of that bite can only be averted by dancing. The specimens handed down to us from old writers of dances for healing the bite of the Tarantula have little resemblance to the T. of modern times. The latter is of extremely lively movement (*presto*), and is in $\frac{3}{8}$ or $\frac{3}{4}$ time (Gigue). Like all other dances, the T. has been pressed into the service of musical art, and has become a favourite form for brilliant solo pieces (for pianoforte, violin, cello, etc.).

Tarchi, Angelo, opera composer, b. 1760, Naples, d. Aug. 19, 1814, Paris, studied under Tarantino and Sala at the Conservatorio Della Pietà. He wrote a great number of Italian operas for Naples, Turin, Venice, Milan, Florence, Mantua, Bergamo, London, etc., up to 1797, in which year he turned his steps in the direction of Paris, and wrote a series of French comic operas, of which, however, only one, *D'auberge à auberge* (Théâtre Feydeau, 1800), achieved success, and, indeed, was published in two German editions (at Hamburg as *Von Gasthof zu Gasthof*, at Vienna as *Die zwei Posten*). T. had been long forgotten when he died.

Tardando (Ital.), same as *Ritardando*.

Tarditi, Orazio, composer of the Roman School, in 1640 organist of St. Michael's, Murano; 1642 of the cathedral at Arezzo, 1647 Camaldunian monk at Ravenna, 1648 maestro at Faenza Cathedral. He published 3 books of masses a 3-5 (together with some psalms, partly with instruments, 1639, 1648, 1650); "Messa e salmi concertati a 4 voci" (1640); "Messa e salmi a 2 voci" (1668); 15 books of "Motetti concertati" a 1-5, partly

with organ bass, partly with instruments (violins, theorbos); of these several books have not been preserved. Also 4 books of motets "a voce sola" with thoroughbass (3rd book, 1646); psalms a 8 with bass (1649); compietoria and litanies a 4, together with antiphons a 3 (1647); litanies a 3-5, antiphons and motets a 3, and a Te Deum a 4 (1644); madrigals a 5 (1639), 2 books of "Canzonette amorose" a 2-3 (1642, also 1647), collected by Al. Vincenti, and "Sacri concentus" a 2-3 (1655, Op. 35!), which are preserved in Bologna (Liceo Filarmónico) and Breslau (Town library).

Tartini, Giuseppe, famous violinist, composer, and theorist, b. April 12, 1692, Pirano (Istria), d. Feb. 16, 1770, Padua. He received his school training at Pirano and Capo d'Istria. T. energetically opposed the wish of his parents that he should enter a Franciscan monastery, and in 1710 attended the University of Padua in order to study jurisprudence. Music, especially violin-playing, had long been one of his favourite occupations, yet he was still more enthusiastic about the art of fencing; he is said, indeed, to have been somewhat of a bully. The course of his life was suddenly changed when he secretly married a relation of Cardinal Cornaro's, and, being accused of abduction, was forced to escape. Completely withdrawn from the world, he became a violin virtuoso; he lived at Assisi, where by means of a friendly monk he had found an asylum, and he received theoretical instruction from Czernohorsky (Pater Boemo), organist of the monastery. After two years he returned to Padua, where the lawsuit against him had been withdrawn. Soon after that he heard at Venice the famous violinist Veracini, by whose playing he was urged on to fresh study. He sent his wife to his relations at Pirano, and withdrew to Ancona. About this time (1714) T. discovered Combination Tones (q.v.), of which he made practical use in his aim after pure intonation. In 1721 he was appointed solo violinist and orchestral conductor at the Basilica di Sant' Antonio at Padua, which post he held until his death, although it was but scantily endowed. From 1723-25, however, he lived at Prague as chamber musician to Count Kinsky, whither (his virtuosity was already becoming widely known) he was summoned to the festival in connection with the coronation of Charles VI. He is said to have refused a brilliant offer from London. In 1728 T. established at Padua a school of higher development of violin-playing, from which sprang Nardini, Pasqualino, and many other violinists of distinction. T.'s method of bowing is regarded as a model by all modern performers; his compositions for the violin are classical, and appear from time to time, in new editions (several violin sonatas and a Gigue in G. Jensen's "Classische Violin Musik"). He published 18 violin concertos (Op. 1, in 3 parts a 6); 12 violin sonatas with cello or cembalo

(likewise as Op. 1; published in Paris); 6 violin sonatas (Op. 2); 12 violin sonatas with bass (Op. 3); 6 concertos for solo violin, 2 violins, viola, and 'cello, or *Cembalo di concerto* (Op. 4); 6 violin sonatas with continuo (likewise as Op. 4); 6 ditto (Op. 5); 6 ditto (Op. 6); 6 ditto (Op. 7); "Sei sonate a 3, due violini col basso" (Op. 8); 6 violin sonatas with continuo (Op. 9); and the "L'arte dell' arco." The concertos appeared in various editions at Paris and Amsterdam. T. left, besides, in manuscript, 48 violin sonatas with bass; a trio for two violins and bass; and 125 concertos a 5, also a *Sinfonia a 6* (2 horns and strings; Königsberg Library). The so-called "Trillo del diavolo" was a posthumous work, which has frequently been published. "L'arte dell' arco" was reprinted in Choron's "Principes de Composition" (6 vols.), also separately by André. Sonatas have been published by Alard, Léonard, David, G. Jensen, Wasielewski, etc. Tartini's theoretical writings are:—"Trattato di musica seconda la vera scienza dell' armonia" (1754); "De' principj dell' armonia musicale contenuta nel diatonico genere" (1767); a reply to a criticism of his "Trattato," "Risposta . . . alla critica del di lui trattato di musica di Monsgr. Le Serre di Ginevra" (1767), and a letter to a pupil, "Lettera alla signora Maddalena Lombardini (afterwards Mme. Symen) inserviente ad una importante lezione per i suonatori di violino" ("Europe littéraire," 1770). In his last years T. wrote the pamphlet, "Delle ragioni e delle proporzioni"; this was not printed, and appears to be lost. Another treatise on ornaments for the violin seems not to have been printed, but appeared in a French translation by P. Denis, "Traité des agréments de la musique" (1782). Biographical notices on T. were written by Abbate Fanzago (1770), J. A. Hiller (1784), A. Forno (1792), C. Ugoni (1802), Fayolle (1810). Tartini's system of sounds is essentially a development of that of Rameau, for T. attempts to work out his system without going beyond the seventh overtone, and refers the minor consonance to a (undertone) series opposed to the upper-tone one. The conception of the minor chord as counterpart of the major chord, as its antipodes—which, indeed, Zarlino had already formulated before him—is expounded with all desirable clearness on pp. 65, 66, 91, etc., of the "Trattato."

Taschengeige (Ger.), pochette, kit (q.v.).

Taskin, Pascal, famous instrument-maker at Paris, b. 1723, Theux, d. Feb. 9, 1795; the inventor of the leather tangents of the clavichord. (Cf. PIANOFORTE.) His nephew, Joseph Pascal T., was keeper of the king's (Louis XV.) instruments. His second son, Henry Joseph, b. Aug. 24, 1779, Versailles, d. there May 4, 1852, music page-boy to Louis XVI., pupil of his aunt, the organist, Mme.

Couperin, published pf. trios, a pf. concerto, a caprice for pf. and violin, pf. pieces, songs, etc. Three operas remained in manuscript. A grandson of his, Alexander T., b. March 8, 1853, is a highly-esteemed opera singer in Paris (at the Opéra Comique).

Tasto solo (abbr. t. s.) is an indication in harpsichord or organ accompaniment (continuo), which, for the rest, is provided with thoroughbass figuring, to accompany a passage without harmony, only with the bass notes indicated. A single note which is only to be accompanied in octaves (*unisono*) is indicated in figuring by a small nought, for example:

Taubert, (1) K. Gottfr. Wilhelm, b. March 23, 1811, Berlin, d. Jan. 7, 1891; he was son of an official in the Ministry of War, studied under Ludwig Berger (pianoforte) and Bernhard Klein (composition), also at the Berlin University from 1827-30, appeared at an early age as pianoforte virtuoso and composer in Berlin, lived there some time as music teacher, became in 1831 leader of the court concerts, in 1842 capellmeister at the opera and conductor of the symphony *soirées* of the royal band, was named "Oberkapellmeister" in 1869, and from 1875 became president of the musical section of the Royal Academy of Arts. T. was a prolific and well-known composer, and published symphonies, overtures, much chamber music, songs, pf. pieces, vocal works, etc. His "Kinderlieder," also the music to Euripides' *Medea* and Shakespeare's *Tempest* met, and still meet, with great success. His operas are: *Die Kirmess* (1832), *Der Zigeuner* (1834), *Marquis und Dieb* (1842), *Foggeli* (1853), *Macbeth* (1857), and *Cesario* (1874).

(2) Otto, b. June 26, 1833, Naumburg-a.-S., studied at the Gymnasium there, was at first "Prefect" of the cathedral choir, and in music, a pupil of O. Claudius, studied from 1855-58 at Halle, took his degree of Dr. Phil. at Bonn in 1859, and filled the post of teacher in various schools. Since 1863 he has been at the Torgau Gymnasium, where he is both cantor at the town church and conductor of the town choral society. T. produced excellent results with the limited means there: he prepared, for example, performances of ancient dramas with new music, published many songs, part-songs, etc., and wrote, besides much not relating to music: "Die Pflege der Musik in Torgau" (1868); "Der Gymnasialsingchor in Torgau" (1870); "Daphne das erste deutsche Operntextbuch" (1878). He also published a book of poems.

(3) Ernst Eduard, b. Sept. 25, 1838, Regenwalde (Pomerania); as student of theology at Bonn, he was the private pupil of Albert

Dietrich, then turned his whole attention to music, and studied further under Kiel at Berlin, where he now lives. T. has published chamber music, pf. pieces, and songs.

Taudou, Antoine, French violinist and composer, b. Aug. 24, 1846, Perpignan; pupil of the Paris Conservatoire (*Prix de Rome*, 1869), and, since 1883, professor of harmony at the Conservatoire. He has published a trio for flute, viola, and 'cello, a pf. trio, a stringed quartet (♭ minor), violin concerto, and several pieces for orchestra.

Tausch, (1) Franz, celebrated clarinet-player, b. Dec. 26, 1762, Heidelberg, d. Feb. 9, 1817, Berlin. At the early age of eight he joined the Mannheim orchestra, to which his father also belonged, went in 1777 with the court to Munich, and remained there until, in 1789, he received an advantageous engagement in the Berlin court orchestra. In 1805 he established a wind-instrument school. T. published 2 clarinet concertos, 2 concertantes for two clarinets, andante and polonaise for clarinet, duets for clarinet, trios for two clarinets and bassoon, 6 quartets for two basset-horns and two bassoons with two horns *ad libitum*, military marches, etc. T. was in every way a worthy rival of Beer and Stadler. Bärmann was his pupil. His son, Friedrich Wilhelm T., was an excellent clarinet-player (d. 1845).

(2) Julius, pianist, composer, and conductor, b. April 15, 1827, Dessau, d. Nov. 11, 1895, Bonn; pupil of Fr. Schneider. He studied from 1844-46 at the Leipzig Conservatorium, settled in 1846 at Düsseldorf; after the departure of Ries, he undertook the direction of the Künstlerliedertafel, became in 1853 deputy, and in 1855 successor of Schumann as conductor of the Musical Society and of the subscription concerts (retired 1889), was also assistant conductor at several Lower Rhenish Festivals. Of his compositions there appeared in print: songs, duets, vocal works with orchestra, "Der Blumen Klage auf den Tod des Sängers" (soprano solo and female voices) and "Dein Leben schied, dein Ruhm begann" (male chorus), quartets for male voices, an Ave Maria for soprano solo and orchestra, music to *As You Like It*, pf. pieces, a festival overture, etc.

Tausig, Karl, eminent pianoforte virtuoso, b. Nov. 4, 1841, Warsaw, d. July 17, 1871, Leipzig. He was the son of an excellent pianist (Aloys T., d. March 14, 1885, pupil of Thalberg; brilliant pianoforte pieces), was trained, first by his father and afterwards by Liszt, and by his stupendous, unerring technique and his excellent renderings, attracted extraordinary notice. His short life consisted mainly of concert tours. From 1859-60 his headquarters were at Dresden, in 1862 at Vienna, and, after 1865, Berlin, where in 1866 he

founded an academy for the higher development of pianoforte-playing, which, however, he gave up in 1870. T. only wrote some pf. pieces ("Soirées de Vienne," caprices on themes of Strauss, etc.), but, on the other hand, was active as editor of classical pianoforte works; he also prepared a new edition of Clementi's "Gradus ad Parnassum" with subtle increase of difficulties, and arranged the piano score of Wagner's *Meistersinger*. After his death, his "Technische Studien" were published by Ehrlich. His widow, Seraphine (von Brabely), a pupil of Dreyschock's, is an excellent pianist.

Tauwitz, Eduard, b. Jan. 21, 1812, Glatz, d. July 25, 1894, Prague; he was capellmeister at Wilna Theatre in 1837, Riga (1840), Breslau (1843), and Prague (1846). He received a pension in 1863, and became director of the Sophien Akademie and choirmaster of the Male Choral Society. T. wrote sacred music, songs for one and more voices, and the operas: *Trilby* (Wilna, 1839), *Byadamanie* (Riga, 1844), and *Schmolke und Bakel* (comic, Breslau, 1846).

Tayber. (See TEYBER.)

Taylor, Edward, English musical antiquarian, b. Jan. 22, 1784, Norwich, d. March 12, 1863, Brentwood. He was originally engaged in business, but, especially owing to his fine bass voice, was more and more drawn to music; he also played various wind-instruments and the organ. Once devoted to music, he became absorbed in its history and theory, and in 1837 succeeded Stevens as Professor of Music at Gresham College. T. was one of the founders of the Purcell Club and the Musical Antiquarian Society, also member of the Glee Club and of the Vocal Society. He published: "Three Inaugural Lectures" (1838); "The English Cathedral Service, its Glory, its Decline, and its designed Extinction" (1845, in the *British and Foreign Review*); "An Address from the Gresham Professor of Music to the Patrons and Lovers of Art" (1838, a plea for the founding of a musical library at Gresham College). T. composed some glees and other vocal pieces, and published a collection of Rhineland popular songs, also adapted to English words several German oratorios (Graun's *Tod Jesu*, F. Schneider's *Sündflut*, and Spohr's *Last Judgement, Calvary, and Fall of Babylon*).

(2) Franklin, celebrated pianist, b. Feb. 5, 1843, Birmingham; from 1859-61 pupil of the Leipzig Conservatorium (Plaids, Moscheles, Hauptmann, Richter, Papperitz); he returned, after a short stay in Paris, in 1862, to London, where he holds a high position as pianist and teacher. In 1876 he was teacher at the National Training School for Music, and since 1882 has been one of the principal professors of the pianoforte at the Royal College of Music. His "Primer of the Pianoforte" (1879), an excellent

little book, appeared also in German. T. has translated Richter's "Harmonielehre," "Kontrapunkt," and "Kanon und Fuge" into English, and revised a new edition of the first 12 Beethoven sonatas, etc.

Technics, a term expressing the mechanical, so to speak trade, element of art: that which can and which must be learnt. One speaks both of the T. of composition and of the T. of execution; and when the term is used in common parlance the latter is generally meant. Modern virtuosity, developed to such a high degree, demands of everyone who wishes to enter the lists, a technical perfection which presupposes mechanical practice continued through many years, and with iron persistency; the kind and manner of study has, therefore, quite changed. Formerly, the harmonious development of technical ability and musical understanding were kept in view, and the material for practice provided spiritual nourishment for the pupil; but in our days, in order the quicker to conquer the mechanical difficulties of execution, and to bring them to the highest degree of virtuosity, *technical studies* are employed, *i.e.* use is made of the elements, from which musical phrases, passages, runs, ornaments, etc., are evolved, in small fragments, without interrelation—pure mechanism. The same is done for singing, and the playing of all instruments. A certain danger lies therein; and the teacher who proceeds in this manner, must, on the other hand, see to the spiritual nourishment of his pupils if he does not wish mechanical work to destroy or to stultify their powers.

Tedesca, Fernanda, excellent lady-violinist, b. 1860, on an estate near Baltimore, d. Aug., 1885; she received instruction from Wilhelmj at Wiesbaden, also from Vieuxtemps and Léonard at Paris.

Tedesco, (1) Ignaz Amadeus, pianist (called in Bohemia the "Hannibal of the octaves"), b. 1817, Prague, d. Nov., 1882, Odessa; he was pupil of Tomacek, and made successful concert-tours, especially in Russia. His compositions are mostly of the brilliant *salon genre*.

(2) Fortunata, important dramatic singer, b. Dec. 14, 1826, Mantua, pupil of Vaccaj at the Milan Conservatorio, made her *début* in 1844 at La Scala, and sang afterwards at Vienna, Paris (at the Grand Opéra from 1851-57, and from 1860-62), Lisbon and Madrid, and in America. In 1866 she retired.

Te Deum, a setting of the words of the so-called Ambrosian Hymn (q.v.): "Te deum laudamus," etc. The original setting was a noble chorale melody, whereas the T. D. of modern times is written in a grand style, and with calculated massive effects. A T. D. has even been written for several choirs, orchestra (and organ).

Telemann, (1) Georg Philipp, the most celebrated contemporary of J. S. Bach—better known during his lifetime than the latter, but now little more than an historical name—b. March 14, 1681, Magdeburg, d. June 25, 1767, Hamburg. He received his school training first at the cathedral school, Magdeburg, under the eye of his father, who was a minister, and afterwards at the Zellerfeld, and also at the Hildesheim Gymnasium; in 1700 he attended the University at Leipzig in order to study jurisprudence and modern languages. Already at the age of 12 he had written an opera (for which Lully was his model), and, indeed, was so far advanced in music that in 1704 the post of organist at the "Neukirche," Leipzig, was entrusted to him. He had previously been obliged to write a composition every fortnight for St. Thomas's, where at that time Kuhnau was cantor. He founded, besides, a *Collegium musicum*, a choral society (consisting of students), which gained great esteem, and took part in the "Neukirche" performances; and thus St. Thomas's, whose choir the students had formerly strengthened, suffered. At that time T. wrote several operas for the Leipzig theatre; but this he was no longer allowed to do after his appointment as organist. Still in the year 1704 he was called to Sorau as capellmeister to Count Promnitz, and there he made friends with Printz. In 1708 he accepted a call to Eisenach as leader, in the following year succeeded Hebenstreit as court capellmeister, and retained this title, together with a pension, up to his death, although he had only remained four years in Eisenach and afterwards had only sent compositions there. T. also made friends with J. S. Bach, and became godfather to Ph. E. Bach. In 1712 he went to Frankfurt as capellmeister of the "Barfusser" and the "Katherine" churches, and in 1721 to Hamburg as town musical director, where he remained until his death. Before his departure to Hamburg he had received, in addition to his Eisenach title of capellmeister, a similar one from the Margrave of Bayreuth. The fact that after Kuhnau's death, in 1722, the post of cantor at St. Thomas's and the direction of the town music was offered to him, also that when he declined, the council proceeded with great discontent to a new election (Bach, as is known, was the candidate selected), are proofs of the high consideration in which T. was held. T. was the prototype of a German composer making a business of his profession, *i.e.* he wrote down his works with astonishing rapidity, just as he wanted them, just as they were wanted. His style was flowing and correct, and he was master of counterpoint; but he lacked the purity, the depth, and the thoroughness of Bach. According to approximate calculation, his works were as follows: 12 yearly series of church cantatas and motets, 44 Passions, 32 compositions for the installation

of preachers, 33 "Hamburger Kapitänsmusiken" (each consisting of an instrumental movement and an oratorio), 20 compositions for jubilee, coronation and consecration festivals, 12 funeral and 13 wedding pieces, over 300 overtures, many serenades and oratorios (Zachariäs' *Tageszeiten*, *Auferstehung*, *Befreites Israel*; Ramler's *Tod Jesu*, *Auferstehung*, *Mai*; Ahler's *Tag des Gerichts*; a fragment from Klopstock's *Messias*), etc. In addition, about 40 operas, mostly written for Hamburg. There appeared in print, nearly all engraved by T. himself: 12 violin sonatas (1715, 1718), "Die kleine Kammermusik" (6 suites for violin, German flute, oboe, and clavier, 1716), 6 trios for various instruments (1718). "Harmonischer Gottesdienst oder geistliche Kantaten" (1725), "Auszug derjenigen musikalischen und auf die gewöhnlichen Evangelien gerichteten Arien," etc. (1727), "Der getreue Musikmeister" (songs, sonatas, fugues, etc., 1728), sonatas for two German flutes or violins without bass (Amsterdam), "Allgemeines evangelisches musikalisches Liederbuch" (1730), 3 trios and 3 scherzi for two violins or flute and bass, humorous songs for soprano and strings, 6 new sonatinas for clavier alone or with violin, or flute and continuo; "Scherzi melodichi" (for violin, viola and bass, 1734), "Siebenmal sieben und ein Menuett," "Heldenmusik" (12 marches), 50 more minuets, an overture and suite for two violins or oboes, two violas and continuo; quartets for violin, flute, gamba, and continuo, "Piombine" (intermezzo for two voices, two violins, and continuo), "Sing-, Spiel- und Generalbassübungen," with continuo (1740); "Jubelmusik" (1 cantata for one voice, and 1 for two voices, with stringed quartet), "Kleine Fugen für die Orgel," methodical sonatas for violin or flute with continuo (2 parts), 3 sets of clavier fantasias, "Tafelmusik" (overtures, concertos, symphonies, quartets, trios, and solos in sets of 3), quartets (*ad libitum* trios) for two flutes or violins and two (one) 'celli. In later years T. himself could no longer remember all that he had written.

(2) Georg Michael, grandson of the former, b. April 20, 1748, Plön (Holstein), d. March 4, 1831, as cantor and musical director at Riga. He published: "Unterricht im Generalbassspielen auf der Orgel oder sonstigen Klavierinstrumenten" (1773); in 1775 he replied to the criticism of this work, which appeared in the *Allgemeine Deutsche Bibliothek*, vol. 23; "Beiträge zur Kirchenmusik" (1785, organ pieces); "Sammlung alter und neuer Kirchenmelodien" (1812); and "Ueber die Wahl der Melodie eines Kirchenlieds" (1821).

Telen (*Telein*, *Telyn*). (See HARP.)

Telephone (Gk. "speaking at a distance"), an instrument invented by Reis (1860) and considerably improved by Graham Bell (1876) and Edison (1878), which communicates sound

by means of an electric current. The T. consists of two bells with vibrating metal plates (two electric magnets) and a connecting wire. By means of the electric current, which, by the vibrations of the plates is now interrupted, now stopped, the sound vibrations which move the metal plates, entering into the one bell, are reproduced in the other bell by movement of the other plates. The *Phonograph* is a clever improvement on the T., for it at once translates the vibrations in form of curves, which can be preserved, and afterwards reproduced by introducing them into an apparatus of extraordinary sensitiveness. Cf. Hoffmann, "The T." (1877); Reis, "Das T. und sein Anrufapparat" (1878); Sack, "The Telephone" (1878); and Grawinkel, "Lehrbuch der Telephonie und Mikrophonik" (2nd ed., 1884).

Tellefsen, Thomas Dyke Akland, Norwegian pianist and composer, b. Nov. 26, 1823, Drontheim, d. Oct., 1874, Paris, where he lived from 1842; he studied at first with Chopin, and then became a teacher of music. T. published: 2 pf. concertos, a violin sonata, a 'cello sonata, a trio, pieces for pf. and violin, and many waltzes, nocturnes, mazurkas, etc., for pf. alone.

Temperament (Lat. *Systema participatum*; Ger. *Temperatur*; Fr. *Tempérament*), the regulation for practical musical purposes of the unavoidable deviations of intervals from acoustic purity. Every consonant chord (major or minor) consists of principal tone, third tone, and quint tone, which, when given with their natural ratios, fully amalgamate one with another, presenting one clang (q.v.). In chord succession one clang is followed by that of one of the partial tones (third or fifth) of the first clang, or the clang of one of its overtones of the second order. If these other clangs, like the first, are to give fifth or third ratio exactly, it follows that a far greater number of various tone values is necessary than we have in our (twelve degrees within the octave) system of keyed instruments (pianoforte, organ, etc.). For, already the under-third of a tone taken as starting-point (for example, $a\flat$ under-third of c) has as $\frac{4}{5}$ a different pitch value from the under-octave of the second third ($g\sharp$ as third of the third of c), of which the vibration quotient is $\frac{3}{2} \cdot \frac{5}{4}$, i.e. $g\sharp$ is then about $\frac{15}{8}$ ($= \frac{4}{5} : \frac{3}{2}$) lower than $a\flat$. The table under "Tone, Determination of" (q.v.) gives an idea of the endless variety of conceivable tone values; the impossibility of making use of all these in their full purity, likewise the recognition that the means of distinguishing differences of pitch are limited ($\frac{1}{2}$ to $\frac{1}{8}$ of the comma *syntonum* may, most probably, be taken as the extreme limit of perception of difference), brings home the thought of an *identification of values*

almost identical, and renders T. indispensable. Since about the end of the 17th century only twelve values within the octave have been in practical use. The oldest kinds of T. were by unequal beats, *i.e.* some pure values were selected which had to serve for the others. A. Schlick (1511), P. Aaron (1523), L. Fogliani (1529), J. Zarlino (1558), etc., and even Kepler (17th century), Euler (1729) and Kirnberger, etc., selected those which favoured the tones of the c major scale, with—corresponding to the five upper keys of the keyboard—insertion of five middle tones. (Cf. Riemann's "Katechismus der Musikwissenschaft," pp. 34-47.) To such false relationships objection has of late been taken, and unequal T., in consequence, abandoned. The equal T. of twelve degrees, which was established just before 1700 (Neidhardt and Werkmeister) divides the octave into twelve equal portions (semitones, hence "twelve semitone system"), through which mean values are obtained; no interval is perfectly pure, but all fairly serviceable. The thirds of equal T. (cf. table under "Tone, Determination of") are certainly all too large by about $\frac{1}{3}$ of a comma; the third, however, can better bear being out of tune than the fifth. The endeavour to obtain purer thirds has led to renewed, though vain efforts with systems of more degrees. Only a tone-system of 53 degrees answers all demands (first demonstrated by Nicholas Mercator, c. 1675); this, however, is a very unwieldy apparatus. It is, indeed, possible to construct an instrument in which this gigantic T. is fully developed. (Cf. Helmholtz, "L. v. d. Tonempfindungen," 19th supplement; G. Engel, "Das mathematische Harmonium" [1881], and Shohé Tanaka, "Studien im Gebiete der reinen Stimmung" [Vierteljahrsschrift f. Mus.-Wiss., 1890; also separately]). Its practical employment is, however, problematical; besides, to keep such an instrument in tune would prove an herculean task.

Templeton, John, celebrated English tenor singer, b. July 30, 1802, Riccarton, near Kilmarnock (Scotland), d. July 2, 1886, New Hampton; he studied under Blewitt, Welsh, De Pinna, and Tom Cooke in London, commenced singing in 1828 in provincial towns, and was engaged at Drury Lane in 1831. In 1833 and 1835 he was "Malibran's tenor." After 1840 T. devoted himself principally to concert singing, and retired from public life in 1852.

Tempo (Ital. "time"), measure, the determination which, in a single instance, regulates the absolute value of the note values. Before the 17th century the means of indicating various kinds of T. were extremely limited. Yet at that period the notes had a fairly fixed average value, the "integer valor" (q.v.), which changed considerably in the course of centuries; so that in transcribing musical works of the 14th to the 16th century the values must be reduced to at

least one-half, or even a quarter, and in still older ones to an eighth, if one desires to obtain a fairly correct idea of the music. The determinations: *Allegro*, *Adagio*, *Andante*, sprang up about 1600; and with these were soon associated *Presto*, *Largo*, and the sub-species: *Allegretto*, *Andantino*, *Prestissimo*. As these indications were frequently used in a very arbitrary manner, about the end of the 17th century, absolute, invariable determinations were thought of, and this led to the invention of the metronome (q.v.). At the present day determinations of T. are much in vogue, which for pieces of a certain definite character suggest the kind of movement, thus: *T. di marcia* (march time = *Andante*, the rate about = 72-84 M.M.), *T. di minuetto* (minuet time, about = *Allegretto*, faster than the preceding), *T. di valse* (waltz time = *Allegro moderato*, still quicker), etc. The indication *T. giusto*, "in exact time," refers to such well-known types; if it appear in pieces which belong to none of these, it must be understood as normal (medium) T., *i.e.* *Andante-Allegretto* (76-80 M.M.). (Cf. AGOGICS.)

Tempus (Lat. "time"), in the older mensurable music, the time value of the Breve, the original time unit, somewhat as the crotchet with us. Only in the case of Alteration (q.v.) could the Breve be equal to two "times" (*tempora*). Since the 14th century, in which by the side of triple time, binary times were revived, a distinction was made between *T. perfectum* and *T. imperfectum*, which latter shortened the value of the Breve by a third; for in *T. perfectum* the Breve was equal to three semibreves, but in *T. imperfectum* only to two of equal length, *i.e.* the semibreve became the time unit; and to this may be traced the origin of modern time determinations. (Cf. MEASURE.) The sign for *T. perfectum* was the circle O, that for *T. imperfectum* the half-circle C, *i.e.* our $\frac{C}{2}$, now the sign for $\frac{1}{2}$ time.

Ten Brink. (See BRINK, TEN.)

Tenebræ (Lat. "darkness"), the name of the solemn service in the Sistine Chapel and other Roman Catholic churches, at which, during the singing of the Lamentations, the candles burning on the altar are extinguished one by one.

Teneramente (con *tenerazza*), in a tender manner.

Tenglin, Hans, German composer who flourished from the 15th to the 16th century. In Forster's collection there are to be found German songs a 4 by him: "Auszug guter alter und neuer teutschen Liedlein" (1539), and "Kurtzweiliger guter frischer teutschen Liedlein" (1540).

Ten Kate. (See KATE, TEN.)

Tenor (Fr. *Taille*), (1) the high male voice,

which, however, is not distinguished from the low (the bass), as the soprano from the alto, by the preponderance of a high register over a low one; the so-called head register only occurs exceptionally in male voices, and is only occasionally used by way of substitution. The real full notes of the male voice from the lowest bass to the highest T. are produced by the same function of the vocal cords as those of the so-called chest notes of women's voices. (Cf. REGISTER.) There are two principal species of tenor voices, the so-called "lyric" and the "dramatic." The latter answers somewhat to the mezzo soprano, i.e. it has only a moderate compass (from small *c* to *b*[♭]); it is distinguished by a powerful middle range, and by a timbre of baritone quality. The former has a much clearer timbre, almost reminding one of a soprano voice; and, as a rule, the low notes have little power, but, on the other hand, a wide compass upwards (*c'*, *c*[♯]).—(2) The part in vocal and instrumental compositions which is intended for the tenor voice, and which answers to it as regards compass. Also instruments which have this compass are called tenor instruments, thus: T. trombone, T. horn, and, formerly, T. viol, Tenorpommer, etc.—(3) The term T. really signifies text, running thread, and the term first arose in the 12th century, when discant appeared: it was given to the principal melody taken from Gregorian song, against which a higher one made discant (i.e. sang differently). Thus T. became the name for the normal middle voice, and Discant that of the higher opposing voice. To these were added, later on, first the bass, as support (foundation, basis); and then, as an additional filling-up voice, the *contratenor* (counter-tenor), also named *alta vox*, *altus* (high voice)—while the discant assumed the name of *supremus*, *soprano* (the "highest").—(4) In writers on music of the Middle Ages the word T. occurs with various other meanings, viz.: (a) as pause, fermate, prolongation of the last note of a melody; (b) as a term to express the scale, the ambitus (compass) of a Church Mode; (c) the opening tone of the EVOVAE.—(5) Another name for the *Viola* (q.v.).

Tenor Clef, the *c*-clef of the fourth line

(Cf. C. and CLEF.)

Tenor Horn. (See SAXHORN.)

Tenorino (Ital.) really means a small tenor. It was the term applied to the falsetto tenor (Spanish falsettists), which, before castrati were allowed, took the place of boys' voices in the Sistine Chapel and elsewhere. Later on, to distinguish such singers from the soprano

and alto voices preserved by unnatural means, they were called *Alti naturali*. (Cf. ALTO.)

Tenorist (Ger.), a tenor singer. (See TENOR.)

Tenuto (Ital.), abbrev. *ten.*, sustained. This term signifies that the notes should be held on their full value; *forte t.* (*f. ten.*), sustained forte, without decrease of sound.

Terpander. (See GREEK MUSIC.)

Terradellas (Terradeglias), Domenico Michele Barnaba, eminent composer of operas of the Neapolitan School, b. at the beginning of Feb., 1711, Barcelona, d. 1751, Rome; pupil of Durante at the Conservatorio Sant' Onofrio, made his *début* in 1739 as a dramatic composer with *Astarte*, followed by *L'intrigue delle cantarine* (Naples, 1740), *Artemisia* (Rome, 1740), *Issifile* (Florence, 1742), *Merope* (ditto, 1743), *Mitridate* and *Bellerofonte* (London, 1746). With exception of *Issifile*, these works met with success. In 1747 T. became maestro of the Spanish church of St. James at Rome. His early death is said to have been caused by the failure of his opera *Sesostri* (Rome, 1751). A mass and an oratorio, *Giuseppe riconosciuto*, remained in manuscript.

Terschak, Adolf, performer on the flute, b. 1832, Hermannstadt (Siebenbürgen), pupil of the Vienna Conservatorium. He made many extended concert tours, and published numerous (150) works for flute.

Tertia (Lat.), third. (1) The organ stop *Terz* (*Ditonus*, *Sesquiquarta* [♯], etc.) is, like all mutation stops, an open flue-stop of diapason measure. The T. belonging to the 8 ft. diapason is of $1\frac{3}{8}$ (= $\frac{3}{8}$); it is also called *Decima septima*. The T. belonging to the 16 ft., $3\frac{1}{2}$ (= $\frac{1}{2}$), is called *Decima* (q.v.). T. stops of $6\frac{3}{8}$ (= $\frac{3}{8}$), T. of $\frac{1}{4}$ and T. of $\frac{3}{8}$ are rare. The T. in the cathedral organ at Schwerin (by Ladegast) of $12\frac{3}{8}$ (= $\frac{3}{8}$), and the Quint $21\frac{1}{8}$ (= $\frac{3}{8}$) in the cathedral organ at Bremen, have really no sense, as there is no stop of 64 ft. to which they belong. The old term *Terz* of 4 ft. = T. of $3\frac{1}{8}$, and *Terz* of 2 ft. = $1\frac{3}{8}$.

(2) The third degree in diatonic succession. It may be: major, minor, diminished or augmented; for example:—

The major T. is of enormous importance in connection with the elementary study of harmony, for, like the fifth (q.v.), it is one of the fundamental intervals of both the major and the minor chord. Already Zarlino, Tartini, and, within modern times especially, M. Hauptmann, have emphasised the fact that the minor chord has not a minor third (this it only has in thoroughbass), but, like the major chord, a major third, reckoning downwards from the highest note; for the whole

minor chord must be thought of from top to

bottom: $\begin{matrix} c \\ a \end{matrix} \begin{matrix} \gamma \\ \vee \end{matrix}$ The student of harmony need

not load his memory with the minor thirds: it is sufficient if he thoroughly knows the major. He learns them in the easiest way mechanically, if he remembers that the notes of the fundamental scale (without signature) only show three major thirds, namely: All the others are one semitone smaller (minor thirds), and hence can be extended into major ones by raising the higher (by a \sharp), or lowering the lower note (by a \flat):

Of thirds with similar accidentals (both notes with \sharp or \flat), only those derived from *c. e. f. a.*, and *g. b.* are major:

The others are again too small, hence need for the higher note a \times , or for the lower, a $\flat\flat$:

Thirds of all notes without accidentals, likewise those with a simple \sharp and \flat must also be familiar to the student, and in either direction, upwards or downwards.

Terzett, a composition for three concertante parts, especially voices (but, as a rule, with instrumental accompaniment; cf. TRIO and TRICINIUM).

Terziani, Eugenio, b. 1825, Rome, d. there June 30, 1890; he was pupil of Mercadante at the Naples Conservatorio, produced in 1844 an oratorio, *La caduta di Gerico*, and soon after, the operas *Giovanna di Napoli* and *Alfredo* at Rome, whereupon he was named maestro of the Apollo Theatre. After that, from 1867-71, he conducted the orchestra at La Scala, Milan; but he again returned to his former post at Rome, and in 1877 became professor of composition at the Lyceum of Music of the Academy of St. Cecilia. Of his compositions there are still to be mentioned: a Cecilia mass, the requiem for Victor Emanuel, and his last opera, *Niccolò de' Lapi* (*L'assedio di Firenze*, Rome, 1883). T. was also highly esteemed as a teacher of singing.

Terzo suono (Ital.), "the third tone." (See COMBINATION TONE.)

Teschner, Gustav Wilhelm, excellent

teacher of singing, b. Dec. 26, 1800, Magdeburg, d. May 7, 1883, Dresden; he received his first musical instruction from his father, who was organist at Kroppenstedt (near Halberstadt), afterwards from Seebach and Reinhardt at Magdeburg; he then studied (1824) singing and composition under Zelter and Klein at Berlin, went (1829) to Italy, and had the advantage of learning with Ronconi, Bianchi, and Crescentini; he entered into lasting relationship with the celebrated connoisseur of old church music, the Abbé Santini; and, spurred on by the latter, afterwards acquired much merit as a searcher after old musical works in forgotten libraries. On his return to Germany he had further the advantage of lessons in singing from Mieksch at Dresden, and laboured for many years in Berlin, highly esteemed as a master of voice formation according to Italian methods. In 1873 he was appointed royal Prussian professor. As composer, T. only published some Solfeggi; on the other hand, he displayed enormous activity as editor of old sacred vocal music ("Choralbuch" of Hasler, songs of Eccard, Altenburg, Burck, M. Franck, M. Prætorius, Gese, Gumpeltzhaimer, and other German and Italian masters of the 16th and 17th centuries), several books of Italian canzonets and other Italian folk-songs (for one, also for four voices); but, especially, a great number of books of Italian Solfeggi for all kinds of voices (Minoja, 6 books; Crescentini, 5 books; Zingarelli, 10 books; Clari, 8 books). His own Solfeggi appeared some in collections, others separately (elementary exercises, progressive solfeggi, etc.).

Tesi, Vittoria (T. Tramontini), famous singer, b. at the end of the 17th century, Florence, pupil of Redi there, also of Campeggi at Bologna. She made her *début* there, and sang chiefly at Venice and Naples. In 1719 she sang for the wedding festivities at Dresden. In 1737 T. received an engagement for four months at the San Carlo Theatre, Naples, at a fee of about £500. T. was then engaged at Madrid with Farinelli (1738-48?), and passed her last years at Vienna in the house of the Prince of Hildburghausen. She sang still in 1749 with undiminished success, and died there, at an advanced age, in 1778.

Tessarini, Francesco, b. Dec. 3, 1820, Venice, a friend of Wagner's and highly esteemed by him; he was pupil of G. B. Ferrari. T. has composed pf. pieces, sacred music, a cantata, *Inno saluto* (1875), and the opera *L'ultimo Abencerragio* (1858).

Tessarini, Carlo, important violinist, possibly a pupil of Corelli's, b. 1690, Rimini, principal violinist of the leading church at Urbino. According to Burney, he went to Amsterdam in 1762, and excited attention by the novelty of the style of his compositions. He published:

sonatas for two violins and bass with a canon, 2 books of sonatas for two violins, 12 "Concertini" for solo violin, two ripieni violins, violetta, 'cello, and continuo; 12 sonatas for violin and organ bass, 6 "Divertissements" for two violins, "L'arte di nuova modulazione" (*Concerti grossi* for principal violin, two concertante violins, two ripieni violins, violetta, 'cello, and continuo), "Contrasto armonico" (ditto), and a violin Method: "Grammatica di musica . . . a suonar il violino" (only known in MS. copies; the French and English translations, however, are printed), merely a practical educational work with few theoretical precepts.

Tessitura (Ital.), a term to indicate the average position of the notes of a song or instrumental piece, with regard to the voice or instrument for which it was written.

Testore, Italian family of violin-makers, the father, Carlo Giuseppe (1690-1715), and two sons, Carlo Antonio and Pietro Antonio (1715-45); the father, pupil of Grancino, whose instruments are similar, made excellent 'celli and basses (Bottesini's favourite bass was a T.). The two sons imitated Joseph Guarneri's violins.

Testudo (Lat.), the Roman lyre; from the 15th-17th centuries same as lute.

Tetrachord. (See GREEK MUSIC.)

Teyher (Tayber), (1) Anton, b. Sept. 8, 1754, Vienna, d. there Nov. 18, 1822; at first member of the Dresden Court band, in 1792 cembalo-player at the Vienna Court Opera and adjunct of Salieri, in 1793 "k. k. Kammerkompositeur" and teacher of music to the imperial children. He wrote: sacred pieces, pf. works, a melodrama, an oratorio, stringed quartets, etc.

(2) Franz, brother of the former, b. Nov. 15, 1756, Vienna, d. there Oct. 22, 1810; he first conducted Schikaneder's Opera Company in its wanderings through South Germany and Switzerland, and afterwards at Vienna. Shortly before his death he was named royal imperial organist (Vogler thought highly of him as an organist). T. wrote a number of operas and vaudevilles (*Alexander* [1800], *Der Schlaftrunk*, *Scheradin und Almanzor*, *Der Telegraph*, *Pfändung und Personal-arrest*, *Die Zerstreute*, *Das Spinnerkreuz am Wienerberge* [1807], *Die Dorfdeputierten*, *L'arragio di Benevento*, etc.), also an oratorio, songs, church pieces, etc.

Thadewaldt, Hermann, the founder and president of the "Allgemeiner deutscher Musikerverband" (1872), b. April 8, 1827, Bodenhagen (Pomerania); he was from 1850-51 military bandmaster at Düsseldorf, and from 1853-55 conductor at the Dieppe Baths. From 1857-69 he conducted a band of his own at Berlin, and in 1871 directed the concerts at the Zoological

Gardens. Since the foundation of the above-named society T. has devoted the whole of his interest to it.

Thalberg, Sigismund, one of the most famous pianoforte players, and also a brilliant composer for his instrument, b. Jan. 7, 1812, Geneva, d. April 27, 1871, Naples; he was the natural son of Prince Moritz Dietrichstein and Baroness v. Wetzlar, and received his training at Vienna under Sechter and Hummel; but, according to his own statement, the chief bassoon-player of the Vienna Court Opera was his real pianoforte-teacher. At the age of fifteen T. was so advanced that he attracted attention in Viennese private circles. In 1830 he undertook his first concert tour through Germany and speedily made a name; at that time he composed his pf. concerto (Op. 5). His first compositions (Op. 1-3, fantasias on themes from *Euryanthe*, on a Scottish melody, on themes from the *Siège de Corinthe*) had already appeared in 1828. In 1835 he took Paris by storm, and in 1836 competed honourably with Liszt, and went in triumph through Belgium, Holland, England, and Russia. In 1855 he went to Brazil, in 1856 to North America, purchased a villa at Naples in 1858, and lived for some years in retirement. In 1862 he resumed his art tours, and went to Paris, London, and in 1863, again to Brazil. From the following year up to his death he lived at Naples. T. was the son-in-law of Lablache; his daughter, Zara T., is a singer gifted with a fine voice. T. solely worshipped virtuosity, and hence did not fulfil the promise given by his earlier compositions. Chord passages divided between the two hands, and enclosing a melody, form a speciality of T.'s writing; by this very brilliant effect he dazzled the public until it became common property. He published: a pf. concerto (Op. 5), a grand sonata (Op. 56), a divertissement (F minor, Op. 7), 2 caprices (Op. 15, 19), 6 nocturnes (Op. 16, 21, 28), *Grande fantasia* (Op. 22), 12 études (Op. 26), scherzo (Op. 31), andante (Op. 32), *La cadence* (Op. 36, étude), romance and étude (Op. 38), "Thème original et étude" (Op. 45), waltzes (Op. 4, 47), *Decameron musical* (Op. 57, études), funeral march with variations (Op. 59), "Apothéose" (fantasia on Berlioz' Triumphal March, Op. 58), and a great number of fantasias on operatic airs from Mozart (*Don Giovanni*), Weber, Rossini, Meyerbeer, Bellini, Auber, Donizetti, etc., on "God Save the Queen," and "Rule Britannia," etc. As an opera composer he failed twice (*Florinda* [London, 1851] and *Cristina de Suezia* [Vienna, 1855]).

Thallon, Robert, b. March 18, 1852, Liverpool; he went as a child to America (1854), studied music from 1864-76 at Stuttgart, Leipzig, Paris, and Florence, and has lived since then at Brooklyn (New York), distinguished both as organist and music teacher.

Thayer, (1) Alexander Wheelock, American writer, b. Oct. 22, 1817, South Natick (near Boston); he studied at Cambridge (Mass.), was then assistant at the University Library there, conceived the plan of writing a comprehensive Beethoven biography, and is carrying out this work in a distinguished manner. For this purpose he went to Germany from 1849-51, 1854-56, and 1858, etc., and found opportunity to continue his studies without interruption when he received an appointment at the American embassy, Vienna, in 1860. In 1865 he undertook the post of American consul at Trieste, which he still holds. The fruit of his labours: "Ludwig van Beethovens Leben," has appeared up to now only in German translation by H. Deiters (1866, 1872, 1878, 3 vols.; the 4th vol. has not yet appeared); it was preceded by "Chronologisches Verzeichnis der Werke L. van Beethovens" (1865); he wrote besides: "Ein kritischer Beitrag zur Beethoven-Litteratur" (1877). T. has made the *man* Beethoven the object of his study, and has drawn a living, true portrait of him—one which no previous attempt in any way approached. The preliminary work of O. Jahn for a projected Beethoven biography was placed at his service.

(2) Eugène, b. Dec. 11, 1838, Mendon (Mass.), d. June 27, 1889, Burlington; he was a distinguished organist, also composer.

Theile, Johann, the "father of contrapuntists," as he was called by his contemporaries, b. July 29, 1646, Naumburg, d. there June 24, 1724; he went, when schooldays were over, to Halle, and, soon afterwards, to Leipzig, maintaining himself by teaching music and working in the orchestra as gamba-player. He still studied for some time under Heinrich Schütz at Weissenfels, and then settled as a teacher of music at Stettin. In 1673 he became capellmeister to the Duke of Holstein at Gottorp; but when the court was broken up during the unsettled times of war, he went to Hamburg, and there received the honourable commission to write for the opening of the Hamburg Opera in 1678 the vaudevilles *Adam und Eva, oder der erschaffene, gefallene und wieder aufgerichtete Mensch und Orontes*. In 1685 T. succeeded Rosenmüller as Brunswick capellmeister at Wolfenbüttel, exchanged this post shortly after for a similar one at Merseburg, and, after the death of Duke Christian II. of Sachsen-Merseburg, retired to his native town. Among T.'s pupils is counted Nik. Hasse. His works which have been preserved are: a German Passion (Lübeck, 1673), "Noviter inventum opus musicalis compositionis 4 et 5 vocum pro pleno choro" (20 masses in the style of Palestrina), and "Opus secundum, novæ sonatæ rarissimæ artis et suavitatis" (instrumental pieces a 2-5 with fugal movements in double counterpoint). A Christmas oratorio of T. was produced at Hamburg in 1681, but not printed.

Thematic development, in musical forms of any extent, is the section in which the (previously expounded) principal thoughts (themes) of the movement are freely developed, *i.e.* the motives are fixed in a variety of ways and combined in new manner. Especially in the sonata form, the most important of all instrumental forms, the T. d. follows immediately after the double bars (repetition of the themes), and thus is placed between the first exposition of the themes and their final appearance. In the fugue the carrying of the theme (as *dux* and *comes*) through all the parts is named a T. d., so that in fugue one can also speak of a second and a third D. Anyhow, the term D. proceeds from the fugue, for the D. of the sonata formerly was frequently fugal in character (Cf. FORM.)

Theme is the name given to a musical thought, which, if not completely rounded off and finished, is, nevertheless, so far developed as to present a characteristic physiognomy. The T. is thus distinguished from the *Motive*, which is only a germ of thematic formation. A real T. is already the outcome of the structural strength of a Motive (Cf. IMITATION), whether it be that the latter is repeated in similar or inverted motion or that it has received a counter-part (Gegensatz). Even the shortest fugue themes of Bach are to be thus explained; for example:

The fugue has never more than one T.; only double fugues, which develop two subjects separately, and only combine them at the close, can be said to have two themes; and in that they resemble the movement in sonata form. The T. of a set of variations is already a separate piece complete in itself (song, air). Also the Themes of a sonata movement are the products of an amplified motive form. On the introduction of several themes in one piece the design bears further extension (Cf. Riemann, "Katechismus der Kompositionslehre," 1st part); the characteristic difference of several themes is essential if they are to be contrasted.

Theodericus, Xistus. (See DIETRICH.)

Theogerus (Dietger) von Metz, about 1090 Benedictine monk at Hirschau, afterwards Abbot at St. George (Black Forest), finally Bishop of Metz. He wrote a musical treatise printed in Gerbert, "Script." II.

Theorbo (Ital. *Tiorba*, *Tuorba*), a bass instrument belonging to the lute family, a characteristic feature of which was the double neck with two sets of pegs. For, as in the case of the lute, all the strings did not lie over the fingerboard, but a great number, as bass strings (drones), ran by the side of it. In order to

produce notes of lower pitch and greater fullness of tone, these strings were much longer than those similarly placed in the lute, and had a special peg-case, which lay in a tailed prolongation of the neck beyond the peg-case of the finger-board strings. (Cf. CHITARRONE.)

Theory (Gk.), "beholding." The T. of music is either an investigation of the technical manipulations of composition established by practice, reduced to fixed rules, and presented as instruction, as method (general-bass, systems of harmony, counterpoint, and composition), or it is an inquiry into the natural laws of musical hearing, the elementary effects of the various factors of musical art, and of the final perception of completed musical works of art (speculative T. of music, philosophy of music, musical esthetics). Practical and speculative T. are, it is true, closely correlated, yet very distinct domains of intellectual activity. Of both there is a rich literature, although, naturally, rational speculative T. has been, and is, much slower in development than purely empirical technology.

Thern, (1) Karl, b. Aug. 18, 1817, Iglo (Upper Hungary), whither his great-grandfather, Thomas T., who was a builder of organs and pianoforte maker at Salzburg, had taken refuge from the Protestant persecutions, d. April 13, 1886, Vienna. He received musical training at home, afterwards at Pesth, and in 1841, when his music to Gaal's *Notar von Paleska* first made him known, became capellmeister at the Pesth national theatre, and in 1853 teacher of composition and of the pianoforte at the National Conservatorium. T. resigned in 1864, and travelled with his sons, for their further training and for the purpose of giving concerts; but from 1868 he lived again at Pesth, finally Vienna. T. is the popular Hungarian composer of the "Foter-lied," and other melodies which have become almost national. He also published pf. pieces, especially arrangements of classical works for the ensemble playing of his sons. Three operas: *Gisul* (1841), *Die Belagerung von Tiharry* (1845), and *Der Hypochondr* (1855), were successfully produced at Prague. His sons—

(2) Willi, b. June 22, 1847, Ofen, and

(3) Louis, b. Dec. 18, 1848, Pesth, are famous for their excellent ensemble playing on two pianos. They were taught by their father, appeared at an early age in public, studied from 1864-65 under Moscheles and Reinecke at Leipzig, and at the same time gave concerts in various places. In 1866 they undertook their first great tour to Brussels and Paris, and after that many others to England, Holland, etc.

Thesis. (See ARSIS.)

Thibaut IV., King of Navarra, b. 1201, Troyes, d. July 8, 1253, Pamplona. He was a Trouvère, and his adored one was said to have been Queen Blanche, mother of Saint Louis. Bishop La Ravallière collected 63 songs of T.'s

from the Paris Library, and published them in 1742 ("Poesies du roi de Navarre," etc., 2 vols.), but reproduced the melodies in an incomplete form.

Thibaut, Anton Friedrich Justus, professor of law, Heidelberg, b. Jan. 4, 1774, Hameln, d. March 28, 1840, Heidelberg. He wrote "Ueber Reinheit der Tonkunst" (1825, frequently republished; in English, "Purity in Musical Art," by Mr. W. H. Gladstone), a work opposed to romanticism in music. T. had collected a library full of musical treasures, a catalogue of which was printed in 1842; the King of Bavaria procured it for the Munich Library. (Cf. A. F. J. Thibaut: "Blätter der Erinnerung für seine Verehrer," by E. Baumstark [1841].)

Thiele, Karl Ludwig, in his time a highly-esteemed organ-player, b. Nov. 18, 1816, Harzgerode (near Bernburg), d. (of cholera) Sept. 17, 1848, Berlin; son of a teacher, by whom he was first trained, but after removing to Berlin in 1830, he studied at the Royal Institute for Church Music (A. W. Bach) from 1831 to 1833, and was fellow-pupil there of Haupt, with whom he formed a friendship. From 1839 until his death T. was organist and ministrant at the parochial church, Berlin, and published much-esteemed virtuoso pieces for organ.

Thieme (Thiémé), (1) Friedrich, German by birth, teacher of music at Paris from 1780-92, then at Bonn, where he died, June, 1802. He published: "Éléments de musique pratique" (1784, 2nd ed., with a new figuring after the system of Abbé Roussier); "Principes abrégés de musique à l'usage de ceux qui veulent apprendre à jouer du violon" (no date); "Principes abrégés de musique pratique pour le piano," and "Nouvelle théorie sur les différents mouvements des airs . . . avec le projet d'un nouveau chronomètre" (1801). He also published several books of violin duets.

(2) Samuel Lebrecht, b. Dec. 14, 1807, Bernsdorf, d. May 20, 1883, Giebichenstein (near Halle-a.-S.); he was musical director and organist at the "Liebfrauenkirche," Halle.

Thierfelder, Albert, b. April 30, 1846, Mühlhausen, student at the Leipzig Conservatorium, took his degree of Dr. Phil., was musical director at Brandenburg, and in 1888 succeeded Kretschmar as musical director at Rostock University. He is well known as a composer (music to Baumbach's *Zlatarog*, pf. music, orchestral works, operas: *Die Jungfrau vom Königssee*, 1877; *Der Trentajäger*, 1883; and *Almansor*, 1884; etc.).

Thieriot, (1) Paul Emil, b. Feb. 17, 1780, Leipzig, d. Jan. 20, 1831, Wiesbaden; violinist, and a friend of Jean Paul.

(2) Ferdinand, b. April 7, 1838, Hamburg, studied under E. Marxsen at Altona, after-

wards under Rheinberger at Munich, became musical director and teacher at Hamburg, Leipzig (1867), Glogau (1868-70), and artistic director of the Styrian Vocal Society at Graz (until 1885). He now lives in Hamburg. Of his compositions, chamber music, songs and part-songs of merit, have appeared in print.

Thillon, Anna (*née* Hunt), eminent English singer, b. 1819, London, pupil of Tadolini, Bordogni, and Thillon, marrying the last-named at the age of 15. She made her *début* in 1838 at Paris in Grisar's *Lady Melvil*, sang from 1840-44 at the Opéra Comique, Paris; 1844, etc., in London; from 1851-54 in America. In 1856 she retired from the stage owing to illness. In 1867 she was last heard in public at a Kuhe Festival, Brighton.

Thimus, Albert, Freiherr von, b. 1806, Cologne, d. Oct. 14, 1846, as "Hofrat" of the Court of Appeal there. He published: "Die harmonikale Symbolik des Altertums" (1868-76, 2 vols.), a work containing much of interest for those in favour of harmonic dualism.

Third. (*See* TERTIA.)

Third-tones. (*See* QUINT-TONES.)

Thoinan, Erneste, pseudonym of a French writer on music, whose real name was Antoine Ernest Roquet, b. Jan. 23, 1827, at Nantes, d. May, 1894, Paris; he went to Paris in 1844 as apprentice to a merchant, and remained in business for many years, but at the same time acquired a deep knowledge of music, and collected a musical library, which is said to have surpassed that of Fétis. (*Cf.* Pougin's "Supplément," to which T. was a contributor). T. wrote: "La musique à Paris en 1862" (1863); "Les origines de la chapelle-musique des souverains de France" (1864); "La déploration de Guillaume Crestin sur le trépas de Jean Ockeghem" (1864); "Maugars, célèbre joueur de viole" (1865); "Antoine de Cousu et les singulières destinées de son livre rarissime 'la musique universelle'" (1866); "Curiosités musicales et autres trouvées dans les œuvres de Michel Coyssard" (1866); "Un biseauil de Molière; recherches sur les Mazuel, musiciens du XVI. et XVII. siècles" (1878); "Louis Constantin, roi des violons" (1878); "Notes bibliographiques sur la guerre musicale des Gluckistes et Piccinistes" (1878), a satire, "L'opéra *Les Troyens* au Père Lachaise" (1863), etc.

Thoma, Rudolf, b. Feb. 22, 1829, Lehsewitz (near Steinau-a.-O.); he attended the teachers' seminary at Bunzlau, and afterwards, the Royal Institute for Church Music, Berlin. He became cantor of the Gnadenkirche, Hirschberg-i.-S. in 1857, and in 1862 of the Elizabethkirche, Breslau, where he has since lived as conductor of a society bearing his name and as director of a music school. In 1870 he was appointed royal music director. T. has composed church

music, oratorios (*Moses* and *Johannes der Täufer*), an opera (*Helgas Rosen*, 1890), etc.

Thomas, (1) Christian Gottfried, writer on music and composer, b. Feb. 2, 1748, Wehrsdorf (near Bautzen), d. Sept. 12, 1806, Leipzig; unsuccessful competitor with Forkel, Hiller, and Schwencke at Hamburg for the post of musical director, rendered vacant by the death of Ph. E. Bach, after which he lived at Leipzig without holding any appointment. T. published: "Praktische Beiträge zur Geschichte der Musik, musikalischen Litteratur, etc." (1778; the contents refer specially to musical trade matters); *Unparteiische Kritik der vorzüglichsten seit drei Jahren in Leipzig aufgeführten und fernerhin aufzuführenden grossen Kirchenmusiken, Konzerte und Opern* (1798 and 1799, a newspaper which quickly came to an end); and *Musikalische kritische Zeitschrift* (1805, 2 vols.). Of his compositions are known a Gloria for three choirs with instrumental accompaniment, a cantata in honour of Joseph II., and some quartets.

(2) Charles Louis Ambrose, one of the most important modern French composers, b. Aug. 5, 1811, Metz, d. Feb. 12, 1866, Paris. He was the son of a teacher of music, and from an early age received regular instruction in violin and pianoforte playing. In 1828 he entered the Paris Conservatoire, where Kalkbrenner (piano), Dourlen (harmony), Barbereau (counterpoint), and Le Sueur (composition) were his teachers. As early as 1829 he received the first prize for pianoforte-playing, in 1830 the first prize for harmony, in 1831 honourable mention in the competition for the *Prix de Rome*, and, finally, in 1832, the *Grand Prix de Rome* itself, for his dramatic cantata *Hermann et Ketty*. After he had spent, according to prescription, three years in Italy (Rome, Naples, Florence, Bologna, Venice, Trieste), and had stayed in Vienna, adding to his experiences, he returned in 1836 to Paris, and devoted himself with zeal to dramatic composition. The operas of T.'s first period are: *La double échelle* (one act, 1837), *Le perruquier de la régence* (1838, both at the Opéra Comique); *La Gipsy* (ballet, 1839, jointly with Benoit), *Le panier fleuri* (1839), *Carlène* (1840, both at the Opéra Comique), *Le Comte de Carmagnola* (Grand Opéra, 1841), *Le guerillero* (ditto, 1842), *Angélique et Médor* (Opéra Comique, 1843), *Mina* (ballet; ditto), and *Betty* (ditto). The first four operas pleased; the others met with a cool reception. T. was, therefore, for a time frightened away from the stage, and turned to other spheres; only in 1849 did he appear again before the public with *Caid*, and in 1850 with *Songes d'une nuit d'été*, both at the Opéra Comique; these two works finally established his fame, and gained for him a place of honour among French opera composers. Several works followed afterwards, but were only moderately successful: *Raymond*

(1851), *La Tonelli* (1853), *La cour de Célime* (1855), *Psyché* (1857), and *Le carnaval de Venise* (1857), all at the Opéra Comique. Then there was a long pause, only broken by *Le roman d'Elvire* (1860). Two decided successes now followed: *Mignon* (1866) and *Hamlet* (1868), the one at the Opéra Comique, the other at the Grand Opéra. When Auber died, in 1871, there could be no question as to his successor at the head of the Conservatoire; the Commune, it is true, appointed Daniel, but as soon as order was restored, T. took his place. Already in 1851 he had been elected Spontini's successor at the Académie, in 1845 was made Knight, in 1858 Officer, and in 1868, Commander of the Legion of Honour. T.'s musical nature was akin to that of Gounod, full of intelligence, grace, and elegance. His speciality was comic opera; his *Mignon* has proved the most successful of modern pieces at the Paris Opéra Comique. His *Hamlet*, it is true, is likewise held in honour in that city. His most recent opera, *Françoise de Rimini*, completed many years ago, was produced April 14, 1882, but with only moderate success. To the list of T.'s works must still be added a one-act comic opera, *Gille et Gilotin* (1874), *Hommage à Boieldieu* (cantata, Rouen, 1875), a cantata for the unveiling of the statue of Le Sueur at Abbeville (1852), a requiem, a solemn mass, a quintet for strings, a quartet for strings, a pf. trio, a fantasia for pf. and orchestra, pf. pieces, a sacred march, a motet, 6 Neapolitan canzonets, and a set of very effective quartets for male voices.

(3) John (Welsh title, "Pencerdd Gwalia," conferred 1861), distinguished performer on the harp, b. March 1, 1826, Bridgend, Glam.; he studied at the Royal Academy of Music under Chatterton (harp), Cipriani Potter and C. J. Read. From 1851-61 he made yearly concert tours on the Continent, and was appointed harpist to the Queen in 1872. T. has taken a prominent part in most Eisteddfodau of importance in his native country, and has been for many years principal teacher of his instrument at the R.A.M., Royal College of Music, Guildhall School of Music, etc. His compositions are chiefly solos and concertos for harp; also two cantatas (*Llewellyn*, 1863; and *The Bride of Neath Valley*, 1866).

(4) Harold, b. July 8, 1834, Cheltenham, d. July 29, 1885, London, a favourite pupil of Bennett at the Royal Academy of Music, also of Potter (theory), and Blagrove (violin), esteemed pianist, professor of the pianoforte at the Royal Academy of Music and the Guildhall School of Music. He wrote many pieces for the pianoforte, also 3 overtures ("Overture to a Comedy," "As You Like It," and "Mountain, Lake, and Moorland").

(5) Lewis William, b. at Bath, distinguished bass singer, especially of oratorio music. He made his first appearance in London in 1854.

(6) Theodore, a man highly to be esteemed for the services which he has rendered to music in North America, b. Oct. 11, 1835, Esens, East Friesland; he went, already as a youth, to New York, and, as regards his musical training, had chiefly to rely upon himself. He first made himself known in New York as an able quartet-player, but suddenly rose into high esteem, when he appeared at the head of an excellently organised orchestra. The concerts of T.'s orchestra for six years caused dangerous rivalry to those of the Philharmonic Society under Bergmann at the Academy of Music (opera house), and exercised a powerful influence over musical culture in other cities of the States, as T. repeatedly, and with pecuniary loss, undertook concert tours with his whole orchestra. In 1877, compelled to dissolve his band, he was soon placed at the head of the Philharmonic Society, although, only a year previously, L. Damrosch, a conductor of great eminence, had been appointed. When he left for Cincinnati, in 1878, in order to organise and manage the Conservatoire there, the New York Symphony Society, now a powerful rival of the Philharmonic, was formed under Damrosch, while the Philharmonic Society fell into such incapable hands, that for the season of 1879-80 T. was forced to come from Cincinnati to conduct the concerts. A year later T. gave up the direction of the Cincinnati Conservatoire and returned to New York as conductor of the Philharmonic Society. In 1888 he disbanded his orchestra and undertook the direction of the Chicago Conservatoire.

(7) Arthur Goring, gifted English composer, b. Nov. 21, 1851, Ratton (Sussex), d. March 21, 1892, London. He only began to study music seriously after he was grown up. From 1875-77 he was a pupil of E. Durand's at Paris, and then studied for three years at the Royal Academy of Music under A. Sullivan and E. Prout, and greatly distinguished himself. His compositions are: a grand anthem for soprano solo, chorus, and orchestra (1878); a cantata, *The Sun Worshipers* (Norwich, 1881); operas: *Esmeralda* (London and Cologne, 1883), *Nadeshda* (1885), and *The Golden Web* (1893, produced after his death); "Suite de ballet," an orchestral suite (1887), etc.

(8) Otto, b. Oct. 5, 1857, Krippen (Saxony); pupil of G. Merkel, since 1890 organist of the Paulikirche, Dresden. He is an able organist and gifted composer (sacred songs, Op. 1; elegies for organ, etc.).

Thomas of Aquino (Aquinas), Saint, b. 1227, Roccasecca (near Naples), d. March 7, 1274, in the Cistercian abbey, Fossanuova, near Terracina, on a journey to the Council at Lyons. He entered the Dominican Order in 1245. At the wish of the Pope, Urban IV., T. composed, in 1263, a communion service, in which occur the Corpus Christi sequence "Lauda Sion" and the hymns

"Pange lingua," "Sacra solemnitas," "Verbum supernum," and "Adhortor te," for ever associated in the history of music with his name.

Thomasschule, Leipzig. The post of cantor at the T. is one of marked distinction in the musical world, and it has been held by a number of eminent men: Georg Rhaw, 1519-20; Joh. Hermann, 1531-36; then in direct succession, Wolfg. Jünger until 1540, Ulrich Lange until 1549, Wolfg. Figulus (Töpfer) until 1551, Melchior Heyer until 1564, Valentin Otto until 1594, Seth Calvisius (Kalwitz) until 1615, J. Herm. Schein until 1630, Tobias Michael (deputy, Joh. Rosenmüller) until 1657, Seb. Knüpfer until 1676, Joh. Schelle until 1701, Joh. Kuhnau until 1722, Johann Sebastian Bach until 1750, Gottlob Harrer until 1755, Joh. Friedr. Doles until 1789, Joh. Ad. Hiller until 1800, Aug. Eberh. Müller until 1810, Joh. Gottfr. Schicht until 1823, Chr. Th. Weinlig until 1842, Moritz Hauptmann until 1868, E. Fr. Richter until 1879, Wilhelm Rust until 1892, and Gustav Schreck. The cantor of the T. is teacher of singing to the choir of St. Thomas, formed from the foundation scholars of the T., and he directs or controls the sacred music at St. Thomas's, of which the motet singing every Saturday afternoon forms a special feature. For Sundays and festivals Bach wrote the greater number of his cantatas.

Thomson, César, celebrated violinist, b. March 17, 1857, Liège; he received his first instruction in violin-playing from his father, but entered the Liège Conservatoire as soon as he was seven years of age; Dupuis and Léonard becoming his teachers. In 1873 he went to Italy as chamber musician to Baron von Derwies at Lugano, where he was married in 1877. After many years of concert touring in Italy, he became capellmeister under Bilse at Berlin. In 1883 T. was appointed violin teacher at Liège Conservatoire, where he at present labours as principal teacher of the violin; a great part of his time is, however, spent in concert tours, which yield him an abundance of laurels. T.'s virtuosity is especially wonderful in passages with double-stopping.

Thooft, W. F., b. July 10, 1829, Amsterdam, pupil of Hauptmann and Richter at Leipzig, and for some time capellmeister of the German Opera at Rotterdam. He has written: 3 symphonies, a choral symphony ("Karl V.," gained a prize in 1861), overture to the *Jungfrau von Orleans*, orchestral fantasia, "In Leid und Freud;" also psalms, songs, pf. sonatas, and an opera, *Aleida von Holland* (1866).

Thorne, Edward H., b. May 9, 1834, Cranborne (Dorset); pupil of G. Elvey as chorister of St. George's Chapel, Windsor; in 1870 organist of St. Patrick's, Brighton; afterwards of St. Peter's, Cranley Gardens; now of St.

Michael's, Cornhill. He is an esteemed organist and pf. teacher, and an able composer (services, 125th Psalm for chorus and orchestra, 47th Psalm for female voices, organ preludes, toccata and fugue, festival march, funeral march, overture; there exist in manuscript pf. trios, 'cello and clarinet sonatas, the 57th Psalm for tenor solo, chorus, and orchestra, etc.).

Thoroughbass, same as GENERALBASS (q.v.).

Thureau, Hermann, b. May 21, 1836, Klausthal (Harz), trained at Göttingen and the Leipzig Conservatorium (Hauptmann). He became organist of the principal church at Eisenach in 1863, in 1865 musical director and court cantor, and at the same time seminary music teacher and conductor of the musical society. In 1872 the title of Professor was bestowed on him.

Thüring (Thuringus), Joachim, candidate of theology and *poeta laureatus*, born at Fürstenberg (Mecklenburg). He published: "Nucleus musicus de modis seu tonis" (1622), further continued as "Opusculum bipartitum de primordiis musicis quippe, 1^o De tonis sive modis, 2^o De componendi regulis" (1624).

Thürlings, Adolf, since 1887 Professor of Old-Catholic Theology at the Bonn University, previously preacher to the Old-Catholic community at Kempen (Bavaria); he took his degree of Doctor of Philosophy at Munich University with the dissertation: "Die beiden Tongeschlechter und die neuere musikalische Theorie" (1877), in which, like the compiler of this Dictionary, he showed himself favourable to the conception of harmony in a dual sense. (Cf. MINOR KEY, CLANG, OETTINGEN, etc.)

Thurner, (1), Friedrich Eugen, distinguished oboe-player, b. Dec. 9, 1785, Montbéliard, pupil of Ramm at Munich, played (apart from his artistic tours) in the orchestras of Brunswick, Cassel, Frankfurt (under Spohr), and from 1818 at Amsterdam, where he died, March 21, 1827, in a lunatic asylum. T. published: 3 symphonies, an overture, 4 oboe concertos, 4 quartets for oboe and stringed trio, rondos and divertissements for oboe and stringed quartet, a trio for oboe and two horns, duets for oboe and pf., a sonata for horn and pianoforte, a pf. sonata, pf. pieces, etc.

(2) Theodor, b. 1806, Ruffach (Alsace), d. there June, 1885; he was an excellent organist and diligent church composer (30 masses).

Thurnmayer. (See AVENTINUS.)

Thursby, Emma, distinguished coloratura singer, b. Nov. 17, 1857, Brooklyn (New York); she studied first with the singing-masters Jul. Meyer and Achille Erani, afterwards at Milan with Lamperti and San Giovanni, finally again in America under Madame Rudersdorff. In 1875 she made her first American concert tour,

appeared in London in 1878, and in 1880 made herself known on the Continent.

Tibia (Lat.), really the "shin-bone," a Roman flute. The term was afterwards applied generally to the instrument named *Aulos* (q.v.) by the Greeks.

Tichatschek, Joseph Alois, famous stage-singer, b. July 11, 1807, Oberwerkelsdorf (Bohemia), d. Jan. 18, 1886, Dresden; he was the son of a poor weaver, and received his training at the Gymnasium of the Benedictine Abbey at Braunau. He went in 1827 to Vienna in order to study medicine, but soon accepted an engagement as chorus singer at the Kärntnerthor theatre; and, when his talent as a vocalist became more and more recognised, he received regular instruction in singing from Cicimera. T. won his spurs, as soloist, at Graz, and, after visiting in rapid succession Vienna and Dresden, was engaged at the Court Theatre, Dresden, in 1837, remaining there until he received his pension in 1872. Among the *rôles* created by T., "Tannhäuser" stands foremost; and, together with the principal dramatic tenor parts, his *répertoire* also included a number of lyrical and acting parts. On the occasion of the celebration of his 40 years' artistic activity (1870) he received many marks of distinction.

Tie, a curved line above or below two notes of the same pitch which indicates that they have to be played like one note equal in length to the two. This curved line is also called a *bind*.

Tiefenbrucker. (See DUIFOPRUGCAR.)

Tiehzen, Otto, b. Oct. 13, 1817, Danzig, d. May 15, 1849, Berlin; pupil of the Kgl. Akademie, and esteemed as a composer of songs. He also wrote a *Kyrie* and *Gloria a 6*, a *Christus cantata* for solo and chorus *a 6*, a *Crucifixus (a cappella) a 6*, and a comic opera, *Annette* (1847).

Tierce de Picardie (Fr.), the major third in the concluding chord of a composition in a minor key.

Tiersch, Otto, b. Sept. 1, 1838, Kalbsrieth (near Arnern, Thuringia), d. Nov. 1, 1892, Berlin; pupil of the famous organ-builder and able harmony-teacher J. G. Töpfer at Weimar, afterwards pupil of Heinrich Bellermann, B. A. Marx, and L. Erk at Berlin. He was for several years teacher at the Stern Conservatorium, Berlin, and finally became teacher of singing there. T. was also interesting as theorist; in many of his published writings he attempted to make practical use of the most recent knowledge acquired in the department of acoustics, and in that of the physiology of hearing. (See HELMHOLTZ.) He adopts for his system of harmony the Hauptmann dualism (see HAUPT-

MANN) as basis, but does not logically work it out (see OETTINGEN); so that (like Hauptmann himself) he has not advanced beyond the beginnings of the reform of theoretical harmony, but only moved one step in advance, inasmuch as his exposition of the third relationship of chords and keys is clearer than that of Hauptmann. His writings are: "System und Methode der Harmonielehre" (1868); "Elementarbuch der musikalischen Harmonie und Modulationslehre" (1874); "Kurze praktische Generalbass-, Harmonie- und Modulationslehre" (1876); "Kurzes praktisches Lehrbuch für Kontrapunkt und Nachahmung" (1879), "Allgemeine Musiklehre" (jointly with L. Erk, 1885); "Lehrbuch für Klaviersatz und Akkompagnement" (1881); "Notenfibel" (1882); "Die Unzulänglichkeit der heutigen Musikstudien an den Konservatorien," etc. (1883); and "Rhythmik, Dynamik und Phrasierungslehre" (1886). The very comprehensive articles in Mendel's "Konversationslexikon" on harmony, etc., are also from his pen.

Tiersot, Jean Baptiste Elisée Julien, b. at Bourg (Bresse), where his father was conductor of a male choir (Edm. Pierre Lazare T., b. Aug. 29, 1822, author of "Leçons élémentaires de lecture musicale," 1867); he studied at the Paris Conservatoire (1876), more especially under Savard, Massenet, and César Franck; since 1883 he has been sub-librarian of the Conservatoire. T. is a composer (songs, rhapsodies for orchestra on popular melodies; "Hellas," for solo, chorus, and orchestra) also writer on music ("Histoire de la chanson populaire en France" [1885, Bordin prize], etc.).

Tietjens (really Titiens), Therese Johanne Alexandra, famous dramatic singer (soprano), b. July 17, 1831, Hamburg, of Hungarian parents, d. Oct. 3, 1877, London. She received her musical training at Hamburg, and made her *début* there in 1849 with enormous success. She sang for a short time at Frankfort, and was engaged in 1856 for the Vienna court stage. In 1858 brilliant offers attracted her to London, where she remained until her death, highly esteemed both as a dramatic and oratorio singer. She only once visited Paris (1863), and America (1875).

Tilborghs, Joseph, Flemish theorist and composer, b. Sept. 28, 1830, Nieuwmoer; he studied under Lemmens (organ) and Fétis (composition) at the Brussels Conservatoire, was from 1855-82 music teacher at the normal school at Lierre, and is now professor of the organ at the Royal Conservatoire at Ghent, and professor of counterpoint at the school of music at Antwerp. T. published a suite of excellent organ-pieces, also motets for equal voices, with organ accompaniment.

Tilman, Alfred, Belgian composer, b. Feb. 3, 1848, Brussels, d. there Feb. 20, 1895; pupil

of the Conservatoire. He became known by his great church compositions (Requiem, Te Deum), also cantatas, and 24 fugues $a\ 2$ and 3 , etc.

Tilmant, Théophile Alexander, composer and conductor, b. July 8, 1799, Valenciennes, d. May 7, 1878, Asnières (near Paris). He studied under R. Kreutzer at the Paris Conservatoire, was from 1838–49 second maître de chapelle at the Théâtre Italien, and afterwards principal maître de chapelle at the Opéra Comique. His brother, Alexander T., b. 1808, d. June 13, 1880, Paris, was one of the founders of the Conservatoire concerts, and played in the orchestra, also at the Théâtre Italien, as 'cellist.

Timanoff, Vera, b. Feb. 18, 1855, Ufa (Russia), studied with Nowitzsky there, afterwards at the Petersburg Conservatoire, also with Tausig at Berlin, and with Liszt. She is a distinguished pianist.

Timbre, according to common parlance, same as clang-colour (q.v.); but, in a narrower sense, the clang-colour resulting from the difference of the resonant material, as opposed to that resulting from clang composed of partial tones.

Time-signature. At the commencement of every piece of music a figure placed after the clef gives a clue to the metre, *i.e.* the distances between the points of stress of the motives; also the duration of the beats and their subdivisions. It is explained in detail under "Metre" how the bars should always be framed so that each contains two or three real beats. Instead of that, composers frequently adopt a mode of writing which only contains one single beat between two bar-lines (especially for movements in rapid tempo); or, on the other hand, write in so-called *compound time*, in which each bar really contains two (rarely three) real beats. The T.s. in general use at the present day gives in the form of a fraction the number of divisions of the bar; yet, unfortunately it does not clearly distinguish the real beats. In so far as the subdivisions are binary they are never indicated; but as soon as triple subdivision comes into play, the note values, arranged by threes ($\frac{3}{8}$, $\frac{3}{4}$, $\frac{3}{16}$), appear in the signature and conceal the number of true beats. According to the number of real beats there are, in fact, only two different kinds of time (duple and triple); both, however, can appear in a variety of forms, viz.:—

A. *Duple (even) time*, as $\frac{2}{4}$, $\frac{2}{2}$, $\frac{2}{8}$, $\frac{2}{16}$ (ternary division, indicated by figures, of each beat—the beats being then not = ♩ but ♩.), $\frac{2}{4}$ (beats = ♩.), $\frac{2}{8}$ (beats = ♩.), also condensing every two bars into one as C ($\frac{2}{4}$), $\text{C}\frac{2}{2}$ ($\frac{2}{4}$), $\frac{2}{8}$, $\frac{2}{16}$ ($4\ \text{♩.}$),

rarely $\frac{1}{2}$ ($4\ \text{♩.}$), frequently $\frac{1}{4}$ ($4\ \text{♩.}$); and, on the other hand, with bars of too small compass, so that each bar only contains one beat, as $\frac{2}{8}$ (in which beats or pulses are minims), $\frac{2}{16}$ (in which the beats are ♩.), etc.

B. *Triple (uneven) time*, as $\frac{3}{4}$, $\frac{3}{8}$, $\frac{3}{16}$, $\frac{3}{2}$, $\frac{3}{4}$ (♩.), $\frac{3}{8}$ ($3\ \text{♩.}$), $\frac{3}{16}$ ($3\ \text{♩.}$), or also with condensation of two bars into one as $\frac{3}{4}$, $\frac{3}{8}$, $\frac{3}{16}$, $\frac{3}{2}$ ($6\ \text{♩.}$), $\frac{3}{4}$ ($6\ \text{♩.}$); and, on the other hand, with too small time measure, *i.e.* in each bar only one beat, as $\frac{3}{8}$ (in which beats are minims), $\frac{3}{16}$ (with ♩. as beat), $\frac{3}{4}$ (with ♩. as beat), $\frac{3}{2}$ (with ♩. as beat); in all the last four cases as so-called *Ritmo di tre battute* (a real bar actually consisting of three bars).

An important variety of triple time, really the original form (*see* METRE, ART OF), is the one with unequal beats, viz.:—

$\frac{3}{4}$ as $\text{♩} | \text{♩.}$ *i.e.* alternately a crotchet (up-beat) and a minim (point of stress) as beats; and thus

$\frac{3}{8}$ as $\text{♩} | \text{♩.}$

$\frac{3}{16}$ as $\text{♩} | \text{♩.}$ etc.

Composers would do well to indicate at the beginning of a piece which are the true beats; instead of this one finds a metronome mark such as $\text{♩.} = 40$, a value which cannot safely be controlled by feeling (instead of $\text{♩.} = 120$, or, still better, $\text{♩} | \text{♩.}$ without signature). To write $\text{♩.} = 160$ in place of $\text{♩.} = 80$ is fundamentally false, for it leads one to ignore the allabreve character.

The oldest mensurable music (up to the end of the 13th century) had no time-signatures; from the 12th to the 13th century only one kind of time (triple) was known. The older Troubadours certainly sang in even measures, but their system of notation was imperfect, and very free. Only when, in the 14th century, church music had been powerfully developed, and had shaken off the fetters of dogmatic theory, was respect shown to equal, as well as triple measure; and, as the bar-line was still unknown, time-signatures became necessary. The oldest time-signs are those expressing the perfect (ternary) or imperfect (binary) value of the Breve:—

O *Tempus perfectum* ($\text{C} = 3\ \text{♩.}$),

C *Tempus imperfectum* ($\text{C} = 2\ \text{♩.}$).

From the 14th to the 16th century the Breve had about the value which now the whole-bar note (semibreve) has, and which the Long had from the 12th to the 13th century, *i.e.* it represented a bar in the modern sense. In the transcription of old notations the value of notes should, therefore, be taken in diminution; without this the difficulty of perceiving the rhythmic relationships is considerably increased.

Thus *Tempus perfectum*, if we take the half of the tone values, answered to our $\frac{3}{2}$ time, *Tempus imperfectum* to $\frac{3}{4}$ time. To these was soon added the mensural determination for the binary and ternary value of the semibreve; and the latter was, indeed, fixed by a point in the time-sign: \odot *Prolatio major* ($\odot = 3 \square$) in perfect time, \circ *Prolatio major* ($\circ = 3 \bullet$) in imperfect time. Then the absence of the dot always indicated binary division of the semibreve (*Prolatio minor*). Thus \odot was our $\frac{3}{2}$ time; \circ , $\frac{3}{4}$ time; \bigcirc , $\frac{3}{2}$ time; and \bigcirc , $\frac{3}{4}$ time. Each of these four time signs could have a stroke through it (see DIMINUTION), whereby a *tempo* twice as fast was indicated. The sign for *Tempus imperfectum* with the stroke through it is still used, in the same sense, at the present day, \bigcirc (allabreve time). Of similar meaning was \bigcirc (*Hemicirculus inversus*). For smaller values than the semibreve smaller mensural determinations were not necessary, as they were always binary. On the other hand, time-signatures were established by the theorists, also for the value of the Long, and even for the Maxima, although they never attained to any degree of practical importance. (See MODE.) Concerning the many time-signatures fixed by the theorists, of which only those named above came into general use, cf. Riemann, "Studien zur Geschichte der Notenschrift," p. 254, etc. (History of time-signatures). Fractions ($\frac{3}{2}$, $\frac{3}{4}$, $\frac{3}{8}$) have nothing in common with our time-signatures of to-day. (Cf. PROPORTION.)

Timpani (Ital.). (See DRUM.)

Tin, as material for organ pipes. (See ORGAN METAL.)

Tinctoris, Johannes (really Jean de Vaerwere), Belgian writer on music and composer, b. about 1446, Poperinghe, d. 1511, Nivelles. About 1475 he was maestro at the court of Ferdinand of Arragon at Naples, who sent him in 1487 across the Alps (to France and the Netherlands) to seek after singers for his chapel; but from this journey he never returned. He finally became caupon at Nivelles, was one of the most learned musicians of his time, and wrote, among other things, the oldest existing musical dictionary: "Terminorum musicae diffinitorium" (at Naples without date, but, as Fétis conclusively shows, printed about 1475). His other works remained in manuscript: "Expositio manus secundum magistrum Johannem T.," "Liber de natura et proprietate tonorum" (written in 1476); "De notis ac pausis;" "De regulari valore notarum;" "Liber imperfectionum notarum;" "Tractatus alterationum;" "Super punctis musicalibus;" "Liber de arte contrapuncti" (reprinted, Coussemaker, "Script." IV., written in 1477, T.'s most important work); "Proportionale musices," and "Complexus effectuum musices." Also a mass

("L'homme armé") and some chansons of T.'s exist in manuscript (Rome, Dijon); other chansons are in Petrucci's "Odhecaton" (1501), and a Lamentation in his "Lamentationes" of 1506.

Tinel, Edgar, pianist and composer, b. March 27, 1854, Sinay (Belgium); from 1863 he studied under Brassin, Gevaert, and Kufferath at the Brussels Conservatoire, obtained in 1877 the *Prix de Rome* for composition with a cantata, *Klokke Roeland* (printed as Op. 17). In 1882 he became director of the Institution for Church Music at Malines as successor to Lemmens, in 1889 inspector of the music schools under state subvention. Since then T. has made a name with entr'actes to Corneille's "Polyeucte," "Kolledbloemen," for tenor, chorus, and orchestra; "De drie ridders," for baritone, chorus, and orchestra; *Te Deum* (Op. 26); oratorio, *Franciscus*, Op. 36 (important; performed at the Cardiff Festival, 1895); motets, "Marienlieder," pf. pieces, etc. He has also published "Le chant grégorien, théorie sommaire de son exécution" (1890).

Tintinnabula (Lat., also *Nolæ*), the name of small bells, tuned to the notes of a scale, which the monks cast in various sizes, from the 10th to the 12th century. They appear to have introduced them into organs (as "Glockenspiel"), for they were called "organica T."

Tiorba (Ital.). (See THEORBO.)

Tiraboschi, Geronimo, b. Dec. 28, 1731, Bergamo, d. June 3, 1784, as librarian of the Ducal Library at Modena. He wrote a comprehensive history of Italian literature (1772-82, 13 vols.; 2nd ed. 1805-12, 20 vols.), with notes on musical history; the 6th vol. of his "Biblioteca Modenese" contains an "Appendice de professori di musica" (1786).

Tirade (Fr.; Ital. *Tirata*), running passage, especially for singing.

Tirasse (Fr.), pedal-coupler.

Tiré (Fr.), down stroke. (See BOWING.)

Tirolienne. (See TYROLIENNE.)

Tischer, Johann Nikolaus, castle and town organist at Schmalkalden, 1731 up to 1766; he was a gifted composer of his time, and published several pf. suites, divertissements, concertos, etc.; also compositions for the flute, oboe, horn, etc. Sacred works, violin concertos and sonatas, etc., remained in manuscript.

Titl, Anton Emil, b. Oct. 5, 1809, Pernstein (Moravia), d. Jan. 21, 1882, Vienna, capellmeister at the Burg Theatre, Vienna; a well-known composer (operas, *Die Burgfrau*, Brünn, 1832; *Das Wolkenkind*, Vienna, 1845).

Titoff, Nicolai Alexejewitsch, b. April

28, 1801, Petersburg, d. there Jan. 6, 1876; favourite Russian song composer.

Toccata (Ital., from *toccare*; Fr. *toucher*, "to touch") is one of the oldest names for pieces for keyed instruments (clavier, organ), and originally meant the same as *Sonata*, *Fantasia*, *Ricercar*, etc. T., according to M. Prætorius' definition (1620), originally meant a free prelude, introduction. In the oldest remaining examples (by A. Gabrieli and C. Merulo) the T. begins with some full harmonies, but gradually running passage work is more and more introduced, interspersed with small fugal periods. The modern T. is likewise entirely a piece for keyed instruments, and its only characteristic marks are that it moves along throughout in notes of short value and that it is written in a fair number of parts. (Cf. Bach's organ Toccatas, Czerny's and Schumann's pianoforte Toccatas, etc.)

Toccato in the old art of trumpeting meant the bass part of a trumpet piece (really kettle-drum!). (See CLARINO.)

Todi, Luiza Rosa de Aguiar (her real name, according to Vasconcellos' dictionary, which contains so many details concerning this very celebrated singer; neither Mendel-Reissmann, nor Pougin, nor Grove has consulted this work), b. Jan. 9, 1753, Setubal, Portugal (her husband, Francisco Saverio T., was a violinist, of Italian descent). She appeared already in 1768 as Dorine in Molière's *Tartuffe* at the Bairro Alto Theatre at Lisbon with great success, but studied under David Perez up to 1772 in order to become a vocalist. She appeared in London in 1772 and 1777, but not with decided success. In the latter year, however, she obtained her first complete triumph in Paesio's *Olympiade* at Madrid, and from 1778-79 and 1781-82 she was received with enthusiasm at the *Concerts Spirituels* at Paris. She also sang at Berlin in 1781, but did not please Friedrich II., who was no friend of Italian music, gave concerts in South Germany, sang at Vienna, at the court and at the opera, and in 1781 accepted an engagement at Berlin, from which, however, she soon withdrew. In 1783 she entered into rivalry with La Mara at Paris, and the excited public formed itself into parties, the Todists and the Maratists. T. took Petersburg by storm in 1784, and received an engagement; thus there only remained Berlin which refused to her unqualified recognition; but she was in a measure compensated when, in 1786, Friedrich Wilhelm II. engaged her at a high salary with many concessions. She now sang up to 1789 at Berlin and Petersburg, went in 1789 once more to Paris, but was soon frightened away by the first disturbances of the Revolution; and as in this year her Berlin contract expired, and her demand of a salary of 6,000 Thalers was refused, she returned *via* Italy to her native land. She died at the age of 80, having been blind for many

years, Oct. 1, 1833, at Lisbon. Vasconcellos also published a separate biography of T.

Todini, Michele, b. about 1625, Saluzzo (Piedmont), performer on the musette (bagpipe), and maker of instruments, some of them with highly-complicated mechanism (one was a combination of organ, clavier, lute, and strings), described both by A. Kirchner, in his "Phonurgia," and by T. himself in his "Dichiarazione della galleria armonica" (1676). T. lived in Rome.

Tofte, Waldemar, b. Oct. 21, 1832, Copenhagen, pupil of Joachim and Spohr, solo violinist in the royal orchestra and teacher of the violin at the Conservatorium, Copenhagen; an excellent violinist.

Tolbecque, Jean Baptiste Joseph, famous composer of quadrilles, b. April 17, 1797, Hanzinne (Belgium), d. Oct. 23, 1869, Paris. He studied under R. Kreutzer and Reicha at the Conservatoire, was for a short time violinist at the Italian Opera, but soon turned to the profitable *genre* of dance music, and, until the appearance of Musard, was the most favourite ball conductor in Paris; at the same time he played the violin for many years in the Conservatoire orchestra. Other musical representatives of the same family are his brothers:—Isidore Joseph, b. April 17, 1794, d. May 10, 1871, Vichy, also a composer of dance music.—Auguste Joseph, b. Feb. 28, 1801, d. May 27, 1869, Paris; an able violinist who played in the orchestra of the Grand Opéra and the concerts of the Conservatoire, afterwards at Her Majesty's Theatre, London.—Charles Joseph, b. May 27, 1806, d. Dec. 29, 1833, Paris (violinist, conductor at the Théâtre des Variétés); also a son of Auguste Joseph—Auguste, b. March 30, 1830, Paris; excellent 'cellist, pupil of Vaslin at the Conservatoire, from 1865-71 teacher of the 'cello at the Marseilles Conservatoire, afterwards at Paris, 'cellist at the Conservatoire concerts; and his son—Jean, b. Oct. 7, 1857, likewise a gifted 'cellist.

Tomaschek (Tomaček), Johann Wenzel, distinguished organist, famous teacher and composer, b. April 17, 1774, Skutsch, Bohemia, d. April 3, 1850, Prague. He received his first instruction in singing and violin-playing from the *Regens chori* Wolf at Chrudin, attended the school of the Iglau monastery, also (1790) the University of Prague in order to study law, but he then turned entirely to music, and, after he had received a thorough theoretical training, became one of the most noted teachers of music in Prague. T. devoted particular attention to fantasia in strict style. Droyschok, Kittel, Schulhoff, Kuhe were his pupils. T. wrote many sacred and secular vocal works, also an opera, *Seraphine* (1811). There appeared likewise in print a mass for orchestra, hymns, cantatas, songs (in Bohemian and German), a

symphony, a pf. concerto, a quartet for strings, a trio, 5 pf. sonatas and other works for pf. Among various works, a "Harmonielehre" and 2 Requiems remain in manuscript.

Tomasini, Luigi, distinguished violinist, b. 1741, Pesaro, d. April 25, 1808, Esterházy, leader, and chamber musical director to Prince Esterházy under J. Haydn, of whom he was an intimate friend. He published violin concertos, quartets, concertante duets; he also wrote for Prince Anton 24 divertissements for baritone, violin and 'cello, etc. Of his children, two daughters sang in church and opera at Eisenstadt, and two sons were able violinists.

Tomeoni, Florido, b. 1757, Lucca, trained in Naples. From 1783 he lived as teacher of music at Paris, where he died, August, 1820. He published: "Méthode qui apprend la connaissance de l'harmonie et la pratique de l'accompagnement selon les principes de l'école de Naples" (1798), and "Théorie de la musique vocale" (1799); also some vocal pieces. His brother Pellegrino, b. 1759, teacher of music at Florence, published "Regole pratiche per accompagnare il basso continuo" (1795).

Tommasi, Giuseppe Maria, Cardinal, gifted philologist and connoisseur of the history of church music, b. Sept. 14, 1649, son of a Prince of Parma, at Castle Alicate, Sicily, d. Jan. 1, 1713, Rome. He published: "Codices sacramentorum nongentis annis vetustiores . . . Missale Gothicum sive Gallicanum vetus, Missale Francorum, Missale Gallicanum vetus" (1680); "Psalterium juxta editionem Romanam et Gallicanam" (1683); "Responsorialia et Antiphonaria Romanæ ecclesiæ a. S. Gregorio M. disposita cum appendice monumentorum veterum" (1686); "Antiqui libri missarum Romanæ ecclesiæ, i.e. Antiphonarium S. Gregorii" (1691); "Officium dominicæ passionis feriæ VI. parascève majoris hebdomadæ secundum ritum Græcorum" (1693); "Psalterium cum canticis et versibus primo more distinctum" (1697); also in a complete edition (1748-54, 7 vols.).

Tonal Fugue. (See FUGUE.)

Tonality, the modern conception (amplified by Fétis) of the key, which passes far beyond the limits of harmony as represented by the scale. T. expresses the particular meaning which chords receive through their relationship to one principal clang, that of the *tonic*. The older system of harmony, essentially based on the scale, regarded the tonic as its beginning and ending note, whereas the modern system, in which chords are considered as clangs, establishes one clang (a major or a minor chord) as tonic. Thus *C major* is the ruling tonality when the harmonies can be regarded as related to the *C major* chord. For instance, the succession

in the sense of one key is not possible according to the older system of harmony, although no one could deny that the ear receives it as such. In *C major* T. it consists of: tonic—contra third clang—tonic—plain third clang—tonic, i.e. only related clangs are opposed to that of the tonic. (See CLANG SUCCESSION.)

Tone, (1) a musical sound or clang (q.v.); only clangs with regular vibrations are tones. (2), the interval consisting of two semitones.

Tone, Determination of, that is, the mathematical determination of pitch relationships, the establishment of the relative vibration numbers or string lengths for the various musical intervals. The sound-wave lengths or vibration ratio is the exact mathematical expression of the character of the relationship between two notes. For example, *c* : *e* as 4 : 5 (cf. QUINT-TONES) = a (pure) major third, whereas *c* : *e* as 64 : 81 is the ratio of the fourth fifth ($[2 : 3]^4$, octave transposition being ignored). The following table of the most important conceivable tone values within the compass of an octave, starts from *c*, and from it the acoustic values of the other notes are determined. Against all values are given the determinations, (1) according to the degree of relationship (each tone is expressed as result of step of fifth [quint], third, or octave [Q, T, O] from *c*; cf. INTERVAL); (2) in vulgar fractions which show the ratios of the string lengths, compared with *c* as 1 (for example, *g* = $\frac{3}{4}$ *c*); (3) in decimal fractions which give the relative vibration figure; and, finally, (4) in *logarithms* (q.v.) on basis 2, which change the proportions into differences, showing at once which interval is greater, which smaller. Whether 16 : 15 or 2,187 : 2,048 is the greater interval can only be shown after elaborate calculation; the logarithms, on the other hand, express directly the differences of pitch. The table, in addition, contains (likewise in logarithms on basis 2) the exact values of the system of 53 degrees (cf. TEMPERAMENT); also, for convenience of comparison, those of the 12 degree system of equal temperament: finally, for the lovers of a chromatic system of tones, all determinations in logarithms on basis $\sqrt[12]{2}$ which give whole numbers for the system of 12 semitones ($1^{00000} = \sqrt[12]{2}$ octave). The figures in fatter type give the values of the 12 degree stave of equal temperament, which as middle values are of excellent service. The horizontal strokes above or below the alphabetical names of the tones enable one more quickly to perceive the harmonic relation between *c* and the tone in question, likewise between the various tones.

SYNOPSIS

OF THE MOST IMPORTANT DETERMINATIONS OF TONE.

Tone Relationship, a modern conception, which refers to the connection of tones with clangs. Tones are related to one another in the first degree, directly related, when they belong to one and the same clang (q.v.). To *c* are related in the first degree *g, f, e, a♭, a*, and *e♭*; for *c*: *g* belongs to the C major chord or C minor chord; *c*: *f* to the F major chord or F minor chord; *c*: *e* to the C major chord or A minor chord; *c*: *a♭* to the A♭ major chord or F minor chord; *c*: *a* to the F major chord or A minor chord; and *c*: *e♭* to the A♭ major chord or C minor chord. *Tones related to one another in the first degree are consonant.* (Cf. CONSONANCE.) Tones which do not belong to the same clang, which are not, therefore, directly related to one another, but only through the mediation of one of the first degree, are related to each other in the second degree. It is idle to discuss relationship of the third, fourth, or still more distant degrees, since all tones not directly related are dissonant one against the other. The varied quality of dissonances depends entirely on the kind of mediation necessary for the understanding of the interval; this mediation, however, is not effected by tones, but by clangs, so that *clang relationship* comes into question. Tones which belong to clangs related in the first degree are reciprocally easier to understand than those which must be referred to clangs related in the second degree. The following are clangs related to one another in the first degree:—(1) Those of like kind (both major or minor) whose fundamental tones are related to each other in the first degree; (2) those of dissimilar kind, of which one is the *change-clang* (Wechselklang) of a chord tone of the other, i.e. for the major chord, the minor (under) clang of the principal tone, quint tone, and third tone; for the minor chord, the major

clang of the principal tone, quint tone, and third tone—or generally: principal *change-clangs* (upper- and under-clang of the same tone), fifth change-clangs (Quintwechselklänge) and third change-clangs (Terzwechselklänge); to these must be added the leading-tone-change-clangs (Leittonwechselklänge). The following are thus related in the first degree to the C major chord: the G, F, E, A♭, A, E♭ major, and the F, C, A, E minor, chords; to the A minor chord: the D, E, F, C♯, C, F♯ minor, and the E, A, C, F major, chords. All others are not directly intelligible, but need mediation or additional explanation. The tone relationship depends on the relationship of the tonics (principal clangs); thus all keys are related in the first degree to C major (also A minor) whose tonic is one of the clangs which are here represented as related in the first degree to C major chord (also A minor chord). On the other hand, there are related in the second degree to the key of C major, for instance, D, B♭, B, D♭ majors, D, B minors, and all standing yet further; likewise to the key of A minor, G, B, B♭, G♯ minors, G, B♭ majors, etc. In general it is to be noted that the minor relationship is much less utilised by composers than the major one, which is no doubt partly a result of the imperfect theoretical knowledge of the nature of the minor key in the older systems of harmony. M. Hauptmann denied such a connection of the minor keys one with the other as belongs to the major keys. On the different character of the keys dependent on the relationship to the Fundamental Scale, see article CHARACTER OF KEYS.

Tongue-pipes (Reed-pipes) are wind instruments in which the sound is produced by regular alternate opening and closing of the wind-passage by means of a vibrating tongue.

(*Cf.* WIND INSTRUMENTS.) With regard to the various kinds of tongues, *see* REED. The tongue-stops (reed-stops) of the organ, not counting the few delicate free-reed stops (*Æoline*, *Phys-harmonica*), do not essentially differ. In proportion as the tongues are stronger, more capable of resistance, the more need is there for a stronger supply of wind to make the pipe speak, and the stronger is the resultant tone. Again, the strength of the tone is increased by outspreading (funnel-shaped) tubes; on the other hand, by pipes narrowed at the top (half-stopped), it is diminished. Thus we have the following stops all more or less related to one another: those of the trombone species (*Serpent*, *Bombarde*, *Tuba*, *Ophicleide*), the trumpet (*Clarino*), bassoon (*Dulcian*, *Bassoon*), *Oboe*, *Clarinet*, *Schalmei*, *Cornet* (*Zink*), *Bassethorn*, *Horn*, etc. Obsolete reed stops are the *Sordun*, *Rackett*, *Bärpfeife*, *Bassanelli*; likewise all names compounded with *Regal*. (*Cf.* ORGAN and articles referring to the various stops.)

Tonic is generally the note which gives the name to the key, *i.e.* in *C major* *c*, in *G major* *g*, etc. In the modern system of harmony, by *T.* is also understood the triad of the *T.*, *i.e.* in *C major* the chord of *C major*, in *C minor* the chord of *C minor*, etc. (*See* TONALITY.)

Tonic Sol-fa Association, a vocal society widely spread in England, and counting hundreds of thousands of members. Its aim is the study of a *cappella* singing with pure intonation, and it makes use of a special notation with the solmisation syllables: *Doh, Ray, Me, Fah, Soh, Lah, Te*. The soul of the undertaking for many years was the Nonconformist minister J. Curwen (q.v.), who developed the method invented by Miss Elizabeth Glover, of Norwich, published instruction books, and also edited the paper, *The Tonic Sol-fa Reporter*. The speciality of the Tonic Sol-fa method consists in this, that the solmisation syllables do not stand for fixed notes, but always for fixed degrees of the scale. For example, *Ray*, for the second, *i.e.* in *C major* *d*, in *D major* *e*, etc.; it is, therefore, identical with the system of *figures* which, for a time, was in vogue in Germany for the teaching of singing in the public schools. (*Cf.* NATORP.) The passing to another key is effected by changing the meaning of a note; for example, *e* is changed from *Me* to *Lah* (the two notes written one smaller than the other, *m*¹) when a passage is to be made through *f* to *g*, *i.e.* when a modulation is made from *C major* to *G major*. It is clear that the Tonic Sol-fa method is a revival of the old solmisation, only with the exception of the seventh of the key, which, as is known, was excluded in the solmisation named after Guido of Arezzo. For music of free formation the Tonic Sol-fa method is as little sufficient as was, for a similar reason, the antiquated hexachord solmisation at the beginning of last

century; but it fits well with the non-tempered principle of Helmholtz, and stands, therefore, in direct opposition to the endeavours of the modern "chromatic" (*see* VINCENT) systems based on the principle of equal temperament, and in which only twelve different kinds of pitch-values are recognised within the octave. J. Hullah invented suitable names for the intermediate chromatic tones; for *f* he made the syllable brighter, for *p* duller, thus: *a* (*Fa, la*) with sharp becomes *e* (*Fe, le*), *e* (*Re*) becomes *i*, *o* (*Do, sol*) becomes *a* (*Da, sal*), while *i* does not need brightening, as from *Mi* or *Si* upwards there is only a semitone step. By reversed process, where chromatic lowering enters, *i* becomes *e*; *e*, *a*; *a*, *o*; *o*, *u* (*Sol* \bar{p} = *Sul*).

Tonus (Gk.), (1) signifies whole tone, major second.—(2) Also key; especially in connection with the Greek scales or the Church Modes. It is synonymous in meaning with *Modus*; for example, *T. lydius*, the Lydian key of the Greeks, or of the Middle Ages. (*Cf.* GREEK MUSIC and CHURCH MODES.)

Tonwechselfmaschine. (*See* VALVE.)

Töpfer, Johann Gottlob, famous organist and writer on organ-building, b. Dec. 4, 1791, Niederrossla (Thuringia), d. June 8, 1870, Weimar. He first received scanty musical instruction from the local cantor Schlömilch, and then obtained a subsidy which enabled him to study more thoroughly under Destouches, Riemann, and A. E. Müller at Weimar. He attended the Gymnasium and teachers' institution there, in 1817 became teacher of music at the institution, and in 1830 was appointed town organist at Weimar. T.'s writings, from which many things have been extracted and circulated concerning the organ, are: "Die Orgelbaukunst" (1833); "Die Orgel; Zweck und Beschaffenheit ihrer Teile" (1843); "Die Scheiblersche Stimmethode" (1842); "Theoretisch-praktische Organistenschule" (1845; method of harmony and composition for organ); "Lehrbuch der Orgelbaukunst" (1856, 4 vols.; 2nd ed. by Max Allihn, 1888). T. was for many years a contributor to the *Urania*. (*See* KÖRNER, 2.) His practical musical works are: "Allgemeines und vollständiges Choralbuch" (a 4 with interludes), a concert piece for organ, a grand organ sonata, cantata (*Die Orgelweihe*), many organ pieces (preludes, interludes, etc.), a sonata and variations for flute and pf., a sonata for pf., a trio for pf., violin, and 'cello, etc.

Torelli, Giuseppe, famous violinist, the creator of the *Concerto grosso*, b. Verona; he was appointed in 1685 at the San Petronio church, Bologna, became in 1703 leader of the band of the Margrave at Ansbach, where he died in 1708. T.'s principal works are the "Concerti grossi con una pastorale per il Santissimo Natale," Op. 8 (1709), recently published in Jensen's "Classische Violin-Musik"; these are written for two concertante violins, two ripieni violins,

viola, and continuo. He also published: Op. 1, "Balletti da camera a 3 violini e B.C.;" Op. 2, "Concerto da camera a due violini e basso" (1686); Op. 3, "Sinfonie a 2-4 istromenti" (1687); Op. 4, "Concertino per camera a violino e violoncello;" Op. 5, "6 sinfonie a 3. e 6 concerti a 4" (1692); Op. 6, "Concerti musicali a 4" (with organ); Op. 7, "Capricci musicali per camera a violino e viola overro arciliuto." (Compare CORELLI.)

Torrance, Rev. George William, b. 1835, Rathmines (near Dublin); he was at first organist of various churches in Dublin, studied still in 1856 at the Leipzig Conservatorium, and from 1859 at Dublin University; in 1869 he emigrated to Australia, where he holds a high position in Melbourne. In 1879 he obtained the degree of Mus.Doc. from Dublin University. T. has written the oratorios *Abraham* (1855), *The Captivity* (1864), and *The Revelation* (1882); also an opera, *William of Normandy* (1859), etc.

Torri, Pietro, in 1689 was chamber organist at Munich, then at the court of Bayreuth, in 1703 chamber music director at Munich; in 1715 capellmeister and Electoral Councillor, at the same time capellmeister (doubtless only titular) at Cologne and Brussels, in 1732 acting capellmeister at Munich, where he died, July 6, 1737. T. wrote for Munich, between 1690 and 1737, 26 operas; for Brussels, in 1706, an oratorio (*Les vanités du monde*); he was esteemed more especially for his chamber duets.

Tösch, (1) Carlo Giuseppe, really Toesca della Castella-Monte, violinist and composer, b. 1724, Romagna; in 1756 violinist in the Mannheim band, in 1768 leader. He went in 1778 with the court to Munich, where he died, April 12, 1788. T. composed several ballets, 6 symphonies for two violins, two oboes, two horns; 1 for two violins, two oboes, two horns, tenor, and 'cello; 24 quartets for flute and strings, 3 quintets for flute and strings, and 3 sextets for flute, oboe, bassoon, and stringed trio.

(2) Johann Baptist, son of the former, also an excellent violinist; he (1788) succeeded his father, whom he surpassed as composer; he died May 1, 1800, Munich. The symphonies of T. were highly esteemed in Paris before those of Haydn became known. He published at Paris: 10 stringed quartets, 6 trios for two violins and 'cello, and 18 symphonies (various instrumentation, but without trumpets, clarinets, and double-bass).

Tosi, Pier Francesco, famous singer (castrato) and teacher of singing, b. 1647, Bologna, d. 1727, London; son of the opera and vocal composer Giuseppe Felice T. (1630 organist of San Petronio, Bologna; and 1683 maestro di cappella at Ferrara Cathedral). After singing at Dresden and on various other Italian stages in Germany, T. settled in London 1692, where, after the loss of his voice, he devoted

himself to teaching. His famous work, "Opinioni de' cantori antichi e moderni o sieno osservazioni sopra il canto figurato" (1723), was translated into English by Galliard ("Observations on the Florid Song," etc., 1742), and into German by Agricola ("Anleitung zur Singkunst," 1757).

Tosti, Francesco Paolo, b. April 7, 1827, at Ortona (Abruzzi); he was a pupil of the Royal College, St. Pietro a Majella, Naples, was soon appointed pupil teacher (maestrino) by Mercadante, but for reasons of health gave up this position in 1869. After a severe illness, he went to Rome, where Sgambati proved a friend to him and helped him to appear in public as a concert singer, when he was at once appointed teacher of singing at the court. In 1875 he removed to London, and in 1880 became teacher of singing to the Royal Family. T. has written many Italian and English songs, which enjoy great popularity.

Tosto (Ital.), quick, rapid.

Tottmann, Albert Karl, b. July 31, 1837, Zittau; he studied at the Leipzig Conservatorium, entered as violinist into the Gewandhaus orchestra, and in 1868 became musical director at the old theatre, which post he resigned in 1870. T. has given many lectures on musico-esthetic subjects, and has published the following treatises: "Kritisches Repertorium der Violinen- und Bratschenlitteratur," "Der Schulgesang und seine Bedeutung für die Verstandes- und Herzensbildung der Jugend," as well as musical articles for newspapers, dictionaries, etc. He has also published some vocal works (hymns, sacred and secular choruses, a melodrama, *Dornröschen*, etc.) and pf. pieces.

Touch (Ger. *Anschlag*). This term is used to express the manner in which keys are pressed down on the pianoforte and organ. An instrument is described as having a heavy or a light T., i.e. one requiring much or little expenditure of strength. Again, one speaks of the T. of a pianoforte-player; he is said to have a good, soft, powerful, or a hard, jerky, weak T.; any one of these according as he understands how to handle the instrument, or does so according to his physical nature. Finally, there are various kinds of touch, both for pianoforte and organ, by which the articulation prescribed by the composer is effected. The principal kinds are the *Legato* T., the *Staccato* T.; the former binds the notes thoroughly together, so that while the second key is being pressed down the first is raised; the latter sharply divides them, i.e. the first key is left before the second is touched. There are subordinate kinds: the *Legatissimo* T., in which notes are held on after others have been touched, so far as they are harmonically related to the same; the *Non-legato* T., the quietest kind of *Staccato*, when the note is held as long as possible, and yet always clearly separated from the next one (it is indicated by

....., i.e. the combination of the staccato dot with the legato slur). The real *Staccato* is generally taught in three different ways: (1) with perfectly quiet arm and hand, and only a quick raising of the finger from the key (*leggiero*), a mode of touch specially employed in rapid scale passages; (2) with a light, quick movement of the wrist for each note; and (3) with light movement of the elbow, i.e. raising of the whole forearm. As a matter of fact, this last distinction is only a theoretical one. The practical genuine staccato, which alone is of value, proceeds from the upper arm, and allows rapid movement of the hand with perfectly free wrist action. Cf. Riemann's "Catechism of Pianoforte Playing" (Augener) and "Praktische Anleitung zum Studiren der Technischen Uebungen." Passages consisting of groups each of two notes with legato tie, demand a special kind of touch:

In such cases the hand and arm must be quietly raised after every second note, or rather the second (lighter) note must be touched during the upward movement of the hand. Again, ornaments (Pralltriller, Mordent, *Anschlag*, Turn), which are counted in the value of a note, are often produced with greater ease and smoothness if preceded by a slight raising of the hand, which adds considerably to the elasticity. (Cf. ATTACCA-ANSATZ.)

Tourjée, Eben, b. June 1, 1834, Warwick (Rhode Island). In 1867 he established "The New England Conservatory of Music," Boston, and made himself known by his introduction of class teaching in music.

Tours, Berthold, b. Dec. 17, 1838, Rotterdam; he studied under Verhulst, also at Brussels and Leipzig. In 1878 he became musical adviser to Messrs. Novello & Co. T. has written much sacred music, pieces for pianoforte and other instruments, and also a "Primer of the Violin."

Tourte, François, famous maker of violin bows, b. 1747, Paris, d. there April, 1835. He improved violin bows by introducing a metal plate at the nut to fix the hair, and by using exclusively Pernambuco wood cut with the grain.

Toy Symphony, the English name of Haydn's *Kinder-Sinfonie* (No. 62 in Pohl's catalogue in his "J. Haydn," Vol. 2, Section A); the original parts are entitled "Sinfonia Berchtoldsgadensis." Another T. S. which enjoys almost equal reputation is the one by Anton Romberg. Compositions of a similar character have been written by C. Reinecke, Lachner, and Gurlitt.

Tp., abbrev. for *Timpani*.

Tr., abbrev. for *Trumpet*.

Trackers (Ger. *Abstrakten*; Fr. *Abrégés*), part of the mechanism of an organ, which draws down, whereas the stickers work by pressure.

Tractus (Lat., "drawn," i.e. slow, restrained melody). The term applied to a melody in the Roman Catholic Church, which is used during Lent, and other fasts instead of the Alleluia (originally sung in a joyful manner).

Traetta, Tommaso, famous composer of the Neapolitan School, b. March 30, 1727, Bitonto (Naples), d. April 6, 1779, Venice. He was for ten years (1738-48) a pupil of Durante at the Conservatorio di Loreto. His first dramatic attempt, *Il Farnace* (San Carlo Theatre, 1751), proved an instantaneous success, and T. found his hands fully occupied in satisfying the requests of the best Italian theatres for new operas. In 1758 his excessive productiveness was somewhat moderated, when he accepted the posts of court maestro and music teacher to the princesses at Parma. His opera *Ippolito ed Aricia*, performed at Parma in 1765, on the occasion of the wedding of a princess with the Prince of Asturias, resulted in his receiving a pension from the King of Spain. The Duke of Parma died in that year, and T. undertook the direction of the so-called Ospedaletto (Conservatorio for girls) at Venice; he, however, resigned this post in 1768 to Sacchini, for he was called to Petersburg by Catherine II. as court composer in place of Galuppi. He remained there until 1786, and then came to London. He was received in a cool manner, and returned to Italy. His residence in Petersburg had greatly affected his health; his strength gradually collapsed, and as a composer he no longer achieved success as of yore. T. possessed a natural gift for dramatic effect, which alone can ensure success to opera composers. By his energy, truthfulness of expression, and powerful harmonies, he distinguished himself from the composers of his, and of a later day. The catalogue of his operas gives 37 numbers, but he also wrote some sacred works (Stabat, Passion of St. John), and for his pupils in the Ospedaletto an oratorio for female voices, *Rex Salomon arcam adoraturus in templo*.

Trampeli, brothers, Johann Paul, Christian Wilhelm, and Johann Gottlob, famous German organ-builders at the end of the 18th century at Adorf (Saxony).

Tranquillo (Ital.), quiet.

Transcription (Lat.), an arrangement of a composition other than the original one. The term is often used in the sense of Paraphrase, Fantasia (on opera melodies, etc.).

Transposing Instruments, the name given to wind instruments for which the key which answers to their natural scale (upper-tone series) is noted as c major. Horns, trumpets, cornets, clarinets, also English horn, basset horn, besides the modern brass instruments

(bugle horns, tubas, etc.), are T.I. On a D horn

clarinet the same C" as

therefore, properly to read the transposing instruments in a score as they sound, one simply reads *all notes as interval signs* from C as prime; for example, F#, as an augmented 4th; this note then for an instrument in B \flat becomes the augmented 4th from B \flat (= e); for one in A \flat , the augmented 4th from A \flat (= d), etc. All T.I. are equally easy to read. The re-tuning of one or all the strings of a violin (for example, a half-tone higher, *cf.* SCORDATURA), adopted by certain violin virtuosos, changes the violin in whole or in part into a transposing instrument (so that, for example, the key of C \sharp major is played as C major). The notation in that case best follows the fingering, with indication of the alteration in tuning.

Transposition, changing a piece from one key to another. T. presupposes either high musical gifts or continual practice. To become thoroughly possessed of a piece (*i.e.* to know it by heart), and then at once to reproduce it in any desired key, is the most ideal form of T.; and nearly all youthful prodigies have this power. To transpose by writing is a task for the most part mechanical. More difficult is T. at sight on the piano or other instruments; the most essential points in it are:—in transposing a chromatic semitone, only accidentals are changed; a \flat key is changed into a \sharp key, and thus every \sharp becomes a \flat , and an accidental \flat either becomes a \sharp or remains a \flat . If a \sharp key is turned into a \flat key, then, on the contrary, every \sharp becomes \flat , and an accidental \sharp , for the most part, a \flat (for example, A major to A \flat major, or the reverse: 1 as 2, 2 as 1):

For all other kinds of T. (for any required interval upwards or downwards) the sole really good expedient is to attach to the stave the requisite altered meaning. A number of such alterations are familiar to the musician through the different clefs, but not nearly enough. With a certain practice, however, one soon conceives the notes to be played as if they were actually noted down. The worst error in T. is to regard the original notation as continuing and to attempt to alter it—a perpetual running on side by side of two heterogeneous keys.

Transverse Vibrations, cross vibrations, the usual vibrations of sounding strings. (*cf.* LONGITUDINAL VIBRATIONS.)

Tratto (Ital.), extended, drawn out.

Trantmann, M. (*See* JAEHL [MADAME].)

Trantwein, Traugott, founded in 1820 the music business bearing his name; he was associated in 1821 with F. Mendheim, sold the business in 1840 to J. Guttentag, who in turn disposed of it to Martin Bahn in 1858, under whom the already respected firm attained a high degree of prosperity. Bahn has rendered special service to art by his publications of old music. The firm has also published a series of works on the science of music.

Travesty. (*See* PARODY.)

Tre (Ital.), three. *Sonata a tre*, a sonata for three instruments, to which, however, was still added (in the 17th–18th century), as an obvious supplement for executing the continuo part, the clavier (likewise organ, gamba, chitarone), e.g. Corelli prescribes in his "Sonate a tre," Op. 1, "Due Violini e Violone o Arcilento col basso per l'organo."

Trebelli-Bettini, Zelia, celebrated stage singer, b. 1838, Paris, d. Aug. 18, 1892, Etretat, of German parents (her real name was Gillebert). She made her *début* at Madrid in 1859 with great success, and afterwards sang at the most important opera houses: from 1860–67 in Berlin, and from 1862 especially in London.

Treble, the highest kind of voice. (*See* SOPRANO.) *T. clef*, the G or violin clef. (*See* CLÉF.)

Treiber, Wilhelm, pianist and conductor, b. 1838, Graz; he was trained by his father, gave successful concert-tours in Germany and Austria, in 1876 became conductor of the Euterpe Concerts at Leipzig, and since the spring of 1881 has been court capellmeister at Cassel.

Tremolo (Ital.), trembling; notes played repeatedly and rapidly (intermittent), or quickly following reinforcements of sound. In singing it is a mannerism which soon becomes wearisome. On bowed instruments it is of excellent effect; on the clavi-chord, after the manner of a drum-beat, it intensifies the tone to a high degree.

Tremulant, in the organ is a special contrivance, worked by means of a special draw-stop action, which gives to the tone more or less of a trembling effect. The T. is a pallet easily movable, which, when the stop is drawn, closes the wind-trunk near to the wind-chest, but which is set into oscillation by the wind from the bellows. An effect similar to the T. is obtained in certain organ-stops, of which the pipes are constructed so as to give a marked trembling tone, as in the Bifara (q.v.), which is of two kinds. In the first, the pipes have two mouths (one each side), and, naturally, also two slits; one of the mouths stands lower than the other, and therefore produces a sound somewhat lower in pitch, so that the two sounds given out by the same pipe produce strong beats. In the other kind, two

pipes differing slightly in pitch are placed over the same wind-canal (Pifaro, two-fold, of 4 ft., and Bifara, two-fold, of 8 and 4 ft., in the Music Hall at Boston; in the latter, the beats arise between the 4-ft. stop and the first overtone of the 8-ft stop; the same is to be found also at St. Peter's, Petersburg). The *Unda Maris* (Lat. "wave of the sea") is a stop of similar kind; in the organ at the Oliva monastery the stop is called "Meerflaut." It is an 8-ft. lip stop, which is tuned a shade below the proper pitch, so that it causes beats to arise between other stops tuned to proper pitch. G. Silbermann was fond of this stop (Hofkirche, Dresden; Nikolaikirche, Leipzig; St. Vincenz, Breslau, etc.). The *Voix céleste* is a kind of trembling stop (only treble).

Trento, Vittorio, opera composer, b. 1761, Venice, pupil of Bertoni; he wrote, already at the age of 19, ballets for the theatres of Northern Italy. With these he appears to have been successful, for up to 1792 he wrote nothing but pieces of similar kind (in all 14); but afterwards, and with equal diligence, operas (31), of which *Quanti casi in un sol giorno* (*Gli assassini*, Venice, 1801) is considered the most important. T. was at first accompanist at San Samuele, and afterwards at the Fenice Theatre, Venice: he was called to Amsterdam (1806) as musical director of the Italian Opera, and also undertook some years later the direction of the opera at Lisbon. From 1818-21 he was again in Italy, and from 1821-23 at Lisbon. We last hear of him in connection with the production of the operas *Giulio Sabino in Langres* (1824) and *Le gelosie villane* (1826, both at Bologna).

Treu (named in Italy, Fedele), Daniel Gottlieb, violinist and composer, b. 1695, Stuttgart. He studied under J. S. Kusser, at that time court capellmeister at Stuttgart, and had already written a great number of instrumental works and operas when the Duke of Württemberg, whose favour he had won by his violin playing, provided him with means to complete his education under Vivaldi at Venice. After 12 of his operas had been written and performed at Venice, he appeared in 1725 at the head of an Italian opera company, which performed at Breslau up to 1727; and with his operas *Astarte*, *Coriolano*, *Ulisse e Telemacco*, and *Don Chisciotte*, he celebrated triumphs. We afterwards meet with T. as capellmeister at Prague (1727), and finally, at Hirschberg (1740), where he held a similar post in the house of Count Schaffgotsch. The year of his death is unknown.

Triad, the name, in the usual terminology of harmony, for a chord formation consisting of two thirds, whether major or minor, built up the one over the other. Hence the following are distinguished: (1) the *major T.*, with the lower third major, the upper minor; for example: *c, e, g* (see TRIAD, MAJOR); (2) the *minor T.* with, contrariwise, the upper third, major,

and the lower, minor, for example: *a, c, e* (see MINOR CHORD); (3) the *augmented T.*, in which both thirds are major, for example, *c, e, g[#]* (see DISSONANCE, III.); (4) the *diminished T.*, in which both thirds are minor, for example, *b, d, f* (see DISSONANCE, I., end of 8). These formations are still called triads, even though they appear in four or more parts, i.e. when their notes are doubled in other octave positions; for even then they have only three essentially different (differently named) sounds. Chords of *four parts* are the chords of the seventh; those of *five parts*, the chords of the ninth. By triads in the narrower sense, practical harmony understands the full three-note form of the chord with the root in the bass (a)

in opposition to the so-called inversions: the chord of the sixth (2nd position, *b*) and the chord of six-four (3rd position, *c*), in which the third and the fifth become bass notes. The same nomenclature is also employed for more than three-note forms of the chord in close or in spread position, since one has only to consider which note of the chord is bass note:—

1st Position (Root pos.) 2nd Position. 3rd Position.

Triad.

Chord of the sixth.

Chord of six-four.

General-bass figuring indicates the T. by $\frac{5}{3}$ over the bass note, or, generally, by *absence* of a figure of any kind. (Cf. GENERALBASS.) The chord notation of modern theorists (Weber, M. Hauptmann) marks the major chord by a capital letter, for instance, A or A; the minor chord by a small one, a or a; the diminished by a small nought or a minus sign added to the small letter, a^o, a⁻; and the augmented by a vertical stroke or a plus sign to the capital letter, A[!], A⁺. The harmonic dualists (v. Oettingen, Riemann) only employ small letters, and indicate the C major chord by c+ (upper clang of c), and the C minor chord by ^oc (underclang of g). (Cf. MINOR CHORD, KLANGSCHLÜSSEL, DISSONANCE.)

Triad, Major, is the sounding together of a principal tone, with pure upper fifth and (major) upper third. The three tones blend together presenting the unity of the major clang (upper-clang, see CLANG). Any one of the three tones can be taken as representative of the major chord; for example, *c* or *g* or *e* can be understood solely in the sense of the c major chord.

It can likewise be represented by two tones of the major chord; for example, *c : g* or *c : e* or *e : g*; these representations by one or two tones are not, however, free from ambiguity, since each tone can stand for three major chords and as many minor. (Cf. KLANGVERTRETUNG.) Major chord and minor chord are the two foundation stones of harmonic structure; dissonant chords are only modifications of them. (Cf. DISSONANCE.)

Triads, Secondary, of the key, in the usual terminology of harmony systems are the triads formed from notes of the scale with exception of the triad of the tonic and of the two dominants, i.e., for example, in C major, *c. e. g.*, *g. b. d.*, and *f. a. c.*, are the principal triads; on the other hand, *a. c. e.*, *e. g. b.*, *d. f. a.*, and the diminished triad *b. d. f.*, are secondary triads. In A minor, *a. c. e.*, *d. f. a.*, and *e. g. b.* (*e. g. b.*) are principal triads; and *c. e. g.*, *f. a. c.*, *g. b. d.*, the diminished *g. b. d.* and *b. d. f.*, and the augmented *c. e. g.*, secondary triads.

Trial, (1) Jean Claude, French opera composer, b. Dec. 13, 1732, Avignon, d. June 23, 1771, Paris. In 1767 he was, jointly with Berton, director of the Grand Opéra, and wrote 4 operas (*Esope à Cythère* [1767], *La Fête de Flore*, *Sylvie* [with Berton], and *Théonis*), music to *La chèreuse d'esprit*, also cantatas and orchestral works. His nephew—

(2) Armand Emanuel, b. March 1, 1771, Paris, d. there Sept. 9, 1803, wrote also a number of operas, and indeed with success. He then married an actress, but gave himself up to an irregular course of life, and died at an early age.

Triangle (Lat.), an instrument of percussion common in the orchestra. It is of the simplest construction, consisting of a steel rod bent into triangular shape, which, when struck by another rod, gives out a high clashing sound. The marking of the rhythm (on one line) is sufficient for the notation of the T. :—

Trias (Lat.), term used in Latin treatises of the theory of music in the sense of triad (*T. harmonica*); *T. deficiens*, the diminished; (*T. abundans* or *superflua*, the augmented triad.

Trichter (Ger.), name given to the upper part of the tubes of reed-pipes in the organ, especially of those of powerful tone (Posaune, Trumpet).

Tricinium (Lat.), composition for three voices (*a cappella*). (Cf. BICINIUM.)

Triennial Festivals, performances with exceptionally large chorus and orchestra, do not date further back than the last century. The oldest one is that of Birmingham. Performances were held there in 1768, 1778, and 1784;

but from the last date up to the present, with the exception of two breaks (in 1793 and between 1829–1834), there have been regular T.F.

Handel Commemorations were held at Westminster Abbey in 1784, '85, '86, '87, and '91, but after two special Handel Festivals at the Crystal Palace in 1857 and 1859, Triennial Handel Festivals were started; there was one alteration of date (from 1886 to 1885) so as to celebrate the bi-centenary of the composer; but with that exception they have remained triennial up to the present.

The Lower Rhenish Festivals commenced at Elberfeld in 1817; but in 1827 that city withdrew from the union. At Düsseldorf there were festivals in 1818, '20, '22, '26, '30, '33, '36, '39, '42, '45, '53, '55, '56, and '60, since which time they have been triennial. At Cologne performances were given in 1821, '24, '28, '32; then every three years, with the break 1858, '62, since which time they have been regular T.F. At Aix-la-Chapelle, in 1825, '29, '34, '37, '40, '43, '46, '51, '54, '57, '61, since which time they have been regular T.F. The conductors have been: Schornstein, 1817, '19, '23, '27; Burgmüller, 1818, '20, '21, '22; Fr. Schneider, 1824; Klein, 1828; Ferd. Ries, 1825, '26, '28, '29, '30, '32, '34; Spohr, 1826, 1840; Mendelssohn, 1833, '35, '36, '38, '39, '42, '46; Kreutzer, 1841; Reissiger, 1843; Dorn, 1844, '47; Rietz, 1845, '56, '64, '67, '69, '73; Spontini, 1847; Lindpaintner, 1851, '54; Hiller, 1853, '55, '58, '60, '62, '65, '68, '71, '74, '77, '80, '83; F. Lachner, 1861, '70; Liszt, 1857; O. Goldschmidt, 1863, '66; Tausch, 1866, '81, '87; Rubinstein, 1872; Joachim, 1875, '78; Breunung, 1876, '79; Gade, 1881; Wüllner, 1882, '86, '90; Reinecke, 1883; Brahms, 1883, '84; Kniebe, 1885; H. Richter, 1888, '89, '91; Schwickerath, 1888; F. Butts, 1893.

Among modern T. F. may be named those of Norwich, Leeds, Bristol.

Trihemitonium (= 3 semitones). Greek name for the minor third.

Trill. (See SHAKE.)

Trio (Ital.), (1) a composition for three instruments; at the present day the term generally used for a T. for pf., violin, and cello; it is better, however, to distinguish the latter as a *pianoforte trio*. The *stringed trio* consists, as a rule, of violin, viola, cello, or of two violins and cello; all other combinations of instruments must be more minutely described. Compositions of old date (17th–18th century) are frequently called trios (a 3) when written for three concertante instruments (for instance, two violins and viola da Gamba); to these is added a fourth part, though not reckoned as such, for basso continuo, to be performed on the theorbo, harpsichord, or organ, etc.—(2) In dance pieces (minuets, etc.), marches, scherzi, etc., for pianoforte, a *middle section of quieter movement* and broader melody, opposed to the more lively,

dashing principal theme, is termed a T.; formerly it was the custom to write short sections of this kind in three parts, whereas the principal section had only two.—(3) An organ piece *a 3* for two manuals and pedal, also for three keyboards, each with different registering, so that the three parts may be sharply distinguished the one from the other. A peculiarity of the organ trio is, that a legato melody may be performed by one hand within the same compass in which figuration is being performed by the other hand (on the second keyboard).

Triole (Triplet; Fr. *Triplet*) is the term for a figure of three equal notes which take the place of two, rarely of four, of the same species. As a rule, the T. is indicated by a 3, yet it is frequently omitted when, by means of cross strokes (for quavers, semiquavers, etc.) the measure is made sufficiently clear:—

Trionfante (Ital.), triumphant.

Tripla, one of the most important proportions (q.v.) of mensurable music, indicated by 3 as time sign, or by $\frac{3}{2}$. T. signature indicated that three breves taken together belonged to a unit of higher order (to the Long, already rare in the 16th century): according to our modern mode of expression, the *Ritmo di tre battute* (3 bar rhythm). A 3 occurring in the middle of a composition, frequently indicated, not the real T., but the ternary division of the breve (usually expressed by O), especially when only few triplets of semibreves occurred (thus answering completely to our $\frac{3}{2}$ time). The 3 marked above or beneath notes written on the staff is quite our present triplet sign (also with minims and semi-minims). The 3 of tablature notation ($\frac{3}{2}$ and $\frac{3}{4}$), also of instrumental notation in the 17th century (Frescobaldi), simply indicates triple time.

Triple Time, ternary time, i.e. $\frac{3}{4}$, $\frac{3}{2}$, $\frac{3}{4}$, $\frac{3}{8}$, $\frac{3}{16}$ time. On the other hand, $\frac{3}{4}$ and $\frac{3}{8}$ time must be regarded as duple, provided the movement is not so slow as to make the separate crotchets or quavers felt as units. (See TIME SIGNATURE.)

Triplet. (See TRIOLE.)

Trite. (See GREEK MUSIC.)

Tritone ("three tones"), Greek name given to the augmented fourth, which is an interval of three whole tones (for example, *f—g—a—b*); as melodic progression the T., like all augmented intervals, is forbidden in strict style, for it is difficult of execution and comprehension. Formerly, the succession of two major thirds was forbidden, because the higher note of the second against the lower one of the first formed the interval of the T. (Cf. PARALLELS.)

Tritonius, Peter, the writer of a work in many ways interesting: "*Melopoia seu har-*

monia tetracentica super XXII. genera carminum heroicorum, elegiacorum, lyricorum et ecclesiasticorum hymnorum" (1507, printed by Erhard Oeglin under the supervision of Konrad Celtes). T.'s odes are, so far as is known, the first attempt to set the words to music by following the metre exactly, with note against note.

Tritto, Giacomo, composer of the Neapolitan School, b. 1735, Altmura near Bari (Naples), d. Sept. 17, 1824, Naples. He studied with Cafaro at the Conservatorio della Pietà, Naples, and afterwards became assistant teacher (primo maestrino) and deputy for Cafaro as teacher of harmony at the Conservatorio, also musical director at the San Carlo Theatre. The return of Paisiello from Russia prevented T. from taking Cafaro's place after the death of the latter. In 1779 he was appointed principal professor of harmony, and in 1800 succeeded Sala as professor of counterpoint and composition. Spontini was one of his pupils. T. wrote 51 operas, mostly for Naples; but also a large number of sacred works:—8 masses, among which one in eight real parts with accompaniment for two orchestras, and 3 solemn masses *a 4*, a requiem, portions of a mass, psalms, a *Te Deum a 5* with orchestra, 2 Passions (S. Matthew and S. John), etc. All these works remained in manuscript. He expounded his system of teaching in: "*Partimenti e regole generali per conoscere qual numerica dar si deve ai vari movimenti del basso*" (1821, general-bass method), and "*Scuola di contrapunto ossia teoria musicale*" (1823). Also his son Domenico wrote, from 1815–18, several operas for Naples.

Tromba, (1) same as trumpet (wind instrument and organ stop). (2) *T. marina*. (See TRUMSCHEIT.)

Tromboncino, Bartolommeo, Italian composer from the 15th–16th century, b. at Verona. Numerous Frottole of his composition are to be found in Petrucci's collection of such pieces (9 books, 1504–1508), and 29 for one voice with lute accompaniment in Franciscus Bossinensis' *Tablature work* of 1509 (Petrucci).

Trombone (Ger. *Posaune*; Ital. *Trombone*, i.e. great trumpet, from *tromba* = trumpet), a brass wind-instrument of clang character similar to the trumpet, and, in fact, quite belonging to the same family. The German name "*Posaune*" and the instrument itself sprang from the Roman *Buccina* (q.v.); the latter was formerly a long, extended, straight tube (Tuba), which, for convenience of handling, was then arranged in folds; and this was brought about (probably at the close of the Middle Ages) as soon as the technical structure of the instrument was sufficiently advanced; for similar reasons the Bomhart was bent, and from it ultimately evolved the bassoon. But already at the beginning of the 16th century we meet with the

T. in its present shape, as slide-trombone. Martin Agricola ("Musica instrumentalis") says that pure melody was alone obtained from the "Busaun" by "blowing and drawing" ("durchs Blasen und Ziehen"). The slide apparatus of the T. is familiar to everyone; its object is to lengthen the sound-tube, and thus to deepen the tone of the instrument; by means of it the blower has full command over the purity of intonation. Hence the system of *valves* (q.v.) has not attained popularity for the T. The tone is full, grand, and dignified. Formerly the T. was constructed in various sizes, but now only the *tenor* T. (in \flat) is in general use, of which the compass, apart from the slides, gives the uppertone series from (contra) \flat to (twice-accented) c'' (3 octaves). By means of the slide, the lowest natural tone (which speaks with difficulty) can be lowered by 3 semitones (contra A— $A\flat$ —G, the so-called pedal notes of the T.), and the second by 6 (these are obtained by prolonging the tube to its utmost extent by means of the slide; it is not quite clear why the first natural tone cannot be also thus lowered, provided, of course, that the blower has sufficient breath for the purpose). The notes

of the tenor T. are wanting, and those lying below \flat can scarcely be taken into consideration for orchestral use; from \flat the series extends chromatically upwards to c'' , and many notes can be produced in various ways (for example, f without slide as 6th natural tone, with the 2nd slide as 7th, and with the 5th as 8th). The *bass* T. in F (with orchestral compass from [contra] \flat to [once-accented] f') and the *alto* T. in $E\flat$ (orchestral compass [great] A to [twice-accented] $e\flat''$), are now somewhat rare; the Zink of the trombone family served formerly as *dis-cant*. (Cf., however, SLIDE TRUMPET.) In notation, trombones are not regarded as transposing instruments. The tenor T. is written in tenor or bass clef (the latter only for the lowest notes, likewise for the 2nd or 3rd T.), and the alto T. in the alto clef; and indeed with the signature of the sharps or flats after the clef. *Quartposaune* is an obsolete name for the bass T. in F ; *Quintposaune* the name of the bass T. in \flat (compass, A— $e\flat''$); the double-bass T. of Wagner is in \flat an octave lower than the tenor T. Among celebrated T. players may be named Belcke, Queisser, and Nabich.—In the organ, the T. is the greatest and most powerful of intonation of the reed stops (16 and 32 ft. in pedal, also 8 ft. in the manual).

Tromlitz, Johann Georg, flautist, composer, and flute-maker at Leipzig, b. 1726, Gera, d. Feb., 1805, Leipzig. He published: 3 concertos for flute and strings, 2 sonatas for flute and pianoforte, pieces for flute, songs with pianoforte, etc. Also the methods:—"Kurze Abhandlung vom Flötenspielen" (1786); "Ausführlicher und gründlicher Unterricht die

Flöte zu spielen" (1791); and "Ueber die Flöten mit mehreren Klappen" (1800), likewise articles on the flute in *Allg. mus. Zeitung* (1799).

Trommel (Ger.), drum (q.v.).

Trompe (Fr.), old name for the horn (*Trompette* is the diminutive thereof; *T. de chasse*, French horn, "Waldhorn" (Lully).

Tropi (Lat.), the name given in Gregorian Chant to the various formulæ of the short doxology appended to the close of the Introitus "Gloria patri et filio et spiritui sancto, sicut erat in principio et nunc et in secula seculorum amen." (Cf. *Evovæ*.) Originally there was only one *Tropus* for each church mode, but later on a greater number were introduced, distinguished one from the other as "Differences."

Tropo (Ital.), too; *non troppo*, not too.

Trost, (1) Johann Kaspar (senior), government attorney and organist at Halberstadt about 1660. He wrote a series of works on the theory of music, which, however, like his translations of 13 prefaces of Frescobaldi, Donati, Rovetta, etc., also of Artusi's "Counterpoint," Dirutas's "Transilvano," Zarlino's "Istitutioni," Sabbatini's "Regola facile e breve," etc., remain in manuscript.

His son (2) Johann Kaspar (junior) was organist at Weissenfels, and in 1677 published the description of the new organ at the Augustusburg there.

(3) Gottfried Heinrich, a well-known organ-builder at Altenburg about 1709–39.

Troubadours (*Trobadors* [in Provence], *Trouvères*, *Trouveres*, *Troveurs* [in the north of France]), the name of the chivalrous French poets and singers from the 11th to the 14th century, who, like the German Meistersänger (q.v.), made the praise of their adored mistress the centre point of their poems. They either accompanied themselves on the viol, hurdygurdy, or some harp-like instrument (Rotta), or hired a musician for that purpose (*Ménestrel*, *Jongleur*, *Ménétrier*, minstrel). The following Troubadours distinguished themselves as musicians: Raoul de Coucy, King Thibaut IV. de Navarra, Adam de la Hâle, and Guillaume Machault. The melodies of the Troubadours are, for the most part, not noted down after the complicated mensural directions of that period, but in a totally different and plain manner. (Cf. *SIR-VENTES*.)

Troutheck, Rev. John, b. Nov. 12, 1832, Blencowe, Cumberland; graduated B.A. 1856, and M.A. 1858, Oxford. He has published: "A Music Primer for Schools," and "A Primer for Church Choir Training." His chief work, however, has been the translation of the texts of operas, oratorios, cantatas by Bach, Beethoven, Schumann, Gounod, Wagner, etc.

Truhn, Friedrich Hieronymus, b. Nov. 14, 1811, Elbing, d. April 30, 1886, Berlin;

pupil of B. Klein and Dehn, also for some time of Mendelssohn. He was for a few years theatre capellmeister at Dantzig, from 1848-52 musical director at Elbing, went in 1854 on concert tour with Von Bülow, then settled for a time in Riga, otherwise he lived mostly at Berlin, where he was looked up to as a critic. As a composer he made himself known by pretty Lieder, also choral works and an opera, *Trilby* (Berlin, 1835); an operetta, *Der vierjährige Pastor* (ditto, 1833); and a melodrama, *Kleopatra* (1853).

Trumpet (Ital. *Tromba*; Fr. *Trompette*; Ger. *Trompete*), the well-known brass wind-instrument, allied to horns and cornets, and, with regard to pitch, standing between the two. (See CORNET.) The T. is old, and already in the Middle Ages played a rôle, especially in military music (Feldtrummel). It was afterwards called *Clarino* or *Clareta*. The ancient Tuba, with straight metal tube, was an instrument of similar kind; the art of bending tubes is of later date; and even the trumpets of the 16th century show no returnings, but only winding. The modern T. is also distinguished from the horn by the form of the folds, which in the horn assume more of a circular, in the T., on the other hand, more of a rectilinear shape. As in the horn, so in the T., different tuning (A, B \flat , B, C, D \flat , D, E \flat , E, F, F \sharp , G, A \sharp , high A, and high B \sharp) is obtained by means of crooks. The T. is of somewhat narrow "scale;" its lowest note is therefore not in use, and even the second overtone in the lowest kinds (in low A and B \flat) is of unpleasant quality. The T., like the horn, is a transposing instrument, only the T. sounds an octave higher than the horn, i.e. a c'' written for an F-horn sounds as f', but on an F-trumpet as f \sharp . The compass (upwards) of the T. is much the same in the various kinds, the limit is the note sounding as

Only virtuosi can safely venture on higher notes; but, with the highest tunings, b \sharp 2 to c \sharp can be obtained. The tone of the T. is sharp and penetrating, and, in combination with other brass instruments, of brilliant and festal quality; and then it is an instrument eminently fitted to bear the melody. On the other hand, a trumpet melody not covered, or well sustained by other brass instruments, has a commonplace sound. Wagner wrote for three trumpets so as to obtain complete triads from instruments of the same clang colour. In the symphonic orchestra, in which, as a rule, there are only two trumpets, these, combined now with horns, now with trombones (in opposition to the four horns), form an independent group. Closed notes, as soon as they had been discovered on the horn (q.v.), were used for the T. In order to keep the instrument short, narrower bends were necessary for such notes; but they had such a bad sound that they were soon given up, and better means for furnishing the chromatic scale

were planned. In 1780 Michael Wöggel of Augsburg (jointly with Stein) sought to revive the obsolete slide trumpet with his "Inventions-trompete" with two slides; Kälbel at Petersburg constructed the "Klappenhorn" (Bugle) in 1770; Weidinger at Vienna the "Klappen-trompete" in 1801; Clagget in England (1790) the double trumpet (in D and E \flat , with common monthpiece and one valve); Blümel in Silesia (1813) the proper Valve Trumpet (two valves); Blümel sold his invention to Stölzel. Asté of Paris combined (about 1800) slides and keys. Müller of Mayence, and Sattler of Leipzig added a third valve in 1830. Valve trumpets are taking the place of natural trumpets more and more every day; the former, like the valve horns, change the pitch of the natural scale from about $\frac{2}{3}$ to 3 whole tones by means of valves (cylinders, pistons, etc.). Valve trumpets are generally in F, within recent times in high B \sharp , and with corresponding notation; the high (small) B \flat trumpet, mostly after the manner of the cornet (q.v.). Also the still smaller trumpets in D, recently constructed (for the high parts in Handel and Bach), have similar notation. Of methods for T. may be specially recommended the "Grosse Schule für Cornet à pistons und T.," by Kosleck (2 parts), and F. Gumbert's "Orchesterstudien für T." (selection of the most important passages from operas, symphonies, etc.). Cf. H. Eichhorn, "Die T. alter und neuer Zeit" (1882). With regard to the old art of playing the trumpet, see CLARINO. The Bass Trumpet in Wagner's *Nibelungen* ought to be a kind of T. (in low E \flat , D and C) sounding an octave lower: the instrument used at Bayreuth for this part is a valve trombone of middle compass (in C).

Trumscheit (*Trumscheit*, *Scheitholt*, *Trompetengeige*, *Tromba Marina*, *Tympanischiza*, according to Cocleus [1512], also named *Chorus*), a primitive bowed instrument, much in vogue in Germany from the 14th to the 16th century, and even longer. In the English navy it was formerly a signalling instrument. It consisted of a long, narrow resonant box composed of three boards, over which was stretched a single string; other unchangeable strings, struck with the bow, served as drones. Of the two feet of the bridge of the T. only one was glued, while the other, when the string vibrated, striking repeatedly and rapidly against the resonant box, produced somewhat of a reed tone. (Cf. BRIDGE.) On the T. only harmonics were played.

T'schaikowsky, Peter Iljitsch, one of the most esteemed of modern Russian composers, b. Dec. 25, 1840, at the smelting works, Wotkinsk, in the government of Wiätka, d. Nov. 5, 1893, Petersburg (of cholera). He studied law, entered government service, became, thanks to Anton Rubinstein, a pupil of the Petersburg Conservatoire soon after its establishment, and

in 1866 teacher of harmony there, a post which he held until 1877. From that time he devoted his whole attention to composition (latterly with a pension from the Czar), residing now in Petersburg, now in Italy, Switzerland, etc. T. was a lyrical, highly-gifted, true musician, but at the same time a good Russian; hence there are found in his works side by side with moments of almost maidenly delicacy and sentiment, and of the most refined construction, others of semi-Asiatic roughness and brutality. T. gained for himself a firm position also in the esteem of foreign nations. The honorary degree of Doctor of Music was conferred on him by the University of Cambridge in 1893. T. wrote the Russian operas: *Der Woiwode* (1869), *Opritschnik* (1874), *Wakula der Schmied* (1876), *Eugen Onegin* (1879); in German, 1892, Hamburg, *Die Jungfrau von Orleans* (1881), *Mazeppa* (1882), *Tscharavitschki* (1886), *Tscharodeika* (1887), *Piquedame* (1890), and *Yolantihe* (1893); a lyrical drama, *Schneewittchen* (*Snegoroutschka*), and the ballets *Der Schwanensee* (Op. 20), *La Belle au bois dormant* (1890), and *Le Casse-noisette*, Op. 71; 6 symphonies (1st, G minor, Op. 13; 2nd, C major, Op. 17; 3rd, D major, Op. 29; 4th, F minor, Op. 36; 5th, E minor, Op. 64; and 6th, in B minor, Op. 74); 4 suites for orchestra (Op. 43, 53, 55, and 61, "Mozartiana"), "1812, Ouverture solennelle" (Op. 49); the symphonic poems (orchestral fantasias), "The Tempest" (Op. 18), "Francesca da Rimini" (Op. 32), "Manfred" (Op. 58), "Romeo and Juliet" (fantasia overture), and "Hamlet" (Op. 67); a serenade for strings (Op. 48), "Ouverture triomphale" on the Danish national hymn (Op. 15); "Marche slave" (Op. 31), Coronation march (1883), Coronation cantata (soli, chorus, and orchestra), 3 quartets for strings (Op. 11, 22, 30), a sextet for strings (*Souvenir de Florence*, Op. 70, for two violins, two violas, two 'celli), 2 pf. concertos (Op. 23, B flat major, and Op. 44, G minor); likewise a fantasia for pf. and orchestra (G minor, Op. 56), a pf. trio (Op. 50, A minor), a violin concerto (D major, Op. 35), a capriccio for cello and orchestra (Op. 62), pf. sonata (Op. 37), many pf. pieces (Op. 1, 2, 4, 6, 7, 8, 9, 10, 19, 21, 39, 40, 51, and "die Jahreszeiten"), pieces for pf. and violin (Op. 26, 34), variations for cello and pf. (Op. 33), Russian songs (Op. 6, 16, 25, 27, 38, 47, 57, 63, 65), 6 duets (Op. 46), 2 masses (Op. 41, 52), a "Treatise on Harmony;" also translations of Gevaert's "Instrumentationslehre," and Lobe's "Katechismus der Musik."

Tscheng (Cheng), an old Chinese wind-instrument, consisting of a scooped-out bottle-gourd, which serves to hold the wind, and which is filled by means of an S-shaped tube. At the open upper end of the bottle-gourd there is a row of (12-24) pipes with free reeds. The last-named first became known through the T., and at the beginning of this century were introduced into the organ and Physharmonika (harmonium).

Tschirch, six brothers, all excellent musicians, (1) Herrmann, b. Oct. 16, 1808, Lichtenau (near Lauban, Silesia), d. 1829, as organist at Schmiedeberg, Silesia.

(2) Karl Adolf, b. April 8, 1815, Lichtenau, d. Aug. 27, 1875, as principal minister (Pastor) at Guben (Silesia); he was an able pianist, and from 1845-55 contributor to the *N. Z. f. Musik*.

(3) Friedrich Wilhelm, b. June 8, 1818, Lichtenau, d. Jan. 6, 1892, Gera; pupil of the seminary at Bunzlau and of the Royal Institution for Church Music, Berlin. From 1843-52 he was musical director at Liegnitz, afterwards court capellmeister at Gera. His quartets for male voices are popular, and known far and wide. In 1869 he visited North America at the invitation of the choral societies there, and made concert tours to Baltimore, New York, Philadelphia, Washington, Chicago, etc., producing his own compositions. Of works of greater importance may be named: "Eine Nacht auf dem Meer" (gained a prize from the Berlin Akademie), "Der Sängerkampf," "Die Harmonie," and other songs for male chorus with orchestra, a mass, and an opera: *Meister Martin und seine Gesellen* (Leipzig, 1861). As a salon composer for the pianoforte, he disguised himself under the pseudonym Alexander Czersky.

(4) Ernst Leberecht, b. July 3, 1819, Lichtenau, d. Dec. 26, 1854, Berlin; from 1849-1851 he was theatre capellmeister at Stettin, then went to Berlin (orchestral works, overture, "Kampf und Sieg;" operas, *Frithjof* and *Der fliegende Holländer*, neither produced).

(5) Heinrich Julius, b. June 3, 1820, Lichtenau, d. April 10, 1867, as royal musical director and organist at Hirschberg-i.-S.; an excellent performer on the pianoforte and composer of instructive pf. pieces.

(6) Rudolf, b. April 17, 1825, Lichtenau, d. Jan. 16, 1872, as royal musical director at Berlin. He founded the "Markischer Central-Sängerbund" (1860), and wrote a number of works for wind band, among which "Die Hubertusjagd" (produced every year, on the occasion of the royal chase at Grunewald), and "Das Fest der Diana."

Tschudi. (See BROADWOOD.)

Tschung. (See GONG.)

Tua, Teresina (now married to Count Franchi-Verney, q.v.), b. May 22, 1867, Turin. She was the child of a poor musician, studied under Massart at Paris, and left the Conservatoire, having gained the first prize. She travelled throughout Europe (from 1882), everywhere winning fame as a violinist.

Tuba, (1) brass instrument of the Romans, a straight trumpet (of wide scale).—(2) General name for the modern chromatic low brass wind-instruments of wide scale belonging to the family of Bugle Horns (q.v.), first constructed in 1835 by Moritz and Wieprecht, in France by Ad. Sax (q.v.), where they all bear the name

"Saxhorn," common to all Bugle Horns. Tubas have four valves, so that they are able to fill in the gaps between the first and second natural notes (a whole octave) with chromatic notes (the 4th valve lowers by a fourth). The very lowest notes, those, indeed, lying below the first natural note, are not, however, very good, and require too much breath. The highest (smallest) kind of Tuba is the *Baritone Horn* (*Tenor-Bass*, *Euphonium*, *Bass Tuba* in B \flat with B \flat as first natural tone, compass up to f \sharp ; the Bombardon in E \flat (also in F) stands a fifth lower; its first natural note is E \flat , likewise, F (only good from B \flat). The *Contrabass Tuba* in B \flat , likewise C (when constructed in circular form, they are sometimes named *Helicon*), certainly have the fundamental tone B \flat (C), and by means of ventils would extend almost an octave lower; yet they are only serviceable down to E \flat (as in Wagner). Symphony composers use notation for all bass tubas, as if they were non-transposing instruments; in windbands the cornet notation (2nd natural tone as c \sharp) is used for tubas, also for bugle horns. (3) The *Tubas* of Wagner in the *Nibelungen* are in B \flat (*Tenor Tubas*) and F (*Bass Tubas*), but are not intended to give out the fundamental tone; they have, moreover, bells similar to horns. The former extend only to B \flat , the latter to B \flat ; the former extend upwards to f \sharp , the latter to g \sharp .

Tuba curva (= bent tube) was a simple brass instrument which only produced a few harmonic notes. The instrument was taught at the Paris Conservatoire in 1798. Méhul wrote for it in his *Joseph en Egypte*.

Tubal, also Jubal, is the name of an obsolete open flue-work stop of 8 ft. (rarely 4 and 2 ft.).

Tucher, Gottlieb, Freiherr von, Bavarian officer of justice, b. May 14, 1798, Nürnberg, d. Feb. 17, 1877. In 1856 he became Councillor of the High Court of Justice at Munich, and received his pension in 1868. He published: "Kirchengesänge der berühmtesten ältern italienischen Meister (Anerio, Nanini, Palestrina, Vittoria) gesammelt und Herrn Ludwig van Beethoven gewidmet" (1827), and "Schatz des evangelischen Kirchengesangs" (1848, 2 vols.).

Tuckermann, Samuel Parkman, b. Feb. 11, 1819, Boston (Mass.), d. June 30, 1890, Newport, Rhode Island. He studied under Karl Zeuner, was at first organist of St. Paul's, Boston, and published two collections of sacred songs (including some of his own), then went to England in order to study cathedral style there (London, Canterbury, York, etc.). In 1853 he returned with the title Mus.Doc. to America and resumed his old post. T. wrote much sacred music, and published, besides, "Cathedral Chants" and "Trinity Collection of Church Music." He possessed a valuable musical library.

Tuczek, Franz, Bohemian composer, b. about 1755, Prague, d. 1820, Pesth, son of the musical director (of like name) of St. Peter's Church, Prague. He was at first tenor singer, then accompanist at the theatre belonging to Count Schwerts at Prague; in 1797 he became leader of the band of the Duke of Courland, Sagan; in 1800, musical director of the Breslau Theatre, and, in 1802, capellmeister of the Leopoldstadt Theatre, Vienna. T. wrote 10 operas for various theatres with which he was connected; of these *Lanassa* deserves mention. He also composed oratorios, cantatas, and dances much in vogue in their day. His granddaughter Leopoldine (T. Herrenburg), b. Nov. 11, 1821, Vienna, d. Oct. 20, 1883, at Baden (near Vienna), was from 1841-1861 an esteemed member of the Berlin Court Opera. She was excellently trained as a coloratura singer by Josephine Fröhlich, and also sang with equal skill dramatic and simple rôles suitable to the compass of her voice.

Tudway, Thomas, b. about 1660, d. 1730, London. In 1705 he became Professor of Music at Cambridge, in 1706 was suspended from his office for giving offence to the University authorities; after reinstatement, however, he held office until 1726. T. composed much sacred vocal music, and wrote out a valuable collection of ancient church music, which is preserved in the British Museum.

Tulou, Jean Louis, famous flautist, b. Sept. 12, 1786, Paris, d. July 23, 1865, Nantes; he was the son of the professor of the bassoon at the Conservatoire and composer for his instrument, Jean Pierre T. (d. Dec., 1799). In 1796 T. became a pupil of Wunderlich's, and, at the age of 15, received the first prize in the flute class, which, in spite of his superiority, had been refused to him in 1800 on the score of youth. In 1804 he became principal flautist at the Italian Opera, and was appointed in 1813 Wunderlich's successor at the Grand Opéra. His triumphs reached their highest point in Lebrun's opera, *Le Rossignol*, in which the rôle of the nightingale was assigned to him; and by his playing he drove a dangerous rival (Drouet) from the field. On the return of the Bourbons T. compromised himself and fell into disgrace, i.e. he was not appointed flautist to the royal band; on his side he resigned his post at the Grand Opéra in 1822. He returned, however, in 1826 as *première flûte solo*, and soon afterwards was appointed professor of the flute at the Conservatoire, which post he held until 1856. In 1857 he returned to Nantes to enjoy a well-deserved rest. T., up to the time when he received his pension, opposed the introduction of the Boehm flute at the Conservatoire. He wrote over 100 compositions (concertos, solos, for competition at the flute class of the Conservatoire, variations, duets, trios for three flutes, etc.).

Tuma, Franz, excellent contrapuntist, b. Oct. 2, 1704, Kostelec a. d. Adler (Bohemia), d. Feb. 4, 1774, at the Barmherzige Brüder monastery at Vienna; he studied under Czernohorsky at Prague and J. J. Fux at Vienna. In 1741 he became chamber composer to the widowed Empress Elisabeth (T. was a performer on the gamba). After the death of his wife (1768) his health gave way, and he withdrew to Gera, the monastery of the Premonstrants, but afterwards returned to Vienna. T. wrote about 30 masses (Ambros praises those in ϵ minor and \flat minor as truly great), a Miserere, Responses, Lessons, etc.

Tunder, Franz, distinguished organ virtuoso, b. 1614, d. Nov. 5, 1667, as organist of the Marienkirche, Lübeck; he was the predecessor and father-in-law of Dietrich Buxtehude, and received his training from Frescobaldi at Rome.

Tuning is, generally, the establishment of pitch, and, indeed, (1) establishment of absolute pitch, *i.e.* the vibration number of a note, from which the rest are tuned. (Cf. A, CHAMBER TONE, DIAPASON NORMAL).—(2) Theoretical determination of the relative pitches, ratios (intervals) of the notes one to another; and this can be accomplished in two ways: (*a*) by a mathematico-physical determination of tone as a matter of abstract theory; and for practical purposes (*b*), by the substitution of a few notes, giving a sure hold for intonation, in place of the innumerable notes obtainable according to theoretical definition; this is temperament (q.v.).—(3) Temperament of twelve degrees, termed equal, is the one in general practical use for organs and pianofortes. It cannot be strictly carried out, yet, practically, satisfactory results are obtained. One becomes reconciled to it from the fact that it does not represent exact, but only approximative values; and that although a certain deviation makes one interval worse, on the other hand it makes another better. The only interval which must be *absolutely pure* in this system is the octave; the fifth must be a shade flat, and in the once-accented octave the difference amounts to about one vibration, *i.e.* it gives one beat per second against the fifth of exact consonance, and makes each fourth higher in the same proportion; by these means a fairly exact result is obtained. This is somewhere about the mode of procedure: first of all, *a'* is tuned after a tuning-fork to the desired chamber pitch (435 vibrations), and then, the lower *a* and *A*, as exact octaves (without beat). If now *A* be struck, its twelfth (3rd overtone) *a'* is heard with sufficient distinctness to tune from it the strings of the *a'* so that they are one beat lower. Then the under-octave *a* is tuned, and, in like manner, its upper twelfth *b'*; further, the under-octaves *b* and *B*, and the twelfth of the latter *f#*, the under octave of this *f#*, and its twelfth *c#*'. Now the thirds can be taken into consideration; the *c#*' thus tuned must be

Tuorba. (*See* THEORBO.)

Turbæ ("crowds"). This is the name given to the choruses connected with the action of the people (of the Jews ["Judæorum"] or of the heathen [paganorum]) in the Passions, sacred plays, oratorios, etc., in contradistinction to the reflective choruses (chorales, etc.).

Turco (Ital.), Turkish; *alla turca*, in a Turkish style. This is a term used for pieces which underneath a melody have a noisy accompaniment with few chord changes; for example, the finale of Mozart's pianoforte sonata in A.

Turini, (1) Gregorio, singer and player on the cornet at the court of the Emperor Rudolf II. at Prague, b. about 1560, Brescia, d. about 1600, Prague. He published a book: "Cantiones admodum devotæ cum aliquot psalmis," for four equal voices (1589), a book of canzonets *a 4* (1597), and "Teutsche Lieder nach Art der welschen Villanellen mit 4 Stimmen."

(2) Francesco, son and pupil of the former, b. about 1590, Brescia, d. there 1656; after at least 1624 (according to the title of his works) organist of the cathedral of his native town. He published: a book of masses *a 4-5*, 2 books *Motetti a voce sola* (1629 and 1640), 3 books of madrigals (the first and second *a 1-3*, together with some sonatas *a 2-3* [for two violins and bass], 1624; the third book for three voices, two violins, and chitarrone, 1629), and "Misse a cappella *a 4-5 v.*" with continuo (1643).

Türk, Daniel Gottlob, distinguished organist and theorist, b. Aug. 10, 1756, Clausnitz (near Chemnitz), d. Aug. 26, 1813, Halle-a.-S. He studied at the Kreuzschule, Dresden, was private pupil of Homilius, and learnt to play on the violin, organ, and on nearly all wind-instruments. In 1772 he attended the University at Leipzig, and continued his studies under Hiller, who engaged him as violinist at the Grosses Concert, also at the theatre. In 1776 he became cantor of the Ulrichskirche, Halle, and teacher of music at the Gymnasium, in 1779 musical director of the University and in 1787 organist of the Liebfrauenkirche, on which he resigned the posts of cantor and teacher. The events of the war of 1806, which caused his activity at the University to come to a standstill, and the loss of his wife (1808) hastened his death. T. composed and published an oratorio, *Die Hirten bei der Krippe in Bethlehem*; 18 pf. sonatas, 18 sonatinas, many pf. pieces, and some songs. Symphonies, sacred compositions, organ pieces, etc., remained in manuscript. T. was a gifted teacher, and his didactic and theoretical works were highly esteemed: a great "Clavierschule," with critical comments (1789); "Kleines Lehrbuch für Anfänger im Klavierspielen" (1792); "Von den wichtigsten Pflichten eines Organisten. Ein Beitrag zur Verbesserung der musikalischen Liturgie" (1787); "Kurze Anweisung zum Generalbass-

spielen" (1791; improved edition, 1800, etc.); "Anleitung zu Temperaturberechnungen" (1806).

Turle, James, b. March 5, 1802, Taunton, d. June 28, 1882, London; from 1831-75 organist and choirmaster at Westminster Abbey, from 1840-43 conductor of the "Ancient Concerts," excellent teacher and able church composer. He published, jointly with E. Taylor, the "People's Music Book." His brother Robert and his cousin William were also good organists.

Turley, Johann Tobias, distinguished organ-builder, Trenenbrietzen (Brandenburg), b. there April 4, 1773, d. April 9, 1829.

Turn (Fr. *Double*; Ger. *Doppelschlag*), the well-known ornament (q.v.), which is expressed by a *∞* above the note, and which is formed by means of an upper and lower appoggiatura (hence the German name). The auxiliary notes are the upper and under second according to the key signature; if one of these auxiliary notes is to be chromatically changed by a *♯*, *♭*, etc., this is effected by placing one of the latter above or under the sign (according as the upper or under second is meant):

In cases where the sign of the turn is so placed that doubt arises as to the part for which it is written, let it be remembered that ornaments almost always are intended for that part which carries the melody. When the sign *∞* is placed directly over the note, the T. is performed quickly at the beginning of its value, and then what may chance to remain is sustained:—

Only when the same sound precedes, is the T. played before the time, i.e. affixed to the preceding note:—

If the sign occur *after* the note, only the last portion of the latter is always broken up by the T.:—

Should the simple dotted rhythm *♩.* be ornamented by a T., after the first note, the second can retain its full value (*a*); or if

the dotted rhythm be enforced, shortened to the half (b):—

However, in many cases another resolution is yet more suitable, which only concerns the second quaver:—

Analogous is the following, in $\frac{3}{4}$, $\frac{3}{8}$, and similar time signatures, to be performed in place of the dotted formation (Mozart, Sonata in D, Rondo):

thus: or:

The *rebounding* or *trilled* T. ("prallend," "gertrillert") begins with the passing shake, and continues with the ordinary T. (Mozart, Sonata in F):—

generally simplified:

The *inverted* T., rarely used, and now quite in disuse, was expressed by the sign standing erect ∞ or upside down ∞ . This is now always indicated by small notes, or written out in exact note value:—

J. N. Hummel, in his Pianoforte Method, made the blameworthy and also abortive attempt to exchange the meanings of ∞ and ∞ , and in this unfortunately found a follower in Spohr (Violin School).

Turnhout, (1) Gérard de (really Gheert Jacques, named T.), Belgian contrapuntist, b. about 1520, Turnhout, d. Sept. 15, 1580, Madrid. In 1545 he was chapel-singer in the Cathedral at Antwerp. In 1562 he was received into the Confrérie de la Vierge as master (see GUILDS); in 1563 he became cathedral capellmeister. The damage (destroying of organs, plundering of libraries, etc.) caused by the iconoclasts of 1566 was made good by him during the years immediately following, by rebuilding, and obtaining copies, etc., so far, indeed, as was possible. In 1572 he became capellmeister to

Philip II. at Madrid. T. published: a book of motets a 4-5 (1568), a book of motets and chansons a 3 (1569), "Præstantissimum divinæ musices auctorum Missæ X." a 4-6, 1570; the 6th Mass is by T. himself. Other compositions are to be found in the Collections of Phalèse and Tylman Susato.

(2) Jean de (really Jean Jacques), son of the former (as de Burbure has shown), was from 1589 (and probably earlier) up to at least 1595 court capellmeister to the Duke of Parma (Stattholder of the Netherlands) at Brussels. He published a book of madrigals a 6 (1589), madrigals a 5 (1595), and motets a 5-8 (1600).

Turpin, Edmund Hart, distinguished organist, b. May 4, 1835, Nottingham; in 1869 organist of St. George's Church, Bloomsbury, in 1875 secretary of the College of Organists, from 1880 editor for several years of the *Musical Standard*. He has written many sacred vocal compositions and organ pieces, and has edited an edition of classical pianoforte works, with comments, etc.

Turtschaninoff, Peter Iwanowitsch, b. Nov. 20, 1779, d. March 4, 1856, Petersburg, as Russian high priest; his much-prized sacred compositions are preserved in the Imperial chapel.

Tutto (Ital.), all; *tutta la forza*, all the power; *tutti*, all, in contradistinction to *solo*, marks the entry of orchestra or chorus. (See SOLO.)

Tuyaux (Fr.), organ pipes.

Twice-accented octave, contains the notes—

(Cf. A, the synopsis, p. 1.)

Tye, Christopher, English organist and composer, d. about 1572; he took his degree of Mus.Doc. at Cambridge in 1545, and in 1548 was incorporated in the University of Oxford. He became rector successively of the parishes of Doddington-cum-Marche and Newton (till 1570). T. published *The Acts of the Apostles*, etc., a setting of the first 14 chapters of that book. Anthems of this are to be found in collections: Page's "Harmonia Sacra," Boyce's "Cathedral Music," etc.

Tylman Susato (Tilman, Tielman, Thieleman), composer and famous music printer at Antwerp, probably a native of Soest (Susatum), Westphalia. He appears to have lived first at Cologne, as in the account-books of the city of Antwerp he is mentioned as Tielman of Coelen. In the year 1531 we read of him at Antwerp as instrumentalist at the Cathedral, and as "Stadt-musicus." In 1543 he commenced to print music, and the undertaking grew to such dimensions that, already in 1547, he built an establishment of his own. His last publication was the 14th book of Chansons u 4 (1560). In 1564 the

of masses and motets *a* 8-12 (1622); and a book of psalms and motets *a* 12 (1624).

(2) Blasio, Venetian priest, published "Thesaurus antiquitatum sacrarum, complectens selectissima opuscula, in quibus veterum Hebræorum mores, etc., illustrantur" (1744-69; 34 folio volumes, of which the 32nd treats entirely of the music of the Hebrews; among other things it contains a Latin translation of 10 chapters of the "Schilte Haggiborim," etc.

Uhl, Edmund, b. Oct. 25, 1853, Prague, studied at the Leipzig Conservatorium, has lived in Wiesbaden since 1878 as teacher at the Conservatorium, and as musical critic of the *Rheinischer Courier*, also as organist at the Synagogue. Of his compositions, some interesting chamber music (pf. trio, 'cello sonata), a romance for violin with orchestra, also some books of pf. pieces and songs, have become known.

Uhlig, Theodor, violinist, b. Feb. 15, 1822, Wurzen near Leipzig, d. Jan. 3, 1853, Dresden, pupil of Fr. Schneider at Dessau (1837-40), from 1841 member of the royal orchestra, Dresden. From being a decided opponent of Wagner, he became one of his most enthusiastic adherents (he arranged the pf. score of *Lohengrin*). Of his numerous compositions (he left 84 works: symphonies, music to vaudevilles, chamber music) there have only appeared some songs and a "Charakterstück" in fugue form (1882). During the last years of his life T. was active only as an author: "Die Wahl der Taktarten," "Die gesunde Vernunft und das Verbot der Fortschreitung in Quinten," "Druckfehler in den Symphonie-Partituren Beethovens." In 1888 "Briefe Wagners an U." appeared (English, 1890).

Uhlrich, Karl Wilhelm, b. April, 10, 1815, Leipzig, d. Nov. 26, 1874, Stendal, pupil of Matthäi. He was a member of the Gewandhaus orchestra, then leader at Magdeburg, and finally, for many years up to his death, court leader at Sondershausen, and one of the founders of the fame of the *Loh-konzerte*.

Ulibischeff, Alexander von, Russian nobleman and amateur of music, b. 1795, Dresden, as son of the Russian ambassador there, d. Jan. 24, 1858, on his estate at Nishnij Novgorod, whither he had retired after the accession of the Czar Nicholas to the throne, having filled various diplomatic posts at European Courts. He wrote a biography of Mozart: "Nouvelle Biographie de Mozart, suivie d'un aperçu sur l'histoire générale de la musique" (1844, 3 vols.; Ger. by Gantter, 2nd ed. 1859). He was severely attacked by Lenz ("Beethoven et ses trois styles") for the denunciatory verdict on the last works of Beethoven which he had expressed in the "Aperçu." U. answered with "Beethoven, ses critiques et ses glossateurs" (1857; Ger. by Bischoff, 1859), in which he only emphasised his judgment, and excited general indignation.

Ulrich, Hugo, composer, b. Nov. 26, 1827, Oppeln, Silesia, d. May 23, 1872, Berlin. Nature had bestowed on him rich gifts, but pecuniary circumstances, unfortunately, compelled him to employ his time in the humbler work of proof reading, arrangements, pianoforte scores, etc. With exception of a four years' professorship of composition at the Stern Conservatorium (1859-63) at Berlin, U. held no public post; teaching was a torture to him. He received his final musical training from S. Dehn, at Berlin, whither he had betaken himself (1846), after completing his college curriculum at Breslau and Glogau. He had previously studied under Mosewius at Breslau. The few works, which will hold the name of U. in good remembrance, are:—A pf. trio (Op. 1), and 3 symphonies: No. 1, in B minor, No. 2, "Symphonie triomphale," (on which the Belgian Académie bestowed a prize in 1853; it was played with success in many towns), and No. 3 in G, a work of his later years when composition was no longer a joy to him. An opera, *Bertrand de Born*, remained unfinished.

Umbreit, Karl Gottlieb, b. June 9, 1763, Rehstedt (near Gotha), d. there April 27, 1829, after having been for several years organist at Sonnenborn near Gotha. He was an excellent performer (pupil of Kittel at Erfurt), and published: "Allgemeines Choralbuch für die protestantische Kirche" (1811, 332 Chorales *a* 4 with a long preface; translated into French by Choron, without date); a collection of chorale melodies: "Die evangelischen Kirchenmelodien zur Verbesserung des häuslichen und kirchlichen Gesangs" (1817); also a number of organ works: 12 organ pieces (1798), 25 organ pieces, 50 chorale melodies (for one voice), 24 chorale melodies, with various basses (in books *a* 12), 4 chorale melodies with variations.

Umlauf, (1) Ignaz, composer, b. 1756, Vienna, where he d. June 8, 1796. He was for several years musical director at the German Opera at Vienna, and acted as deputy for Salleri at the Court Chapel. His operettas; *Die Bergknappen*, *Die pucefarbenen Schuhe* (*Die schöne Schusterin*), *Die Apotheke*, *Die glücklichen Jäger*, *Der Ring der Liebe*, *Das Irrlicht*, were formerly all the rage, while his romance "Zu Steffen sprach im Traume" was extraordinarily popular.

(2) Michael, son of the former, b. Aug. 9, 1781, Vienna, d. there June 20, 1842, was, like his father, first of all violinist at the German Opera, then deputy for Weigl, and after the death of the latter, capellmeister at the German Opera, until it was administered by private hands. He wrote an operetta, *Der Grenadier*, an opera, *Das Wirtshaus in Granada* (not produced), 6 ballets, some sacred pieces for the Court Chapel, and published: a violin sonata, a pf. sonata for 4 hands, and a few pf. pieces.

Umlauf, Paul, b. Oct. 27, 1853, Meissen, pupil of the Leipzig Conservatorium, holder of the Mozart Scholarship from 1879-83, published various vocal pieces, among which "Agandecca" for male chorus, solo and orchestra, and "Mittelhochdeutsches Liederspiel" (4 solo voices with pf.). His *Evantia* gained a prize at the Coburg Competition for one-act operas in 1893.

Un (*uno*, Ital., "one"); *un poco*, a little; *una corda*, with soft pedal (in pianoforte playing), see **CORDA**.

Unca (Lat. "hook"), the small flag of the quaver ♪, also the quaver itself; *his unca* ♪ (semi-quaver), etc.

Unda maris. (See **TREMULANT**.)

Undertones (undertone series), is the name given to that series of tones which, as opposed to the upper tone series, extends downwards; and these are as necessary for the explanation of the consonance of the minor chord, as the upper tone series for that of the major chord (see **CLANG**). The compiler of this dictionary has made repeated attempts to show the existence of U. answering to the upper-tone series; in his "Musikalische Logik" he has demonstrated their subjective origin in the ear (1873); and, from various signs, he thinks himself justified in believing in their objective existence (cf. "Die objektive Existenz der U. in der Schallwelle," 1876, and "Musikalische Syntaxis," 1877). In his "Katechismus der Musikwissenschaft," p. 79, he has shown, by proof, finally, of a scientific character, why, in spite of the commensurability of the vibration forms, a tone, by summation of its vibrations, cannot produce the under series; and thus the question may be considered finally solved. Each tone, of necessity, produces the whole series of undertones; but each, according to its ordinal number, so many times; the second, twice, the third, three times, etc., proceeding exactly thus, so that by interference, they neutralise one another.

Unequal Counterpoint, antithesis to *Equal* (note against note), florid or syncopated (see **COUNTERPOINT**).

Unequal Temperament. (See **TEMPERAMENT**.)

Unfretted (Ger. *Bundfrei*), a term used in connection with a clavichord which had a special string for each key. (Cf. **PIANOFORTE**.)

Ungarisch. (See **HUNGARIAN**.)

Unger, (1) Johann Friedrich, b. 1716, Brunswick, d. there, Feb. 9, 1781, as councillor and private secretary to the Duke. He was the first who attempted to record the notes played on a keyboard by means of a mechanical apparatus applied to the latter (see **MELOGRAPH**). He claimed right of priority over the mechanician Hohlfeld, who, in 1752, according to the statement of Euler, had constructed an instrument of a similar character, and described his invention in "Entwurf einer Maschine, wodurch

alles, was auf dem Klavier gespielt wird, sich von selber in Noten setzt" (1774).

(2) **Karoline** (named in Italy, *Carlotta Ungher*), celebrated stage vocalist, b. Oct. 28, 1803, Stuhlweissenburg, (Hungary), d. Mar. 23, 1877, at her villa near Florence. She was trained at Vienna, and by Ronconi at Milan, sang at Vienna, Naples, Milan, Turin, Rome, 1833 at Paris, but only with moderate success, and then again in Italy, until in 1840 she married at Florence a certain person of the name of Sabatier. She was of imposing appearance and had a powerful voice, though not free from sharpness in the higher register.

(3) **Georg**, the Siegfried of Wagner's "Nibelungen" at Bayreuth in 1876 and elsewhere, b. March 6, 1837, Leipzig, d. there Feb. 2, 1887. At first he studied theology, but already in 1867 made his *début* at Leipzig, and then sang without much success at Cassel, Zürich, Bremen, Neustrelitz, Brunn, Elberfeld and Mannheim, until Wagner selected him as the representative of the youthful hero for the Bayreuth Festivals. U. studied the part under Hey at Munich, and his impersonation of Siegfried proved most gratifying. He was engaged at Leipzig from 1877-81.

Ungher-Sabatier. (See **UNGER**, 2.)

Unions. (See **SOCIETIES**, **MUSICAL**.)

Unison (Ger. "Einklang"), the term applied to the doubling of the same sound. Two instruments play in U. when they give out the same notes. But in a canon in U. (cf. **CANON**), the same notes are not played simultaneously, but one after the other. It is usual to assert that the U. is not an interval, inasmuch as there is no difference between the parts or voices; such a definition is, however, mathematically bad. The U. is the zero point, the neutral point from which intervals, both above and below, are reckoned. (Cf. **PRIME** and **UNISONUS**.)

Unisonus (Lat.) **Unison**, (see **INTERVAL**); *unisono*, *all' unisono* (Ital., in unison), i.e. giving out the same sound—as, for instance, when several players perform the same piece on different pianofortes, as practice in keeping exact time, and gaining smooth technique; this method is of advantage, but if constantly employed, is open to objection; for the teacher may be able to train a number of pupils at the same time, but he cannot have sufficient control over them; by this means all individuality of interpretation is stifled. On the other hand, it is indispensable, and of the highest importance that orchestral players should be trained in unison playing. The term *unisono* is also used when several orchestral instruments have to play the same notes in various octave positions—for instance, when in a score only the bass part is written out, and over the 'cello line is written *c. b.* (*col basso*) *al un.* (*unisono*), or when the piccolo flute is to play in octaves with the ordinary flutes (in both cases, how-

ever, the notation is identical, since the double-bass sounds an octave lower, and the piccolo flute, an octave higher than the written notes).

Untersatz, in the organ, a Gedackt of 32 ft.

Unterstimme (Ger. "under voice"), the lowest part of a composition in several parts; the term is opposed to "middle parts" and "upper part."

Uómo, man; "primo u.," principal male singer on a stage (as prima donna is the first female), the chief tenor singer, formerly (during the 17th and 18th centuries) also the first soprano (Evirato).

Upbeat is the name given to the apparently incomplete bar at the beginning of a piece or phrase, as, for example, in

the quaver standing alone at the beginning. As, in fact, in our system of notation, the bar-line is always placed before the part of the bar which forms the centre of gravity of the bar motive (see *METRE*), all metrical bar motives which commence on an unaccented part have their bar line somewhere in the middle. There is nothing more false than to separate such an upbeat from what follows, and to look upon the notes between two bar lines as comprehending the motive. On the contrary it may be asserted generally, that in pieces which commence with a full bar (on the "one") it is necessary to see how much at the end of the bar belongs as upbeat to the next one. For the upbeat is not only a possible form, but the real point of departure, the *punctum saliens* of all musical formation. (Cf. *METRE*, ART OF.)

Upper-dominant. (See *DOMINANT*.)

Upper part, is the term applied, in music of several parts or voices, to the highest. In modern music the upper part is especially the one bearing the melody (formerly the middle voice, the tenor), wherefore it is also named the melodic part. It may reasonably be supposed that the upper part described as Cantus, instead of, as formerly, Discantus, is a proof that, already in the 16th century, the U. P. began to be felt as the ruling one.

Urban, (1) Christian, theorist, b. Oct. 16, 1778, Elbing, town musician there, afterwards at Berlin, and finally town musical director at Dantzig. He published: "Ueber die Musik, deren Theorie und den Musikunterricht" (1823); "Theorie der Musik nach rein naturgemässen Grundsätzen" (1824); and a prospectus of 16 pages: "Ankündigung meines allgemeinen Musikunterrichtssystems und der von mir beabsichtigten normalen Musikschule" (1825). He also wrote an opera, *Der goldne Widder*, and music to Schiller's "Braut von Messina."

(2) Heinrich, gifted composer, b. Aug. 27, 1837, Berlin, pupil of Hubert Ries, Laub, Hellmann, and others, lives in Berlin, since 1881 teacher at Kullak's Academy. He has composed a symphony, "Frühling" (Op. 16), an overture "Fiesco" (Op. 6), and "Scheherezade" (Op. 14), a violin concerto, violin pieces, songs, etc.

(3) Friedrich Julius, brother of the former, b. Dec. 23, 1838, Berlin, was solo soprano in the Royal Cathedral Choir under Neithardt, and private pupil of H. Ries and Hellmann (violin), Grell (theory), Elsler and Mantius (singing), and since 1860 has been much sought after as a teacher of singing at Berlin; he also holds appointments as singing-master at schools. His "Kunst des Gesanges" is an educational work well spoken of by the press; he has also published songs.

Urbanek, Ian, b. Jan. 31, 1809, Slanin (Bohemia), distinguished violinist, student at Prague Conservatorium (Pixis); he was afterwards leader at the Königstädt Theatre, Berlin.

Urfey, Thomas d', famous English singer who died at an advanced age, Feb. 26, 1723. He published "Wit and Mirth, or Pills to Purge Melancholy" (1719), and a collection of ballads and songs, in part of his own composition.

Urhan, Chrétien, violinist and composer, b. Feb. 16, 1790, Montjoie near Aix la Chapelle, d. Nov. 2, 1845, Paris. He received his first violin instruction from his father, and trained himself in pianoforte playing and composition, until in 1805 the Empress Josephine of France, to whom he had been presented at Aix la Chapelle, placed him under Le Sueur for further training in composition; on the pianoforte he never received any lessons. He devoted his attention to the *viola d'amour* which had fallen into oblivion (Meyerbeer wrote for him a solo in *Les Huguenots*), and followed the example of Woldemar (q.v.) in adding a fifth string to the violin, i.e. the c-string a fifth below, so that the violin included viola compass ("Alt violine" Violin-alto); he also distinguished himself as violinist in Baillot's Quartet party. In 1816 he entered the orchestra of the Grand Opéra, of which he was later on solo violinist; he was also for a long time organist of St. Vincent de Paul. U.'s printed compositions are: 2 *Quintettes romantiques* for two violins, 2 violas and 'cello, quintet for 3 violas, 'cello, and double bass (with drum *ad libitum*), 3 *Duos romantiques* for pianoforte for four hands, pf. pieces, and songs.

Urio, Francesco Antonio, Italian church composer, b. probably 1660, Milan; in 1690 he was Franciscan monk at Rome, and maestro of the Church of the Twelve Apostles, and as such he published his Op. 1, "Motetti di concerto a 2, 3, e 4 v. con violini e senza." In addition, the following works of his are known: "Salmi concertati a 3 v. con violini" (Op. 2); an oratorio,

Sansone accettato da' Filistini, and a "Te Deum." The last-named is of particular interest in that Handel made use of a great number of themes from it, transforming them by the power of his genius, especially in his "Dettingen Te Deum," but, to some extent, also in *Saul*, *Israel*, and *Julius Caesar*. Cf. E. Prout's "Urio's Te Deum and Handel's use thereof," *Monthly Musical Record*, 1871; and Chrysander's detailed notice in the *Allg. musikal. Zeitung* (1878-79).

Ursillo, Fabio, (also merely, Fabio), performer on the archlute (archilinto) and several other instruments, lived about the middle of the 18th century at Rome. He published:—Trio sonatas for 2 violins and cello, also flute sonatas; "Concerti grossi" and other works for the archlute remained in manuscript.

Urspruch, Anton, b. Feb. 17, 1850, Frankfort, studied under Ignaz Lachner and M. Wallenstein, afterwards under Raff and Liszt, for some time teacher of pianoforte playing at the Hoch Conservatorium at Frankfort, since 1887 at the Raff Conservatorium there. He is a distinguished pianist, and has shown himself

a talented composer:—A pf. sonata for 4 hands, a pf. concerto, variations and a fugue on a theme of Bach's for 2 pianofortes, a symphony, a pf. quartet, a trio, part songs, etc. U. is the son-in-law of Alw. Cranz (q.v.).

Ursus. (See BÄHR.)

Ut, the solmisation name of the sound *C*. Cf. *Do*; likewise see SOLMISATION and MUTATION.

Utendal, (Utenthal, Untendal), Alexander, born in the Netherlands, but spent the greater part of his life in Germany. He was, at first, musician, afterwards capellmeister to the Archduke Ferdinand of Austria at Innsbruck, where he died May 8, 1581. He published: "7 psalmi penitentiales" (1570), 3 books of motets for 5, 6, and more voices (1570-77), three Masses a 5-6, and Magnificats a 4 (1573), likewise "Fröhliche neue teutsche und französische Lieder, etc., mit 4, 5 und mehr Stimmen" (1574 and freq.). Joannelli's "Novus thesaurus musicus" and Paix's Organ Book contain some pieces by U.

V.

V. in scores, pianoforte scores, etc., is the usual abbreviation for Violin; *Vc.* (*V^{uo}*) = Violoncello; *Vla.* = Viola; *V.S.* = *volti subito* (turn quickly) or *vide sequens* (see the following); *m.v.* = *mezza voce*. **V.** = Vers, Verset (in Catholic hymn-books). **V.** also stands for "Versicle" (R. "Response") in service books, whether sung or said.

Vaccai, Niccolò, opera composer and teacher of singing, b. March 15, 1790, Tolentino, d. Aug. 5, 1848, Pesaro, went when young with his parents to Pesaro, where he received his first musical instruction, and afterwards to Rome to study law; but he soon adopted music as the vocation of his life, became a pupil of Jannaconi for counterpoint, and studied besides, in 1812, opera composition under Paesiello at Naples. His first opera was *I solitari di Scizia* (Naples, Teatro Nuovo, 1815). As he had only little success with his operas and ballets at Naples and Venice, already, in 1820 he devoted himself to the teaching of singing (at Venice, Trieste, Vienna). Renewed efforts with operas at Parma, Turin, Milan, Venice, etc., did not win for him a solid reputation, although some, especially *Giulietta e Romeo* (Milan, 1825) made a good impression; V. betook himself, therefore, in 1829 to Paris and in 1832 to London, and obtained for himself in both towns the name of a distinguished teacher of singing. Some years afterwards, he returned to Italy, again wrote some operas, with which he obtained a *succès d'estime*, and in 1838 succeeded Basili as professor of composition and censor

(inspector of studies) of the Milan Conservatorio, which posts he held until his death. Besides 17 operas (the last, *Virginia*, 1845, for Rome) and 4 ballets, V. wrote a number of cantatas (among others, jointly with Coppola, Donizetti, Mercadante, and Pacini, a funeral cantata on the death of Malibran, 1837), also sacred vocal works, arias, duets, romances, and two vocal Methods: "Metodo pratico di canto italiano per camera" (much in vogue), and "21 ariette per camera, per l'insegnamento del bel-canto-italiano."

Vaet, Jacob, Netherland contrapuntist of the 16th century, imperial chapel singer at Vienna under Charles V., Ferdinand I., and Maximilian II., d. Jan. 8, 1567, as imperial capellmeister to Maximilian II. He published: "Modulationes 5 voc." (1562). Some of his compositions are to be found in Joannelli's "Novus thesaurus musicus" (1568), in Tyman Susato's "Ecclesiasticæ cantiones" (1553), in Montan-Neuber's "Evangelien-sammlung" (1554-56), and his "Thesaurus musicus" (1564), etc.

Vagans. (See QUINTUS.)

Valentini, (1) Giovanni, Roman composer, published: "Motetti a 6 voci" (1611); "Musiche concertate a 6-10 voci ossia istromenti" (1619); "Musiche a 2 voci col basso per organo" (1622); "Sacri concerti a 2-5 voci" (1625); "Musiche da camera a 2-5 voci, parte concertate con voci soli e parte con voci ed istromenti" (1621, madrigals, etc.); "Libro V. Le musiche da

camera a una e 2 voci col basso continuo" (1622). Other more important works (masses, magnificat, Stabat) remained in manuscript.

(2) Pietro Francesco, celebrated composer of the Roman School, d. 1654, Rome; he published: "Canone . . . sopra le parole del Salve Regina, 'Illos tuos misericordes oculos ad nos converte,' con le risoluzioni a 2, 3, 4, e 5 voci" (1629, canon with more than 2,000 possible solutions; the theme is printed in Kircher's "Musurgia," I., 402); "Canone nel nodo di Salomone a 96 voci" (1631, also in Kircher); "Canone a 6, 10, 20 voci" (1645); 2 "Favole" (pieces for the stage, operas): *La Mitra* (1654) and *La trasformazione di Dafne* (1654), both with intermezzi. His heirs also published: 2 books of madrigals a 5 (1654); 2 books "Motetti ad una voce con istromenti" (1654); 2 books of motets a 2-4 (1655); 2 books "Canzonetti spirituali a voce sola" (1655); 2 books ditto a 2-3 (1656); 2 others a 2-4 (1656); "Canoni musicali" (1655, 155 pages); 2 books a 1-2 "Musiche spirituali per la natività di N. S. Gesù-Cristo" a 1-2 (1657); 2 books "Canzoni, sonetti ed arie a voce sola" (1657); 4 books "Canzonetti ed arie a 1, 2 voci" (1657); and 2 books of litanies and motets a 2-4. A number of theoretical works on music in manuscript are to be found in the Barberini Library at Rome.

(3) Valentino Urbani, named V., celebrated evirato (altist), sang in London from 1707-14.

(4) Giuseppe, violinist and composer, appointed about 1735 at the court of Florence, published:—"12 sinfonie a 2 violini e violoncello," "7 bizarrerie per camera a 2 violini et violone," "12 fantasie a 2 violini e violoncello," "8 idee da camera a violino solo e violoncello," "12 sonate a 2 violini e violone," "Concerti a 4 violini, alto viola, violoncello e basso continuo," violin sonatas with bass, and 10 other concertos.

Valentino, Henri Justin Armand Joseph, celebrated conductor, b. Oct. 14, 1785, Lille, d. Jan. 28, 1856, Versailles; he was the son-in-law of Persuis, through whom he was drawn to Paris. In 1820 V. became second conductor, and in 1824 first conductor, alternately with Habeneck, at the Grand Opéra; from 1831-37 at the Opéra Comique. In 1837 V. established the first popular concerts of classical music at the Salle St. Honoré (Salle Valentini), but was forced in 1841 to give them up; the quadrilles of Musard and Tolbecque were preferred to symphonies. From that time V. lived in retirement at Versailles.

Valotti, Francesco Antonio, distinguished organist, composer, and clever theorist, teacher of Abbé Vogler, Sabbatini, etc., b. June 11, 1697, d. Jan. 16, 1780, Padua. He became a Franciscan monk, was still, at the age of 25, pupil of Calegari at Padua, and in 1728 received the post of maestro at the church

of S. Antonio, which he held until his death. V. was considered in his time one of the most important church composers. He showed Burney two cupboards full of his compositions; of these only the following were printed:—"Responsoria in paraseve" a 4, "Responsoria in sabbato sancto," "Responsoria in Coena Domini," and his most learned theoretical work, "Della scienza teorica e pratica della moderna musica" (1779), which was intended to be the first volume of a comprehensive treatise on composition. Sabbatini gave a sketch of his teacher's system in "Lavera idea delle musicali numeriche signature." V. was an opponent of the Rameau, as well as of the Tartini system, considered it one-sided to found a system of harmony on a fundamental note with its twelfth and seventeenth, and developed the scale from the series of the higher overtones, i.e. 8, 9, 10, 11, 12, 13, 14, 15, 16. The central point of his system was, however, the theory of the inversion of chords, which he received through Calegari from Rameau.

Valor (Lat.; Ital. *Valore*), value (of the notes). (See INTEGER VALOR.)

Valve (Ger. "Ventil"), a mechanical apparatus which gives access to, or shuts off the wind. (1) Of the valves of the organ, two kinds must be distinguished: those that are opened and closed by the organ wind itself, and those which, like pistons, are placed at rest by the pressure of a spring and moved by a lever mechanism. The pump-valves of the bellows are valves of the former kind—viz. (i.) the *suction* valve of the bellows, in the bottom board, easily movable, which opens into the bellows as soon as the latter is raised, i.e. when the air in it is rarefied; this allows the wind outside to enter into the bellows, and when the latter is quite raised, to fall back on the bottom board. But if the bellows is left to itself, the weight of the upper-board compresses the air in the bellows, and opens (ii.) the *joint-valves* in the direction of the canals, so that the density of wind is equalised between the bellows and the canals. On the other hand, the (iii.) playing-valves (Spielventile), which in the *slide-chest* (Schleiflade) give the wind access to a groove over which stand several pipes; but in the *spring-chest* (Springlade), on the other hand, only to one pipe, or to the pipes of a mixture, are moved by means of a lever mechanism, of which the last member is a key of the keyboard.

(2) The valves (pistons: invented by Clagget, 1790; likewise Blümel, 1813; cf. TRUMPET) of modern brass wind-instruments (horn, trumpet, cornet, also trombone) are mechanical contrivances which either prolong their sounding tubes (lower the tone) by restoring the communication between the principal tube and the side channels, so that in using the piston, the channel in question (as in valves most in use at the present) becomes a part of

the sounding tube, or, inversely, portions of the tube are excluded, as in the cleverly-constructed instruments à pistons indépendants invented by Ad. Sax, though hitherto little used). The ordinary valves are cylinders with two kinds of passages running in slanting directions, of which one offers to the wind a longer, the other a shorter way, according as the button of the valve is pressed down or not. Another kind of valves (*Tonwechselmaschinen*) are the so-called cylinder machines (*Radlmaschinen*, *Hahnmaschinen*), which only differ from the piston in that the cylinder makes not a vertical, but a rotatory motion; but this demands complicated mechanism. In both kinds of machines a state of repose is restored by springs lying in the cylinder. The valves are for the purpose of filling up mechanically the gaps of the natural scale of brass instruments; this for centuries has been accomplished in trombones by drawing out; this is possible to a certain extent in horns by stopping (*See HORN*); and in bugle horns it is effected occasionally by soundholes and keys (as in the old Zinken). Valves have put an

end to all these insufficient means. Instruments of narrow scale have now always three valves, of which the first lowers by a whole tone, a second by half a tone, a third by one and a half tones. By combination of two or all three valves, further deepening to the extent of an augmented fourth, is possible (yet all tones obtained by using several valves are somewhat too high, a drawback which is removed in Sax's non-combining valves, at the expense, however, of technique, as Sax employs six valves). The following synoptical table shows the rôle of valves (the same for horn, trumpet, and all bugle horns [with the exception of tubas]); and from it the rôle of the fourth valve of tubas (Bombardon, etc.) is easily intelligible (it lowers by a whole fourth, and together with the three other valves completely fills up the distance between the first and the second natural tone (2nd = B, 1st = B \flat , 3rd = A, 3rd + 2nd = A \flat , 4th = G, 4th + 2nd = F \sharp , 4th + 1st = F, 4th + 3rd = E, 4th + 3rd + 2nd = E \flat , 4th + 3rd + 1st = D, 4th + 3rd + 1st + 2nd = C \sharp)).

Natural tones:

Valve: 2. 1. 2. 2. 2. 1. 3. oi + oi

2. 1. 3. 2. 1. 3. oi + oi

2. 1. 3. oi + oi

The notes in bass clef are, according to a foolish tradition, noted down an octave lower than the actual sounds.

Valve. (Horn, Trumpet, Cornet, Trombone). (*See HORN*, etc.)

Vanderstraeten* (Van der Straeten), Edmond, Belgian writer on music, b. Dec. 3, 1826, Audenarde, d. Nov. 26, 1895; he studied philosophy at Ghent, and settled at Brussels in 1857, where, with the exception of a residence of several years at Dijon, he lived and held an appointment at the Royal Library. He published: "Comp d'œil sur la musique actuelle à Audenarde" (1851); "Notice sur Charles Félix de Hollande" (1854); "Notice

sur les carillons d'Audenarde" (1855); "Recherches sur la musique à Audenarde avant le XIX. siècle" (1856); "Examen des chants populaires des Flamands de France, publiés par E. de Coussemaker" (1858); "Jacques de Goüy" (1863); "J. F. J. Janssens" (1866); "La musique aux Pays-Bas" (8 vols., 1867-88, a work containing a number of valuable historical notices, expressed, however, in very terse manner); "Le noordsche Balck du musée communal d'Ypres" (1868); "Wagner, Verslag aan den heer minister van binnenlandsche Zaken" (1871); "Le théâtre villageois en Flandre" (1st vol., 1874); "Les musiciens Belges en Italie" (1875); "Sociétés dramatiques des environs d'Audenarde" (no date);

* Van, van der, etc.; Netherlands names with these prefixes, which are omitted here, should be looked for under the principal name (e.g. van Elewyck under ELEWYCK).

"Voltaire musicien" (1878); "La mélodie populaire dans l'opéra *Guillaume Tell* de Rossini" (1879); "Lohengrin, instrumentation et philosophie" (1879); "Turin musical" (1880, miscellanies); "Jaques de St. Luc" (1886); "La musique congratulatoire en 1545," etc. (1888); "5 lettres intimes de Roland de Lassus" (1891); "Les billets des rois en Flandre; xylographie, musique, coutumes" (1892).

Van der Stucken, Frank, b. Oct. 15, 1858, Fredericksburg (Texas), whence, however, his parents went to Antwerp about 1868, where he became a pupil of Benoit. He travelled, from 1879-80, in Germany, Italy, and France, was theatre capellmeister at Breslau 1881-82, lived with Grieg at Rudolstadt 1883, and had his own compositions performed at Weimar under Liszt's auspices. In 1884 V. d. S. undertook the direction of the male choral society "Arion" at New York. Of his compositions there should be mentioned the opera *Vlasda*, music to Shakespeare's *Tempest*, overture to an opera, *Ratcliff*, a Te Deum, and other choral and orchestral works; also songs and pf. pieces.

Van Duyze, Florimond, b. Aug. 4, 1843, Ghent, son of the poet of like name, lives there as advocate; but he is at the same time an industrious and talented composer. He gained the *Prix de Rome* in 1873 with his cantata *Torquato Tasso's* *dood*, and produced seven operas at Antwerp and Ghent.

Van Dyck, Ernest Marie Hubert, famous singer (dramatic tenor), b. April 2, 1861, Antwerp, first studied law at Louvain and Brussels, then became pupil of Bax St. Yves in Paris, writing meanwhile for the *Patrie*. He first became known at the Concerts Lamoureux, but became at one stroke most celebrated when the rôle of Parsifal at Bayreuth was assigned to him. In 1888 he was engaged at the Vienna Court Opera. V. D. is a brother-in-law of François Servais, whose sister he married in 1886.

Van Hal. (See WANHAL.)

Vanneo, Steffano, b. 1493, Recanati, March Ancona, Augustine monk at Ascoli, afterwards maestro of his monastery. He published a theoretical work; "Recanetum de musica aurea," etc. (1553), which is considered the best of its day; it treats succinctly, but thoroughly, of *musica plana*, mensural music, and counterpoint.

Variations are all kinds of transformations (metamorphoses) of a pregnant theme, which, however, even through the boldest disguises, must be recognisable. As a rule, a variation transforms only one or a few elements of the theme: time, rhythm, harmony or melody. The old *Doubles* (q.v.), the oldest kind of V., left these foundation-pillars untouched, and only surrounded the theme with ever-changing ornaments, and more intense figuration. (Cf.

Handel's "Harmonious Blacksmith.") But the real variation, as we find it fully developed in Haydn and Mozart, gives the theme occasionally in minor instead of major, or in $\frac{3}{4}$ time instead of $\frac{4}{4}$ or $\frac{2}{4}$ time, dots or syncopates the rhythm, develops some special motive (not belonging to the theme), conceals the theme by some counter melody full of charm, widens or contracts the contour of the melody by introducing new intensifications, or by suppression of certain prominent tones, etc. Nothing is denied to the variation, provided that, in one way or another, consciousness of the theme is not destroyed. Whereas the old *Doubles* always adhered strictly to the key, in variations of the present day contrasting keys are readily placed one against the other. As models of V., from a large number, may be named those of Beethoven in F (Op. 34), those in his pf. sonata in A flat (Op. 26), the Schubert V. in B flat, the Mendelssohn "Variations sérieuses," and those by Saint-Saëns for two pfes. on a theme by Beethoven.

Varnay, Pierre Joseph Alphonse, b. Dec. 1, 1811, Paris, d. there Feb. 7, 1879, was violinist and theatre capellmeister at The Hague, Rouen, Paris, and Bordeaux. V. composed 7 one-act operettas for the Bouffes-Parisiens, but is best known by his republican song (1848), "Mourir pour la patrie." Louis V., who since 1876 has written more than a dozen operettas for Paris (*Les mousquetaires au couvent*, 1880; *Riquet à la houppe*, 1889, etc.), was probably related to the above.

Varsoviennne, Polish dance (from Warsaw) in $\frac{3}{4}$ time, of somewhat slow movement, with long, marked notes at the beginning of the 2nd, 4th bars, etc.

Vasconcellos, Joaquim de, contemporary Portuguese writer on music, who has set himself the task of making known the merits of his countrymen with regard to music, first in a Portuguese dictionary of music, "Os musicos portuguezes (biographia-bibliographia)" (1870, 2 vols.), which corrects many erroneous statements of former lexicographers (Fétis, etc.), and gives much new and interesting information; and, secondly, in a monograph on the famous vocalist Todi, "Luiza Todi" (1873), with an "Ensaio critico sobre o catalogo del rey D. João IV." (1873), and many original notes for Pougin's two supplementary volumes to Fétis' "Biographie universelle." V. also provided a reprint of the catalogue described in the above-named work, of the Lisbon Library destroyed in 1755 by earthquake (1874).

Vasseur, Félix Augustin Joseph Léon, French composer of operettas, b. May 28, 1844, Bapaume (Pas de Calais), pupil of the Niedermeyer School of Sacred Music, organist of Versailles Cathedral since 1870. He has written, mostly for the Bouffes-Parisiens, about 20 operettas, of which *La timbale d'argent* (1872) has been the most successful. The later ones

Le roi d'Yvetot (produced at Brussels, 1873), *Les Parisiennes*, *La blanchisseuse de Berg-op-Zoom*, *La cruche cassée*, *La Sorrentine*, *L'Oppoponax*, *Le droit du seigneur*, *Le billet de logement*, *Le petit Parisien* (1882), were less satisfactory. Since then he has produced; *Le mariage au tambour*, *Madame Cartouche*, *Ninon (de Lenclos)*, *Mam'zelle Crémone*, and *La famille Vénus* (1891), also music to Chievot and Venlo's *Le pays d'or* (1892). The attempt which V. made in 1879 to undertake the management of a theatre (Nouveau Lyrique) quickly ended in disastrous fiasco. V. has published a Method for organ and harmonium, many transcriptions of operatic airs for organ (harmonium), also for pf.; likewise some sacred works (2 masses, offertories, antiphons, magnificats, in a collection entitled "L'office divin"). In 1877 he won recognition for his Hymn to St. Cecilia for soprano solo, orchestra, and organ.

Vaucorbeil, Auguste Emanuel, composer, b. Dec., 1821, Rouen, d. Nov. 3, 1884, Paris, son of the actor Ferville (stage name), pupil of the Paris Conservatoire (Marmontel, Douren, Cherubini); he first made a name with songs displaying style and feeling, and afterwards with violin sonatas and quartets for strings. In 1863 he brought out a comic opera, *Bataille d'amour*, and has since produced pf. pieces, "Intimités"; a choral work, "La mort de Diane," with great success at one of the *Concerts Spirituels*, and a number of sacred songs in the musical paper, *La Maîtrise*. In 1872 V. became government commissioner of the subsidised Paris theatres, and in 1880 director of the Grand Opéra.

Vauville is, properly, the name of French popular songs of satirical tendency pointedly expressed in a short refrain. During the last century the V. was introduced into stage works of a lighter kind, to which ultimately the name was given. The German Liederspiel, as well as the English Ballad Opera (q.v.), arose in quite a similar way.

Vavrinecz, Mauritius, Hungarian composer, b. July 18, 1858, Czegled, in Hungary; pupil of the Pesti Conservatorium, finally of Rob. Volkmann. In 1886 his "Stabat Mater" was performed at the Buda garrison church; shortly afterwards he received the post of cathedral capellmeister at the Hungarian Coronation Church (S. Matthias), Pesth. V. has composed 5 masses, a Requiem, an oratorio (*Christus*), overture, "Die Braut von Abydos" (after Lord Byron), a "Dithyrambe," both for large orchestra; a cantata, *Der Todtensee* (poem by Otto Roquette); a symphony, etc. Since 1882 V. has been also active as a music critic.

Vecchi, (1) Orazio, a highly interesting composer of the latter part of the 16th century, b. about 1550, Modena, where he received his musical training from the monk Salvatore Essenga; he was canon at Corregio from 1586-1595, maestro of Modena Cathedral in 1596,

and, likewise, in 1598, court maestro and music-master to the ducal princes. He died at Modena, Feb. 19, 1605. V. is best known by his "Amfiparnasso" (*commedia harmonica*, i.e. a musical comedy), produced at Modena, 1594, and published at Venice in 1597. It is naturally to be regarded as a forerunner of opera, but is sharply distinguished from the first attempt made at the same time in Florence (cf. OPERA) in that V. did not write in the monodic style, but speech and reply of the various *dramatis personæ* were sung by a chorus *a 4-5* in madrigal style. Yet, after all, it was not anything altogether new, as V. himself implied in the title "Amfiparnasso"; on the contrary, isolated attempts of a similar kind had already been made during several previous decades. But V. has other claims to immortality, for he was one of the best canzonet- and madrigal composers of his time, loved tone-painting (cf. the "Selva"), and characterisation (cf. the "Veglie di Siena"), and was also an excellent master in sacred composition. His publications are: 4 books of canzonette *a 4* (the first book known only in 2nd ed. [1580]; the others appeared 1580, 1585, 1590, and like the first were repeatedly reprinted; complete ed. Nüremberg, 1593. Selected canzonetti *a 4*, published 1611 by Pierre Phalèse, and with German text at Nüremberg, 1600, and Gera, 1614); also a book of canzonetti *a 6* (1587); 2 books of madrigals *a 6*, besides some *a 7-10* (1583 and freq., 1591); a book of madrigals *a 5* (1589), "Selva di varie recreationi" . . . [*a 3-10 voci*] . . . "Madrigali, Capricci, Balli, Arie, Justiniane, Canzonetti, Fantasie, Serenate, Dialoghi, un Lotto amoroso, con una Bataglia *a 10* nel fine ed accomodatavi la intavolatura di liuto alle Arie, ai Balli ed alle Canzonette" (1590); 2 books of Canzonette *a 3* (1597, 1599; the first book with German text 1608); a book of Lamentations *a 4* for equal voices (1597); 2 books of motets *a 4-8* (1590, 1597), motets *a 6* (1604, reprint?); "Convito musicale" *a 4-8* (1597); "Hymni per totum annum, partim brevi stilo super plano cantu, partim propria arte" *a 4* (1604); "Le Veglie di Siena ovvero i vari umori della musica moderna *a 3-6 voci*" (1604; characters of all kinds are drawn in it, as: umore, grave, allegro, dolente, lusinghiero, affettuoso, etc.; also 1605 as "Noctes ludicre"); "L'Amfiparnasso, etc." (1597 [1610]). A book of Masses *a 6-8* by Vecchi was published by his pupil Paulus Brausius (German?) 1607, four of which were reprinted by Phalèse 1612. Fétis also mentions "Dialoghi *a 6 e 8 voci*" with continuo; the date 1508 is naturally a misprint (1608? The first edition of the "Biographie universelle" places under this date the 4 Lamentations *a 4*). Many collections of the period 1575-1615 contain pieces by V.

(2) Orfeo, maestro of the church of Santa Maria della Scala (after which the Scala Theatre was named), Milan, b. there 1540, d. before 1604, was likewise a famous composer, but appears

to have restricted himself exclusively to church music. The greater number of his masses, motets, psalms, etc., is preserved in the library of the Scala Church. There appeared in print 24 books, of which 4 only are still known; a book of motets *a 4* (1603), the third book of motets *a 6* (1603), a book of psalms *a 5*, Magnificats, etc. (1614).

(3) Lorenzo, church maestro at Bologna, b. 1566, published "*Misse a 8 voci*" (1605).

Veit, Wenzel Heinrich, Bohemian composer, b. Jan. 19, 1806, Repic near Leitmeritz, d. Feb. 16, 1864, as district president at Leitmeritz; he was an excellent musician, and for some years chairman (Praeses) of the School of Organists. V. wrote chamber music (6 quartets for strings, 5 quintets for strings, a trio), a symphony, overture and "*Missa solennis*," and many songs; also Bohemian and German quartets for male voices.

Velato, **Velata** (Ital.), veiled; *una voce velata*, a veiled (not clear) voice.

Velluti, Giovanni Battista, the last famous *evirato*, b. 1781, Monterone (March Ancona), d. beginning of Feb. 1861; he distinguished himself at various Italian theatres, and finally, from 1825-26, in London.

Veloce (Ital.), swiftly.

Venatorini. (See *MYSLIWECZEK*.)

Venetian swell (Ger. "*Jalousieschweller*"). (See *CRESCENDO*.)

Venosa, Prince of. (See *GESUALDO*.)

Venth, Carl, b. Feb. 10, 1860, Cologne, pupil of the Conservatorium there and at Brussels (Wieniawsky), went to America 1880, became leader of the metropolitan orchestra, and founded a school of music at Brooklyn, 1888.

Ventil. (See *VALVE*.)

Vento, (1) Ivo de, of Spanish origin, 1568, capellmeister in Landshut from 1569 until his death in 1575, organist of the Court Chapel at Munich; he published motets *a 4* (1569, 1574), motets *a 5* (1570), and several books of "*Neue deutsche Lieder*" (*a 3*: 1572, 1573, 1576, 1591; *a 4-6*: 1570, 1571, 1582). The Munich Library preserves in MS. a mass *a 6* and one *a 4* ("*Jesu, nostra redemptio*," and "*Je ne veulx rien*").

(2) Matthias, b. 1739, Naples, pupil of the Conservatorio di Loreto, d. 1777; he wrote 6 operas, and published at Paris and London: 6 trios (2 violins and bass), 6 clavier sonatas, 36 trios for clavier, violin and 'cello, canzone, etc.

Venzl, Josef, b. March 26, 1842, Munich, from 1852-58, studied at the Royal School of Music, was member of the court orchestra there; he has published instructive violin pieces.

Veracini, (1) Antonio, violinist and composer of chamber music at Florence. He published: Op. 1, sonatas for 2 violins and bass with continuo (c. 1692); Op. 2, church sonatas

for violin and bass; and Op. 3, chamber sonatas for 2 violins and bass with continuo (1696). G. Jensen has re-published a sonata from Op. 1, and one from Op. 2.

(2) Francesco Maria, distinguished violinist, b. 1685, Florence, d. 1750, near Pisa. He made such a successful *début* in 1714 at Venice that Tartini, in order to be able to enter into rivalry with him, withdrew to Ancona for renewed and serious practice. V. then undertook extensive concert tours, for two whole years played *soli* during the entr'actes at the Italian Opera, London, was engaged from 1717-1722 as chamber virtuoso at Dresden, then, for many years, as violinist to Count Kinsky at Prague; and when, in 1736, he found the London public cold (Geminiani, meanwhile, had advanced with conquering steps), he withdrew to Pisa and lived there in modest circumstances. V. published 12 violin sonatas with bass, and left in manuscript violin concertos and symphonies for strings and clavier. His concert sonata in *e* minor and two others are published in G. Jensen's "*Classische Violin Musik*." One of his sonatas was published by Ferd. David with a written-out pianoforte accompaniment, also another by Wasielewski.

Verbonnet, Jean, foreign composer, pupil of Okeghem; only a few works are preserved (a motet *a 4* in Kriesstein's "*Selectissimæ*," etc. 1540, and a "*Salve regina*" in MS. at Munich).

Verdelot (Verdelotto), Philippe, renowned Belgian contrapuntist, one of the first composers of madrigals. Nothing more is known of his life, except that between 1530-40 he lived for some time at Florence, that he was singer at St. Mark's, Venice, and that he died before 1567. Unfortunately many of V.'s compositions have been lost, or the full number of part-books not been preserved. The oldest printed work extant is a book of madrigals for lute, arranged by Adrian Willaert (1536). The original edition for voices is unknown, unless it be identical with the 3 books of madrigals *a 4* of 1537 (in a complete edition, 1566). Then followed madrigals *a 5* (the 2nd book 1538; the first unknown, but probably contained in the collected madrigals *a 5* of 1541); "*Verdelot, La più divina et più bella musica che se udisse giamai delli presenti madrigali a 6 voci*" (1541); madrigals *a 4-5*, collected from earlier publications, appeared 1540, 1541, 1546, and 1566, and a selection of those *a 4* in 1541. Of his motets only one book *a 4* is known: "*Philippi Verdeloti electiones diversorum motetorum distinctæ 4 voc.*" (1549). On the other hand, several single motets in the celebrated collections of the time (Gardane's "*Motetti del frutto*" and "*Fior de Mutetti*," Jacques Moderne's "*Motetti del fiore*," Montan-Neuber's "*Magnum opus musicum*," Kriesstein's "*Cantiones selectissimæ*" *Graphäns* "*Novum et insigne opus musicum*" in Attaignant's great collection of motets, etc.).

V. wrote a 5th part to Jannequin's "Bataille" (printed in Susato's song collection, 10th book). A mass a 4 by V. is to be found in Hier. Scotto's "Missarum quinque liber primus cum 4 voc." (1544).

Verdi, Giuseppe, the most highly-gifted Italian opera composer of the present day, b. Oct. 9, 1813 (not 1814), at Roncole, a village near Busseto (Parma), where his father was proprietor of an inn; the town of Busseto granted him a subsidy, which, increased by help from a gentleman of means, Barazzi, enabled him to seek his musical education in Milan. The director of the Conservatorio, Basilj, gave him credit for little talent and refused him admission; V. therefore became pupil of Lavigna, the "maestro al cembalo" of La Scala. After small songs and orchestral works, written under his master's guidance, V. came forward Nov. 17, 1839, with his first opera: *Oberto, Conte di San Bonifacio* (La Scala), which, in spite, or on account, of its numerous reminiscences of Bellini, met with success. His second work *Un Giorno di regno* (La Scala, 1840) failed, and was only given once. *Nabucodonosor* ("Nabucco," Nebuchadnezzar), on the contrary, made his name (La Scala, 1842; Vienna, 1843; Paris, 1845). His success increased with *I Lombardi alla prima crociata* (1843), and *Ernani* (1844), whilst *I due Foscari* (1844), *Giovanna d'Arco* (1845), *Alzira* (Carlo Theatre, Naples, 1845), *Attila* (Venice, 1846), *Macbeth* (Florence, 1847), *I Masnadieri* (London, 1847), *Jerusalem* (re-arrangement of *I Lombardi*, Paris, 1847), *Il Corsaro* (Trieste, 1848), *La Battaglia de Legnano* (Rome, 1849), and *Stiffelio* (Trieste, 1850), were either complete fiascos, or only aroused slight interest, and were unable to retain hold on the public. Only one opera of this period, *Luisa Miller* (Naples, 1849), proved an exception and has kept the stage. Verdi's brilliant career began in 1851 with *Rigoletto* (Venice), followed in 1853 by *Il Trovatore* (Apollo Theatre, Rome), and *La Traviata* (Venice), the composer's three most popular works. With these Verdi's series of triumphs was for a long time brought to a close. *Les Vêpres Siciliennes*, written for the Grand Opéra, Paris, 1855, met with a cool reception; *Simone Boccanegra* (Venice, 1857) made little impression; *Avoldo* (a revision of *Stiffelio* at Rimini, 1857) was not heard elsewhere; the *Ballo in Maschera* (1858, written for Naples, but produced for the first time in 1859 at the Apollo Theatre, Rome) contained some striking numbers, and was performed in 1861 at the Théâtre Italien, Paris, and in 1869 in a French translation, at the Théâtre Lyrique. Then followed *Inno delle Nazioni* (dramatic cantata, London, 1862), *La Forza del Destino* (Petersburg, 1862; with additional numbers, Milan, 1869, Paris, 1876), a revised *Macbeth*, (Paris, Théâtre Lyrique, 1865), and *Don Carlos* (also in Paris at the Grand Opéra, 1867). If the last-named work already showed a great

improvement in the single numbers, and on this account was better received, so was this the case, and in still greater degree, with *Aida*, which V. wrote by command of the Khedive, Ismail Pasha, for the opening of the Italian Opera at Cairo, 1871, and for which he received over £3,000. The success of this work was enormous, and it increased, if that was possible, at Milan (1872). Since then the opera found its way abroad, and was performed at Berlin (1874), Vienna (1875), Paris (1876) Brussels (1877), London, Leipzig, etc. In *Aida* V. has made an attempt to write in the Wagnerian style, but did little more than imitate externals. His music in *Aida* and also that of his Requiem (in memory of the poet Alessandro Manzoni, who died in 1873, performed for the first time in Milan, 1874) is real Italian opera music of the kind against which Wagner fought, although the instrumentation became richer, and the harmony more happy in its dissonant element. His next opera was *Otello* (Milan, Feb. 5, 1887, libretto by A. Boito). His last opera, *Falstaff* (La Scala, 1893), was produced with brilliant success. The distinctive feature of Verdi's compositions is a striving after effect, unmotivated dynamic contrasts, passionate outbursts of feeling; in this, more than in all else he shows a marked contrast to Rossini, to whom melody, the "bel canto," was the first consideration; and he shows therein a certain resemblance to Meyerbeer, to whom however, especially in his earlier works, he cannot hold a candle in the art of composition. Besides operas, V. has written a number of romances, a nocturne for three voices with flute obbligato, and a quartet for strings (1873).

Verdonck, Cornelius, a composer of the Netherland school, b. 1564, Turnhout, d. July 4, 1625, Antwerp, where a monument was erected to him in the Carmelite Church. Of his writings are preserved: French chansons, two books of madrigals for 6 and one book for 7 voices, *Magnificat a 5* (1585).

Verhulst, Jean J. H., celebrated composer and excellent conductor, b. March 19, 1816, The Hague, d. there Jan. 17, 1891; he attended the Conservatoire there, made progress by private study, and at an early age played in the orchestra under Ch. Hanssen (jun.). The bestowal of several prizes, on the part of the Society *De toonkunst*, for his first attempts at composition, encouraged him to new endeavours, and Mendelssohn pronounced a favourable judgment when V. was introduced to him by Libeck, then director of the Conservatoire at The Hague. The plan to study under Mendelssohn in Leipzig was postponed in consequence of Mendelssohn's marriage and prolonged absence from that city (1837); V. on his way to Leipzig remained in Cologne, worked for some time under Joseph Klein (Bernhard Klein's brother), and then returned to The Hague. In 1838, how-

ever, he hurried to Leipzig, and on Mendelssohn's recommendation became director of the Euterpe Concerts, enjoyed until 1842 the rich impetus offered by the city of Leipzig, then the focus of musical life in Germany, and, on his return to The Hague was appointed court musical director. After that he remained in his own country, became in 1848 conductor of the "Maatschappij tot bevordering der toonkunst" at Rotterdam, in 1860 conductor of the Dilettantia concerts at The Hague; also for a great many years conductor of the concerts of the "Maatschappij tot bevordering der toonkunst" and of the *Felix meritis* Society, of the Cecilia concerts. In 1886 he retired into private life. V. composed symphonies, overtures, quartets for strings, many sacred works (among which a Requiem for male voices, songs, part-songs, etc.). His daughter Anna is an excellent pianist.

Vernier, Jean Aimé, harpist and composer, b. Aug. 16, 1769, Paris, in 1795 became harpist at the Opéra Comique, and in 1813 at the Grand Opéra. In 1838 he received his pension. V. published sonatas for harp alone, and with violin; a quartet for harp, pf., oboe, and horn; trios for harp, flute and 'cello; duets for two harps; and many fantasias, variations, etc., for harp alone.

Verovio, Simone, music printer at Rome about 1586-1604, the first to employ copper-plate for music-printing. He had therefore a process for multiplying copies, of which much use was afterwards made; and Petrucci's epoch-making invention of music-printing by types was thereby almost entirely superseded (see MUSIC PRINTING). Among other things V. engraved Merulo's Toccatas.

Verschöbung (Ger., lit. *a shift*), a mechanism in modern pianofortes (grand) which, by means of a pedal (the left one), moves the keyboard slightly to the right, so that the hammers do not strike all three strings, but only two or one. (Cf. CORDA.)

Vesque von Püttlingen, Johann (pseudonym, J. Hoven), b. July 23, 1803, Opole (Poland), d. Oct. 30, 1883, Vienna. He was the son of an official in the Belgian War Office who, on the advance of the French, fled, and found refuge with his young wife in the castle belonging to Prince Lubomirsky of Opole. The father afterwards received an appointment at Vienna, and V. was also destined for government service; he received, however, regular musical training under Moscheles and S. Sechter. He took his degree of Dr.jur. and became state councillor; but he was also highly esteemed as pianist and composer (sonatas, rondos, etc., for piano-forte), songs, a grand mass, and 6 operas: *Turandot* (1838), *Johanna d'Arc* (1840), *Liebeszauber* (*Käthchen von Heilbronn*; 1845), *Ein Abenteuer Karls II.* (1850), *Der lustige Rat* (1852), *Libs Tellian* (1854). He also wrote *Das musikalische Autorrecht* (1865).

Viadana, Ludovico, the famous inventor of concertante sacred song for a few voices with organ bass. According to the most recent investigations of Antonio Parazzi (in the Milan *Gazzetta musicale*, 1876, and separately under title "Della vita . . . di Ludovico Grossi-V." [1876]), his real family name was Grossi, and V. only the name of his birthplace—thus, L. Grossi da V. V. was born at Viadana (near Mantua) in 1564, became cathedral maestro there (1594-1609), then church maestro at Fano, was afterwards at Venice, and finally again at Mantua; he died May 2, 1645, at Gualtieri. The invention of thorough-bass or continuo (q.v.) has frequently been ascribed to V., yet to this he can scarcely lay claim (cf. CAVALIERI, CACCINI, PERI). So far as the introduction of the continuo into church music is concerned, he had at least one predecessor; but even this one (Deering) can scarcely be considered the prime inventor. It seems that the custom, which sprang from necessity, of allowing pieces written a 4 or 5 to be sung by sets of two or three singers (the proper number not being obtainable) and the missing parts to be played on the organ, or, in the case of madrigals, on the gamba, lute, or some similar instrument, had already led to the invention of thorough-bass, as a kind of clavier score; further, that composers, towards the end of the 16th century, foreseeing such cases, at once added a running figured bass (thus, for instance, Adriano di Bologna in his "Concerti ecclesiastici a 8 v." 1595). The innovation of V. consisted in writing his church concertos deliberately in one or two parts, and in using the continuo as an harmonic support, as did the Florentine musico-dramatists in another branch. To this matter the comment "Invenzione commodata per ogni sorti di cantori e per gli organisti" on several of his title-pages bears reference. The list of V.'s works has been considerably increased by Parazzi; the following are now known: canzonets a 4 (1590); canzonets a 3 (1594); madrigals a 4 (1591); madrigals a 6 (1593); Masses a 4 (1596 and frequently); 2 books of Vesper psalms a 5 (1595, 1604); "Falsi bordonni, etc." a 5 (1596); "Completorium Romanum" 8 v. (2 books, 1597, 1606); motets a 8 (1597); Psalms and Magnificats a 4 (1598 and frequently); "Officium defunctorum" (1600); Vesper Psalms a 8 (1602); "Cento concerti ecclesiastici 1, 2, 3 e 4 voci con il basso continuo per sonar nell'organo" (1st book [at the end a canzone for violin, zink, 2 trombones and bass] 1602 and frequently [also under the title "Opus musicum sacrarum concentuum, etc.," Frankfort 1612], 2nd book, 1607 and frequently, 3rd book [2nd ed.] 1611; complete edition, "Opera omnia sacrarum concentuum, 1, 2 et 3 vocum cum basso continuo, etc.," Frankfort, 1620); "Litanie" a 3-12, 2nd ed. (1607); "Officium ac missæ defunctorum 5 voc." (1604); "Lamentationes Hieremiæ" 4 equal voices (1609); "Symphonie musicali a 8 v. . . pe-

ogni sorti d'istromente" with figured bass (organ) 16ro; "Responsoria ad lamentationes Hieremias 4 voc." (1609); "Completorium romanum 4 voc. . . cum basso continuo" (1609); "Salmi a 4 voci pari col basso per l'organo, brevi, commodi ed ariosi con 2 magnificat" (1610); "Falsi bordoni a 4 voci," together with "Sicut erat"; "Te Deum and Salve regina 8 voc. (1612); "24 Credo a canto fermo, etc." (1619); "Missa defunctorum 3 voc." (1667). To these must be added some reprints and selections; some of those quoted may, however, be identical.

Vianesi, Auguste Charles Léonard François, b. Nov. 2, 1837, Leghorn, trained in Italy (Pacini and Döhler), went to Paris in 1857 with recommendations to Rossini. In 1859 he became conductor at Drury Lane Theatre, London, and subsequently at New York, Moscow, Petersburg, and again in London, and later on, at a large number of other theatres in Great Britain and on the Continent, also at Philadelphia until 1887, when he was elected maître de chapelle of the Paris Grand Opéra.

Viardot, Michelle Pauline, distinguished singer, daughter and pupil of the famous Garcia, sister of Malibran, b. July 18, 182r, Paris. As a child she accompanied her parents in their tour through America; in Mexico she received pianoforte lessons from the organist Marcos Vega, and afterwards, at Paris, became the pupil of Meysenberg and Liszt, studying also composition with the latter. In 1837 she made her *début* at a concert given by her brother-in-law, de Bériot, at Brussels, achieved enormous success by her singing, and soon afterwards commenced her first concert-tour through Germany, visiting also Paris. In 1839 she made her first appearance on the (London) stage in the rôle of Desdemona; her reputation quickly spread, and the director, Viardot, of the Théâtre Italien, Paris, went purposely to London to hear her, engaged her, became her husband in 1847, gave up the direction of the Opéra, and managed extensive tours for his wife throughout the whole of Europe (he died May 5, 1883). In 1849 Mme. V. was engaged at the Paris Grand Opéra to create the rôle of Fidès in Meyerbeer's *Prophète*. After a concert-tour and appearances on various stages she created the rôle of Sappho in Gounod's opera of that name, and played Orphée at the revival of Gluck's opera (played 150 times to crowded houses) at the Théâtre Lyrique in 1859. Soon afterwards she retired from the stage, and went to Baden-Baden, and since 1871 has lived at Paris and Bougival. Mme. V. is thoroughly musical both by nature and training, and is known as the composer of songs and several operettas (*Le dernier sorcier*, *L'Ogre*, *Trop de femmes*, performed at her house at Baden-Baden). She has also arranged 6 of Chopin's Mazurkas for voice, and published a collection of classical

songs with pianoforte accompaniment, etc. Her daughter Louise Hérítte-V., b. Dec. 14, 1841, Paris, was for several years (up to 1886) teacher of singing at the Hoch Conservatorium at Frankfurt. She has composed an opera, *Lindoro* (Weimar, 1879), a cantata, *Das Bacchus-fest* (Stockholm, 1880), a pf. quartet, a terzet, songs, etc. Two other daughters, Mme. Chamerot-V. and Marianne V., are excellent concert singers, and a son, Paul V. (pupil of Léonard), is a gifted violinist.

Vibrations are regular periodic movements like those of the pendulum of a clock; but, especially, quick periodic movements of elastic bodies, which give birth to corresponding quick changes in the density of the surrounding air, and become perceptible as tones. Thus the V. of strings first set into molecular vibration the sounding-board over which they are stretched, and this, throughout its whole surface, communicates to the air the several movement shocks. (For other kinds of tone production, see WINN INSTRUMENTS.) Each maximum of deviation from a state of equilibrium in a positive direction (*i.e.* in the direction in which the tone-exciting power works) is such a movement shock, and this is quickly transmitted through the air (see ACOUSTICS), in that it produces a wave of condensation. The return of the vibrating body and the deviation towards the negative side produce corresponding changes in the density of the air (re-establishment of equilibrium and wave of rarefaction). The strength of the tone depends upon the extent of the deviation (amplitude); its pitch, upon the rapidity with which the deviations succeed one another. Pitch can be determined by the number of V. in a given time (a second), or by the length of the sound-waves; but as the rapidity with which sounds are transmitted depends upon temperature, the former method is the more exact, and the only one employed for scientific purposes. Concerning the mode of counting vibrations, see SIREN. The vibration numbers of two sounds always stand in inverse ratio to the length of their sound-waves, *i.e.* a sound which has a sound-wave twice as long as that of another sound, has, with respect to the same, half the number of vibrations. In fact, the simpler the ratio, expressed in figures, between vibration numbers or sound wave-lengths, the easier it is to grasp their musical relationship; the mathematical theory of intervals in itself, is, however, insufficient (*cf.* EULER). Concerning relative vibration ratios of tones, *cf.* INTONATION.

Vibrato (Ital.). (See TREMOLO.)

Vicentino, Nicola, composer and theorist, b. 1511, Vicenza, pupil of Adrien Willaert at Venice, afterwards court maestro and music-master to the Este princes at Ferrara. He lived for several years at Rome in the service of the Cardinal Hippolito of Este, where he held learned disputations with the Portuguese

musician Vicente Lusitano (author of the "Introduzione facilissima e novissima di canto fermo figurato," etc., 1553), in which, however, he was worsted. V. had published a book of madrigals *a 5*, in which he made an attempt to revive the chromatic and enharmonic genera of the ancients ("Dell' unico Adriano Villaert discepolo D. Nicola V. madrigali a 5 voci per teorica e per pratica da lui composti al nuovo modo del celebrissimo suo maestro ritrovato," 1546); and he had also constructed an "Archicembalo" and "Archiorcano" which made a distinction between enharmonic sounds (\sharp and \flat), really derived from different roots. His defeat induced him to discuss the subject in detail in a pamphlet, "L'antica musica ridotta alla moderna pratica" (1555, with a description of the Archicembalo). He described the enharmonic-chromatic organ in a pamphlet, "Descrizione dell' arciorcano" (1561). Zarlino and Doni declared that V. understood nothing of ancient music. From the standpoint of the present day, V.'s attempt deserves attention for two reasons: firstly, because he gave definite expression to the idea then in vogue that a reform in the art of counterpoint, which had degenerated into artificialities, could only be effected by a return to the music of the ancients (this idea led finally to the invention of monody); and secondly, because he broke through the strict diatonic limits of the church modes. The immediate successors of V. in chromatics were Willaert, who had been fellow-pupil with him under Cyprian de Rore, and the still more energetic and consistent Prince of Venosa. (See GESUALDO.)

Victoria. (See VITTORIA.)

Vidal, Louis Antoine, French writer on music, b. July 10, 1820, Rouen; he studied the 'cello under Franchomme, published a comprehensive and interesting work on stringed instruments, also on makers, performers, composers; it bears the title: "Les Instruments à archet" (3 stout quarto volumes, with many illustrations, engraved by Frédéric Hillelmacher, 1876-1878). This work shows diligent research, opens up new ideas, and its drawings of instruments give it special value. He published, besides, "La chapelle St. Julien des Ménétriers" (1878, extract from the former), and "La lutherie et les luthiers" (1889).

Vi-de (Lat. "see"), a common sign in music, indicating in a score or parts that a leap (cut) is to be made; *vi-* then stands at the commencement, and *-de* at the end of the passage to be omitted.

Viella (Vielle), (1) the name of the viol, the stringed instrument commonly known during the Middle Ages (Sp. *Vihuela*; Ger. *Fiedel*; Lat. *Fidula*). Its last representative was the Gamba, and from it our present stringed instruments were naturally evolved. (See VIOLA and STRINGED INSTRUMENTS.)—(2) The name in

France, since the 15th century, for the hurdy-gurdy.

Vierdank, Johann, organist of the Marienkirche, Stralsund. He published: "Neue Pavanen, Gagliarden, Balletten und Konzerten mit zwei Violinen und einem Violone nebst dem Basso Continuo" (1641, 2 parts; the second containing capricci, canzone, and sonatas for from two to five instruments), and "Geistliche Konzerten mit 2, 3 und 4 Stimmen nebst dem Basso Continuo" (2 parts, 1642 [1656], 1643).

Vierling, (1) Johann Gottfried, excellent organ-player and composer, b. Jan. 26, 1750, Metzels (near Meiningen), d. Nov. 22, 1813, Schmalkalden. He succeeded his teacher, the organist Fischer, at Schmalkalden, but obtained leave of absence in order to continue his studies under Ph. E. Bach at Hamburg and Kirnberger at Berlin, and then remained in his modest calling until his death. V. published: 2 pf. trios, a pf. quartet, 6 pf. sonatas, a "Choralbuch" *a 4*, with a short introduction to thorough-bass (1789); "12 leichte Orgelstücke" (with a guide to the playing of interludes, also modulation tables); "Versuch einer Anleitung zu Präludien für Ungeübtere" (1794); "Sammlung leichter Orgelstücke" (1794, 4 books); "48 leichte Orgelstücke" (1795); "Sammlung 3-stimmiger Orgelstücke" (1802); "Allgemein fasslicher Unterricht im Generalbass" (1805); "Leichte Choralvorspiele" (1807, 3 books). Other pieces, also sacred vocal works (2 yearly series of church cantatas), remained in manuscript.

(2) Georg, celebrated modern composer, b. Sept. 5, 1820, Frankenthal (Palatinate), where his father, Jakob V. (b. 1796, d. 1867, editor of a "Choralbuch" for the Palatinate), was teacher and organist. V. received his first training from his father, was for a time a pupil for pianoforte of H. Neeb at Frankfurt, and for organ of J. H. Ch. Rinck at Darmstadt, and studied composition under A. B. Marx at Berlin from 1842-45. In 1847, on Marx's recommendation, he was appointed organist of the "Oberkirche," Frankfurt-on-the-Oder, undertook the direction of the Singakademie, and established subscription concerts there. From 1852-53 he conducted the Liedertafel at Mayence, then moved to Berlin, where he founded, and for a time conducted, the Bach-Verein; but he still continued for many years the subscription concerts at Frankfurt-on-the-Oder, and also conducted a concert society at Potsdam. In 1859 he was named royal musical director. Soon afterwards he resigned all his public appointments, and occupied himself only with composition and private teaching. V.'s compositions are principally vocal: many songs, duets, part-songs for female, male, and mixed choir, motets, the 100th Psalm *a cappella*, the 137th Psalm for tenor solo, chorus, and orchestra; "Zechkantate" and "Zur Weinlese" for chorus and

orchestra; the choral works, "Hero und Leander," "Der Raub der Sabinerinnen," "Alarichs Tod," and "Constantin" (Op. 64). His instrumental works consist of: a symphony, the overtures, "The Tempest" (Shakespeare), "Maria Stuart," "Im Frühling," "Hermannsschlacht" (Kleist), a capriccio for pf. and orchestra, a pf. trio, 2 quartets for strings, "Phantasiestücke" for pf. and 'cello, "Phantasiestücke" and a grand fantasia for pf. and violin, pieces for pf. alone, etc.

Vieuxtemps, Henri, a distinguished performer on the violin, b. Feb. 20, 1820, Verviers, d. June 6, 1881, Mustapha (Algiers). He was the son of an instrument-maker and pianofortetuner, formerly officer, who lived at Verviers. V. made such progress that his father's teaching soon became insufficient, and in Lecloux he met with a conscientious, steady teacher, under whom he made such rapid progress, that as a boy of 9 he attracted the attention of De Bériot; the latter offered to instruct him free of charge, and took him to Paris, where in 1830 he made a successful public appearance. In 1833 V. began the wandering life of the virtuoso, went first to Vienna, where he studied harmony for a short time under Sechter, worked somewhat more seriously under Reicha at Paris in 1835, and in the following year produced some of his own compositions in Holland, which soon afterwards were heard at Vienna. He won his first great success at Brussels in 1840 with his concerto in E and his fantasia in A, both of which he had written in Russia. In the following year his virtuosity was fully recognised by the critical and fastidious Parisian public; he had nothing more to do than to maintain the high reputation which he had achieved. In 1846 the Emperor Nicholas tried to retain him at Petersburg as solo violinist and for the purpose of training pupils; but after five or six years V. relinquished his chance of a pension and started again on his travels. His tours were not confined to Europe, but extended to Turkey and America (1844, 1857, 1870). His chief place of abode was Paris or Frankfort; in the latter city he possessed a villa (at Drei-Eichenhain). In 1871 he became principal professor of the violin at the Brussels Conservatoire, and held this post until 1873, in which year he suffered a severe stroke of paralysis of his left side, which entirely prevented him from playing. His recovery was slow, but he was never active again as a virtuoso; he only taught for a short time afterwards at the Brussels Conservatoire, and lived at Paris, for the most part, in retirement. V.'s compositions are held in high esteem by violinists, and occupy an honourable place in violin literature. They are as follows: 6 grand concertos (E, Op. 10; F sharp minor, Op. 19; A, Op. 25; D minor, Op. 31; A minor, Op. 37; the sixth appeared after his death), several smaller concertos, a fantasia for violin with orchestra (in A), Fantaisie-caprice with orchestra,

two fantasias on Slavonic themes (Op. 21, "Souvenir de Russie," and Op. 27), "Introduction et Rondo" (Op. 29); Caprice, "Hommage à Paganini" (Op. 9); violin sonata (Op. 12), variations on "Yankee Doodle" (Op. 17), with which he captivated the Americans; *Duo concertant* for piano and violin on *Don Giovanni* (Op. 20); *Duo brillant* for same on Hungarian themes (jointly with Erkel); a suite (Op. 43), a large number of fantasias on operatic themes, caprices, pieces, etc., 6 concert studies with pf. accompaniment (Op. 16), 3 cadenzas to Beethoven's Violin Concerto; also 2 'cello sonatas, an *Élégie* and a sonata for viola or 'cello, and an overture (Op. 41) on the Belgian national hymn.—V.'s wife, Josephine (Eder), b. Dec. 15, 1815, Vienna, married in 1844, d. June 29, 1868, Celle St. Cloud (near Paris), was an able pianist. His brothers are: Jean Joseph Lucien, b. July 5, 1828, pianist and teacher of the pianoforte at Brussels, composer of numerous pf. pieces; and Jules Joseph Ernest, b. March 18, 1832, Brussels, d. suddenly at Belfast, March 20, 1896, for many years solo 'cellist at the Italian Opera, London; also solo 'cellist in Hallé's Orchestra at Manchester.

Vigoroso (Ital.), vigorous.

Villancicos (Vilhancicos), Spanish sacred songs sung at great church festivals, somewhat similar to the anthem, beginning and ending with a choral movement, the so-called *Estribillo*, with intermediate solo or solos (*Coplas*, the "verses" of the English anthem). The *Estribillo* is frequently written for two or more choirs, in which case, besides the general continuo, each choir has its own continuo. A great number of V. of the 17th and 18th centuries are preserved in manuscript in the Munich Library. (Cf. J. J. Meyer's Catalogue.)

Villanelle (*Canzoni villanesche*, *Villote*, "street songs," answering to the German "Gassenhawerlin"), the name (about 1500) of the Italian popular song of light character, of comic, and indeed somewhat coarse tendency, in contradistinction to the more refined art-song, the madrigal. The V. was written in a plainer style than the madrigal of contrapuntal formation; according, indeed, to the ideas of the present day, it was truly homophonic, *i.e.* setting aside the melody (tenor) and counter-melody (discant), there was little flow in the part-writing, which consisted throughout of consonant chords arranged note against note. The German composers often described their light, fresh songs as "after the manner of the Italian Villanelle" ("nach Art der welschen Villanellen"), and by that only referred to the absence of learned artifices; but in the matter of contents, many, though not thus termed, resembled Villanelle.

Villarosa, Marquis of, Italian writer on music. He published: "Memorie dei compositori di musica del regno di Napoli" (1840),

which, until the appearance of Florimo's "Cenni storici" formed the best source for information respecting Neapolitan composers; and "Lettera biografica intorno alla patria ed alla vita di Giov. Battista Pergolesi" (2nd ed., 1843).

Villars, François de, b. Jan. 26, 1825, Île Bourbon; Parisian author, musical *feuilletoniste* of *L'Europe*, contributor to the *Art Musical*. He also wrote: "La 'Serva padrona,' son apparition à Paris, 1752, son analyse, son influence" (1863); "Notices sur Luigi et Federico Ricci" (1866); "Les deux 'Iphigénie' de Gluck" (1868).

Villebois, Constantine Petrowitsch, b. May 17 (29), 1817, d. June 30 (July 12), 1882, Warsaw, a favourite Russian song-composer (duet, "Die Schiffer"; opera, *Natascha*, etc.).

Villoteau, Guillaume André, writer on music, b. Sept. 6, 1759, Bellême (Orne), d. April 25, 1839, Paris; he was at first choir-boy, and afterwards tenor at Le Mans Cathedral, then at Rochelle, and finally at Notre Dame, Paris. As religious services were suspended during the Revolution, he entered the Grand Opéra as chorus-singer, where Perne (q.v.) was engaged at the same time, and in like capacity. As V. had studied philosophy at the Sorbonne (although he had not acquired a knowledge of Greek), he was chosen a member of the learned Commission taken by Napoleon to Egypt, and received special instructions to collect material respecting the music of the various Oriental peoples in Egypt. The results of his investigations, collection of manuscripts, inscriptions, etc., likewise of subsequent researches at the Paris Library, are four treatises (in the great work, "Description de l'Égypte," published by order of Government): "Dissertation sur la musique des anciens gyptiens" (German by Michaelis, 1821); "Dissertation sur les diverses espèces d'instruments de musique que l'on remarque parmi les sculptures qui décorent les antiques monuments de l'Égypte," etc.; "De l'état actuel de l'art musical en Égypte," and "Description historique, technique et littéraire des instruments de musique des Orientaux." He also published an esthetic investigation concerning the essence of music: "Mémoire sur la possibilité et l'utilité d'une théorie exacte des principes naturels de la musique" (1807), and "Recherches sur l'analogie de la musique avec les arts qui ont pour objet l'imitation du langage" (1807, 2 books; the idea of deriving the laws of music from speech is certainly neither new nor false; at best it is fruitful for vocal music only).

Vina, an old Indian stringed instrument, which has probably been in existence for thousands of years. It consists of a bamboo reed, over which, by means of a neck with necessary pegs and bridge, four wire strings are stretched lengthways, and tuned as tonic, subsemitone, upper-fourth (under-dominant), and under-

fourth (upper-dominant), i.e. A— \sharp —d. g. Between neck and bridge there are 18 somewhat lower bridges, representing both finger-board and frets; and these bridges, before performance, are stuck with wax in positions representing one or other of the Indian modes. Besides, one string answering to the under-fourth on the one side, and two strings giving respectively the octave and double-octave on the other side, are placed near the finger-board and act as drones. The bamboo reed is fastened to two hollowed-out gourds. The strings of the Vina are struck by means of a thimble with steel tip.

Vinata (Ital. *Vinetta*), a vintage song, a wine song, a drinking song.

Vincent, (1) Alexandre Joseph Hydulphe, prolific French writer on music, b. Nov. 20, 1797, Hesdin (Pas de Calais), d. Nov. 26, 1868, Paris. He was teacher of mathematics at the St. Louis College in the latter city, afterwards member of the Académie and of the Société des Antiquaires; also conservator of the library of the learned societies in the government educational department. He wrote: "Sur le rythme chez les anciens" (1845); "De la musique dans la tragédie grecque" (in the *Journal de l'Instruction publique*); "De la notation musicale de l'école d'Alexandrie" (*Revue Archéologique*, 3rd vol.); analysis of St. Augustine's "De musica" (1849); on Scheibler's Tuning Method ("Annales de chimie et de physique," 1849); "Notice sur trois manuscrits grecs relatifs à la musique" (1847, in the "Notices et extraits des manuscrits de la bibliothèque du roi"); "Quelques mots sur la musique et la poésie, anciennes" (*Correspondant*, 1854); on the occurrence of quarter-tones in Gregorian Song (1854, 1856); "De la notation musicale attribuée à Boèce" (*Correspondant*, 1855); "De la musique des anciens Grecs" (a short report, 1854); "Sur la tonalité ecclésiastique de la musique du XV. siècle" (1858); "Rapport sur un manuscrit musical du XV. siècle" (1858): a critical notice of Coussemaker's "Histoire de l'harmonie au moyen-âge" (1862); "Sur la théorie de la gamme et des accords" (report of the Paris Académie des Sciences, 41st vol.); "Réponse à M. Fétis" (1859); on the question whether the Greeks were acquainted with harmony); "Erklärung einer auf Musik bezüglichen Darstellung auf einer griechischen Vase im Berliner Museum" (1859); "Introduction au traité d'harmonie de Georges Pachymère," a biographical notice on A. Botté d. Toulmon (1851); "Pédagogie musicale. Sur un clef universel" (1856); "Note sur la messe grecque qui se chantait autrefois à l'abbaye de St. Denis" (1864), etc. The greater number of his small pamphlets appeared in Parisian scientific papers, reports of the Académie, etc., but many were published separately. V., like R. Westphal, supported the idea that music in several parts was known to the Greeks, and came, therefore, into conflict with Fétis.

(2) Heinrich Joseph, one of the most zealous champions of the Chroma (q.v.) theory, b. Feb. 23, 1819, Theilheim (near Würzburg). He at first studied theology, then law; but he took to the stage and sang (as tenor) at Vienna, Halle, and Würzburg. From 1872 he was teacher of singing at Czernowitz, and now lives at Vienna. V. has composed several operas and operettas, and also published some songs. He is known as the author of the pamphlets: "Kein Generalbass mehr" (1860); "Die Einheit in der Tonwelt" (1862); "Die Neulaviatur" (1874), and a series of articles on the chromatic keyboard and notation in the *Allgemeine deutsche Musikzeitung*, *Allgemeine musikalische Zeitung*, *Klavierlehrer*, etc.

Vinci (1), Pietro, b. 1540, Nicosia (Sicily), church maestro at Bergamo. He published: 2 books of motets *a 5* (book 1, unknown; book 2, 1572); 3 books of motets *a 4* (1578, 1582, 1588; in the 3rd book are some *a 6*); "14 sonetti spirituali" (1580); masses *a 5-8* (1575); 2 books of madrigals *a 6* (1574, 1579); a book of madrigals *a 3* (1583), and 7 books of madrigals *a 5* (1564-89).

(2) Leonardo, opera composer, b. 1690, Strongoli, Calabria, pupil of Greco at the Conservatorio dei Poveri, Naples (fellow-pupil of Pergolesi), d. 1732, Naples. In consequence of an unhappy passion for a Roman lady of high degree, he entered the monastery of the Brothers *del rosario* in 1728. V. was one of the maestri of the Royal Chapel at Naples. He wrote over 25 operas for various Italian theatres, especially for Naples (Teatro dei Fiorentini), Venice, and Florence, of which *Ifigenia in Tauride* (Vienna, 1725) and *Astianatte* (Venice, 1725) had great success, and were produced on many stages. Besides his connection with the stage, V. displayed ecclesiastical tendencies, and also wrote 2 oratorios, 2 masses, motets, etc.

Viol. (See VIOLA.)

Viola (1) (Ital.), the well-known stringed instrument, constructed since the 16th century, which in our stringed orchestra of the present day represents the alto position (Alt viola, V. alta, Alto); it is somewhat larger than the violin, and has the four strings tuned thus: *c, g, d', a'*. The usual orchestral upward limit of the instrument is *g''* or *a''*; but solo players can produce sounds considerably higher. The alto clef is used for the notation of the V. The sound-box of the V. is somewhat flat in proportion to its size, and this explains the rather nasal tone of the instrument, which, however, like that of the oboe, is by no means unpleasant. The attempt, by different measure, to get rid of this peculiarity of timbre (Vuillaume, see RITTER, 5; cf. VIOLOTTA) does not seem to have resulted in anything definite. (2) In the organ, a Gamba stop of 8 or 4 feet (as Quint stop, $2\frac{3}{4}$ feet; *Quint viola*.) (3) An older kind of stringed instrument,

the *real violas* (viols), which held their own up to the last century, side by side with instruments which resembled the violin (q.v.) in their contour, number of strings, and method of tuning (to which belong, besides the viola of the present day, the 'cello, and the double-bass). From this older kind, by gradual improvements, giving up of frets, reduction of the number of strings, etc., the Tyrolese and Cremonese masters evolved the violin. It is frequently stated that our tenor violin *was* one of these old instruments, but this is a great error. Anyhow, only the violin first came into general use, especially in France, where, under Louis XIII., we meet with "les vingt quatre violons du roi," while in England, viols were only supplanted after the restoration of Charles II. The violin quietly took the place of the "Pardessus de viole" in the band of viols, for the highest part, while alto, tenor, and bass viols remained. Then, when larger kinds of viols on the violin model began to be made, the tenor violin (viola), and, at the beginning of the 18th century, the 'cello came into fashion; the latter, as bass instrument, had up to then only occupied a subordinate position, the Gamba being the recognised concertante instrument. Also the double-bass (Violone), originally built on viol model, gradually changed to violin model. There were two special kinds of viols: those which, like the violin and viola of the present day, were supported by the arm, and held under the chin (*V. da braccio*; hence the German name "Bratsche," which was transferred from the "arm viol" to the alto violin, as it really ought to be called); and those which were held between the knees, like the 'cello of the present day (*V. da gamba*, "Knieseige," or merely "Gamba"). All kinds of viols are to be clearly distinguished from the violin and instruments allied to it by the outer shape, the *accordatura*, and the form of the sound-holes. The sound-box ran, neckwards, almost to a point; the lateral incisions were of almost semicircular shape; the upper part of the sound-box narrower than the under part; the ribs were higher, and the top and bottom blocks not in any way arched, but completely flat. The sound-holes were sickle-shaped cuttings opposed to each other thus: () or) (. The number of strings for all kinds was six (the Discant Viol in France had, however, only five, and was hence named *Quinton* or *Quinte*); the *accordatura* was similar to that of the lute:

Bass Viol (Gamba).

The strings lay pretty close to one another on the finger-board divided by frets; the bridge was slightly arched and it was therefore scarcely possible to play on only one of the middle strings, but all the easier to play in chords. The double-bass viol (*Violone, Contrabasso da viola*) stood an octave lower than the Gamba. Many old viols by good masters were transformed by skilful hands into violas, likewise 'cellos or basses, and this gave rise to many false suppositions. For information respecting the history of the development of the V. before the period of any instrumental music worthy of the name (the V. was the stringed instrument *par excellence* throughout the Middle Ages, under the names *Fidel, Fidula, Viella* [Fr. *Vielle*], *Vitula, Vistula, Vidula, Vihuela*, and even *Phiala* [in Johannes Cotto, 1100], all etymologically identical; and also under the names *Rubebe, Rebec, Giga* [Gigue, "Geige"], in vogue during the same period). (Cf. STRINGED INSTRUMENTS.) (4) Special kinds of V. are: the *Lyres*, viols with a greater number of strings, partly over the finger-board, partly near to it, after the manner of drones (cf. *LYRA*, 2; and *BARYTON*, 2); further, the *V. bastarda*, of somewhat larger dimensions than the *V. da gamba*, with 6-7 strings, at a later period, especially in England, fitted with strings, in unison with those of the finger-boards (cf. also *VIOLET, ENGLISH*), which ran under the bridge and the finger-board, and which were set into sympathetic vibration when the strings were sounded with the bow; the *V. d'amore* (*Viola d'amour*), constructed in like manner, but only of the size of the viola, with 7 finger-board, and 7 sympathetic strings, the latter, according to need, tuned differently; the *V. pomposa*, on the other hand, midway between viola and 'cello, constructed by J. S. Bach. This last-mentioned instrument was not really a V., but belonged to the modern instruments of the violin family (*Violoncello piccolo*), and had 5 strings, C, G, d, a, e (Bach's sixth 'cello Suite was really written for *V. pomposa*). Lastly, there was the *V. da spalla* (shoulder-viol), which was a larger kind of *V. da braccio*, and, when played upon, was placed on the shoulder.

Viola. (1) Alphonso della, maestro to Hercules II. of Este at Ferrara, published a book of madrigals a 5 (1539); but he is especially noteworthy as one of the oldest composers of dramatic pieces (pastorals, incidental music to plays), which were produced at the court of Ferrara: *Orbeche* (1541), *Il sacrificio* (1554), *Lo sfortunato* (1557), *Aretusa* (1563). Naturally these were not written in the *stilo rappresentativo*, invented 50 years later at Florence, but speech and counter-speech were sung in madrigal fashion by the chorus.

(2) Francesco, pupil of Willaert, maestro to Alfonso d'Este; he published motets and madrigals of Willaert: "*Musica nova*" (1558), also 2 books of madrigals of his own (1567, 1573).

(3) Alessandro della. (See *ALESSANDRO ROMANO*.)

Viola. (See *VIOLA*.)

Viola, Rudolf, distinguished pianist, pupil of Liszt, composer, b. May 10, 1825, Schochwitz (Mansfeld), d. Dec. 7, 1867, Berlin, where for a long time he was teacher of music. He composed a number of pianoforte works (11 sonatas, 100 studies ["*Musikalische Gartenlaube*"], *Caprice héroïque, Ballade*, etc.), in which he showed himself a disciple of the new school.

Violento (Ital.), *impetuous*.

Viola, English, an obsolete stringed instrument similar to the Viola d'amore, with 14 sympathetic strings lying under the finger-board. A special mode of tuning the violin, of which formerly frequent use was made (e a e' a'), was also called E.V.

Violetta (Ital., *Small Viol*) was the name given to the Discant Viol, or it stood for smaller kinds of viols with only three or four strings, of which many species ("kleine Geigen") were constructed, especially in Germany, during the 16th and 17th centuries. *V. piccola* was a term used for the violin at the time when it came into vogue (in the 17th century); it is often described more fully as *alla francese*. This did not mean that the French invented it, but that the French first brought it into repute. Even Charles IX. acquired the violins for his court musicians from the Tyrol, *V. marina*. (See *CASTRUCCI*.)

Violin (Ital. *Violino*, Fr. *Violon*), the bowed instrument of world-wide fame, which, together with those of lower compass, allied to it (viola, 'cello, double-bass), has completely supplanted all other bowed instruments. It is, comparatively speaking, a modern instrument, although, if the period during which it reached perfection of form be taken into consideration, it is older than any one of our musical instruments. The construction of the violin reached its highest stage of perfection at the commencement of the 18th century. All attempts to surpass the master creations of the Cremonese violin-makers have miserably failed; whereas other orchestral instruments, also the organ and the pianoforte, have, since that time, passed through various stages of improvement. With regard to the evolution of the V. from the older Viol, of which, originally, it was a smaller species, cf. *VIOLA*. There was no actual inventor of the violin; the transformation was a gradual one, from about 1480 to 1530 experience suggested, first one, then another small change. Anyhow, such a steady advance towards perfection can only be explained on the supposition that there was a succession of teachers and pupils—in fact, a real school. That violin-makers really had such a prolonged series of experiences may be seen in the Amati (q.v.) family, which laboured through several generations; through Andreas Guarneri, pupil of Nicolò Amati, through three generations

of the Guarneri family, and Antonio Stradivari; and it must also be noted that, during the period of development, the art of violin-making was restricted to a very small sphere (Tyrol and Upper Italy). The V., like those instruments allied to it, has four strings; after all kinds of experiments, lasting during centuries, with a smaller or greater number of strings, this number was selected as the most fitting; for, with moderate arching of the bridge, the fingers lie comfortably over each string. They are tuned as follows: and as in all other bowed instruments, are counted from the highest, downwards, because the highest is the one nearest to the bow.

The first string is named in Germany *Quinte*, in France *Chanterelle*, ("song-string," cf. *QUINT*); the 4th (G) string is over-spun. By its nature the V. is an instrument for monodic playing; by the reduction of the number of strings in viols and lyres, chord-playing was given up; though, within certain limits, that is still possible. Chords composed of fifths, fourths, and sixths, are fairly easy of execution, provided the change from one chord to another has not to be taken at too rapid a rate; by using one or more open strings, very many chords are easy to play. It is, of course, self-evident that no double stopping can take

place below the  of the V., as there

is only one string tuned lower. The *timbre* of the 3rd and 4th strings of the V. has something akin to that of the alto voice, especially in the higher registers. Besides the ordinary full tone, special sounds can be produced on the violin: (1) by touching the nodal points of harmonic overtones, the so-called harmonics or *Flageolet* (q.v. 3) tones; (2) by plucking with the finger, instead of playing with the bow: the *Pizzicato* (q.v.), the only substitute in the modern symphonic orchestra for the instruments whose strings were plucked (Lute, Theorbo, etc.), and which at one time were so richly represented. The V. rightly occupies an exceptional position among all instruments, and at the present day only the pianoforte surpasses it in general circulation and popularity.

Violin literature is exceptionally rich, and a great number of distinguished virtuosi who delighted their contemporaries by their masterly handling of the most expressive of all instruments, were for the most part also composers. The most celebrated are:—17th–18th century—Bassani, Vitali, Biber, Torelli, Ant. Veracini, Corelli, Matteis, Vivaldi, Strungk, Volumier, Baptiste, Birkenstock; 18th century—Aubert Babbì, Franz Benda, Berthaume, Brunetti, Cannabich, Castrucci, Tr  u, J. Fr  nzl, Festing, Fiorillo, Gavini  s, Geminiani, Giardini, Leclair, Linley, Locatelli, Lolli, Mestrino, Nardini,

Pisendel, Pugnani, Somis, Stamitz (2), Tartini, Tessarino, T  schi, Fr. M. Veracini; 18th–19th century—Campagnoli, Cartier, F. Fr  nzl, Rolla, T  glichsbeck, Viotti; 19th century—Adelburg, Alard, Art  t, Baillot, de B  riot, B  hm, Ole Bull, David, Ernst, Kreutzer (2), Lafont, Laub, L  onard, Lipinski, Massart, Maurer, Mayseider, Mazas, Meerts, Molique, Paganini, Polledro, Prume, Rode, Sainton, Saloman, Sauzet, Schuppanzigh, Sivori, Spohr, Strauss, Vieuxtemps, Wieniawski. Of living players may be named:—Auer, Dancla, Joachim, Lauterbach, Marsick, Rappoldi, Remenyi, Sarasate, Sauret, Singer, Thomson, Wilhelmj, Ysaye, etc. The most notable violin methods are: the *M  thode* of the Paris Conservatoire (Kreutzer, Rode and Baillot), and the violin methods of Baillot, Spohr, Alard, David, Dancla, Singer. The number of important educational works is very great; those most worthy of mention are: Tartini's "Arte dell' arco," David's "Hohe Schule des Violinspiels" (selection of classical violin works); cf., besides, the biographies of Corelli, Vivaldi, Gavini  s, Locatelli, Nardini, L. Mozart, Viotti, etc.

Violin Clef,  cf. the articles "G" and CLEF

Violin diapason, also *crisp-toned diapason* (Ger. *Geigen prinzipal*), usually of 8, rarely 4 ft. In "scale" and tone it stands midway between the diapason and gamba stops. It is an open fl  t-stop of somewhat "bowy," soft tone.

Violino piccolo (Ital.), a small violin, Kit or *Pochette*.

Violon (French), *violin*; the term V. has also been used, in error, for *Violone* (q.v.) or double-bass.

Violoncello, abbr. 'cello. (from *Violone* [double-bass viol], really "small Violone"), is a bass instrument, constructed on the model of the violin by the master-makers of Upper Italy, soon after the shape of the violin had been established. The Amatis, Gasparo da Salo, Maggini, etc. (1550–1600), already made 'celli, but at first the instrument only occupied a subordinate place; as a solo instrument, likewise as a concertante instrument, it only supplanted the Gamba very gradually; and it was specially employed for the execution of simple accompaniment bass (in violin and in flute sonatas, arias, etc), and for the most part, was indicated merely as "Bass" (*basso, basse*). In ensemble works from the 17th century, by "Bass" is therefore to be understood the V. The size of the sound-box varied at first, and, as a rule, was somewhat larger than the one now in general use, which was definitely fixed by Stradivari; the *accordatura*, however, of four strings, C G d a, had been already settled. The treatment of the cello is quite analogous to that of the violin; but the instrument, like the Gamba, is held between the knees. Harmonics

are very effective on it, and *Pizzicato* has a full, pithy tone. The most famous masters of 'cello playing were and are: Boccherini, Brevai, Cervetto, Duport, Schetky, Schindlöcker, Ant. and Nic. Kraft, Pierre and Jean Levasseur, Dotzauer, Lindley, Ch. Kellermann, B. Romberg, Merk, Platel, Batta, Bandiot, M. Bohrer, Menter, Demol, François and Ernst Demunck, Seligmann, Servais (father and son), Franchomme, Carl Schubert, Seb. and Louis Lee, Kummer, Cossmann, Popper, Davidoff, Drechsler, Friedr. and Leop. Grützmacher, Georg and Julius Goltermann, de Swert, Lübeck, A. Lindner, Fischer, F. Hilpert, Hausmann, Jul. Klengel, Piatti, Hngo Becker, etc.

Violoncello, as an organ stop, is a Gamba stop of 8-ft., which is supposed to imitate the tone of the 'cello.

Violoncello piccolo. (See VIOLA, 4-.)

Violone (-one is an Italian suffix expressive of increase, therefore, *Great Viol*), *Contrabasso da Viola* (Viol da Gamba bass, great "Bassgeige," Bass Viol, etc.), was the name given to the instrument of the viol family (see VIOLA, 3-), which before the introduction of the double-bass (in the 17th-18th century), took the lowest octave notes in the orchestra, and which was only gradually supplanted by the double-bass of the present day. The differences in the outer shape between the two are the same as between violin and discant viol, 'cello and gamba, viola and alto viol. The V., like the other kinds of viols, had an *accordatura* of six strings, played an octave lower than the gamba, and had a finger-board with frets.

Violotta, a kind of larger viola constructed some years ago by Dr. Alfred Stelzner (q.v.) of Wiesbaden, with the *accordatura* G d a e'. It has, however, scarcely fulfilled the hopes of the inventor of seeing it incorporated into the string quartet, for it is awkward and unwieldy; further, it does not possess the expected increased volume of tone.

Viotta, Henri, b. July 16, 1848, Amsterdam, student at the Cologne Conservatorium; but he also studied law, and was for some time advocate. He then became conductor of the Wagner Society founded by himself (1883), and also of the Excelsior Society in 1886; further, in 1889, of the Cæcilia Society, Amsterdam. Since 1889 he has edited the *Maandblad for Muziek*, and also contributed to the *Cæcilia* (Hague) and the *Guide musical*; he has published "Lexicon der Toonkunst" (3 vols. 1889), and composed orchestral and choral works.

Viotti, Giovanni Battista, the father of modern violin-playing, and one of the most important composers for his instrument, b. May 23, 1753, Fontanetto da Po (Verceili), d. March 3, 1824, London. He was the son of a blacksmith, who played a little on the horn, and who presented to V. a small violin when he was

eight years old, and on which, without guidance, the boy made such progress, that he attracted the notice of the Bishop of Strambino, by whom he was recommended to Alonso de Pozzo, Prince de la Cisterna, at Turin. This young Prince looked after the boy, and placed him under Pugnani (q.v.). After a few years V. entered the royal band at Turin as violinist, but in 1780 undertook, with Pugnani, a grand concert tour through Germany and Russia; and this was soon followed by a second one to London and Paris. He arrived in the latter city in 1782, and, until 1783, appeared repeatedly at the Concerts Spirituels; his success there, as in Berlin, Petersburg, and London, was almost unexampled; so perfect a player had never yet been heard. The public, however, was capricious; V. played at a concert at which there was a small and unenthusiastic audience, and this was followed by another at which a violinist of moderate ability was enthusiastically received by a large audience. V. was so annoyed that from that time he gave up playing in public; and it was only granted to a few chosen friends to admire his genius. V., however, remained in Paris, became accompanist to Queen Marie Antoinette, and, soon afterwards, conductor of the orchestra of the Duke of Soubise. He only paid one visit to his home (1783) in order to purchase an estate for his father, who died not long afterwards. V.'s aversion to public playing seems to have been intense: he not only had his own compositions performed by other violinists, but turned his attention to other matters, and sought to be appointed director of the Grand Opéra (1787). In this he, however, failed, and then entered into partnership with the *friseur* Léonard, who had received permission to establish an Italian Opera; this was opened in the Tuileries in 1789; and, when in 1790 the Court moved from Versailles to Paris, the performances were given at the Théâtre de la Foire St. Germain till 1791; after the addition of Feydeau de Brou as partner a theatre of their own was built (Théâtre Feydeau). The Revolution ruined the undertaking, and V. saw himself compelled to seek new means of subsistence. He gave several concerts at the Hanover Square Rooms in London, and was received with enthusiasm; but he was soon forced to flee, since he was suspected of being an agent of the revolutionary party in Paris. He lived in retirement in the neighbourhood of Hamburg until 1795, then returned to London, but made no public appearance. He was connected with a wine business, and was almost forgotten by the world, when in 1802 he again appeared in Paris, and sought out his old friends. Pressed by Cherubini and Rode, etc., he played in the small hall of the Conservatoire; and, to the general astonishment, it was found, not only that he had lost nothing, but that he had made progress, and no one could stand near him as rival. He remained,

however, this time, and also in 1814, only a short time in Paris, but settled there definitely in 1819, and undertook the direction of the Grand Opéra at a time when it had fallen into sad decay. V. was unable to improve matters (better times only came with Auber's *La Muette de Portici*, Rosini's *Tell*, and Meyerbeer's *Robert*), and he had to be content with having blame ascribed to him for circumstances for which he was not responsible, and with having the management withdrawn from him in 1822. He died while on a journey which he had undertaken for the purpose of distraction.

V.'s compositions rank high in the literature of the violin, although he had made no serious study of the art of composition; V.'s sound musical instinct and practice filled up the gaps in his knowledge; and with increase of experience, his works gained in substance and dignity. He wrote 29 violin concertos, the last nine of which are distinguished by means of letters (A-I); also 2 Concertante for two violins, 21 string quartets, 21 trios for two violins and 'cello, 51 violin duets (Ops. 1-7, 13 [serenades], 18-21), 18 violin sonatas with bass (the last six in sets of three, marked respectively A and B); 3 divertissements (Nocturnes) for pianoforte and violin, also a pianoforte sonata. Some of his quartets and trios appeared arranged as violin sonatas. Biographical notices of V. were written by Fayolle, Baillot (his pupil), and Miel.

Virdung, Sebastian, priest and organist at Basle, the author of an important work in regard to the history of instruments: "Musica getutscht und ausgezogen durch Sebastianum V., Priester von Amberg (not Arnberg, as in Fétis' "Biogr. univ." [2nd ed.], or even Arenberg, as stated in Mendel's "Lexikon"), um alles Gesang aus den Noten in die Tabulaturen dieser benannten dreye Instrumente der Orgeln, der Lauten und der Flöten transferieren zu lernen kürzlich gemacht" (1511, printed in facsimile by Breitkopf and Härtel (1882). A few Lieder by V. are to be found in Peter Schöffer's "Teutsche Lieder mit 4 Stimmen" (1513).

Virga (Virgula). (See NEUMES.)

Virginals. (See PIANOFORTE.)

Vischer, F. Th. (Cf. KÖSTLIN, I.)

Visselli, Albert Anthony, b. May 13, 1846, Spalato, Dalmatia, pupil of the Milan Conservatorio (Mazzucato), distinguished teacher of singing, professor at the Royal College of Music and other London musical institutions, conductor of the Philharmonic Society at Bath. He translated into Italian, Hullah's "History of Modern Music," Hueffer's "Musical Studies," etc.

Vista, more fully, *a prima vista* (to play, sing, transpose), at sight.

Vitali, (1) Filippo, composer of the 17th century, native of Florence, maestro of the cathedral there, in 1631 singer at the Papal Chapel

at Rome. He published a book of five-part madrigals (1616); "Musiche a 2, 3 e 6 voci" (1617, in monodic style); "Musiche ad 1 e 2 voci con il basso per l'organo" (1618); "Intermedj . . . fatti per la commedia degli' Accademici Inconstanti" (1623, produced in the same year at the palace of Cardinal Medici at Florence); "Motetti a 2, 3, 4, 5 voci" (1631); "Arie a due voci" (1635); "Hymne Urbani VIII." (1636); "Arie a 3 voci col basso continuo" (1639); "Salmi a 5 voci" (1641); "Libri V. di arie a 3 voci" (1647). A musical drama, *Aretusa* (1640, produced at Cardinal Barberini's, Rome), remained in manuscript. V. rendered essential service in the development of the chamber duet.

(2) Giovanni Battista, b. about 1644, Cremona, about 1667 violist in the orchestra at San Petronio, Bologna, afterwards vice-capellmeister to the Duke of Modena, d. Oct. 12, 1692, Modena. He was one of the most prominent promoters of the instrumental style during the period immediately before Corelli; he published: "Balletti, correnti, gighe, allemande, etc." (1668); "Sonate a 2 violini col uno basso continuo per l'organo" (1667, 2nd ed. 1685); "Balletti, correnti, e sinfonie da camera a 4 stromenti" (1677, 1685); "Balletti, correnti, etc., a violino e violone o spinetto con il secondo violino a beneplacito" (1678); "Sonate a 2, 3, 4 e 5 stromenti" (1681); "Salmi concertate a 2-5 voci con stromenti" (1677); "Sonate a 2 violini e basso continuo" (Op. 9); "Inni sacri per tutto l'anno a voci sola con 5 stromenti" (1681); "Varie sonate alla francese ed all'italiana a 6 stromenti" (1689); "Balli in stilo francese a 5 stromenti" (1690); "Artifici musicali a diversi stromenti" (1689); "Sonate da camera a 4 stromenti" (1692). Other works remain in manuscript at Modena. The Tommaso V. described by Fétis, Wastelowski, etc. is probably identical with him (Trio sonatas, 1693).

Vitry, Philipp de (Philippus de Vitriaco), important writer on the theory of mensurable music, b. about 1290, d. 1316, as Bishop of Meaux, of whom many treatises have been preserved and reprinted in Coussemaker ("Scriptores III.'). Personally, V. did much to advance theory and practice, for he established the *quatror prolationes*, which are not, as Ambros imagines ("Gesch." II., 379), the four note values—Long, Breve, Semibreve, Minim, but four different kinds of values of the Breve, viz.: (1) = 3 semibreves a 3 minims, (2) = 3 semibreves a 2 minims, (3) = 2 semibreves a 3 minims, and (4) = 2 semibreves a 2 minims. In the 14th century the invention of the note signs of the minima and semi-minima was ascribed to V., but already in 1350 S. Tunstede opposed this view. According to a statement of Morley, which stands in agreement with that of S. Tunstede, a priest of Navarra was the inventor of the *minima* (Tunstede says: "inventa erat in Navarra et a Philippo de Vitriaco . . . approbata et usitata"). Other inventions of V. were

red notes (*see* COLOR), and Proportions (*cf.* passage in Ambros); he also appears to have been the first to introduce the term *contrapunctus* in place of *discantus*.

Vittori, Loreto, singer and composer, b. about 1588, Spoleto, pupil of the two Nanini and of Soriano at Rome. He lived for a long time as singer at the court of Cosimo II. of Medici at Florence, and in 1622 entered the Papal Chapel at Rome, in which city he died April 23, 1670. He published: "Arie a voce sola" (1639); *La Galatea* (*Dramma in musica*, 1639); *La pellegrina costante*, (*Dramma sacro*, 1647); *Irene*, (*Cantata a voce sola*, 1648). *Santi Ignazio da Loyola* (oratorio) and *Il pentimento della Maddalena* (cantata) remained in manuscript.

Vittoria (Victoria), Tomaso Ludovico da, one of the most distinguished representatives of the Palestrina style, was on friendly terms with Palestrina, and much of his music can scarcely be distinguished from that of the Italian maestro, b. about 1540, Avila, Spain, d. about 1608. His real name was Victoria. He went when young to Rome, where his countrymen, Escobedo and Morales, singers in the Pope's chapel, were his teachers. In 1573 he became maestro of the German College there, and in 1575, of S. Apollinaris. At the desire of Palestrina, V. is said to have laid aside his Spanish costume, and to have had his beard trimmed according to Roman fashion. The works of V. which have been preserved are: "Liber primus, qui missas, psalmos, Magnificat, ad virginem Dei Matrem salutationes aliaque complectitur," a 6-8 (1576); a book of Magnificats a 4, together with 4 antiphons to the Virgin a 5-8 (1581); "Hymni totius anni," a 4, together with 4 psalms a 8 (1581 and 1600); 2 books of masses a 4-8 (the first book dedicated to Philip II. of Spain, 1583; the second, 1592); "Officium hebdomadae sanctae" (1585); "Motetta festorum totius anni cum communi sanctorum," a 5-8 (1585 and frequently; 1589, together with some motets a 12); and "Officium defunctorum (Requiem) 6 vocum" (1605), his most famous work, worthy to be placed by the side of Palestrina's best productions. Esclava's "Lira sacro-Hispana" contains this Requiem and some other works by V. Among modern publications Proske's "Musica divina" is rich in pieces by V.

Vivace (Ital. *vivo*, "lively"), an indication of tempo somewhat similar to *Allegro*; *Vivacissimo* (very lively) has the same meaning as *presto*.

Vivaldi, Antonio, famous violinist and composer, b. at Venice, son of a violinist of St. Mark's, was for some time violinist at the court at Darmstadt, but returned to Venice in 1713, became director of the Conservatorio della Pietà, and died in 1743. V. was a priest, and on account of his red hair surnamed "Il prete rosso." His violin compositions are still held in high esteem. He published: 12 trios

for violins and 'cello, Op. 1; 18 violin sonatas with bass, Op. 2 and 5 (one of which is published in Jensen's "Classische Violin Musik"); "Estro poetico" (12 *Concerti* for four violins, two violas, 'cello, and organ bass), Op. 3; 24 *Concerti* for solo violins, two ripieni violins, viola, and organ bass, Op. 4, 6, and 7; "Le quattro stagioni" (12 *Concerti a 5*), Op. 8; "La cetra" (6 ditto), Op. 9; 6 *Concerti* for flute, violin, viola, 'cello, and organ bass, Op. 10; and 12 *Concerti* for solo violin, two concertante violins, viola, 'cello and organ bass, Op. 11 and 22. He also wrote 29 operas, mostly for Venice. J. S. Bach arranged a number of V.'s violin concertos (6 for clavier and four for organ; Bach's a minor concerto for 4 claviars is a free arrangement of V.'s concerto in B minor for four solo violins).

Vivier, Albert Joseph, b. Dec. 15, 1816, Huy (Belgium), pupil of Fétis at the Brussels Conservatoire (1842). In 1857 he produced a one-act opera, *Padillo le tavernier*, at Brussels; but he should be mentioned here specially as author of a "Traité complet d'harmonie" (1862, frequently reprinted), in which the chord formations arising from suspensions and changing-notes are sharply distinguished from principal harmonies.

Vivo. (*See* VIVACE.)

Vleeshouwer, Albert de, b. June 8, 1863, Antwerp, studied under J. Blockx; he was an industrious composer (opera, *L'école des pères*, 1892; symphonic poem, "De wilde Jager," Idyll for orchestra, etc.).

Vocal Music is music written only for voices (*voices*); but vocal music with accompaniment is also styled V. M. As the voice produces notes entirely by means of the ear, *i.e.* according to previous presentation (harmonic conception), many progressions permissible in instrumental music are forbidden in a *cappella* style, strict style, *Stilo osservato*. (*Cf.* PARTS, CONDUCT OF; STYLE; INSTRUMENTAL MUSIC.)

Vocalisation, "enunciation of the vowel" in singing. (*Cf.* VOWEL.)

Vocalise (Fr.), singing exercise. (*Cf.* SOLFEGGIO.)

Voce (Ital.), voice; *Voce pari*, same as equal voices; *mezza voce*, with half voice; *sotto voce*, with soft voice.

Voces æquales (Lat.), (equal voices) *i.e.* voices of only one of the two kinds: men's voices or women's (boys' voices). The term opposed to V. æ. is **Voces INÆQUALES**, full chorus, mixed chorus (*plenus chorus*, *coro pieno*), compounded of men's and women's (boys') voices.

Vockerödt, Gottfried, rector of the Gymnasium at Gotha, b. Sept. 24, 1665, Mühlhausen-i.-Th., d. Oct. 10, 1727, Gotha. V. was of opinion that excessive enjoyment of music was injurious to the intellect, and that Nero

and Caligula, in consequence of their passion for music, became depraved in character. These thoughts were discussed in the pamphlets: "Consultatio . . . de cavenda falsa mentium intemperatarum medecina" (1696); "Missbrauch der freien Kunst, insonderheit der Musik" (1697), and "Wiederholtes Zeugnis der Wahrheit gegen die verderbte Musik und Schauspiele, Opern," etc. (1698).

Vogar. (See FUGARA.)

Vogel, (1) Johann Christoph, a gifted but early deceased composer, b. 1756, Nürnberg, d. June 26, 1788, Paris. He studied under Riepel at Ratisbon, went to Paris in 1776, where he became an enthusiastic admirer of Gluck's music, which he imitated. His first opera, *La toison d'or*, after long delay, was produced at the Grand Opéra in 1786, and excited great hopes for V.'s future. He completed a second, *Démophon*, but did not live to see it produced. Already in the following winter, the overture was performed at the Loge Olympique, the opera itself in September, 1789, in the opera house. Also *La toison d'or* was revived under the title *Médée à Colchis*. *Démophon* held the boards for some time, and the overture afterwards became part of a favourite ballet, *Psyché*. It is said that V.'s mode of living led to his early death. The following works of V. appeared in print: 3 orchestral symphonies, 2 concertantes for two horns, and one for oboe and bassoon, 6 quartets for horn and strings, 3 quartets for bassoon and strings, 6 quartets for strings, 6 trios for two violins and bass, 6 clarinet duets, 3 clarinet concertos, a concerto for bassoon, and 6 bassoon duets.

(2) Ludwig, flautist at the Paris Théâtre de Variétés in the Palais Royal, 1792-98. He published numerous flute compositions.

(3) Friedrich Wilhelm Ferdinand, distinguished organist, b. Sept. 9 1807, Havelberg; he studied under Birnbach at Berlin, travelled for a long time as organ virtuoso, lived from 1838-41 in Hamburg as teacher of music, and in 1852 became a teacher at the school of organ-playing and composition at Bergen, Norway. He published an organ concerto with trombones, 6 chorale preludes, 10 postludes, some preludes and fugues, a symphony, a suite in canon form for orchestra, marches, part-songs, etc.

(4) Charles Louis Adolphe, grandson of Johann Christoph V., Belgian composer, b. May 17, 1808, Lille, d. Sept., 1892, Paris; pupil of the Paris Conservatoire. He wrote several operas, which were favourably received: *Le podestat* (Paris, Opéra Comique, 1833), *Le siège de Leyde* (The Hague, 1847), *La moissonneuse* (Paris, Théâtre Lyrique, 1853), *Rompons* (one act, Bouffes-Parisiens, 1857), *Le nid de cigognes* (*Das Storchennest*, Baden-Baden 1858, Stuttgart), *Gredin de Pigoche* (Paris, Folies-Mariigny, 1866), and *La filleule du roi* (Brussels and Paris, 1875).

He also wrote orchestral and chamber music, and sacred songs.

(5) Wilhelm Moritz, pianoforte teacher, b. July 9, 1846, Sorgau (near Freiburg, Silesia), became favourably known by a set of instructive pianoforte compositions for beginners and for more advanced players, a pianoforte Method in 12 parts; études, rondos, sonatinas, etc.; also some songs (Op. 24) and duets (Op. 15, 21). He has for some years been active as musical critic of Leipzig local and musical papers.

(6) Adolf Bernhard, writer on music, b. Dec. 3, 1847, Plauen; he wrote pamphlets on R. Volkmann and Hans von Bülow, also "Robert Schumanns Klaviertonpoesie" (1887); he likewise edited in 1885 the *Deutsche Liederhalle*, and has published pf. pieces.

(7) Emil, musical historian and bibliographer, b. Jan. 21, 1859, Wriezen-a.-O.; he obtained the means for his musical training by private teaching at Berlin and Dresden. After discharging his military obligations, he attended Berlin University in the spring of 1880, and afterwards (1882) that of Greifswald, in order to study philology. In Berlin, Philipp Spitta introduced him to the study of the history of music, and this soon captivated his entire interest. In 1883 V. went to Italy, as assistant of the well-known Palestrina investigator Haberl, with a grant from the Prussian Government. After his return to Germany he took the degree of Dr. phil. at Berlin University in 1887. Of his writings he first published in the *Vierteljahrsschrift für Musikwissenschaft* (1887) a monograph on Claudio Monteverde, then (1889) one on Marco da Gagliano and Florentine musical life from 1570 to 1650. In 1890 he brought out a valuable catalogue, "Die Handschriften nebst den älteren Druckwerken der Musikabteilung der herzoglichen Bibliothek zu Wolfenbüttel," and in 1892, at the cost of the Schnyder v. Wartensee foundation (Zürich), the two comprehensive volumes, "Bibliothek der gedruckten weltlichen Vocalmusik Italiens aus den Jahren 1500-1700." Since 1893 he has been librarian of the "Musikbibliothek Peters" in Leipzig.

Voggenhuber, Vilma von (Frau V. Krolop), excellent dramatic singer, b. 1845, Pesth, d. Jan. 11, 1888, Berlin, studied there under Stoll, made her *début* in 1862 at the National Theatre, Pesth, as Romeo (Bellini), sang up to 1865 with ever-increasing success in Pesth; she then visited Berlin, Hanover, Prague, etc., sang during one season at Stettin, the following year at Cologne, and Aix-la-Chapelle, then at Rotterdam, and again at Cologne, and Bremen. She made a "star" appearance in 1867 at the Vienna Court Opera, and during the performance was engaged by telegram for Berlin. From 1868 she was an esteemed member of the court opera, Berlin. In March, 1868, she married the bass singer, Krolop, (q.v.). Frau V. had a strong soprano voice, especially suitable to dramatic rôles (Donna Anna, Fidelio, Armida, Iphigenia, Leonore,

Norma, Elisabeth, Isolde, etc.). After the first performance of *Tristan und Isolde* at Berlin she received the title of "Königliche Kammer-sängerin."

Vogl, (1) Johann Michael, distinguished stage and concert singer (tenor), b. Aug. 10, 1768, Steyr, d. Nov. 19, 1840, Vienna. He went with his friend and fellow-countryman Süssmayer to Vienna, where he studied law, until he was won over to the stage (1794) by Süssmayer, who meanwhile had become court theatre capellmeister. V. followed that career up to 1822. To him belongs the immortal merit of having perceived the high importance of Schubert's songs and made them known to the public; he was on friendly terms with the composer, and frequently, when the latter was composing his songs, tendered practical advice.

(2) Henrich, the well-known representative of *Tristan*, b. Jan. 15, 1845, in the Munich suburb Au. He attended the Teachers' College at Freising, and was schoolmaster at Ebersberg (1862-1865), but meanwhile pursued his musical studies, paying special attention to the cultivation of his voice, so that he ventured to sing on trial before the Intendant Schmitt; and this led to his being engaged at the Munich Court Opera. After a few months' serious study of various rôles under the direction of F. Lachner and the manager Jenk, he made a most successful *début* in Nov., 1865, as Max in *Der Freischütz*, and since then has belonged, without interruption, to the same theatre. V. is, above all, a Wagner singer, and for a long period was the only *Tristan*. His wife Therese (née Thoma), b. Nov. 12, 1845, Tutzing on the Starnberg Lake, was a pupil of the Munich Conservatorium (Hauser, Herger), was at first engaged at Carlsruhe (1864), but already in the following year at Munich. In 1868 she married V. Like her husband she is one of the best interpreters of Wagner rôles; her impersonation of Isolde is one of her most astonishing creations.

Vogler, (1) Johann Caspar, b. May, 1698, Hausen (near Arnstadt), studied under J. S. Bach, at Arnstadt, 1715 organist at Ratibor, 1721 court organist at Weimar. He published "Vermischte Choralgedanken" (1737).

(2) Georg Joseph ("Abbé" V.), famous alike as organist, theorist, and composer, b. June 15, 1749, Würzburg, d. May 6, 1814, Darmstadt. He was the son of a violin-maker, and was trained at an early age for his musical calling. He went to Mannheim in 1771, wrote some ballet music, and found in the Elector Karl Theodor, a generous patron. The latter placed him under Padre Martini (q.v.) at Bologna, but his teacher's method (strict counterpoint) was so distasteful to V. that, already after a few weeks, he went to Padua to Vallotti (q.v.), and, at the same time, studied theology at the University. Vallotti's system of teaching harmony (root-chords, inversions, etc.) met with the approval

of V., but not the master's somewhat mysterious method of communicating it; and again, the lessons lasted only for a short time—in fact, only a couple of months. V. then went to Rome, entered the priesthood there, and was appointed Protontary and Chamberlain, received the order of the Golden Spur, and became member of the *Accademia degli Arcadi*. In 1775 he returned to Mannheim, founded a school of music ("Mannheimer Tonschule") in which his own system was taught; he was also appointed to the posts of court chaplain and second capellmeister. V. understood the art of making himself prominent, and soon brought his "Tonschule" into notoriety. Peter v. Winter, Knecht, and other famous musicians, studied under him at Mannheim. In 1779 the court removed to Munich. V., on account of his school, remained in Mannheim, but produced an opera at Munich in 1781. In 1783 he started on his travels, first to Paris, where his opera, *La Kermesse*, failed miserably, then on to Spain and to the East. In 1786 we meet with him in Stockholm, as royal court conductor and director of a "Tonschule." He only left Sweden in 1799, after he had become entitled to a pension. He had, for the rest, made full use of the leave of absence granted to him, in making known his system of "simplifying" organs. He travelled with a small chamber organ, which he named "Orchestrion," to Denmark, England and Holland, and everywhere attracted attention as a performer on the organ. His system of simplification consisted in setting aside mixtures, also prospect pipes, and the double arrangement of the C. and the C[#] chest ("C- und Cis-Lade"), so that the pipes stood directly behind the keys belonging to them, and thus rendered complicated stop-action unnecessary. It is certainly remarkable that these ideas of V. were much talked about, and that he received commissions from London, Stockholm, etc., for organs to be re-built on his system; for at the present day little mention is made of that system, although, perhaps, some of the practical hints thrown out by V. are still of service. Vogler's Orchestrion had a *crescendo* (Venetian swell); also it was a pet scheme of his to employ a pipe of 8-ft. together with a Quint of 5½-ft., which by combination tones gave a 16-ft. sound. This idea of V.'s has been retained up to the present day, especially in the combination of a pipe of 16-ft. and one of 10½-ft. as a substitute for a 32-ft. pipe. In 1807 V. undertook the post of court capellmeister at Darmstadt, and also established a "Tonschule" there, from which sprang two men of note—Carl M. v. Weber and Meyerbeer. V. always knew how to place himself in the best light, and to turn everything to his advantage. His services must not be denied; they consisted principally in waging war against deep-rooted prejudices and old-fashioned rules of art; and in this respect Weber and Meyerbeer, for their many innovations, probably owed much to him.

As an opera composer he met with but little success, although he made many stage ventures (operas: *Der Kaufmann von Smyrna*, Mayence, 1780; *Albert III. von Bayern*, Munich, 1781; *La Kermesse*, Paris, 1783; *Églé*, *Erwin und Elvira*, Darmstadt, 1781, Paris, 1782; *Le patriotisme*, 1788, written for the Paris Grand Opera, but refused; *Castor und Pollux* (Ital.), Munich, 1784, (Ger.) Mannheim, 1791; *Gustav Adolf* [*Ebba Brahe*], Stockholm, 1792; *Hermann von Unna*, play by Skjöldebrand, with music by V., also as *Hermann von Staufen*, Copenhagen, 1800, Berlin, 1801; *Samori*, Vienna, 1804; *Der Admiral*, Darmstadt, 1810; and besides: overtures and Entr'actes to *Hamlet*; the ballets: "Schusterballett," 1768; "Lerendez-vous de chasse," 1772; a melodrama, *Lampedo*; cantata, "Ino"; and choruses to *Athalia*. His sacred compositions were highly prized in their day (psalms, motets, masses, Requiem, hymns, Miserere, Te Deums, Salve, etc.). His instrumental works consist of a symphony, several overtures, a pf. concerto, a pf. quartet, a nocturne for pf. and strings, "Polymelos" (characteristic pieces of various nationalities for pf. and strings), an organ concerto, organ preludes, figured chorales, pf. trios, violin sonatas, sonatas for pianoforte alone, 6 for two pianofortes, variations, divertissements, etc. His pamphlets are of great interest: "Tonwissenshaft und Tonsetzkunst" (1776); "Stimmbildungskunst" (1776); "Kurpfälzische Tonschule" (1778); "Mannheimer Tonschule" (reprint of the three above-mentioned in 1 vol.); "Betrachtungen der Mannheimer Tonschule," a monthly journal; *Essai de diriger le goût des amateurs* (1782; with many musical examples 1778-81); "Inledning til harmoniens kœnne-dom" (Stockholm, 1795); a pianoforte and thoroughbass Method, and an organ Method in Swedish (1797); "Choralsystem" (Copenhagen, 1800); "Data zur Akustik" (1800); "Hand-buch zur Harmonielehre" (1802); "Ueber die harmonische Akustik" (1807); "Gründliche Anweisung zum Klavierstimmen" (1807); "Deutsche Kirchenmusik" (1807); "Ueber Choral- und Kirchengesänge" (1814); "System für den Fugenbau" (posthumous). K. v. Schafhänzl has written a biography of Abbé V., with a complete list of his works (1888).

Vogt, (1) GUSTAVE, performer on the oboe, b. March 18, 1781, Strassburg, studied with Sallantin at the Paris Conservatoire. He played in various orchestras in Paris. He went through the German campaign under Napoleon in 1805-6, as oboist of the Garde, was afterwards principal oboist at the Opéra Comique, 1814-34 at the Grand Opéra, 1828-44 principal oboist at the Conservatoire concerts, in 1808 assistant teacher, and in 1816 principal teacher of the oboe at the Conservatoire, also from 1815-30 principal oboist of the royal band. In 1844 he withdrew from public life. V. wrote 4 oboe concertos, potpourris, marches for military band, a concert piece for English horn, etc.

(2) Jean, pianist and composer, b. Jan. 17, 1823, Gross Tinz (near Liegnitz), d. July 31, 1888, Eberswalde, studied with Bach and Grell at Berlin, Hesse and Seidel at Breslau, made many concert-tours, repeatedly changed his place of residence, and settled in Dresden in 1861, in Berlin 1865 (teacher at the Stern Conservatorium), and went in 1871 to New York; after 1873 he lived again in Berlin. Of his compositions may be named an oratorio, *Lazarus*.

Voice (Lat. *Vox*, Ital. *Voce*, Ger. *Stimme*, Fr. *Voix*).—(1) the human singing-voice, and its different kinds; see SOPRANO (*Discant*), MEZZO SOPRANO, ALTO, TENOR, BARYTON, BASS. (2) The various parts, harmonically connected and proceeding in company (voices, parts, Lat. *voces* or *partes*), of a composition are divided into principal voices or parts (*obbligato* parts) which in concertante fashion develop the real material of the composition, and *accessory* or *filling-up* voices or parts, which only complete the harmonies; further, *solo* parts, to which a special and prominent rôle is assigned, and *chorus* or *ripieno* parts. In the theory of musical composition a distinction is made between extreme (highest and lowest, Soprano and Bass), and middle parts (Tenor and Alto). Concerning real parts, see PARTS, CONDUCT OF.

Voice, breaking of. (See MUTATION.)

Voice-formation. The various points of importance to notice in the training of the voice are: (1) The right mode of tone-production, and the proper resonance of the vowel in singing. (2) Training in inspiration and expiration (by means of *Messa di voce*), also the strengthening of the organs of respiration, which is the first condition for strengthening the voice. (Cf. BREATH.) (3) Practice in firmly maintaining pitch (in which the muscles and ligaments concerned, and the sense of hearing are exercised, likewise by means of *Messa di voce*). (4) Equalisation of the clang-colour of the sounds (in striving after which the bad production of one particular sound will frequently be noticed). (5) Extension of the compass of the voice (by practising the notes which the singer has comfortably at his command). (6) Practice for flexibility of the voice (first of all slow tone-binding with narrow and wide intervals; afterwards, practice in runs, shakes, mordents, etc.). (7) Perfecting of the sense of hearing (systematic pitching upon notes). (8) Practice in correct enunciation (best accomplished by the study of songs). (9) Practice in the rendering of music (by the selection of works of different character for study).

Voigt, (1) Johann Georg Hermann, organist of St. Thomas's Church, Leipzig, b. May 14, 1769, Osterwieck (Saxony), d. Feb. 24, 1811, Leipzig. He published 12 minnets for orchestra, 7 quartets and a trio (with viola) for strings, a concerto for viola, a polonaise

for 'cello and orchestra, 6 scherzi for pianoforte (four hands), and 3 pf. sonatas.

(2) Karl, b. March 29, 1808, Hamburg, d. there Feb. 6, 1879. In 1836 he became deputy for Schelble, and in 1838, his successor as conductor of the "Cäcilienverein" at Frankfurt. V. settled in 1840 at Hamburg, where he established the still-flourishing "Cäcilienverein," which he conducted for many years.

Volata (Ital.), lit. "a flight, a volley." A series of quick notes forming an embellishment of a melody.

Volckmar, Wilhelm Valentin, gifted performer on the organ and composer for his instrument, b. Dec. 26, 1812, Hersfeld, d. Aug. 27, 1887, Homberg (near Cassel); from 1835 teacher of music at the seminary at Homberg, royal musical conductor, professor, and Dr. phil. He wrote 20 organ sonatas, several organ concertos, an "Orgelsymphonie" and other works for the organ which are widely known; also a great "Orgelschule" and an educational work, "Schule der Geläufigkeit für die Orgel"; likewise many vocal, especially sacred, pieces.

Volkert, Franz, b. Feb. 2, 1767, Friedland (near Bunzlau), organist of the Scotch Collegiate Church and capellmeister of the Leopoldstadt national theatre, Vienna, d. there March 22, 1845. V. wrote, from 1810-29, over 50 comic operas, vaudevilles, melodramas, farces, etc., for the Leopoldstadt theatre, some of which were very favourably received; also pf. trios, variations, organ pieces, preludes, etc.

Volkland, Alfred, b. April 10, 1841, Brunswick; he studied from 1864-66 at the Leipzig Conservatorium, was appointed court pianist, and in 1867, court capellmeister at Sondershausen. In 1869 he was called to Leipzig as conductor of the "Euterpe," laboured there until 1875, and during that time established, jointly with Franz v. Holstein and Philipp Spitta, the "Bach-Verein" in that city. Since 1875, V. conducts the concerts of the Basle "Allgemeine Musikgesellschaft," of the "Gesang-Verein," and of the "Liedertafel." In 1889 the Basle University granted him the degree of Dr. phil. *hon. c.*

Volkmann, (1) Friedrich Robert, one of the most eminent modern composers, especially in the department of instrumental composition, b. April 6, 1815, Lommatsch (Saxony), where his father was cantor, d. Oct. 30, 1883, Pesth. V. received instruction in pianoforte and organ from his father; in other instruments, from the Stadt-musikus Friebe. As he was to be trained for a schoolmaster, he attended the Gymnasium and Seminary at Freiberg, but soon turned to music and studied theory under Anacker at Freiberg and K. F. Becker at Leipzig. By friendly intercourse with R. Schumann, he was urged forward; to this master his muse was near akin. V. went in 1839 as music teacher to Prague, in 1842 to Pesth,

lived from 1854-58 at Vienna, but afterwards again in Pesth; during his last years he was professor of harmony and counterpoint at the "Landes-Musikakademie." Of V.'s compositions the following deserve special mention: his 2 symphonies, D minor, Op. 44, and B \flat , Op. 53; the 3 serenades for strings, c, Op. 62, F, Op. 63, and D minor, Op. 69 (with obbl. violoncello); 6 quartets for strings, Op. 9 (A minor), 14, (G minor), 34, 35, 37, 43; 2 overtures, Op. 50 (for the jubilee of the Pesth Conservatorium), and 68 (*Richard III.*); 2 trios, F., Op. 3, B \flat minor, Op. 5; a 'cello concerto, Op. 33; a romance for 'cello (Op. 7) and one for violin (Op. 10); with pf.; Allegretto capriccioso for pf. and violin, Op. 15; rhapsody for pf. and violin, Op. 31; 2 sonatinas for pf. and violin, Op. 60, 61; a concert piece for pf. and orchestra, Op. 42; pf. sonata, Op. 12; variations for two pfs. on a theme of Handel's, Op. 26; further for pf., four hands; a sonatina, Op. 57; Rondino and march capriccio, Op. 55; "Musikalisches Liederbuch," Op. 11; "Ungarische Skizzen," Op. 24; "Die Tageszeiten," Op. 39; 3 marches, Op. 40; also transcriptions of the pf. pieces Op. 21, 22, 40, and of the orchestral and chamber works; numerous pieces for pf. for two hands: "Phantasiebilder," Op. 1; "Dithyrambe und Tokkate," Op. 4; "Souvenir de Marolh," Op. 6; Nocturne, Op. 8; "Buch der Lieder," Op. 17; "Deutsche Tänze," Op. 18; "Cavatine und Barcarolle," Op. 19; "Visegrad," Op. 21; "4 Märsche," Op. 22; "Wanderskizzen," Op. 23; "Lieder der Grossmutter," Op. 27; 3 Improvisations, Op. 36; "Am Grab des Grafen Széchenyi," Op. 41; Ballad and Scherzetto, Op. 51; transcriptions of songs by Mozart and Schubert, also of the four-hand pieces, Op. 11, 24, 39, 40. The vocal works of V. are: 2 masses for male voices, Op. 28, 29; 3 sacred songs for mixed chorus, Op. 38; offertories for soli, chorus, and orchestra, Op. 47; songs for male chorus, Op. 48, 58; Christmas carol of the 12th century, Op. 59; old German hymns, Op. 64 (double male chorus); 6 duets to Old German words, Op. 67; 2 sacred songs for mixed choir, Op. 70; 2 wedding songs, ditto, Op. 71; "An die Nacht," Op. 45, alto solo with orchestra; "Sappho," Op. 49, dramatic scena for soprano; "Kirchenarie" for bass with strings and flute, Op. 65; 2 songs for mezzo soprano with pf. and 'cello, and many songs with pf., Op. 2, 13, 16, 32, 46, 52, 54, 66.

(2) Wilhelm. (See BREITKOPF & HÄRTEL.)

Vollkied is either a song which has sprung from the people (*i.e.* one of which neither the poet nor the composer is known), or one which has become popular; or, finally, one of popular character, *i.e.* composed with simple melody and harmony, and, consequently, easily intelligible.

Vollbeding, Johann Christoph, b. 1757, Schönebeck (near Magdeburg); teacher of polite

literature at the military school, Berlin, in 1793 magister and preacher at Luckenwalde. He translated into German the introduction of the 4th vol. of Dom Bedos' work on the organ: "Kurzgefasste Geschichte der Orgel" (1793); together with Heron's description of the water organ (previously published [1792] in the "Archiv der Erfindungen").

Volles Werk. (See FULL ORGAN.)

Vollhardt, Emil Reinhardt, b. Oct. 16, 1858, Seifersdorf (near Rochlitz-i.-S.), and received his musical training at Leipzig Conservatorium. From 1883-86 he was organist at the "Gnadenkirche," Hirschberg (Silesia), and has since then laboured with much success as cantor at St. Mary's, and as conductor of the musical society and of the *a capella* society in Zwickau. He has made himself a name, not only as conductor, but as pianist and organist, and more recently as arranger of the musical treasures in the Zwickau Municipal School Library. He has published songs and motets.

Vollweiler, Karl, composer, b. 1813, Offenbach, d. Jan. 27, 1848, Heidelberg. He was trained by his father (died Nov. 17, 1847), who was a renowned teacher at Frankfurt, and lived afterwards at Heidelberg, and published an elementary piano Method, also an elementary singing Method. V. lived for several years at Petersburg as teacher of music, and only during the last years of his life at Heidelberg. He composed: a symphony (manuscript), 2 pf. trios (Op. 2, 15), variations on Russian themes for stringed quartet (Op. 14), a pf. sonata (Op. 3), 6 melodic études (Op. 4), 6 lyric études (Op. 9), and some other pianoforte pieces.

Volta (Ital.), "turn," "time"; *due volte*, twice; *la prima v.*, the first time (abbr. 1^{ma}).

Volti (Ital.), "turn over"; *v. subito*, abbr. V.S., turn over quickly. V.S. has, however, also the meaning *Vide sequens* (see what follows).

Volumier, Jean Baptiste, distinguished violinist, b. 1677, Spain, trained at the French court, from 1692-1706, leader of the Elector's band and director of the dance music at the Berlin court. In 1709 he was called to Dresden in a similar capacity; he died there Oct. 7, 1720.

Vopelius, Gottfried, b. 1645, Herwigsdorf (near Zittau), d. 1715, Leipzig, as cantor at the Nicolai Church. He composed chorale melodies which are sung to this day, and published "Neues Leipziger Gesangbuch" (1682).

Voretzsch, Johannes Felix, b. July 17, 1835, Altkirchen (Sachsen-Altenburg), excellent pianist, conductor of the Singakademie at Halle a. S.

Vorhalt. (See SUSPENSION.)

Vorschlag. (See APPOGIATURA.)

Voss, (i.) Gerhard Johann (Vossius), b. 1577, Heidelberg, professor of elocution at Leyden (1618), and in 1633 professor of history at Amsterdam, where he died March 19, 1649.

He wrote: "De artium et scientiarum natura" (1650-58, 2nd. ed. 1660), a work which treats in detail of music.

(2) **Isaak (Vossius)**, son of the former, o. 1618, Leyden, a learned philologist, who lived at first at the Stockholm Court, returned to Holland in 1652, came to England in 1670, and died as canon at Windsor, Feb. 21, 1689. He wrote "De poematum cantu et viribus rhythmici" (1673).

(3) **Charles**, pianist and composer, b. Sept. 20, 1815, Schmarsoff (near Demmin), d. August 29, 1882, Verona, was trained at Berlin, and settled in Paris in 1846, where he was esteemed as a teacher of the pianoforte. He also brought to market a very large number of brilliant pianoforte pieces (fantasias, potpourris, dances, drawing-room pieces of all kinds), among which however, there are some of higher value; concertos, studies, variations, etc.

Vowel. In speaking as in singing the V. is the real bearer of the tone; the word itself is therefore not derived without good meaning from Vox, "the voice." Consonants only introduce the V. or bring it to a close; they themselves are void of tone. Concerning the varied resonance of vowels in the cavity of the mouth, cf. EMBOUCHURE, also ENUNCIATION.

Vox (Ital. *voce*), the voice. *V. humana* (Gk. *Anthropoglossa*, "human voice"), in the organ, is an 8-ft stop, which each organ-builder constructs in a different way. As a rule, it is a reed-stop with short tube, partly covered; it is, indeed, to be found as a lip-stop (at Breslau, at the church of St. Elizabeth, and at that of the 11,000 Virgins; in Italy it is very common), and sometimes with double pipes, one a lip, the other a reed. A good *V. humana* is the pride of an organ, but it is a somewhat *rara avis* (Madeleine at Paris, Cathedral at Freiberg, ditto at Freiburg in Switzerland, St. Johannes at Gouda). The stop probably depends greatly on the acoustic properties of the particular church. When of 4-ft., the stop is generally called *V. virginæa*, "Jungfernstimme," Jungfernregal, or *V. angelica*.

Vredemann, (i.) Jakob, teacher of music at Leuwarden about 1600-40; he published: "Musica miscella o mescolenza di madrigali, canzoni e villanelle a 4 e 5 voci" (1603, with Dutch text), and "Isagoge musicæ, dat is korte perfecte ende grondighe instructie vandt principale musijcke, etc." (1618).

(2) **Michael**, teacher of music at Arnheim, published: "Der violen-cyther mit vyf snaaren, en nieuwe sorte melodieuze inventie twe naturen hebbende vier parthyen spelende, licht te leeren, half violen, half cyther" (1612).

Vroye, Theodor Joseph de, a learned connoisseur of Church music, b. Aug. 19, 1804, Villers la Ville (Brabant), 1835 canon and musical director (*Grand chantre*) of the Cathedral at

Liège, died there July 19, 1873. He rendered service towards the reform of Gregorian Song in Belgium by publishing: "Vespéral" (1829); "Graduel" (1831); "Manuale cantorum" (1849); "Processionale" (1849); "Ritualet Romanum" (1862); also a "Traité de plainchant à l'usage des séminaires" (1839); and the pamphlet "De la musique religieuse, etc." (1866), jointly with Elewyck (q.v.).

Vuillaume, Jean Baptiste, famous violin-maker, b. Oct. 7, 1798, Mirecourt, where his ancestors had already carried on the art of violin-making, d. March 19, 1875, Ternes. In 1818, he worked under Chanot at Paris, then under Lété, with whom he soon afterwards entered into partnership. But in 1828 he left Lété, and by his imitations of Antonio Stradivari's violins, acquired extraordinary fame. His instruments received prizes at all exhibitions; among others, at the London Exhibition of 1851, and at the Paris one of 1855. V. also constructed a new kind of viola, especially powerful and full-toned, which he named *Contralto*; also a monster double-bass of huge dimensions (*Octobasse*), descending a third lower than the double-bass, 4 metres high; a specimen has been preserved in the museum of the Paris Conservatoire. He also invented a machine

for the fabrication of pure strings, and another for the construction of bows, etc.—His two brothers, Nicolas (1800–71) and Nicolas François (1802–76), became excellent violin-makers, the former at Mirecourt, the latter at Brussels. A third, Claude François, gave up violin-making for organ-building, while his son Sébastien established himself in Paris as a violin-maker, and was specially noted for his good bows.

Vulpinus, Melchior, composer and theorist, b. about 1560, Wasungen, cantor at Weimar, where he died in 1616. He published: 2 books of "Cantiones sacrae" (1602 [1603] and 1604, 2nd ed., 1611); "Kirchengesänge und geistliche Lieder Dr. Luthers u. a. mit 4 und 5 Stimmen" (1604); "Canticum beatissimæ Virginis Mariæ 4, 5, 6 et plurium voc." (1605); "Lateinische Hochzeitstücke" (1608); "Opusculum novum selectissimarum cantionum sacrarum 4, 5, et 6 vocum" (1610); "Erster (zweiter, dritter) Teil der sonntäglichen Evangelischen Sprüche von 4 Stimmen" (1619–21), also a new edition of Heinrich Faber's "Compendium musicæ" with German translations and some additional chapters of his own: "Musica compendium latino-germanicum M. Henrici Fabri, etc." (1610), etc.

W.

Wach, Karl Gottfried Wilhelm, performer on the double-bass, b. Sept. 16, 1755, Löbau (Oberlausitz), d. Jan. 28, 1833, Leipzig, where from 1777, with exception of some concert tours, he resided; he was a member of the theatre orchestra, also of the Gewandhaus orchestra, etc.

Wachsmann, Johann Jakob, musical director at the Cathedral, teacher of music at the Training School, and conductor of the Verein at Magdeburg. He published a number of elementary educational vocal works: "Praktische Singschule," a "Gesangfibel für Elementarklassen" (1822), "Gesangfibel in Ziffern" (1827), "Vierstimmige Schulgesänge" (1840), also an "Elementarschule für Pianoforte," an "Altargesänge," and "Choralmelodien zum Magdeburgischen Gesangbuch."

Wachtel, Theodor, famous tenor singer, b. March 10, 1823, Hamburg, d. Nov. 14, 1893, Frankfurt; son of a cab proprietor, who after his father's death continued the business, jointly with his mother. When his voice was discovered he first studied with Fr. Grandjean at Hamburg, Schwerin, Dresden, Würzburg, Darmstadt, Hanover, Cassel, Vienna, London, Berlin, Paris: these cities mark the stages of his dramatic career. During his last years W., who had long been a man of means, accepted no fixed engagement, but appeared now here, now there;

in 1871 he visited the United States, and in 1875 went to California. W., as lyric tenor, had a powerful voice, and one of large compass; time and routine added what he originally lacked in musical training; still he remained more or less a singer of natural gifts. He reached his highest point in such rôles as George Brown, Postillon de Lonjumeau (in which the crack of his whip, recalling his father's occupation, secured for him tremendous success). His attempt to add Lohengrin to his *répertoire* (Leipzig, 1876) was bound to fail.—His son Theodor, also gifted with a voice, sang at various German theatres with success, but soon lost his voice, and died in January, 1875, at Dessau, as an embroiderer in gold.

Waelput, Hendrik, Flemish composer, b. Oct. 26, 1845, Ghent, d. there July 8, 1885; pupil of the Brussels Conservatoire, received in 1866 the *Prix de Rome* for his Flemish cantata *Het Woud* (*The Wood*), became, already in 1869, director of the Conservatoire at Bruges, and at the same time theatre *maitre de chapelle* and conductor of the Popular Concerts there. In 1871 he settled in Dijon, and in 1875 in Ghent as *maitre de chapelle* at the Grand Théâtre, concert conductor, etc., and finally became professor of harmony at Antwerp Conservatoire. W. is held in high esteem as a composer in his native

land; by production or publication the following of his works have become known: 4 symphonies, several cantatas (*De zegen der wapens*, *La pacification de Gand*, *Memling*), a festival march, many songs, etc.

Waelrant, Hubert, Belgian composer and theorist, b. about 1517, Tongerlo, Brabant, d. Nov. 19, 1595, Antwerp. He was a pupil of Willaert at Venice, lived afterwards (1547) in Antwerp, and there set up a school of music, in which he introduced, instead of the solmisation according to the hexachords, the one with the seven sound names (Bocedisation, *Voces belgicae*; cf. BOBISATION): *bo, ce, di, ga, lo, ma, ni*, (similar as regards the vowels, to the present *do, re, mi, fa, sol, la, si*; the *do* and *si* were certainly chosen in connection with the former names). W. entered into partnership with Jean Laet in the establishment of a music publishing house. His compositions were published partly by this house, partly by Phalèse, Tylman Susato, also at Venice: motets *a 5-6* (1557), chansons and madrigals *a 5* (1558), "Canzoni alla napoletana" (*a 3-4*, 1565); and works scattered among collections of the Belgian publishers mentioned above.

Wagensell, (1) Johann Christoph, b. Nov. 26, 1633, Nuremberg, d. Oct. 9, 1708, Altdorf, as professor of history and librarian. He wrote: "De sacri Rom. Imp. libera civitate Norembergensi commentatio. Accedit de Germaniae phonasorum origine," etc. (1697), with a long treatise of 140 pages on the Meistersinger, together with melodies by Franenlob, Mühlings, Murner, and Regenbogen.

(2) Georg Christoph, a once favourite composer, especially for the clavier, b. 1715, Vienna, d. there March 1, 1777; pupil of J. J. Fuchs, teacher of music to the Empress Maria Theresia, and afterwards chamber composer and teacher to the princesses, with a retiring pension of 1,500 fl. for life. Of his works the following appeared in print: "Suavis artificiose elaboratus concentus musicus continens 6 partithias selectas ad clavicembalum compositas" (1740); "18 Divertimenti di cembalo" (Op. 1-3); a "Divertimento" for two claviers and 2 for clavier, violin, and cello (Op. 5); 10 symphonies for clavier, two violins, and cello (Op. 4, 7, 8); 6 violin sonatas with clavier (Op. 6). There remained in manuscript 30 grand symphonies, 27 clavier concertos, 36 trios for two violins and cello, clavier pieces, some sacred pieces, etc.; also 10 operas (*Orfeo*, *Tito*, *Alessandro*, *Siroe*, *Olimpiade*, *Antigone*, *Vincelao*, *Le cacciatrici amanti*, *Prometeo assoluto*, and *L'inverno*, 1740-62, for Vienna), an oratorio (*Gioas*), and a cantata (*Il quadro animato*).

Wagner (1), Gotthard, b. 1679, Erding, entered, 1700, into the Benedictine monastery at Tegernsee, where he died, 1739. He published a series of collections of sacred songs for one voice with instrumental accompaniment; "Der

Marianische Schwan" (1710), "Musikalischer Hofgarten" (1717), "Der musikalische Springbrunnen" (1720), and "Das Marianische Immelein" (1730).

(2) Georg Gottfried, b. April 5, 1698, Mühlberg; he attended St. Thomas's School at Leipzig under Kuhnau, and remained, when Bach in 1722 succeeded the latter, still three years in Leipzig, in order to profit by intercourse with this composer. In 1726 he became cantor at Planen, where he died, 1760. W. wrote violin concertos and solo pieces, overtures, trios, oratorios, cantatas, etc., which were highly esteemed, but which remained in manuscript.

(3) Johann Joachim, famous organ-builder at Berlin at the beginning of the 18th century, the maker of a number of the Berlin organs.

(4) Johann and Michael (brothers), celebrated organ-builders at Schmiedefeld (near Henneberg) about the middle of last century; among other instruments they built the large organ at Arnheim, which is said to have cost 100,000 fl. (47 stops).

(5) Christian Salomon and Johann Gottlob (brothers), famous clavier-makers during the last quarter of the 18th century at Dresden; they constructed more than 800 claviers, among others, one (1774) with three pedals, which they named royal clavecin (Pantalonzug, Lautenzug, Harfenzug), and (1786) one with three keyboards.

(6) Karl Jakob, horn virtuoso, composer, conductor and theorist, b. Feb. 22, 1772, Darmstadt, d. there Nov. 25, 1822; he was a pupil of Portmann and Abbé Vogler, 1790 principal horn-player in the Darmstadt band, shone as virtuoso up to 1805, and made numerous concert tours; later on, however, he devoted himself exclusively to composition and theory, so far as his activity as conductor permitted, for in 1808 he became court concertmeister, and later on court capellmeister. W. wrote 5 operas for Darmstadt (*Pigmalion*, *Der Zahnarzt*, *Herodes*, *Nitétis*, *Chimene*), also some dramatic cantatas (monodrama, *Adonis*, Darmstadt, 1811), and *pièces d'occasion*. There appeared in print 2 symphonies, 4 overtures ("Jungfrau von Orleans", "Götz von Berlichingen"), 3 violin sonatas, trios for flute, violin, and cello, 40 horn duets, pieces for flute and violin, variations for clavier, etc. He also republished in extended form Portmann's "Kürzer musikalischer Unterricht," as "Handbuch zum Unterricht für die Tonkunst" (1802).

(7) Ernst David, b. Feb. 18, 1806, at Dramburg (Pomerania), d. May 4, 1883, Berlin; 1827 organist at Neustettin, afterwards pupil of the Royal Institute for Church Music (A. W. Bach) and of the School of Composition of the Royal Academy of Berlin (Rungenhagen); 1838 cantor of St. Matthew's Church, 1848 organist of Trinity Church, Berlin, in 1858 royal musical director. W. published: motets,

psalms, songs, pf. pieces, organ pieces, a chorale book, and a pamphlet, "Die musikalische Ornamentik" (1868), and also composed an oratorio, *Johannes der Täufer*.

(8) Wilhelm Richard, the greatest dramatic composer of the 19th century, and indisputably, one of the most energetic, concentrated musical thinkers of all times, likewise a poet of most gifted and noble conception, b. May 22, 1813, Leipzig, d. Feb. 13, 1883, Venice; he was buried Feb. 18, at Bayreuth, near his villa, "Wahnfried." W. lost his father (who was a police magistrate) when scarcely six months old; his mother soon married again, at Dresden, the actor and playwright Ludwig Geyer, who, however, died already in 1820. W. passed his childhood in Dresden, and attended the Kreuzschule, where his talents received many a fruitful impulse. His relationship to music was, for the moment, only a superficial one, since at first he was far more inclined to poetry: for a long time he cherished the idea of writing a grand tragedy in the style of Shakespeare. Only after his mother had settled again in Leipzig, where, meanwhile, his sister Rosalie (afterwards wife of Oswald Marbach) had become engaged at the town theatre, did music begin to play a part in his dreams of the future. W. passed through the Nicolai Lyceum, received instruction on the pianoforte from the organist Gottlieb Müller, and whilst, as a student of philosophy, preparing for matriculation at the University, he studied counterpoint regularly under Weinlig. His earliest compositions are not in any way remarkable; yet, with regard to certain characteristic features of melody and harmony, of the highest interest to those who know the master in his later works. They are as follows:—a pf. sonata (Op. 1) and a polonaise (Op. 2), fantasia, ♯ sharp minor (MS.); quartet for strings, 4 overtures (B flat minor, D minor, C [with fugue], and "Polonia"). His sketches for an opera, *Die Hochzeit*, did not meet with the approval of his sister, and were abandoned (they include an introduction, chorus, and sextet). In addition, in 1833, whilst staying at Würzburg with his brother Albert (a gifted singer and actor, father of Johanna Jachmann-W., q.v.), he wrote an opera, *Die Feen* (libretto based on Gozzi's "La donna serpente"), which he offered in vain to the Leipzig theatre (produced, 1888, at Munich). In 1834 W. commenced a practical career as conductor at the Magdeburg theatre. There he wrote his second opera, *Das Liebesverbot* (based on Shakespeare's *Measure for Measure*), which was produced in 1836, but with only moderate success; likewise a New Year's cantata, and incidental music to Gleich's *Berggeist*. As the opera troupe broke up soon afterwards, W., who meanwhile had married the actress Minna Planer, accepted the post of conductor at the Königsberg theatre; but the director became bankrupt before the expiration of a year, and his engagement came to an end.

Still in the autumn of 1837, W. undertook the post of conductor at the Riga theatre, newly opened under Holtei. He also conducted subscription concerts there, at which he produced two overtures (one to Apel's *Columbus*, and "Rule, Britannia"). In 1839 the aspiring young artist went with his wife *vid London* to Paris. Here hard times commenced, and, forced to earn money for the barest necessities of life, he found himself compelled to do musical journeyman's service: to make transcriptions of the most inferior music for publishing houses, to compose French romances, to write for the daily press, etc. The pianoforte score of Halévy's *Reine de Chypre* marked the end of this humiliating epoch, one, however, without doubt in the highest degree fruit-bearing for W., since he had an opportunity to study the excellent performances at the Grand Opéra, and to listen to the works of his predecessors in the department of dramatic composition. During this first three years' stay in Paris (1839–42) W., in addition to transcriptions, had written his "Faust Overture," finished *Rienzi*, which he had already commenced at Riga, and written text and music of the *Flying Dutchman*, to which he had been moved by a stormy voyage from Riga to London. *Rienzi* was accepted for performance at Dresden, also, on the recommendation of Meyerbeer, the *Flying Dutchman* at Berlin; and W., on his return to Germany in April, 1842, faced his first triumphs. He had obtained the means for his journey by the above-mentioned pianoforte score and by the sale of the text-book of the *Flying Dutchman*, which was acquired by the Grand Opéra; a French version by Paul Foucher, with music by Dietsch (*Le Vaisseau Fantôme*), was produced soon afterwards. The first performance of *Cola Rienzi*, *der letzte der Tribunen*, took place at Dresden Oct. 20, 1842. The success was so great that W. was induced to request that the score of the *Flying Dutchman* should be sent back from Berlin, where probably it would long have waited for a chance of performance; and thus the *Flying Dutchman* was produced at Dresden Jan. 2, 1843. Meanwhile, however, W. had been appointed court capellmeister (through the intervention of his friend the chorus-master, Wilh. Fischer), in place of the lately deceased Rastrelli. The *Flying Dutchman* created an extraordinary impression; if, on the one hand, *Rienzi* showed the strong influence of Meyerbeer, and especially of the traditions of the Paris Grand Opéra, the *Flying Dutchman*, on the other hand, displayed in full strength the "innovator" W. From the time of the production of that opera dates a party for, or against, W. The breaking away from traditional forms was altogether striking; an opera in which the prima donna only had one solo of short duration (the Ballad), therefore not a single aria, was something unheard of; and the avoidance, for the first time, of the usual closes

of the separate numbers of the opera must have proved exciting to the highest degree. For the rest, the relationship in many points of detail and colouring, etc., to Marschner's *Hans Heiling* and *Vampyr* proved a good recommendation to the opera in Dresden. The idea of giving unity to the work by means of a "leading motive," presented for the first time in definite shape—but neither in obtrusive nor complicated manner, so as to cause a strain on the intellect (as in the *Nibelungen*)—could not fail of its effect; and in its form at that time that idea gave no rise to esthetic anxiety. Finally, the unlimited freedom of the harmony and the very naturalistic use of the chromatic scales produced a powerful effect on unprejudiced hearers; while for the critics, the wished-for stumbling-block was found.

W. now displayed extraordinary activity; as a conductor he quickly achieved high reputation by his masterly productions of the works of Gluck. In spite of all opposition to his ideas of reform, W. moved steadily forward. On Oct. 19, 1845, *Tannhäuser, oder der Sängerkrieg auf der Wartburg*, was produced at Dresden; and already about this time W. was occupied with the poems of *Lohengrin*, the *Meistersinger*, and, indeed, the *Nibelungen*. Of compositions written at this period there have still to be named: a cantata for the Dresden Sängerkrieg of 1843; further, *Das Liebesmahl der Apostel* (a kind of oratorio), and the revision (Bearbeitung) of Gluck's *Iphigenie en Aulide*. As a special "deed," to use the favourite expression of the Wagnerites, must be named the performance of Beethoven's Ninth Symphony in 1846. On the occasion of the removal of Weber's remains from London to Dresden (1844), W. delivered the funeral oration, and wrote the words and music of a funeral cantata. The excitement of the year 1848 drew also W. within its circle; he offered to the ministry a project for a national theatre ("Entwurf eines Nationaltheaters des Königreichs Sachsen"). No notice was taken of it; and this probably explains the participation of W. in the revolution of May, 1849, on the quelling of which W. was forced to fly. He went first to Liszt at Weimar, then to Paris, and, after a short stay there, to Zürich, his headquarters for several years. His next productions were the pamphlets: "Die Kunst und die Revolution" (1849); "Das Kunstwerk der Zukunft" (1850); "Kunst und Klima" (1850); "Oper und Drama" (1851); and "Eine Mitteilung an meine Freunde" (autobiographical and autocritical, 1851). The complete text of the *Nibelungen* also appeared already in 1853. *Lohengrin*, written in 1847, was produced for the first time at Weimar, Aug. 28, 1850, by Liszt, the willing and devoted friend of W.; also to him W. was indebted for the production of *Tannhäuser*, already in 1853, at many German theatres. In 1855 W. was called to

London to conduct the Philharmonic Society concerts for the season. In 1860 he visited Paris and Brussels as propagandist of his works; three concerts given in the Salle Ventadour cost him, however, about £400. The production of *Tannhäuser* at the Paris Opéra in 1861, by command of the Emperor himself, provoked the lively opposition of a section of the Paris public, and W. saw himself compelled to withdraw the work after the third performance. Within the period of this renewed stay in Paris (1860-61) falls the pamphlet "Zukunftsmusik." W. meanwhile had received his amnesty, and went from Paris to Germany, first to Karlsruhe and Vienna. In both cities, *Tristan und Isolde*, an opera completed in 1859, was accepted for performance. This work marks the beginning of W.'s third creative period (resolution of melody into "speech-singing" [Sprechsingen], the higher art of recitative peculiar to W.; and the transference of the point of stress of theme formation to the orchestra). In both cities, however, the production of the work was delayed. During the year 1862 W. lived at Biebrich-on-the-Rhine, occupied with the composition of the *Meistersinger*, and this, interrupted by one concert tour to Prague and Petersburg, was continued in 1863 at Vienna. Finally the master saw himself, at one stroke, brought nearer to the fulfilment of his bold plans, when, in 1864, King Ludwig II. of Bavaria, who had just ascended the throne, invited him to Munich and presented him with a villa on the Starnberger Lake. On the recommendation of W., his pupil, Hans von Bülow, was called to Munich in 1865, first as court pianist, but in 1866 as director of the Royal School of Music, reorganised on a plan suggested by W., and as court theatre capellmeister. Cosima (daughter of Liszt), separated from her husband, Bülow, in 1869, and went to live with W. (who had separated from his first wife). *Tristan und Isolde* was produced for the first time June 10, 1865. Soon afterwards W. left Munich, and took up his residence at Triebtschen, near Lucerne, where he completed the *Meistersinger* and made progress with the *Nibelungen*.

On June 21, 1868, *Die Meistersinger von Nürnberg* was produced for the first time at Munich. To speak of the success of the first performance of a new work by Wagner sounds, according to present notions, almost a heresy; it was an event. In fact, each new work of W.'s after *Rienzi* was a creation of lasting value; and, with the exception of *Tristan*, which is beyond the powers of most German theatres, formed a rich addition to their repertoire. The youthful dream of W., the composition of the great tetralogy *Der Ring des Nibelungen* (Trilogy: *Waldhude, Siegfried, Götterdämmerung*, with Vorspiel *Rheingold*) approached completion: the heaven of the gods of the north again became a reality to the people. The *Rheingold* was produced for the

first time at Munich, Sept. 22, 1869, and made such an impression, that it gave good promise for the success of the great undertaking long meditated by W., viz. the establishment of periodical performances of musico-dramatic festival plays; that is, of a thoroughly national institution devoted to the master works of German art. In 1871, W. settled at Bayreuth, which he had selected as the site for a national theatre. At Whitsuntide of 1872, the foundation-stone of the festival playhouse was laid amid the lively participation of the friends (and enemies) of W.'s music. A noble performance of Beethoven's Ninth Symphony by an orchestra composed entirely of artists of the first rank (Hans Richter played the kettledrums) constituted the worthy central point of the festival. Finally, owing to the zealous activity of the Wagner societies (Wagner-Vereine), the sum necessary for the undertaking (£36,000) was collected; and from the 13th to the 30th of August, 1876, the first three performances of the complete festival play *Der Ring des Nibelungen*, took place in the "temporary" festival playhouse in presence of the Emperor Wilhelm I., King Ludwig II., and the *élite* of the artists of all nations. These performances gave rise to a perfect deluge of pamphlets and newspaper articles for and against; the deluge subsided, and the *Nibelungen* made a triumphant entry into one city after the other (Leipzig, Munich, Vienna, Hamburg [Schwerin, Weimar], Cologne, Berlin). Wagner's last work was the "Bühnenweihfestspiel" *Parsifal*, the first performances of which took place under the personal supervision of the master, as announced, July–August, 1882 (the first on July 26). He also prepared the work for the renewed performances of the summer of 1883, in which the artists selected by W. took zealous part. In order that Bayreuth might remain the place where W.'s creations could best be given, and *Parsifal* exclusively, a special "Allgemeiner Richard Wagner-Verein" was formed during the summer of 1883 to pursue the one aim. Unfortunately, the heirs of W. have lost sight of the original, more general idea, one not conceived solely for Wagner worship; Bayreuth has now become exclusively a Wagner theatre. The necessary result of this limitation is a decrease, already visible, of the interest shown in the continuance of the undertaking.

To the list of the compositions of W. must still be added: "Huldigungsmarsch," "Kaisermarsch," "Festmarsch" (1876, for Philadelphia); an idyll, "Siegfried"; 3 "Albumblätter," some beautiful songs, etc., for pf. His writings have been published in a complete edition by E. W. Fritzsch of Leipzig (1871–83, 10 vols., 2nd ed. 1888; "Entwürfe, Gedanken, Fragmente" were added in a supplement [1885]; they are being translated into English by W. A. Ellis; and four volumes have appeared); besides the writings already named,

they include "Das Judentum in der Musik" (1850); "Das Wiener Hofoperntheater" (1863); "Ueber Staat und Religion" (1864); "Deutsche Kunst und deutsche Politik"; "Erinnerung an Schnorr von Carolsfeld"; "Zensuren" (notices of Riehl's "Neues Novellenbuch," Hiller's "Aus dem Tonleben unsrer Zeit," Devrient's "Erinnerung an Mendelssohn," explanations concerning "Das Judentum in der Musik"); "Ueber das Dirigieren" (1869); "Erinnerungen an Auber"; "Beethoven"; "Ueber die Bestimmung der Oper"; "Ueber Schauspieler und Sänger"; "Sendschreiben und kleinere Aufsätze"; "Baireuth" (together with six plans of the festival playhouse); also all opera poems, sketches and articles for the *Baireuther Blätter*; in 1887 appeared the "Briefwechsel zwischen W. und Liszt" (2 vols.); in 1888, "R. W.'s Briefe an Th. Uhlig, W. Fischer, und Ferd. Heine." The Wagner literature has already assumed great dimensions, as may be seen at a glance in the biographies of our living writers on music. We mention, especially, the numerous detached writings of Franz Liszt (q.v.), Fr. Müller (q.v., 11), H. v. Wolzogen (q.v.), Rich. Pohl, H. Porges, and F. Hueffer; the Wagner dictionaries and catalogues of Tappert, Em. Kastner and Glasenapp (jointly with H. von Stein); the biographies of Glasenapp (1876–77, 2 vols.), W. Tappert (1883), R. Pohl (1883), Ad. Jullien (1886); also Fr. Nietzsche's "Die Geburt der Tragödie aus dem Geiste der Musik" (1872), Ed. Schuré's "Le drame musical" (1875, 2 vols.), Alfred Ernst's "L'œuvre de W." (L'œuvre poétique, 1893), H. von Bülow's "Ueber R. Wagner's Faustouvertüre" (1860), Nohl's "Beethoven, Wagner, Liszt" (1874), Mayrberger's "Die Harmonik R. Wagners" (1882), E. Kastner's "Briefe R. Wagners an seine Zeitgenossen" (1830–83; but not complete), Esterlein's "Katalog einer Wagner-Bibliothek" (1882–86, 2 vols., contains already 5,560 entries!), Kürschner's "Wagner-Jahrbuch," etc. (1886).

W. as a composer passed through various stages of development, which may be sharply distinguished: the period of learning, in which he wrote without pronounced independence and originality (up to and including *Rienzi*); the period of fresh, happy creation, in which he did not allow his musical forms to be influenced by reflection (*Holländer*, *Tannhäuser*, *Lohengrin*); and the period of the logical carrying out of his ideas of reform (*Tristan*, *Meistersinger*, *Nibelungen*, *Parsifal*). By this it is not meant that the music of his third period is of less value than that of the second; on the contrary, so far as intensity of expression, wealth of harmony, characteristic rhythm, and refinement in orchestration are concerned, it is immeasurably superior to the former; but it has almost entirely lost the capability of producing effect away from the stage, as *absolute music*. Some few numbers, true masterpieces of melodic formation

("Preislied" in the *Meistersinger*, "Liebeslied" in the *Walküre*) must be regarded as exceptions. In this, however, W. only achieved what he desired; his music was not intended to produce effect *per se*, but only in union with poetry and scenic effects. He who cannot understand the nobility of this thought, which means a renunciation of cheap means of effect in favour of a uniform presentation of the dramatico-musical work of art—for him there is no help. Quite another question is the one with regard to the absolute justice of this combination of factors—the question, indeed, whether this heaping together of poetic reasoning, profound thought, and exciting dramatic ideas which distinguishes W.'s operas from others, is not a preference shown to poetry at the expense of music; the latter, with equal right, can exist in an opera rather of lyrical contents, permitting it to unfold itself more in song (aria) form. Time will pronounce its sentence: it is pronouncing it even now; for instance, Mozart's operas have not suffered the least harm from those of W. Operas like Rossini's *Barbiera*, Lortzing's *Czar* and *Wildschütz*, Adam's *Postillon*, and many other works of a light kind, have not been touched in any way by W.'s reform; although recent productions in the department of comic opera clearly point to the influence of W.'s mode of writing. Even Gluck's operas stand in no contradiction to Wagner tendencies, as the latter, indeed, himself acknowledged. Only the false pathos of modern Italian and French grand opera, against which W.'s sharpest attacks were directed, has received a mortal blow. (Cf. DRAMATIC MUSIC, OPERA, ABSOLUTE MUSIC, etc.)

(9) Johanna (Jachmann-W.), niece of R. Wagner, daughter of Albert Wagner (b. 1799, Leipzig, opera singer at Hanover, Würzburg, Bernburg, etc., for some time opera "Regisseur" at Berlin, d. Oct. 31, 1874), important stage singer and *tragédienne*, b. Oct. 13, 1828, at a village near Hanover, d. Oct. 16, 1894, Würzburg; she appeared on the stage as a child at Würzburg and Bernburg, was engaged at Dresden in 1844 (she created the part of Elizabeth), and, 1846–48, was sent by the intendant of the Dresden theatre to Paris to study under Viardot-Garcia. She was engaged at Hamburg in 1849, and at Berlin in 1850, where until 1862 she was one of the chief ornaments of the Hofoper (1853, chamber singer). In 1859 she married the district councillor Jachmann. After 1862 W. appeared for several years as an actress, and then retired from the stage. She, however, took part in the Choral Symphony in 1872, and was one of the Valkyrie and the principal Norn at Bayreuth in 1876. From 1882–84 she was engaged as teacher of dramatic singing at the Munich School of Music, and in her last years gave private lessons in singing at Munich.

(10) Gertrud Anthonie Alexandre, b.

March 8, 1862, Amsterdam, pupil of H. Fr. R. Brandts-Baus, and then of the Antwerp School of Music, conductor of the "Antwerpsch Mannenkoor" and of the German Liedertafel there. He has composed "Babylonische Gevangenis" paraphrase of Psalm 136, for soli, chorus, and orchestra; "Lentezang" for chorus and orchestra, etc.

Wagner-Verein. (See SOCIETIES, 3.)

Waissel (Waisselius), Matthias, lutenist at Frankfurt-on-the-Oder, b. at Bartenstein, Prussia. He published a work in lute tablature: "Tabulatura continens cantiones 4, 5 et 6 vocum testudini aptatas ut sunt præambula, phantasie, cantiones germanicæ, italicæ, gallicæ et latinæ, Passamesiæ, Gagliardæ et Choricæ" (1573). A second, "Tabulatura oder Lautenbuch, allerley künstlicher Præambula, ausserlesener deutscher und polnischer Tantz, Passamezen," etc. (1592), is, in fact, a second edition of the above.

Waits. (1) A kind of shawm.—(2) Players on this instrument.—(3) Musical watchmen.—(4) Musicians performing at night in the open air.—The word is said to have no singular. One of its old spellings is *wayghes*.

Walcker, Eberhard Friedrich, b. July 3, 1794, Kannstatt, d. Oct. 4, 1872, Ludwigsburg. He was one of the most gifted and productive organ-builders of our century, a pupil of his father, who was himself a skilful organ-builder at Kannstatt. W. commenced business in 1820 at Ludwigsburg, and by improvements of all kinds, and certain inventions of high importance, he so distinguished himself, that his house acquired world-wide celebrity. It was, especially, the invention of the "Kegellade" (cone-box) which attracted extraordinary notice (1842), and led to a thorough revolution in the construction of wind-chests (q.v.); for organ-builders adopted W.'s scheme in ever-increasing numbers, and no longer built "Schleifladen" (sliding-chests).—The five sons of W.:—Heinrich (b. Oct. 10, 1828), Friedrich (b. Sept. 17, 1829), Karl (b. March 6, 1845), Paul (b. May 31, 1846), and Eberhard (b. April 8, 1850), have devoted themselves to the art of organ-building; the two eldest were for twenty years partners in their father's business; the third joined only after the death of the latter, and the other two are now also active members. Of the many organs (up to 1880 already 384) of this famous house the most important are: the one at Ulm Cathedral, with 100 sounding stops (1856); at the Music Hall, Boston, 86 stops (1863); Paulskirche, Frankfurt, 74 stops (1833); collegiate church, Stuttgart, 74 stops (1839); St. Peter's, Petersburg, 65 stops (1840); Olaikirche, Reval, 65 stops (1842); Votivkirche, Vienna, 61 stops (1878); Petrikirche, Hamburg, 60 stops (1885); also, up to 1880, still 48 more, with from 30–55 stops.

Waldersee, Paul, Graf von, b. Sept. 3, 1831,

Potsdam; from 1848-71 Prussian officer. He afterwards devoted himself entirely to music, was one of the editors of Breitkopf & Härtel's complete editions of Beethoven and Mozart and editor of an excellent "Sammlung musikalischer Vorträge."

Waldflöte (Lat. *Tibia silvestris*), an open metal flute-stop in the organ, of wide measure, the upper lip of which is rounded off on the inner side. The tone is soft and full; it is generally of 2 ft. or 4 ft., rarely 8 feet or 1 foot.

Waldhorn (Jagdhorn, Natural Horn; Ital. *Corno di caccia*; Fr. *Cor de chasse*; Eng. French Horn) is the horn without valves, for which the classic composers wrote; and which, ever more and more, is being supplanted by the horn with valves.

Walker, (1) John, b. 1732, Friern-Barnet, d. 1807, London; author of a dictionary of English pronunciation. In his book, "The Melody of Speaking Delineated" (1787, and frequently), he cleverly attempted, by a kind of notation, to represent the cadence of the voice in speech.

(2) Joseph Caspar, b. Nov., 1760, Dublin, revenue officer there, d. April 12, 1810, St. Valery, France, whither he had gone for the sake of his health. He published: "Historical Memoirs of the Irish Bards . . . also an Historical and Descriptive Account of the Musical Instruments Irish . . . with Select Irish Melodies" (1786).

Wallace, William Vincent, pianist and composer, b. July 1, 1814, Waterford, Ireland, d. Oct. 12, 1865, at the Château de Bages (Haute Garonne); he received his training in Dublin, where he was appointed violinist in the theatre orchestra, and conducted subscription concerts. At the age of 18, after a serious illness, he was ordered to travel, and went first to Australia, then to New Zealand, India, and South, Central, and North America, everywhere giving concerts with success. In 1841 he conducted the Italian Opera at Mexico, and twice visited England and Belgium from America. In 1853 he returned definitely to Europe and lived partly in London, partly in Paris. W. wrote for London the operas: *Maritana*, *Matilda of Hungary*, *Lurline*, *The Amber Witch*, *Love's Triumph*, and *The Desert Flower*; also a large number of brilliant pf. pieces.

Wallaschek, Richard, private lecturer at Lemberg University; in 1886 he attracted the attention of the musical world by an important treatise: "Aesthetik der Tonkunst."

Wallenstein, Martin, pianist and composer, b. July 22, 1843, Frankfurt; pupil of A. Drey-schock, and in Leipzig, of Hauptmann and Rietz; he became known through numerous concert tours as a refined, finished player. W. wrote a pf. concerto (published), an overture, the opera *Das Testament*, etc.

Wallerstein, Anton, violinist and favourite composer of dances, b. Sept. 28, 1813, Dresden,

d. March 26, 1892, Geneva. He made concert tours as a child, became in 1829 member of the Dresden court band, lived from 1832-41 in Hanover, and from that time as a private gentleman, mostly in Hanover, and from 1858 in Dresden. W. published about 300 light dance pieces, also some songs and variations for violin and orchestra (Op. 2).

Wallis, John, famous English mathematician, b. Nov. 23, 1616, Ashford, professor of mathematics at Oxford, d. Oct. 28, 1693, London. He published; "Tractatus elencticus adversus Marci Meibomii dialogum de proportionibus" (1657); "Claudii Ptolemæi harmonicorum libri III." (Greek, 1662; with an appended treatise, "De veterum harmonia ad hodiernam comparata"); "Porphyrii in harmonica Ptolemæi commentarius"; "Manuelis Bryennii harmonica" (printed in his complete writings, 1699, 3 vols.). W. published a number of investigations relating to acoustics in the "Philosophical Transactions" (1672-98).

Walliser, Christoph Thomas, b. 1568, Strassburg, Schulkollege, vicar, and musical director of the Cathedral, St. Thomas's Church, and of the Strassburg University, d. April 26, 1648. He published: "Chorus nubium ex Aristophanis comædia ad æquales compositus, et Chori musici novi Eliæ dramati sacro-tragico accommodati" (1613); choruses a 4-6 for the tragico-comedy *Charikles* (1641, for the students); "Catecheticæ cantiones odæque spirituales, hymni et cantica et madrigalia" (1611); "Sacrae modulationes in festum nativitatis Christi" a 5 (1613); "Ecclesiodix d.i. Kirchengesänge oder Psalmen Davids, nicht allein una voce, sondern auch mit Instrumenten von 4-6 Stimmen" (1614); "Ecclesiodix novæ" a 4-7 (1625); "Herrn Wilhelm Salusten von Bartas Triumph des Glaubens" (1627); also a theological work: "Musicæ figuræ præcepta breviter . . . accessit centuria exemplarum fugarumque, ut vocant, 2-6 vocum," etc. (1611).

Wallner, Leopold, b. Nov. 27, 1847, Kiew (Russia); he has lived since 1866 in Brussels esteemed both as teacher of music and writer. He has written "De la Mathésis dans la musique" (1891).

Wallnöfer, Adolf, b. April 26, 1854, Vienna; pupil of Waldmüller, Krenn, and O. Dessoff for composition, and of Rokitsky for singing. He originally possessed a not very strong, but sympathetic baritone voice. He has lived in Vienna as a concert singer, but since 1880 has become a tenor. W. was first engaged at the Town theatre, Olmütz, and in 1882 joined Neumann's itinerant Richard-Wagner Theatre Company, and later on, the town theatre, Bremen. W. has proved himself an excellent song-composer (songs and ballads; also a selection called the "Wallnöfer-Album"); and he has written two choral works, with orchestra: "Die Grenzen

der Menschheit" and "Der Blumen Rache," likewise an opera, *Eddystone* (Prague, 1889).

Walmisley, (1) Thomas Forbes, b. 1783, London, d. there July 23, 1866, pupil of Attwood, in 1810 organist of St. Martin-in-the-Fields; he was a clever and popular composer of glees.

His son (2) Thomas Attwood W., b. Jan. 21, 1814, London, d. Jan. 17, 1856, Hastings, pupil of his godfather Attwood (whose name he received at his baptism), was a distinguished organist and highly-esteemed musician, in 1830 organist at Croydon; he made serious musical and scientific studies at Cambridge, where he also acted for some time as organist at several churches (partly as deputy); in 1836 he became Professor of music there, in 1838 took his B.A., in 1841 M.A., and in 1848 Mus.Doc. W. wrote especially church music (published in 1857 by his father) and *pièces d'occasion* (installation odes, etc.), but also other vocal pieces. He published church music of his teacher Attwood (anthems, services, etc.). His lectures on the history of music, with illustrations on the pianoforte, made his name famous.

Walsh, John, eminent English music publisher, and one of the first who printed scores from engraved pewter plates. In 1724 he obtained a patent, and in that year published Croft's anthems; he died 1736. Somewhere about the year 1730 he introduced punches to stamp in the note-heads; whereas previously they were engraved on the pewter (or copper) plate by hand.

Walter, (1) Ignaz, famous tenor-singer, composer of vaudevilles, b. 1759, Radowitz (Bohemia), d. about 1830, Ratisbon, pupil of Capellmeister Starzer at Vienna; he sang at Prague (1783), Mayence (1789), and in Grossmann's company (1793), at Halle and Bremen; after the death of Grossman, he himself undertook the sole direction, and appeared as actor at Frankfort and Ratisbon. W. wrote a series of vaudevilles for the Grossman company (*Der ausgeprügelte Teufel*, 25,000 *Gulden*, *Die böse Frau*, *Doktor Faust*, etc.), also a number of masses, a coronation cantata for the Emperor Leopold (1791), a quartet for harp, flute, violin, and cello, etc. His wife, Juliane (*née* Roberts), was an esteemed singer.

(2) Georg Anton, violinist, German by birth, but a pupil of R. Kreutzer at Paris (1785), in 1792 opera conductor at Ronen; he published quartets for strings, trios for two violins and bass, and 6 violin sonatas with bass.

(3) Albert, clarinet-player, b. at Coblenz, occupied various posts in Paris from 1795, and published: a concertante for two clarinets, 6 quartets for clarinet and strings, variations for two clarinets; also smaller pieces for clarinets, flutes, etc.

(4) August, composer, b. 1821, Stuttgart. He was apprenticed to a pastrycook, then be-

came a pupil of Sechter's at Vienna, and since 1846 has been musical director at Basle. He has composed songs, choruses for male voices, also 3 quartets for strings, an octet for wind instruments, a symphony, etc. His wife (Frau W.-Strauss) is an esteemed concert-singer.

(5) William Henry, b. July 1, 1825, Newark (New Jersey), already as a lad was organist at Newark; he went to New York in 1842, where he became organist at the Epiphany Church, from which he went successively to four others; finally, in 1856, to Columbia College, which bestowed on him the title of Doctor of Music in 1864. W. has composed much sacred music (masses, psalms, Common Prayer with Ritual Song, anthems, services, etc.). His son George William, b. Dec. 16, 1851, New York, was a musical prodigy, studied under J. K. Paine (Boston) and S. P. Warren (New York), and in 1882 became Doctor of Music of Columbia University, Washington, in which city he has lived since 1869. He is also an excellent organ-player.

(6) Joseph, violinist, b. Dec. 30, 1833, Neuberg-on-the-Danube, d. July 15, 1875, Munich, pupil of the Conservatorium there, also for a short time of De Bériot at Brussels; he entered the court orchestra at Vienna (1851), and Hanover (1853); in 1859 he became leader and teacher of the violin at the Munich Conservatorium.

(7) Benno, younger brother of the former, also a violinist, b. June 17, 1847, Munich, pupil of the Munich Conservatorium, and from 1863 member of the court band. In 1875 he succeeded his brother as leader and teacher at the Conservatorium, gave concerts with success in South Germany, Austria, Switzerland, and America; he is everywhere recognised as an excellent orchestral leader and also quartet player.

(8) Gustav, distinguished singer (tenor), b. Feb. 11, 1836, Bilin (Bohemia); he was working at a sugar factory at Bilin when his voice was discovered (1853). After he had been trained at the Prague Conservatorium, he received his first engagement at Brünn, and in 1856 went to the court Opera, Vienna, where he enjoyed high reputation as principal lyric tenor, as well as concert-singer. He retired in 1887. W. was especially distinguished as a singer of Lieder.

(9) Carl, b. Oct. 27, 1862, Cransberg (Taunus); he attended the "Realprogymnasium" at Limburg, and from 1880-82 the Teachers' Seminary at Montabaur, where he was pupil for music of K. S. Meister and P. Schmetz. From 1882-86 he worked as a teacher at Pfaffenwiesbach, and until 1887 at Friedrichsthal. In 1888 he completed a course at the School of Church Music at Ratisbon, and then became teacher, organist, and *regens chori* at Biebrich-on-the-Rhine, and in 1893 received a post, suited to his abilities, as music teacher at Montabaur Seminary. W. has written several organ pieces, a triple fugue which gained a prize, various

motets a 3-6; further, he is possessed of a wealth of material for the history of music from the most diverse libraries, is an industrious contributor to Haberl's "Musica sacra" and "Kirchenmusikalisches Jahrbuch," and has repeatedly written articles to the *Monatshefte für Musikgeschichte*.

Walter Odington. (See ODINGTON.)

Walther, (1) Johann, the friend of Luther, and one of the first Protestant church composers, b. 1496, at a village near Cola (? probably Gotha), Thuringia (so states the inscription on his tombstone), d. 1570, Torgau, where in 1524 he was singer in the castle choir; in 1525 he became Electoral Saxon capellmeister (Sängermeister). When in 1530, for financial reasons, the choir was dissolved, the dismissed singers formed themselves into the Torgau "Kantorei-gesellschaft" (for church music), which W. continued to conduct. The Elector listened to Luther's appeal for a small subsidy for the singers, and W. was appointed by the town to a post in the school. In 1548 he was called to Dresden in order to organise and conduct the choir formed there by his new sovereign, Moritz of Saxony, and remained there until 1555; but then, on receiving his pension, he returned to Torgau. In 1524 W. was summoned by Luther to Wittenberg, in order to help him compose the German mass. He published: "Geystlich Gesangk-Buchleyn" (1524, 1525, and frequently; the oldest Protestant hymn-book, a 4; republished lately by O. Kade); "Cantio septem vocum in laudem Dei omnipotentis et Evangelii ejus" (1544); "Magnificat 8 tonorum" (1557); "Ein neues christliches Lied" (1561); "Ein gar schöner geistlicher und christlicher Bergkreyen" (1561); "Lob und Preis der himmlischen Kunst Musica" (1564); and "Das christlich Kinderlied Dr. Martin Luthers 'Erhalte uns Herr bei Deinem Wort' . . . mit etlichen lateinischen und deutschen Sängen gemehret," etc. (1566); most of the collections of motets (1540) and Montan-Neuber's "Psalmenwerk" (1538), contain pieces by W.

(2) Johann Jakob, b. 1650, Witterda (near Erfurt), Electoral Saxon chamber musician (1676) and afterwards (1688) Italian secretary (probably for the correspondence with Rome) at the Electoral court of Mayence. He published: "Scherzi di violino solo," with continuo and *ad libitum* with viol or lute (1676), and "Hortulus chelicus, uno violino, duabus, tribus et quatuor subinde chordis simul sonantibus harmonice modulanti" (1688), a very remarkable work, of which the last number (28) is: "Serenate a un coro di violini, organo tremolante, chitarrino, piva, due tromboni e timpani, lira tedesca, ed arpa smorzata per un violino solo." W. must certainly have been looked upon as a conjuror if he could play all that on the violin.

(3) Johann Gottfried, musical lexicogra-

pher and distinguished contrapuntist, b. Sept. 18, 1684, Erfurt, d. March 23, 1748, Weimar, pupil of Jacob Adlung, Joh. Bernh. Bach, and Kretschmar at Erfurt; in 1702 he became organist of St. Thomas's Church there, and in 1707 town organist at Weimar. At the same time he became music teacher to the Ducal Princes, and in 1720, court musician. W. was a near relation of J. S. Bach's, and was on very friendly terms with the master during his residence in Weimar (1708-14, as chamber violinist); Bach was godfather to his eldest son. After a time their friendship seems to have cooled down, for in Walther's dictionary very few lines are devoted to Bach. Mattheson had a very high opinion of W.; he speaks of him as "der zweite Pachelbel, wo nicht an der Kunst der erste" ("the second Pachelbel, possibly the first in his art"). There is no doubt that Bach profited much by his intercourse with W. In the working of chorales for organ W. was a thorough master, and in this branch inferior only to Bach himself. Of his compositions the following are printed: clavier concerto without accompaniment (1741), prelude and fugue (1741), and 4 varied chorales ("Jesu meine Freude," "Meinen Jesum lass ich nicht," "Allein Gott in der Höh' sei Ehr," and "Wie soll ich dich empfangen"); in addition, a large number of worked-out chorales (Choralbearbeitungen), fugues, preludes, and toccatas have been preserved in manuscript (Berlin Library, and in private hands). The chorale prelude, "Gott der Vater wohn' uns bei," in Peters' edition of Bach, is also by W. According to the statement of Mattheson, he worked 119 chorales after the manner of Pachelbel, and made large collections of "Choralbearbeitungen" by other masters; five collections have been preserved in autograph (in these Bach is scantily represented). His most famous work, however, is his "Musikalisches Lexicon oder Musikalische Bibliothek" (1732)—the first biographical, bibliographical and technological musical encyclopedia, on which all later ones are based. The first sketch of it, only 64 pages, appeared already in 1728 as "Alte und Neue musikalische Bibliothek oder musikalisches Lexicon." The corrections and additions afterwards collected by W. for a possible second edition were placed at the disposal of Gerber when working at his dictionary. W.'s son—

(4) Johann Christoph, b. July 8, 1715, Weimar, d. there Aug. 25, 1771, was from 1751-70 musical director and organist at Ulm Cathedral; a distinguished clavier- and organ-player. He published 3 clavier sonatas in 1766.

(5) Johann Rudolf, librarian at Göttingen, d. March 21, 1752. He published: "Lexicon diplomaticum," one of the oldest paleographies, which contains attempts—in the main correct, according to modern conceptions—to decipher the neumes.

(6) J . . . A . . . , doctor of philosophy and

Comique), Strassburg (where he produced an operetta of his own in 1865, *Une heure de mariage*), and Brussels (1867). In 1867 he became teacher of singing at the Conservatoire in the last-named city, and in 1869 conductor of the orchestra of the Town Musical Society there. In 1870 W. founded a school of music of his own in a suburb of Brussels. His daughter and pupil, Elly, b. 1857, Liège, an esteemed opera singer, made her *début* in 1878 at the Monnaie, Brussels, and, up to now, has been engaged at the Pergola, Florence. She also made a successful appearance in London (in the rôle of Valentine in *Les Huguenots*).

Warren, Samuel P., highly-esteemed American organist, b. Feb. 18, 1841, Montreal; from 1861-64 he was pupil of Haupt at Berlin, settled in 1865 in New York, where he is now organist of Grace Church. W. has become noteworthy by the organ concerts which he established at Trinity Church in order to awaken interest for good organ music.

Wartel, Pierre François, b. April 3, 1806, Versailles, d. Aug., 1882, Paris; pupil of the Conservatoire there, then of Choron's Institute for Church Music, and in 1828 again of the Conservatoire (Banderelli, Nourrit); in 1831 he was engaged at the Grand Opéra as tenor-singer, then made concert tours through Europe, and after his return settled in Paris as a teacher of singing (Trebelli was his pupil) and became famous.—His wife, Atala Therese Annette (Adrien, the daughter of Adrien l'aîné, q.v.), b. July 2, 1814, Paris, d. there Nov. 6, 1865, was an excellent pianiste, and at one time teacher at the Paris Conservatoire. She published an analysis of Beethoven's pf. sonatas.

Wasielewski, Joseph W. von, violinist and noteworthy historian of music, b. June 17, 1822, Grossleesen (near Danzig), was one of the first pupils of the Leipzig Conservatorium (1843-56). He had the advantage of instruction from Mendelssohn, David, and Hauptmann, and was, besides, for a long time a private pupil of David. For several years he was musical critic of the *Signale*, contributor to the supplement devoted to science of the *Leipziger Zeitung* and to the *Dresdener Journal*, also to Lortz's *Männer und Frauen der Zeit*, and was also engaged as violinist in the Gewandhaus orchestra. In 1850 he was drawn by Schumann to Düsseldorf as leader, and in 1852 undertook the direction of the newly-established mixed choral society at Bonn, where, gradually, he acquired posts of a similar kind. But W. gave up his position at Bonn in 1855, and settled in Dresden. There he displayed profitable activity as writer on the history of music, and we are indebted to him for the following: "Robert Schumanns Biographie" (1858; 3rd ed., 1880), and "Die Violine und ihre Meister" (1869, a very noteworthy monograph; 2nd, and considerably enlarged ed., 1883; 3rd ed., 1893); a valuable

appendix to his Schumann biography is "Schumanniana" (1883). In 1869 he was called to Bonn as town musical director, and in 1873 received the title of Royal Musical Director; but in 1884 he withdrew from all appointments and settled in Sondershausen. W.'s later historical works, not inferior in merit to his older ones, are: "Die Violine im 17. Jahrhundert und die Anfänge der Instrumentalkomposition" (1874); "Geschichte der Instrumentalmusik im 16. Jahrhundert" (1878); "Beethoven" (biography, 2 vols., 1888); "Das Violoncello und seine Geschichte" (1889); and "Karl Reinecke, ein Künstlerbild" (1892). W. has also written some articles for the *Musikalisches Centralblatt*, and is contributor to the *Vierteljahrsschrift für Musikwissenschaft*. He has recently appeared as a composer with a nocturne for violin and pf. and some patriotic part-songs.

Wassermann, Heinrich Joseph, violinist, b. April 3, 1791, Schwarzbach (near Fulda), pupil of Spohr, violinist at Hechingen, Zürich, Donaueschingen, also active as orchestral conductor at Geneva and Basle; he d. Riehen, near Basle, Aug., 1838. W. published several chamber-music works: quartet for strings (Op. 14), variations for violin and strings (Op. 4), quartet with flute, etc.; also dances for orchestra, pieces for guitar, etc.

Wassmann, Karl, violin teacher at Carlsruhe Conservatorium, has published "Entdeckungen zur Erleichterung und Erweiterung der Violintechnik," and, based on it, "Vollständig neue Violinmethode" [system of double-stopping in fifths] (2 parts).

Waste-pallet, in the organ a valve opened by means of draw-stop action, which, when the performer has finished playing, allows the wind still in the bellows to escape.

Water Organ (Lat. *Organum hydraulicum*; Gk. *Hydraulos*) was, in later antiquity, a small organ, altogether similar in principle to the organ of the present day, but one in which the supply of wind was regulated by water pressure.

Webb, Daniel, b. 1735, Taunton (Somerset), d. there Aug. 2, 1815; wrote "Observations on the Correspondence between Poetry and Music" (1769; German by Eschenburg, 1771); the same is also printed in his "Miscellanies" (1803).

Webbe, (1) Samuel (senior), b. 1740, on the island of Minorca, where his father was an English Government official, came at an early age to London, and in 1776 became organist of the Portuguese Church; he died in 1816, London. Of his compositions, not counting about 100 glees and catches scattered in collections, the following are known: 8 antiphons for double choir and other sacred music, a Cecilian ode a 6, a pf. concerto and divertissement for wind band.

(2) **Samuel**, son of the former, b. 1770, London, d. Nov. 25, 1843; in 1798 teacher of

music at Liverpool, afterwards organist of the chapel of the Spanish Embassy and teacher at Kalkbrenner's and Logier's School of Music. He composed: glees, catches, church music, and wrote "Harmony Epitomised, or Elements of the Thorough Bass" (no date), and also published solfeggi under the title "L'amico del principiante."

Weber, (1) Friedrich August, physician at Heilbronn, b. there Jan. 24, 1753, d. Jan. 21, 1806; besides his medical calling, he was an able musician and prolific composer. He wrote vaudevilles, oratorios, cantatas, symphonies ("La cappella grazziata," a pendant to Haydn's famous "Cappella disgraziata" [farewell symphony]), pf. sonatas for four hands, etc., and was a zealous and valuable contributor to the *Musikalische Realzeitung* (Speier, 1788-90) and to the *Allgemeine Musikalische Zeitung* (1799 to 1803).

(2) Bernhard Anselm, distinguished pianist, a practised conductor, and prolific composer, b. April 18, 1766, Mannheim, d. March 23, 1821, Berlin; he studied under Abbé Vogler, and, after the departure of the latter, under Holzbauer; also theology and law at Heidelberg. Finally, however, he turned his attention to music and undertook concert performances on Röllig's *Xanorhika*, and in 1787 became musical director of Grossmann's Opera Company at Hanover, but again went to Abbé Vogler in 1790 and travelled with him to Stockholm. In 1792 W. became second capellmeister at the National Theatre (Königstadt), Berlin, and remained, after its amalgamation with the Italian Opera, in his post as royal capellmeister. As a composer for the stage, W. was an imitator of Gluck, but without the genius of the latter. He wrote a series of operas (*Menœceus*, *Mudarra*, *Hermann u. Therselda*), vaudevilles (*Die Wette*, *Deodata*, etc.), monodramas (*Hero*, *Sappho*), incidental music (*Tell*, *Fräulein von Orleans*), cantatas, arias, songs, pf. sonatas, etc.

(3) Friedrich Dionys, celebrated theorist and composer, b. Oct. 9, 1766, Welchau (Bohemia); pupil of Abbé Vogler, teacher of music at Prague, one of the original founders (1808) and first director of the Prague Conservatorium, d. Dec. 25, 1842, Prague. He composed a number of dances for pianoforte which became very popular (Ländler, quadrilles, etc.), variations, a sextet for six cornets-a-pistons, a similar work for six trombones, quartets for cornets, military marches, several small operas, etc.; he also wrote "Allgemeine theoretische Vorschule der Musik" (1828) and "Theoretisch-praktisches Lehrbuch der Harmonie und des Generalbasses" (1830-34, 4 parts).

(4) Gottfried, distinguished theorist and writer on music, also composer, b. March 1, 1779, Freinsheim (near Mannheim), d. Sept. 21, 1839, Kreuznach, while on a visit there. He was not trained to music, but to jurisprudence, studied at Heidelberg and Göttingen, became legal counselor and judge at Mannheim (1802), Mayence

(1814), and Darmstadt (1818), and in 1832 was named Grand Ducal General State Attorney, in recognition of his services in drawing up the new civil and criminal code. At the same time he had trained himself from an early age in flute and 'cello playing, founded a music school at Mannheim, conducted a musical society, and produced compositions (masses) of his own, although he had received no regular lessons in theory. To supply this need, he zealously studied the systems of Kirnberger, Marpurg, Vogler, Knecht, etc., and finally resolved to construct a system of his own. The result was the "Versuch einer geordneten Theorie der Tonsetzkunst" (1817-1821, 3 vols.; 2nd ed., 1824, 4 vols.; 3rd ed., 1830-32). The system of W. is not in itself new, and makes no claim to be rationally deduced from some leading principle; many things, however, in his method are new. For example, he indicates chords for the first time by means of German letters (with him the Latin ones stand for single notes), and, indeed, capital letters for the major, small ones for the minor chord: $\mathbb{C} = c. e. g.$, $\mathbb{C} = c. e. \flat. g.$, $\mathbb{C}^{\flat} = c. e. g. \flat$, $\mathbb{C}^{\sharp} = c. e. \flat. g. \sharp$, $\mathbb{C}^{\flat\sharp} = c. e. \flat. g. \sharp$, $\mathbb{C}^{\sharp\flat} = c. e. g. \flat$, $\mathbb{C}^{\flat\flat} = c. e. \flat. \flat. g.$, $\mathbb{C}^{\sharp\sharp} = c. e. g. \sharp$, $\mathbb{C}^{\flat\sharp\flat} = c. e. \flat. \flat. g. \sharp$; only the \mathbb{C} with the \mathbb{C} for the diminished seventh is wanting to make this figuring complete, $\mathbb{C}^{\flat\flat\flat} = c. e. \flat. \flat. \flat. g.$ W.'s works appeared in two English translations, by Warner (Boston) and Bishop (London, 1851). W. wrote besides, "Allgemeine Musiklehre" (1822, and frequently); "Die Generalbasslehre zum Selbstunterricht" (1833); "Ueber chronometrische Tempobezeichnung" (1817); "Beschreibung und Tonleiter der G. Weberschen Doppelposaune" (1817); "Versuch einer praktischen Akustik der Blasinstrumente" (in Ersch and Gruber's Encyclopædia; also in the *Allgemeine Musikalische Zeitung*, 1816-17); "Ueber Saiteninstrumente mit Bündeln" (*Berliner Musikzeitung*, 1825), and many other articles (for the most part published separately) in the Leipzig *Allgemeine Musikal. Zeitung*, and especially in the *Cæcilia*, established by him at Mayence in 1824, and edited by him up to the time of his death. As a composer, W. produced: 3 masses, a requiem, and a Te Deum (all with orchestra), many songs, part-songs, a pf. sonata, a trio, variations for guitar and 'cello, and other instrumental pieces.

(5) Karl Maria Friedrich Ernst, Freiherr von, the great composer of *Der Freischütz* and *Euryanthe*, the first representative of the so-called Romantic School, b. Dec. (? Nov.) 18, 1786, Eutin (Oldenburg), d. June 5, 1826, London. His father, Franz Anton von W., a cousin of Mozart's wife, Constance von W., was originally an officer, later on administrative official, then musical director, and, finally, theatre manager at Meiningen, Hildburghausen, Salzburg, etc. (from 1787); and as such, he led a

restless and changeful life. The son, therefore, when he was very young saw a good deal of the world. He received his first musical training from his step-brother Fridolin (b. 1761, musical director and singer, etc., at his father's theatre, who died at an advanced age in Hamburg, where he had been active for a long time as viola player); then especially in pianoforte, from J. P. Heuschkel at Hildburghausen (1796); in theory, from Michael Haydn at Salzburg (1797); also 1798-1800 from the court organist, J. N. Kalcher (theory) and Valesi (singing). His Op. 1, six fuguettes (dedicated to M. Haydn), appeared in 1798; Op. 2 (pf. variations) in 1800; the latter work W. lithographed himself. He was an important personage in the history of lithography, for he essentially improved this art, which had been discovered not long before by Senefelder; the father hoped for great success from it, and removed for that purpose in 1800 with his family to Freiberg-i-S. in order to work at lithography on a large scale. This, however, did not last long. Already in 1801 we find the family in Salzburg, with W. for the second time as pupil of M. Haydn, in 1802 in Hamburg, and in 1803 in Augsburg and Vienna. In this last town, J. Haydn having declined, Abbé Vogler became W.'s teacher, and already at the expiration of one year, procured for his pupil the post of capellmeister at the town theatre, Breslau (1804); W. exchanged this post in 1806 for that of music intendant to Prince Eugen von Württemberg at Carlsruhe (Silesia); and when the Prince joined the army W. went with his father to Stuttgart as secretary to Prince Ludwig and as music teacher to his daughters. W. lost this post in 1810 through an "indiscretion" of his old father, for which both were expelled from Württemberg. In Stuttgart W. had written his first grand opera, *Silvana*, which was produced at Frankfurt in 1810, and achieved great success. W. had previously attempted dramatic composition, first in 1799 with *Die Macht der Liebe*, which was never heard, since, together with other early works, it perished by fire; then in 1800, with the *Waldmädchen*, which was performed at Chemnitz, Vienna, Prague, and Petersburg (he used the libretto again for *Silvana*); in 1802, with *Peter Schmoll und seine Nachbarn* (Augsburg); *Rübezahl* (1804), begun at Breslau, was not completed (the revised overture appeared under the title "Beherrscher der Geister"). After the Stuttgart period followed Mannheim, then Darmstadt, where W. renewed his studies under Vogler. Here he entered into friendly relations with Meyerbeer, Gänsbacher, but especially with Gottfried W. (q.v.). His next opera in one act, *Abu Hassan*, was produced in 1811, Munich. *Silvana* was put on the Berlin stage in 1812 with some additional numbers. W. stayed about this time at Munich, Leipzig, Berlin, also at the courts of Gotha and Weimar. In 1813 he was appointed capellmeister of the

State theatre, Prague, where he distinguished himself by his labours, until he received an offer from the King of Saxony to organise and direct the German Opera about to be established in Dresden (1816). In 1817 he married the singer Caroline Brandt, and accepted the post thus offered; he fulfilled his difficult task in a most satisfactory manner, and gained for the new national institution a high reputation by the side of Italian Opera under Morlacchi. Up to this moment, W. was no popular celebrity, although in 1814 his setting to music of the songs from Körner's "Leier und Schwert" had quickly made his name known; but all this was suddenly changed when *Der Freischütz* was produced for the first time at Berlin, June 18, 1821. The German saga chosen for the subject proved a very happy one, and gained for W. the title of father of the so-called Romantic School. *Preciosa*. (with musical numbers inserted) had preceded *Der Freischütz* at Copenhagen, Oct. 8, 1820, and at Berlin, March 14, 1821; a comic opera, *Die drei Pintos*, remained unfinished (revised by W.'s grandson, Carl von W., and produced by G. Mahler, Leipzig, 1888). On the other hand, at the invitation of the "Kärnthnertheater," Vienna, W. wrote a grand opera, *Euryanthe*, a work which in many details, as well as in the general disposition, recalls Wagner's *Lohengrin*; this was first produced Oct. 25, 1823, Vienna. Its success, at first enormous, soon subsided. Rossini then reigned supreme in Vienna. (The work was brought out at Berlin on Christmas Eve, 1825, and here the enthusiasm was much greater, and also more lasting.) In the following year (1824) W. was forced to go to Marienbad on account of his health failing; and in 1825 he was again obliged to interrupt his work on *Oberon*, which had been commissioned for Covent Garden Theatre, London, in order to try a fresh cure at Ems. He was very ill (consumptive) when he travelled to London in 1826 to direct the performance of *Oberon*, which took place on April 12 of that year; and six weeks later he was a dying man, and quite incapable of work; his life passed away like a tale that is told. His mortal remains were deposited in Moorfields Chapel to the tones of Mozart's Requiem, but were removed to Dresden in 1844. (Cf. R. WAGNER.) A statue by Rietschel was erected to the composer's memory at Dresden in 1860.

W. was a distinguished and characteristic pianist; he could stretch very wide intervals, and introduced them in his pianoforte writing. His pf. works are:—4 sonatas (c, A flat, D minor, E minor), 1 for four hands, 2 concertos (c and E flat), 1 Concertstück, Polonaise (E flat, Op. 21), Rondo brillant (Op. 62), variations (Op. 5, 6, 7, 28, 40, 55), the "Auforderung zum Tanz," Allemandes, Ecosseuses, and other pieces; 1 pf. quartet (B flat), 1 trio (Op. 63), 6 progressive violin sonatas, variations for pf. and violin (Op. 22), Duo concertante for pf. and clarinet (Op. 48), 2 clarinet concertos (Op. 73, 74), a concertino

for clarinet (Op. 26), variations for pf. and clarinet (Op. 33), quintet for clarinet with strings (Op. 34), 1 bassoon concerto (Op. 75), andante and rondo for bassoon and orchestra (Op. 35), concertino for horn (Op. 45). For orchestra:—2 symphonies, overture and marches to *Turandot*, "Jubel" overture (for the jubilee of Friedrich August I.). Vocal works:—"Der erste Ton" (for declamation, orchestra, and chorus), "Kampf und Sieg" (cantata on the Battle of Waterloo), male choruses (Op. 42 ["Leier u. Schwert"], 53, 63), "Natur und Liebe," for two sopranos, two tenors, and two basses; mixed quartets (Op. 16), duets (Op. 31), children's songs (Op. 22), hymns (Op. 36), two masses *a 4* with orchestra. Scenes and Arias: "Misera me" (Op. 50, "Athalia"), "Non paventar" (Op. 51, "Ines de Castro"), "Deh consolai tuo affanno" (Op. 52), "Signor, se padre sei" (Op. 53, for tenor with chorus), a grand aria for Cherubini's "Lodoiska" (Op. 56), and many songs (Op. 23, 25, 29, 30, 46, 47, 54, 64, 66, 71, 80). F. W. Jähns drew up a complete chronologico-thematic catalogue: "K. M. v. W. in seinen Werken" (1871); he also wrote a sketch of the composer's life: "K. M. v. W." (1873); his collection of works connected with W., unique of its kind, was acquired by the Royal Berlin Library. The literary writings of W. (his concert notices, dramatico-musical reports, etc.) were published by Th. Hell: "Hinterlassene Schriften von K. M. v. W." (1828, 3 vols.; a bad edition). A comprehensive biography of W. was written by his son, Max Maria v. W.: "K. M. v. W.; ein Lebensbild" (1866-68, 3 vols.; it contains also the writings of W.); his grandson, Carl, published "Reisebriefe W.'s an seine Gattin Caroline" (1886). (Cf. also Reissmann's "K. M. v. W." 1882).

(6) Edmund von, stepbrother of the former, b. 1766, Hildesheim; pupil of Joseph Haydn at Vienna, and to quote his brother: "ein braver Komponist und routinierter Musikdirektor" ("an excellent composer and a practised musical director"). He lived as musical director at Cassel, Berne, Lübeck, Danzig, Königsberg, Cologne, etc., and died in 1828 at Würzburg.

(7) Ernst Heinrich, famous physiologist, b. June 24, 1795, Wittenberg; was son of the famous theologian, Michael W., d. Jan. 26, 1878, as professor of physiology at Leipzig. He published, among other things, "De aure et auditu hominis et animalium" (1820), and "Die Wellenlehre" (1825), the latter work jointly with his brother Wilhelm Eduard, the famous physicist (b. Oct. 24, 1804, Wittenberg, d. June 23, 1891, Göttingen, professor at Göttingen from 1831, with the exception of the suspension from 1837-49, when, owing to the famous protest against the repeal of the statutes, he was ejected from the chair). Later on he published a series of small works relating to acoustics, printed partly in Gottfried Weber's

"Cäcilia," partly in Schweizer's and Poggen-dorff's "Annalen."

(8) Franz, organist, b. Aug. 26, 1805, Cologne; pupil of B. Klein, Berlin, in 1838 organist of Cologne Cathedral, conductor of the male choral society at Cologne, in 1875 professor there, d. Sept. 18, 1876; he published the 57th Psalm *a 4*, also a set of choruses for male voices.

(9) Karl Heinrich (Eduardowitsch), able teacher of music, b. Aug. 9, 1834, Frankenberg (near Chemnitz), whence his father, who was town musician, moved in 1839 to Riga; from 1846-49 pupil of the Leipzig Conservatorium, and from 1866-70 assistant teacher at the Moscow Conservatoire; from 1867-77 musical inspector at the St. Mary's Foundation there, since then director of the Imperial Russian Musical Society at Saratow (institution for concerts, and school of music). He published a pianoforte Method in Russian, and a transcription of A. Schmitt's *Études* (Op. 16). He also wrote "Short sketch of the present state of musical culture in Russia" (1885, in Russian).

(10) Georg Viktor, b. Feb. 25, 1838, Ober-Erlenbach (Upper Hesse); he prosecuted his musical studies under Schrems at Ratisbon, was ordained priest in 1863, and has been capellmeister of Mayence Cathedral since 1866. He is a thorough connoisseur in the art of organ-building, also of the Gregorian chorale and of Palestrina music, and is a very able conductor. With his well-trained cathedral choir he performs almost exclusively the *a capella* music of the 15th and 16th centuries. In 1884 he received from the Grand Duke of Hesse the grand gold medal for art and science. W. has written several masses, motets, and psalms; also "Manuale cantus ecclesiastici juxta ritum S. Rom. ecclesiæ" (1878), "Orgelbuch zum Mainzer Diöcesan-Gesangbuch" (1880), "Ueber Sprachgesang" (1883), "Ueber Orgeldispositionen" (1890). He is also a contributor to Böckeler's "Gregorius-Blatt," and has furnished several articles to Haberl's "Cäcilien-Kalender."

(11) Gustav, b. Oct. 30, 1845, Münchenhusee (Switzerland), where his father (author of a "Gesanglehre" in 4 vols.) was a teacher of music at the Teachers' Seminary, d. June 12, 1887, Zürich. When 14 years of age he went as music teacher to the Hirzel Institution for the Blind, Lausanne; in the autumn of 1861 he went to the Conservatorium at Leipzig, and in 1865 to Vincenz Lachner at Mannheim, then to Aaran and Zürich as conductor. From 1869-70 he lived in Berlin as a pupil of Tausig, and was esteemed by Liszt and Bülow. Liszt produced W.'s symphonic poem, "Zur Iliade," at the Beethoven Festival in 1870. Since 1872 W. has been organist of St. Peter's, Zürich, conductor of the "Harmonie" and teacher at Zürich Conservatorium. The following works

have been published: Op. 1, pf. sonata (B flat); Op. 2, five duets for soprano and alto; Op. 3, waltzes for four hands; Op. 4, pf. quartet (C minor); Op. 5, pf. trio (B flat); Op. 6, Elegies; Op. 7, Idylls (5 pf. pieces); Op. 8, violin sonata (D); Op. 9, pf. pieces (2 sets); besides a large number of compositions for chorus without opus, as also choral arrangements of old German songs. W. edited, contributing many numbers, the second volume of the male chorus collection started by Heim. "Prinz Carneval," small pf. pieces for the young (without opus), were published by E. W. Fritzsche.

(12) Mirosław, distinguished violin virtuoso and quartet-player, b. Nov. 9, 1854, Prague; he was trained by his father, played at the early age of 10 before the Emperor of Austria, and travelled repeatedly through the countries of the Austrian monarchy. He attended the organ school for a time (teacher, Professor Blažek), and from 1870-73, the long-famed Conservatorium of his native town. Before then his teachers were A. Hora (pianoforte), Vinar, and Prucha (composition). In 1873 W. entered the court orchestra at Sondershausen, became in 1875 court leader at Darmstadt, where he organised a permanent string quartet, and in 1883, Rebicek's successor as principal leader in the royal orchestra, Wiesbaden, and second conductor of the Opera (in 1889 he was appointed royal musical director). In 1893 he resigned this post. Of his works should be mentioned: 2 string quartets (to the second was awarded a prize at the quartet competition, Petersburg, in 1891), 2 orchestral suites, the ballet *Die Rheinnixe* (Wiesbaden, 1884), music to Rod. Fels' *Olaf* (1884) and to Schulte's *Prinz Bibu*; also a septet for violin, viola, cello, clarinet, bassoon, and two horns.

Weckerlin, Jean Baptiste Théodore, b. Nov. 9, 1821, Gebweiler (Alsace), where his father was proprietor of a cotton-dyeing factory; he was first trained for his father's business, but at an early age showed talent for music. After he had gone through his studies in chemistry and mechanics, and had been for some time active as a dyer, he resolved to devote himself entirely to music, and in 1844 became a pupil of Ponchard (singing) and Halévy (composition) at the Paris Conservatoire. In 1849 he left that institution and devoted himself to composition and teaching, especially of singing. His first published compositions were songs. With a one-act comic opera, *L'organiste dans l'embarras*, he achieved such success in 1853 that it was performed 100 times at the Théâtre Lyrique; but it was not until 1877 that he succeeded in bringing out another one-act piece there (*Après Fontenay*), producing in the meantime only some salon operas (*privatum*), and at Colmar, 2 comic operas in the Alsatian dialect, *Die dreifache Hochzeit im Besenthal* (1863), and *D'r verhäxte Herbst*. On the other hand, in the department of choral and

orchestral composition, he succeeded in making a good name for himself, especially by the great work for soli, chorus, and orchestra: "Les poèmes de la mer" (1860, produced at the Théâtre Italien under his own direction), and "L'Inde," also "La fête d'Alexandre"; a grand *Symphonie de la forêt*, an oratorio, *Le Jugement dernier*; a Cecilia mass, many songs, etc., a *cappella* songs ("25 Chœurs pour voix de jeunes filles," "6 quatuors de salon," "Soirées parisiennes," for mixed choir), etc. W. is librarian of the Paris Conservatoire (succeeded Fel. David in 1876), and archivist of the Paris Société des Compositeurs de Musique. As a musical historian he has been active in collecting a large number of popular songs, "Échos du temps passé" (3 vols.), "Échos d'Angleterre" (folk-songs with pf., 1877), "Chansons et rondes populaires" (children's songs with pf.), "Les poètes français mis en musique" (1868), "Chansons populaires des provinces de la France" (jointly with Champfleury, "La chanson populaire," 1886), "Musicana" (2 vols., 1877 and 1890), "L'ancienne chanson populaire en France" (1887); also in writing a history of instruments and instrumental music, which gained an award from the Académie; he has likewise published a bibliographical catalogue of the valuable library of the Conservatoire (1885, Firmin-Didot).

Weelkes, Thomas, English composer, about 1600 organist at Winchester, in 1608 member of the Chapel Royal and Cathedral organist at Chichester, Mus.Bac., etc. He published a book of madrigals a 3-6 (1597), "Ballets" and madrigals a 5-6 (1598), madrigals a 5-6 (1600); also a collection: "Ayres or Phantastickes Spirites for 3 Voices" (1618). Detached pieces of his are to be found in the "Triumphs of Oriana," in Barnard's "Church Music," and "Teares or Lamentacions of a Sorrowful Soule."

Wegeler, Franz Gerhard, practising physician at Bonn, afterwards at Coblenz, a friend of Beethoven when a youth, b. Aug. 22, 1765, Bonn, died May 7, 1848, Coblenz. He published, jointly with F. Ries: "Biographische Notizen ueber Ludwig van Beethoven" (1838), and a supplement (1845); both appeared in a French translation in 1862.

Wegelius, Martin, composer, b. Nov. 10, 1846, Helsingfors; he studied philosophy there, was created "Magister" in 1869, and became a conductor of the Academical Vocal Society, studied from 1870-71 under R. Bibl in Vienna, and Richter and Paul in Leipzig, was then for a short time "Repetitor" at the Opera at Helsingfors, continued his studies from 1877-78 at Leipzig, and in 1878 became conductor of the Finnish Opera, Helsingfors. W. is now director of a Conservatorium, which has prospered, as, likewise, the musical society under his direction. W. has published pf. pieces and songs, and produced:—An overture "Daniel Hjort"; a "Rondo quasi fantasia" for pf. and orchestra; ballad

for solo tenor and orchestra; "Mignon" for sop. and orch.; *Der 6. Mai* (festival cantata), "Weihnachtskantate," and other vocal pieces. He has also written "Lärobok i allmann Musik lära och Analys" (2 vols., 1888-89), a sketch of the history of music (3 parts, 1891-93), and a "Course in Key-finding" (all three in Swedish).

Wehle, Karl, pianist, b. March 17, 1825, Prague, son of a well-to-do merchant, d. June 3, 1883, Paris. He first followed the career of a merchant, but was trained at Leipzig (Moscheles) and Berlin (Kullak) for a pianist. With the exception of extensive tours to Asia and America, he lived mostly in Paris, where he published a large number of brilliant pf. pieces; a sonata (Op. 38), 2 tarantelles (Op. 5 and 56), *Allegro à la hongroise* (Op. 81), impromptus (Op. 10, 73); ballade and nocturne (Op. 79), *Sérénade napolitaine* (Op. 31), 2 berceuses, 3 nocturnes, and a ballade (Op. 11), etc.

Weidenbach, Johannes, b. Nov. 29, 1847, Dresden; pupil of the Leipzig Conservatorium from 1869-71. He afterwards lived some time in Nürnberg, returning to Leipzig in the autumn of 1873 as teacher of pianoforte-playing at the Conservatorium.

Weidt, Carl, b. March 7, 1857, Berne; in 1889 conductor of Klagenfurt Male Choral Society; favourite composer of male choruses.

Weigl, Joseph, practised conductor and opera composer, b. March 28, 1766, Eisenstadt, where his father (Joseph Franz W., b. March 19, 1740, Bavaria, d. Jan. 25, 1820, Vienna, as member of the court band) was 'cellist to Prince Esterhazy, d. Feb. 3, 1846, Vienna. W. was to have studied law, but received musical instruction at an early age from Albrechtsberger and Salieri, and plunged straight into operatic composition. At the age of 16 he wrote his first opera: *Die unnütze Vorsicht*; the first one which he produced, *Il pazzo per forza* (1789), brought him in the sum of 100 ducats. From that time he had no need to wait for commissions, and he wrote about 30 operas, among them the long-popular *Schweizerfamilie*, a dozen ballets, *Entr'actes*, etc., for the Vienna theatre, from 1807 to 1815, also for La Scala, Milan. On the death of Salieri, W. was appointed second court capellmeister (1825), and from that time gave up working for the stage; but, on the other hand, he composed many oratorios, cantatas, 10 masses, graduals, offertories, etc. In addition he wrote many small songs and a few chamber works (trios for oboe, violin, and 'cello). His brother, Taddäus, b. 1774 or 1776, Vienna, d. there Feb. 10, 1844, was custos of the music department of the royal library, and proprietor of a music business. Four operettas and 13 ballets were produced between 1799-1805.

Weingartner, Paul Felix, nobleman of Münzberg, b. June 2, 1863, Zara (Dalmatia);

was brought up in Graz (pupil of W. Remy for composition), studied at Leipzig (1881), where he devoted himself entirely to music; since then he has been successively capellmeister at Danzig, Königsberg-i.-P., Prague, Mannheim, and Hamburg. In 1891 he was called to Berlin as second court capellmeister, but exchanged this post in 1894 for a similar one at the Munich Court Theatre. W. is a composer of ultra modern tendency (Wagner-Liszt); besides pf. and orchestral works, he has written the operas *Sakuntala* (Weimar, 1884), *Malawika* (Munich, 1886), and *Genesius* (Berlin, 1893).

Weinlig (1) Christian Ehregott, organist and composer, b. Sept. 30, 1743, Dresden, d. there March 14, 1813, pupil of Homilius at the "Kreuzschule," in 1767 organist of the Evangelical Church at Leipzig, 1773 at Thorn, in 1780 accompanist at the Italian Opera, and organist of the "Frauenkirche," Dresden, and finally in 1785 succeeded his old teacher, Homilius, as cantor at the "Kreuzschule." Of his compositions there only appeared in print a set of pf. pieces, and 2 sets of flute-sonatas; he left, however, in manuscript, several Passions, oratorios, cantatas, etc.

(2) Christian Theodor, nephew and pupil of the former, b. July 25, 1780, Dresden; he studied afterwards at Bologna under Mattei; from 1814 to 1817 was cantor at the Dresden "Kreuzschule," then private teacher until, in 1823, he became successor of Schicht as cantor of St. Thomas's, Leipzig, in which post he died, March 7, 1842. W. was specially renowned as a teacher of theory, and numbered amongst his pupils Richard Wagner. He wrote: "Anleitung zur Fuge für den Selbstunterricht" (2nd ed. 1852), a meritorious, independent work. Of his compositions there appeared in print vocal exercises (vocalises) for the different voices, also exercises for two sopranos, and a "Deutsches Magnificat" for soli, chorus, and orchestra.

Weinwurm, Rudolf, b. April 3, 1835, Schaidldorf (near Maidhofen-on-the-Thaya, Lower Austria). As a boy he entered the Imperial court band at Vienna, and there received a thorough musical training; in 1858 he founded the Academical choral society of the Vienna University, became conductor in 1864 of the Vienna "Singakademie"; in 1866, on the retirement of Herbeck, conductor of the male choral society, and, further, director of all the musical instruction at the Royal Institution for the training of male and female teachers. W. published an "Allgemeine Musiklehre" and a "Methodik des Gesangunterrichts"; also composed choruses for male voices and mixed choir. In 1880 he was named musical director of the University.

Weinzierl, Max, Ritter von, b. Sept. 16, 1841, Bergstadt (Bohemia), artistic director of the "Singakademie" at Vienna. W. made himself known as operetta composer (*Don Quixote*,

Vienna, 1879 [jointly with L. Roth]; *Die weiblichen Jäger, Moclemos, Fioretta, Puga Fritz*, 1889).

Weisheimer, Wendelin, composer, b. 1836, Osthofen; pupil of the Leipzig Conservatorium (1856-57), 1866 capellmeister of the theatre at Würzburg, afterwards at Mayence, and now music-teacher at Strassburg. He has hitherto written 2 operas: *Theodor Körner* (Munich, 1872), and *Meister Martin und seine Gesellen* (Carlsruhe, 1879; Baden-Baden, Leipzig).

Weiss, (1) Silvius Leopold, celebrated lute-player, b. 1684, Breslau, d. Oct. 16, 1750, Dresden, where from 1718 he was a chamber virtuoso.

(2) Carl, flautist, b. 1738, Mühlhausen (Thuringia); he went with a distinguished Englishman, first to Rome and then to London, where he became principal flautist to George III.; together with his son of like name, b. 1777, who travelled a great deal, and was for some time a pupil of S. Mayer at Bergamo, W. published numerous solo and ensemble works for flute. The son published an important Method, "New Methodical Instruction Book for the Flute."

(3) Franz, tenor-player in the Schuppanzigh Quartet, b. Jan. 18, 1778, Silesia, d. Jan. 25, 1830, Vienna: he wrote several symphonies, 6 quartets and a quintet for strings, violin duets, duets for flutes, pf. sonatas, violin variations with orchestra, concertantes for flute, bassoon, trombone, and orchestra, etc.

(4) Julius, violinist, b. July 19, 1814, Berlin, pupil of Henning and Rungenhagen, lived as an esteemed teacher of music at Berlin, until in 1852 he took over the music business of his father.

(5) Amalie. (See JOACHIM.)

Weissbeck, Johann Michael, writer on music, b. May 10, 1756, Unterlaimbach (Swabia), cantor and organist of the Liebfrauenkirche, Nuremberg, where he died, May 1, 1808. W. attacked Vogler's tonal system: "Protestationschrift über exemplarische Widerlegung einiger Stellen und Perioden der Kapellmeister Voglerschen Tonwissenschaft und Tonsetzkunst" (1783); he also wrote an "Auswer" (1802) to Knecht's defence of Vogler, and further: "Ueber Herrn Abt Voglers Orgel-Orchestration" (1797), "Etwas über Herrn Dan. Gottl. Türks wichtige Organistenpflichten" (1798), and two satirical pamphlets against Hässler, Rösler, and Vogler (1800).

Weitzmann, Carl Friedrich, practised contrapuntist and most able theorist, b. Aug. 10, 1808, Berlin, d. there Nov. 7, 1880; he was pupil of Henning (violin) and Klein (theory) at Berlin, also of Spohr and Hauptmann at Cassel, in 1832 chorus-master at the Riga Theatre, where, in conjunction with Dorn, he founded a "Liedertafel," in 1834 chorus-master at Reval, 1836 first violinist of the Imperial band and musical director of the Church of St.

Ann's, Petersburg; he betook himself in 1846 to London and Paris for the purpose of study, and settled in Berlin (1847) as a teacher of composition and a writer on music. W. was an intimate friend of Franz Liszt. His chief writings are: "Der übermässige Dreiklang" (1853); "Der verminderte Septimenakkord" (1854); "Geschichte des Septimenakkords" (1854); "Geschichte der griechischen Musik" (1855); "Geschichte der Harmonie und ihrer Lehre" (*Allgemeine Musikalische Zeitung*, 1849); "Harmoniesystem" (1860, gained a prize); "Die neue Harmonielehre im Streit mit der alten"; "Geschichte des Klavierspiels und der Klavierlitteratur" (1863, published as 3rd part of the Lebert-Stark Piano Method; 2nd ed. separately, with the addition of a History of the Piano-forte, 1879); "Der letzte der Virtuosen" (Tausig). One of W.'s pupils, E. M. Bowman, published at New York in 1877: "C. F. Weitzmann's Manual of Musical Theory." Of his own compositions may be named: 3 operas produced at Reval (*Räuberliebe*, *Walburgisnacht*, *Lorbeer und Bettelstab*), some sets of songs, pf. pieces for two and four hands, "Rätsel" for four hands (canons), contrapuntal studies (2 books), and 1800 preludes and modulations (first book classical, second romantic).

Welcker von Gontershausen, H., writer on the construction of musical instruments, author of "Der Flügel oder die Beschaffenheit des Pianos in allen Formen" (1853); "Neueröffnetes Magazin musikalischer Tonwerkzeuge, dargestellt in technischen Zeichnungen," etc. (1855); "Der Ratgeber für Ankauf, Behandlung und Erhaltung der Pianoforte" (1857); "Der Klavierbau und seine Theorie, Technik, und Geschichte" (4th ed., 1870); "Ueber den Bau der Saiteninstrumente und deren Akustik, nebst Uebersicht der Entstehung und Verbesserung der Orgel" (1876).

Weldon, John, English organist, pupil of Purcell; in 1701 Gentleman of the Chapel Royal, 1708 successor of Blow as organist of the Chapel Royal, 1715 composer for the Chapel, d. 1736. W. wrote many anthems, services, etc., and published in 1730 six anthems for solo with continuo; other pieces are to be found in "Mercurius musicus" (1734).

Welsh, Thomas, stage-singer and teacher of singing in London about 1800; he wrote several light operas for the Lyceum Theatre, and published glees, songs, and pf. sonatas; also a Method of singing: "Vocal Instructor, or the Art of Singing." His wife, who, as Miss Wilson, became famed as a vocalist, was trained by him. He died at Brighton in 1848.

Wenck, August Heinrich, violinist, pupil of Georg Benda, went with him to Paris in 1786, and there published pf. sonatas and a Pot-pourri for pf. and violin; he was also a performer on the harmonica. In 1798 he invented a metronome, which he described in

"Beschreibung eines Chronometers oder musikalischen Taktmessers." From 1806 he lived at Amsterdam.

Wenckel, Johann Friedrich Wilhelm, b. Nov. 21, 1734, Niedergebra (near Nordhausen), d. 1792, as organist in Ülzen; pupil of Ph. E. Bach, Kirnberger, and Marpurg at Berlin. W. wrote pf. sonatas, pieces, duets for flute, etc., in a good style.

Wendelstein. (See COCHLÄUS).

Wendling, (1) Johann Baptist, flautist in the Mannheim band from 1754, and after its removal to Munich (1778), up to 1800, the year of his death; he published concertos, quartets, and trios for flute and strings, also duets for flute. His wife Dorothea (Spurni), b. 1737, Stuttgart, d. 1809, Munich, was an excellent singer. She must be distinguished from

(2) Auguste Elizabeth W., wife of the violinist Karl W., who likewise flourished at Mannheim and Munich about this period, and who died in 1794.

(3) Karl, pianist (Janko-keyboard), b. Nov. 14, 1857, Frankenthal (Rhine Palatinate), studied at the Leipzig Conservatorium, since 1887 teacher at that institution, court pianist to the Prince of Waldeck.

Wendt, (1) Johann Gottlieb, professor of philosophy at Göttingen, b. 1783, Leipzig, d. Oct. 15, 1836, Göttingen. He wrote: "Ueber die Hauptperioden der schönen Kunst" (1831), "Leben und Treiben Rossinis" (1824) and a series of articles for the Leipzig *Allgem. Musik. Zeitung*.

(2) Ernst Adolf, music teacher at the Normal School, Neuwed, b. Jan. 6, 1806, Schwiebus (Prussia), d. Feb. 5, 1850, Neuwed; pupil of Zelter, Klein, and A. W. Bach at Berlin, published pieces for organ, a 4-hand pf. sonata, a pf. trio, and variations for pf. and orchestra; symphonies, quartets, etc., remained in manuscript.

Wenzel, Ernst Ferdinand, renowned pf. teacher, b. Jan. 25, 1808, Walddorf, near Löbau, (Saxony), d. Aug. 16, 1880, at the Kösen Baths. He studied philosophy at Leipzig, and became private pupil for pianoforte of Fr. Wieck; he formed a friendship with R. Schumann, and soon devoted himself entirely to music. When Mendelssohn founded the Conservatorium, he appointed W. teacher of the pianoforte, and the latter filled this post in the most distinguished manner up to his death. He was also active as a contributor, and indeed, so long as Schumann was editor, to the *Neue Zeitschrift für Musik*. W. was an intelligent man, though somewhat peculiar.

Werbecke, Gaspar van. (See GASPAR.)

Werckmeister, Andreas, important theorist and organist, b. Nov. 30, 1645, Beneckenstein, d. Oct. 26, 1706, Halberstadt; he attended the

schools at Nordhausen and Quedlinburg, received his musical training from his uncles Heinrich Christian W., organist at Benningen, and Heinrich Victor W., cantor at Quedlinburg. In 1664 W. became organist at Hasselfelde, 1670 at Ellrich, 1674 at Elbingerode, then organist of the castle at Quedlinburg, and finally, in 1696, organist of St. Martin's Church, Halberstadt. Of Werckmeister's compositions only a book of violin pieces with continuo has been preserved: "Musikalische Privatlust" (1689). His writings are: "Orgelprobe, oder kurze Beschreibung, wie man die Orgelwerke von den Orgelmachern annehmen . . . könne" (1681; 2nd ed. as "Erweiterte Orgelprobe," 1698, and frequently); "*Musica mathematica hodegus curiosus*, oder Richtiger musikalischer Wegweiser" (1687; treatise on intervals); "Der edlen Musik-Kunst Würde, Gebrauch und Missbrauch (1691); "Musikalische Temperatur, oder deutlicher und wahrer mathematischer Unterricht, wie man durch Anweisung des Monochordi ein Klavier, sonderlich die Orgelwerke, Positive, Regale, Spinetten u. dgl. wohltemperiert stimmen könne" (1691; the first treatise on equal temperament); "*Hypomnemata musica* oder Musikalisch Memorial" (1697; general instruction-book); "*Cribrum musicum* oder Musikalisches Sieb" (1700; an interesting little pamphlet); "*Harmonologia musica*, oder Kurze Anleitung zur musikalischen Composition" (1700); "Die notwendigen Anmerkungen und Regeln, wie der Bassus continuus oder Generalbass wohl könne traktiert werden" (1698; 2nd ed., 1715); "*Organum Gruningense redivivum*, oder Beschreibung des in der Grünigischen Schlosskirche berühmten Orgelwerks, etc." (1705); "Musikalische Paradoxaldiskurse, oder ungemaine Vorstellungen, wie die Musik einen hohen und göttlichen Ursprung habe," etc. (1707).

Werkenthin, Albert, b. March 6, 1842, Berlin, pupil of H. v. Bülow, Stern, Weitzmann, and H. Ulrich; pianist, author and composer ("Die Lehre vom Klavierspiel, Lehrstoff und Methode," 3 vols.; songs, and pf. pieces).

Wermann, Friedrich Oskar, organist and composer, b. April 30, 1840, Neichen, near Trebsen (Saxony), attended the Seminary at Grimma, was then school teacher at small places near Leipzig and Dresden, pupil in the latter city of Julius Otto, Merkel, Krägen, and Fr. Wieck, also of the Leipzig Conservatorium; he became music director at Wessering and teacher at the Neuchatel Music School, and in 1868 received a call to Dresden as teacher at the Normal School. In 1876 he succeeded J. Otto as cantor of the Kreuzschule and music director of the three principal evangelical churches. Of his compositions should be named: "Reformationskantate" (Op. 35), organ sonata (Op. 45), ditto with 'cello (Op. 58), a vocal mass for double choir with soli (Op. 60),

numerous motets, a lyric opera, (*Vineta*), pf. pieces (technical studies, *études*), and songs.

Werneburg, Johann Friedrich Christian, teacher at the Gymnasium and Normal School at Cassel, afterwards at Gotha, and finally Weimar; he published in 1796 a set of pianoforte sonatas, and in 1812 an "Allgemeine neue, viel einfachere Musikschule für jeden Dilettanten und Musiker, mit einer (natürlich fingierten) Vorrede von J. J. Rousseau" (1812). W.'s system is that of Rousseau, namely, figures in place of notes.

Werner, (1) Gregorius Joseph, Haydn's predecessor as capellmeister to Prince Esterházy, b. 1695, d. March 3, 1766, Eisenstadt; he published "Sex symphonizæ senæque sonatæ, priores pro camera posteriores pro cappellis usurpandæ a 2 viol. et clavichord"; and "Neuer und sehr kurios musikalischer Instrumentalkalender, parthieen-weiss mit zwei Violinen und Bass in die zwölf Jahrmonate eingetheilet."

(2) Johann Gottlob, b. 1777, Hoyer, Saxony, 1798 organist at Frohburg (near Borna), 1808 deputy to the cantor Tag at Hohenstein (near Chemnitz), called (1819) to Merseburg, where he died (July 19, 1822), as cathedral organist and music director. He was an excellent teacher of music, and published:—many chorale preludes; an "Orgelschule" (1805 and frequently; the second part appeared as "Lehrbuch, das Orgelwerk kennen, erhalten, beurtheilen und verbessern zu lernen," 1823); "Choralbuch zum holländischen Psalm- und Gesangbuch" (1814); "Choralbuch zu den neuern sächsischen Gesangbüchern"; "Musikalisches A B C, oder Leitfaden beim ersten Unterricht im Klavierspielen" (1806 and frequently); "Versuch einer kurzen und deutlichen Darstellung der Harmonielehre" (1818-19, 2 pts.); likewise several collections of chorales.

(3) Karl, b. Jan. 18, 1822, Breslau, d. there June 11, 1884; from 1848 was organist at St. Bernard's, finally principal organist.

(4) Carl Ludwig, organist, b. Sept. 8, 1862, Mannheim, pupil of A. Hänlein there and of K. A. Fischer at Dresden. He was at first for a short time organist at Davos, played at the Trocadéro, Paris, on Guilmant's recommendation, and in 1892 became organist of the Protestant Church at Baden-Baden.

(5) Josef, 'cellist, b. June 25, 1837, Würzburg, studied at the Conservatorium there, became member of the Munich Court Orchestra and teacher at the Conservatorium. He wrote a 'cello method, a quartet for four 'celli, Elegie ditto, Duos and pieces for 'celli with and without accompaniment, etc.

Werstowski, Alexei Nikolájewitsch, Russian composer, b. Feb. 18, 1799, Moscow, d. there Nov. 17, 1862; he wrote seven operas, of which *Ascol's Grab* had great success.

Wert, Jacob van (Giaches de W., Jacques de W., etc.), b. 1536, d. May 23, 1596, Mantua,

famous Netherland contrapuntist, who went already as a boy to Italy, and was first appointed at the court at Novellara in the duchy of Reggio, belonging to the duchy of Modena. He must, while still young, have entered the service of Duke Gonzaga at Mantua, for he writes in the dedication to the eleventh book of Madrigals of 1595, that he had already served under the grandfather of Duke Francesco. At first only a musician in the band, he rose about 1566 to be maestro da capella (successor to Giov. Continuo), and went from 1568-74 as assistant-maestro to the court at Novellara. On his return to Mantua he suffered many degradations, and, through lack of occupation, accepted the post of maestro at the church of St. Barbara. As a composer he was wonderfully prolific, and his works belong to the best of that time. The following are known: 11 books of madrigals a 5; a similar book a 4, and one a 5 and 6; 1 book of canzonets; 3 books of motets a 5 and 6; the earliest publication appeared in 1558, the latest in 1653. All these books passed through several editions.

Wéry, Nicolas Lambert, violinist, b. May 9, 1789, Huy (near Liège), d. Oct. 6, 1867, Bande (Luxembourg), first joined the military band at Metz, lived then as a music teacher at Sedan, whence he went for some time annually to Paris to Baillet, and settled in Paris 1822. He was for a short time conductor of the amateur concerts at "Vauxhall," but already in 1823 he won by competition the post of solo violinist of the royal orchestra and that of violin teacher at the Conservatoire at Brussels; he occupied both until he received his pension in 1860.

Wesembeck. (See BURBURE DE W.)

Wesley, Samuel, able English organist and composer, b. Feb. 24, 1766, Bristol, d. Oct. 11, 1837, London, was a warm admirer of the music of J. S. Bach, and zealously laboured to open up a way for it in England: this can be seen in his correspondence (published by his daughter) with the organist Jacob, "Letters referring to the works of J. S. Bach." His compositions consist of anthems, organ pieces, and pf. sonatas (also for 4 hands). His brother, Charles W., b. Dec. 11, 1757, Bristol, d. May 23, 1834, was also a distinguished organist (pupil of Boyce). His son, Samuel Sebastian W., b. 1810, was likewise an excellent organist and church composer; he died April 19, 1876, Gloucester.

Wesselack, Johann Georg, b. Dec. 12, 1828, Sattelpfeilestein (Upper Palatinate), d. Dec. 12, 1866, Ratibson, son of a teacher, was admitted as choir-boy in the "Studienseminar" of the old chapel at Ratibson, and remained twelve years—the last four as Prefect. In 1852 he was ordained priest, worked for two years as assistant pastor at Schöensee, and for three months at Vilseck. In October, 1854, he was called to

the Episcopal "Klerikalseminar" at Ratisbon as assistant and choir-master. After Joh. G. Mettenleiter's death W. succeeded him as *regens chori* and Inspector of Seminaries on the collegiate foundation to the old chapel. He carried on an active intercourse with Dr. Proske, after whose decease he brought out the 4th vol. of "Musica divina" with a biography of Proske. W. left a number of motets in manuscript.

Wessely, (1) **Johann**, violinist and composer, b. June 27, 1762, Frauenburg (Bohemia); 1797 in the orchestra at Altona, then at Cassel, 1800 at Ballenstedt, where he died in 1814; composed 14 quartets for strings, 3 trios for strings, clarinet quartets, variations for horn, etc., in light, pleasing style, also 2 vaudevilles.

(2) **Karl Bernhard**, b. Sept. 1, 1768, Berlin, d. July 11, 1826, Potsdam; pupil of J. A. P. Schulz, 1788 musical director at the National Theatre (Königstadt), 1796 capellmeister to Prince Heinrich at Rheinsberg; after the death of the Prince he gave up music and accepted a subordinate government post, first at Berlin, afterwards at Potsdam. In the latter city he founded a society for classical music, which he conducted until his death. W. composed several operas, ballets, incidental music to plays, funeral cantatas for Moses Mendelssohn and Prince Heinrich, songs, 3 quartets for strings, etc. He also wrote on music for the *Archiv der Zeit* and the *Allgemeine musikalische Zeitung*.

Westmeyer, **Wilhelm**, b. Feb. 11, 1832, Iburg (near Osnabrück), d. in a medical establishment at Bonn, Sept. 4, 1880; pupil of the Leipzig Conservatorium, and afterwards of J. Chr. Lobe. He made himself known as a composer by songs, quartets, symphonies, and two operas: *Amanda (Gräfin und Bäuerin)*, 1856), *Der Wald bei Hermannstadt* (Leipzig, 1859), etc. His "Kaiser" overture is performed by the united military bands of Vienna every year on the birthday of the Austrian Emperor (Aug. 18).

Westmoreland, **John Fane**, Earl of, b. Feb. 3, 1784, London, d. Oct. 16, 1859, at Aporthe House. He at first bore the title of Lord Burghersh, but after his father's death succeeded to the earldom, went through the Spanish campaign, studied composition from 1809-12 under Marcos Portugal at Lisbon, entered the Prussian army as a volunteer in the War of Liberation, became envoy at Florence, and finally ambassador at Berlin and Vienna. In 1855 he retired into private life. W. wrote seven operas for Florence and London: *Bajazet*, *L'eroe di Lancastro*, *Lo scompiglio teatrale*, *Catarina ossia l'assedio di Belgrad*, *Fedra*, *Il torneo*, and the dramatic cantata, *Il ratto di Proserpina*, besides a number of cantatas, arias, scenas, duets, terzets, a grand mass, a requiem, anthems, hymns, magnificat, a cathedral service, madrigals, canzonets, 3 symphonies, etc. He was chiefly

instrumental in founding the Royal Academy of Music.

Westphal, **Rudolf Georg Hermann**, gifted philologist, b. July 3, 1826, Oberkirchen, Lippe-Schaumburg, d. July 11, 1892, Stadthagen, studied at Marburg, and settled in 1856 at Tübingen, was from 1858-62 occasional professor at Breslau, also private tutor there and at Jena, was for a long time collegiate teacher at Livland, and in 1875 became professor at the Katkoff Museum, Moscow. After 1880 he again lived in Germany (Leipzig, Bückeburg, Stadthagen). The real field of W.'s labours was ancient metre and rhythm, in the knowledge of which he showed great sharp-sightedness; and he expounded them in a thoroughly systematic manner. His investigations, however, extended to the question of harmony among the Greeks; and in this matter he came to the conclusion that the Greeks had polyphonic music. He published: "Metrik der griechischen Dramatiker und Lyriker" (jointly with Roszbach, 1854-65, 3 vols; 2nd ed. 1868, 3rd ed. as "Theorie der musischen Künste der Hellenen," 1885); "Die Fragmente und Lehrsätze der griechischen Rhythmiker" (1861); "System der antiken Rhythmik" (1865); "Geschichte der alten und mittelalterlichen Musik" (1865, a fragment to which also belongs "Plutarch über die Musik" 1864); "Theorie der neuhochdeutschen Metrik" (1870; 2nd ed., 1877); "Die Elemente des Musikalischen Rhythmus mit Rücksicht auf unsere Opernmusik" (1872); "Allgemeine Theorie der musikalischen Rhythmik seit J. S. Bach" (1880); "Die Melik und Rhythmik des griechischen Altertums" (1893, 3 vols.); and "Die Musik des griechischen Altertums" (1883). A posthumous work has appeared: "Allgemeine Metrik der indo-germanischen und semitischen Völker auf Grundlage der vergleichenden Sprachwissenschaft" (1892, with a treatise by R. Kruse: "Der griechische Hexameter in der deutschen Nachdichtung"). Westphal's bold method of combination and interpretation has, unfortunately, introduced great confusion into the theory and history of ancient music; the "Westphalising" of the first volume of Ambros's History of Music by B. v. Sokolovsky (1887), is one of its worst fruits.

Wetterharfe (Ger.). (See *ÆOLIAN HARP*.)

Wexschall, **Frederik Torkildson**, b. April 9, 1798, Copenhagen, d. there Oct. 25, 1845; pupil of Spohr, 1835 soloist in the royal band, Copenhagen; he was a distinguished violinist and teacher (Gade and Ole Bull were his pupils).

Weyse, **Christoph Ernst Friedrich**, composer, b. March 5, 1774, Altona, d. Oct. 8, 1842, Copenhagen; he received his musical training from his grandfather, who was cantor at Altona, and from J. A. P. Schulz at Copenhagen. W. produced the operas: *Ludlams Höhle*

(1808), *Der Schlaftrunk* (1809), *Faruk* (1814), *Floribella* (1825), *Ein Abenteuer im Königsgarten* (1827), and *Das Fest in Kenilworth* (1836); but devoted himself almost entirely to sacred composition. He also wrote overtures, a symphony, pf. sonatas, etc. In 1816 he received the title of Professor.

Whistling, Karl Friedrich, a bookseller at Leipzig. He published: "Handbuch der musikalischen Litteratur, oder allgemeines, systematisch geordnetes Verzeichnis gedruckter Musikalien, auch musikalischer Schriften und Abbildungen mit Anzeigen der Verleger und Preise" (1817, 2nd ed. 1828; numerous supplements; a supplemental volume, 1842). The undertaking was continued by Fr. Hofmeister (q.v.).

Whiting, George C., American organist and composer, b. 1840, Holliston, studied the organ with G. W. Morgan in New York and with Best in Liverpool, and, in addition, orchestration with Radecke in Berlin. He then occupied various posts as organist at Boston, Hartford, and Albany, and is now professor of organ-playing at Cincinnati Conservatory. W. has written organ pieces, sacred part-songs, male part-songs, a *Te Deum*, and the choral works with orchestra, "The Viking's Story" and "Leonora."

Whole-tone, the larger of the two progressions by second within the fundamental scale (c-d, d-e, f-g, g-a, a-b, are whole tones; e-f and b-c, semitones). With regard to the acoustic determinations of the major and minor whole tone, cf. **TONE**, **DETERMINATION OF**, **COMMA** and **INTERVAL**.

Wichmann, Hermann, b. Oct. 24, 1824, Berlin, son of the sculptor Ludwig W., pupil for composition at the Royal Academy. He continued his studies under Taubert, Mendelssohn, and Spohr; became 1857 conductor of the Bielefeld Musical Society, lived for a long time in Italy for the sake of his health, but returned to Berlin. W. has published pf. pieces, songs, and some ensemble works, also "Gesammelte Aufsätze" (2 vols., 1884 and 1887).

Wichtl, Georg, b. Feb. 2, 1805, Trostberg, (Bavaria), d. June 3, 1877, Breslau. He went to Munich at the age of 18 in order to study the violin, and obtained a post at the Isarthor Theatre; in 1826, as first violinist, he joined the Court Band of the Prince of Hohenzollern-Hechingen at Löwenberg, Silesia; became in 1852 royal musical director and second capellmeister there. In 1863 he received a pension, and lived up to his death in Breslau. W. wrote a large number of educational violin pieces much in vogue with amateurs, also a mass, a quartet for strings, several concert pieces, songs for one or more voices, several symphonies and overtures, an opera: *Almaida*, and an oratorio: *Die Auferstehung und Himmelfahrt Jesu* (1840).

Wickede, Friedrich von, b. July 28, 1834, Dömitz (on the Elbe), was a Mecklenburg officer, and in 1867 was engaged in the Post Office and lived from 1872 in Leipzig, Hamburg, Mannheim; he is now in Munich. W. has become known by his songs, pf. pieces, etc., also by an overture: *Per aspera ad astra*, a funeral march for the Emperor William I. He has also composed an opera: *Ingo*.

Widmann, Erasmus, poet laureate, Hohenlohe capellmeister at Weickersheim, previously organist at Rotenburg-on-the-Tauber. He published: "Teutsche Gesänglein" a 4 (1607); "Musikalische Kurtzweil newer teutscher . . . Gesänglein, Tantz und Curranten" (1611); "Musikalischer Tugendspiegel mit schönen historischen und politischen Texten" a 5, *ad libitum* a 4 (1614); a book of motets a 3-8 (1619); "Musikalischer Studentenmut," a 4-5 (1622); a volume of antiphons, hymns, responses, etc. (1627); "Musikalische Kurtzweil in Kanzonen, Intraden, Balletten" etc., a 4-5 (1618, 1623; 2 books).

(2) **Benedict**, rector, writer, and composer at Frankfort, b. March 5, 1820, Bräunlingen (near Donaueschingen). He published: "Formenlehre der Instrumentalmusik" (1862); "Katechismus der allgemeinen Musiklehre"; "Grundzüge der musikalischen Klanglehre" (1863); "Praktischer Lehrgang für einen rationellen Gesang-Unterricht"; "Handbüchlein der Harmonie, Melodie- und Formenlehre" (4th ed., 1880); "Generalbassübungen" (1872), etc.

Widor, Charles Marie, distinguished organist and celebrated composer, b. Feb. 24, 1845, Lyons (his father was a native of Alsace, but his family was Hungarian). He studied under Fétis in Brussels and Rossini in Paris, first filled the post of organist of St. François at Lyons, but soon acquired a name as an expert, and was present at the trial performances of the principal organs in the South of France; in 1869 he was called to Paris as organist of St. Sulpice, famed for its noble instrument. W. has written hitherto: a symphony, a pf. concerto, a 'cello concerto, "Une nuit de Walpurgis" (choral work with orchestra), a pianoforte trio (Op. 19), a pf. quintet (Op. 7), 8 sonatas for organ ("Symphonies"), a serenade for pianoforte, flute, violin, 'cello, and harmonium (Op. 10), pieces for 'cello and pianoforte (Op. 21), many pianoforte pieces, songs, also part-songs (Op. 25), duets (Op. 30), the 112th Psalm for two choirs, two organs, and orchestra, etc. He visited England in 1888, and conducted his "Walpurgis Night" music at a Philharmonic concert.

Wieck, (1) Friedrich, renowned pianoforte teacher, b. Aug. 18, 1785, Pretzsch (near Torgau), d. Oct. 6, 1873, Loschwitz (near Dresden); he studied theology at Wittenberg, was for several years private tutor, and then founded in Leipzig a pianoforte manufactory and a musical

lending library, but soon abandoned both. W. was first married to a daughter of the Cantor Tromlitz, who bore him a daughter, the famous Clara, afterwards the wife of Robert Schumann; and after the unfortunate union was dissolved, the former married the music-teacher Bargiel. The extraordinary success which W. achieved with his daughters Clara and Marie (of the second marriage) in piano-forte-playing, obtained for him such a great name, that he gave himself up entirely to piano-forte instruction. In 1840 he settled in Dresden, where he made a study of Mieksch's method of singing, so as to be able to give lessons in that branch of the art. He published: "Klavier und Gesang" (1853), and "Musikalische Bauernsprüche" (2nd ed. by Marie W., 1876), also several sets of studies. Cf. "Friedrich Wieck und seine Töchter Clara und Marie" (1875), by A. von Meichsner, also "Fr. W." (1887), by A. Kohut.

(2) Alwin, son of the former, b. Aug. 27, 1821, Leipzig, d. Oct. 21, 1885, Leipzig; he was trained as a violinist under David, and from 1849-59 was in the orchestra of the Italian Opera at Petersburg; he afterwards lived in Dresden and gave instruction on his father's method. He published "Materialien zu Fr. Wiecks Pianofortemethodik" (1875).

Wiedemann, Ernst Johann, teacher of singing to the cadet corps in Potsdam, b. March 28, 1797, Hohengiersdorf (Silesia); he studied under Schnabel and Berner in Breslau, in 1818 became organist of the Roman Catholic church at Potsdam, founded in 1832 a mixed choral society, and in 1840 also a male choral society. He resigned his post of organist in 1852, and died Dec. 7, 1873, Potsdam. W. composed masses, hymns, a Te Deum, etc.

Wiederkehr, Jacob Christian Michael, b. April 28, 1739, Strassburg, d. April, 1823, Paris; he went in 1783 to Paris and became 'cellist at the Concert Spirituel and the Loge Olympique, in 1790 bassoon-player at the Théâtre Lyrique, and in 1797 trombone-player at the Grand Opéra. From 1794 he had also been professor of singing at the Conservatoire, but when in 1802 the staff of teachers was reduced, he was dismissed. W. wrote 12 concertantes for wind-instruments, 10 quartets and 2 quintets for strings, 6 quintets for wind-instruments and pf., 6 pf. trios, 6 sonatas for violin, potpourris, etc.

Wiegand, Josef Anton Heinrich, excellent stage-singer (bass), b. Sept. 9, 1842, Fränkisch-Crumbach (Odenwald); he was at first a merchant, and as such visited England, Constantinople, and Paris. In 1870 he was driven out of Paris, and, as he had long been privately training himself as a singer, he soon obtained an engagement at the opera at Zürich, then went to Cologne, and from 1873-77 was principal bass at Frankfurt. In 1877 he made

an eight months' tour through North America with the Adams-Pappenheim troupe. He was then engaged from 1878-82 at the town theatre, Leipzig; went from there to the Court Opera, Vienna, and since 1884 has belonged to the Hamburg Opera. W. took part in the *Nibelungen* performances at Berlin in 1881, London 1882; in 1886 at Bayreuth he was successful in the rôles of Gurnemanz and King Marke. At the present time W. is highly esteemed as a bass singer.

Wielhorski, Count, the name of several distinguished Russian amateurs. Michael Juriewitsch Matuschkin, b. Oct. 31, 1787, Wolhynia, d. Sept. 9, 1856, Moscow; for his uncle, Count Matthias W., who was a pupil of Bernhard Romberg and an excellent performer on the 'cello, he wrote, among other things, a quartet for strings and variations for 'cello. His brother Joseph was an excellent pianist, 'cellist, and composer of nocturnes, fantasias, caprices, songs without words, marches, etc., for pianoforte.

Wieniawski, (1) Henri, a remarkable violin virtuoso, b. July 10, 1835, Lublin, d. March 31, 1880, Moscow. At an early age he went to Paris with his mother, who was a sister of Eduard Wolff, became already in 1843 a pupil of Clavel, and in 1844 of Massart, at the Conservatoire, and in 1846 obtained the first prize of the violin class. After a residence of one year in Russia, he studied harmony from 1849-50, and then his fame as a concert-player began to spread. In 1860 he was appointed Imperial chamber virtuoso at Petersburg, remained there until 1872, when he commenced a tour in America with Anton Rubinstein, which he extended on his own account until 1874. When Vieuxtemps (q.v.) became ill, W. was telegraphed for to take his place; he arrived at Brussels in 1875, and worked with the best success until Vieuxtemps was able to resume his functions as teacher. W. then started again on his travels, and, finally, died in destitute condition in a hospital at Moscow. W. wrote 2 violin concertos and some solos for the violin, which please both players and hearers.

(2) Joseph, as famous a pianist as his brother was a violinist, b. May 23, 1837, Lublin; became already in 1847 a pupil of the Paris Conservatoire, especially of Zimmermann, Alkan, Marmontel, also for harmony of Le Couppey. In 1850 he returned with his brother to Russia, gave many concerts with him, studied afterwards for a short time under Liszt at Weimar, and in 1856, theory under Marx at Berlin. W. lived again for several years in Paris, and in 1866 settled at Moscow, taught for a time at the Conservatoire there, but soon founded a pianoforte school of his own, which prospered exceedingly. He afterwards went to Warsaw. He now lives at Brussels, and teaches at the Conservatoire there. Since the death of his brother he has made more frequent appearances on the concert platform.

Wieprecht, Wilhelm Friedrich, b. Aug. 8, 1802, Aschersleben, d. Aug. 4, 1872, Berlin, as director of the military band of the Garde. He was the inventor of the Bass-tuba, 1835, jointly with the instrument-maker Moritz; of the Bathyphon (a kind of bass clarinet, 1839, jointly with Skorrä); of the *piangendo* on brass instruments with pistons; and of an improved contrabass bassoon, etc. In his dispute with Sax concerning the priority of invention of bugle-horns with valves (Saxhorns) he was worsted.

Wiese, Christian Ludwig Gustav, Freiherr von, writer on music, b. 1732, Ansbach; was at first officer and chamberlain at the Ansbach court, from 1757 at Dresden, where he died as Privy Councillor, Aug. 8, 1800. W. wrote: "Théorie de la division harmonique des cordes vibrantes" (manuscript in the Dresden Library; copy at Berlin); "Anweisung, nach einer mechanischen Behandlung das Klavier zu stimmen" (1790); "Versuch eines formularisch und tabellarisch vorgebildeten Leitfadens in Bezug auf die Quelle des harmonischen Tönungsausflusses" (1792); "Formularisches Handbuch für die ausübenden Stimmer der Tasteninstrumente" (1792); "Der populären Gemeinnützigkeit gewidmeter, neu umgeformter Versuch über die logisch-mathematische Klangteilungs-, Stimmungs- und Temperaturrehre" (1793); "Discours analytique sur la cohérence imperturbable de l'unité du principe des trois premières parties intégrantes de la théorie musicale" (1795); "Ptolemäus und Zarlino, oder wahrer Gesichtskreis der haltbaren Universalitäten der Elementar-Tonlehre," etc. (no date).

Wietrowetz, Gabriele, distinguished lady violinist, b. 1866, Laibach, pupil of Geyer and Caspar at the Styrian School of Music there, also for some time of Joachim in Berlin.

Wilbye, John, famous writer of madrigals, of whose life very little is known; he appears to have lived in London. W. wrote "The first set of English Madrigals to 3, 4, 5, and 6 voices" (1598), "The second set of Madrigals to 3, 4, 5, and 6 parts" (1609); besides one madrigal contributed to "The Triumphes of Oriana" (1601), and two others to Leighton's "Teares or Lamentacions" (1614). These have been reprinted of late years by the Musical Antiquarian Society.

Wild, Franz, famous tenor-singer, b. Dec. 31, 1792, Niederhollabrunn (Lower Austria), d. Jan. 1, 1860, Oberdöbling (near Vienna). He was chorister at Klosterneuburg and afterwards in the court chapel, and sang in the chorus at the Leopoldstadt Theatre. As soloist he was at first in the Esterhazy Chapel, Eisenstadt, and in 1811 was engaged at the Theater-an-der-Wien, whence in 1813 he went over to the Court Opera. From 1816-30 he sang at Berlin, Darmstadt (1817), and Cassel (1825);

and after that (1830), up to his death, again at Vienna, where he was held in very high esteem.

Wilder, Jérôme Albert Victor van, b. Aug. 21, 1835, Wetteren (near Ghent), d. Sept. 8, 1892, Paris; he studied philosophy and law in Ghent and took his degree in both faculties. In 1860 he went to Paris, and quickly made a name there by a great number of translations of German songs and opera libretti into French; he likewise, though only for a short period, displayed praiseworthy activity as a writer on music (one of the contributors to the *Ménestrel*, etc.). Mention must also be made of W.'s Mozart biography: "Mozart, l'homme et l'artiste" (1880).

Wilhelm, Karl, b. Sept. 5, 1815, Schmalkalden, d. there Aug. 26, 1873; from 1840-65 he was director of the Liedertafel at Krefeld, and as such composed in 1854 the patriotic song "Die Wacht am Rhein," which afterwards (especially during the war of 1870-71) became celebrated; for this a yearly pension of 3,000 marks was granted to him in 1871.

Wilhelm von Hirschau, native of Bavaria, in 1032 narrator of legends to Othlo of Würzburg, from 1068 up to his death (June 4, 1091) Abbot of Hirschau monastery (Black Forest). He wrote a treatise on the theory of music, which Gerbert published ("Script," II.). Another treatise, "De musica et tonis," ascribed to him, was once in the possession of v. Murr of Nuremberg (cf. his "Notitia duorum codicum musicorum," 1801), but it has disappeared. Dr. Hans Müller wrote a monograph on W. v. H. (1883). Cf. also M. Kerker's "Wilhelm der Selige, Abt von Hirschau" (1863), and A. Hermesdörffer's "Forschungen zur Geschichte des Abtes W. v. H." (1874).

Wilhelmj, (1) August, famous violinist, b. Sept. 21, 1845, Usingen (Nassau); he received his first violin instruction from K. Fischer at Wiesbaden, and at an astonishingly early age developed into an able violinist. From 1861-64 he received training under David at the Leipzig Conservatorium, studied theory under Hauptmann, Richter, and afterwards under Raff in Wiesbaden. While still a student (1862) W. appeared at the Gewandhaus concerts; and at the conclusion of his studies he began the wandering life of a virtuoso, and travelled through nearly every civilised country—first to Switzerland (1865), then to Holland and England (1866), to France and Italy (1867), Russia (1868), again to Switzerland, France, and Belgium (1869), etc. In 1872 he appeared in Berlin for the first time, and in 1873 in Vienna. From 1878-82 he went round the world (North and South America, Australia, Asia), and with ever-increasing sensational success. He was leader of the orchestra at the Bühnenfestspiel (Wagner's *Nibelungen*) at Bayreuth (1876). In 1871 W. received the title of Professor. He resided a long time at Biebrich-

on-the-Rhine, where he established jointly with R. Niemann (q.v.) a "Hochschule" for violin-playing. Since 1886 he has lived at Blasewitz, near Dresden. W. is one of the most eminent of living violinists, and to wonderful technique unites the gift of interpretation. His brother's wife is

(2) Maria (née Gastell), b. July 27, 1856, Mayence, an excellent concert-singer (soprano), originally trained in pianoforte playing and theory by Lux, Schoch, Raff, Mme. Tausig, Reissmann, and Leschetitzky; in singing, by her mother (Mme. Gastell-Canozzi), Hedwig Roland, and Mme. Viardot-Garcia. She appeared as a concert-singer in Bruch's *Glocke*, 1886, and from that time quickly won general esteem.

Wilhem, Guillaume Louis (Bocquillon, named W.), made known the method of mutual instruction (*enseignement mutuel*) in music, b. Dec. 18, 1781, Paris, d. there April 26, 1842. He was the son of an officer, and at the early age of 12 placed in a regiment, but became a pupil of the Conservatoire (1801-3); he was afterwards teacher of music at the military school of St. Cyr, in 1810 teacher of music at the Lycée Napoléon (Collège Henri IV.), and occupied the latter post up to his death. At the same time, when his method—which he first tested in private courses—bore good fruit, he became more and more engaged as teacher of singing at schools, and finally became general director of musical instruction at all the Paris schools; with a salary of 6,000 francs. The *Orphéons* (q.v.) are his creation. W. composed many songs for one and several voices, some to poems by Béranger, with whom he was on friendly terms. He published a grand collection of *a cappella* songs, "Orphéon" (1837-40, 5 vols.; in the last edition 10 vols.). His educational writings are: "Guide de la méthode élémentaire et analytique de musique et de chant" (1821-24); also as "Méthode élémentaire analytique, etc." (1835, and with other *variantes*, "Guide complet," 1839); "Tableaux de lecture musicale et d'exécution vocale" (1827-32); "Nouveaux tableaux de lecture musicale et de chant élémentaire" (1835), and "Manuel musical à l'usage des collèges, des institutions, etc., comprenant pour tous les modes d'enseignement le texte et la méthode de lecture musicale, etc." (1836, 2 vols., and frequently). Biographical notices of W. were written by Isouard (1842), E. Niboyet (1843), and Lafage (1844).

Wilhórski, (1) Matwéi Júrjewitsch, Count, b. Oct. 19, 1787, Wolhynia, d. 1863, an able violoncellist, pupil of Bernhard Romberg, was director of the Imperial Russian Musical Society, Petersburg. His large and important library W. bequeathed to the Petersburg Conservatoire, and his magnificent Stradivarius instrument to Carl Davidoff.

His brother—(2) Micháil Júrjewitsch,

Count, b. Oct. 31, 1788, Wolhynia, d. Aug. 28, 1856, Moscow, was a gifted composer of songs.

Wilke, Christian Friedrich Gottlieb, organist, and well versed in the art of organ-building, b. March 13, 1769, Spandau, d. July 31, 1848, Treuenbrietzen; in 1791 he was organist at Spandau, in 1809 at Neuruppin, in 1820 royal musical director, in 1821 government commissioner for the building of organs. W. wrote "Beiträge zur Geschichte der neuern Orgelbaukunst" (1846); "Ueber Wichtigkeit und Unentbehrlichkeit der Orgelmixturen" (1839); "Leitfaden zum praktischen Gesangsunterricht" (1812); descriptions of the new organs at Perleberg (1831) and Salzwedel (1839); likewise a series, in part very valuable, of technical articles on the construction of organs, in the *Allgemeine Musikalische Zeitung* and *Cäcilie*.

Willært, Adrian (Vuigliart, Vigliar, Willardus, also simply, Adriano), the famous teacher of Andreas Gabrieli, Cipr. de Rore, Zarlino, etc., for which reason he is regarded as the founder of the Venetian School, b. about 1480 or 1490 at Bruges, or (according to van der Straeten) at Roulers, d. Dec. 7, 1562, Venice. He studied under Jean Mouton and Josquin Depres, went in 1516 to Rome, where, as it appears, he obtained no appointment. He lived for some time at Ferrara, then at the court of Ludwig II. of Bohemia and Hungary, and on December 12, 1527, was appointed maestro of St. Mark's, Venice, as successor to P. de Fossi. He himself was succeeded by his pupil Cipriano de Rore. The striking invention of Willært, and one which marked his school with the stamp of individuality, was the writing for two choirs; and to this he was prompted by the two organs opposite one another at St. Mark's. His works which have been preserved are: a book of 5 masses *a 4* (1533), 2 books of motets *a 4* (1539, 1545); a book of motets *a 6* (1542); 2 books of motets *a 4-7* (1561); "Canzone villanesche" *a 4* (1545); madrigals *a 5* (1548); "Fantasie o ricercari . . . *a 4 e 5 voci*," by W. and de Rore (1549); vesper psalms *a 4-8* "auctoribus Adriano W. et Jachetto" (de Berchem [q.v.] 1550, etc.); madrigals *a 6* (by Verdelot and W., 1561); hymns *a 4* (1550); "Musica nova" (1559, contains motets *a 4-7* and madrigals); "Sacri e santi salmi che si cantano a vespro et completi . . . *a un choro et a 4 voci*" (1571). Detached pieces are to be found in Girol. Scotto's "Musica *a 3 voci*" (1556), in Petrucci's "Motetti della corona" (1519), in Montan-Neuber's "Thesaurus," and other Italian, German, and French collections of that time. W. also published 22 madrigals of Verdelot in lute tablature (1536). (Cf. besides, Eitner's monograph on W. in the *Monatsh. f. Mus.-Gesch.*, 1887, 6 etc.)

Willent (W.-Bordogni), Jean Baptiste Joseph, performer on the bassoon, b. Dec. 8,

1809, Douai, d. May 11, 1852, Paris, pupil of Delcambre at the Paris Conservatoire, was at first bassoon-player at the Italian Opera, London, and the Théâtre Italien, Paris. In 1834, at New York, he became son-in-law of Bordogni (q.v.), travelled for some years with his wife, and then was appointed teacher of the bassoon at the Brussels, and in 1848 at the Paris, Conservatoire. W. wrote a method for the bassoon, 4 fantasias for bassoon and orchestra or pf., a concertante for bassoon and clarinet, and a duet for oboe and bassoon. Two of his operas, *Le Moine* and *Van Dyck*, were given at Brussels in 1844 and 1845.

Willing, Johann Ludwig, organist at Nordhausen, b. May 2, 1755, Kühndorf, d. at the end of September, 1805, Nordhausen. He published pf., violin, and 'cello sonatas, a 'cello concerto, a violin concerto, violin duets, etc.

Willmann, Maximilian, b. about 1745, Forchtenberg (Hohenlohe), d. in the autumn of 1812, Vienna, excellent 'cellist, member of the Electoral orchestra at Bonn. Of his two daughters, the elder, Marie (W.-Huber), was a distinguished pianist (pupil of Mozart), the other, Madame W.-Galvani, b. about 1770, d. near the end of Dec. 1811, an excellent singer (contralto); she sang at the court at Bonn, and afterwards in Schikaneder's company.

Willmers, Heinrich Rudolf, pianist, b. Oct. 31, 1821, Berlin, d. Aug. 24, 1878, Vienna; he studied under Hummel at Weimar, and Fr. Schneider at Dessau, made concert-tours, and in 1864 obtained the post of pianoforte teacher at the Stern Conservatorium, Berlin, which, however, he resigned in 1866. After that he lived at Vienna, where in 1878 he suddenly lost his reason. W. published many brilliant pianoforte pieces, also a violin sonata (Op. 11).

Wilm, Nikolai von, composer, b. March 4, 1834, Riga, pupil of the Leipzig Conservatorium (1851-56), in 1857, after an extended tour for the purpose of study, second capellmeister of the town theatre at Riga, and in 1860, on the recommendation of Henselt, teacher of the pianoforte and theory at the "Nicolai" Institute, Petersburg. He retired, *emeritus*, in 1875, settled first at Dresden, and in 1878 at Wiesbaden. Of his compositions, especially the chamber music (sextet for strings, Op. 27) has become known; further, pleasing and instructive pianoforte pieces for 2 and 4 hands: suites for 4 hands (Op. 25, 30, 44, 53); "Schlesische Reisebilder" (Op. 18); "Die schöne Magelone" (Op. 32); songs, part-songs, motets (Op. 40), and pieces for harp (up to the present 108 works). A volume of poems by W. appeared at Riga in 1880.

Wilms, Jan Willem, composer, b. March 30, 1772, Witzhelden ("im Bergischen"), where his father was teacher and organist; from 1791 he lived as teacher of music at Amsterdam, where

he died July 19, 1847. W. was a member of the Dutch Academy, honorary member of the "Toonkunst" Society, etc. He published 2 pf. concertos, a flute concerto, a pf. sonata, a quartet for strings, 2 trios, a violin sonata, etc.

Wilphlingseder, Ambrosius, cantor of the Sebaldus Church, Nuremberg, d. Dec. 31, 1563. He published: "Erotemata musices practicæ" (1563), a small musical catechism, which passed through several editions, especially the German version, which appeared at the same time ("Musika teutsch, der Jugend zu gut gestellt").

Wilsing, Daniel Friedrich Eduard, b. Oct. 21, 1809, Hörde, near Dortmund (Westphalia), where his father was pastor. He attended the Dortmund Gymnasium, then the Teachers' Seminary at Soest. He went to Wesel in 1829, as organist of the principal Protestant church, and in 1834 removed to Berlin, where he still lives as composer and music teacher. W. has published songs for one or more voices, three sonatas, and a *De Profundis* a 16, for which he was decorated by Friedrich Wilhelm IV. with the gold medal for Art. Robert Schumann wrote of this work that it belonged to the greatest and most striking masterpieces of our time. In 1889 the 1st and 2nd parts of W.'s oratorio (*Jesus Christus*) were produced by his pupil, Arnold Mendelssohn, in the Beethoven Hall at Bonn, and this recalled the studiously inclined artist to public musical life.

Wilson, John, famous performer on the lute, b. April 5, 1594, Faversham (Kent), Mus. Doc. at Oxford in 1644, Professor of Music there in 1656, Gentleman of the Chapel Royal in 1662, d. Feb. 22, 1673, London. He published: "Psalterium Carolinum (dedicated to James II.) . . . for 3 voices, and an Organ or Theorbo" (1657), "Cheerful Ayres or Ballads" for one single voice, or for three voices (1660), others with theorbo or bass viol in "Select Musically Ayres and Dialogues" (1652-3 and 1659), in Playford's "Musical Companion," etc. MSS. are to be found in various libraries.

Wilt, Marie (née Liebenthaler), distinguished dramatic singer, b. Jan. 30, 1833, Vienna, committed suicide Sept. 24, 1891; she was already married to the engineer W., when she resolved to cultivate her voice (under Gänsbacher and Wolf). After appearing at several concerts (she was a member of the Vienna "Singerverein" from 1859-65), she made her *début* in 1865 on the stage at Graz as Donna Anna with great success, and sang afterwards at Berlin, London, Vienna, etc. In 1877, owing to a family contract, she was unable to appear on the stage at Vienna, but sang at Leipzig, Brunn, etc. A family arrangement, however, was afterwards made, by which she was able to appear at Vienna. Fran W.'s voice was a soprano of great compass, of great strength, and of extremely pleasing quality.

Wind-chests and Sounding-boards (Ger. *Windkasten* and *Windladen*) are those portions of an organ from which the separate rows of pipes, and pipes, are supplied with wind. The sounding-board lies above the wind-chest, with which it communicates by means of valves. This sounding-board is divided into a number of narrow ways, the so-called *channels* or *grooves*. In the wind-chest with sliders, the pipes belonging to the same key, stand over one *channel*; in spring-chests (*Kegelladen*), on the other hand, those belonging to the same stop. The groove valve is, therefore, a stop or register valve in the spring-chest, but in the wind-chest with sliders a playing valve. Hence this valve opened by pressing down the key, gives, in the wind-chest with sliders, the wind access to a greater number of pipes; in the spring-chest, on the other hand, only to a single one, or to the various pipes for one note in a mixture stop.

Wind, Escape of, a phenomenon in the organ. It consists of an indistinct sounding of notes, and arises when there is a leakage of wind from one groove to another, or if the feet of the pipes are not properly fastened to the sound-board, or if there is something wrong with the slide-action. A similar defect occurs when the wind from the mouth of one pipe impinges on to the lips of another one; to cure this, the mouth of one of the pipes must be turned round a little. A cone-box wind-chest is of great advantage, for with it, escape of the first kind mentioned cannot happen.

Wind-gauge, Anemometer, an apparatus constructed on a principle similar to that of the barometer, for measuring the strength of wind in the organ, *i.e.* the degree of density of the air condensed in the bellows. The A. was invented about 1675 by the organ-builder, Ch. Förner.

Windharfe (Ger.). (*See* ÆOLIAN HARP.)

Winding, August, skilled and gifted composer, b. 1835, Copenhagen, pupil of Gade, a good pianist. Of his compositions a pf. concerto, violin concerto, pf. quartet, etc., deserve mention.

Wind Instruments (Fr. *Instruments à vent*; Ger. *Blasinstrumente*; Ital. *Stromenti da fiato*) are those in which a stream of condensed air (wind) is the tone-producer, and a vibrating column of air, the sounding element. Among W.I. are not, however, to be reckoned those instruments, in which strings are set in vibration by the wind (Æolian harp, Anemochord). On the other hand, however, free vibrating reeds or tongues without tubes (Harmonium, Æolina, Accordion), in which, undoubtedly, the tongue is the sound-giving element, are classed among W.I. The instrument of instruments, the *organ*, is composed of all imaginable kinds of W.I.; but as each one produces only one sound, they are constructed in the most simple manner.

Like the stops of an organ, W.I. may be divided into two groups—into labial-pipes (lip-pipes, flue-pipes) and reed-pipes (tongue-work). The mode of producing sound differs in each, though, after all, both may be referred to the same fundamental laws. In *lip-pipes*, the stream of air entering through the pipe-foot is forced through a narrow slit (wind-way) against the sharp edge of the upper lip which divides it, part going into the body of the pipe, and part escaping. By the air which enters, that which is in the pipe is condensed, so that, pressing back, it forces outwards the easily yielding current of air; but according to the laws of adhesion, a portion of the air in the pipe is drawn out; thus a slight rarefaction of the air in the pipe takes place, which in its turn, causes the current of air to bend inwards again. The rapidity with which these alternate condensations and rarefactions (vibrations) recur, depends upon the length of the column of air enclosed within the pipe, *i.e.* the longer the pipe, the greater the distance which the wave of condensation has to traverse until it is reflected; and therefore the longer the pipe, the deeper the tone. In open lip-pipes, the point of reflection is in the middle, in stopped, at the end of the pipe: *i.e.* a stopped pipe sounds about an octave lower than an open one of the same length. In reed-pipes, a tongue shutting in the wind-way is bent (outwards or inwards) by the wind, and thus gives passage to the latter; but this tongue, by virtue of its elastic nature, darts back as soon as the conditions of pressure have been adjusted by the passing in of the wind, when the process of bending recommences. The period of the return of these deflections depends in the first place on the elasticity and size of the tongue; in instruments with free vibrating reeds without tubes, the pitch is determined entirely by the shape of the tongue (*see* above). In instruments with tubes the conditions are totally different, inasmuch as the tongue plays the same part in them as the current of air in the lip-pipe; here the deflections of the tongue are determined by the size of the tube. The air let in through the tongue-opening, condenses the column of air in the tube, and causes, as in lip-pipes, a returning wave of condensation which allows the tongue to return to a state of equilibrium. In the case of metal tongues, the effect is not so striking or perfect, as in the more yielding tongues of the oboe and bassoon made from reeds, or in membranous tongues, in which the vibrations of the tongue depend entirely on the vibrations of the column of air. The different kinds of W.I. are as follows:—

(1) *Flutes*, in which sound is produced in the same way as in lip-pipes (q.v.). They are divided principally into two kinds: direct flutes and cross-flutes.

(2) Instruments with *reed*. (a) Those with *double reed*: oboe, bassoon, English horn, and

contra-bassoon (cf. also *SARRUSOPHON*); (b) those with single reed: *clarinet*, *basset-horn*, and *saxophone*.

(3) Instruments without tongues, in which the lips of the blower serve as membranous tongues: *horn*, *trumpet*, *trombone*, *cornet*, *bugle*, *horn*, and *tuba*.

In wind instruments without sound-holes, keys, valves, etc., sounds of various pitch can only be produced by a change in the method of blowing. A sharp straining of the lips (the edges of which act as tongues), as well as a reinforcement of the current of air, call forth higher sounds from the series of natural sounds of such instruments. In instruments with reeds, and in flutes, the position of the lips is no longer a matter for consideration: the passing to other sounds of the series depends only on the degree of pressure of air. But as the natural scale consists of a very limited number of sounds, quite insufficient for music consonant with the rules of art, the idea arose of piercing holes in various places in the tube, and by that means shortening the same. Naturally the holes must be closed if shortening is not wanted. This contrivance is in general use for wood-wind instruments. For brass instruments, the opposite means is almost invariably employed—i.e. the sound-tube is lengthened by inserting crooks which do not communicate with the principal tube, but can be made to do so by mechanical contrivances easy to work (*Ventil*, *Cylinder*, *Tonwechselsmaschine*—pistons). Cf., however, *HORN*. In the slide-trombone the lengthening of the tube is accomplished by drawing out. On the various kinds of organ-pipe stops see *LIP-PIPES* and *REED-PIPES*.

Wind-trunk, or shutting-off valve (Ger. *Sperrventil*), a valve in the principal wind-channel of an organ, which completely shuts off the wind from the wind-chest; this is effected by a special draw-stop action. This shutting-off valve prevents the humming which otherwise often occurs at the close of playing; and, when each keyboard has its special shutting-off valve, at once puts an end to any ciphering which may occur, by shutting off the wind-chest from the keyboard in question; for the time being that keyboard cannot, of course, be used.

Wind-trunks (Ger. *Kanäle*) are four-edged wooden tubes which receive the wind produced in the bellows, and convey it to the wind-chests. The wind, on leaving the bellows, first enters the principal channel through joints (knees), and thence is distributed among the accessory channels. The size of the W. depends upon the size and number of the wind-chests to be supplied.

Wind-way. (See *LIP-PIPES*.)

Wingham, Thomas, b. Jan. 5, 1846, London, d. March 24, 1893; at the early age of 10 he became organist of a church, studied at Dr. Wylde's London Academy of Music in 1863, and at the

Royal Academy under Bennett and Harold Thomas in 1867; at the latter institution he became one of the professors for pianoforte in 1871. W. was an industrious and gifted composer (symphonies, overtures, mass, *Te Deum*, etc.).

Winkel, Dietrich Nikolaus, mechanician at Amsterdam, b. about 1780, d. there Sept. 28, 1826; he constructed several interesting instruments, especially a "Variation" machine called "Componium," by which a given theme was presented in an endless variety of ways; also the metronome in use at the present day, the idea of which originated with him; only Mälzel (q.v.), however, managed to derive profit therefrom.

Winkelmann, Hermann, stage-singer (tenor), b. 1845, Brunswick; he was to have been a pianoforte-maker, and was sent to Paris for the completion of his training; he returned, however, as a singer, studied under Koch in Hanover, and made his *début* at Sondershausen in 1875. W. was then engaged at Altenburg, Darmstadt, and Hamburg, and is now "Imperial court opera-singer" at Vienna. In 1882 he sang at Bayreuth as Parsifal.

Winter, Peter von, famous opera composer, b. 1754, Mannheim, d. Oct. 17, 1825, Munich; in 1766 he entered the band of the Elector Karl Theodor as violinist, became a pupil of Abbé Vogler, and already in 1776, musical director at the court theatre. In 1778 he went with the court to Munich, and in 1788 was named court capellmeister, retaining this post until his death. Yet extensive leave of absence was granted to him, so that he was frequently absent for a considerable time from Munich. In 1783, at Vienna, he produced his cantatas *Heinrich IV.*, *Hektors Tod*, and *Inez de Castro*, and in 1791 went to Italy for the staging of his operas: *Antigono* (Naples), and *Catone in Utica*, *I fratelli rivali*, and *Il sacrificio di Creta* (Venice). From 1794-97 he was repeatedly in Vienna, where he produced *Das Labyrinth*, *Die Pyramiden von Babylon* and his most famous work: *Das unterbrochene Opferfest* (1796), also the Italian operas *Arianna* and *Elisa*. At Prague he brought out: *Ogus* (*Il trionfo del bel sesso*), in 1802 at Paris, *Tamerlan*; and from 1803-1805 at London, *Calypto*, *Castore e Polluce*, *Proserpina*, *Zaira*, and 3 ballets. In 1806 W. was again in Paris, where he sustained a defeat with *Castore e Polluce*, again in Vienna in 1807 (*Die beiden Blinden*), 1816 Hamburg (*Die Pantoffeln*); and from 1816-18 once more in Italy, where he wrote *Maometto*, *I due Valdomiri*, and *Etelinda* for Milan. The greater number of his best works were, naturally, also given at Munich. He wrote specially for that city the early works; *Armida*, *Cora ed Alonzo*, *Leonardo e Blandine*, *Helena und Paris* (1780, his first German opera), *Bellerophon* (1782), *Der Bettelstudent*, *Das Hirtenmädchen*, *Scherz*, *List und Rache*, *Circe* (1788, not produced),

Fery u. Bätely (1790), *Psyche* (1793), *Der Sturm*, *Marie von Montalban* (1798, one of his most important works), *Colmal* (1809), *Belisa, Gräfin von Huldberg* (1812), and *Schneider und Sänger* (1820), finally, for Bayreuth, *Die Thomasnacht* (1795). There appeared in pianoforte score: *I fratelli rivali*, *Der Sturm*, *Das Labyrinth*, *Das unterbrochene Opferfest*, *Ogus*, *Marie von Montalban*, and *Calypto*; and in orchestral score, portions of *Das unterbrochene Opferfest* and the whole of *Tameylan*. Besides stage works (the above list is probably not complete), W. wrote a large number of sacred works (26 masses, 2 requiems, many single movements of masses, psalms, motets, offertories, graduals, 3 Te Deums, 3 Stabat Maters, hymns, magnificats, 17 sacred cantatas for the court chapel [*Die Auferstehung, Die Propheten*, etc.], oratorios [*Der sterbende Jesus, La Betulia liberata*]); further, a series of cantatas with orchestra (*Timotheus, oder die Macht der Musik, Die Tageszeiten*), others with pianoforte (*Elysium, Ode an die Freundschaft*, etc.), songs, and military songs, and, finally, instrumental works (in print: 9 symphonies, a choral symphony [*"Die Schlacht,"* for the festival of victory of 1814], many opera overtures, and a detached overture [Op. 24], several concertantes for strings and wind-instruments with orchestra, an octet for strings and wind, a sextet for strings and two horns, 2 septets, 2 quintets for strings, 6 quartets for strings, concertos for clarinet, bassoon, etc.). W.'s "Vollständige Singschule" (3 parts) is a work held in esteem even at the present day.

Winterberger, Alexander, organist and pianist, b. Aug. 14, 1834, Weimar; pupil of the Leipzig Conservatorium and of Liszt, went to Vienna in 1861 and to Petersburg in 1869 as teacher at the Conservatoire, but returned after some years to Leipzig. W. has published pf. pieces and songs ("Britannias Harfe," Op. 33; German and Slavonic duets, Op. 59, 66, 68).

Winterfeld, Karl Georg August Vivigens von, highly-esteemed writer on music, b. Jan. 28, 1784 (not 1794, as stated in many dictionaries), Berlin, d. there Feb. 19, 1852; he attended the Hartung School and the "Graue Kloster," and studied law at Halle. In 1811 he became assessor of the principal court of judicature at Berlin, and in 1816 councillor of the provincial court at Breslau, and at the same time custos of the musical section of the University library, in 1832 "Geheimer Obertribunalrat" at Berlin. In 1847 he received his pension, and then devoted himself entirely to his history of music. He returned in 1812 from his first journey to Italy with extensive material for his work of investigation. W. bequeathed his valuable collection of old music to the Berlin Library. His writings, for the most part of the highest value, bear the titles: "Johannes Pierluigi von Palestrina" (1832, with critical remarks on Baini's "Palestrina"); "Johannes Gabrieli und sein

Zeitalter" (1834, 2 vols. letterpress and 1 vol. of musical supplements; the most interesting of W.'s works, rich in independent research and new points of view); "Der evangelische Kirchengesang und sein Verhältnis zur Kunst des Tonsatzes" (1843-47, 3 very stout volumes, large quarto; a gigantic work, which is looked upon as the general source for the history of evangelical church song during the 16th and 17th centuries); "Ueber K. Ch. Fr. Faschs geistliche Gesangswerke" (1839); "Dr. Martin Luthers deutsche geistliche Lieder" (1840); "Ueber Herstellung des Gemeinde- und Chorgesangs in der evangelischen Kirche" (1848); "Zur Geschichte heiliger Tonkunst" (1850-52, 2 parts; detached treatises).

Wirth, Emanuel, b. Oct. 18, 1842, Luditz (Bohemia); from 1854-61 pupil of the Prague Conservatorium (Kittl and Mildner), obtained his first appointment as leader in the orchestra at Baden-Baden, settled at Rotterdam in 1864, where until 1877 he was teacher of the violin at the Conservatoire and leader at the Opera and the "Society Concerts." In 1877 he accepted Joachim's call to Berlin as successor to Rappoldi as viola-player in the Joachim quartet party, and as teacher of the violin at the Royal High School, in which post he has worked up to the present time, and with the best success.

Wiske, Mortimer, b. Jan. 12, 1853, Troy (New York State); when only 12 years old he received a post as organist in his native town, went in 1872 to New York, and for a number of years has been highly respected as organist and conductor at Brooklyn. (Compositions for organ, sacred music, and choruses.)

Wit, Paul de, b. Jan. 4, 1852, Maestricht; violoncellist; in 1880, jointly with O. Laffert, he founded the *Zeitschrift für Instrumentenbau*. In 1886 he opened a well-stocked "Instrumentenmuseum." His collection was purchased by the Royal High School, Berlin, in 1890, whereupon he shortly set up a new collection. Also by giving performances on the viola da gamba, W. sought to bring that instrument again into vogue.

Witásek, Johann Nepomuk August, pianist, b. Feb. 20, 1771, Horzin (Bohemia), d. Dec. 7, 1839, Prague; in 1814 he became cathedral capellmeister at Prague (as successor to his teacher, Kozeluch), in 1826 director of the Organ School. He declined the post of court capellmeister at Vienna, offered to him on Salieri's death, and remained in Prague. W. excelled in the rendering of Mozart's concertos. His own compositions (he attempted almost every branch of the art) remained for the most part in manuscript.

Witt, (1) Friedrich, composer, b. 1771, Haltenbergstetten, d. 1837, Würzburg; at the age of 19, he became principal violinist

in Prince Oettingen's band at Wallerstein. From 1802, and up to his death, he was capellmeister at Würzburg, first to the Prince-Bishop, then to the Grand Duke; and when the Grand Duchy ceased to exist, he became town capellmeister. W. composed two operas (*Palma*, Frankfurt; *Das Fischerweib*, Würzburg, 1806), the oratorios *Der leidende Heiland* and *Die Auferstehung Jesu*, several masses, cantatas, etc. There appeared in print: 9 symphonies, pieces for wind-band, a flute concerto, a quintet for pf. and wind instruments, a septet for clarinet, horn, bassoon, and strings, etc.

(2) Julius, b. Jan. 14, 1819, Königsberg-i-Pr., where he lives as teacher of singing; composer of numerous popular choruses for male voices.

(3) Franz, Roman Catholic priest, b. Feb. 9, 1834, Walderbach (Bavaria), d. Dec. 2, 1888, Schatzhofen (near Landshut). He was educated at Ratisbon (Prose, Schrems), was ordained priest in 1856, became "Cooperator" at Schneiding (Lower Bavaria), in 1859 choirmaster in the Priests' Seminary, Ratisbon; in 1867 inspector at St. Emmeran. On account of failing health he accepted, in 1869, a post at the municipal offices, in 1873 had the degree of Doc. Phil. bestowed on him by Pius IX., was parish priest at Schatzhofen (near Landshut) from 1873-75, and clerical assistant at Landshut 1868-88. W. founded (1867) the "Allgemeiner deutscher Cäcilienverein" for the improvement of Catholic Church song, and edited the *Fliegende Blätter für katholische Kirchenmusik und Musica Sacra* (cf. Walter, "Fr. W."), two musical papers founded by him. He has also written: "Der Zustand der katholischen Kirchenmusik" (1865), "Ueber das Dirigieren der katholischen Kirchenmusik," and the polemical treatise "Das bayerische Kultusministerium" (1886).

(4) Theodor de, b. May 9, 1823, Wesel, d. Dec. 1, 1855, Rome. He was son of an organist, and by the help of Liszt, who gave a concert for his benefit, became a pupil of Dehn; unfortunately, already in 1846 there were symptoms of a serious disease of the lungs, which carried him off nine years later; he was compelled, therefore, to go to Italy, and received state aid on condition that he should study ancient church music. The fruits of this were the first volumes of the *Breitkopf & Härtel* Palestrina edition. The compositions of W. consist of 6 psalms a 3 and 6 a 4, an *Agnus Dei* and *Tantum ergo*, *Lieder*, songs for female voices, a pf. sonata.

(5) Joseph von (really Filck, Edler von Wittinghausen), excellent opera singer, b. Sept. 7, 1843, Prague, d. Sept. 17, 1887, Berlin, from the effects of an operation. W. was son of a high Government official, was an Austrian officer in Croatia, but retired from military service in 1867, studied singing under Uffmann in Vienna, and, after several appearances at Graz, was engaged for Dresden, where, until his engage-

ment at Schwerin (1877), he remained as principal dramatic tenor.

Witte, Georg Heinrich, composer, b. Nov. 16, 1843, Utrecht, son of a famous organ-builder (Christ. Gottlieb Friedrich W., d. Nov. 5, 1873); pupil of the Royal School of Music at The Hague (Nicolai) and of the Leipzig Conservatorium, has been since 1872 conductor of the Musical Society at Essen, in 1882 was nominated royal musical director. Of his compositions may be mentioned a pf. quartet which gained a prize. W. also edited 34 studies by Crämer (different from those selected by von Bülow) with phrase marks.

Wohlfahrt, Heinrich, excellent teacher, b. Dec. 16, 1797, Kössnitz (near Apolda), d. May 9, 1883, Connewitz (near Leipzig); he attended the College at Weimar, where Häser was his teacher for music, and then lived as tutor and cantor in small Thuringian towns until he withdrew from public life and went to Jena, and in 1867 to Leipzig. W. published a large number of small educational works, especially for elementary pianoforte teaching: "Kinder Klavierschule" (24 editions), "Der erste Klavierunterricht" (Op. 50), "Der Klavierfreund," "Klavierübungen," "Grössere und rein praktische Elementar-Klavierschule," "Schule der Fingermechanik," "Anthologische Klavierschule," etc.; also a "Theoretisch-praktische Modulationsschule," a "Vorschule der Harmonielehre" (5th ed., 1880), "Wegweiser zum Komponieren," etc.—Both his sons, Franz (b. March 7, 1833, Frauenpriesnitz, d. Feb. 14, 1884, Gohlis near Leipzig), and Robert (b. Dec. 31, 1826, Weimar), followed in the footsteps of their father, became esteemed pianoforte teachers at Leipzig, and likewise published instructive elementary works for pianoforte.

Woldemar, Michel, violinist, b. Sept. 17, 1750, Orleans, d. Jan., 1816, Clermont-Ferrand; his name was really Michel, but at the wish of a relation, he called himself W. He was a pupil of Lolli, and, like him, a man of peculiar ways. For a long time he was musical director of an itinerant theatrical company. W. published 3 violin concertos, a concerto for a violin with five strings (fifth string c; he named this instrument, which at the same time included the viola, a violon-alto; cf. URHAN); quartet for strings, duets for two violins and for violin and viola, 12 grand violin solos, "Sonates fantomagiques" (*L'ombre de Lolli, de Mestriano, de Pugnani, de Tartini*), "Le nouveau labyrinthe harmonique pour le violon" (studies in double-stopping, Op. 10), "Le nouvel art de l'archet," "Etude élémentaire de l'archet moderne," etc.; also a Method for violin, one for viola, and one for pianoforte. Finally, he invented a kind of musical stenography, which he described in "Tableau mélotachygraphique."

Wolf, (1) Ernst Wilhelm, b. 1735, Grossheringen (near Gotha); in 1761 leader, in 1768

court capellmeister at Weimar, where he died, Dec. 7, 1792. W. wrote about 20 stage pieces (operas, dramatic cantatas) for Weimar, likewise several Passion oratorios, Easter cantatas, and other sacred pieces; further, 15 symphonies (manuscript), 17 Partitas for 8-10 instruments (manuscript), 17 quartets for strings (6 printed), 18 pf. concertos (5 printed), pf. quintets, quartets, trios, violin sonatas, pf. sonatas, etc. He wrote: "Kleine musikalische Reise" (1782), and "Musikalischer Unterricht" (1788).

(2) Georg Friedrich, b. 1762, Hainrode, Schwarzburg-Sondershausen; in 1785 he became capellmeister at Stolberg, in 1802 at Wernigerode, where he died, Jan., 1814. He composed pf. sonatas for four hands, pf. pieces, songs, funeral choruses, etc., and published several small educational works: "Kurzer Unterricht im Klavierspielen" (1783, and frequently); "Unterricht in der Singekunst" (1784, and frequently); "Kurzgefasstes musikalisches Lexikon" (1787, and frequently).

(3) Ferdinand, writer on musical literature, b. Dec. 8, 1796, Vienna, d. Feb. 18, 1866, as librarian of the Vienna court library. He published: "Ueber die Lais, Sequenzen und Leiche" (1841), the best work on the music of the Troubadours, etc.

(4) J. C. Ludwig (Wolff), b. 1804, Frankfort, d. Aug. 6, 1859, Vienna. He was the son of a member of the Frankfort theatre orchestra, was in early life a merchant, and only began to compose when 22 years of age. He settled in Vienna, and had the advantage of instruction in composition from Seyfried. W. was an excellent violinist and pianist. Of his numerous compositions the following are printed: 3 quartets for strings (Op. 12), a pf. quartet (Op. 15), 4 trios (Op. 16, gained a prize at Mannheim; Op. 6, 13, 18). A great number of works remained in manuscript. (Cf. N. Z. f. Musik, 1859, No. 14.)

(5) Max, composer of operettas, b. Feb., 1840, Moravia, d. March 23, 1886, Vienna; he studied under Marx and Dessoff, lived at Vienna, where his operettas were very successful; they have also found their way to other cities (*Die Schule der Liebe, Im Namen des Königs, Rosa und Reseda, Die blaue Dame, Der Pilger, Die Porträtdame, Cäsarine, Rafaela* [1884]).

(6) William, b. April 22, 1838, Breslau, pianist, pupil of Kullak; teacher of the history of music at the "Humboldt Akademie" and Breslau's Conservatorium. He is also a composer and contributor to several musical papers.

Wolf, in the organ. (See HOWLING.)

Wolff, (1) Edouard, pianist and composer, b. Sept. 15, 1816, Warsaw, d. Oct. 16, 1880, Paris; pupil of Zawadzki (piano) and Elsner (composition) at Warsaw, and of Würfel (piano) at Vienna, went to Paris in 1835, where to the end of his life he was highly esteemed as a concert-

player, composer, and teacher. W. published in all 350 works, especially for pianoforte, in a style akin to that of Chopin, with whom he was on very intimate terms. Of his works the best are: his études (Op. 20, 50, 90, 100), his pianoforte concerto dedicated to Chopin (Op. 39), also his 32 duos jointly with De Bériot, and 8 duos jointly with Vieuxtemps.

(2) Auguste Désiré Bernard, head of the house Pleyel, Wolff and Co., pianist and composer, b. May 3, 1821, Paris, d. there Feb. 3, 1887; he attended the Paris Conservatoire as pupil of Zimmermann and Halévy, and was himself appointed teacher of the pianoforte at that institution. In 1850 W. joined the pianoforte factory of Camille Pleyel, became one of the partners in 1852, and in 1855, after Pleyel's death, head of the house. W. himself took a very active part in the construction of the pianofortes, and introduced many improvements. He was also honorary president of the Paris "Société des compositeurs de musique," and founded a yearly Pleyel-W. prize for the best work for pianoforte with or without orchestra.

(3) Hermann, b. Sept. 4, 1845, Cologne, pupil of Franz Kroll and Würst, lives at Berlin, edited the *Neue Berliner Musikzeitung* from 1878-79, and was also one of the editors of the *Musikwelt*. He has lately been active as concert agent (entrepreneur of the Philharmonic Concerts at Berlin and of the "New Subscription Concerts" at Hamburg). As composer W. has published songs and pf. pieces.

Wölfl (Wölfl), Joseph, a once celebrated composer and a rival of Beethoven, b. 1772, Salzburg, d. May 21, 1812, London, forgotten and destitute. W. studied under Leopold Mozart and Michael Haydn, was a distinguished pianist, and had acquired such skill and variety in the art of extemporisation that he was considered superior to Beethoven, and almost equal to Mozart. He lived at Warsaw from 1792-94, then until 1798 at Vienna, married the actress Therese Klemm, undertook a grand concert tour with her through Germany to Paris, where he arrived in 1801, and was recognised by all the notabilities in the world of art. Some years later he is said to have had dealings with the singer Ellenreich, who was a cardsharp, and W. went to the bad; both had some difficulty in escaping from the police at Brussels, and in London they were not recognised by society. For the rest W. continued for several years to publish compositions. His printed works are: 7 pf. concertos, 2 symphonies, 9 quartets for strings, 15 pf. trios, 2 trios for two clarinets and bassoon, 22 violin sonatas, a flute sonata, a cello sonata, 36 pf. sonatas, a duo for two pfes., many solo pieces, variations, fugues, rondos, fantasias, etc., for pianoforte, likewise German and English songs. He also wrote a number of operas, viz. for Schikaneder's theatre at Vienna: *Der Hölleberg, Das schöne Milchmädchen, Der Koff ohne Mann, Das trojanische Pferd, Liebe macht*

kurzen Prozess (with Hoffmeister, Haibel, Süssmayer, etc.); for the Paris Opéra Comique: *L'amour romanesque* (1804) and *Fernand* (*Les Maures*, 1805); also for the Haymarket Theatre, London, two ballets: *La surprise de Diane* (1805) and *Alsire* (1807).

Wolfram, (1) Johann Christian, organist at Goldbach (near Gotha), d. Nov. 17, 1835; he wrote "Anleitung zur Kenntnis, Beurteilung und Erhaltung der Orgeln" (1815).

(2) Joseph Maria, Burgomaster at Teplitz, b. July 21, 1789, Dobruza, Bohemia, d. Sept. 30, 1839, Teplitz. He studied under Drechsler at Vienna (piano), and Kozeluch at Prague (composition). He occupied himself with music at first, and also later on, as an amateur; but for a long time before he obtained a post as a municipal official (1811-13), he was compelled, as a means of subsistence, to give music lessons in Vienna; as a composer, also, he won high esteem. W. wrote a series of vaudevilles and operas, of which one, *Alfred* (1826), was produced at Dresden with great success, and almost procured for him the post of capellmeister, vacant through Weber's death. Of his other works, "Missa nuptialis," songs and pianoforte pieces appeared in print.

Wolfrum, Philipp, b. Dec. 17, 1855, Schwarzenbach a. Wald, pupil of the Munich School of Music, 1879-84, teacher of music at the Seminary, Bamberg, afterwards musical director of the University of Heidelberg; he made himself known by his chamber music, choral works (the "Grosses Halleluja" of Klopstock), songs and pianoforte pieces. In 1891 the Leipzig University conferred on him the degree of Dr. Phil. hon. c.

Wollanck, Friedrich, b. Nov. 3, 1782, Berlin, d. there as councillor of justice, Sept. 6, 1831; he composed an opera, *Die Alpenhirten*, and the vaudeville *Thibaut von Louis*, which was produced at Berlin; also monologues from *Maria Stuart* and the *Braut von Messina*, music to the drama *Liebe und Frieden*, above 100 songs, 33 part-songs, cantatas, duets, tertzets, a requiem, 2 masses, and other sacred works for the Roman Catholic St. Ludwigskirche, 2 overtures, 3 quartets for strings, 2 sextets, quintets, pianoforte sonatas, clarinet concertos, and other instrumental works; his songs met with the greatest success.

Wollenhaupt, Heinrich Adolf, pianist, b. Sept. 27, 1827, Schkeuditz, pupil of the Leipzig Conservatorium, died in 1845 to New York, where he died, Sept. 18, 1863. W. wrote many brilliant pf. pieces, not without a certain artistic value.

Wollick (Bollicius, Bolicius, Vollicius) Nicolas, b. Bar le Duc (hence Barroducensis or de Serovilla), studied at Cologne (at least he dedicated his book to the rector Cornelius of that city), and was made *magister artium*, and

became teacher at Metz. W. published "Opus aureum musices castigatissimum de Gregoriana et figurativa, etc." (1501, 2nd ed. 1505; the "Enchiridion musices . . . de Gregoriana et figurativa, etc." 1509, and frequently).

Woltz, Johann, organist at Heilbronn, published a copious work in tablature: "Nova musices organicae tabulatura" (1617).

Wolzogen, (1) Karl August Alfred, Freiherr von, *intendant* of the Court Theatre, Schwerin, b. May 27, 1823, Frankfurt, d. Jan. 14, 1883, San Remo. He wrote "Ueber die scenische Darstellung von Mozarts 'Don Giovanni'" (1860); "Ueber Theater und Musik" (1860); "Wilhelmine Schröder-Devrient" (1863); "Don Juan" (new German text and scenario, 1869); "Der Schauspielersdirektor" (by Mozart, new text in 1872), also numerous articles in newspapers ("Italienische Reisebilder"; notices of operas, etc., in the *Breslauer Zeitung*, 1856-63).

(2) Hans Paul, Freiherr von W. und Neuhaus, son of the former, one of Wagner's most zealous partisans, b. Nov. 13, 1848, Potsdam, studied 1868-71 comparative philology and mythology at Berlin, and afterwards lived at Potsdam, until Wagner drew him to Bayreuth (1877), where he edited the *Baireuther Blätter*, and took part in the central management of the "Allgemeiner Richard-Wagner Verein," etc. W. has published: "Der Nibelungenmythus in Sage und Litteratur" (1876); "Thematischer Leitfaden durch die Musik von Richard Wagners Festspiel 'Der Ring des Nibelungen'" (1876; a very useful Ariadne-clue, several times republished; 4th ed. as "Erläuterungen zu Richard Wagners Nibelungendrama," 1878); "Die Tragödie in Baireuth und ihr Satyrspiel" (1876, 5th ed. 1881); "Grundlage und Aufgabe des allgemeinen Patronatsvereins zur Pflege und Erhaltung der Bühnenfestspiele in Baireuth" (1877); "Die Sprache in Wagners Dichtungen" (1877, 2nd ed. 1881); "Richard Wagners Tristan und Isolde" (1880); "Was ist Stil? was will Wagner?" (1881); "Die Religion des Mitleidens" (1882); "Richard Wagners Heldengestalten erläutert" (2nd ed. 1886); "Wagneriana" (1888); R. Wagner und die Thierwelt; auch eine Biographie" (1890); a translation of Schuré's "Drame Musicale" ("Das musikalische Drama" 1877); "R. Wagner's Lebensbericht" (1884; the original of "The Work and Mission of My Life" which appeared in the *North American Review*, 1879, under Wagner's name), and "Erinnerungen an R. Wagner" (1883). Also his translations of "Armer Heinrich," "Beowulf," and of the "Edda," together with his "Poetische Lautsymbolik" (1876), deserve mention.

Wonnegger (Vuonnegger), Johann Ludwig, friend of Glarean's at Freiburg i-Br., published an epitome of the latter's "Dodekachordon"; "Musicae epitome ex Glareani Dodekachordo, etc." (1557, also 1559).

Wood, Mrs., distinguished singer. She created the part of Rezia in Weber's *Oberon* at Drury Lane in 1826; before she married the singer W. she was known as Miss Mary Anne Paton; b. Oct. 1802, Edinburgh, d. July 21, 1864, Bath. Mrs. W. was, as a concert-singer, especially noted for her rendering of Scotch ballads; she also composed songs herself. At the age of 15 she made successful appearances at concerts as pianist, harpist, and vocalist.

Wood-wind Instruments is the collective name for a special group of instruments in the modern orchestra: it includes flutes, oboes, clarinets, and bassoons, together with other instruments related to them (piccolo, English horn, bass clarinet, basset-horn, double bassoon, etc.). As a rule these instruments are constructed of wood, but even silver flutes or brass clarinets are classed under W. I., as opposed to brass wind instruments (trumpets, horns, trombones, tubas, euphoniums, etc.). (Cf. WIND INSTRUMENTS.)

Words, Repetition of. It is altogether preposterous to condemn this in vocal compositions as wanting in taste and sense. If already the lyrical poet repeats certain words to intensify the expression, how much more is the composer justified in doing the same; since for the unfolding of the means which his art offers for effect, he must dwell on certain points.

Wouters, François Adolphe, eminent Belgian composer, b. May 28, 1841, Brussels, pupil of the Conservatoire there, in 1868 organist of Notre Dame de Finisterre, Brussels, and since 1871, professor of a ladies' class (piano-forte) at the Conservatoire. W. has composed technical studies for his pupils, and published classical works with fingering and ornaments written out ("Répertoire du Conservatoire de Bruxelles," Schott). He has won a good name for himself by his important sacred works: 3 grand masses, the first of which (in G) was performed at the Finisterre Church, 1872, the second (in F) at St. Gudula, Brussels, 1875. Three smaller ones appeared under the nom de plume Don Adolfo. There are also: a grand Te Deum, an Ave Marie (a 4), "Jesu refugium nostrum" (baritone solo), and "O gloriosa virginum" (tenor solo), some songs for male chorus (several of which gained prizes), transcriptions for pianoforte, a symphonic overture, etc.

Woyrsch, Felix, gifted composer, b. Oct. 8, 1860, Troppau (Austrian Silesia); he spent his early years in Dresden and Hamburg, studied with H. Chevallier at Hamburg, but has been for the most part self-taught. He lives at Altona as conductor of the Singakademie and organist of the Friedenskirche. Of his compositions, characterised by fresh energy, the following are known:—a symphony (B♭ minor, Op. 10), symphonic prologue to Dante's

"Divina Commedia," music to "Sakuntala" (Breslau, 1885), the operas *Der Pfarrer von Meudon* (Hamburg, 1886), *Der Weiberkrieg* (1890), and *Helga* (1893); *Deutscher Heerbann* for soli, male chorus and orchestra (Op. 32), a quartet (G minor), a pf. quartet, violin sonata (E♭ major), several sets of charming songs ("Rattenfängerlieder," Op. 16; Spanish songs, Op. 14; Persian songs, Op. 6); pf. pieces, part-songs, motets, etc., "Edward" (ballad for baritone and orchestra, Op. 12), "Die Geburt Jesu" (for soli, chorus and orchestra, Op. 18), "Deutsche Volkslieder" from the 14th to 16th century (a 4-8, Op. 33), "Sapphische Ode an Aphrodite" (for soprano, female chorus and orchestra).

Wranitzky, (1) Paul, violinist and composer, b. Dec. 30, 1756, Neureisch (Moravia), d. Sept. 28, 1808, Vienna; he studied under J. Kraus at Vienna, was violinist of the Esterhazy band under Haydn, and from 1785 until his death, capellmeister of the Court Opera orchestra at Vienna. W. was an extraordinarily prolific composer, wrote operas (*Oberon*, 1790), ballets, and incidental music, and published:—27 symphonies, 12 quintets and 45 quartets for strings, 9 trios for violin, viola, and 'cello, a 'cello concerto, a flute concerto, 3 trios for 2 flutes and 'cello; divertissements for pf. and strings (Op. 34), pf. trios (Op. 21), 3 pf. sonatas; he also left about 50 works in manuscript.

(2) Anton, brother of the former, likewise a violinist, b. 1761, Neureisch, d. 1819, Vienna, studied under his brother, Albrechtsberger, Mozart, and Haydn; he was capellmeister to Prince Lobkowitz, and highly esteemed in Vienna as teacher of the violin. His compositions are: 2 masses (manuscript), a concerto for violin, 6 quintets for two violins, two violas and 'cello, 15 quartets for strings, violin duets, variations for two violins, also for violin with bass, violin sonatas with bass, and a violin Method. His daughter Katharina (Kraus-W.) was highly esteemed as stage and concert singer.

Wrede, Ferdinand, pianist and composer, b. 1828, Hanover, pupil of Methfessel, Marschner, and Litloff, lives at present at Frankfort-on-the-Oder as musical director and director of the Singakademie. He has composed pf. pieces, male-voice choruses, songs, etc.

Wrest-plank (Ger. *Stimmstock*), the strong wooden cross-beam above and behind the keyboard in the pianoforte into which the tuning pins are inserted.

Wüerst, Richard Ferdinand, b. Feb. 22, 1824, Berlin, d. there Oct. 9, 1881; he attended the Gymnasium, then became a pupil of Rungenhagen at the Akademie, received instruction in violin-playing from Hubert Ries, afterwards from David (Leipzig), and in composition from Mendelssohn. During 1845-46 he visited Leipzig, Frankfort, Brussels, and Paris, for the purpose

of study; he then settled in Berlin, and became in 1856 royal musical director, in 1874 professor, and in 1877 was named member of the Academy of Arts. W. was for many years teacher of composition at the Kullak Conservatorium. From 1874-75 he edited the *Neue Berliner Musikzeitung* (Bote & Bock). W. wrote several operas, of which the majority were produced (*Der Rotmantel*, *Vineta*, *Stern von Turan*, *Eine Künstlerreise*, *Faublas*, *A-ing-fo-hi*, *Die Offiziere der Kaiserin*); a lyric cantata, *Der Wassernock*; symphonies (the second, Op. 21, gained a prize at Cologne, 1849); overtures, quartets for strings, a violin concerto, a concert aria, etc. The critical notices (for musical journals and the *Berliner Fremdenblatt*) by W. are held in high esteem.

Wüllner, Franz, music teacher of great merit, and distinguished conductor, b. Jan. 28, 1832, Münster (Westphalia), where his father was teacher (d. 1842, as director of the Gymnasium at Düsseldorf), attended the Gymnasium at Münster up to 1848, studying also music under C. Arnold and A. Schindler. When Schindler, in 1848, went to Frankfurt, W. followed him, and continued his studies with him, and also with F. Kessler, up to 1852. He spent the winter of 1850-51 at Berlin, holding intercourse with Dehn, Rungenhagen, Grell, etc. He spent his years of wandering (1852-54) at Brussels (where he became intimate with Fétis and Kufferath), Cologne, Bremen, Hanover (with Brahms and Joachim), Leipzig (O. Jahn, Moscheles, David, Hauptmann), giving many concerts, and obtaining great success as a pianist (as interpreter of Beethoven's "last" sonatas), and in 1854 settled in Munich, where in 1856 he was appointed teacher of the pianoforte at the Conservatorium. In 1858 W. received the post of town musical director at Aix-la-Chapelle, was named, in 1861, royal musical director, and in 1864 conducted, jointly with Rietz, the 41st Lower Rhine Festival. In 1864 he was called back to Munich, first as conductor of the court band (church choir), and by giving concerts, greatly extended its sphere of activity. In 1867 he also undertook the conductorship of the singing classes of the reorganised Royal School of Music, for which he wrote his well-known "Chorübungen der Münchener Musikschule." In 1869 W. succeeded H. v. Bülow as conductor at the Court Opera and the *Akademie* Concerts, became inspector of the executive section, at the Conservatorium, and, under highly complicated and unfavourable conditions, produced the *Rheingold*, which was followed in 1870 by the *Walküre*. In 1870 he was named chief court capellmeister, and in 1875 royal professor. From 1872 he had shared with Levi some of the duties attaching to these posts. In 1877 W. exchanged Munich for Dresden, and succeeded Rietz as royal court capellmeister, and as artistic director of the Conservatorium. He was named Dr. Phil. *hon. c.* by

the Munich University. In 1882, without any plausible reason being assigned, W. was dismissed from the direction of the Opera in favour of Schuch, who had hitherto been associated with him in the conductorship of the Court Opera, Court and Symphony Concerts. For this wrong he was compensated by the brilliant reception given to him as conductor of the Lower Rhine Festival at Aix-la-Chapelle in 1882, and by the offer made to him to conduct the Berlin Philharmonic Concerts during the winter of 1883-84. On the 1st of October he succeeded Ferd. Hiller as head of the Conservatorium and of the Gürzenich Concerts at Cologne; and he has laboured in this post with distinguished success. In 1886 and 1890 he conducted the Lower Rhine Musical Festival. W. is also a creditable composer. He has written a cantata, *Heinrich der Finkler* (1864); masses, motets, Miserere for double choir (Op. 26), the 125th Psalm with orchestra (Op. 40), Stabat Mater for double choir (Op. 45), chamber music, songs, part-songs, pf. pieces. His recitatives to Weber's *Oberon*, adopted at the most important theatres, also deserve mention.

Wunderlich, Johann Georg, famous flautist, b. 1755, Bayreuth, d. 1819, Paris; pupil of his father and afterwards of Rault in Paris, he appeared in 1779 at a *Concert Spirituel*, became in 1782, second, and in 1787, principal flautist of the royal band and of the orchestra of the Grand Opéra, also in 1794, professor of the flute at the newly-established Conservatoire. His most famous pupil was Tulou. He retired from the Opera in 1813, but taught at the Conservatoire until his death. W. published: flute sonatas with bass, 6 flute duets, 6 soli for flute with five keys, 6 divertissements, several books of studies for flute with five keys, 9 grand soli, 3 sonatas with bassoon or 'cello, and a Flute Method.

Wurm, Wilhelm, b. 1826, Brunswick, virtuoso on the cornet à piston. He has been living since 1847 at Petersburg, in 1862 became teacher of his instrument at the Conservatoire, and in 1869, principal bandmaster of all the Russian Guards regiments. W. has composed many pieces for his instrument.

Wylde, Henry, b. May 22, 1822, Herts, d. March 13, 1891, London; he was intended for the church, but took up music instead, studying first under Moscheles, then (1843) under Cipriani Potter at the Royal Academy of Music. Later on he became one of the professors at that institution, in 1850 received the degree of Mus. Doc., Cambridge, and from 1863 to his death, held the appointment of Gresham Professor of Music. In 1852 he founded the New Philharmonic Society, and from 1858-79 was director and conductor of its concerts. W. built St. George's Hall, where he founded (1867) the "London Academy of Music," of which he

continued Principal up to his death. He wrote: "The Science of Music" (2 vols.; a treatise on harmony); "Modern Counterpoint" (1873); "The Evolution of the Beautiful in Sound"

(1888); "Occult Principles of Music" (four Gresham lectures reprinted, 1881), and other works; he was also the composer of a cantata, pf. pieces, etc.

X.

Xänorphika. (See RÖLLIG and BOGENFLÜGEL.)

Ximenes, Franziskus de Cineros, also named *Gonzales*, archbishop and cardinal at Toledo, b. 1457, Tordelaguna, d. 1517, Toledo. He founded a college at Alcala in 1500, and is said to have introduced Mozarabic Song there.

Xylander (Holtzmann), Wilhelm, professor of Greek at Heidelberg, b. Dec. 26, 1532, Augsburg, d. Feb. 10, 1576, Heidelberg; he published in a Latin translation Psello's treatise on mathematics and music.

Xylophon. (See STROHFIEDEL.)

Y.

Yodle, a style of singing practised by the Swiss and Tyrolese; it consists of a wordless shout, with frequent changes from chest to head voice. A song to which such *vocalise* is added by way of refrain, is called in German a "Jodler"; the word is probably formed by onomatopoeia.

Yost, Michel, performer on the clarinet, studied under Beer, b. 1754, Paris, d. July 5, 1786. He published: 14 clarinet concertos, 5 quartets for clarinet and strings, 8 books of clarinet duos, and a set of variations for clarinet with viola and bass.

Young, Matthew, professor of Dublin University, Bishop of Clonfert and Kilmacduagh (Ireland), d. Nov. 28, 1800. He wrote: "An Inquiry into the Principal Phenomena of Sounds and Musical Strings" (1784).

Yriarte, Don Tomas de, Spanish poet, b. about 1750 on the island of Teneriffe, d. 1791, Santa Maria (near Cadiz). He was secretary of the state archives at Madrid, and, among other things, wrote a didactic poem in 5 books: "La Musica" (1779), which appeared also in Italian (by Antonio Garcia, 1789), French (Grainville, 1800), and English (John Belfour, 1811).

Ysaye, Eugène, celebrated performer on the violin, b. July 16, 1858, Liège; he studied at the Conservatoire there, and later on under Vieuxtemps at Brussels. He was for some time leader in Bille's orchestra, Berlin (until 1881), then made a name by his concert tours, and was appointed principal professor of the violin at the Brussels Conservatoire in 1886. Y. has composed 6 violin concertos, variations on a theme by Paganini; but all his music, except some smaller pieces, as yet lies in manuscript. Y.'s speciality is unusual *verve* and intensity of expression, joined with eminent virtuosity.

Yussupoff, Prince Nicolas, Russian composer and writer on music, b. 1827, Petersburg; an able violinist (pupil of Vieuxtemps) who maintained an orchestra in his palace. As composer, he has written, amongst other things, a violin concerto (Concerto symphonique), and a programme symphony with violin solo, "Gonzalvo de Cordova." Y. is the author of "Luthomonographie historique et raisonnée" (1856, a monograph on the construction of the violin), also "Histoire de la musique en Russie: première partie: Musique sacrée suivie d'un choix de morceaux de chants d'église" (1862).

Yzac. (See ISAAC.)

Z.

Zabel, Carl, composer of dances, ballets, military music, etc., b. Aug. 19, 1822, Berlin, d. Aug. 19, 1883, Brunswick, where he was second capellmeister at the court theatre.

Zacconi, Ludovico, Augustinian monk and choir director at the monastery of his order at Venice; 1593 member of the Vienna, 1595 of the Munich, court band; later on again at Venice. Z. wrote one of the most distinguished musical and theoretical works of his time, entitled:

"Pratica di musica" (part 1, 1592 [1596], part 2, 1622), which not only treats admirably of mensural theory and counterpoint, but also gives excellent explanations concerning the instruments of that time.

Zachariä, Eduard, b. June 2, 1828, Holzappler-Hütte (in Nassau); he studied theology, and at the same time, and with preference, music, physics, acoustics; and for many years he made known his invention (the "Kunst-

pedal") in the most important cities of Germany. He now lives as pastor at Maxsayn, Unterwesterwald district.

Zachau, (1) Peter, town musician at Lübeck, published: "7 Branlen, dazu Gigen, Gavotten, etc., und mit 3 Couranten" (1683), and "Erster Teil vierstimmiger Viol di gamb Lustspiele solo, bestehend in Präludien, Alemanden, Couranten," etc. (1693).

(2) Friedrich Wilhelm, teacher of Handel, b. Nov. 19, 1663, Leipzig; from 1684 up to his death, Aug. 14, 1712, organist of the Liebfrauenkirche, Halle-a.-S.; he left organ pieces, figured chorales, etc., of which some were included in later collections (among others, in Breitkopf & Härtel's "Sammlung von Präludien, Fugen, ausgeführten Chorälen," etc.).

Zajic, Florian, b. May 4, 1853, Unhoscht (Bohemia), of poor parents; with help of a grant, was for eight years pupil of the Prague Conservatorium (Moritz Mildner, A. Bennewitz). He was at first a member of the theatre orchestra at Augsburg, then leader at Mannheim, Strassburg (1881, successor to Lotto), and Hamburg (1889); in 1891 he succeeded Sauret as teacher at Stern's Conservatorium, Berlin.

Zamminer, Friedrich, professor of physics at Giessen, b. ca. 1818, Darmstadt, d. Aug. 16, 1856, Giessen. He wrote an excellent book: "Die Musik und die musikalischen Instrumente in ihrer Beziehung zu den Gesetzen der Akustik" (1855).

Zanettini. (See GIANETTINI.)

Zang, Johann Heinrich, b. April 13, 1733, Zella St. Blasii (Gotha), for two years a pupil of J. S. Bach at Leipzig, d. Aug. 18, 1811, as cantor at Mainstockheim (Bavaria). He published: "Singende Muse am Main" (1776), and a "Kunst- und Handwerksbuch," the title of the second part of the latter being: "Der vollkommene Orgelmacher, oder Lehre von der Orgel und Windprobe" (1804); church cantatas, pf. sonatas, and organ trios remained in manuscript.

Zange (Zangius), Nikolaus, in 1597 capellmeister to the Elector of Brunswick, afterwards at the court at Vienna, 1612 capellmeister to the Elector of Brandenburg at Berlin, died before 1620. He published: "Schöne teutsche geistliche und weltliche Lieder" a 5 (1597, in the Library, Liegnitz); "Ander Teil deutscher Lieder" a 3 (1611; also there); "Lustige neue deutsche Lieder und Quodlibete" (a 5-6, published in 1620 by Jacob Schmidt; in the Berlin Library), and "Cantiones sacræ" a 6 (1630, in the Danzig Library; evidently a second edition, since the dedication is signed by Z., who, however, was already dead in 1620). Other pieces by Z. are to be found in "Musikalischer Zeitvertreib" (1609), in Bodenschatz' "Flori-legium Portense" (1688), and in manuscript at the Berlin Library.

Zani de Ferranti, Marco Aurelio, b. July 6, 1800, Bologna, d. Nov. 28, 1878, Pisa; he commenced studying the violin, but gave it up for the guitar, on which he acquired rare proficiency, and brought out from the instrument a singing tone such as had never been known before. He lived a restless life, went in 1820 to Paris, and from there to Petersburg, where he became a private secretary. Z. appeared as virtuoso at Hamburg, Paris, Brussels, London, etc., from 1824, and in 1827 settled in Brussels as teacher of the guitar. In 1846 he was appointed Professor of Italian at the Brussels Conservatoire.

Zanobi da Gagliano. (See GAGLIANO.)

Zaremba, Nicolai Iwanowitsch von, b. 1824, d. April 8, 1879, Petersburg; pupil of Marx, and teacher at the Petersburg Conservatoire (1862) from its foundation, 1867-71 director of the Institution (as successor to Anton Rubinstein); he was an excellent theorist and teacher.

Zarembski, Jules de, b. Feb. 28, 1854, Schitomir (Russia), d. there Sept. 15, 1885; celebrated pianist, pupil of Dachs at Vienna and of Liszt at Weimar, played in 1878 the "Piano Manged" (*à deux claviers renversés*) at the Paris Exhibition, and in 1879 succeeded Louis Brassin as professor at the Brussels Conservatoire.

Zarlino, Gioseffo, a theorist of great importance, b. March 22, 1517, Chioggia (Venetia); entered the order of the Franciscans in 1537, became a pupil at Venice of Adrian Willaert. In 1565 he succeeded his fellow-scholar Cipriano di Rore as maestro di capella of St. Mark's, afterwards became, likewise, chaplain at San Severo, and died Feb. 14, 1590, Venice. Of Z.'s compositions little has been preserved; unfortunately, the manuscripts of the numerous sacred works which he undoubtedly wrote for St. Mark's, together with many others, have long since been stolen by wicked hands from that church. In addition to the short examples in his theoretical works, only the following have been preserved: a volume, "Modulationes sex vocum" (1566); a MS. mass, in the library of the Liceo Filarmonico, Bologna, and 3 "Lectioes pro mortuis," which were printed in 1563 by Hier. Scotto at Venice in a volume containing motets a 4 by Cipriano di Rore and others. The theoretical works of Z. are: "Istituzioni harmoniche" (1558 [1562, 1573]); "Dimostrazioni harmoniche" (1571 [1573]), and "Sopplimenti musicali" (1588). His collected works ("Tutte l'opere del R. M. Gioseffo Z. da Chioggia, etc.," 1589; 4 vols.) contain, in addition, a number of treatises not relating to music, which appeared separately. A great work in 25 books, promised by Z., and bearing the title, "El melopeo perfetto," or "De re musica," or "De utraque musica," remained in manuscript, and has, it appears, been lost. (Cf.

CERONE.) The translations of Z.'s "Istituzioni," one in French by Jehan Lefort (Paris Library), one in Dutch by a pupil of Z., Jan Pieter Sweelinck, and one in German by J. Kaspar Trost, remained in manuscript; even now, Z. can only be studied at the fountain-head. Z., like his predecessor L. Fogliani, followed Ptolemy's "Diatonon syntonon" in the determination of intervals (*see* PROLEMY); and he succeeded in giving to it lasting value, although the natural foundation on which it rests (through the phenomenon of over-tones) was only discovered a century and a half later. With Z. the presentation of the third as 4 : 5 was, indeed, not entirely without foundation; already we find him conscious of the opposition of the major and minor consonant chords, in that the one is referred to the harmonic, the other to the arithmetical division of the string. In other words, the major chord is naturally founded on the string-length ratios $1, \frac{2}{3}, \frac{3}{4}, \frac{4}{5}$; but the minor chord, on the other hand, on $1 : 2 : 3 : 4 : 5 : 6$. The major chord is therefore the *Divisione armonica*; the minor, the *Divisione aritmetica*. Both series give for the third the determination 4 : 5. Z., like M. Hauptmann, only recognises one kind of third (the major), and names the thirds of the major and the minor chord, "not according to their size, but according to their position." That the germ of a rational system of harmony in a dual sense (*cf.* "Istituzioni," I., ch. 30, and III., ch. 31) was not developed in the period immediately following, must have been caused by the invention of figured bass, which sprang up not long afterwards, perhaps even before Z.'s time; and which, for the determination of intervals, started from the bass note, and thus made the difference between the major and the minor chord depend upon the size of the third. Tartini (q.v.) was the first to revive Z.'s idea, yet—since he could not rid himself of figured bass—without success. The idea of the polarity of major and minor fell so thoroughly into oblivion, that when revived by Hauptmann in 1853, it appeared as something quite new. The "Istituzioni" contain, for the rest, clear and systematic explanations of double counterpoint (*Contrapunto doppio*) in the octave, twelfth, and in contrary motion (*a moti contrarii*); likewise of canon and double canon in the unison, octave, and upper- and under-fifth. Numerous examples are given, all based on the same *Cantus firmus* ("Veni creator").

Zartflöte (4-ft.), in the organ a flute stop of delicate intonation, invented by Thurley. Instead of a pipe-plug it has, already from the foot of the pipe, a small wind-way which is directed against the upper lip.

Zarzuela (Span.), a short play or comedy with songs; also comic opera, operetta; *Zarzuelero*, composer of such pieces.

Zarzycki, Alexander, pianist and composer,

b. Feb. 21, 1834, Lemberg, d. Nov. 1, 1895, Warsaw; he studied first at Lemberg, then at Paris (under Reber), and made concert tours through Poland, Austria, and Germany. In 1870 Z. became conductor of the Musical Society, Warsaw, and in 1879 succeeded Appol. de Kontski as director of the Conservatoire there. He wrote pieces for pf. with orchestra, and pf. solos, likewise songs.

Zaytz, Giovanni von, b. 1834, Fiume, son of an Austrian military bandmaster; pupil of the Milan Conservatorio (1850–56). He studied under Lauro Rossi, soon developed a talent for dramatic composition, lived until 1862 at Fiume, then at Vienna, and from 1870 at Agram, as theatre capellmeister and teacher of singing at the Conservatorium. Besides many masses, songs, choral and instrumental pieces, Z. has composed no less than 20 works for the stage (mostly one-act operettas): *La Tirolese* (1855, at the Milan Conservatorio), *Amalia*, *Mannschaft an Bord*, *Fitzliputali*, *Die Lazzaroni*, *Die Hexe von Boissy*, *Nachtschwärmer*, *Das Rendezvous in der Schweiz*, *Das Gaugericht*, *Nach Mekka*, *Sonnambula*, *Der Schuss von Poterstein*, *Meister Puff*, *Der Raub der Sabinerinnen*, *Der gefangene Amor*, and the Croatian operas: *Nicola Subic Zrinski* (actually the first Croatian opera, 1876), *Ban Legat*, *Mislav*, *Lizinka*, *Pan Twardowski*, and the Croatian operetta *Aphrodite* (1888).

Zeckwer, Richard, b. 1850, Stendal; he studied at Leipzig, then went to Philadelphia, and is now the esteemed director of an Academy of Music there. Z. is the composer of some orchestral, pianoforte, and vocal works.

Zeelandia, Henricus de, one of the earliest Netherland contrapuntists and theorists (about 1400), author of a theoretical treatise with musical examples, "De musica," which is in the Prague Library. Z.'s attempts at composition are, it is true, still stiff and awkward. *Cf.* Ambros' Music History, vol. 2, in which there are many extracts from Z.'s work.

Zelenka, Johann Dismas, composer, b. Oct. 16, 1679, Lannowicz (Bohemia), d. Dec. 23, 1745, Dresden; in 1710 double-bass player in the royal Polish band at Dresden, sent to Venice in the suite of the Prince Elector (1716–17), also to Vienna (1718–19). He enjoyed intercourse with, and possibly instruction from, A. Lotti and J. J. Fux, acted at Dresden as second conductor under Heinichen, and as sole conductor after the death of the latter; he, however, never became court capellmeister, but in 1735 was named church composer. Z. composed no less than 20 masses, some portions of masses, 3 requiems, 2 Te Deums, responsoria, hymns, psalms, etc.; also 3 oratorios (*Die eherne Schlange*, *Jesus auf Golgotha*, *I penitenti al sepolcro*), a Latin melodrama, cantatas, arias, etc.

Zelenski, Ladislaus, b. July 6, 1837, on the family estate Gradowice, lives at Cracow; he has written chamber-music (a quartet for strings, pf. trio, variations for strings, etc.) and pf. pieces.

Zellner, (1) Leopold Alexander, b. Sept. 23, 1823, Agram, where his father was cathedral organist (b. 1794, d. Feb. 6, 1875), d. Nov. 24, 1894, Vienna. While yet a child he played the cello, the organ, and the oboe, and also tried his hand at composition; he, however, entered the War Office, and remained there until 1849. He then lived as teacher of music at Vienna, until he succeeded Sechter in 1868 as teacher of harmony at the Conservatorium and as general secretary of the "Gesellschaft der Musikfreunde." He, however, soon resigned the former post, in order to devote himself more thoroughly to the latter. From 1859-66 he gave "historical concerts" at Vienna, which met with great approval. From 1855-68 he edited a musical paper of his own, *Blätter für Musik*. Z. was a brilliant performer on the harmonium, published a Method, and also made improvements in certain details of the mechanism of that instrument. As a composer, he published educational pf. pieces for four hands, pieces for cello, and some part-songs; likewise, transcriptions for harmonium, etc.

(2) Julius, composer, b. 1832, Vienna, where he received his training and lives as teacher of music. He was at first technologist, then merchant, and only definitely took up music in 1851. Of his compositions there have become favourably known:—two symphonies (E and E♭), music to "Schöne Melusine," "Im Hochgebirge" (choral work), some chamber music, pf. pieces, songs, etc.

Zelter, Carl Friedrich, the friend of Goethe, conductor of the "Singakademie," and founder of the Berlin Liedertafel, b. Dec. 11, 1758, Berlin, d. there May 15, 1832. Z. was the son of a master mason, learnt his father's trade, but at the same time made a diligent study of music in its various branches. In 1783 he became a master mason; meanwhile he had ripened into an excellent violinist, conductor, and composer. In 1786 a funeral cantata of Z.'s was performed in the garrison church on the occasion of the death of Frederick the Great. In Rellstab's Amateur Concerts, Z. acted as leader. In 1791 he joined his teacher Fasch's "Singverein," which, after removal to the Kgl. Akademie, assumed the name of "Singakademie." He frequently acted as Fasch's deputy, and, after the death of the latter (1800), became conductor of the society. In 1806 Z. was elected associate of the Akademie. In 1807, the war over, and music no longer mute, he founded a "Ripienschule" for orchestral practice. In 1808 a joyful gathering in honour of the singer Otto Grell, who was leaving for Vienna, proved the germ whence sprang the first Liedertafel,

which was formally established in 1809, and for which Z. composed so many songs. The example was speedily imitated (see LIEDERTAFEL), and it proved the commencement of a new era of male choral singing. In 1809 Z. was appointed professor of the Akademie. In 1819 he founded the Royal Institution for Church Music, of which he remained director up to his death. The friendship between Goethe and Z. sprang from the poet's special preference for Z.'s melodies, while the latter naturally felt himself roused to enthusiasm by Goethe's noble lyrics. The highly interesting "Briefwechsel zwischen Goethe und Z." appeared 1833-36 in 6 octavo vols. Z.'s second wife, Juliane Pappritz (b. May 28, 1767, d. March 16, 1806), was an excellent singer, and the ornament of the "Singakademie." Z. composed a set of sacred songs in several parts, cantatas, also operas, few of which, however, appeared in print; his songs and quartets for male voices, for the most part of national character, became known, as they deserved, far and wide. Of his literary works the "Biographie von K. F. Ch. Fasch" (1801) deserves chief mention; and with this may be coupled a notice of the first performance of Gluck's *Alceste* at Berlin in the paper entitled *Deutschland* (1796), etc.

Zenger, Max, composer, b. Feb. 2, 1837, Munich, son of a professor of jurisprudence, F. X. Z. With the exception of a few lessons in theory from Ludwig Stark, he was self-taught. In 1860 he became capellmeister at Ratisbon, in 1869 musical director at the Munich Court Opera, and in 1872 court capellmeister at Carlsruhe. But there he soon fell ill and went to Munich, where he lived without holding any public appointment until 1878, when he became conductor of the Oratorio Society (up to 1885), and of the Academical Vocal Society, likewise choirmaster of the Royal School of Music. Of Z.'s published compositions the oratorio *Cain* (after Byron, 1867), repeatedly performed in Germany, has met with special approval. Of other works may be named:—a festival march for orchestra, about 100 songs, part-songs, etc., a pf. sonata for four hands, etc. The operas *Die Foscari* (Munich, 1863), *Ruy Blas* (Mannheim, 1868), and *Wieland der Schmied* (Munich, 1880), *Eros und Psyche*, also 2 "Gretchen" scenas from Goethe's "Faust," the ballets *Venus und Adonis* and *Les plaisirs de l'île enchantée* (both in 1881 for Ludwig II.; private performances), 2 symphonies (D major, and "Tragische"), overture (Op. 42), recitatives to Méhul's *Joseph en Egypte*, etc.

Zeretelew, Princess Elizabeth Andrejewna. (See LAWROWSKAJA.)

Zerr, Anna, celebrated stage-singer, b. July 26, 1822, Baden-Baden, d. June 14, 1881, on her estate, Winterbach (near Oberkirch). She studied under Bordogni, distinguished herself from 1839-46 at Carlsruhe, then at Vienna,

where in 1851 she was dismissed before the expiration of her contract, because she consented to take part in a concert for the benefit of the Hungarian emigrants in London. After brilliant triumphs during several years in England, America, etc., she withdrew from the stage (1857). She married at Vienna, but was divorced in 1874.

Zerrahn, Karl, excellent conductor and teacher, b. July 28, 1826, Malchow, Mecklenburg; he received his musical training at Rostock (Fr. Weber), Hanover, and Berlin, emigrated to America in 1848 as member of the "Germania" orchestra, and so early as 1854 became conductor of the Handel and Haydn Society at Boston, and, later on, also of the Symphony Concerts at Harvard (see HARVARD ASSOCIATION), where he was appointed teacher of singing, harmony, and instrumentation at the New England Conservatory.

Zeugheer, Jacob, excellent violinist, b. 1805, Zürich, d. June 15, 1865, Liverpool; he studied under Wassermann at Zürich, and under Franzl at Munich. In 1824 he founded the Quartet party bearing the pseudonym "The Brothers Herrmann" ("Gebrüder Herrmann"; 1st violin, Z.; 2nd violin, J. Wex, afterwards Anton Popp; viola, Karl Baader; 'cello, Joseph Lidel), which travelled through Western Europe with great success up to 1830. In 1831 Z. became director of the Gentlemen's Concerts at Manchester, and in 1838, conductor of the Philharmonic Society, Liverpool, where he laboured until his death, highly esteemed as a teacher.

Zeuner, Karl Traugott, pianist and composer, b. April 28, 1775, Dresden, d. Jan. 24, 1841, Paris; studied under Türk at Halle, gave concerts in 1803 at Paris, then lived for several years at Vienna, afterwards at Petersburg, where he studied under Clementi. Later on he returned to Dresden, and died in 1840, while on a visit to Paris. Z. bequeathed 40,000 francs to his native town. His chief works, formerly held in high esteem, are:—2 pf. concertos, a quartet for strings, variations on a Russian theme for pf., violin, and 'cello; also variations, polonaises, fantasias, etc., for pf. solo.

Ziani, (1) Pietro Andrea, famous Venetian composer, b. circa 1630, d. 1711, Vienna; in 1666 successor of Cavalli as second organist of St. Mark's, Venice; then, after Cavalli's death, as he did not receive the post of maestro, Z. went to Naples (1676) and entered the royal chapel. He composed for Venice, Bologna, and Vienna 21 operas; of his other compositions only the following are known:—an oratorio, *Le lagrime della Vergine* (Vienna, 1662), "Sacra laudes" a 5 (1659; masses and psalms, some with two obbligato instruments, some with the same *ad libitum*), also sonatas a 3-6 (1691).

(2) Marco Antonio, nephew of the former, b. 1653, Venice, d. Jan. 22, 1715, Vienna, where

in 1700 he became "k. k. Vizekapellmeister," and in 1712, court capellmeister. He wrote 40 operas and serenades, also 9 oratorios for Venice (1676-1700) and Vienna.

Zichy, Géza, Count, b. July 22, 1849, Szatara, son of a rich Hungarian magnate. He had the misfortune, when a lad of 14, to lose his right arm in consequence of a hunting accident; nevertheless he obtained, as the result of his predilection for music, a high position as a one-handed piano virtuoso! His teachers in music were Mayrberger and Robert Volkmann, also, later on, Franz Liszt. Count Z., who, after finishing his course at the University, followed the legal calling and filled high positions, was, until 1892, president of the Hungarian National Academy of Music, Pesth. He has made the world acquainted with his abnormal, painfully acquired, virtuosity since 1880 at charity concerts, and also in concert tours undertaken for charitable purposes. Z. is, of course, obliged to adjust all compositions to his own mode of execution. He is a creditable composer (studies for the left hand alone, with preface by Liszt; pf. pieces, songs, part-songs), and a no less creditable poet (lyric poems, epics, and dramas in the Hungarian language).

Zigeunermusik, Ger., gipsy music.

Zimbal, Zimbalon. (See CYMBAL and CYMBALUM.)

Zimbelstern. (See CYMBELSTERN.)

Zimmer, (1) Friedrich August, b. Feb. 26, 1826, Herrngosserstädt, Thuringia; he studied under E. Hentschel at Weissenfels, in 1854 became teacher at Gardelegen College, in 1859 royal musical director at Osterburg (Altmark). He published an "Elementarmusiklehre," "Violinschule," "Gesanglehre," also an "Evangelisches Choralbuch" which was adopted at several colleges.

(2) Otto, editor of the *Fliegende Blätter für evangelische Kirchenmusik*, b. 1827, Priskorsine (Silesia), d. April 2, 1896, Breslau; he studied under Richter and Mosewius at Breslau. Z. was royal musical director and organist at Oels.

(3) Robert, b. Jan. 17, 1828, Berlin, d. there Dec. 5, 1857; pupil of Dehn for music. He studied philosophy for several terms, then lived for a long time in Italy, and from 1856-57 was teacher at Kullak's Academy. He wrote "Gedanken beim Erscheinen des 3. Bandes der Bach-Gesellschaft in Leipzig" (1854, critical notice of Becker's edition of Bach's clavier pieces).

Zimmermann, (1) Anton, composer, b. 1741, d. Oct. 8, 1781, Pressburg, as capellmeister to Prince Batthyany, and as organist at the cathedral. He composed a great number of instrumental works, of which some appeared in print:—9 sonatas for pianoforte and violin, "Die Belagerung von Valenciennes" for pianoforte and violin, 6 violin duets, 6 quartets for strings,

and a pf. concerto. Also a vaudeville, *Andromeda und Perseus*, appeared in pf. score in 1781, while a second remained in manuscript.

(2) (Zimmerman) Pierre Joseph Guillaume, renowned teacher of the pianoforte, b. March 19, 1785, Paris, d. there Nov., 1853. He was the son of a pianoforte manufacturer in Paris, attended (1798) the Conservatoire, and distinguished himself as a student under Boieldieu, Rey, Catel, and Cherubini; in 1816 he became professor of pianoforte-playing at the Conservatoire, and laboured with the most distinguished success until 1848, when he received his pension. Among his pupils were Prince de la Moskowa, Alkan, Déjazet, Prudent, Marmontel, Ravina, Lefebvre, Lacombe, A. Thomas, etc. The professorship of counterpoint and fugue offered to him in 1821 was declined, as he preferred to hold his pianoforte professorship. In 1830 his comic opera *L'enlèvement* was produced with some success; but a grand opera, *Nausicaa*, was not produced. At the head of his published compositions stands an elaborate educational work, entitled "Encyclopédie du pianiste," the third part of which forms a treatise of harmony and counterpoint. Further are to be named: 24 studies (Op. 21), 2 pf. concertos, a pf. sonata, a number of rondos, fantasias, variations on operatic airs, and songs; also 6 sets of romances with pianoforte.

(3) Agnes, distinguished pianist, b. July 5, 1845, Cologne; she studied under Potter and Steggall at the Royal Academy of Music, London, first appeared at the Crystal Palace Concerts, 1863, and at the Gewandhaus, Leipzig, in the following year, and gained the name of a first-rate player of classical works. Z. has composed 3 violin sonatas, a pianoforte trio, a pf. sonata and other pf. pieces, also songs and part-songs; she has also published editions of Beethoven's and of Schumann's pianoforte works.

Zingarelli, Nicola Antonio, prolific Italian composer, b. April 4, 1752, Naples, d. May 5, 1837, Torre del Greco (near Naples). He studied under Fenaroli at the Conservatorio di Loreto, and afterwards under Abbate Speranza (Durante's pupil). While still a scholar he wrote an opera, *I quattro pazzi*, which was performed at the Conservatorio, 1768; he also produced a second one, *Montezuma*, in 1781. Z. was however compelled, for pecuniary reasons, to take the post of music-teacher, for a long time, in a private family, until his opera *Alsinda*, played in Milan in 1785, brought him great success. His subsequent career was the one common to composers of Italian opera, i.e. he lived in the place for which he had been commissioned to write an opera, and thus he also went to Paris, where, meanwhile, his *Antigone* (1790) had met with a cool reception. In 1792 Z. became cathedral maestro at Milan, and in 1794 at Loreto, where he wrote a great number

of sacred works, without, on that account, neglecting the stage. In 1804 the high honour of being maestro of St. Peter's, Rome, fell to his lot, and he held office until 1811. In this year, for refusing to allow a *Te Deum* to be performed in commemoration of the birth of Napoleon's son (the King of Rome), he was arrested, and brought to Paris, where, however, Napoleon not only received him very graciously, but gave him, by way of compensation for his journey and for a mass which he had written for him, 14,000 francs, and allowed him to return. But his post, meanwhile, had been given to Ficravanti, and Z. therefore turned towards Naples, where in 1813 he undertook the direction of the "Real Collegio di Musica," and in 1816 succeeded Paesiello as maestro at the cathedral. He was not famed for activity as director of the Conservatorio; he lacked energy, enthusiasm as a teacher; and, besides, he failed to perceive the enormous strides made by art (Mozart, Beethoven) since his school-days. Z. wrote not less than 31 operas, many of which, owing to the efforts of Marchesi, Crescentini, Rubinelli, Catalani, and Grassini, achieved extraordinary success. To these must be added: dramatic cantatas, 4 oratorios (*La riedificazione di Gerusalemme*, 1812). Of sacred music he wrote no less than 38 masses for male voices and orchestra, about 20 solemn masses, 7 masses for double choir, 66 masses with organ, 25 masses a 2-3 with orchestra, 4 Requiems, 21 Credos, many *Te Deums*, 73 Magnificats, 28 Stabat Maters, a number of motets, hymns, etc. Considering the quantity, it is not surprising that the quality is only moderate.

Zingaresca (Ital.), a song sung by persons masked as gypsies during carnival time. (See ZINGARESCO.)

Zingaresco, m.; Zingaresca, f.; Zingarese (Ital.), pertaining to, or after the manner of, gypsies.

Zink (Zinken, Cornett; Ital. *Cornetto*; Lat. *Lituus*, *Liticen*), (1) obsolete wind instrument, with a mode of tone production similar to that of our horns, trumpets, trombones, etc., i.e. they had no reeds, but a cone-shaped mouthpiece, against which the lips were pressed; this instrument was not of brass, but of wood, and had soundholes. The mouthpiece of the Z. was of ivory or hard wood, and had an opening only a few millimetres wide. The smaller kinds of Z. were straight (*Cornetto diritto*, with added mouthpiece; *cornetto muto*, with mouthpiece screwed on: both with compass a-a'; *Cornettino*, standing a fourth higher [Quartzzink], compass d'-g'''); and these were called the "white" Z. to distinguish them from the larger "black," crooked Z., which consisted of two long pieces glued together and covered over with leather. Of these latter there were also two kinds: the *Cornetto curvo* (of the same compass as the *Cornetto diritto*) and the *Cornetto torto* (*Cornone*;

compass *d-d'*), which latter had an S-shaped bent tube, like the bassoon; from this *Cornetto diritto* was afterwards evolved the serpent. In the 17th century, Zink instruments played an important rôle; the straight-shaped ones were by far the older, and they were in use among the "Stadt Pfeifer" up to the 18th century. The tone of the straight Z. was clear, that of the *Cornetto muto* soft; that of the bass Z. coarse, and of horn quality.

(2) In the organ (see CORNET).

Zinkeisen, Konrad Ludwig Dietrich, violinist and composer, b. June 3, 1779, Hanover, d. Nov. 28, 1838, Brunswick. From 1801-1803 he was military musician at Lüneburg, then leader at the academical concerts at Göttingen under Forkel, whose instruction he enjoyed, in 1819 he became ducal chamber musician at Brunswick. Z. wrote a great number of instrumental works, some of which, however, remained in manuscript:—4 overtures, 6 violin concertos, *Duo concertant* for violin and viola, variations for violin and stringed trio, 2 duets for violin and viola, 3 quartets for strings, variations for flute with quartet of strings, a concerto for oboe, one for clarinet, one for basset-horn, and one for bassoon, pieces for clarinet and orchestra, for oboe and strings, variations for two French horns and orchestra, military music, part-songs for mixed and male chorus.

Zipoli, Domenico, organist at the Jesuit Church, Rome, one of the most important composers for the clavier before Bach ("Sonate d'intavolatura per organo o cimbalo," 1716, 2 parts).

Zither (Cithar) is the name given to a small stringed instrument (about $\frac{1}{2}$ a metre long and $\frac{1}{4}$ m. wide), which has a large number (36-42) of strings stretched over a flat sound-box, of which five (the "fret strings"), tuned thus:

pass over a fingerboard, near the longer side of the instrument, divided by 29 (chromatic) frets, while the others (the bass strings), running three times, in 4ths and 5ths, through the circle of fifths, are tuned from *f'* to *F#*. Some players also make use of a higher melody string tuned to *c'*. The bass strings are not shortened. The five highest bass strings are of gut, the others, of silk covered with silver wire; the "fret" strings, of steel or brass. The Z. is struck with a plectrum, hence called also a *Schlagzither*. A larger kind, with lower tuning is the *Bass* or *Elegia* Z. A peculiar variety is the heart-shaped "Streichzither," with only four strings, tuned like those of the violin; it can be played with a bow or like a Z. Its fellow is the "Streichmelodion," the body of which is similar to the violin. The Streich-

zither (Bow Zither) is made in three sizes: Treble, Alto, and Bass Z.; the *accordatura* corresponds to that of the stringed quartet. The form of the instrument varies; as a rule, it resembles that of the viola d'amour. A union of German Zither societies (since 1877) brings together the adherents of the instrument enthusiastic for its cause (President, Hans Thauer, of Munich). (Cf. ALBERT, MAX.) Regarded both from an historical and etymological point of view, the Z. points to various predecessors; and (1) to the *Cithara* of the Greeks, which, however, was not, like the Z., placed flat on a table, but held vertically; and, further, had neither fingerboard nor sound-box underlying the whole surface of the strings; (2) to the *Chitarra* (Span. *Gitarrarra*; Ger. *Quintern*), which, originally, was a kind of small lute—just as the *Chitarrone* was one of the largest; a flat sound-box was afterwards added, and the instrument became our guitar;—(3) to the *Cithar* of the 16th and 17th centuries (Eng. *Cittern*, *Cithorn*; Fr. *Cistre*, *Sistre*; Ital. *Cetera*), another species of lute or guitar, which had wire strings, and was played with a plectrum. The French name for the instrument points to one which is probably the real prototype of the Schlagzither, viz. (4) the *Cistole* (Fr. *citole*, from the Latin *cistella* = small chest) of the Middle Ages, a kind of Psalterium or small dulcimer.

Zoilo, Annibale, 1561-70 maestro at the Lateran, then singer at the Papal Chapel. He wrote masses, a *Tenebræ* a 16, etc., preserved in the archives of the Papal Chapel. A *Salve Regina* a 12 is to be found in Fabio Constantino's "Selectæ cantiones" of 1614, and some madrigals and chansons in collections (1585-96).

Zöllner, (1) Karl Heinrich, excellent organist, b. May 5, 1792, Oels (Silesia), d. July 2, 1836, Wandsbeck (near Hamburg). He led a wandering life without succeeding in finding a post suited to his capacities. While on his travels he frequently performed in public on the organ, remained, for periods varying in duration, at Oppeln, Posen, Dresden, Leipzig, Hamburg, Lübeck, Copenhagen, and finally settled (1833) in Hamburg. Z. wrote an opera, *Kunz von Kaufungen*; a melodrama, *1. Uhr*; and published masses, psalms, motets, organ pieces, a pianoforte Method, a violin sonata, a pf. sonata for two, another for four hands, and other pf. pieces; also a number of quartets for male voices.

(2) Karl Friedrich, the famous cultivator of male choral singing, b. March 17, 1800, Mittelhausen (Thuringia), d. Sept. 25, 1860, Leipzig; he attended the Gymnasium at Eisenach and the St. Thomas' School, Leipzig (from 1814), and there became a pupil of Schicht, who persuaded him to make music, and not theology, the calling of his life. Already in 1820 he became teacher of singing at the "Ratsfreischule," and in 1822, together with

his friend Hemleben, established an institute for music, at which there were choral practices every Sunday. In 1830 Z. began to write music for male chorus, founded in 1833 the first "Zöllner-Verein," which was followed by many other independent societies for male choral singing, and only differing slightly in name. In 1859, by the union of twenty such societies, he was able to hold a musical festival at Leipzig. After his death the societies amalgamated definitely under the name "Zöllner-Bund." (Cf. LIEDERTAFEL.) In 1868 a monument was erected to Z. in the Rosenthal, Leipzig. As a composer Z. confined himself to part-songs for male chorus, songs for mixed choir, motets and songs with pf. accompaniment.

(3) Heinrich, son of the former, b. July 4, 1854, Leipzig. After studying law during two terms, Z. turned his attention to music, studied at the Leipzig Conservatorium, 1875-77 (Reinecke, Jadassohn, Richter, Wenzel), and in 1878 became musical director of the University at Dorpat, in 1885 conductor of the Male Choral Society at Cologne and teacher at the Conservatorium of that city. In 1890 he went to New York as conductor of the "New York Liedertafel." Z. has published charming songs (Op. 2, 7, 8) and part-songs for male voices (Op. 1, 4, 5, 6). A choral work, "Hunnenschlacht," was performed with success at Leipzig in 1880. Of works of considerable importance may be named: a symphony (Op. 20), an Orchestral Episode, "Sommerfahrt" (Op. 15), and the operas *Frithjof* (1884), *Faust* (1887, both at Cologne), and *Die Braut*, 1893.—The following must not be confused with the above-named:

(4) Andreas, b. Dec. 8, 1804, Arnstadt, d. March 2, 1862, as musical director at Meiningen. He also published many part-songs for male voices, some of which became popular.

Zoppi, Hermann, b. June 1, 1826, Glogau, d. July 12, 1883, Leipzig. He studied at Breslau and Berlin, and took his degree of Dr. phil. At his parents' wish, he devoted himself to agriculture, and only in 1850 became a pupil of the Stern Conservatorium; he then lived for a long time at Berlin, where he founded an "Opernakademie," an "Orchesterverein," a "Verein zur Hebung des Dramas," and similar institutions. In 1864 he settled in Leipzig, took part in the editorship of the *Neue Zeitschrift für Musik*, and, after Brendel's death, became chief editor. Z. was a very zealous member of the committee of the "Allgemeiner deutscher Musikverein," and for this he received the title of Professor; he also displayed praiseworthy activity in arranging gatherings of artists, etc. Some of his compositions (operas not produced, great choral works, and smaller works of various kinds appeared in print; he also wrote a "Theorie der Oper" and a "Gesangsschule."

Zoppo (Ital.), limping; *contrappunto alla zoppa*, syncopated counterpoint.

Zschiesche, August, excellent bass-singer, b. 1800, Berlin, d. there July 7, 1876; he sang at first in the theatre chorus, as soprano, at Berlin (1809), then as tenor (1817), and from 1818 as bass. In 1820 he was engaged for small bass rôles at Pesth, afterwards sang for a time at Temeswar (1823), and returned in 1826 to Berlin, where he was first engaged at the Königstadt theatre, but in 1829 at the Court Opera, to which he belonged as *basso serio* until he received his pension in 1861. From 1833 he also sang at the "Singakademie."

Zuccalmaglio, Anton Wilhelm Florentin von, b. April 12, 1803, Waldbrohl, d. March 24, 1869, Nachrodt (near Gröna, Westphalia). He was a valuable contributor to the *Neue Zeitschr. f. Mus.* when that paper was first started by Rob. Schumann. Under the pseudonym Wilhelm von Waldbrohl, his literary activity extended to the domains of history and physical science.

Zugwerk (Ger. "draw action") is the term applied to the action of an organ, or of one of its keyboards, when the keys communicate with the more remote portions of the mechanism (rollers, squares, etc.) by means of trackers; the pressure on the key thus changes, first of all, into a "drawing" action. (Cf. DRUCKWERK and DRAW-ACTION.)

Zumpe, Hermann, b. April 9, 1850, Taubenheim (Saxon Oberlausitz); he attended the Teachers' College, Bautzen, from 1870-71 as teacher at Weigsdorf, whence he fled to Leipzig and obtained a post at the third town school; he also played the triangle in the orchestra of the town theatre. He studied with A. Tottmann, and from 1873-76 was with Wagner at Bayreuth, helping in the copying of the *Nibelungen* scores. He was afterwards theatre capellmeister at Salzburg, Würzburg, Magdeburg, Frankfurt, and from 1884-86 at Hamburg. In the autumn of 1891 Z. accepted a call to Stuttgart as court capellmeister, and in 1893 succeeded Faisst as conductor of the Union for Classical Church Music. Of his works the following deserve mention: songs, overture to *Wallensteins Tod*, an opera based on a legend: *Anahra* (Berlin, 1880); romantic comic opera, *Die verwunschene Prinzessin* (MS.), and the operettas, *Farinelli* (Hamburg, 1886), *Karin*, (Hamburg, 1888), and *Polsische Wirthschaft* (Berlin, 1891).

Zumsteeg, Johann Rudolf, composer, b. Jan. 10, 1760, Sachsenflur (Odenwald), d. Jan. 27, 1802, Stuttgart. He was the son of a former valet de chambre at the Stuttgart court, and thus obtained entry into the "Karlsschule," where he became intimately acquainted with Schiller. Z. was to have been a sculptor, but, under the guidance of capellmeister Poli, he became, first an able 'cello-player, and, later on, a composer. In 1792 he succeeded

Poli as court capellmeister. Z. was no genius, but a cultivated man and a trained musician; his name commands special esteem, in that he made the first attempts at ballad composition ("Ritter Toggenburg," "Leonore," etc.), and first rendered arable the field which has since borne such noble fruit (Klein, Schubert, Schumann, Löwe, etc.). He also wrote 8 operas: of these 4 (*Elbondokani, der Kalif von Bagdad, Die Geisterinsel, Zaalor, Das Pfauenfest*) appeared after his death in pianoforte score; also choruses to Schiller's "Räuber," sacred cantatas, concerto for 'cello, and 'cello duets.—His daughter Emilie, b. Dec. 9, 1796, Stuttgart, d. there Aug. 1, 1857, was formerly esteemed as a song composer.

Zur Mühlen, Raimund von, concert vocalist (tenor), b. Nov. 10, 1854, on his father's estate in Livland; he studied at the Berlin High School and under Stockhausen in Frankfort and Bussine in Paris. Z. M. is a distinguished and tasteful *salon* singer.

Zvonař, Joseph Leopold, Bohemian composer, b. Jan. 22, 1824, Kublov (near Prague), d. Nov. 23, 1865, Prague; pupil of the School for Organists, then teacher, finally director of the same institution. In 1859 he became director of the Sophienakademie, and in 1863, *Regens chori* of Trinity Church and teacher of music at the High School for Girls. He composed an opera (*Zabój*), also many (large and small) vocal works, and published the first treatise on harmony in the Bohemian language; he likewise rendered service in investigating matters connected with the history of Bohemian church music.

Zwintscher, Bruno, b. May 15, 1838, Ziegenhain (near Meissen); he attended the Kreuzschule, Dresden, before he became (1856) a pupil of Plaidy at Leipzig Conservatorium, where in 1875 Z. received an appointment as teacher of technical studies. His "Technische Studien" are an extension of Plaidy's work.

Zwitscherharfe. (See POINTED HARP.)

APPENDIX.

A

Abaco, for from about 1700-20, Electoral Bavarian Capellmeister, *read* about 1725 Electoral Bavarian Capellmeister.

Abeille, J. C. L., d. March 2, 1838 (not 1832).

Abel (5), Ludwig, d. Dec. 8, 1895, Munich.

Abert, J. J. Date of performance of opera *Die Almohaden*, for 1890 *read* 1860.

Abt, *add* His son Alfred, b. May 25, 1855, Brunswick, d. of consumption, April 29, 1888, Geneva; was theatre capellmeister at Rudolstadt, Kiel, Rostock.

Adler (2), Guido. In 1893 he was made regular professor. He is bringing out the musical works of the Emperors Ferdinand III., Leopold I., and Joseph I. of Austria, and also superintends the publication of "Denkmäler der Tonkunst in Oesterreich" (Masses by J. J. Fux, orchestral snites by Muffat, piano works by Froberger, etc.).

Adriano di Bologna. (See BANCHIERI.)

Agricola, Martin, d. at Magdeburg.

Agthe (3), F. W., for d. after 1828, *read* d. Aug. 19, 1830.

Ahlström, *omit l. 4*, "and he is said to have also composed operas," and *last line*, "He was still in office in 1827." *Add* (2) Johann Niklas, probably son of above, b. June 5, 1805, Wisby (Sweden), d. May 14, 1857, Stockholm, composer of operas, songs, etc.

Alabieff, Alexander, b. Aug. 30, 1802, Moscow, d. there 1852, was a popular Russian composer of songs ("The Nightingale" ["Sala-wei"]).

Albert (3), Eugen, d', *add to list of compositions* a second quartet for strings (♯), the operas *Der Rubin* (Carlsruhe, 1893) and *Ghismonda* (1894), and a choral work *a 6*, "Der Mensch und das Leben."

Alboni, Marietta, d. June 23, 1894, Paris.

Albrecht (3), Eugen, M., d. Feb. 9, 1894, St. Petersburg.

Allegrì (1), Gregorio, b. 1584.

Allihn, Heinrich Max, b. Aug. 31, 1841,

Halle-a.-S.; in 1876 archdeacon at Weissenfels, 1885 pastor and district school inspector at Athenstedt (near Halberstadt), edited Töpfer's "Lehrbuch der Orgelbaukunst" for a 2nd ed. (1888), and also wrote interesting detached articles on organ-building for P. de Wit's *Instrumentenbau Zeitung*.

Alsleben, Julius, d. Dec. 8, 1894, Berlin.

Altès, Joseph Henri, d. July 24, 1895, Paris.

Amati, Andrea, lived c. 1535-1611; Geronomo, sen., c. 1556 to Nov. 2, 1630; Nicola (not Nicolo), d. April (not Aug.), 1684; Geronomo, jun., d. Feb. 21, 1740.

Andriessen. (See STAHRMER-ANDRIESSEN.)

Apotommas, *add*, see also THOMAS (3).

Ariosti, Attilio, d. about 1740, Bologna.

Armbrust, K. F., d. July 12, 1896, Hanover. His father, George A., b. March 17, 1818, Harburg, d. May 3, 1869, Hamburg.

Armbruster, Carl, conductor and pianist, b. July 13, 1846, Andernach-on-Rhine, studied under Hompesch at Cologne, appeared in public at an early age as pianist, and settled in London in 1863. As an enthusiastic admirer of R. Wagner, he was soon held in high esteem by the party of musical progress in London, was second conductor at the Wagner performances given by Hans Richter between 1882-84, was at first conductor at the Royal Court Theatre, then at the Haymarket, conducted the *Tristan* performances at Covent Garden in 1892, and is now conductor at Drury Lane Theatre.

Arrieta, Don Juan Emilio, d. Feb. 12, 1894, Madrid.

Artaria, end of; for his son August is the present proprietor, *read* his son August d. Dec. 14, 1893, Graz.

Artusi, G. M., d. Aug. 18, 1613.

Auer, for leader of the Imperial band, *read* solo violinist to the Emperor, and as such attached to the Court Opera.

Augmented Intervals, *add*, see SUPERFLUOUS.

Auvergne, Antonio d', b. Oct. 4, 1713, Clermont-Ferrand, d. Feb. 12, 1797, Lyons; son and pupil of a violinist, went (1739) to Paris, where from a violinist in the orchestra of the Grand Opéra he rose to be upper intendant. From 1752-71, A. produced 11 comic operas and ballets. His one-act *Les Troqueurs* (1753) was one of the first genuine comic operas (with spoken dialogue).

B

Bach (2), Otto, d. July 3, 1893, Vienna.

Bagge, Selmar, d. July 17, 1896, Basle.

Bähr, for rifle match, *read* shooting tournament.

Baj. (See BAL.)

Baker, *add* George, and for b. 1768, d. 1825, *read* b. 1773, d. Feb. 19, 1847.

Balart, d. July 5, 1893.

Barbieri (2), d. Feb., 1894.

Barnby, d. Jan. 28, 1896, London.

Bartel, August, b. 1800, Sondershausen, d. there 1876, son of Heinrich B., the esteemed performer on the trumpet in the military band and member of the court band; to the latter belonged also B.'s brother Adolf (b. 1809, d. 1878). B. trained many excellent musicians—H. Frankenberger, Sir A. C. Mackenzie, likewise his sons (both 'cellists), Ernst, b. 1824, in 1853 musical director at Riga, then at Paris, Petersburg, finally at Remscheid, where he died, 1868; and Günther, b. 1833, who, after further study at Paris and Berlin (S. Dehn), went in 1866 to Düsseldorf, where he now lives. He has written pleasing songs, pf. pieces, also some for 'cello, and has contributed many clever articles to musical papers.

Barth (4), Gustav, for b. 1818, *read* b. Sept. 2, 1811.

Baryphonus. (See PIPEGROP.)

Battaille, for, *read* Battaille.

Battanchon, d. July, 1893, Paris.

Beck (10), Joh. Nep., d. Sept., 1893, Vienna.

Becker (9), Reinhold, *add* to list of compositions also the opera *Frauenlob* (Dresden, 1892).

Becker (10), Carl, b. June 5, 1853, Kirrweiler (Trèves district); in 1881 teacher of music at the Ottweiler seminary; since 1885 he has been employed in a similar capacity at Neuwied ("Rheinischer Volksliederborn," 1892, school song-books, etc.).

Beethoven, p. 67, col. 1, line 5, after van der Eden, *add* (d. June 29, 1782).

Beliczay, d. April 30, 1893, Pesth. *Add*, The first part of a Method of Composition by B. appeared in 1891 (Hungarian).

Bériot, *add*, His son, Charles Wilfried

de B., b. Feb. 12, 1833, Paris, lives there esteemed both as pianist and composer ("Opéras sans paroles" for pf. and violin; "Méthode d'accompagnement" [jointly with his father]).

Bertini, (4) Domenico, d. Sept. 7, 1890, Florence.

Beley. (See STENDHAL.)

Bial, Karl B., d. Dec 20, 1892, Steglitz, near Berlin.

Bird (2), Arthur, gifted composer, b. July 23, 1856, Cambridge, near Boston ("Karnevalszene" for orchestra; symphony in A; ballet, *Rübezahl*, etc.).

Bischoff (3), K. J., d. Oct. 26, 1893, Munich.

Bletzacher, J., d. June 16, 1895, Hanover.

Bloch, Georg, b. Nov. 2, 1847, Breslau, studied there under Hainisch and J. Schubert, later on under Taubert and Fl. Geyer at Berlin, founder (1879) and director of the Opera Society at Berlin, likewise teacher at Breslau's Conservatorium there; also composer of vocal music.

Boch, Franz de, 'cellist, b. Feb. 14, 1808, Potenstein (Bohemia), pupil of the Prague Conservatorium, since 1835 member of the Court band at Stuttgart, and since 1856 teacher at the Conservatorium there.

Böhm (4), Joseph, b. Feb. 9, 1841, Kühnitz (Moravia), d. Nov. 6, 1893, Vienna, studied under Bocklet and Krenn at Vienna, became in 1865 organist, in 1867 choirmaster, and in 1877 capellmeister of the Hofpfarrkirche, Vienna, and director of the school of church music of the Ambrosius-Verein.

Bohn, Emil, was named Royal Professor of Music, 1895.

Boie, the brothers, John, b. Mar. 8, 1822, Altona, and Heinrich, b. there Sept. 16, 1825, pupil for the violin of C. Müller at Brunswick; they both live at Altona. John was, in his time, highly esteemed as a performer in chamber music; Heinrich has composed several operas, etc.

Boisselot, Jean Louis, b. circa 1785, Montpellier, d. 1847, Marseilles. He was at first a maker of stringed instruments at Montpellier, but in 1823 transferred his business to Marseilles, soon, however, changing it into a pianoforte manufactory, which prospered greatly. Of his sons, the elder, Louis, b. 1809, Montpellier, d. 1850, Marseilles, was manager of the pianoforte manufactory, whose present proprietor, Franz B., is a grandson of the founder. The younger son, Xavier, b. Dec. 3, 1811, Montpellier, d. April 10, 1893, Marseilles, made a name as composer (cantata "Velleda," 1836; operas, *Ne touchés pas à la reine*, Paris 1847, *Mosquita la Sorcière*, Paris 1851, *L'ange déchu*, Marseilles, 1869).

Bonometti, Giovanni Battista, published at Venice, in 1615, a collection: "Parnassus

musicus Ferdinandæus" (dedicated to the Archduke Ferdinand of Austria; it contained motets *a* 1-5 by unknown composers). B. has been confused by Fétis and others with Buonamente (q.v.).

Borodin, for An opera (*Fürst Ingor*) remained in manuscript, read His opera *Fürst Ingor* was performed in 1890 at Petersburg.

Bott, d. April 30, 1895, New York.

Bovicelli, Giovanni Battista, native of Assisi, chorister of Milan Cathedral, published in 1594: "Regole, passaggi di musica," etc., containing madrigals and motets, with embellishments of the melody, shakes, runs, etc., usual at that time. (Cf. *Monatshefte*, f. M.-G., 1891, No. 7).

Bowed Instruments. (See STRINGED INSTRUMENTS.)

Brahms, 8th line before end of article, for 34 read 43; also add, Op. 108, 109.

Brambach (2) W., before last line, monographs of importance, add, and "Die Reichenauer Sängerschule" (1888).

Brandt, add In 1886 she sang at the German Opera, New York.

Brandt-Buys, Dutch musical family. The father, Cornelius Alexander, b. April 3, 1812, Zalt-Bommel, since 1840 has been organist and conductor (also composer) at Deventer. His sons are:—Marius Adrianus, b. Oct. 31, 1840, Deventer, since 1864 at Zutphen (organ school, etc.); Ludwig Felix, b. Nov. 20, 1847, Deventer, organist and conductor at Rotterdam (composer of some large vocal works); Henry, b. April 20, 1851, Deventer, since 1878 conductor of "Amstels Mannenkoor," Amsterdam (opera *Albrecht Beyling* [Amsterdam, 1891], and many pieces for male choir, etc.).

Bratsch, Johann Georg, b. Feb. 18, 1817, Zell, d. Sept. 30, 1887, Aschaffenburg, for a long time director of the Royal School of Music at Würzburg, in 1872 musical director of the "Kgl. Studienanstalt" at Aschaffenburg; he was pensioned in 1883.

Brenet, Michel, meritorious French music-historian, wrote *inter alia* "Histoire de la symphonie à orchestre depuis ses origines" (gained a prize, 1882), a biographical notice on Grétry (1884), and a highly meritorious monograph on J. d'Okeghem (1893).

Breslaur, add, B. edited the 11th ed. of Schubert's "Musik. Konversations-Lexikon" (1892). He published a "Melodiebildungslehre" in 1896.

Briegel, add, (Pavanes, Ballets and Courantes *a* 4, 1652, Entr'actes and Sonatas *a* 4-5 for cornets and trombones, 1669, Capricci for violin, 2 viols and bass, 1680, etc.).

Brillenbäse, last line add, or semiquavers.

Brisaler, d. Aug. 6, 1893, Berlin.

Broadwood & Sons, for the present head of the firm, etc., read the late head of the firm, Henry Fowler Broadwood, d. July 8, 1893.

Brodsky, add After returning from America he was appointed (in 1895) principal of the Manchester Royal College of Music, as successor to Sir Charles Hallé.

Brückner, Oscar, distinguished 'cellist, b. Jan. 2, 1857, Erfurt, studied at Dresden under Friedrich Grützmacher, sen., and, for theory, under Felix Dräseke. He made successful concert tours through Germany, Russia, Holland, Poland, was then appointed solo 'cellist at Strelitz ("herzogl. Kammervirtuos"); since 1889, he has occupied a similar post at the Royal Theatre, Wiesbaden, teaching, besides, at the Conservatorium there. As composer B. has written solo pieces for the 'cello, also songs and pf. pieces.

Brüll, I. His latest opera is *Schach dem Könige* (Munich, Nov. 24, 1893).

Bull (2), Ole, add, His life was written by Sarah Bull (London, 1886; in German, by Ottmann, Stuttgart, 1886), and O. Vik (Bergen, 1890).

Büllo, d. Feb. 12, 1894, Cairo.

Buonamente, Giovanni Battista, one of the oldest composers for violin, and one who did much to advance violin technique. He was maestro of the Franciscan monastery at Assisi, and published "Sonate e Canzoni *a* 3-6 voci" (violins, violas [ad lib. bassoon] and continuo, partly also for cornetti [Zinken] and trombones; Venice, 1636). A work with trios for two violins and bass which appeared in 1623, and which was ascribed by Fétis to G. B. Bonometti, was written by B.

Bürger, Sigmund, 'cellist, b. Feb. 8, 1856, Vienna, pupil of Popper, became member of the opera orchestra at Vienna, Baden-Baden, and Munich (1876 to 1880 as solo 'cellist). He then went on concert tours, and since 1887 has been solo 'cellist at the Royal Opera, Pesth, also teacher at the Conservatorium there.

Burgmein. (See RICORDI, Giulio.)

Burmeister, Richard, excellent pianist, b. Dec. 7, 1860, Hamburg, studied under Ad. Mehrkens, and afterwards under Liszt. After long concert tours he became teacher at Hamburg Conservatorium in 1884, but, already in the following year, exchanged this post for a similar one at the Peabody Conservatory, Baltimore. His wife Dory (née Peterson, b. Aug. 1, 1860, Oldenburg) is also esteemed as pianist. As composer, B. has made a favourable *début* with a pf. concerto in D minor and an orchestral fantasia.

Burney, 17th line from end, for In that year, read In 1783.

Busi, (2) A., d. July 8, 1895, Bologna.
Busshop, J. A. G., d. Feb. 10, 1896, Bruges.
Bussler, *add*, "Lexikon der Harmonie" (1889).

C

Cadence, *add*, (See also SHAKE.)
Cagnoni, d. April 30, 1896, Bergamo.
Cahen, d. Nov. 8, 1893, Paris.
Calsabigi, Raniero da, Gluck's famous librettist, b. 1715, Livorno, was trained for a merchant, lived for a time at Paris, went in 1761 to Vienna, but owing to some theatre scandal was forced to leave, and went to Italy; he died at Naples, 1795. Gluck acknowledged the leading part which C. had taken in the reformation of opera. Cf. Heinr. Welter, "Gluck und Calsabigi" (*Vierteljahrssch. f. Mus.-Wissenschaft.*, 1891).

Carreño, *for* She studied with Moritz Gottschalk, *read* She studied with L. Gottschalk, later under Mathias in Paris. *Also for last sentence*, *read* Mme. C. was for some years the wife of E. Sauret; married the pianist Eugen d'Albert, 1892; divorced 1895.

Carrodus, d. July 12, 1895, London.
Carvalho, d. July 10, 1895, Dieppe.
Cerveny, d. Jan. 19, 1896, Königrätz.
Chabrier, d. Sept. 13, 1894, Paris.
Cherubini, *add to list of biographies*, also by Crowest (London, 1890).

Chopin. Miss Janotha, in the preface to her translation of J. Kleczynski's "Chopin's Greater Works," gives the date of birth of C. as Feb. 22, 1810, and not March 1, 1809, as generally stated. C.'s father was at first book-keeper in a cigar factory, then tutor in Count Skarbek's family, Zelazowa Wola, later on proprietor of a school of his own with boarding-house, finally teacher at the Artillery and Engineers School. His teacher's Christian name was Albert (Zwyny). He began his artistic tour, not in 1828, but in 1830 (cf. Niecks' biography of C.). To the C. literature should be added, M. A. Audley's "F. C., sa vie et ses œuvres" (Paris 1880, after Karasowski) and Willeby's "Fr. C." (London, 1892). Liszt's "Chopin" came out in a 4th ed. in 1890 (in English by Cooke, 1877), and Karasowski's "Chopin" in a 3rd ed., 1881, in Polish with some new letters, 1892. A Polish biography was also brought out by M. A. Schulz (Szule), Posen, 1873.

Chorale, *add*, Cf. also Bachmann's "Zur Entstehungsgeschichte der geistlichen Lieder Luthers" (1884) and J. Zahn's "Die Melodien der deutschen evangelischen Kirche" (1887-90).

Cimarosa, *for last line read* seen in the Pantheon at Rome near those of Sacchini and Paisiello.

Clareta, same as Clarino (Trumpet, Clarion).

Clausser, *read* Claussen.

Clausz-Szarvady, *read* Clauss-Szarvady.

Coccius, Theodor, b. March 8, 1824, Knäut-hain (near Leipzig), attended St. Thomas' School there, and was trained by G. W. Finck and J. Knorr. C. lived 1844-45 in Paris, and 1849-55 in Hamburg. Since then he has resided in his native city, where from 1864 he has been highly esteemed as a teacher of the pf. at the Conservatorium (successor of Plaidy); he was named Professor in 1893.

Cohen, (4) Karl Hubert, b. Oct. 18, 1851, Laurenzberg (near Aix-la-Chapelle), ordained priest in 1875, attended the church music schools at Aix-la-Chapelle and Ratisbon, from 1876-79 was vicar of the old chapel and teacher at the music school in the latter city, cathedral capellmeister at Bamberg from 1879 to 1887; at present he is cathedral conductor and vicar at Cologne. C. is a member of the "Referenten Kollegium" for the catalogue of the Cæcilia Society, and has written several masses, motets, and a Te Deum.

Colins, Jean Baptist, b. Nov. 25, 1834, Brussels, studied under Wery (violin), from 1863 teacher of the violin at the Brussels Conservatoire, and since 1888 also at the Antwerp school of music.

Conduct of Parts (Ger. "Stimmführung"), that is, the treatment of the separate parts in musical composition. A sharp distinction must be made between *real parts*, for voices self-evident, and for strings and wind instruments (especially wood-wind) usual; and *free style*, which, especially of late, is employed in music written for keyed instruments or full orchestra. Writing in real parts is also termed *legato* or strict style; yet by strict and free style is also understood more or less conscientious care in the avoidance of unvocal progressions of parts in *stile legato*. Real parts are such as move in a distinct and independent manner throughout a whole piece, or section, or a considerable number of bars, and thus appear to possess musical individuality; in them pulsates the true life of musical composition. They cannot be entirely dispensed with even in the free style; in the latter, however, in addition to real parts, filling-up notes are employed; and for these latter there is no real C. of P., although they are spoken of as filling-up parts (q.v.). With regard to so-called polyphony by breaking, see special article. The most essential points in regard to C. of P. may be summed up in few words. The soul of C. of P. is *progression by steps of a second*. The more chords succeed one another by such steps, the smoother, the more perfect, is the writing. Even harmonic progressions difficult to grasp display a certain absence of restraint when all or most of the parts move by step of

a second, be these whole-tone, leading-tone, or chromatic half-tone steps, as for example:

A special means of connecting chords following one another is to let remain notes common to two or more chords, or also those which are enharmonically identical. The conduct of the bass part, however, forms an exception, for it readily moves from one fundamental tone to another, and is of essential service in rendering intelligible the harmonic scheme. The bass moves readily from principal tone to the third of the chord, and from third to third or principal tone; on the other hand, caution must be used with the leap of the bass part to fifth of the chord. (See CHORD OF SIX-FOUR.) Movement by step of a second should certainly be aimed at, although it certainly is not always achievable; and just in the very part which for the most part is free, and which is first invented, the real melody part (in modern music generally the upper part), progression by second is readily exchanged for greater, so-called *harmonic steps*. Such steps produce the effect of polyphony by breaking (q.v.), and thus the writing is enriched; from the first, blossoms forth, so to speak, a second part (in orchestral and pianoforte music such is, indeed, frequently the case). Certain progressions of parts, of which the harmonic meaning is difficult to follow, and which on that account are difficult to lay hold of, are naturally avoided in writing for voices (in strict style they are entirely avoided), viz. augmented steps (tritone, augmented second, etc.). The rules, which are to be found in all treatises on harmony, viz. that the leading note must ascend a minor second upwards, and that the seventh must move downwards, are only under certain conditions correct. When the leading note occurs in the dominant chord, and progresses to the tonic, the leading-tone progression is naturally made whenever suitable occasion, not contravening any other rule of composition, offers itself. For a similar reason, the seventh will readily proceed downwards in the cases in which it can carry out a falling leading-tone step (leading-tone step in the minor sense), as, for instance, when the chord of dominant seventh resolves on to the tonic.

In this case the rising leading-tone step *b'-c'*, as well as the falling *f'-e'* is obligatory, and only in exceptional cases is any departure made therefrom. On the other hand, there is no necessity, in chords like *b : d : f : a* or *c : e : g : b*, for the seventh (according to usual terminology, i.e. the highest tone) to move downwards, unless there be danger of fifth parallels or something similar. Everything will depend on the harmony which follows; if the latter contain the octave of the fundamental tone, the

seventh will frequently rise. The rule of the downward tending seventh, or of the upward tending leading tone is nothing more than a practical hint, since in choral progressions mostly in use this C. of P. offers itself as suitable. On the other hand, the negative laws for the C. of P., the forbidding of fifths and octaves, are of the highest importance. (See PARALLELS.)

Consecutives. (See PARALLELS.)

Cornelius, p. 165, l. 11, *add*, Wagner first went to Vienna in 1860. *Also add*, Dr. A. Sandberger has written a biography of C. (1887, dissertation on taking Doctor's degree).

Cosacca (alla Cosacca), *Kosakhisch*, *Kosatschek*, a Russian dance (dance of the Cossacks) in $\frac{3}{4}$ time, of moderate movement, mostly in minor.

Cottrian, Guillaume Louis, b. Aug. 9, 1797, Paris, d. Oct. 31, 1847, Naples, where from 1806 he lived and wrote Neapolitan canzonets which became popular (Liszt introduced some into his "Venezia e Napoli"). His sons, Theodore (b. Nov. 27, 1827, Naples) and Giulio (b. 1836, Naples), also achieved great success by following in their father's footsteps. (Theodore is the composer of "Santa Lucia" and "Addio ma bella Napoli"; Giulio, on the other hand, obtained lasting success with his opera *Griselda*, produced at Turin in 1878.)

Couperin (8), F. G., *last line*, for in 1815 read in 1823.

Cowan, F. H., *add*, his operas *Signa* (1893, Milan), and *Harold* (1895).

Crogaert, J. Ed., b. Antwerp, studied under Benoit, became conductor of the *Cercle artistique*, Antwerp, in 1882. Since 1886 he has lived in Paris. C. has written two dry theoretical books: "La verbe de l'homme" (1876, Flemish and French), and "Traité complet de tonalité" (1884).

Cromorne. (See KRUMMHORN.)

Cui, *add*, cf. "C. C." by Countess de Mercy-Argenteau (1888).

Cusins, d. Aug. 31, 1893, Remonchamps (Engadine).

Czartoriska, d. June 8, 1894, at her castle near Cracow.

Czibulka, d. Oct. 27, 1894, Vienna.

D

Daase, Rudolf, b. Feb. 21, 1822, Berlin, pupil of A. W. Bach, A. B. Marx, and E. Wilsing, lives at Berlin as conductor and teacher of music. He has written orchestral works, choruses for male voices, dances, marches, and drawing-room pieces.

Dachs, J., d. June 6, 1896, Vienna.

Dancla, Léopold, d. April 29, 1895, Paris.

Dannreuther, (1) E., *add*, He published in 1893 a highly important work on the ornaments: "Musical Ornamentation."—(2) Gustav, violinist, brother of the former, b. 1852, Cincinnati; from 1871–73 studied under Joachim at the Royal High School, Berlin. Since 1886 he has been leader of the Symphony and Oratorio societies, and founder and leader of the Beethoven Quartet at New York. D. has published "Tonleiter und Akkord-Studien für Violine."

David, (3) S., d. Oct. 3, 1895, Paris.

Dayas, William Humphrey, b. Sept. 12, 1865, New York, where already at the age of 14 he held a post as organist. Later on he studied under Haupt and Ehrlich, and in 1890 succeeded Busoni as teacher of the pianoforte at Helsingfors Conservatoire. Afterwards he went to Düsseldorf (1894), then became pianoforte teacher at the Wiesbaden Conservatorium (1895), and then at Cologne; he is about to settle in America. D. is a gifted composer (2 organ sonatas, quartet for strings, waltzes for pf. duet, etc.).

Debois, d. May 10, 1893, Brunn.

Deffès, *add*, He is now director of the Toulouse branch of the Paris Conservatoire.

Delhasse, Félix, b. Jan. 5, 1809, Spa; lives at Brussels and contributes musical articles to various papers. He has also published non-musical biographical works: "Annuaire dramatique" (stage almanack, from 1839–47, with biographical notices and anecdotes); "Galerie de portraits d'artistes musiciens du royaume de Belgique" (1842–43, folio; portraits and biographical notices of Vieuxtemps, Fétis, Hanssens, De Bériot, Servais, Prume, etc.); also short articles.

Delibes, *add* His posthumous four-act opera *Kassya*, finished (scored) by Massenet, was produced for the first time March 21, 1893, Paris.

Dengremont, d. August, 1893, Buenos Ayres.

Dessau, Bernhard, violinist, b. March 1, 1861, Hamburg, grew up at The Hague, but then studied under Schrädieck (Hamburg and Leipzig), Joachim, and Wieniawski, then became leader, successively, at Görlitz, Ghent, Königsberg, Brunn, Prague; he is now leader at Rotterdam, also teacher at the Conservatoire there.

Development is concerned with that section, in the larger forms of composition, in which the (previously stated) principal ideas (subjects) of the movement are independently worked out, *i.e.* the motives are mixed together and combined in a new way. Especially in the most important of all modern instrumental forms, the sonata form, the D. directly follows the repeat (repetition of the subjects), thus standing in the middle between the first statement of the subjects and their final entry. In the *Fugue* the running of the subject (as *Dux* and *Comes*) once through all the voices concerned is a D., so that one speaks

also of a second and third D. in a fugue. In any case, the term D. is derived from the fugue, for formerly the D. of the sonata movement also took by preference a fugal turn. (*CF. FORM.*)

Dies, for "Biographie Haydns nach mündlichen Erzählungen," read "Biographische Nachrichten von Joseph Haydn," etc.

Döles. The *Monatshefte f. Musikgeschichte* (1893, No. 8) published an extract from the Leipzig *Gelehrten Tagebuch* of the year 1797, with an obituary notice and (? auto-) biography of D., according to which D. was born April 23, 1715, and died Feb. 8, 1797.

Doppler (2), Karl, *add*, since 1865 court capellmeister at Stuttgart. *Also* for Hungarian pieces, *read*, pieces for flute.

Dräseke, *add to list of compositions* the operas: *Sigurd* (fragment performed 1867, Meiningen), *Guhrin* (Hanover, 1844), and *Herrat* (Dresden, 1892); "Akademische Festouvertüre," Mass in F minor (for soli, chorus, and orchestra), also a viola sonata and a cello sonata.

Dregert, d. March 14, 1893, Elberfeld.

Druffel, Peter, b. Oct. 8, 1848, Wiedenbrück (Westphalia), studied music and medicine at Bonn, Marburg, Würzburg, Berlin; he is now chief staff physician at Trèves. D. is a writer on music, and composer (especially songs and ballads, and an Old German sacred "Liederspiel" for soli, chorus, and orchestra, entitled "Der Erlöser"). D. has also published vocal works of the Middle Ages (German Lieder of the 15th and 16th centuries; madrigals of Palestrina).

Dubois, (1) F. C. T., succeeded Ambroise Thomas, in 1896, as director at the Paris Conservatoire. (2) Léon, b. Jan. 9, 1849, Brussels; student of the Conservatoire there (*Prix de Rome*, 1885), since 1890 second conductor at the Théâtre de la Monnaie. He has composed the operas: *Son excellence ma femme* (1884), *La revanche de Sganarelle* (1886), *Mazeppa* (not performed); the ballet, *Smylis* (1891), symphonic poem, "Atala," etc.

Duhamel, *omit*; see instead HAMEL (1).

Duifoprugcar. As Henry Coutaigne points out ("Gaspard Duifoproucart et les luthiers lyonnais du xvii. siècle," Paris 1893), all the notices on Tieffenbrucker up to the present are incorrect. Kaspar Tieffenbrucker lived at any rate from 1553 at Lyons, where he had landed property, which was appropriated in 1564 on account of a plan for new fortifications. He died 1570 or 1571. According to a portrait engraved by Pierre Woeirot in 1562, the date of his birth was 1514. No violins by T. seem to have been preserved.

Dumka, name of narrative songs of Lesser Russia (home ballads), sung to accompaniment of the Bandura and Kobsa.

Dupuis, Sylvain, b. Nov. 9, 1856, Liège, pupil of the Conservatoire there (*Prix de Rome*, 1881), at present teacher of counterpoint in the same institution; he is also conductor of "La Légia." D. has written two orchestral suites; the operas *Cour d'Ognon*, *Moina*; the cantatas "La Cloche de Roland," "Camoens," and "Chant de la Création"; the symphonic tone-picture "Macbeth," etc.

Duyesen, J. L., b. Aug. 1, 1820.

Dwight, d. Sept. 1893, Boston. His *Journal of Music* ceased to appear in 1881.

E

Ebert, Ludwig, 'cellist, b. April 13, 1834, Kladran, Bohemia, pupil of the Prague Conservatorium; in 1852 member of the theatre orchestra, Temesvar; from 1854-74 principal 'cellist at Oldenburg ("Hofkonzertmeister"); then, until 1888, teacher at the Cologne Conservatorium, and in 1889 founder, jointly with K. Heubner, of the Conservatorium at Coblenz. He has composed much for his instrument. From 1875-78 E. was member of the Heckmann Institute.

Eeden (2), *substitute the following*:—Jean Baptiste van den, b. Dec. 26, 1842, Ghent, pupil of the Conservatoire there and of the Brussels Conservatoire, gained in 1869 the first prize for composition (cantata "Faust's laatste nacht"), and in 1878 became Huberti's successor as director of the School of Music at Mons. Of his compositions should be named the oratorios, *Jacqueline de Bavière*, *Jacob van Artevelde*, *Brutus*, *Le jugement dernier*, a large trilogy *Judith* (*Le siège de Bèthulie*); cantatas, "Het Woud" and "De Wind" for soli, chorus, and orchestra, symphonic poem, "La lutte au XVI. siècle," orchestral works (Suites, Scherzo, "Marche des esclaves," etc.), part-songs, etc.

Elster, Daniel, b. about 1800, in Thuringia, d. Dec. 19, 1857, Wittingen, near Baden (Switzerland), lived about 1835 at Schleusingen, afterwards at Baden as teacher of music and conductor of the musical society there. E. wrote a "Vollständige Volksgesangschule" (three parts), an elementary treatise on music, and published collections of choruses for male voices; he also composed various choral works (100th Psalm for male voices).

Elvey, George, d. Dec. 9, 1893, Windsor.

Engel (3), G. E., d. July 19, 1895.

Engelbert von Admont, Abbot, learned Benedictine monk, d. 1331, Admont. He was the author of a treatise "De musica," printed by Gerbert ("Script" II.), which is of interest in matters concerning the history of music during the Middle Ages.

Engelsberg, E. S., pseudonym of the ministerial councillor, Vienna, Dr. Ed. Schön (b. 1825, Deutsch-Jasnitz, Silesia, d. May 27, 1879, Vienna). Under this name he made himself known by humorous quartets for male voices ("Narrenquadrille," "Heini von Steyer," etc.).

English Violet. (See VIOLET, ENGLISH.)

Enna, August, Danish composer, b. May 13, 1860, Nakskov, Laaland (his grandfather was Italian by birth), drew attention to himself by his opera *Die Hexe* (*Heksen*, Copenhagen, 1892; in German, Berlin, 1893), poem by Alfred Ipsen after Fitger's drama.

Equal Voices. (See VOCES ÆQUALES.)

Eschmann (2), Carl E.-Dumur, b. 1835, Wädensweil (near Zürich), highly esteemed teacher of the pianoforte at the School of Music, Lausanne, and editor of an excellent guide through pianoforte literature ("Guide du jeune pianiste," 2nd ed. 1881), likewise of a work on technique ("Rhythme et agilité"; German edition as "Schule der Klaviertechnik" by Ad. Ruthardt).

Evenopoeel, Edmond, b. March 23, 1846, Molensbeek St. Jean (near Brussels), contributor to the *Guide Musical*, the *Revue Wagnerienne*, etc. He wrote "Le Wagnerianisme hors de l'Allemagne" (Brussels, 1891).

Eykens, Dan. Simon, b. Oct. 13, 1812, d. Oct. 9, 1891, Antwerp, composer (operas, masses, choruses for male voices, pianoforte fantasias on operatic themes, etc.).

F

Fahrbach (4), P., d. Feb. 15, 1894, Vienna.

Faisst, d. June 5, 1894, Stuttgart.

Faminzin, A. S., d. June 24, 1896, St. Petersburg.

Farina, Carlo, one of the earliest composers for violin, and one who aided in the development of chamber music. He was a native of Mantua, and in 1625 was appointed chamber musician to the Elector of Saxony. He published at Dresden (1626-28) five books a 2-4 of *Pavane*, *Gagliardi*, *Bransles*, *Mascherate*, *Arie francesi*, *Volte*, *Balletti*, *Sonate*, and *Canzoni*. Cf. the detailed account in Wasielewski's "Die Violine und ihre Meister," 3rd ed. p. 54, etc.

Farmer, (1) Thomas, one of the waits of London, graduated at Cambridge in 1684, d. before 1696 (Purcell composed an Elegy on his death). He published in 1686 "A Consort of Music," beginning with an overture, and in 1690 a "Second Consort," beginning with a Ground.

Felchner, Gustav Adolf, b. Jan. 22, 1832, Kumehnen (East Prussia), d. May 11, 1896,

Giessen; pupil of the Leipzig Conservatorium, in 1864 musical director at Alzey; from 1874 musical director at the University, conductor of the concert society, and teacher of singing at the College, Giessen.

Festivals. (See MUSICAL FESTIVALS.)

Fichna, Ida, teacher of singing, b. 1853, Vienna, pupil of Fuchs and G. Hölzl; she has taught at Vienna, and with distinguished success.

Fin'al, for ending at, read up to.

Finger, Gottfried, native of Olmütz, Moravia; came to England about 1685, and became chapel-master to James II. In 1688 he published sonatas for various instruments, and in 1691, together with John Banister, "Ayres, Chacones, etc." F. returned to Germany in 1702, and in 1717 became chapel-master at Gotha.

Fingersing, add. Cf. the treatise by K. Krebs on Diruta's "Transsilvano" in the *Vierteljahrsschrift f. Musik-Wiss.*, 1892.

Fischer (9), Adolf, d. Dec. 7, 1893, Breslau. (12), Paul, d. March 3, 1894, Zittau.

Fitzenhagen, W. K. F., d. Feb. 14, 1890, St. Petersburg.

Flaxland, d. Nov. 11, 1895.

Fleischer (1), Oskar, Dr. phil., pupil of Spitta and writer on music, a valuable monograph by whom, on the lute player Denis Gaultier, came out in the *Vierteljahrsschrift f. Musik-Wiss.*, 1886 (later Nos. contain critical notices by F. of works on the history of music). In 1895 appeared the first part of another historical work, "Neumenstudien." Dr. F. is *Custos* of the royal collection of ancient musical instruments and lecturer on music history at the University, Berlin. In 1896 he succeeded Ph. Spitta as teacher of music history at the Royal High School of Music.

(2) Reinhold, b. April 12, 1842, etc.

Flight, Benjamin, organ-builder, constructed, jointly with Robson, the "Apollonicon" (q.v.), d. 1847.

Folville, Juliette, b. Jan. 6, 1870, Liège, gifted composer; she is also a performer on the violin and the pianoforte (opera, *Atula*, Lille, 1892).

Fontaine (1), Mortier de. (See MORTIER).—(2) Hendrik, b. April 5, 1857, Antwerp; pupil of the Conservatoire, since 1883 teacher of singing at that institution, esteemed concert-singer (bass), especially in Benoit's oratorios (*Lucifer*).

Fontana, Giovanni Battista, one of the oldest composers for violin, and one who aided in the development of chamber music, d. 1630 of the plague at Brescia. In 1641 there appeared of his compositions: sonatas for violin

with bass, some for two violins with bassoon, and one for three violins (published by Reghino).

Förster (4), Joseph, b. Feb. 22, 1833, Osojnitz (Bohemia); studied at the Prague School of Organists (1850-52), became organist of the Vysebroder monastic church, then returned to Prague in 1857, became in the following year organist of St. Nicholas, in 1862 choir-master of Trinity Church, 1866 of St. Adalbert, and in 1887 of the cathedral (St. Veit). He is also teacher of theory at the Conservatorium, and examiner of music teachers for the middle schools. F. is learned in all matters relating to chorales, and a zealous promoter of polyphonic *a cappella* music. He has written several masses and requiems, also organ works, likewise a treatise on harmony.

(5) Alban, b. Oct. 23, 1849, Reichenbach (Voigtland); pupil of the Dresden Conservatorium, was orchestral leader at Carlsbad, Breslau, Stettin; in 1871 became court musician and conductor of the Singakademie, Neustrelitz; in 1881 teacher at the Conservatorium and conductor of the Dresden Liedertafel; in 1882 court capellmeister at Neustrelitz. He has composed chamber music, educational pieces, songs, orchestral works, and also 3 operas (*Das Flüstern*, 1875; *Die Mädchen von Schilda*, 1887 [both at Neustrelitz]; and *'s Lorie* [Dresden, 1891]).

Förtsch, add. Cf. Fr. Zelle's "J. Ph. F." (3rd supplement to the history of the German Opera).

Fouqué, P. Octave, d. night of April 21-22, 1883.

Franchetti, Alberto, Baron, b. Sept. 18, 1860, Turin, of wealthy parents, pupil of the Munich Conservatorium; composer of chamber music and orchestral works, likewise of the opera *Asraele* (produced at Reggio d'Emilia, 1888; also in Germany [Hamburg, etc.]).

Franck, (1) M. add. cf. Aloys Obrist's "M. F." (1892, dissertation).

(5) E., d. Dec. 1, 1893, Berlin.

Franke, Hermann, b. Feb. 9, 1834, Neusalza-O., pupil of Marx, was at first cantor at Crossen, and since 1869 has been cantor at the principal church at Sorau (Silesia); in 1883 he became royal musical director. F. has written many sacred and secular vocal works (oratorio, *Isaaks Opferung*, several of which won prizes; he has published a "Handbuch der Musik").

Franz, (1) add. For the direction which the creative faculty of R. Franz took, the ballads by Fr. Grimmer, which F. has recently brought out, were of importance. R. F.'s father, Christoph Franz Knauth (not "von"), by royal permission changed his family name into "Franz" in 1847.

Fricke, d. June 27, 1894, Berlin.

Friderici (Friderici), Daniel, cantor *pri-marius* at Rostock from about 1614 until 1656,

during which period appeared his "Musica Figuralis" ("Unterweisung zur Singkunst," 1614, several times republished); likewise a series of excellent vocal compositions (concertos a 3-5, "Liedlein" after the style of Villanelle, Bicinia, etc.).

Fuchs (4), J. N., *add*, In 1893 he became director of the Conservatorium of the Gesellschaft der Musikfreunde, Vienna, in succession to Hellmesberger.

Fumagalli, (1) *add*, pupil of Angeloni at the Milan Conservatorio, attracted attention from 1848 in Italy, France, and Belgium, as an excellent pianist, and was also for a time popular as composer of operatic fantasias, salon pieces, dances, etc. ("Concerto fantastique: Les Clochettes," with orchestra).

G

Gabrieli (1), Andrea, (l. 10). It appears from more recent investigation doubtful whether Sweelinck was a pupil of G.

Gallus, (1) d. July 18, 1591.

Galuppi, *add*, He was one of the best composers for the clavichord of his time.

Garcia, (2) M. del P. V., d. June 9, 1832 (according to Fétis' "Revue musicale").

(3) Manuel, *for* d. May, 1879, London, *read* still living (Sept., 1896).

Garcin, *add*, He conducted the Conservatoire concerts up to 1892 (successor, Taffanel).

Garrigues, Malwina. (See SCHNORR VON CAROLSFELD.)

Geisler, (2) Paul, *for* G. has composed four operas, etc., *read* His operas are: *Ingeborg* (Bremen, 1884), *Hertha* (Hamburg, 1891), *Die Ritter von Marienburg* (Hamburg, 1891), *Palm* (Lübeck, 1893); he also wrote music to the dramas *Schiffbrüchig* (not *Gastrandet*), and *Unser täglich Brod giebt uns heute!* (both 1890, Hamburg).

Genée, d. June 15, 1895, Baden, near Vienna.
